pion is still mightier, no doubt, than the other man, and both able and destined to lay low the ambitions and the person of Jeems Corbett, the tall sequoia of the Pacific slope. Possibly a strict adherence to the precepts of a careful trainer may have made Sullivan fitter for fight than he ever was in his life before, but intrinsically he is not the equal of Sullivan aged twenty-four, when his fist-shooting shoulders were a pair of rapid-fire machines of double charges, and when no bucking mustang could outdance him around the ring.

The fact is that for physical perfection man is a comparatively short-lived race. Decay sets in at the youthful age of about twenty-two, after which one may grow in wisdom and honors, but not in muscle and in the power to use it.

"Rot, pure and simple," was the comment of a New York professor of physical culture the other day, when the REFEREE man spoke of the above declaration by the Nutmeg state editor. "The fact is man is at his prime at thirty to thirty-five if he has taken anything like care of himself," said the muscle builder, "and it is all bosh to talk of a man declining physically from the age of twenty-two. Sullivan didn't, for a certainty, as his blows at the age of twenty-eight were triple the weight they were at

president, Alexander Emmery; corresponding secretary, Hugo Westhofen; financial secretary, Richard Ebert; treasurer, Joseph Wellstein; captain, John Reitzner; first lieutenant, Martin Klaev-enour; second lieutenant, George Bender; directors, Herman Block, Thomas Nevell, Wells Pritchard.

#### Trade Settings.

The Rudge Cycle Company has declared a dividend of 7 1-2 per cent per annum for the last six months, making, with interim dividend paid in June last, a total dividend of 8 3-4 per cent for the year ending Oct. 31.

Stephen Golder, of the New Howe Machine Company, and Mr. Nevill, of J. K. Starley & Co., left Chicago on Thursday for Buffalo and Niagara Falls, when, after viewing the ice bridge, they proceeded to New York.

Arthur G. Flavell, representing Loyd, Read & Co., Coventry, makers of the Overstone cycles, arrived in New York last week, and reported an extremely rough passage across. After doing the

## ZIMMY'S FUTURE PLANS.

WILL GO SOUTH IN MARCH AND  
ABROAD ABOUT MAY 1.

*How a Country Family Called to See the  
Champion of Champions—A Colored  
Boy's Admiration for the Jer-  
sey Man.*

Being Christmas day, a REFEREE correspondent thought it would be a good time to catch A. A. Zimmerman at home, as well as his family, which shares the popularity of the famous Manasquan champion of champions. Manasquan was reached at 6 o'clock. Boarding the only conveyance that meets the train, the driver was asked to deposit the REFEREE man as near Zimmerman's hotel as possible, which he did five minutes later, the Zimmerman hotel being half a mile from the little wooden depot. Entering the large bar-room, whose only occupant was the bar-tender, the dispenser of cheer was asked if any of the Zimmerman family were around. Yes, Mr. Zimmerman, Sr., was up-stairs. What name should he say? "Just say ——— would like to see him when disengaged."

In the next minute a cheery voice of welcome and outstretched hand were extended by that grand sportsman, T. A. Zimmerman, father of "the hero of two continents." Leading the way to the parlor, where a comforting fire blazed merrily (it was in the neighborhood of zero outside), Mr. Zimmerman said: "Arthur and Joe [McDermott], Mrs. McDermott and Mrs. Zimmerman are over at Asbury Park, but I expect them back every minute."

This was luck, indeed, and we fell to talking about the past season, and dipped into the probable future of the champion's career.

"I never forgot your prediction, that 'the American flag will be perfectly safe pinned on the shoulder or back of A. A. Zimmerman, and he will do his country credit in England,'" said Mr. Zimmerman, who, it seems, remembered what the writer said just as Arthur Augustus sailed for the land of the Britons. My prediction was occasioned by the fear expressed by the distinguished editor of a New York cycling paper, who said he would rather pin his faith and flag to the shoulder of the Milbury lad. While in the midst of a debate in walked the gentleman who "scouted" so fast last summer, and also made such fast time from the Saltonstall dinner. Another warm greeting from the champion, who had, as usual, made a scout from Asbury Park in advance of his family, in order, as he explained, to be present at a local Christmas tree lighting up.

An adjournment to the dining room, and Zimmerman, Sr., and the writer partook of supper, while the champion sat at the end of the table puffing away at a cigar.

"He never looked better or stronger," was my comment as I ran my eye over the redoubtable champion of the world.

"No, and I never felt better in my life," was the champion's quiet response, with that smile so fetching, "and I intend to keep up in strength and increase some in weight before March, when I again expect to commence work."

It may be news, however, to state that "Zim" caught a severe cold in Chicago, which was augmented by another contracted duck hunting, and this laid the champion in bed for nearly three weeks. After returning to the parlor "Zim" excused himself, saying that the Christmas tree demanded his attention, but promising to be back in an hour,

which promise he observed to the minute.

In a few moments in walked Joseph McDermott, wife and boy, and the champion's mother.

"Well, well, who has Santa Claus sent us?" exclaimed McDermott, as he repeated the welcome extended by Zimmerman, Sr. and Jr. After a talk about general matters, the REFEREE man commenced delving for what he was after—Zimmerman's present and future plans.

On this subject Mr. McDermott said:

"Well, at present Arthur will continue to take things easy, and will, in company with Marshall Wells of Toronto, do some work in my office at Freehold, as I was never so crowded with work in the abstract title business. He will, about March 1, go south to Brunswick, Ga., be the guest of Warren Leland's famous hotel at that place, and do his work on the splendid ten-mile shell boulevard at that place. He will possibly take advantage of the invitation of Mr. Connelly of Savannah to practice on the new four-

"What is my opinion of Hillier? Why, I think he is one of the best—if not the best—posted man in racing to-day, and we feel deeply grateful for the advice he gave Arthur whilst over there, and will be glad to meet him again. Of course, he did not train Arthur, he simply gave good advice, and I don't wish to take the least credit away from the kind Londoner whilst saying that Arthur did improve after we arrived in England. He felt better and had my personal attention."

Here the champion broke in with: "There is one thing I greatly admired in Mr. Hillier. Although he knew all of Osmond's strong and weak points, he never made me acquainted with them. Is that not most honorable of a man who did not speak to Osmond at the time?"

Mr. McDermott may invite one other good man to join Zimmerman on his English trip.

Mr. Zimmerman, Sr., tells some good stories about the intense admiration some of the local people have for "the

merman said: "This is the wheel on which he won the world's championship and a thousand-dollar team."

"Wall, I swan. Peter, what do you think of that? Can I touch it?"

"Oh, yes." And woman admirer of "them legs" felt the pneumatic tire in a tender sort of way. Placing the cabinet photo next to her heart she mounted the wagon, and with "Now, Peter, let's go home, I have got the champan with us," away they sailed to their country home, thirty miles distant. This is only a sample of the hero worship the poor "skeeter" has to endure.

A conical looking negro was telling in the bar about his meeting with the great Arthur at the Baltimore tournament. He prefaced his story to the REFEREE correspondent with: "I have known 'my boy' since he was so high [about three feet two inches] and have known his sisters and brothers and family, and you can bet I'm proud of 'my boy.' Well, it was like this. I live here in Manasquan, but I went visiting to Baltimore. So when I seed 'my boy's' name in circus letters and bills, I said to the rest of the common nigger trash: 'I'm going to see 'my boy,' the champion, race.' 'Your boy—he won't know you, you foolish nigger.' Now I wanted to take them Baltimore niggers down, so I said: 'You come and see.' Well, it was one of these d—n races—what you call 'em?—they put 'my boy' in a line, then they put one feller here, another there and another here [walking along the bar-room describing the handicap]. Well, it's a fool race anyhow, and I hoped he wouldn't ride. There they was all around the track and 'my boy' by hisself. Well, 'my boy' was just coming out of the house where he dressed for the race, and some fine gentlemen was talking to him. Then the common niggers said: 'He won't see you, he is astamed of you.' That hurt me. I'm white if I am a nigger, so I put my hat under my arm and went a little closer and 'my boy' seed me, and he smiled like he used to, 'my boy' did, although he is champion, and what do you think he did? He excused himself to the fine gentlemen and ran to me and said: 'Why, Tom, old boy, howdy?' I said: 'Pretty well, thank you, Mr. Zimmerman. Can you beat 'e in this fool race to-day?' 'Yes, Tom,' he said. 'Well,' I said, 'Mr. Zimmerman, I want you to if you can, just to show them what a Jersey man can do.' Just then a whistle blowed and 'my boy' got on his wheel and was all alone. But you should have seen them fine gentlemen look and smile, and one of them said: 'It is just like him, he is so modest.' Then I said to the common niggers: 'Go 'way, you niggers, you don't know the champion—he is my boy.' Then they was started, and 'my boy' didn't gain much the first time around, but on the second he did, and I said to a man with a big ribbon on, called judge: 'Say, judge, I'll bet you a dollar 'my boy' wins.' 'My boy,' he said, 'judges don't bet; go away off the track.' I was watching 'my boy' and he caught them all and you should see the way he came down the homer [home stretch]. He came like greased lightning and beat 'em all, 'my boy' did. I throwed up my hat and said: 'Three cheers for the Jerseyman, 'my boy,' I did."

J. P. Bliss has just been notified that, in so many words, the charges laid against him, and upon the strength of which he was suspended sixty days, from Oct. 22, could not be proved—that he did not enter a class race to which he was not eligible. And this kind information after he has been punished by a sixty days' suspension!

## THE MOST IMPORTANT MAN IN CHICAGO LAST WEEK.

[It must be remembered that Mr. William Bostworth Young has become somewhat of a race meet promoter—or inducer—and cut quite a figure in the success of the recent Milwaukee tournament.]

lap track they are building in the latter city. Mr. Wells may accompany him. About May 1 we will sail for England, to be there in time for the English championships, and will try to be there three weeks ahead of time. I will go with him, and expect that he will be in fine form on landing. I will arrange for him to take some exercise on the vessel going over."

"What do you intend to do regarding the Sanger challenge, Mr. McDermott?" asked the REFEREE man.

"Simply ignore it, as we will have plenty of opportunity to meet Mr. Sanger at the tournaments—especially the World's Fair—on our return. We can't think of making such a match as the Sanger people propose at present. In this connection I thought it a singular coincident that my writing the secretary of the club that Arthur was sick—too sick to race—that a challenge should appear on behalf of Sanger on Oct. 21. We have no feeling against Mr. Sanger, but cannot accede to the kind of a match they propose at present.

boy," as Zimmerman, Sr., calls him. One afternoon a country wagon with a farmer, his wife and five children drove up to the hotel, accompanied by two dogs. The woman led the way into the barroom as she asked:

"Do the champan live here—I mean the boy who rides the bisticle?"

"Yes, his home is here. I'm his father, but he is at Freehold, ten miles from here, at present."

"Well, I swan," she replied, turning to hubbie. "Peter, I guess we can drive there. I want to see that champan of Jersey, who beats 'em all on the bisticle."

"I can show you his picture, in fact, I'll give you one," said the amused Zimmerman, Sr. "Step this way."

Leading the way to the parlor Mr. Zimmerman showed a large picture of Arthur Augustus on his wheel.

"Whv, Peter, look at them legs; ain't them dandies? Peter, if you only had them legs we wouldn't have to slave on a farm."

Turning to a racing wheel, Mr. Zim-

#### Novel Buffalo Entertainment.

Last night the Ramblers of Buffalo installed their officers and had a general jollification. A large number of members were present and were given a good entertainment. There were two constables and a spirit of darkness from the untamed wilds of "Boo-Hoo," who made things very pleasant for the incoming officers. A high altar, at one end of the large gymnasium, contained a revolving disk, upon which were the twelve signs of the Zodiac and in the sun's path were lucky policy combinations, this circle surrounding the club emblem. The whole affair was gaily decorated with national colors and flags. The sprite turned the wheel of fortune and the men did its bidding, and some very strange acts were asked of them. The new president had to stand on his head and whistle the chorus to "Annie Rooney." Dick Kelsey ate a weiner suspended in mid-air, his hands tied behind him. Dick took a sky-scraper in a blanket, while Hauenstein and Diehl bobbed for apples in a dishpan of ice-cold water. Fuhrmann, Woods and Riester had a pie-eating contest, and Mr. Thomas had to drink two bottles of pop at once. The evening finished up with a luncheon, hot coffee and claret punch. Everybody voted it a success, and thanks

were tendered to the Tuscarora singers and Mr. Lautz for music and songs.

#### Christmas at Ravenswood.

At the Ravenswood Cycling Club, last Wednesday evening, the annual Christmas entertainment was given. Married couples and single ladies and gentlemen dropped all thoughts of dignity for the time, while old Kris Kringle, in the person of Grant Newell, distributed numerous inexpensive gifts from the brilliantly decorated Christmas tree, with its myriad of canoles. An informal entertainment and dance followed. Lots are chosen a week previous to these entertainments, and the members are expected to purchase a gift, not to exceed ten cents in value, for the person whose name is drawn.

#### In and About Chicago.

With but a few more games to play, C. W. Davis leads in the Chicago Cycling Club's handicap pool tournament.

Other clubs beside the Lincolns are contemplating tramping parties for the early springtime to trim the muscles for the opening of the riding season.

It was watch night at the Illinois Cycling Club Saturday evening, quite a number entering the new year snugly ensconced in one of the club's famous easy chairs.

The Ravenswood Cycling Club is planning a smoker which promises even greater novelty than the famous hard-times smoker of the Lincoln Cycling

Club last season. As on former occasions, the Lincoln club members will be the guests.

The Minnette Cycling Corps stag parties Saturday evenings have been very regular and well attended, from three hundred to six hundred, including guests, being present.

The Cook County Wheelmen gave a reception and dance at Berry's Hall last Thursday evening. Thirty-five couples joined in the grand march, led by John Apwell and lady.

The weather counted for nought New Year's eve, when a number of the Cook County Wheelmen rode from '92 into '93, and later spent many enjoyable moments over a repast spread for them by the club.

On Saturday evening of last week—New Year's eve—the Ravenswood Cycling Club gave its annual formal dance, the dancing coming to a full stop as Sabbath and the new year came stalking in together.

Last Thursday evening the Chicago Cycling Club gave its annual New Year's reception at Rosalie Hall. About seventy-five couples were present. It was one of the most enjoyable of the club's many receptions.

#### About the Country.

The annual reception of the Riverside Wheelmen will be held at Manhattan Athletic Club Theater Jan. 20. The Riverside boys can be depended upon to do the thing properly. They never do anything by halves.

The Hudson County Wheelmen enjoyed a stag racket last Saturday night at the club house on Belmont avenue, Jersey City, as well as a large Christmas tree, which was weighted with suitable prizes for amateurs. The married ama-

teurs were presented with rattles, and Chairman Raymond was solemnly presented with a little steamer and a pure little amateur—a white doll on a wheel. The chairman was completely overcome—at the appearance of the amateur!

The Omaha Wheel Club held a concert and smoker at the "Tepee," Chicago and Seventeenth streets, New Year's eve. A few of the braves from other tribes ate jerked beef and smoked the pipe of peace with the Omaha tribe.

Members of the Manhattan, Riverside, Harlem, Columbia, Brooklyn, Kings County, Long Island, Bedford, Atlanta, Elizabeth and Business Men's Cycling Clubs have engaged seats for the wheelmen's theatre party to be held Jan. 12 at New York.

The ancient and honorable Citizens' Bicycle Club, which the pioneers of cycling in New York venerate, gave a stag social the last night of '92, and had an old-fashioned hilarious time of it. All the old boys were on hand, with a goodly gathering of cyclists from all over.

#### Wants a Six-Day Race

Charles W. Ashinger, the professional, is section boss on the Third avenue (New York) cable road in course of construction. The six-day man in his leisure moments haunts the office of the Madison Square Garden Company, talking six-day race, over which the company does not seem to enthuse. The fact is, the Madison Square Garden Company would like to hear from people who will assume the financial responsibility, and, as usual, will want "the big end of it," but is not over favorable to managers of the Howell type. Neither is the public.

#### Gerencing a Journalist.

Bob Gerwing, the Denver crack, now has charge of the cycling department of the Denver Sun.

## THE MILWAUKEE TOURNAMENT.

## Johnson, Rhodes and Ballard Break Indoor Records.

The third and probably last of the series of indoor meets of the Milwaukee Wheelmen was held on Monday afternoon and evening at the Exposition building. Though the club made money on the first tournament it is doubtful if it pulls out even on the series, because the extreme cold weather on Christmas and New Year's days kept many away. Then Sanger did not ride on these two days and a good many would stay away on that account. Johnson, Rhodes and Ballard, under Tom Eck's tutelage, were on hand; also Lumsden, Githens, Steele, Leonhardt, Emerson and other Chicago men. Rhodes, Githens, Leonhardt, Bowen and Schmidbauer qualified in the five-mile handicap, the first two being on scratch. Leonhardt, with his 400 yards, simply kept behind Githens and Rhodes and won with a couple of laps to spare, while Githens beat Rhodes out. In the half-mile open (heat) Johnson made 1:13, and in the final 1:13 3-5. Johnson was sick and didn't want to ride, but did so to pacify the crowd when it began to howl "fake." He felt insulted and said he never would race again in the Cream City. In the evening, however, he won the two-mile open. The summaries follow:

Half-mile, open—First heat—John S. Johnson, 1; George E. Emerson, 2; W. A. Rhodes, 3; time, 1:13.

Second heat—George Becker, 1; J. C. Schmidbauer, 2; time, 1:30 2-5.

Third heat—A. E. Lumsden, 1; Gus Steele, 2; E. W. Ballard, 3; time, 1:17 2-5.

Final heat—Johnson, 1; Steele, 2; Schmidbauer, 3; time, 1:13 3-5.

One-mile, 2:45 class—First heat—J. L. Coogan, 1; A. Leonhardt, 2; time, 2:44.

Second heat—W. C. Wenger, 1; Mattie Stark, 2; time, 2:43 1-5.

Final heat—Gus Steele, 1; W. C. Wegner, 2; A. Leonhardt, 3; time, 2:59.

Two-mile, open—First heat—A. E. Lumsden, 1; Phil Nickel, 2; W. C. Wegner, 3; time 6:00.

Second heat—J. S. Johnson, 1; E. W. Ballard, 2; time, 6:23.

Final heat—Johnson, 1; Lumsden, 2; Ballard, 3; time, 5:36 3-5.

One-mile, Milwaukee championship—Phil Nickel, 1; P. H. Sercombe, 2; time, 2:45.

Five-mile, handicap—First heat—W. A. Rhodes, 1; J. C. Schmidbauer, 2; time, 13:51.

Second heat—A. Leonhardt, 1; J. R. Bowen, 2; time, 14:53.

Third heat—A. Bartels, 1; H. A. Githens, 2; time, Bartels, 13:51; Githens, 14:06 3-5.

Final heat—A. Leonhardt, 400 yards, 1; A. R. Bowen, 400, 2; time, 13:17 2-5.

One-mile, 2:40 class—First heat—H. W. Breckenridge, 1; J. L. Coogan, 2; time, 3:00.

Second heat—P. H. Sercombe, 1; Phil Nickel, 2; time, 2:44.

Final heat—Phil Nickel, 1; J. L. Coogan, 2; time, 2:52 3-5.

One-mile, open, one heat—W. A. Rhodes, 1; E. W. Ballard, 2; time, 2:41.

## TUESDAY'S RACING.

Tuesday afternoon Johnson lowered Sanger's record for the track (2:31) to 2:26, Ballard cut the half-mile made by Johnson (1:13) to 1:12, and Rhodes put the five miles at 13:05 4-5, as against Githens' 13:29. The evening races were witnessed by a small crowd. The results were as follows:

Two-mile, handicap—A. Bartels, 140 yards, 1; Gus Steele, 130 yards, 2; J. S. Johnson, scratch, 3; time, 5:21 2-5.

Five mile, open—J. S. Johnson, 1; W. A. Rhodes, 2; time, 15:03 3-5.

## The 2:50 Club Scorch.

As usual it was a small company of the "2:50 club" members that participated in the annual scorch to Pullman on New Year's day. Shortly after 10 o'clock seven men, and all members of the Chicago Cycling Club, left Grand boulevard and Thirty-eighth street. A good pace was made and at Midway Plaisance and Cottage Grove avenue W. C. and G. A. Thorne had dropped back. Waller, Barrett, Van Sicklen, Root and Theodore Smith kept on through Woodlawn and Parkside to Stony Island avenue. A little below "Five Points" the Thorne brothers—who had made a short cut via Cottage Grove and South Chicago avenues, and thus gained a half mile—were overtaken. George Thorne had a big lead, but was overtaken by Smith; Barrett gave up, so did W. C. Thorne; Van Sicklen had a bad fall, but passed Waller on the meadow near the hedge row; Root went into fourth place, trailing

tance will be twenty-five miles, of which there will be four miles of asphalt pavement and twenty-one of very fine dirt roads with no hills. The management has again been given to D. H. Lewis, of the *American Wheelman*.

\* \* \*

## The Championship Medals.

Chairman Raymond of the racing board has been in communication with the World's Fair people regarding the medals to be used for the international championships next year. It is his desire to have one side struck from the world's fair die, and on the other a suitable inscription. Mr. Raymond has already received many applications for dates for the international circuit, which will be arranged during February.

\* \* \*

## A Bicycle-Base Ball Deal.

A Pittsburg dispatch, dated Dec. 31, says:

President Buckenberger said to-day that there is a movement on foot to arrange a bicycle league in connection with the twelve-club base ball league, and that the local team is figuring on a bicycle track here, as Von der Ahe has arranged one in his St. Louis grounds. From another source it was learned that the object of the move is to have a bicycle track at each base ball park in the league, and have bicycle race meetings

## VOTING BLANK.

Cut Out this Blank, and, After Filling In Your Replies, Mail to the Referee, Chicago.

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs? .....

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.? .....

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals? .....

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership? .....

No. 5. Shall cash prizes be awarded to any class, and if so, which? .....

No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin? .....

No. 7. Shall the constitution be so changed as to permit of a change by a mail vote? .....

I certify that I am a member of the League of American Wheelmen and I have not previously voted on the above questions.

Name.....

Address.....

League No. (if possible).....

A supply of these blanks will be forwarded to any league member on application.

Van Sicklen at the sand hill. Smith was in first in 45 m n., George Thorne second, then Van Sicklen, Root, Waller, Barrett and W. C. Thorne in the order named. After dinner the seven rode across Calumet lake on the ice and down the river to South Chicago.

\* \* \*

## The Martin Road Race.

H. C. Martin & Co., of Buffalo, have come out with their announcement in reference to the annual Martin road race, which takes place on Decoration day, and which promises to outdo in excitement and interest the event of last year. The prizes offered will be increased in value from \$1,900 to \$2,000, and some changes will be made in the course. The distance will be the same, and the road also, but the course will be extended so that the contestants will not have, as they did last year, to make three circuits of the quarter-mile distance around the parade, but will make it once, finishing at a certain point, thereby making it easier for the track officials, as last year the people crowded in and mixed things so that it was impossible for the judges and scorers to tell anything about the number of times the men had passed. The entire dis-

take place during the entire base ball season and the absence of the home team. It is further said that Zimmerman and nine or ten other prominent wheelmen have signed to take part in these races next season.

## ZIMMY'S MASCOT.

The "Dark Secret" and How He Will Travel to Europe.

For about next June Londoners should see a very happy-looking African about sixteen years old, shouting and smiling as only an African can, in the neighborhood of Herne Hill after the finish of an English championship, they will understand that the aforesaid joyous "gem-

um" is John Backus of Philadelphia, mascot extraordinary to Arthur A. Zimmerman of Skeetersville, champion of champions. Now this mascot is not in the employ of any manufacturer; and, as far as his amateur standing goes—well, its perfect (this for the information of G. L. H. and the N. C. U.), and as far as his "expenses" go, that is all right also. He never pays "expenses." Whenever Mr. Zimmerman feels like winning a few pianos or houses he picks up his traps and proceeds to the scene of action with a first-class ticket as a passport on the railroad or steamboat. John Backus picks up his graveyard rabbit's foot (the African's sure luck), and also proceeds to the scene of action—generally by freight cars—and sometimes by ways that are dark and very peculiar. But John always gets there without the expenditure of one red. He lives pretty good, too, while on his journey, and the story of his trip to the dedication tournament in Chicago, having "beat" his way

over a thousand miles to be with Zimmerman and see him race, is a true example of the way "Zim's" mascot travels.

The writer was throwing some mail in the New York postoffice the other day, when some one said "hello!" Looking around he beheld John Backus, Zimmerman's distinguished mascot, who said: "I'm dead against it."

"What, booze?" was asked.

"No, luck," he said. "I am not a mascot to myself, but 'my boy' Zimmerman can always win when I'm about. He can't lose; see!"

Later on (after disposing of a meal) the great mascot dropped into the REFEREE office, and looked much better, as he inquired: "Is Zimmerman going to England?"

On getting the champion's proposed plans—south first, and then to England—Backus simply reveled in the information and chuckled softly:

"I'll be there; 'my boy' can't be alone, or a winner without me."

"How will you travel th's time?" the REFEREE man asked.

"Well, I'll go souf by boat on the Savannah line, and will wuk for my paslage, and to England on a cattle boat, and I will make enough to buy me a new suit, so that Zimmerman won't be ashamed of me. How I do like 'my boy'—he can beat 'em all when his mascot is aroun'," was John Backus' last remark as he made tracks for the Pennsylvania railroad depot to catch a fast freight for Philadelphia. He will be at the show, as Zimmerman will be there.

The Illinois club is laying out a 25-mile course on the west side for the purpose of riding for road records the coming season.

The Minnette Cycling Corps held a novel race New Year's day on the ice at Garfield Park. A score of men were entered. The distance was 200 yards.

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

# SINGER CYCLES.

BOSTON, MASS., Dec. 31, 1892.

MESSRS. SINGER & CO.,

BOSTON, MASS.

GENTLEMEN:—My Special Modele de Luxe has been all, and more than I had ventured to hope. As your books will show, I purchased it September 2, and since that time have ridden it about 1,700 miles. It tips the scales at 29 lbs., and I have yet to see the wheel, that to my taste, approaches it in appearance. So far as I discover, it is as stiff and strong in every way as the 33 lb. Singer Modele de Luxe, which I rode with perfect satisfaction during the fore part of the season, until the lighter edition (The Special) was put on the market. Both my safeties were fitted with Heale pneumatic tires, and when I say that no repairs were put upon my wheels the whole season through, I mean that no repairs were put upon either machines or tires. Not many riders, whose mileage for the season has been nearly 4,600 miles can honestly say as much as this, and I am glad to express my appreciation of my happy lot by making this statement of the facts, which you are at liberty to use in any way you desire.

Yours truly, JAMES KELTIE, Captain Roxbury Bicycle Club.

Reliable Agents wanted in the West, including Chicago. Send for our Catalogue.

AND 2 WARREN AVE.,  
BOSTON, MASS.

# THIRD ANNUAL PHILADELPHIA CYCLE SHOW JAN 4 TO 14 1893.

P

PHILADELPHIA, Jan. 4.—[Special].—Notwithstanding the fact that the third annual National Cycle

Show of the Associated Cycling Clubs opened to-day, everything was backward, but with hard work to-day getting things in place, the show will be in good running order shortly. The carpenters and decorators did not begin work until Tuesday and this alone put things back considerably. To add to the discomfort, the building is exceedingly cold. The decorations throughout are beautiful and the building presents a handsome appearance. The attendance of the trade men is good, but on account of snow and a bad storm, the attendance of the general public was poor to-night. The building is nicely lighted by electricity. Many of the exhibitors on hand to-day promised to have their stands entirely completed by to-morrow.

One of the sensations of the day was the rumor that Phelps & Dingle would sue the owners of the American Dunlop patent, claiming that the same was issued to a Philadelphian no less than three years ago, and many believe the claim to be good. A rumor to the effect that the people offered to sell their claim for \$50,000 was not verified, as none of the parties in the case have arrived, as yet.

The formal opening of the show was made by President Tucker, with a neat speech of welcome. He was followed by Mr. Bartols, who had the honor of organizing the A. C. C., and Col. A. K. McClure, editor of the *Times*, who made a very neat speech, most favorable to cycling, in which he said that the prospects were so excellent as to completely outshadow all other shows. Up to this time it has been hustle and bustle among the exhibitors, newspaper men, trade people and everybody in general; but from present indications the show will prove an immense success. President Bunnell, for the last few days, has devoted his exclusive time to arranging matters pertaining to the show, and has come to the conclusion that because of the neglect of his private business, in the future he will have no connection with the exhibitions. Among the trade people noticed in town during the last two days are as follows: Edwin Oliver, W. S. Atwell, James Josephi, James Murphy, H. C. Tyler, Kirk Brown, L. A. Howell, C. W. Heath, A. L. Pope, Jr., C. R. Overman, P. H. Sercombe, F. T. Fowler, William Herrick, George M. Hendee, W. W. Kenfield and many others. Up to this time a large majority of the exhibits are very incomplete, some of them being merely blank spaces, while others have a few boxes and cases scattered about. There is a large force

of workmen on hand however, and things are being quickly put into shape, so that before the end of the week the show will be fairly under way.

**Stand No. 1.—Hulbert Bros. & Co., New York City.**

George M. Hendee and Frank Weston are busily engaged fitting up Hulbert Bros. & Co.'s exhibit, which contains a complete line of the King and Queen of Scorchers in various styles, the Majestic, and a line of cheaper wheels. A considerable showing in sundries is also made. The voting contest for a Majestic began to-night, the drawing to take place the last day of the show. Altogether, Hulbert Bros. & Co. have a very select line of wheels and report a strong demand for their goods. The stand was handsomely decorated and richly carpeted.

**Stands Nos. 3 and 4. Coventry Machineists' Company, Boston.**

The chief article in this exhibit is a racing Swift with a Humber pattern frame, weighing but 20 pounds. A road wheel which is shown has the same lines and strips to 30 pounds. A geared ordinary, with a Crypto gear, 66 inches, also attracts considerable attention. Besides these wheels, the Swift people show a neat ladies' machine and a so the Holbein and models C and D, which are too well known to need description. A number of parts of the Swift are on exhibition, as well as a bag for repair outfits. The stand is in charge of Charles Haigh and Charles Seymour, the latter of saddle fame.

**Stand No. 5.—Yost Manufacturing Company, Toledo, O.**

The house shows samples of its entire line, consisting of a gentlemen's road wheel, ladies' and boys', and boys' and girls' combination. The line is fitted with pneumatic tires, ball bearings all around, and is built throughout of steel and cold-drawn weldless steel tube. The latest lines have been adopted in their construction, and they have a distinctive feature in the shape of russet tires. Otherwise they have no distinctive feature, except that (in common with all manufactories) of being the best wheel ever made for the money. H. G. Campbell and C. F. Cope are in charge.

**Stand No. 6.—Norman Wheel Company, Philadelphia.**

A new comer in the cycle trade is the Norman, a 35 pound light roadster. This is model A. Beside it stands model B, a road racer of 30 pounds. The Norman front driver and the ladies Norman are also shown. The Umpire, a medium grade machine at 35 pounds, completes the line. W. A. Whitmore, formerly with Luburg, is in charge.

**Stand No. 7.—Smith Wheel Company, Washington.**

Shows the Dart in five styles, and has a neat exhibit. The Smith brothers and Mrs. W. E. Smith, the pioneer woman safety rider of America, are on hand. The Smith Wheel Company is using the Silverton self-closure pneumatic on all its wheels, which seem to be entirely up to date.

**Stand No. 8.—J. B. Rich Cycle Company, Philadelphia.**

This house makes an exhibit of Triumph cycles. It includes the Chicago, 24 and 40 pounds; Royal, 24 and 40 pounds; ladies', 32 pounds; geared ordinary, 30 and 35 pounds; geared, 36 to 45 pounds, and London Triumph, substantially the same as shown last year. The Rich company has made important progress during the past season, and the exhibit plainly shows its advancement. The exhibit also contains a 34-pound March, made by the March-Davis Cycle Company.

**Stand No. 9.—Common Sense Bicycle Company, Philadelphia.**

This exhibit consists of the various styles manufactured last season, together with the new pattern Humber frame prepared for the '93 market. C. F. Cope is on hand.

**Stand No. 10.—Howard A. Smith & Co., Newark, N. J.**

Howard A. Smith was in charge of the stand, assisted by L. C. Crondal and C. Walter Heath. Their exhibit consists of the now well-known line of Excelsiors, and the Prince, a splendid medium grade wheel; also a very complete line of sundries, both domestic and imported, principal of which were cork handles, rims, bundle carriers, tire tape, adjustable cone wrenches, etc. A very distinctive feature of stand 10 is the festoons of cork handles and a railing made from rims and spokes of cork.

**Stands No. 11 to 14.—R. L. Coleman & Co., New York.**

These four stands are presided over by E. J. Day, George A. Pixley and Lewis Asmond. A very complete line of the Western Wheel Works' goods is shown, including the new Blackhawks. It was on one of these machines that J. W. Judge won a race at midnight, Dec. 31, from One Hundred and Tenth street to Tarrytown. Throughout, the line is much improved, and contains nineteen more styles than last season's. The output will be greatly increased this season, and 35,000, of all grades, is the figure set down by the concern. A thousand hands will be employed in making these wheels. The Blackhawk light roadster, weighing but thirty pounds and listing at \$135, is sure to prove a splendid wheel. It has

28-inch wheels, Western Wheel Works tires (which are, indeed, good), and is built of light, high-grade tubing. It has every improvement known in cycle construction.

The No. 2 Crescent is a 30-inch diamond pneumatic weighing 43 pounds, and is fitted with brake, guards, etc. It is also fitted with the firm's own tires, and is made in a perfect manner.

The Juno No. 2 is a ladies' pneumatic listing at \$90, having 28-inch wheels and all improvements. The Rob Roy No. 4 is an \$85 diamond frame, with pneumatic tires on 28-inch wheels. Rob Roy No. 2, pneumatic, sells for \$65 and has 26-inch wheels; Combination Junior, No. 4, 26-inch wheels, \$65, pneumatics; Combination Junior, 24-inch wheels, \$50, pneumatics; Clinch, 24-inch wheels, \$50, pneumatics. The other wheels are mostly fitted with cushion tires.

**Stands Nos. 15, 16, 17, 18.—A. G. Spalding & Brother and Overman Wheel Company.**

These houses occupy these stands in partnership. The stands are on the corner of the center aisle, and are in charge of S. H. Bilyeu and G. H. Bolton. The five different models of Victors are shown, also the Credenda line. It includes the new Pacemaker Credenda and the Consort Credenda, the former with a Humber diamond frame, the latter with a Humber drop diamond. The new models are fitted with pneumatic tires only.

**Stands No. 19 to 22.—Raleigh Cycle Company, New York.**

Zimmy and his Raleigh—and his prizes, too—seemed to prove an attraction at the four stands occupied by the Raleigh company and J. T. Bailey & Co., the company's Philadelphia agents. The Jerseyman's pet racer was admired by all, and so was the stack of medals, cups, pieces of jewelry, etc. All the prizes won by Zimmerman—excepting the bulky articles, such as horses, buggies, pianos—were exhibited, besides six styles of Raleighs. M. G. Geoli and Mr. Greer in charge, and Zimmerman was there, while Manager George S. Macdonald was in and about. The Raleigh exhibit was a most attractive one to the trade people as the general public.

**Stand No. 23.—Warwick Cycle Manufacturing Company, Springfield, Mass.**

The Warwick company shows four new models, all fitted with Warwick pneumatic tires; including a 21-pound road racer; 28-pound road racer; model B, a 30-pound road wheel, and a ladies' wheel weighing 34 pounds, all on; the Ghost, a light roadster, which is shown, weighs 27 pounds. In addition to the exhibit of wheels, which is complete in every detail, a fine showing is made by

the drop forgings in the rough, used in the construction of the various Warwicks.

**Stand No. 24.—Bretz & Curtis Manufacturing Company, Philadelphia.**

W. M. Perrett is in charge here, and has a neat exhibit. There are four patterns of Quadrants and a large line of Solid Comfort saddles shown. The full roadster has a Humber frame, 30-inch front and 28-inch rear wheels and weighs 36 pounds with guards and brake. The ladies' roadster is of a new design, light and strong, with 28-inch front and 26-inch rear wheels, weighing 32 pounds, all on. A special light\* roadster, of Humber frame, 28-inch wheels and weighing 30 pounds, is a handsome wheel. The racer resembles the light roadster, has 28-inch front and 26-inch rear wheels, and weighs 25 pounds.

A large line of saddles is shown, the roadster, for heavy riders; Scorchers, weighing 25 ounces; the ladies' and one for boys. Another novelty shown by the Bretz & Curtis Manufacturing Company, is a new idea of tool bag. This is of metal construction and made practically in the same shape as the old bags. The idea of the metal is to do away with the old way of using straps and buckles to get at their tools and oil can. As this bag is made, the cover snaps off and on with a single turn of the hand.

**Stand No. 25.—Stokes Manufacturing Company, Chicago.**

A stand that attracts universal admiration. The railing surrounding it is composed of Sterling wheels each attached to a separate post and free to revolve at any curious spectator's will. In the centre of the exhibit is a post ten feet in height from which is suspended an old-fashioned set of steel-yards, on which is hung from time to time one of the models of Sterling wheels, that there may be no mistake

STERLING SPECIAL.

about the weights. Three Sterling specials are shown, one full coppered, and most handsomely finished. Another has what are usually the bright parts plated to represent black steel. The third is black enameled with Sterling silver rims. These wheels weigh 27 pounds each. Two Sterlings of the double diamond variety, one nicked and the other enameled, are shown. All are fitted with M. & W. tires. C. F. Stokes, C. W. Dickerson, William Herrick and L. A. Howell are present. An illustrated dictionary of cycling terms is being distributed. This is liberally illustrated by the incomparable Herrick and is serving its purpose, being quite a hit.

**Stand No. 26.—Buffalo Tricycle Company, Buffalo, N. Y.**

This stand is occupied jointly by the Buffalo Tricycle Company and H. C. Martin & Co., Buffalo. The first named concern shows a couple of samples of each of the Fleetwing, Envoy and Unique. The first named is a drop frame (convertible) machine, made in various sizes, of the best materials throughout and splendidly finished. The machines are made with 24, 26, 28 and 30-inch wheels, in cushion and pneumatics, the latter listing at \$60, \$70, \$95 and \$100, respectively. The Envoy is a diamond frame, Humber pattern machine with

24, 28 and 30-inch wheels and listing at \$60, \$95 and \$100. The Unique has a double diamond frame, made with 26, 28 and 30-inch wheels, listing at \$70, \$95 and \$100. The machines are finely finished and constructed, the spokes being swaged at both ends and having the threads rolled on. Mr. Martin shows the Buffalo light roadster and scorcher.

**Stand No. 27.—Stover Bicycle Manufacturing Company Freeport, Ill.**

The Stover exhibit, in charge of Vice President Wilcox and C. M. Bouggy, eastern traveler, consists of Thoroughbred Phoenix A and B, Phoenix, C and D, and the Ladies' Phoenix, Y and Z. The Freeport wheels will be fitted with G. & J. or Palmer tires exclusively this year.

**Stand No. 28.—A. M. Scheffey & Co., New York City.**

Scheffey & Co. have a nice stand, with A. M. Scheffey in charge. The exhibit consists of four Wynnewoods in two weights, all splendidly made and apparently good mounts. The Queen City is also shown in several styles.

**Stands No. 29, 30, 32.—Rouse, Hazard & Co., Peoria.**

Rouse, Hazard & Co.'s exhibit, although not entirely in shape, is one of the largest and most complete in the show. It adjoins the stand of the Rouse-Duryea Cycle Company, and the four booths are practically thrown together.

RUDGE NO. 1.

Fred Patee is in charge. The principal part of the exhibit consists of all the grades of Rudge cycles, including a neat racer and the No. 1 scorcher, made in the Rudge American branch factory at Peoria. There seems to be no difference between the American-made and the English-made wheel. The '93 pattern is considerably improved in design over that of '92, and has a general excellent appearance.

**Stand No. 31.—Rouse-Duryea Cycle Company, Peoria.**

The exhibit of Sylph spring frames, at this writing, is hardly in shape. A full line of the Sylph spring frames will be shown. There seems to be no change in the wheels for 1893 except in the matter of tires. The ladies' wheel now has 29-inch instead of 30-inch wheels, but the patterns and weights of the two spring frame machines, models A and B, remain unchanged. The company also shows a rigid frame scorcher of 30 pounds, with 28-inch wheels, and made with 18-gauge tubing throughout.

**Stand No. 35 and 36.—Remington Arms Company, New York.**

J. Zollinger is in charge of this splendid exhibit, which includes a light roadster, 31 pounds; roadster, 44 pounds; ladies' machine, 43 pounds. The wheels were fitted with New York Belting, Closure, Morgan & Wright and Bidwell tires and roller chains. Mannesmann tubing and Warwick hollow rims are used in the construction of these wheels. They are using very large gauge tubing, and both the light roadster and roadster have the crank hanger very high. The models they are showing are not Humber pattern, the Remington people say. The finishes of the wheels on exhibition are in black and red.

"Pop" Worden is expected here Saturday.

**Stand No. 37.—Charles Scott & Co., Philadelphia.**

This house has long been one of the most prominent builders of wagon wheels in the country. It makes a display of sulky wheels fitted with pneumatic tires. M. J. Kelly may be found in charge.

**Stand No. 38.—Crawford Manufacturing Company, Hagerstown, Md.**

R. H. Crawford is in charge of the exhibit, and shows three diamond frame wheels, one for boys all fitted with Greyhound tires.

**Stand No. 38.—Columbus Bicycle Company, Columbus, O.**

This company shows Columbus light roadster and Diamonds, and is represented by C. S. Merrill, general agent.

**Stands Nos. 39 and 40.—Schoverling, Daly & Gales, New York.**

The exhibit of Schoverling, Daly & Gales, in charge of Messrs. Wympier and Alvah, contains Humber, racers and roadsters from both factories. A special Humber was shown having the Dunlop silk tires. Holophote, Powell and Hammer lamps are also exhibited.

**Stand No. 41.—Hart Cycle Company, Philadelphia.**

This stand adjoins that of the Pope and Hartford companies and is conducted in conjunction with them. The display is combined with these two houses and the exhibit is a general one.

**Stand No. 42.—Hartford Cycle Company, Hartford, Conn.**

Marion is in charge of this neat exhibit, which contains six patterns of the Hartford—A and B, cushion tires; C and D, pneumatics; E and F, pneumatic (E also with 1 1/2-inch cushions). The last two are the latest product of the Hartford company. Pattern E is a diamond

THE HARTFORD.

frame listing at \$120 with 1 3/4-inch pneumatics, and \$110 with 1 1/2-inch cushions and having 28-inch wheels, ball bearings throughout, elliptical or round sprocket wheel, Elliott chain, 62-inch gear, weight 43 pounds.

Pattern F is the ladies' wheel, with the same specifications as in E excepting the weight. The frame is the loop pattern and the weight 45 pounds. The finish on both is black enamel and nickel.

**Stands Nos. 43-46.—Pope Manufacturing Company, Boston.**

The Pope company show models 30, 27, 28, 29, 31 and 32. Those in charge are Messrs. Anderson and Pope, Jr. The four spaces, which are practically in connection with the exhibit of the Hartford people, are well arranged in every detail. Besides the wheels, the Pope company shows samples of many of the parts, sections, tires, etc. In addition to this is a machine which shows the advantages of the elliptical sprocket wheel, which is fitted to all Columbias this year.

**Stand No. 47.—Lovell Arms Company, Boston.**

Manager Harvey is in charge and has

on hand a complete line of Lovell pneumatics and cushions. A new model wheel of the Humber pattern is shown, with steering head 9 3/4 inches; wheel base 44 inches; 28-inch rear and 30-inch front wheels, weighing 36 pounds. The same wheel is also shown striped and with light pneumatic tires, weighing about 30 pounds. This wheel is known as the light roadster. Manager Harvey states that a little later on, possibly not before the middle of the season, they will have a racer ready. This will be on the same lines as the other machines, but will probably weigh between 20 and 24 pounds. The ladies' wheel is a gem, one advantage being that there is sufficient room between the saddle and the handle bar to allow a person to mount without difficulty. The machine weighs 37 pounds, all on. Both wheels are 28-inch and are fitted with 1 3/4-inch tires. Besides this line, the Lovell people have a number of boys' and youths' safeties.

**Stand No. 48.—Eclipse Bicycle Manufacturing Company, Beaver Falls, Pa.**

The Eclipse people have a nice stand, but unfortunately have only one wheel on hand. Three styles will be shown, however, the road wheel, scorcher and a ladies' wheel. They will turn out a racer later.

**Stand No. 49.—Eagle Bicycle Manufacturing Company, Torrington, Conn.**

The Eagle company's exhibit shows a full line of Eagles, with a true elliptic racer with aluminum rims. The exhibit is in charge of F. E. Weaver and E. K. Tryon, whose wares are also shown in this space.

**Stand No. 50.—McKee & Harrington, New York.**

This firm has a complete line of Lyndhursts on exhibition. The racer, 21 pounds, has wood rims which are enameled in orange. The light roadster, 28 pounds has steel rims (wood if ordered), road tires, scorcher saddle, but no guards and brake. The roadster weighs 32 pounds and has brake, road saddle, steel rims and guards if desired. The lady Lyndhurst is something really fine, weighing but 32 pounds when fitted with wood rims, brake, guards and 1 3/4-inch tires. McKee & Harrington have adopted the lap braze on all their wheels, which enables them to make a light mount without losing strength. They also give the rider the option of wood rims. They have adopted the Mackintosh tire, but will give the riders what they desire on special order. W. H. Kirkpatrick is in charge of the space.

**Stand No. 51.—W. H. Hart, Jr., Philadelphia.**

This handsome stand is so arranged as to allow the wheels to revolve, producing a striking effect. Mr. Hart is in charge and shows a very neat and new style of home trainer, which will, no doubt, be kept going during the show.

**Stand No. 52.—Buffalo Wheel Company, Buffalo.**

The Buffalo Wheel Company shows a roadster, 38 pounds, all on; semi-racer,

MAID OF THE MIST.

27 pounds, with brake; racer, 24 pounds; a ladies' wheel, the Maid of the Mist, 30 pounds, all on, and a 21 pound racer built to order only. The roadster has a

diamond frame, long wheel base, hollow rims, cork handles, forgings throughout and Morgan & Wright tires. The racer is built on the same lines as the semi-racer, but is constructed of lighter stock, with stationary handle bar, hollow rims, hollow cranks, and rat trap pedals. The ladies' wheel combines all the features desired to make a light, strong and graceful machine. Brinker has charge of this excellent exhibit.

**Stand No. 53.—Monarch Cycle Company, Chicago.**

This western concern is well represented by L. M. Richardson and C. C. Mead, of Chicago, and the C. W. Dalsen Cycle Company, the local agents. Four machines are shown, a road racer weighing 32 pounds, a ladies' wheel, 35 pounds, roadster model A, 41 pounds; roadster model B, 37 pounds. The ladies' wheel has a double loop frame and the samples are finished in gold instead of the usual nickel, and it is possible that the company will shortly adopt this style of finish.

**Stand No. 53 1-2.—Hilliard Cyclometer Company, Philadelphia.**

The exhibit is far from complete, but Messrs. Hilliard and Wise, who are in charge, show a very complete line of cyclometers, including one weighing but ten ounces.

**Stand No. 54.—Ames & Frost Manufacturing Company, Chicago.**

This exhibit is resplendent in Chicago's municipal color, terra cotta and white. The tubular railing surrounding it is handsomely enameled in these colors, and in each corner a post of the same material rises ten feet in height, from which many gay signs are stretched. The company has but one space, and this is fitted as befits it. The carpets match the general decorations in color and magnificence. Five of the regular models, a military cycle and a set of Imperial sulky attachments are shown. The Imperial roadster is enameled black. This wheel weighs 39 pounds, all on. The same model, stripped and full copper plated, weighs 35 pounds. This is the scorcher. The track racer, weighing 24 pounds, is greatly admired. The ladies', model B, is full nickeled and weighs 38 pounds. Then there is the road racer, 28 pounds. Full sets of forgings, rough and finished, display the real excellence of the wheels. A new dust cap for ball bearings is shown among the parts. James Josephi and W. E. King are in charge.

**Stands Nos. 55, 57 and 59.—Gormully & Jeffery Manufacturing Company, Chicago.**

Messrs. Smith, Wells and McWade are in charge of the G. & J. exhibit, which is very complete. It includes a Rambler racer, weighing 28 pounds, having a perfect diamond frame, fitted with G. & J. tires; Diamond Rambler No. 1, with pneumatic tires; diamond Rambler No. 2, with pneumatic tires; rigid frame diamond No. 3, pneumatic tires and brake, weighing 37 1-2 pounds, all on, with tool bag and road saddle; strips to 33 pounds; Diamond Rambler No. 4, similar to No. 3 but shorter, weighing 28 pounds, strips to 26 pounds, with racing tires; ladies' Rambler A, with pneumatic tires; ladies' Rambler B; combination Rambler; boys' Ideal Rambler and girls' Ideal Rambler, fitted with cushion tires. The G. & J. line of sundries is very complete and shows eight styles or lamps, including the Lustre, Arc, Brilliant, Rambler, Leader Nos. 1 and 2, Chicago Headlight Nos. 3 and 4; four styles of bells; three styles of saddles; tool bags, pouches, pumps, tourists' bags, luggage carriers, child's seats,

stands, locks, wrenches, clothing, etc., help to complete the excellent showing made by the Chicago firm.

**Stand No. 58.—H. A. Lozier & Company, Cleveland, Ohio.**

The Lozier stand was beautifully decorated and carpeted, having a quantity of rugs and all surrounded by handsome nickeled railings. The exhibit contained three No. 4 Clevelands, weighing 30 to 34 pounds; two No. 5 Clevelands, weighing 34 pounds, and also a

THE CLEVELAND.

racer. Besides the wheels, samples of Shelby tubing, forgings in the rough, rims, Cleveland tires and other parts were shown. The wheels were finished in various colors and were in charge of H. A. Lozier, Jr., and Messrs. Ensworth and Diamond.

**Stand No. 60.—Royal Cycle Works, Marshall, Mich.**

Considerable improvement is noticeable in the wheels of this concern. All the parts are shown separately. The machines shown consist of three Royal Limiteds in three different weights and finishes; two Royal light roadsters, with different finishes, one ladies' Royal and one special 19-pound racer. The company also exhibits a Royal Limited complete in every other respect, but with no finish whatever, which has very naturally attracted a great deal of attention and comment. The finish on these wheels causes much favorable comment. President Gorham and Secretary Weld are in charge.

**Stands Nos. 62 and 64.—Union Cycle Manufacturing Company, Boston.**

Messrs. Kirk Brown, Measure, Jr., and Tyler represent the Union company at stands 62-64, where they are

UNION P. D. Q.

buisly engaged, in arranging several Union wheels, principally the No. 3 and the P. D. Q. Another portion of the exhibit was the Riehle Brothers' testing machine for spokes, chains, rims, etc.

**Stands Nos. 63 and 64.—American Ormonde Cycle Company, New York.**

The Ormonde exhibit consists of a very complete line of sundries, a full Ormonde roadster, weighing 38 pounds; a light roadster, weighing 28 pounds; a front driver safety, two ladies' machines and a model D. The last three are all fitted with roller chains.

**Stands Nos. 66, 68 and 70.—Wilson, Myers & Co., New York City.**

This company, makers of the Liberty, show ten different machines, including a full roadster, 40 pounds; a light roadster, 35 pounds; scorcher, 29 and 31 pounds; and ladies' wheel, 33 and 37 pounds. A racer weighing but 11 3-4 pounds without tires is also shown, and as Bidwell has promised tires but two

pounds to the pair, the Liberty people think they will have about the lightest racing machine on the market. A 20-

FULL ROADSTER.

pound racer is also shown, besides the Ideal and Columbia Rubber Works tires. The construction in the Liberties seems to be of the best. The bottom bracket is hard, cylindrical tubing is used, and the fork connections are bolted from the inside and brazed. The racer is all steel, with 1 3-4 inch tires. The Liberty ex-

GODDESS.

hibit was tastefully arranged, lanterns showing the word "Liberty," being suspended across the front. The railing was composed of forks and wheels. This

BOGIE MAN.

will be used also at the exhibit at the World's Fair. Messrs. Bretz, Perkins, Hazleton, Robinson and Green are in attendance.

**Stand No. 67.—Gendron Iron Wheel Company, Toledo, O.**

The Gendron exhibit consists of a diamond frame safety with 30 inch front and 28-inch rear wheels; a ladies' machine with 28-inch rear wheels, a double diamond frame with 26-inch wheels, and also a full line of sundries. In addition, a sulky is shown fitted with 1 1-2 inch cushion tires on 54-inch wheels. The company is represented by E. T. Valient, Peter Gendron and J. F. Vogel.

**Stands No. 69 and 71.—Sercombe-Bolte Manufacturing Company, Milwaukee.**

In the two spaces mentioned the Sercombe-Bolte Manufacturing Company exhibits its full roadster, 35 pounds; light roadster, 31 pounds; ladies' Telegram, 33 pounds; also a full nickled ladies' Telegram; Chainless Telegram, (diamond frame) 35 pounds; Lightning Messenger racer, 27 pounds and the special Sanger racer, 24 pounds. In addition to these machines the company shows sections of its new Telegram (clinch) pneumatic tire and "silver rims," which are fitted to all its machines with the exception of the Sanger racer and the Lightning Messenger racer, which are fitted with light racing tires. Samples of frames, enameled and bare, to show the workmanship and material and the different colors of enamel, including

green, yellow, red and wine color, are also shown.

Then samples of every part of the machines are exhibited, finished and unfinished, to show just what material and workmanship enter into their construction. Five different styles of saddles, including a three-spring saddle which weighs 28 ounces, are exhibited.

Perhaps the most interesting part of this exhibit is a machine for measuring the different sizes of balls used in the Telegram cycles. The workmanship of this machine is so delicate that with it a hair can be measured. The company also makes a special feature of exhibiting its pneumatic sulkies, of which it has several designs. Messrs. Sercombe and Seward arrived to-night and F. S. Fox is here also.

**Stand No. 72.—W. H. Wilhelm & Company, Reading, Pa.**

This firm shows its regular road wheel, the Reading Flyer, weighing 36 pounds all on; Humber pattern frame, Solid Comfort saddle, drop bars, 28-inch wheels and 1 3-4-inch tires. The road racer is a 32-pound wheel, all finished in nickel except the frames. The racer weighs 25 pounds, has 28-inch wheels and 1 5-8-inch Morgan & Wright tires. These wheels have 11 1-2-inch ball head, and the ladies and Junior Flyer have 9-inch ball head. The ladies' wheel weighs 37 pounds and is built on the double tube straight line order. The Junior is a 26-inch boys' pneumatic. All the wheels are built on the same lines and list as follows: Flyer, \$115; road racer, \$115; ladies', \$115; racer, \$125; Junior, \$65.

**Stand No. 73.—Parkhurst & Wilkinson and the Garford Manufacturing Company, Chicago.**

The former firm arranges an exhibit of forgings, chains, rims, forks and tubings, parts and Hartford Rubber Company's goods very artistically. The booth is prettily decorated with evergreen and cork. The saddles have not arrived, but the Garford exhibit will contain fifteen saddles of different designs. The complete list includes twenty-two designs.

**Stands Nos. 74 to 77.—George R. Bidwell Cycle Company, New York.**

This is a house which seems determined at all times to be among the leaders at exhibition times, and its display to-day is no exception. Samples of its entire line are shown, but many of them, particularly the St. Nicholas line, have been already described in the REFEREE.

The Tourist is by no means a novelty, but the '93 model differs from the '92 in having a longer wheel base and a longer steering head, while the saddle post tube is almost straight, making a frame, practically Humber pattern. The full line comprises the Roadster, the Light Roadster and Ladies'. The Roadster weighs 40 pounds, with 30-inch wheels and 1 3-4-inch tire to the front and 2-inch to the rear wheel. The Light Roadster, stripped of guards and brake parts, weighs 34 pounds, 28-inch wheels and 1 3-4-inch tires. The ladies' Tourist is made with U frame, 28-inch wheels, 1 3-4-inch tires and weighs 39 pounds. All list at \$150.

A cyclometer of new pattern, improved as the result of two seasons' experience, is shown. The company believes it perfection. List, \$10. It was intended to have a tire-making exhibit, but as yet it has not been arranged. Secretary Loucks has charge of the stands.

**Stand No. 78.—New York Cycle Company, New York.**

This exhibit is in charge of S. H. Ellis,

and comprises a line of six different styles of machine and the New York saddle.

**Stand No. 79.—The Ariel Cycle Manufacturing Company, Goshen, Ind.**

Here is shown a geared ordinary of home manufacture, models C and D Ariel and a ladies' machine, the Titiana. The model D is the leader for '96 and has the Humber pattern frame, with 10 1-2 inch head. It has 28-inch wheels, Warwick rims, 64-inch gear, and lists at \$150. A wheel is shown fitted with elliptical sprockets.

**Stand No. 81.—Whitten, Godding & Co., Providence, and Philadelphia Drop Forging Company.**

This exhibit, which is in charge of Mr. Whitten, consists of a very complete line of sample forgings of the Philadelphia concern, and also forgings, parts and sundries of all kinds by the Providence house.

**Stand No. 82.—Premier Cycle Company, New York.**

The Premier exhibit is far from being ready, but promises to be elaborate. It will consist of five styles of machines, an electric lamp weighing but 24 ounces, and a line of Lucas' oil lamps and other sundries, and will be in charge of Harry C. Wheeler and E. S. Dayton. President Johnson is expected next week. The machines to be shown are as follows: A helical tube road racer, weighing 26 pounds; helical tube roadster, 30 pounds, with brake and mud guards; weldless tube roadster, 38 pounds; helical tube racer, 18 1-2 pounds, the frame of which weighs 3 1-2 pounds, and a ladies' machine, 30 pounds, complete with brake, guards and chain case. All the machines are fitted with Dunlop detachable tires, and list, respectively, at \$150, \$150, \$115, \$160 and \$150.

**Stand No. 83.—American Dunlop Detachable Tire Company.**

A fine line of the old and new style Dunlop tires will be shown as soon as the exhibit is complete. Alfred and Har- Harvey (Jr.) Du Cros will be in charge. The two young Irish gentlemen, with A. Halroyd and an assistant, will soon be busy giving illustrations of attaching, detaching and repairing the new Dunlop tire.

**Stand No. 84.—C. D. Hill Cycle Company, Chicago.**

The stand is hardly ready. It is to be handsomely decorated and carpeted. The railings are brightly nickeled and enameled, the exhibits of the New York Belting & Packing Company and American Dunlop Company on either side being surrounded by a similar railing. Four machines are shown—including model A, standard finish, all on 36 pounds and model B, stripped to 32 pounds, full nickeled. Another of the same model, of polished steel and unbrazed, is shown. This machine has the pins only to hold it together, and can be taken apart in a few minutes. The road racer, weight 26 pounds, attracts much attention. All machines are fitted with Morgan & Wright pneumatic tires. A novelty in this exhibit is a long bar of tool steel, such as the parts are turned from, on which cups and other parts have been turned and finished up as if for the machine, but none of them detached from the bar.

**Stand No. 86.—E. C. Stearns & Co., Syracuse, N. Y.**

This exhibit is represented by C. A. Benjamin, F. A. Garrett and F. Howard Tuttle, and consists of a Stearns racer built on Humber lines, either with 28 and 30 inch wheels or two 30 inch

wheels; road scorchers, 32 pounds, and a model C, 38 pounds.

**Stand No. 87.—Anglo-American Iron & Metal Company, New York.**

The Anglo-American company's exhibit has an immense variety of materials used in cycle construction, in all conditions of finish. Rims, frames, ball heads, chains and small parts make up the major portions of the exhibit. It is the only concern in the show which has aluminum rims on exhibition. The stand is beautifully decorated and very complete in all details.

**Stand No. 88.—Singer & Co., Boston, and Wall & Boyer, Philadelphia**

The leader is a line after the Modele de Luxe. Of these there are the roadster, light roadster, ladies' and a racer. The first named has been remodeled since last season, the lines of the frame being like those of the Special Modele. To the lightness, strength and finish of these patterns they have devoted strict attention. They show a new pattern,

a marble slab, are all sizes of balls made by the company, from 2 5-8 inches down to 1-32 of an inch. The display is neatly gotten up and attracts considerable attention.

**Stand No. 93 to 95.—Elliott Hickory Cycle Company, Newton, Mass.**

Sterling Elliott is on hand. His company shows all the different finishes of its machines, and its new tubular handle bar and forks. The original Nancy Hanks sulky, as it is known, is shown, together with all the parts used in the construction of the Elliott sulky. Mr. Elliott says prospects are unusually bright. Many improvements are noted in the Hickory for 1893. The east railing of the exhibit is formed of Hickory trade marks, each four feet long. The first Hickory ever made and an old hickory boneshaker are displayed.

**Stand No. 96.—The Columbia Rubber Works Company, Akron, Ohio.**

This exhibit consists of the Palmer and Greyhound tires, various kinds of rub-

Next they show a 28-pound racer of the same model, which is a superb machine. A lady's model with a very full dress guard and ball bearings throughout, and also a boy's New Mail, diamond frame and ball head, which is certainly a very handsome machine, are also shown. The exhibit is tastefully arranged and is presented over by W. S. Atwell.

**Stand No. 98.—J. A. Hunt & Co., Westboro, Mass.**

Hunt & Co. exhibit a large line of the several styles of saddles for gentlemen's use in riding, scorching or racing saddles; a fine line of ladies' saddles, both in regular leather and pneumatic tops; also tool bags, toe clips, pedals and other sundries. They also show fourteen different styles of saddle tops, thirty-three styles of saddle springs and sixteen different sizes and styles of tool bags. The saddles are arranged in tiers and make a good exhibit.

**Stand Nos. 99 to 101.—McIntosh-Huntington Company, Cleveland.**

An attractive display and one in which the man who delights to ponder over the days of the g. o. o. is particularly interested, is this, inasmuch as it includes a number of Crypto geared ordinaries, including one said to be that on which the great Shorland won the 24-hour race at Herne Hill, and established a record unapproached up to that time. A number of other wheels were shown at Agricultural Hall in November. The gearing is shown and fully explained to interested inquirers. The McIntosh-Huntington Company is even more deeply interested in the Sunol, however, a wheel manufactured at the old Speedy factory, in Chicago, by a company com-

KING OF SCORCHERS.

posed mainly of people connected with the Cleveland house. The wheel has a gun metal finish and is a splendid wheel. It is made in four styles, comprising the track racer, weighing 25 pounds, the light roadster weighing 30 to 31 pounds, the full roadster weighing 35 to 36 pounds, and a ladies' wheel weighing 34 pounds. These wheels have many novel features, prominent among which are a new adjusting device, a removable sprocket wheel, and a gear case made after the company's own design. The King and Queen of Scorchers are shown, and for a medium grade the house has the Hercules, manufactured with 30, 26 and 24 inch wheels, all with cushion or pneumatic tires and diamond frames. Another wheel handled is the Stella, a combination, made in two sizes, with 26 and 28 inch wheels. A child's machine completes the list. Lucas' lamps and other sundries are shown.

**Stand No. 103.—Winton Bicycle Company, Cleveland, Ohio.**

Four patterns of the Winton, besides a triplet, were shown, as follows: Roadster, 40 pounds, all on; light roadster, 30 pounds; ladies', 38 pounds, all on; racer, 20 pounds.

**Stand No. 109.—Kalamazoo Cycle Company, Kalamazoo, Mich.**

H. M. Kindee represents this house and exhibits to advantage samples of all its products. Two novelties are shown, a carrier which does not fold and a mail carrier. The latter, should the system

similar in design to the Modele de Luxe, and of the same quality of material, but, having fewer specialties, the price will be less. The well-known Special Singer and Royal are included in their patterns at reduced prices.

The Miniature, ladies' Miniature and Intermediate are fitted with one-inch wired cushion tires, as last year, and the prices will be somewhat reduced. Singer & Co. have several patterns of pneumatic tires under trial. The Singer. Among other improvements we may mention the Singer steering lock, which has been simplified and altered in detail. The Singer detachable crank bracket and the Singer ball pedals they will continue to use. They have also patented a simple, neat and reliable detachable foot rest. A racing saddle weighing 1 1-2 pounds and many sundries were shown.

**Stand No. 89.—Simonds Rolling Machine Company, Fitchburg, Mass.**

At this exhibit, tastefully arranged on

bers and handles. J. C. Pierrez is in charge.

**Stand No. 97.—William Read & Sons, Boston.**

William Read & Sons exhibit a full line of their New Mails. They have brought out at \$125, with pneu-

NEW MAIL.

matic tires, a straight Humber diamond frame 36-pound wheel, which is right for a roadster, with an extra long ball head, and is a very taking machine. It already has received very heavy orders, and is sure to have a great season.

of mounting mail carriers on bicycles prevail, will be one of the most useful articles in the sundry line.

**Stand 109 a.—Red Star Manufacturing Company, New York.**

W. S. Thorn, Jr., was in charge of this exhibit of specialties, consisting of Red Star solid illuminant for bicycle lamps, Red Star chain lubricant and Red Star lubricating oil. Mr. Thorn was making contracts for future delivery.

**Stand No. 110.—Grand Rapids Cycle Company.**

L. T. Wilmarth, secretary of this company, is on hand with three styles of Clippers, and is arranging what will be a neat exhibit.

**Stand No. 110 1-2.—Niagara Machine Company, Buffalo.**

This exhibit consists of a full line of dust-proof pedals, and includes one weighing complete, with rubbers, about 15 ounces. The house is also making a light rat-trap for general and road use, weighing between 9 and 10 ounces, having foot plates made of drop forgings with the corners so braced as to make the pedal, according to the makers' claim, the stiffest rat-trap in the market. In addition to these, they show a very full line of pressed steel bearing cases and a line of steel balls, with specimens of the usual tests. The Capitol Manufacturing Company of Chicago also occupies this stand, and shows a complete line of wrenches, including the Acme, Acme Combination, Hercules and Hercules screw driver.

**Stand No. 112.—Derby Cycle Company, Chicago.**

J. L. Tounsley is representing the Derby company at the show and is exhibiting the Derby, model A, weighing 36 pounds; model C, scorchers, and a ladies' wheel are also shown.

**Stand No. 113.—Bradley Chainless Bicycle Company, Albany.**

A hand-made sample only is shown. As an attractive curiosity it is certainly

a success, but its qualities as a practical road machine have yet to be demonstrated. Nothing can be added to the description already published in the REFEREE.

**Stand No. 115.—New York Belting & Packing Company.**

The exhibit is not nearly completed, but the Burris-Michelin tire will be shown by having tires which can be taken apart, showing the method of operating. The company also shows two French wheels, three Humbers, and an American fitted with the Burris-Michelin tires to show how they look upon the wheel. Mr. Burris is arranging the exhibit. There will also be a neat exhibit of new Protection Strip (1893) and laced tires, together with pedals, handles, and other rubber goods made for the use of cyclists. There is also shown an electrical pump for inflating tires.

**Stand No. 117.—Peerless Manufacturing Company, Cleveland, O.**

W. A. Neff has charge of this exhibit, which consists of the Triangle, a high-grade pneumatic weighing thirty-six pounds, with drop frame and a perfect

truss, as shown in the cut. It has a 45-inch wheel base, 10-inch head, and the cranks are eight inches from the ground. It lists at \$150. Besides this,

THE TRIANGLE.

they show the America and Buckeye Junior, the former weighing 36 pounds and having a 43-inch wheel-base and a 10-inch head.

**Stand No. 120.—Rimington Bros. & Co., New York.**

This firm has a fine exhibit, embracing the Westwood Wheel Company's double hollow rims, Sanspareil patent dust-proof pedal, crank, and interchangeable sprocket wheels, Butler's XLNT, specially toughened brazed forks and patent Webb joint frames, besides bicycle fittings of almost every description. S. A. Rimington and W. H. Newman have charge of the stand.

**Stand No. 122.—Indianapolis Bicycle Manufacturing Company.**

So far the Indianapolis people have received nothing but trunks containing the various sample wheels and parts, and at the time of writing the exhibit has not been arranged.

**Stand No. 123 (a)—Warman & Hazelwood, Chicago.**

This exhibit is tastily fitted out, nothing gaudy or showy. The line includes nine wheels and attracts general attention. J. I. Warman and H. E. Laurie are in constant attendance. The machines shown are as follows: No. 2 Coventry Cross, standard finish, weighing 36 pounds, fitted with Morgan & Wright tires. No. 2 full roadster, Morgan & Wright tires, 40 pounds; No. 4, Coventry Cross, cushion tires, 39 pounds; No. 5, Coventry Cross, cushion tires, weighing 39 pounds, a little different in shape from No. 4; No. 12, Coventry Cross, Morgan & Wright tires, weight 38 pounds; No. 14, Coventry Cross, '93 Dunlop tires, enameled chocolate color and striped in gold; this is a diamond frame with long ball head, and weighs 36 pounds; No. 15, road racer, Morgan & Wright tires weight 32 pounds; No. 16, ladies' wheel, frame of novel construction, strength and beauty in every line. This is called the Lady Bird. It weighs 38 pounds. No. 17, geared ordinary, front driver safety, fitted with Boothroyd tires, weighing but 36 pounds.

**Stand No. 123 (b).—Morgan & Wright, Chicago.**

This exhibit occupies a corner of the stand of Warman & Hazelwood, and is in charge of F. E. Spooner. A tepee of tires and inflated tubes attracts no end of attention. The new racing tire, with its excellent tube and valve, is shown, and Spooner will book many contracts.

**Stand No. 124.—Keating Cycle Company and Philadelphia Cycle Company.**

The stand is occupied by these houses jointly, the latter named being the local agent of the former. Models C and D are shown and are much the same as last year. Model B is a road wheel of pretty lines.

**Stand No. 126.—Cushman & Denison, New York.**

Walter H. Hemming is in charge of

this exhibit, and is busy showing the good points of the Perfection pocket oiler, the Perfect pocket oiler holder, for carrying the oiler, and the Perfect pneumatic pump holder for carrying a pump on a bicycle.

**Stand No. 129.—Excelsior Chemical Company, Sandusky, O.**

A really good oil was shown at this stand, being made expressly for typewriters, bicycles, firearms, sewing machines, etc. It is claimed for it that it will remove rust from nickel, enamel and steel, and is an excellent article for cleaning parts.

**Stand No. 130.—Acme Bicycle Carriage Company, Newark, N. J.**

R. Chandler, in charge of this exhibit, shows the Acme bicycle carriage, a most excellent stand. Several stands are shown enameled in plain and fancy colors. Several firms had all their wheels on these stands. The stand is on castors,

ples of the Druntless—a 22-pound racing wheel, packed in a traveling case; a 30-

TOLEDO RACER.

pound scorchers; 38-pound roadster, and a 40-pound ladies' wheel.

*The Newspaper People.*

It is a mighty small specimen of a cycling journal which is not represented. Some of them feel that the show committee should have furnished suitable press quarters free of charge, but they are here just the same. Our esteemed and enterprising contemporary, the *Bearings*, will no doubt speak for itself

is light and easily adjustable and is certainly a desirable article, particularly for home use.

**Stand No. 153.—Lloyd & Co.**

A. G. Powell, manager, is in charge of this exhibit, which contains a full line of Hickory ball bearings and Pennsylvania cycles. In addition to these they show a new home trainer and a complete line of Hilliard lamps, saddles and bells.

**Stand No. 155.—Marble Cycle Manufacturing Company, Plymouth, Ind.**

The exhibit is far from ready. George K. Barrett and W. B. Young are expected every moment to arrange the

MARBLE RACER.

stand, which will contain a full line of Svalleys and the new Marble racer, with handle bar attached to the fork crown, as shown in the cut herewith.

**Stand F (exit).—Rochester Cycle Manufacturing Company, Rochester N. Y.**

This is the only stand not in the main building, but its exhibit was of such a complete character that it attracted many admirers. President Kenfield was in charge and showed the scorchers, roadster, racer, and also Nos. 1 and 2 Rochester. In addition he had on exhibition a number of sulky wheels, various parts used in the construction of his wheels and a full nickel scorchers. The Rochester detachable sprockets were exhibited with considerable pride by Mr. Kenfield.

*The Toledo Exhibit.*

C. T. Buchanan and C. H. Melik, for the Toledo Bicycle Company, show sam-

—as usual. "The solid paper of the trade" is here apologizing for its backwardness at Christmas time, but preparing for a mighty scoop on its western contemporaries! Crowther's home is stand 94, and he is in his element, of course. Happily his stand is far enough removed to be out of hearing of the fu-sy little man whom F. P. P. so delights to honor. Frank Egan, editor of *Sporting Life* ex-apostle of purity, and a good many other things, is also to be seen, heavily armed and under police protection. Then there are Dimon of *Cycling*, Lewis of the *American Wheelman* and "representatives" and correspondents galore.

*Notes.*

The Simonds Rolling Machine Company of Fitchburg, Mass., is very busy now filling orders for 1893. Its works are run every night until 9 o'clock. It already has orders for nearly 20,000,000 balls and a great many other bicycle parts. It has just made a special lot of balls for the Sercombe-Bolte Manufacturing Company of Milwaukee, Wis., which Sercombe-Bolte Manufacturing Company is exhibiting at the show.

The McCune Cycle Company, of Everett, Mass., had a sample of each of its wheels on hand.

The New Departure Bell Company, of Bristol, Conn., shows samples of its bells.

Loyd, Read & Co., Coventry, have on exhibition several styles of Overstones.

Guest & Barrow, Birmingham, Eng., are represented by Richard Cadbury.

*Singer & Co's. Fine Line.*

Singer & Co., Boston, have an excellent line of wheels for 1893, including the special Modele de Luxe, which is shown in their advertisement, the regular Modele de Luxe and a pretty and well-made ladies' wheel. We show a cut of the ladies' wheel, which has two 26-inch wheels instead of 26-inch front and 28-inch rear; geared to 53 or 54. It is called the Modele de Luxe, and has every improvement known. They are exhibiting at the Philadelphia show, the report of which contains a good description of the Singer goods.

# AS IN A LOOKING GLASS

THUS WE SEE OUR IDEAL WHEEL FOR 1893. We claim to have reached the highest art in bicycle manufacturing known at the present time. Are we right? See: Our Majestic Light Roadster is all made from *steel drop forgings and weldless steel tubing*. *No castings*, scorch diamond frame, 10-in. steering head, 28-in. to both wheels, 36 butt-ended

tangent spokes, tied at intersections, brass nipples, ball bearings all around on hardened steel bushings, 3-16 in. balls at head, 1-4 in. to front wheel, 5-16 in. to crank shaft and rear wheel. Detachable 61-2 inch cranks, seamless tubing drooped handle bar, detachable lamp bracket, direct plunger brake.

adjustable foot rests. Mud guards to both wheels, round step, nickel parts over copper, gear 59 1-2 and 63-in., wheel base 44-in., dust proof pedals, handles cork and rubber; saddle light, graceful, comfortable, evenly balanced and easily adjusted, one screw does it all.

SECURE FOR YOURSELF NOW the Agency of the most Popular High Grade Wheel on the market.

## TWO MORE FAILURES.

Kirkwood, Miller & Co., and The T. D. Ganse Cycle Company Go Under.

The cycling trade and the general business public as well was greatly surprised to hear of the failure last week of the big Peoria bicycle and implement house of Kirkwood, Miller & Co. and the Chicago concern, the T. D. Ganse Cycle Company. Both were considered very strong financially, and enjoyed almost unlimited credit.

The Peoria house made a voluntary assignment Saturday afternoon to Isaac M. Edwards. The total amount of the liabilities as shown by the figures, exclusive of commission business, is \$160,858.68; while the assets figure up in the neighborhood of \$162,000. In the statement given out, A. Featherstone is caught for \$946.18, and Rouse, Hazard & Co. for \$2,078.80. The other creditors appear to be those in the wagon and farm implement line, though it would seem strange if some sundry or bicycle manufacturers were not caught. Some weeks ago it was whispered about that the firm was in bad financial straits, though it was thought that the bad weather would be overcome and the firm would be able to pass over the impending trouble. But the report got about and the members of the company reluctantly affixed their signatures to the assignment papers and the business went into liquidation.

The members of the firm are Hugh Kirkwood, of Cedar Rapids, Iowa; H. L. Miller, of Peoria, and Allan C. Rush, of Perry, Ill. The company commenced business in Peoria, with a branch store in Cedar Rapids, March 2, 1890. The trade was good and the business of the house increased with great rapidity, so much that it was extended and enlarged to a very considerable amount. A little over a year ago Allan C. Rush was admitted to the firm. He was understood by everybody to be a man of considerable wealth. He owned a fine farm in Adams county and a large ranch in New Mexico. The fact of his addition to the firm added to its commercial credit and its standing among the big business houses of the country.

Mr. Miller was the active man in the concern. He had said, when rumors were thick, that if he were given an opportunity he could make the house pay out, and said that they were in better financial condition than ever. Three representatives of the heaviest creditors looked over the books and were satisfied that everything would be all right if a little more time were given to it. But when it became rumored about that the house was shaky, the only thing to do was to protect all the creditors, none of them being preferred.

Mr. Miller says that if the creditors will give him a little time he could pay every dollar the firm owes and resume business at the old stand in better shape than ever. He has a good many friends in the business world who have assured him that they will do all they can to help him, among them a number of the creditors. Business has been splendid all the year, and he says there is enough in sight to keep them shipping out until next July. Under the circumstances it

is more than likely that the creditors will come to some understanding by which the business will be carried on under the assignee, and in time the firm may come out of the financial troubles in good shape.

The bicycle end of the business, at the end of the year just past, showed a clear profit of \$15,000, so that, while the failure is a bad one, it is good news for the cycle trade to know that the department did not cause the downfall, but rather showed a good profit.

## Ganse Fails for \$4,000.

The T. D. Ganse Cycle Company, which last year did a prosperous business in jobbing Reforms, Overstones, Keatings and Ariels, was compelled to close its doors with liabilities about \$4,000 and

enough capital to carry things through. L. Danziger, attorney for Rouse, Hazard & Co., saw Mr. Ganse and made an arrangement with him whereby the latter gave four notes for \$125 each, payable in April, May, June and July. Mr. Ganse had been considered very strong, was a good business man, and it seems to be the general opinion that he could have pulled through if given a little time.

## TRADE IN NEBRASKA.

Lincoln Besieged by Traveling Men From all Directions.

LINCOLN, Neb., Dec. 31.—The city has been full of traveling men of late, hurrying eastward to be at home during the holidays and attend the show. One of these was Fred Patee, en route home from Denver, where he booked some liberal orders. He stopped off here long enough to secure an order for Rudge, Sylph, Overland and Western Wheel Works good. He is the same good fellow and enterprising salesman as of old,

tifully finished, being striped in two colors, and looks like a seller.

C. C. Candy, manager of Overman's Denver branch, was here last week and left his agency again with the above concern. It is thought that cycling will be on a big boom here in '93, and preparations are being made for a big business next year.

"La Cote Mal Taile," the man with a name considerably longer than his coat tails, predicts a badly disorganized trade for '93. We, out here, from a local standpoint, differ with him, and I hope his ideas will prove to be incorrect.

Columbias will be represented in a local way for '93 by C. L. Shader, while E. R. Guthrie retains the Raumbler agency. Hooper and Marshall will sell the Phoenix.

J. Elmer Pratt, Gormully & Jeffery's pilgrim, writes that he is spending the holidays in San Antonio and Houston, Tex., praising the glorious climate, and grows enthusiastic over the fact that he wears two boutonniers a day which never saw a hot house.

SPOONBRAKE.

## RECENT ENGLISH INVENTIONS.

New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Nov. 9, give notice in the prescribed form of such opposition.]

No. 21,284, C.H. Pugh's "Improvements in the manufacture of the metallic rims of wheels for bicycles." Dec. 5, 1891.—According to one method of carrying out the invention, a shallow dish is raised by a stamping process from a disc of sheet metal, and a portion of the bottom is pierced out so as to form a ring having a short internal flange. By means of a series of bending or pressing operations, effected either by dies or rolls, about one-half of the ring is bent at right angles to the other part and parallel to the flange of the ring, so as thereby to form a trough-shaped ring having parallel sides. By further bending or shaping operations the bottom of the trough ring is made concave externally, and the sides of the trough ring bent inwards, so as to form a partly-made hollow ring having a nearly triangular figure in cross section, one of the bent flat sides projecting beyond the other flat side. The two flat sides of the partly-made rim are next shaped to form the convex inner face of the rim, and their marginal parts so bent as to be brought parallel to and in contact with one another and at right angles to the rim. These projecting parallel portions are situated out of the middle line of the rim, and from them a folded joint is made, one of the projecting parts being double the length of the other. The longer projecting part is by a series of bendings folded upon the shorter portion, and the double or folded part thus made is bent flat upon and lies at the middle of the convex or inner side of the rim. To the folded joint thus made at the inner convex side of the rim, the spokes of the wheel are fixed. Instead of making the folded joint at the middle of the inner convex side of the rim, it may be made along one side of the rim at the junction of the concave and convex sides of the rim. In this case a flat ring is used, nearly two-thirds of which are bent parallel to the other third part, so as to form a trough-shaped ring, the sides of the trough being of unequal length.

The marginal parts of these unequal sides of the trough are brought together so as to form a folded joint at one side of the rim substantially in the manner hereinbefore described with respect to the folded joint at the middle of the rim. The inner side of the rim has a convex figure given to it at an early stage of the manufacture, and the outer side of the rim has a concave figure given to it after the folded joint has been made. When the rim is made from two rings, the rings are stamped from sheet metal, and both are made concave, one being shallower than the other and having flat marginal parts. The last-named ring forms the outer side of the rim, and the other deeper ring forms the convex or inner side of the rim. When the shallow or outer rim is placed upon the deeper inner ring, the flat marginal parts of the former project beyond the edges of the latter, and by closing the said projecting mar-

Sketches from Stokes' "Dictionary of Cycle Terms," just out.

assets practically nothing, as near as could be learned in Mr. Ganse's absence to Marshall, Mich. A writ of attachment filed by Kingman & Co., of Peoria, on a claim of \$1,449, forced the concern to shut its doors. As nearly as could be ascertained the principal creditors and their claims are as follows:

Kingman & Co., Peoria, \$1,449.  
Rouse, Hazard & Co., Peoria, \$500.  
Ariel Cycle Company, Goshen, Ind., \$700.  
Morgan & Wright, Chicago, \$290.  
Reform Cycle Company, Coventry, (about) \$2,500.

It is said Mr. Ganse would give ninety days' time on goods when he only received sixty himself, and there was not

and has many friends in Lincoln.

George Collister, of racing board fame, now on the road for the Winton, was also here this week. He placed his agency with the Nebraska Cycle Company. This enterprising concern has grown very fast since beginning business in March last, and will work the states of Nebraska and Kansas for '93 on Rudge, Sylph, Overland, Winton, Cleveland and Niagara cycles. It will also do a big business, it says, on Western Wheel Works goods. In addition to these lines, it will market a wheel of its own, called the Lincoln. It is a Humber pattern machine, weighing 37 pounds, a well made and very symmetrical looking wheel, and will list at \$135. It is beau-

ginal parts upon the edges of the inner ring, the two rings are joined together and a hollow unbrazed rim formed. A number of modifications are shown, and the specification is accompanied by eighty-one drawings. The advantages of making a rim this way are obvious.

No. 17,912, A. T. Brown's "Improvements in the rims and tires of wheels especially applicable to velocipedes" [American detachable.], Oct. 7, 1892.—The object of this invention is to produce an elastic tire which can be readily applied to or removed from the rim, and which is securely locked upon the rim when in use. The rim (a) is provided with edge concavities (a1) and with a plane, or substantially plane, surface between said concavities, which constitutes the outer faces of the rim. A band of metal (B) is fitted loosely around the rim and is wide enough for its edges to overlap the inner edges of the concavities (a1). The tire (C) is constructed of rubber, with a canvas or cloth lining, with thickened tread and enlarged edges, as at c1, creating a neck (c11) adjacent to each enlargement. These enlargements are of the same form as the concavities in which they are seated. D is a pneumatic tube of any desired construction placed within the tire. At regular intervals the inner face of the rim is perforated, as at a11. At corresponding intervals the outer face of the rim is slotted transversely, the slots (m) being opposite or in line with the perforations. The band (B) is also provided with apertures (b1), so that when a bar (n) is inserted through a perforation and slot into one of the said apertures, then that portion of the band adjacent thereto can be pushed to either side, allowing one edge of the tire to be secured or released as desired, and the other edge may be operated on by shifting the band to the other side. When the tire is inserted and inflated it locks the band upon the tire, and the edges of the tire will be locked by the band. It is preferred to have the edges of the tire somewhat less in diameter than the concavities (a1) therefor in the rim, as they will then fit closer and more or less elastically.

No. 14,573, T. Pickin's "Improvements in and connected with tires for velocipedes," Aug. 12, 1892.—The object of this invention is to render air-cushioned tires for velocipedes less liable to collapse through puncture and easily repairable when injured. The improved tire consists of an

outer cover (B) having eyes (b) attached to the outer edges, which engage with the hooks (a) secured to the rim (A). The interior of the tire is closely packed with hollow, flexible, inflated or air-tight balls (C), in each of which the air is compressed by the packing operation. When the tire is filled with the hollow balls, a specially

formed tool is inserted between two balls and forces them apart, leaving room for another ball, which is inserted. This is repeated until the tire is hard enough, the outer cover remaining unsecured only for so much length as permits the tool to operate and a ball to be inserted. The hooks on one side of the rim are preferably attached in such a manner that they may be turned round something like bed hooks. The outer cover may be formed with a flap to cover the face of the rim, or a protected strip of pliable material may be fitted thereon, as shown at (a2).

#### The Steering of a Bicycle.

EDITOR REFEREE:—In your issue of Dec. 23 you comment unfavorably on an article in the *Scientific American*, in which the writer gave the steering of the front wheel as the reason why the cycle does not fall. I wrote one of the articles on that subject, and with all due respect must insist that you are in error. The one necessary and omnipresent action in keeping a cycle, wheel or hoop upright is the steering action. The forward motion assists when it exists, but it is not necessary. On the other hand, no amount of forward motion will maintain a cycle upright unless it be allowed to deviate from a straight line in order to right itself. To prove this, try locking your steering head so it will not turn, and you will find yourself dismounted instantly. Bicycle riders steer either the forward wheel or both of them; unicycle

riders steer the wheel they ride. Cast your eye along the track they make, or ask one about it. He may be unconscious of it, but steering is effected somehow. When not by handle bars it may be by the pressure of the knees against the frame or by the leaning of the body, or through still other causes, but in any and every case the wheel or wheels are deviated from a straight line to get under the center of gravity, and this is steering. That momentum is not necessary is proven by the fact that a Cyclone home-trainer can be ridden. In that case there is no forward motion or momentum, and to remain upright requires more delicate steering than ordinary, so much so that the average man fails unless he lets the machine steer itself. A hoop will stand on a fast-running belt although it have no forward motion, and consequently no momentum. It can be steered from one side to the other very readily, however. Try to roll a hoop down a straight but narrow groove, and see it fall at once. Momentum is a good thing, but it fails to save it.

CHARLES E. DURYEA.

#### Increased Facilities and Capital.

At a stockholders' meeting of the Sercombe-Bolte Manufacturing Company, a full report was made by the officers and the result of the year's business found extremely satisfactory. It was decided to double the original output of the plant, and the officers elected for the coming year were as follows: President, Casper M. Sanger; vice president, F. H. Bolte; secretary, P. H. Sercombe; treasurer, F. R. Pingree. The new directors for the coming year were selected as follows: Casper M. Sanger, P. H. Sercombe, W. H. Wolfe, F. H. Bolte and John S. George. With this new directory the company assumes unusual strength, as locally these gentlemen are of the high-

est standing in financial and business circles. The capital and facilities have been considerably increased, and material is on hand now for 2,500 wheels, so Mr. Sercombe says.

#### The Dunlop Tire Deal.

Of the deal between the Dunlop and Airtite tire companies, the Union Cycle Company writes us as follows; "We believe the sum which changed hands to secure the rights to be the largest ever paid for any patent whatsoever in connection with tires of bicycles. The Airtite Pneumatic Tire Company has gone out of business, having sold to the American Dunlop Pneumatic Tire Company the patent covering that form of tire. The Union Cycle Manufacturing Company has decided to call the pneumatic tire it intends to use for the '93 season the Airtite-Dunlop tire, to distinguish it from the English Dunlop. The Union company will hereafter and altogether use the Airtite Dunlop pneumatic tire."

#### Ames & Frost's New Valve.

The makers of the Imperial have just commenced the use of a new valve. It is very similar to that of Morgan & Wright, but is perhaps more easily taken apart. The valve, faced with rubber, is lodged against another ring of rubber by a spring, and when the cap is screwed on it holds it firmly in position, making it impossible for air to escape.

#### Increasing the Business.

The Anglo-American Iron & Metal Company, having completed extensive additions to its factory, and having recently acquired by purchase another large plant, is in a position to make exceptionally low prices on rims, mud guards, spokes, nipples, chains and other parts of every description required in cycle manufacture. It has just added

1893 CATALOGUES NOW READY.

some of the most powerful rim rolling machines at present in use, which enables it to employ the stiffest grade of bright cold rolled steel, which under other conditions could not be used. This makes a rim of almost spring temper, which is an assurance against buckle or breakage from any cause whatever. Chains, finished parts—such as hubs, pedals, bottom brackets and cranks—and a full line of 1893 Humber pattern forgings, made from the best crucible steel, are a few of the leading articles handled by the company.

#### Prince Wells' "Bear Trap."

The popular Kentucky agent, Prince Wells, dropped into the office of the REFEREE Saturday and showed an iron, spring frame contraption which he said was a bear trap, and which he intended setting for amateurs in his district. The

affair is entirely of metal, will retail for a dollar, and is a really good cycle stand. By a slight pressure of the foot the jaws are opened and the wheel run in. When the foot pressure is taken off the jaws hold the wheel securely.

#### Trade in New England.

One of the gay throng of travelers writes the REFEREE as follows from Portland, Me.:—"This is a prohibition town, and it is snowing like—you know! The only satisfaction is a cheap cigar, an easy conscience and knowing that trains still leave town. Business is good. Trade in Boston promises well for '93, but there is little, if any, news. Kirk Brown smiles quietly when other makers of tires are mentioned; Billy Atwell talks Philadelphia cycle show, and of course New Mails; Bode, he of '92 Speedy, large sales, etc., has, as usual, the wheel, the orders, and so on down the line. The Morgan & Wright style of tire has a very big hold; the entire trade talk show, and here and there a '93 sample is on view. Ned Oliver, with Garfords; Prince, of Columbia Rubber Works, Merrill, of Portland, and Bode and yours truly were looking things over."

#### Humber & Co.'s Profits.

The report of the directors of Humber & Co. for the year ending Sept. 30, states that the trade done in the past year was larger than in any previous year, and the net profits have been proportionately increased. The profits, after discharging working and management expenses, and making provision for bad and doubtful debts, amount to £20,663 9s., which, together with transfer fees and the balance brought forward from last year, make a total of £32,649 0s. 1d. The directors recommend interim dividend paid in June, 1892, £3,125; further dividend at the rate of 10 per cent. per annum, £6,250; bonus of 1 1/2 per cent. for the year, £1,875; to the general reserve fund, £10,000; to carry forward, £3,327 7s. 1d.

#### Lozier's House-Warming.

Wednesday evening of last week the Lozier Manufacturing Company of Toledo, O., gave a house-warming to its employes on the completion of the large annex building on Central avenue. The

affair, while informal, was well managed throughout and proved to be most enjoyable. The entire force of workmen was on hand. Speeches were made by manager Moore, Superintendent Burwell, President Lozier and Assistant Manager Raynor, a fine programme of instrumental and vocal music was given, dancing was enjoyed for several hours, and the company did ample justice to a substantial supper.

#### A Well Posted Woman.

Mrs. Fred T. Merrill, wife of the Portland, Ore., dealer, is about the best posted woman in the cycle trade. Mrs. Merrill knows the principal points of attraction to impress the would-be buyer, and can talk on the merits of every known wheel. She is an expert bookkeeper, can manage a store and sell more goods than the ordinary salesman.

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

488,549, support for umbrellas, etc., on bicycles, etc.; James Dugan, Bristol, Pa.; filed July 16, 1892.

488,603, bicycle; Levi M. Devore and Charles E. Forry, Freeport, Ill. Filed Oct. 26, 1891.

488,626, lamp for velocipedes; Augustine C. Davidson, London, Eng.; filed Jan. 21, 1891. Patented in England March 30, 1899.

488,670, attachment for rims of wheels; Preston Davies, London, Eng.; filed Oct. 25, 1892. Patented in France May 17, 1892, and in Belgium May 17, 1892.

488,745, velocipede; Annet Taitte, Leigneux, France; filed July 23, 1892.

488,852, tire for bicycles; Walter Swain and William Philipson, Astley Bridge, near Bolton, Eng.; filed July 7, 1892. Patented in England Jan. 11, 1893.

#### Chicago Trade in Brief.

G. H. Simons, of Kingman & Co., Peoria, was in Chicago this week.

Secretary L. T. Wilmarth, of the Grand Rapids Cycle Company, was in Chicago late last week.

F. W. Oolsen, of the Sunol Cycle Company, was in Chicago last week, whence he left for the cycle show.

F. Howard Tuttle, of E. C. Stearns & Co., Syracuse, left Chicago on Monday for Philadelphia and the show.

A score or more Chicago exhibitors at the cycle show left on Monday afternoon for Philadelphia over the Baltimore & Ohio road, reaching there at 9 o'clock Tuesday night.

Charles H. Sterner left on Tuesday for the south and west in the interest of Thorsen & Cassady, showing Warwicks and a complete line of Western Wheel Works machines.

The Quadrant Cycle Company will remove May 1 from 297 Wabash avenue to the large double store at 307 and 309 Wabash avenue. A riding school will be opened in the basement.

C. A. Stokes, manager of the Stokes Manufacturing Company's Denver branch, spent the holidays with his father, returning this week. He looks for a large trade next season.

Harry Hall, Jr., of the Raleigh Cycle Company, reached Chicago this week on his western trip, which will last until early next March. He placed the local agency for Raleigh cycles with the Marble Cycle Company, of this city.

H. C. Martin, of Buffalo, was in Chicago last week with samples of the Buffalo Wheel Company's and Buffalo Tricycle Company's lines. H. C. Martin & Co. control the output of the former company and handle Warwicks and Unions in Buffalo.

With but a few days to spend in Chicago, M. D. Rucker, of Humber & Co., of Coventry, Eng., was a busy man. Mr. Rucker left Chicago for Toronto, whence

he went to New York, leaving last week for home. The Humber agency remains with Montgomery Ward & Co., successors to the Humber Cycle Company.

The Peck & Green Hardware Company, West Washington street, Chicago, will soon show to the trade a cycle lock which is said to be about perfect. A patent has been applied for. Mr. Green, of the above firm, is the father of A. and O. E. Green, the lads who became so famous on western racing tracks last season under Chicago club colors.

#### General Trade Notes.

League meet, Denver and "Pikes Peak or bust" in '94.

The American Cyclist, beginning Jan. 15, will be issued semi-monthly.

The Shaw Cycle Company, Baltimore, is having two wheels built for its own trade.

Phelps & Dingle are after the American Ormonde Company for infringement.

the smallest lantern on the market, weighing less than any lamp, and is proving itself to be a great seller.

The Marriott Cycle Company, London, has been awarded two silver medals at the Kimberly exhibition—one for bicycles and another for tricycles.

The Anglo-American Company is showing an extraordinary rim with its patent lap brazing. This rim is made of 17-gauge steel and bears the weight of 250 pounds comfortably.

The REFEREE and all latest cycling papers, periodicals and hand books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

J. B. Vorich & Co., of Manchester, N. H., have decided to go into the cycle trade, and will carry a line of Hulbert Bros. & Co.'s wheels. F. Weston, the well-known traveler in the east for the latter firm, says that J. B. Vorich & Co. have the most complete and handsomest

NEW HOWE PATH RACER.

NEW HOWE LADIES'.

H. A. Nevill, representing J. K. Starley & Co., makers of the Rover, is in Chicago in the interest of his firm.

The recent six-day race at Edinburgh was won by Parks on the Ellwick machine. He covered 757 miles in 48 hours.

Mr. Peoli, of the George R. Bidwell Cycle Company's retail store (now Tinkham's) joined the Raleigh Cycle Company Jan. 1.

To those who don't know, it may be explained that "La Cote Mal Taile" means "tread on the tail of my coat," and is an Irish expression.

Schoverling, Daly & Gales are putting on the market a new lantern, called Horoscope, very small in size but a great light giver. It is of first quality, double double convex optical lens, and the cone and reflector are made of the very best burnished silver plate copper. This is

hardware store east of Chicago, and takes special pride in the fact that he induced the Manchester firm to enter the cycle trade.

The Brookes cycles are undoubtedly strictly high grade, and are certainly excelled by no other wheel; in fact, I consider the Brookes to be par excellence, and shall certainly recommend it to my friends."

The soldiers in the English army are required to carry handkerchiefs on which are printed instructions as to the construction and use of the rifle they use, together with much other useful and valuable information. It might not be a bad idea to get up some such a convenience for wheelmen. A map of the riding district might be printed in the center, and some points as to the care of the wheel and the rider be put on the margin. Of course it would necessarily have to be printed in "fast" colors.—Commercial Gazette.

# '93--CLEVELANDS--'93

CLEVELAND NO. 4.

## A FRESH START.

We are not going to fall back upon the good reputation the No. 4 made in '92. The new pattern is improved in many ways, and is to day the finest wheel on earth. We invite your close inspection. The wheels back up our statements.

## ARGUMENT IS USELESS

In trying to convince a man who has once ridden the **Cleveland Thread Tire** that another is just as good or better. No canvass for him. It makes a tire stiff and detracts from it resiliency.

CLEVELAND NO. 5.

## Generous Approval

Has been bestowed upon this wheel by experts. It is as fine as our other wheels; the same general specifications as the No. 4.

The Cat's Out.

## ST. PAUL'S POPULAR CLUB.

### *How the Organization Started and Prospered—The Officials.*

The St. Paul Cycle Club was originally organized as the Standard Bicycle Club of St. Paul, on the 24th of August, 1887, with a charter membership of seven active wheelmen, as follows: C. A. Roach; H. W. Borrowghs, Felix May, E.

adopted, being a wheel with raised spokes, with the usual league design and "St. Paul Cycle Club" engraved on a bar fastened to the upper part of the wheel. At the first annual meeting in May, '88, C. A. Roach was re-elected president. In August, owing to financial reasons, the club vacated its room and camped out, as it were, holding monthly meetings in the park band stands, but continuing to hold together as an organization.

Jan. 5, 1889, the present name, the St. Paul Cycle Club, was adopted. The second annual meeting, held in May of '89, showed a membership of twenty. F. L. Kellogg was then elected president, while at this time the club was still holding its meetings in the band stand of one of the city parks (much to the delight of the small boy).

August, '89, saw the club once more in possession of a club room of its own, having rented nicely furnished apartments in the McMurran block, corner Tenth and St. Peter streets, which were retained for one year.

At the third annual meeting in May, 1890, George W. Howard was elected president; K. F. Lott, vice-president; E. F. Hertz, treasurer; S. W. Whitney, secretary, and T. L. Bird, captain. The membership had now increased to thirty-five. In August, '90, the club was again without club rooms, this time for two months, and with money thus saved, furnished new rooms at 338 Robert street, the present location. The club first rented two rooms, one for use as a parlor and reading room and the other for a billiard room. The fourth annual meeting in May, '91, showed an advance in membership to forty. C. C. Townsend was elected president; A. K. Keishaw, vice-president; J. W. Loewenberg, secretary; A. Griesen, treasurer, and T. L. Bird, captain. The club soon after

rented another room and added a pool table to its list of fixtures.

At the fifth annual meeting, held in May of the present year, Dr. B. Cornwell was elected president; L. F. Newton, vice-president; D. W. Van Vleck, secretary; C. C. Townsend, treasurer, and T. L. Bird, captain. In August, O. M. Hokanson was elected secretary to fill the vacancy caused by VanVleck's resignation. About the time of the an-

num well supplied with apparatus, and a connecting bath room. The fixtures and accessories belonging to the club approximate the value of \$1,000.

The racing team, composed of B. B. Bird, F. L. Bird, W. J. Martin and D. W. Van Vleck, holds the ten-mile champion cup of the Twin Cities. The club gave its first annual twenty-five mile road race at Como Park July 4, having thirty entries and twenty-four starters,

O. M. HOKANSON.

F. Hertz, J. W. Haller, F. W. Bowe and E. F. Bierce. C. A. Roach was elected president. Joseph A. Wheelock, editor in chief of the *Pioneer Press*, was a visitor at the first meeting and was elected to honorary membership. It was decided to make the organization a league club and the application was dated Jan. 1, 1888, receiving the league number 191. In February of '88 the club decided to rent a room, having up to this time, no stated place of meeting. In April the present club badge was

nual meeting there was a great deal of dissention, and it looked as though the club would be broken up, but, thanks to the counsel and reasoning of the president and others, the club took on a new lease of life, the members took hold and made the club what it is to-day—the most flourishing and prosperous cycling club in the northwest.

The room now occupied consists of a parlor and reading room, supplied with various wheeling manazins, daily papers and other literature; a billiard room with pool and billiard tables; a gymna-

the first time men being club members.

At the present time the club has taken up skating to keep up the interest in out-door sport. A number of the members being speedy skaters, several races with valuable prizes to be competed for have been arranged for the season. Thursday evenings are reserved as social (or ladies') nights, the time being given up to progressive card parties, music, dancing, etc.

The growth of the club from a membership of forty, in May of '92 to one hundred in December has been due to

plications to act on. The next requirement seems to be a suitable track on which to hold races, then a club house of their own, and they will get them if hard work will do it.

Want the Names Published.

The New York Division board met last Friday evening, and upon motion it was resolved that all New York clubs which join the L. A. W. before July 1, 1893, with the entire membership will be given a rebate of 25 per cent, and all clubs which renew their entire active membership between April 1 and July 1, 1893, be given a similar rebate. This is to be confined to the amount received by the division.

It was resolved that the executive committee seek through some means to have the *Bulletin*, in printing the names of applicants to membership to the L. A. W., publish also the full address and club residence of the applicants. The object of this is to more clearly identify the proposed member and prevent the admission of any objectionable characters. The following delegates were chosen to represent the division at the National Assembly to be held at Philadelphia on Feb. 20: W. S. Bull, Buffalo; George S. Blackman, Dunkirk; T. G. Raisbeck, New York; Howard E. Raymond, Brooklyn; A. L. Warford, Troy; A. E. Hildeck, New York; D. T. Dillont, Brooklyn; Dr. E. M. Santee, Cortland; George W. Parkwood, Buffalo; J. E. Sherman, Watersdown; Charles F. Cosum, Poughkeepsie; J. L. Beck, Lockport; H. Gallien, Jr., Albany; Charles A. Sheehan, New York; H. Hingnell, Brooklyn; A. B. Gardner, Utica; A. B. Graves, Rochester; F. P. Share, Brooklyn; J. J. Woods, E. J. Shriver, New York.

Illinois Division Cyclers.

At the Illinois division annual meeting at the Grand Pacific Hotel on Thursday afternoon last, little of importance was done beyond naming the new committees and delegates to the national assembly. Chief Consul Gerould, Vice-Consul Billingsly and Secretary-Treasurer White were present, together with thirty-four district and club representatives. The receipts for the year were \$4,200. It was decided to open an office in Chicago during the next year, so that visiting league members can be entertained. It was also decided to give prizes as follows for new membership: To members getting 100 new members, \$50; fifty new members, \$25; twenty-five

new members, \$12.50, and ten new members, \$5.

The following committees to serve during the coming year were appointed:

- Executive F. W. Gerould, A. A. Billingsley, Fred Patee.
- Rules and regulations—C. F. Nail, F. H. Holmes, C. E. Randall.
- Road improvement—W. A. Counolly, R. M. Starr, F. W. Osborne.
- Hand book—C. L. Stein, E. Manley, W. F. Cameron.
- Racing board—A. A. Billingsley, G. S. Webb, R. D. Garden.
- Recruiting—B. F. White, J. S. Bagley.
- Delegates to national assembly—F. W. Gerould, A. A. Billingsly, B. F. White, T. L. Sloan, C. E. Randall, William Herrick, Fred Patee, G. S. Webb, F. H. Holmes, T. F. Sheridan, L. W. Conkling, J. M. Stimpson, J. S. Bagley, W. A. Connelly, F. W. Osborne, C. S. Robinson.

New Officers Elected.

The Massasoit Cycle Club of Springfield, Mass., held its annual meeting last week and elected officers for the ensuing year as follows: President, S. P. Burns; vice-president, G. H. Wing; secretary, F. W. King; treasurer, F. M. Coe; directors, L. O. Grant, E. A. Richmond, H. G. Camp, W. H. Prothow, W. J. Russell; house committee, C. A. L. Wright, F. E. Fletcher, B. E. Noble, W. E. Taylor, W. C. Nelson; captain, Frank Batty; first lieutenant, J. E. Coburn; second lieutenant, A. O. Etienne. The club also took steps to enter the league as a body, and C. A. L. Wright, G. H. Wing and S. P. Burns were appointed a committee to decide on a suitable club emblem. The organization has now sixty-eight members.

Is "Dead-Broke" Wiley Wolf?

The Philadelphia Press, a paper noted for its news accuracy, had last Monday the following sensational announcement in its Wilmington news:

Harry Gillard Wylie, the "dead broke" cyclist, who recently rode from New York to Chicago without spending a cent, is Henry Wolff, who recently flourished in this city as a bicycle dealer. S. Wallis Merrihew, of this city, visited Torrington, Conn., recently, and was introduced to the bicyclist, whom he immediately recognized as Wolff.

If this is so, Wylie's death in Chicago is assured, as Wolff is the agent who who made such a disreputable failure in Wilmington some time ago. S. Wallis Merrihew is a man of undoubted integrity. Things look black for "Dead Broke."

Combined Business With Pleasure.

The annual meeting of the board of officers of the Kansas division was held at Fort Scott on the evening of Dec. 28, and a considerable amount of business was transacted. Thomas Shaw of Wichita was elected delegate to the national assembly. The board also arranged to take a complete census of the wheelmen of the state for use in recruiting members, and work will be begun at once. After the adjournment the board went out to Chief Consul Harris' residence, where they looked on the campaign while it was white for an hour or so.

Elected New Officials.

On Saturday the Comrades C. C. of Buffalo held its annual election, and the following persons will have the controlling power for the coming year: President, John Roedel; vice-president, George Englehardt; financial secretary, Charles A. Denny; corresponding secretary, Charles Malzen; treasurer, William J. Maeder; captain, Nicholas Maeder; first lieutenant, John Schramm; second lieutenant, Louis Dellwart.

Chief Consul of Oregon.

its contractors, and in order to promote a new industry in Russia, the war department has issued an order, which has been approved by the imperial council, that no more bicycles or velocipedes intended for use in the army shall be purchased from foreign countries. A factory to manufacture those machines is now being established in St. Petersburg. Another plant has also been ordered in the St. Petersburg arsenal. Both of these will, of course, be under government control. There is also some talk of establishing an enormous import tax on bicycles in general, but the proposition is meeting with little favor, the government seeming to be reluctant to interfere with private trade.

#### Notice.

The Norman Wheel Company of Philadelphia, is manufacturing and jobbing the Norman bicycles, formerly known as the Sprinter. We have a special proposition to make to bicycle dealers and those who are handling bicycles as a side line. Catalogue and special terms by mail on application. Correspondence solicited. Norman A, light roadster; Norman B, road racer; Lady Norman; Norman front driver. Our Umpire safety is a medium grade and will be a "dark horse" for 1893. Stand No. 6 at cycle show.

NORMAN WHEEL COMPANY,  
 2,118-2,122 W. Susquehanna Ave.,  
 Philadelphia.—Adv.

#### The Bicycle Canopy Company.

W. De Arnold, traveling agent for the Bicycle Canopy Company of Detroit, will be in Philadelphia during the convention of the Associated Cycling Clubs of Philadelphia, who held their third annual exhibition in that city from Jan. 4 to 14, 1893, and will have a full line of sample copies on exhibition, showing the many ways in which this handy little specialty can be used.—Adv.

#### ON WINTER BICYCLING.

BY E. H. GODBOLD,

EDITOR OF "BICYCLING NEWS" IN "BOYS."

Of the many boys who now own bicycles, there are, I am afraid, a number who, when autumn arrives, put them away, just as they do their cricket bats and balls, until spring shall come again. But this is a mistake. If bicycling be healthy and invigorating in the summer—and that is generally allowed to be—it is ever so much more so in the winter. The condition of the roads, it may be, is not so favorable; but what of that? The only difference it makes is that the riding is harder work; but the exercise is just as good, and if the rider be content to go rather slower and not so far as in summer days, he will enjoy himself just as well.

Some boys, I know, are afraid that by riding in winter they will get their bicycles rusty, but this can easily be prevented. If, before going for a ride, they will smear all the bright parts with vaseline, they will find on their return home that the dirt rubs off quite easily, and they need not have the slightest fear that rust will attack the plating. A ride on a muddy road will, of course, render it necessary for the bicycle to be thoroughly cleaned afterwards; but this is not such a very unpleasant occupation for a winter's evening. In cleaning a machine one obtains a practical acquaintance with its many parts, and the way in which they are put together—useful knowledge, which may possibly be of the greatest value when some day an accident occurs on a lonely road, and, as the saying is, miles away from anywhere. Everybody who owns a bicycle should be thorough, acquainted with the details of its mechanism, and although I do not advise constantly and incessantly taking it to pieces, I do think

that much good may be done by occasionally overhauling and cleaning it in every part.

One result of riding in muddy weather will be that grit will find its way into the bearings of the machine. In order to clean these parts it is better not to undo them, but to fill the oil can with paraffin, and inject it into them. Next spin the wheels until they move quite freely, and all the paraffin has run out; then oil the bearings again with sperm, or some properly prepared oil.

If mud guards are fitted to the bicycle a boy need have no fear of getting his clothes dirty. His feet may get a little splashed, but this can be prevented if he will fasten to the bottom of the front mud guard a piece of leather or floor cloth, shaped like a triangle, with the apex cut off, and measuring at the base some six inches across. It can easily be secured to the mud guard with a small nut and bolt, which any cycle repairer will supply.

The one objection worthy of consideration which I have heard against bicycling all the year round is, that if a boy is always riding he is apt to become round shouldered. Now, if boys will only have their machines properly adjusted, with the handles high enough and the saddle low enough and not too far back, there is no need for them to stoop. The uncomfortable and cramped position which some riders assume is adopted purposely in imitation of racing men, who wish to avoid the wind and obtain a leverage for their hands. For the ordinary everyday rider it is as useless as it is absurd. In Coventry, where everyone, from the mayor of the city downward, is a cyclist, many boys, aye, and girls, too, ride backward and forward between their homes and schools all through the year, and a healthier lot of youngsters is not to be seen any-

where. I have met them on many a frosty morning with their faces glowing from the fresh air and exercise, and in striking contrast to the sombre-visaged youth "creeping like snails unwillingly to school." On the evidence of medical men, and from my own experience, I know that bicycling develops the lungs and widens both shoulders and chest.

The chief points to observe in winter bicycling are to wrap up well so as to run no risk of catching cold from a chill, to carry a mackintosh cape in case of rain, and, as I have already said, to ride neither too fast nor too far. The value of the bicycle there can be no denying. With its aid fresh scenes are visited and distances lessened. When there is a frost, the distant skating ground is brought within easy reach; and riding along a frost-bound road with skates strapped tightly to the handlebar of a well-kept, well-oiled machine is one of the jolliest sensations I know.

#### Wheelmen at the World's Fair.

The National Columbian United Wheelmen's Association in consultation with officers of the league, propose to care for the comfort and pleasure of wheelmen in Chicago during the fair.

Wheelmen must be taken care of, and the handsome four story and basement club building now being erected will provide pleasant and commodious quarters for them.

The club house will contain large parlors, reception and reading rooms, library, cafe, barber shop, bath, besides ample sleeping accommodations, large bicycle storage rooms, together with the repair shop. The building was started Nov. 26, to be completed March 15. Construction, brick, stone and iron.

The cafe will be conducted by two of Chicago's well-known wheelmen. The second, third and fourth floors will be

## Save Your Wheel

by oiling it properly with the best oil can in the world—the "PERFECT" POCKET OILER.

No leakage. Only a small quantity of oil at a stroke. Handsomely nickel plated. Price 25 cents each.

CUSHMAN & DENISON, 172 9th Ave., N. Y.

devoted to sleeping accommodations. Everything will be first-class and the rates reasonable. Charges for rooms will be one dollar and upward. Membership tickets costing \$5.25 entitle the holder to special rates for sleeping and eating accommodations, and the use of club rooms, together with storage of wheels.

Every cyclist taking memberships in advance is assured of sleeping accommodations in the club house, or in case of an overflow, rooms will be secured in the immediate vicinity and be under control of the association. The cyclist with his wheel will thus be the most independent of all the World's Fair visitors.

For further information write to L. D. Taylor, secretary, No. 959 West Madison street, Chicago, Ill.

The racing man's friend in winter.

A New Cycle Journal.

Denver's new cycling paper, the *Cycling West*, makes its bow to the western public this week. It is a bi-monthly paper. J. A. McGuire, formerly of the *Sports Afield* staff, is editor, and Louis Block assistant editor. This paper will aim to be the official organ of the west, and will publish to the cyclists of America the claims of Denver for the national meet in '94.

Columbia Wheelmen Officers.

The Columbia Wheelmen have elected the following officers for 1893: S. A.

Shelters, president; J. F. Lang, vice-president; A. Norman, secretary; J. Byrond, financial secretary; E. C. Bock, treasurer; George G. Gre-nburg, captain. John A. Erickson, the retiring president, refused to again run for office, having seen his club grow from a score to ten times that number, snugly ensconced in \$15,000 club house, all in three years.

As to the Weight of the James.

The James Cycle Company, 113 Adams street, makes a decidedly unique offer in reference to the advertised weights of its James road racer. It will pay to any one \$10 in gold upon the production of satisfactory evidence that he has seen a '92 James road racer, fitted with M. & W. light road tires, that exceeded 28 pounds when shipped from its salesroom. It is perfectly safe for the James people to make this offer, from the fact that they weigh each machine after it is set up complete, and all the riders, so far as have reported, find their mounts run nearer 27 than 28 pounds. It is upon the record earned by this 28-pound wheel that the James stands for its enviable reputation in this country. From the reports made to the company by riders of the James racers of the remarkable accidents through which their mounts have passed without a break, a very interesting volume could be compiled, and though the complete frames of these machines weigh less than five pounds each, the company is positive in saying that not one of them has ever been broken on the road or path. The wheels list as follows: Road racer, \$150; track racer, \$155; fitted with any make of pneumatic tires which can be attached to Warwick hollow rims.

## OFF FOR CASH PRIZES.

And now Thomas W. Eck and John S. Johnson and William A. Rhodes, and probably others are to visit the antipodes and show the Australians how amateurs ride amateur races. Then they are to come back to the land of the stars and stripes and show the Americans how amateurs ride professional races. At any rate it is said the trip will be made almost immediately in order to be there to compete in the last of the Australian tournaments, and to return to America in time for the World's Fair and fall tournaments.

The young men are at this moment on the verge of being declared suspended by the racing board, yet they propose to go to Australia, compete with professionals and for cash prizes, for they have nothing else in that country, and then return to America and compete in our amateur races. Probably these men realize that it would be more profitable to go to Australia and race for cash during our winter months, and take chances on being suspended or expelled and reinstated by the racing board. If these men do go to Australia they will ride for cash and will have their expenses paid, and not by the club which they represent, either. The moment they step foot on the boat for Australia is the time for the racing board to act.

## FAILURES IN THE TRADE.

In company with the year 1892, several cycle concerns in England and the United States ceased to exist. To be frank, it is a wonder there were so few failures toward the close of the year, a time which is apt to test the financial strength of a great many concerns, more particularly the new ones. In England a man went into the cycle business on a capital of less than a thousand dollars, yet was given credit by some of the very best makers, to a total sum of over \$2,500. In another case the liabilities footed up to nearly \$3,000, while the assets were a little over \$1,500, and in another case the liabilities were over \$2,000 and the assets less than \$1,000. In this country, fortunately, except in one or two instances, the liabilities have been less than the assets. We doubt if there exists a business wherein the credit system is so much abused as in the cycle trade. And it is a common remark that any man with enough capital to pay a month's rent of a store and buy a sign

board can enter the bicycle business on quite a grand scale. A man starts in business on practically no capital, he gets credit for sundries, stands and bicycles from the smaller makers—and the larger ones, too, frequently—who must sell to some one, and then he is a full-fledged dealer. He sells wheels on the installment plan, giving more time than he is allowed, and the result is he soon gets to the end of his rope. We have known of such cases—in some instances the projectors have had sufficient cheek to get through, while the others were forced to go out of business, to the creditor's sorrow.

The most prosperous concerns existing to-day are the most strict as to credit; the shaky ones are those that give almost unlimited time and without having fully looked into a man's standing in the world of finance. As long as business exists the credit system will be in vogue, but unless some makers and jobbers of bicycles alter their methods, the whole trade will be thrown into a sea of panic.

## A QUEER BIT OF BUSINESS.

H. Leeming, Chicago, Ill., L. A. W. 47,732, is hereby suspended pending an investigation of his amateur status.

The little item, as above, made its appearance in the last *Bulletin*, over Mr. Raymond's signature. It is now about generally known that Mr. Leeming is a professional—or, at least, he was before he was admitted to the league. We doubt if there is any great necessity for "an investigation of his amateur status," for he does not deny that he was at one time a professional and raced for cash, and we all know he has made it a part of his business to train racing men, and for a cash consideration. Leeming claims to have had no hand in the presentation of his name for membership and says he was about to write a letter of explanation, as far as he was concerned, when he received a notice of his suspension by telegraph. Munger, whose name appeared on the blank as endorsing Leeming's application, with that of George K. Barrett, also says he had nothing to do with the case. This being true "Colonel" Barrett must have been alone in perpetrating this huge joke on the league officials. While admitting the joke of the affair we cannot help feel that it was of too serious a nature to be allowed to pass unnoticed. The fact that the application went through without a single objection does not argue anything in favor of publishing the names; in fact, it argues against it. Leeming is by no means a common name, and if the address had been published it would have found an objector no sooner. If the name had been John Jones, James Smith or Charles Brown we could not have told to which particular member of these numerous families the name belonged; but as Leeming was known to be a prominent trainer, and therefore a professional, and the name was not common, there is no good reason why his name should not have been found and objected to. This happens to be a case where the publication of the address would do little good; but to offset this there are a hundred reasons why the addresses should be published. One of the reasons—and probably the best—is that over 90 per cent of the league members want the names published, and for evidence of this see the REFEREE's vote on another page.

## SIGNS OF THE TIMES.

The impression that the racing board is to take some action regarding the men who journeyed to Milwaukee at someone's else expense, seems to be growing—particularly among the men who went

on the trip. One well-known racing man, who feared the result that is sure to follow if the board does its duty, announced his intention of returning his share of the expense money in order that he could deny that any one, other than himself, had paid his expenses. In other words he admitted that he *had* received expense money—or his expenses had been paid—and he feared the racing board, knowing and admitting he was guilty. Another, who had gone to Milwaukee at the expense of others, but who did not ride and did not intend to do so, made inquiries as to his case and said he should also send back the amount of his expense if there was danger of his being suspended. Little by little the facts leak out. The rule on the expense question was so openly violated, merely because it was thought the racing rules would be changed, that there seemed to be no hesitancy, on the part of those most interested, in telling all about it. It would not be at all surprising to hear of some turning state's evidence in order to save their own precious necks from the wrath of the racing board.

## SUBURBAN MORALISTS.

It is a queer people they have at Oak Park, one of Chicago's west-side suburbs. They probably wouldn't object to a church raffle, but when the only bicycle club of the place announced a raffle for numerous articles, purchased or donated for the same, there was a vigorous protest on the part of numerous people who desire to pose as moralists—people who have nothing at interest in the club, too, except its welfare (?). The club people were considerate enough to abide by the wishes of the protestors, but if they had politely informed the missionaries of morality to mind their own business they would probably be more respected than they now are. A raffle may be one form of gambling, notwithstanding it be for the benefit of the club's finances, but it is certainly a harmless sort, and in more cases than one has been the means of putting a club squarely on its feet.

## WILL THEY SUCCEED?

One Mr. Pringle of Pittsburg has of late expressed his ideas quite freely on the pro-posed professional bicycle league. He claims to have, time and again, "watched interested thousands manifest their delight at the struggles of endurance and skill of bicycle riders. This was at a period when professional bicycle races were held in almost every city of note, and when remarkable young riders, professionals, were coming to the front every day; just when Lamb, Robb Lumsden and others of to-day were making their debut. At that time bicycle contests were considered among the very best in the world of sport and amusement." Then the gentleman from the region of smoke and gas says the people used to patronize professional bicycle races to a degree that made them profitable, but he does not think they would prove very successful nowadays, except for a short time. He also thinks that if the best racing talent is secured the events may draw for a time, owing to the novelty, but that they will soon fail, and the Chicago *Post* adds, "a most logical view of the situation."

If Mr. Pringle and the *Post* refer alone to the professional end of the case, we must heartily agree with them; if they aim their little say-sos at cycle racing in general, then we must disagree. Assuming the latter to be the case. Mr. Pringle evidently never attended a meet at Springfield, Mass., where over 20,000 people have intently watched amateur races; he is not aware that 20,000 is, in England, a common "gate." We doubt if such great crowds as attended the dedication

tournament at Chicago and the big meets at Hartford, Springfield and Buffalo—all amateur affairs—would turn out to see professional racing, even if the best talent were to be announced. Professionalism has lived and died—why go back to it? Amateurism has flourished and grown since the first days of cycling; has brought the sport and pastime to what it now is—why discredit it? Why take a dead man for a live one?

At this moment we hear cash prizes advocated—by whom? By those who expect to secure those prizes and by the professionals, who hope to revive a system of what has been and will be humbuggery. We admit that amateur races—so called—have been cursed with fraud of various kinds, but to no such extent as in the case of professionalism. Those who attend race meets and pay their admission fee, through the promoters, are the ones to say what kind of racing we shall have, and not those who compete.

W. W. WATTS is a gentleman residing in the state with a reputation for good whiskey, blue grass and negro haters—Kentucky, which is known as a southern state. It is probably on this account that he desires only "amateur white wheelmen" to become members of the league. We do not blame any one for wishing to select his associates, but as yet the whites living in the south have brought out the most flimsy arguments against admitting the colored men to league membership. The REFEREE expressed its opinion freely on this subject some time ago, and has heard no argument which would tend to alter its opinion. Probably local option would solve the problem.

*Good Roads* must be given credit for having produced a splendid "Illinois number," as it is called. It contains much of interest on the road improvement question, together with sketches of the leading workers. Among the good things within its covers may be mentioned the following: "Good Roads," by Governor Altgeld; "Hard Facts and Practical Points," D. R. Sperry; "What a Wheel Has Done," S. T. K. Prime; "What's the Use?" Rev. M. K. Whitney; "Illinois Roads and Road Material," J. H. Burnham; "Economic Importance of Good Roads," John M. Stahl; "Work of the Coming Year," F. W. Gerould.

AN esteemed contemporary is somewhat elated over the fact that a cycle maker has taken its whole front page for advertising space, and says it believes that never in the history of cycling has any maker ever paid so much for a single page as this maker did in this instance. We think we are safe in disputing this claim; we believe one maker has been known to pay fully ten times as much as our contemporary received for its front page. Be it known that a year ago the Pope Manufacturing Company paid the *Youth's Companion* \$2,500 for a single cover page of its Christmas edition.

THE *Evening Post's* New York correspondent who took Githens to task for having anything to do with Tom Eck, must have been well posted regarding cycle racing. Githens never had anything to do with Eck, nor Eck with Githens. Githens went to Milwaukee "on his own hook," did not have a trainer and seldom needs one.

WE are pleased to learn that Mr. Sheridan will be a candidate for re-election to the first vice-presidency of the league. At present there seems no likelihood of opposition to the re-election of the entire executive committee.

BIG VOTE ROLLING UP.

PROFESSIONALS AND PROMATEURS EVIDENTLY NOT WANTED.

What Some Prominent League Members Think—Opinions in Brief and at Length—Racing Men's Views —The Vote.

If the vote on the amateur question—as it appears in the REFEREE this week—could settle matters, there would be a decided change in the way racing is conducted, as well as in some matters relating to the management of league affairs. There seems to be a very decided opinion against allowing clubs and makers to pay racing men's expenses; in fact the vote stands more than two to one against it. But the majority seems willing to have pianos, teams, lots and even flat cars for prizes, though the majority is only by thirty-one.

The vote says that if the men do have their expenses paid and race for such prizes they must be classed as professionals, and although the consensus of opinion is against cash prizes, the professionals are the only ones who are to be allowed cash. Out of the 348 who have sent in their answers, nine had no opinion, while there were only fifteen misguided mortals—who did not want the address of league membership applicants published.

Interesting Short Answers.

A good idea may be obtained of the feeling of those who have answered the questions from the short answers which follow. They are either direct answers to the several questions or are marginal notes, and as many are from prominent people in league affairs they are worthy of consideration:

ANSWERING QUESTION NO. 2.

Prizes should not be limited in value or kind.—A. B. Choate, chief consul Minnesota division.

Yes; though I favor limiting values to \$150.—H. E. Harris, chief consul Kansas division.

The greater the prize the bigger inducement to remain amateurs.—J. B. Tolsen, Gadsden, Ala.

Yes; nothing is too good for them.—E. S. Gregory, secretary-treasurer Minnesota division.

Hard to draw the line.—T. W. Roberts, Poughkeepsie, N. Y.

Such men cannot be called amateurs in any true sense.—Charles S. Davis, ex-chief consul Kansas division.

No; the value of the prizes should be limited.—A. A. Billingsley, Springfield, Ill.

Yes; or flat cars.—J. W. Lewis, Marengo, Ia.

No; only medals or cups, etc., properly engraved.—Dr. T. N. McKee, Ford City, Pa.

Medals and diamonds of true value.—C. H. Stephens, Chicago.

QUESTION NO. 3.

Place them where you please, so they don't gamble.—J. W. Lewis, Marengo, Ia.

No professionals wanted.—W. A. Hughes, Greenfield, Ind.

Makers' amateurs are professionals.—J. B. Tolson, Gadsden, Ala.

Those whose expenses are paid class as professionals.—A. C. Groff, Sellersville, Pa.

Have nothing to do with professionals.—W. D. Baker, Selinsgrove, Pa.

Let them remain as they are.—L. B. Auner, Mobile, Ala.

No; such prizes should be offered for

| RESULT OF THE VOTE TO DATE OF JAN. 11:                                                                                                               |  |                  |                      |               |                   |                   |                   |  |  |

amateurs.—C. F. Cossun, Poughkeepsie, N. Y.

QUESTION NO. 4.

Should favor a term of probation before admission to league.—O. L. Fogle, Columbus, O.

Let them join if they wish, but the league should have nothing to do with their racing.—A. B. Choate, Minneapolis.

Yes; and expelled by racing board if crooked.—F. C. Williams, Corning, N. Y.

Every wheelman of good character should belong to the league.—F. W. Cunningham, Scotland, Conn.

Certainly; take them all in.—C. J. I. Stroherker, Zelenople, Pa.

We need all good men.—R. W. Evans, Hudson, N. Y.

Yes; with all benefits but racing.—Dr. T. N. McKee, Ford City, Pa.

QUESTION NO. 5.

No; not in a thousand years.—A. G. Batchelder, Buffalo, N. Y.

Cash prizes are just what the league wants to avoid, above all things.—L. R. Harris, Fort Scott, Kas.

All classes should receive cash.—C. B. Rogers, Milton, N. Y.

Professionals, over whom we have no jurisdiction.

No cash for league members.—John W. Thompson, Watkins, N. Y.

QUESTION NO. 6.

You bet your sweet life, and it is a shame not to do so.—L. R. Harris, Fort Scott, Kas.

No, sir; the Bulletin is not a free mailing list for other papers.—Robert Holm, St. Louis.

Certainly.—Burton F. White, secretary-treasurer Illinois division.

Yes! Yes!! YES!!!—R. L. Thompson, Muscatine, Ia.

By all means.—H. M. Baldwin, vice consul Wisconsin division.

We hope so—in the sweet bye-and-bye.—J. L. Sullivan, La Porte, Ind.

REFEREE would be better.—Eugene P. Kiene, Dubuque, Ia.

Most assuredly—as fully as possible.—A. A. Billingsley, Springfield, Ill.

Yes; in large cities.—R. W. Evans, Hudson, N. Y.

Yes—with a big YES.—S. B. Sander-son, Menominee, Mich.

QUESTION NO. 7.

It would, I think, be a wise provision, such mail vote to be taken by states or

divisions.—Charles S. Davis, Junction City, Kas.

Yes; many divisions are too poor to be represented at the national assemblies, etc.—H. E. Harris, Fort Scott, Kas.

Opinions in Detail

The REFEREE has been favored with some opinions at length on the several questions. They are printed in full:

WANTS PURE AMATEURS.

DAYTON, O., Jan. 6.—Editor REFEREE:—I am in favor of adhering strictly to the amateur definition. I do not believe in a middle class; there can be but two classes, amateur and professional. I believe in allowing a rider to have his expenses paid by his club, but not by any dealer or manufacturer. A rider caught taking bribes or expense money from a manufacturer or dealer should be declared a professional and expelled from the L. A. W. I do not believe in limiting the value of the prizes, but see no objection to having "such prizes as pianos, teams, lots, etc." I do object, most strenuously, however, to the giving of cash prizes.

"Shall professionals, provided they are otherwise acceptable, be admitted to league membership?" No, decidedly not! We are a league of amateurs, and as such have grown and prospered and elevated the sport to its present high standing. Shall we now, by allowing cash prizes and admitting professionals to our ranks, lose all we have gained? I say no! Regarding names of applicants in the Bulletin—the addresses should be published, by all means. Moreover, the league, in making a new contract for publishing their official matter, should make one with a live cycling paper, one that is up to the times. The present sheet is sadly behind time, and it is a poor excuse for a cycling paper. I sincerely hope that these things will be rectified in the near future.

ELMER H. HOUCK,

Representative at large, Ohio division.

FOR AMATEURS AND SIMPLE MEDALS.

PEKESKILL, N. Y., Jan. 5.—Editor REFEREE:—A long experience in boating and cycling has led me to this conclusion: The line between professionalism and amateurism can not be too broad nor too deep. I suppose that it would not be possible to persuade the L. A. W. to ignore racing altogether, to disband its racing board and let no man's business debar him from membership so long as he remained an American gentleman. This would wipe out the whole vexed question. Therefore, I say, let us separate the two classes beyond the possibility of mistake. Your true amateur races only for the pleasure he finds in competition and the glory of beating the other fellow. If the prizes he seeks have any intrinsic value, he finds himself at once upon the ground of the professional. Pecuniary aid from any one should not be prohibited, nor should any one connected with the sale or manufacture of bicycles be permitted to compel an amateur to race. These rules may seem severe, but so long as our grand old league admits none but amateurs to its membership, let their standing as such be as strong as our laws can make them. A long step in this direction would be taken if our racing board would refuse to sanction any races to which prizes other than simple medals were offered. There is no

disgrace in professionalism, as such, but sailing under false colors is always contemptible.

DUDLEY C. HAISTRONCK.

THINKS THE MAKERS SHOULD PAY.

COLUMBUS, O., Jan. 6.—Editor REFEREE:—It will be admitted by all that we must have racing. The question, then, is as to securing that which is best and most satisfactory to all concerned. Racing is expensive. A racing man must give much of his time to special training or he will never be heard from on the track. Unless he be a man of means and leisure he can not afford to do this. If he can not afford to do it, and has no no "backing," he must step down and out. To be sure, there are racing men who can afford to spend the time and money necessary, but there are very few of them. Only a small per centage of the racing men now on the path can afford to pay their own expenses. If it were possible to so manage and arrange that each man would bear his own expenses while training and attending race meets, the number of racing men would soon be very small. They would probably get to be as scarce as the traditional hen's teeth. If not, enough men can be found to do it or there will be no racing. Who shall do it? The club or the makers or both? Both are benefitted by the racing man; perhaps the makers more than the club. Why should they not pay for this benefit which they get? If the racing man insists on giving them something for nothing, it is his own affair, but if the maker or club pays the man's expenses for a part of the benefits received, why should any one object. Is it not right they should pay a share at least. Let the man race if he wants to. It does not matter who pays his bills, so that they are paid. He will race to win, and he will not be less a gentleman because some one else who is equally interested is helping to bear the expense. I am not in favor of cash prizes, at least for amateurs, but think they may consistently race for anything but cash. There should be no discrimination made between men who pay their own expenses and those who do not. Regarding the admission of professionals to the league, I think that there should be a provision made under which they could announce that they had decided to renounce professionalism, and, after a good long term of probation, they might be reinstated or admitted to the league.

OSCAR L. VOGLE.

BELIEVES IN SOLID CASH.

PHILADELPHIA, Jan. 5.—Editor REFEREE:—You are doing a good work in agitating league reforms. I never could discover why a difference should exist between cash and any other values in prizes. Cash is only of value because other things may be bought with it. If we are to race for glory, why not do so merely for the distinction of having the name without any prize? If a prize be offered, why not have it of some use? Cash is useful; a dozen pianos are of no use if we are not allowed to convert them into cash. What cyclist can play a dozen pianos at once?

L. A. W., 11,630.

From Johnson's Corners.

William Twinkle, Zim's ex-partner in the piano, grocery and bicycle business at Johnson's Corners, answers the REFEREE's questions as follows:

No. 1. A man who can get his speed down to

## VOTING BLANK.

Cut Out this Blank, and, After Filling In Your Replies, Mail to the Referee, Chicago.

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs? .....

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.? .....

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals? .....

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership? .....

No. 5. Shall cash prizes be awarded to any class, and if so, which? .....

No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin? .....

No. 7. Shall the constitution be so changed as to permit of a change by a mail vote? .....

I certify that I am a member of the League of American Wheelmen and I have not previously voted on the above questions.

Name.....

Address.....

League No. (if possible).....

A supply of these blanks will be forwarded to any league member on application.

merchantable point, where he can be of value to a bike maker, should have a reward in addition to, and of a more angelic character, than \$5 and cents. He should be put in a conservatory, where he can be sprouted for the growth of wings, which should be gilded or burnished with "cyclone" from time to time.

No. 2. Certainly; everything except cemetery lots, which the pure in heart and undefiled will never need anyhow.

No. 3. Don't want any middle class. Middlings and bran are always fed as soft food to cows and horses.

No. 4. To be sure. Howell, Stage, Lumsden, Willie Wood, Flannagan and Robb should be taken in and given a bath by the league trainer.

No. 5. Cash prizes should be given to all cycle editors, correspondents, track officials and the handicappers.

No. 6. No. Such a practice often embarrasses the league by being compelled to publish the full identity of the rank professionals making application. The names of those who second all applications should always be published.

No. 7. The con. should have the Mason and Dixon's line drawn through it, with a slave driver like Levee on one side and a picture of Justice on the other.

\* \* \*

#### What Racing Men Think.

Zimmerman's vote answers the questions as follows: No. 1, yes; 2, yes; 3, no; 4, yes; 5, as professionals; 6, yes; 7, yes.

Hoyland Smith believes in a middle class and cash prizes for professionals. To the other questions he says "yes."

Bilyeu is not in favor of men having their expenses paid, and if they do have them paid they should be made professionals.

H. C. Wheeler thinks cash prizes should be awarded to professionals, and answers yes to all other questions.

H. E. Laurie thinks expenses should be paid and does not believe in a middle class.

Julian P. Bliss thinks clubs alone should pay expenses, and thinks other matters should be left about as they are, except that he favors publishing the addresses.

#### Same Story, Different Form.

Colonel Pope recently attended a banquet at San Francisco, and in referring to the introduction of the pneumatic ball-bearing sulky on the race track, he told a story at the expense of a prominent eastern turfman who had been chosen by the owner of a speedy mare to drive her hitched to one of the new-fangled vehicles. She was in good form and might have won the race but for the clever trick of a boy attached to a rival stable. Approaching her driver in a confidential way, this fin-de-siècle boy said: "Say, you ain't in it. They've filled your hubs with shot." An investi-

gation followed, and sure enough, a whole handful of bright new buckshot was found and carefully removed by the silurian driver. Of course he lost the race and can't appreciate the advantage of ball bearings.

#### Will Form a Cycling Branch.

The Michigan Athletic Club members, with a tendency toward the winged wheel, expect soon to form a cycling club branch of that organization. They expect to elect officers, call runs and conduct regular meets on the club track, the club to allow them any reasonable amount for expenses, prizes, etc. Fifty or more wheelmen have signified their willingness to support a new club.

#### Something Frightful.

The REFEREE is in receipt of a literary gem from classic Hoosierdom, and takes the liberty of printing the same without the name:

*Bunkerhill Ind, Dec 24th 1892*  
*My dear Mr. Referee Publishing Co.*  
*I am please to give you*  
*Referee with paper send me*  
*I wish to read this Referee*  
*with paper you. I do not*  
*know this Referee one year*  
*you good are many*  
*different these B. G. G. G.*  
*and arise and Dr. G. G. G.*  
*in the mild states. The*  
*gentleman G. G. G. would*  
*like to learn to ride on this*  
*Saddle with B. G. G. G. G.*  
*Running. your very Respectful*  
*address to.* *Bunkerhill Ind.*  
*G. G. G. G.*

We have tried to translate it and have given it up. The spelling is fairly good, but what a jumble of words!

#### Buffalo to Have a New Cycle Paper.

Buffalo, it is said, will have a paper "devoted entirely to the wants of the wheelmen," and to be the official paper for them. It will be sent to them for a very small subscription price, so that it will reach every cyclist in the city, will be filled with all the news of the day and will be very crisp and full of "electric touch and go." The starter of the enterprise is Edward G. Brooks, and it will be named the *Cycling Record*, to be born about the first of February.

#### He's After Them.

Things begin to look dubious for the good and pure amateurs who have been traveling about the country winning prizes and having a good time at some one's else expense. The Chicago racing men are shivering for fear of being suddenly thrown under the suspension act. Hardly a day passes that at least one letter is not reclined by some of the men from Mr. Raymond. Keator, Bliss and Davis have each received notes from the chairman. This is one that Davis was favored with:

BROOKLYN, N. Y., Jan. 3, 1893.—(C. W. DAVIS, Chicago, Ill.)—DEAR SIR:—In the interest of the League of American Wheelmen I take the liberty of asking you the following questions, hoping you will favor me with answers to same:

1. Did you state to any one that your friend E. W. Ballard was out of regular work at the time he went south to ride the Rudge wheel, and that he was paid a salary while south?
2. Did you not state that you knew Messrs. J. S. Johnson and W. A. Rhodes to be receiving salaries in company with Ballard and for the same purpose?
3. In making above statements, to whom did you refer as paying salaries and expenses?
4. If the above statements were made by you, from whom was the information derived?
4. Did you hear a Mr. Leeming state in the Chicago club words to the effect that Mr. Harry Hillard ("Dead Broke") Wylie was going to return his expenses to Mr. Schroeder, so that when he had squared himself he could give the whole inside facts?

H. E. RAYMOND.

Others are apt to come in for a few questions regarding their actions during the past few months, inasmuch as several members of the racing board, and the chairman in particular, were at the Philadelphia show looking serious and talking with the different western men in darkened corners and secluded spots. The REFEREE's prediction: Something is going to drop.

\* \*

#### Buffalo's New Track Scheme.

The Associated Cycling Clubs of Buffalo, although not as yet a perfect organization, has shown to the public that it means business and will do all in its power to be beneficial to the interests of the wheelmen in all particulars. This organization at its first regular meeting, on the 17th, will elect its officers, appoint committees and be ready for all official business. As a preliminary work and also from the urgent necessity, it has taken up the scheme of establishing a track for the exclusive use of the wheelmen. The track used at present is a half-mile affair, constructed upon the inside of the mile track, and at best it is a make-shift. Besides, there is little or no inducement offered to clubs or associations, as the rent is fabulously high and the accommodations nothing; in fact, there are no accommodations. Temporary seats are necessary, also temporary stands for scorers and judges, and tents are made to do for the care of the men, and all these extras have to be provided by the lessee at his expense, thereby adding to the grand sum total, and it makes considerable more work and any amount of trouble.

Just what the association desires to see accomplished is: A stock company, with a capital of \$10,000, divided into 2,000 shares at \$5 per share; the controlling stock or shares purchased by the wheelmen of Buffalo; that the track and its management be under the control of the

company, the association shall not be financially interested; the development of a scheme consisting of the following outline: The park to consist of at least for a term of at least five years, with the privilege of purchasing at the expiration of the lease, if so desired. A track a third of a mile in extent to be built thereon with banked corners and made after specifications; the space inside the track be fitted to accommodate all forms of outdoor sports, such as foot ball, base ball, running races and lawn tennis; the erection of a grand stand to seat 5,000 and of bleaching boards to accommodate as many more; the interior of the grand stand to be divided into club rooms and refreshment hall; the club rooms are to be fitted up with lockers, shower baths and all the necessities for training and the proper care of the men at track events, these club rooms to be leased to the individual clubs of the city.

The location of the park be in the neighborhood of the belt line crossing on

The way a San Francisco youth coasts up hill

Main street, on account of ease of access by street and team lines, and as all the streets in that locality are finished with smooth pavement. The scheme is to be made a business affair and a profitable investment.

\* \*

#### To Visit the Antipodes.

According to a dispatch from Minneapolis, where John S. Johnson and T. W. Eck reside, these two, with Rhodes and possibly Singer, will go to Australia "to compete against Australians, their expenses to be defrayed by the Australians." [The italics are ours, and are inserted for the racing board's benefit.] The party will be taken in charge, on their arrival in Australia, by the Melbourne *Sporting Standard* and Melbourne Cycle Club. The trip will be made almost immediately, in order to be there to compete in the last of the Australian tournaments, and to return to America in time for the World's Fair and fall tournaments.

\* \*

#### Will Race Saturday.

A number of the lesser racing lights of New Orleans have arranged a road race, with four prizes, for Saturday of this week.

\* \*

#### Will Meet in Boston.

At a meeting of the special committee of the Massachusetts division it was voted to hold the division spring meet in Boston on Memorial day.

## FOR GOOD ROADS.

### *Rochester Making Great Efforts—What Governor Altgeld Says.*

ROCHESTER, Jan. 8. — Clanishly, as well as individually, the road improvement question, now more than threadbare with agitation, has been given a spasmodic boom in Rochester. The Chamber of Commerce, representing about 800 residents, has taken an active step toward the reform of country highways, and has several petitions in its rooms endorsing the efforts of the wheelmen. Hundreds of members have enrolled themselves as members of the national league for the improvement of roads, and have paid their entrance fee in support of their endorsement on paper.

The Monroe County supervisors, Gentlemen's Driving Association and other local organizations and legislative bodies have recently interested themselves. The following resolution was adopted in this city a few days ago:

RESOLVED, That it is the sense of the Monroe County Pomona Grange that the state appropriate a certain sum of money for the improvement of the country highways.

Editorially, the day subsequent, the *Times* had the following to say:

The grangers are waking up on the road question. All around us resolutions are being adopted in favor of legislation for better thoroughfares. If this can only be followed up by votes, while the iron is hot, then, indeed, will something grand have been accomplished, and the country will bless the day when the movement was first inaugurated.

Better roads are as much needed in the United States as better laws of any kind, and the day is coming when all hands will understand it, even though it does cost a few cents.

\* \* \*

### *Governor Brown for State Roads.*

Governor Brown of Rhode Island in a speech last week at the Olneyville merchants banquet, he said: "Besides the fact that

many of our towns can not properly take care of the highways, it is manifestly the duty of the state to look after the public roads, for the roads are used by the people in common, and should be paid for by the people in common. If the roads of Johnston were used only by the inhabitants of Johnston, it would be another thing, but the residents of adjoining towns use your highways for some of the heaviest and most damaging kinds of teaming. It is also unfair to expect you to keep your roads in first-class condition while those around you allow their roads to become sloughs. The old toll-gate system was a fairer method than our present one. I do not wish to anticipate any action of our worthy commissioners, but I hope that the legislature at the coming January session will take action toward the placing of the main highways of the state under the supervision of a state commissioner or board for construction and repairs.

\* \* \*

### *Governor Altgeld on Roads.*

Governor Altgeld, Illinois' new chief executive, delivered his inaugural address Tuesday last, and on the subject of roads he said: "While our state has developed in every other respect, we have made no progress in the matter of roads. We are in this regard almost where we were half a century ago, so that for a number of months in the year our roads are almost impassable. The loss and inconvenience of this falls most heavily on our agricultural communities. Not only is the farmer subjected to a heavy loss in the wear and tear of his team, but he is frequently prevented from availing himself of favorable markets by the impassability of the roads. The state should again take up the subject of internal improvements and adopt a policy that will tend to the building of good

roads in every county in the state—roads that can be traveled every day in the year. As the railroads do all the carrying for long distances, wagon roads are, to a great extent, a local matter in each county. This being so, the roads will not need to be so wide, and can, therefore, be more cheaply built than would otherwise be possible. It is also probable that some of the convicts of our penitentiaries could be used to prepare material for the building of roads."

### *The Cleveland Wheel Club.*

The annual meeting of the Cleveland Wheel Club was held Tuesday evening, when the election of officers occurred. The honors were bestowed as follows: President, William A. Skinkle; vice-president, W. A. Crawford; secretary, Ben Ireson; treasurer, H. H. Schleman; directors, W. H. Chubb, W. J. Henley; captain, W. K. Myers.

### *Milwaukee Wheelmen's New Officers.*

At the annual meeting of the Milwaukee Wheelmen, held Monday night, the following officers were elected: President, E. A. Sawyer, vice-president, N. E. Oliphant; second vice-president, H. A. Coleman; secretary, Charles Dean; treasurer, T. E. Hutchings; board of directors, F. J. Schroeder, F. J. Morawetz, G. L. Holmes and H. P. Andrae; captain, G. L. Roth; first lieutenant, Walter Durbin; second lieutenant, George Becker.

### *To Bar the Negro.*

The National assembly will be compelled to wrestle with the question of color as regards the league when it meets next month, for W. W. Watts, of Louisville has caused the following to be published in the *Ancient and Honorable*:

Notice is hereby given that at the constitutional convention to be held by the League of American

Wheelmen at Philadelphia, Pa., on Feb. 21, 1903, I will propose the following as an amendment to the constitution, to wit:

That section 1 of article 3 be amended by inserting the word "white" between the words "amateur" and "wheelmen" on the first line thereof.

The section will then read:

"Any amateur white wheelman of good character, eighteen years or over, shall, with the endorsement of two league members, or three reputable citizens, be eligible to membership in this league upon payment of the initiation fee and dues, as provided in this constitution and by-laws and the by-laws of his division."

Of course Mr. Watts can not hope to carry his point—yet he may, for there are few men in this great world who dare stand up and say what they think. Few men in the north have anything but the kindest feeling for the negro, but they are weak and prefer to emulate John Lawrence Sullivan in this matter. We do not look for the adoption of Mr. Watt's amendment, but the league may give each division the right to settle the matter in its own way.

### *Election On the Coast.*

At the annual meeting of the Alameda Bicycle and Athletic Club, held in the club room at Cycle Park, Tuesday, Jan. 3, the following officers were elected: President, G. H. Mastick, vice-president, E. D. Rue; secretary, W. H. Robinson; treasurer, Clyde Conkey, captain, A. F. Estabrook, first lieutenant, James Sheeran; second lieutenant, J. E. Bailey; directors, A. M. Hickox, E. E. Curtis, H. C. Fincklers, J. F. Ives, C. Uzmay (since deceased), E. K. Taylor.

### *On Their Way East.*

Messrs. Allen and Sachleben, the two bicycle riders who have ridden across Europe and Asia, started from San Francisco for New York Wednesday. A large number of cyclists accompanied them on the first stage of their journey as far as the Leelanau and Stanford, Jr., university at Palo Alto.

## IN THE DAYS OF OLD.

HOW CHICAGO'S PROMINENT CLUBS  
STARTED AND PROSPERED.

*Incidents of Early Cycling Life in the  
World's Fair City—Hard Trials  
and Uphill Work Finally  
Rewarded—Incidents.*

The life of our cycling clubs—and have they not life? Instances may be cited in every city of our country where clubs have been born as it were, have thrived amazingly and gradually sunk out of sight, their demise being recorded with only a passing thought, in the shadow of the greater clubs and their doings. Or, mayhap, the old club looks for young timber and consolidating with some young and thriving organization at once steps into a prominent position in cycling circles, the natural result of a combination of brains and energy—enthusiasm, if you will, the latter controlled and led into proper channels by the experienced ones who once upon a time were among the great army of "enthusiasts," a potent factor in club work, despising and belittling which means failure, dire and dismal.

The club and its life—what volumes could be written? What volumes should never be written! Cycling sympathizers, enthusiasts and workers naturally affiliate. In the old days it was necessary as a sort of protection; nowadays, when cycling has attained national characteristics and the wheelmen form a factor in politics, sociability is the main object of the clubs. It is not denied that the clubs are a great factor in cycling, inasmuch as they keep up a certain amount of interest amongst those who would otherwise allow all interest in the sport to lapse. There is, to the veteran cyclist, a certain glory in giving a helping hand to boost onto higher planes the pastime which, in the more youthful days, afforded so great pleasure and enjoyment, fond memories of which are oft recalled around the cheerful hearthstone at the club house. Years ago, and in fact more so at the present writing, new clubs were announced weekly in the cities of the United States.

Chicago in a few short years increased her number of clubs from two in 1886 to twenty-five times that many in 1892. These clubs have prospered and their prosperity is an excellent criterion of the great increase of the cycle business. In 1886 the old "C. Bi. C." was located on Michigan avenue near the Leland Hotel. How we small boys, cyclists ourselves, used to stand outside the fence, eager for a glimpse of our luckier brethren who could club together, and how we did long for that day to come when we could ride full nickled 56 to 60-inch ordinaries, don a velvet uniform and do as they did. In those days the C. Bi. C. was a power in the cycling world, and respected by all.

In August of 1886 barely a score of west side cyclists banded together and formed the Illinois Cycling Club. The new club thrived amazingly and it was soon rumored that the west riders had as many as EIGHTY members and was gaining fast, recruiting from all quarters of the city. The club was located that year in a long store extending through from Adams street to Ogden avenue. This was divided by means of screens into rooms, and who can gainsay the real pleasure gained from companionship in those good old days when the ordinary was the wheel and the lowly safety almost unknown and despised by all. Then runs were held every night and

Sunday, the latter to near-by points of interest, a century run over country roads being comparatively unknown. On the evening of Aug. 6, 1886, the Illinois Cycling Club held its first birthday reception.

A lantern parade was held in conjunction, in which Burley B. Ayers and other "vets." of to-day took an active part and a bath of candle drippings, to boot. Hundreds were present at the reception, and being caught in the rain left their wheels and went home on the cars.

The south and west sides then had clubs; the north side had none. In a party of north side wheelmen that journeyed northward that evening were Dr. Benion, John Thiele, Martin Bowbeer, W. A. (Billie) Smith, F. E. Spooner and a couple of others, who entered into a lively discussion regarding the formation of a cycling club to represent the northern portion of the city. Several cycling

ergy is undoubtedly due the great boom given to cycle club life at that time. This great worker took hold at once, and working under the maxim, "nothing risked, nothing gained," had the Lincoln club installed with the aid of Edwin Oliver, Joe Crennan, C. P. Whitney, R. G. Hall and others, in a two-story and basement house at 567 North Clark street, the largest and finest furnished cycle club house in the west. The membership increased in three short months to over a hundred, the largest in the city, and the first club in the city to pass the century mark.

In the meantime the C. Bi. C. had yielded to the march of improvements, given up the club rooms on Michigan avenue, and under a spell of great enthusiasm had opened down-town club rooms on Adams street, next to Kinsley's restaurant. Such fittings were never seen in a cycle club house of the west. Staggering were they to the

tables, the gymnasium, and a dancing class once a week in the fine, large parlors, with an occasional open smoker thrown in, were features which boomed the Lincoln club and made it the envy of all the other clubs of the city, new ones springing up every day north, south, east, west, northwest, southwest and in the suburbs. The Lincoln's entertainments in those days were quite as novel in their way as those of to-day. It was the social feature of the L. C. C. that first drew Herrick's attention to the club. His application up, the rest was easy, and in time the wonder grew. In the chief centurion of the present day the Lincolns, whose president he is, have another offspring of whom they are exceedingly proud. In the days of the club's first struggles with parliamentary rules there arose in the meeting a little white-haired cuss, whose knowledge of rules, after the first tilt, were never questioned, J. M. Erwin being the young man referred to, another proud offspring of the Lincoln.

But to the subject: The C. Bi. C. had, by its consolidation, gathered together nearly all the city's fastest men, and the Lincoln and Illinois superseded the south-siders in attendance on runs. The Fort Dearborns and the C. Bi. C. joined issues and formed the Chicago C. C., and later the Kenwood club joined this organization.

Other clubs sprang up from time to time in all quarters of the city, and finding good cycling material lacking, admitted a large associate membership, in order that in the march of improvement they might not get left. One by one, old and young clubs alike, the undesirableness of this element began to be recognized, and one by one the associate memberships were closed. It is doubtful if a club in Chicago to-day admits associate members. Chicago to-day is in cycle interests far from Chicago of 1886.

The old veterans are one by one dropping out of the club and club life. Their interest in the sport begins to lag. Social interests, oftentimes married life, is the cause. Business cares, too, are often the cause. But the cycle fever is never quite lost, and the ghosts of the old selves may often be seen around the cycle stores, examining critically the new improvements and discussing their merits, oftentimes sadly shaking their heads and bragging of the good old days when safeties, geared ordinaries, pneumatic tires and elliptical sprocket wheels were unknown, and the dealers' hearts were light when the merits of the double hollow fork, ball bearing pedals, straight or dropped handle bars, cowhorn and ramshorn bars were items of interest. Tangent spokes, five-eighths or seven-eighths inch solid tires (the smaller were preferable), and other like subjects, were discussed. With but a bare half-dozen wheels in all to pick from, and the Columbia the king of the roost, the job was an easy one. In those days a long country jaunt was a wonder, and a century a still greater wonder. The rider who had ridden to Elgin, Aurora and return was a hero.

In 1890 there were in Chicago but a baker's dozen men who had accomplished a century over the now famous course, and the writer secured a list of these with the idea of forming a century club, to which none but those who had taken that ride would be eligible. A pin was to represent the first century and a bar to be added for each century following over the course. Taken sick, Herrick took the matter up where the writer left off, and the Century Road Club of to-day is the result of his splendid efforts—another product of the Lincoln club,

SOMETHING SURPRISED THE QUAKERS LAST WEEK.

clubs had been formed on the north side, but all had dropped out of sight.

I remember receiving a proposition to bring about the consolidation of the Dearborn Bicycle Club, to which I had the honor of belonging, as well as to the C. Bi. C. The former busted before a move could be made. From that conversation two men, John Thiele and the writer, resolved to start a club at once. Another club at this time existed on the south side, the Owl Bicycle Club, having a portion of the old home of the Overman brothers, of Victor fame, at 3701 Ellis avenue. Thiele and the writer at once started a list, and the writer was, toward the latter part of August, proprietor of a list of three score and more names of cyclists who would join a club if a meeting was called. On the evening of Sept. 6, 1889, such a meeting was held at Garfield hall and fourteen names enrolled on the charter list. One week later another meeting was held, which was chiefly notable as it marked the initiation into active cycle life of F. W. Gerould, chief consul of the Illinois division, To Mr. Gerould's untiring en-

officials of the other city clubs, who were honored with an invitation.

The opening reception was a swell affair. Then there was lively work over on the west side, the Illinois club talking of building themselves a home, probably the first of myriads of building schemes sprung by the cycling clubs since.

The I. C. C. finally settled in a two story and basement club house at Adams and Leavitt streets, broomed in membership, and on its second birthday gave one of the most largely-attended and most successful stag parties ever given in Chicago. The Lincolns, indirectly the cause of all this booming, had meanwhile outgrown the club house on Clark street, and in casting about for another home found just the thing at 333 La Salle avenue, a three story and basement house, wide, deep and roomy, with a large barn, later converted into a complete gymnasium, and a large yard.

The opening reception in September of 1888 was attended by over 125 couples, and was one of the events of cycle life up to that time. Bachelor quarters in the club house, both billiard and pool

OFFICE AND WAREHOUSE, 89 G STREET, PEORIA, ILL.

originators of most original things in American cycledom.

In the early days of the cycling clubs, when, under the pressure of high rents and large expenses, it was necessary to accept non cyclists as members, the clubs started the practice which has oftentimes nearly ruined a score of them, and yet the admittance of these non-riders was a necessity, in order that the club might keep up the pace with the older roads. Follow the history of a score of our local clubs. Meeting constantly together on the road, the cyclists of some quarter of the city form a club, informally, perhaps. Good-fellowship grows, and an organization is perfected. Then a club house is secured, small at first, perhaps. Time goes by, the club grows apace. In their humble quarters there is little attraction for any but cyclists. Runs are well attended, cycling is talked, and society entirely forgotten. The officers and members are ambitious. Lured by the great success of other organizations, the new club house is secured, grand in comparison with the old home.

To support such a house new members must be secured. These are too often recruited from the ranks of those who take little interest in cycling, but care only for the social side of the new club. The two sides do not conflict, but it too often happens the non-riders and non-cyclists recruit its ranks more rapidly than the cyclists. It has a larger field to draw from. Measures come up that tend to elevate the interests of the cycling contingent, only to be downed by a vote in which the non-cyclers play an important part. Thus things run on.

The club house is the lounging place of a lot of "dudes," as the cyclists term them, who in time exercise an influence over the riders themselves. This is seen in the growing scarcity of cyclists in

uniform on pleasant days and the growing proportion of finely dressed gentlemen lounging around the club. The latter have nothing to bind them. Their interest is fleeting, and one by one they resign, to join some large social club started in the neighborhood. The cycling club is used as a stepping stone to serve a selfish end. The club deteriorates. The cyclists, having been the under dog in the fight, lost interest long ago, and this interest may be renewed, and again it may not. Better, far better, a cycling club in humble quarters, than grow into a social club in a palace, with impending doom constantly hanging over its head, a constant struggle to get along, to please its critical membership and hold up its end of the procession.

Then there is the club formed in the old days by enthusiastic wheelmen, who as years go by drop more or less interest in the pastime, give much of their time to the pursuit of pleasure elsewhere, yet, through pride and disliking to yield, hold the remains of power still. With interest all elsewhere, the club is run loosely, runs are not encouraged and entertainments lag. One by one the riders desert the fold, one by one the old-timers go forth to pastures new in the larger social clubs, and one day the officials see disaster staring them in the face, and the announcement is made that such and such a cycling club has given up its pretty home, and later that it will probably never secure another one, and afterward that it has disbanded.

Other clubs divert disaster by a hasty consolidation with some young and thriving organization, which may perhaps adopt the name of the older and better known club, and elect a few of its officials to office. Many a disaster has been thus averted. The cycling club has its life as sure as you or I have ours.

One cause or another leads to its downfall. Others rise in its ashes, and the march of progress goes on. Cycling will never die, and the clubs will always be, to encourage and abet the sport. S.

## INDOOR AMUSEMENTS.

### Gave Up the Raffle.

The good church people rather got the best of the Oak Park C. C., inasmuch as last Saturday's proposed raffle was declared off and an auction sale announced in its place. It seems the club had schemed things so as to hold a raffle for divers articles, valued each from \$2 to \$80, and had hoped to profit materially thereby. But the church people learned of the affair and sent out a band of missionaries to corral the wicked cyclists. The club management was appealed to and told of the demoralizing effects a raffle would have in the good town of Oak Park, and although some of the wheelmen cited cases where some of the objectors had been mixed up in similar affairs — and ones which yielded big profits — they gave in and will dispose of the prizes by auction.

### Social Events at Rochester.

Above any other city its size, Rochester stands pre-eminent not only from a bicyclic point of view, but also in a social way. The wheelmen there have not mourned any for the lack of diversion, for the dancing parlors, progressive euchre tables, billiards, pool, bowling alleys and banquet halls have been the scene of many pleasing festivities in which the boys and their fair companions have participated thus far this season. The Genesees, Crescents, Ramblers, Lake Views and R. Q. C. Wheelmen have contributed largely to make these dark, wintry days cheerful for the devotees of the wheel.

Last Wednesday the Genesees enjoyed a hard times social, the Ramblers a grab-bag social, and on the same evening the Crescents and their friends, to the number of about seventy, played euchre and partook of inviting refreshments. Mrs. W. F. Chandler won the ladies' first prize and William P. O'Brien the gentlemen's prize. Next Wednesday evening the Crescents will give a dancing reception.

Thursday evening a sleigh ride to Charlotte and return will be held by the Ramblers.

The Crescents have elected these officers: President, S. S. Braman; vice-president, W. F. Chandler; treasurer, George S. Hogan; financial secretary, Charles Mann; recording secretary, E. W. Buck; captain, H. W. Phillips.

### Pleasant Hop at Dubuque.

Thursday evening last the Dubuque Cycling Club gave a very successful hop at the Hotel Larimer, in that city. The hall was handsomely decorated in the club colors (blue and old gold), national bunting and evergreens. The attendance was large and a programme of twenty numbers danced through in a very enjoyable manner. It is the intention of the club to give two more hops before the opening of the wheeling season, and is justly gratified at the success of its maiden effort as entertainers. The club is only ten months old, but is one of the most sound financially and socially in Iowa.

### Two Racing Men to Wed.

Two of the Chicago club's most prominent racing men — A. E. Lumsden and C. W. Davis — are to be married shortly. The former will not give up single blessedness before May, but Davis will settle down to home life Feb. 1, the bride-elect being a sister of E. W. Ballard, the racing man.

# THE STEARNS BICYCLES!

Representing the highest type of cycle construction up to the present time. We believe the Stearns wheels will be found to meet, in all respects, the requirements of the most critical rider.

ORANGE  
RIMS.

## CYCLE SHOW IN BRIEF.

Short and Interesting Paragraphs About People and Things.

Harry Pope of the Hartford Cycle Company hopes to demonstrate, by means which cannot be disputed, the theoretical superiority of the elliptical sprocket, by means of an instrument which he will shortly perfect. With this same instrument he expects to be able to ascertain the exact amount of power exerted by racing men while traveling at various rates of speed. He believes that, with a wind resistance of thirty miles an hour, the man brings very nearly a horse power into play.

Have you ever given a thought to the difficulties encountered in making an elliptical sprocket? If not, think it over, and you will easily arrive at the conclusion that any man who adopts it simply as a fad hasn't brains enough to succeed in the bicycle business. No intelligent maker spends money except on what he considers an improvement. So far three pieces of machinery have been used in making an elliptic, but in the near future one machine will do the trick. Few people, other than those engaged in making them, realize the amount of money spent on machinery or the ingenuity required in its construction.

The members of the firm of Reed & Curtis are examples of what intelligence and push can do. Mr. Reed was a poor man, comparatively, ten years ago, but to-day is estimated to be worth a quarter of a million. He is one of the most celebrated lathe makers in New England. Five years ago Mr. Curtis employed five men. Now there are ninety on the payroll. It is only two years ago that he commenced the manufacture of pedals as an experiment. He intended to make 200 pairs, but the season's output was 6,000. This year six times that number will be about the figure.

No Garford saddles were to be seen among the bird cages and evergreens which helped so greatly to make attractive the stand of Parkhurst & Wilkinson. The reason assigned for this by Ned Oliver was that as soon as the samples arrived they were gobbled by people who would have nothing else on their machines. A really creditable display of saddles was that made by J. A. Hunt & Co., whose great variety of styles enabled them to make a showing we have never seen excelled.

A popular man, and one who can make his department thrive if anyone can, is Mr. Burris, the Michelin tire man. He was seen, one morning, to deflate two tires, remove them from the wheels and replace them in six minutes. The Michelin, though the same in general construction as last year, has some improvements, and the weight, which militated against it, has been materially reduced.

The geared ordinary shown by the Ariel people—the invention, we believe, of Mr. Smith—has a somewhat heavy-appearing, frying-pan style of gearing case outside of the wheel, and would

hardly suit the fastidious youth of to-day. Mr. Smith will soon have a new device, which will eradicate this difficulty.

The show of geared ordinaries is not extensive enough to warrant the belief that makers anticipate any rush for it yet. The McIntosh-Huntington Company shows a couple, the Ormonde, Ariel and other concerns one apiece, but none of them seemed disposed to push them.

A report was current at the show that a claimant had appeared to a ball-head patent which anti-dated all in use, and that he meant to wipe all infringers off the face of the earth. Later the story was denied. It is now about seven years since the Trigwell head appeared in America, and William Reed & Sons were, we believe, the first to use it, on the New Mail.

The story of the Phelps & Dingle suit against the American Dunlop company

Prial and lady—Bettsey B.—Joseph McDermott and Mascot "Dark Secret," Charley Overman and Chung Yung Ki Hi. Full list next week.

Philadelphia is slow, too, in some respects. We have heard that they still use 1891 calendars there. If that's the rule the night clerk of the Bingham hasn't got beyond 1880 yet.

The expenses of the show amounted to \$12,000. Think of that, ye amateur show promoters. Mr. Bunnell has a very convincing argument for those people who think the prices of stands too high. "Mr. Maker," says he, "you put the very best material into your wheel, don't you?" Of course Mr. Maker says "yes," whether he does or not. "Very well. If you make money people say you are a very successful man?" "Yes." "And if you don't they say you are a failure?" "Yes." "And therefore you charge enough for your wheel to enable you to put in the best material, hire the best workmen and produce a good wheel. That's just our principle. This show must be a success or we can not carry it on. We tax you enough to make it a success, and it is a success. Why, I have thirteen or fourteen concerns beg-

weight. These are not fancy figures—they are net. Berlo has ridden the machine out to the reservoir in Boston, and a number of heavy men rode it about the bumpy floor of the market building. It is not believed, however, that twelve-pound wheels will become popular this season. It would seem that the weight limit has been reached in this instance, for the tubing reminds one of nothing so much as a penny tin whistle.

The Anglo-American company built an aluminium rim covering the entire width and height of its stand—probably twelve feet. The show of this concern isn't particularly taking to the average spectator, but to trade men—people who understand its mysteries—the unfinished parts, etc., were of great interest.

A contemporary's boasted "six bright young men" consisted, for three days, of R. G. Betts, Bettsey B., Ritchie G. Bett, John J. Prial, J. J. Prial and John Prial. A. T. Merrick came later. Whether anything else "bright, brainy and reputable" came later we know not.

People who wanted to know what Colonel Pope knows about cash prizes were disappointed. He wasn't there. By the way, Walter Wardrop and Senator Morgan met and discussed kindergarten methods during the early days of the show.

We are under the impression that a few exhibitors, whose guarantees are as broad as the universe, must possess an abundance of faith in cheap materials.

One man was describing to another man the beauties of a certain wheel, with the aid of a catalogue. The novice looked intently at the cut, which had across the spokes the name of the machine (see Singer and Sunol cuts for example), and said: "No; don't want a machine with the name stuck across it that way."

The Western Wheel Works' idea of making the dress and chain guards all one seems likely to do away with the objectionable and yet common rattle. Another effective device is the method of fastening the sprocket and crank on the Blackhawk, but whether it can be easily removed for change of gearing—a desirable condition of affairs nowadays—we cannot say.

We learned with much pleasure at the show that Louis Schoninger, of the Western Wheel Works, who recently went to Europe to consult a specialist as to his health, has already improved and is expected to be entirely well in six months.

Frank Egan still talks cash prize league faster than a horse can gallop.

Hulbert Brothers & Co. will have a drawing for a bicycle Saturday night. Every visitor gets a ticket free.

It is astonishing how small a thing some people will turn to account for advertising purposes. People are going about the building with a strong taste of "Hartford cycles" in their mouths, gathered from the harmless-appearing but artfully-lettered toothpicks given away by the company.

There is a little fellow in Jersey—quite a youngster—who publishes a little paper called *Loose Spokes*. One day he called on Mr. Baker, secretary of the show, and asked for an advertisement. Mr. Bunnell was present and remarked:

NEW HOWE FACTORY, GLASGOW, SCOTLAND.  
Said to be just a quarter of a mile around, measured eighteen inches from the wall.

was corroborated on Thursday by Mr. Phelps in person. The details heretofore published, however, have been wide of the mark. Mr. Phelps states that the patent was issued a year ago, and that application was made therefor and the tire made and used nearly a year before that. It seems likely that there will be as much litigation over pneumatic tire patents before the tangle is straightened as there was in days of old over ball bearings.

Mr. Whymper, hustler-in-chief of the Schoverling, Daly & Gales clans, shows a little \$4.50 lamp of the dance-me-on-your-knee-and-I'll-never-go-out order. It is called the Horoscope, a name probably suggested during the late Biela's comet scare. It is light, compact, and will stand any jar it will ever receive on a bicycle, if the one shown is a fair sample, of which we have no doubt.

Merrick and Cox were there one morning sketching away at something they considered new, when Joe Goodman came along and told them he had published the thing two weeks before!

Lots of big men were there and are still. There were Col. George Pope and Honorable "Dead-Broke" Wylie, H. A. Lozier and "Inducer" Young, John J.

ging for space now, and can't give it to them." Whereupon Mr. Bunnell goes on his way rejoicing to think that all the gate money needed to cover expenses is \$10,000, and that if they can't take in that much, Philadelphia must be the slow town some people say it is.

Some confusion was caused during the early days of the show by the backward condition of the carpentering and decorating. The reason of this was that the building was previously occupied by a lot of farmers who refused to move until the last instant, and got even with "them bisickle fellers" who persist in giving them roads which can be driven over at all times of the year.

George Collister showed us something new in trowser guards which has the merit of doing the work required without folding and creasing the garment. It fits round the ankle under the trouser, which it holds away from the wheel. It can be kept on the ankle at all times without being seen.

Talk about your midgets! There was never a midget which compared with Berlo's racer, a full nicked affair with a 63-inch gear, which had been scraped and hollowed, and filed and trimmed until twelve pounds covered its entire

# MORGAN & WRIGHT

MANUFACTURERS OF

RUBBER

GOODS

331 to 339 West Lake Street,  
CHICAGO.

ESTABLISHED 1882.

## BICYCLE RIDERS, ATTENTION:

All Morgan & Wright Tires for 1893 will have our firm name in raised letters on the outside of cover, also "patent applied for."

## BEWARE OF IMITATIONS.

If you choose Morgan & Wright tires for your '93 mount see that they have our name on the cover as above described.

## YOU WILL FIND

Our tires to be superior to any imitation tires. They are also covered by a practical guarantee.

## OUR VALVE,

Which, during the past season was acknowledged to be the lightest and simplest in practical use, has been improved in minor details and will be found perfect.

## OUR TUBES FOR '93

Will be found the most perfect ever produced. These will be found inside our tires and not in short samples shown to the trade.

## MORGAN & WRIGHT TIRES

Have been greatly improved in valves and inner tubes.

## OUR INNER TUBE,

Made by a new process, is the most perfect ever produced. It is equally strong in all points and is seamless.

## ALL PRACTICAL RIDERS

Who have seen our new tube have declared it the most perfect ever put in a tire.

## THE QUALITY OF OUR TIRES.

We will make but one quality of tire and this tire is made of pure Para rubber of the finest quality and of the strongest fabric which six months' experience in testing the strength of various fabrics could discover.

We have put to practical tests several of the much talked of special fabrics, and, having made up tires from these different fibres, subjected them to hydraulic pressure to a bursting point, when we found them inferior to fabrics we have been using.

# MORGAN & WRIGHT,

331-339 WEST LAKE STREET, - - CHICAGO, ILL.

"Give him an ad, Baker, to help him along." "No, sir," spoke up the little man, "I don't need it that badly." And he hadn't a line of advertising in his little sheet! Gentlemen, do any of us blush?

\* \* \*

Some people, and even some newspapers, have foolishly compared the show with the famous Stanley, and declared it fully as large, etc. Don't let us get too exalted ideas into our heads, for this is but our third effort, while the Stanley has had about fifteen years' experience. While we have a nice little show, it is a fact that it could be comfortably stowed away in one corner of the Stanley.

The Rapid Transit chain, shown by J. H. Cibson, of Philadelphia, is provided with roller bearings, and possibly pos-

a patent on any one of the undermentioned applications may, at any time within two months from Nov. 9, give notice in the prescribed form of such opposition.]

No. 92,147. W. P. Thompson's "Improvements in and in connection with bicycles or tricycles."

Dec. 18, 1891. (Communicated by C. L. Flaugh and F. W. McMillan, Kansas, U. S. A.)—This in-

described. The lower portion of the fork (16) is provided with loops (19) carrying bearings (20) in which the axle rotates. Chain wheels (23) are secured, one to each end of the axle, by screws (24). In the lower ends of the loops (19) are bearings (25) in which rotate the short crank axles (25 and 26), on which are mounted chain wheels (30) which are larger in diameter than the chain wheels (23). Endless chains (33) connect the larger and smaller chain wheels on each side of the hub. The saddle is attached to an L pin which fits into a socket, and this again fits into another socket secured to the backbone, making in effect a two-draw telescopic arrangement, which provides a greater range of adjustment than is afforded by the usual construction. By means of the divided crank shaft the pedals are secured at a lower point than if they were fixed direct to the axle, and by the use of the dished hub a narrower tread is obtained than would otherwise be the case. Various modifications are described and fifteen claims are made.

No. 70. J. B. Robertson and T. W. Robertson's "Improvements in valves and inflators for pneumatic tires of wheels, also saddles and foot-balls and such like. January 2, 1892.—The valve

bination with the valve, but by dispensing with the point (F) it may be used for inflating with valves of the usual sort. The point F may have a hole through the its entire length or through only a portion thereof, in which latter case a hole is made in its side to connect with the air channel. H is a piece of flexible tube connecting the point F to the piston (J). The drawing shows the point F reversed to preserve it when not in use, and also to make the inflator more compact for carrying.

#### Kirkwood, Miller & Co.'s Failure.

PEORIA, Jan. 10.—The recent failure of the firm of Kirkwood, Miller & Co. is still the theme of conversation among the bicycle dealers of Peoria. Just what the outcome of the failure will be is a matter that can not be told at this writing. The liabilities are heavy and the resources will not reach half the amount of the liabilities. ## THE RIDDLE OF THE SPHINX....

What animal travels on four legs in the morning, two at noon and three at night? Ans.—Man.

(Revised to suit the times.)

sesses some of the advantages claimed for it. In these days of light machines, however, its weight will tell against it.

\* \* \*

The Chicago Drop Forge & Foundry Company made a small exhibit on the sundry stand. The Grant ball people also sent a small but attractive exhibit.

#### RECENT ENGLISH INVENTIONS.

##### New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of

vention relates to the hub, gearing, spokes and saddle adjustment of a front driving safety bicycle. 1 and 2 represent the improved hub adjustably connected to the axle (3) by means of notches or grooves (4) and set screws (5), whereby the different sections of the said hub may be adjusted on the axle. Near the outer circumference of the hub a series of spreaders (6) is placed. The ends of the spreaders on one side are plain and work in an opening (8) in the flange (9) of the section (3) of the hub. The other ends of the spreaders are threaded at 10 and engage in screw-threaded openings in the flange (9) on the section (1) of the hub. The spreaders are made square or otherwise, so they may be turned by a wrench at 11, in order to adjust the section of the hub latterly. After the same have been adjusted sufficiently to create the desired tension on the spokes (12), the sections of the hub are secured at the proper points on the axle by means of the screws (5). The spokes are double and are secured to the flanges of the hub by passing through openings (13) in the same. The ends of the spokes are secured to the rim preferably by a buttonholing arrangement, two or three methods of which are

pressable material (B) having a small hole or air-passage through it. The head of the frame (A) is screw threaded to fit the internally screw-threaded cap (C). When the cap (C) is screwed down tight on A, it compresses the piece of rubber (B) and by closing the hole prevents the passage of air

through it. D is a nut to fasten the frame (A) to the air tube, and E is another nut for fastening the valve to the rim. The inflator is used in com-

is made up of a frame (A) threaded on the stem for fastening by nuts to the tires, etc., to which it may be applied. The fastening by nuts to the tire, etc., to which it may be applied. The head is hollowed out to hold a piece of india rubber or other compressible material (B) having a small hole or air-passage through it. The head of the frame (A) is screw threaded to fit the internally screw-threaded cap (C). When the cap (C) is screwed down tight on A, it compresses the piece of rubber (B) and by closing the hole prevents the passage of air

give the defunct firm time, it might possibly pull through, but if they insist upon their money, the firm of Kirkwood, Miller & Co. will be a thing of the past. A representative of Bonnick & Co., who manufacture the Telephone bicycle at Coventry, Eng., is on his way to this country, and will place the Telephone agency in the hands of other parties. Bonnick & Co. are trying to recover a consignment of Telephones which are in the custom house in this city. They claim the goods are in transit, and that they have a right to claim them as their property. The assignee looks at the matter in a different light, and claims the goods as the property of Kirkwood, Miller & Co., who have received the goods and placed their signature on the government books.

# Can I Repair My Pneumatic Tire?

That is what it comes to finally with the rider—he wants to  
know if he can repair easily and quickly.

THAT'S JUST WHAT YOU CAN DO

# THE JAMES CYCLE CO.

113 ADAMS ST. CHICAGO.

One Thing in Cycling is Now Generally Admitted as a Fact By All Expert Riders, Viz:

If you wish to ride fast you must have a LIGHT MOUNT, combined with GREAT STRENGTH and RIGIDITY. The proof of this statement is found in the fact that not a single RECORD, and but few races of any kind were won on wheels above 30 pounds' weight during the season of 1893, and further, you cannot find a really fast rider who is content with a wheel above 28 pounds for road use. Probably the most striking feature of the demand for light road wheels is in the fact that every rider who purchased a James 28-lb. road wheel in 1892 swears by it still, and not one of them will listen to a suggestion that they should ride a heavier mount. In fact, you cannot find an UNINFLUENCED rider who has enjoyed the luxury of a light mount (that has met his every demand for strength and rigidity) who can be induced to change to heavier weights. The only ones who have ridden light wheels and are sick of them, are those unfortunates who have purchased light wheels of faulty material and construction—made by builders who have had little or no experience in building really light wheels and naturally disappointment was the result to both rider and builder. Send in your name for our 1893 catalogue, which will contain many items to interest intelligent riders, and which will soon go to press. Our policy is to supply the best wheel ever built for a reasonable price.

#### *Joins the Trade.*

Every day there is evidence that there is demand for good business men in the cycle trade. This is brought forcibly to mind upon hearing that Andrew Cahill, the western representative of the *Wheel*, has resigned his position to engage with the Buffalo Wheel Company, makers of the well-known Niagara bicycle. We wish Mr. Cahill success in his new undertaking, and incidentally congratulate the Buffalo cycling fraternity, as it will soon have a keen sportsman and an estimable gentleman among its members.

#### *No Challenges Yet.*

The James Cycle Company reports that it has had no claimants for the \$10 in gold offered by it to any one who could show that he had seen a James road racer, fitted with light road tires, which exceeded 28 pounds in weight. It also says "we told you so," because the road racer runs under 28 pounds, nearer 27 in fact, and not a frame broken during '92.

#### *Aurora's New Factory.*

Frazier & Co., Aurora, Ill., of road cart fame, have decided to enter the bicycle business, and have taken possession of the old watch factory. George S. Webb, the Aurora cycle dealer, will be interested in the concern, and A. W. King, late with the Brown Brothers Manufacturing Company, will look after the mechanical end of the concern. Mr. King is a native of St. Louis and was at one time technical manager of the Adler Cycle Works at Frankfort, and of the Goldsmith Brothers cycle works at New Market. Having had this experience, and being a graduate of the Polytechnic of Zurich, Switzerland, he ought to be capable of turning out a fine wheel. Only one style of wheel will be

made at present, a high grade light roadster, to sell at \$150 or \$160, and a hundred machines will be ready May 1. Mr. Webb is now in the east for the new concern. The company is capitalized for \$50,000 and has leased the match factory with the privilege of buying.

#### *It Can't be Stolen.*

The accompanying illustration shows the new lock-clamp bell made by the

New Departure Bell Company of Bristol, Conn. The feature of the bell is that it locks to the handle bar and cannot be removed, unless broken off, except when unlocked by the key provided for the purpose.

#### *Munger's New Wheel.*

Since Birdie Munger has been with the Standard Manufacturing Company, now the Century Cycle Manufacturing Company, he has been busily engaged in making up three wheels for the Philadelphia show, and completed them Sunday at midnight. There are three styles—light roadsters, 24 1-2 pounds with rubber pedals and scorcher saddle; racer, 18 1-2 pounds; full roadster; 32

pounds, with brake, guards, etc. The tread of the racer is but 6 1-4 inches, and the roadster 6 3-4 inches. A feature of the wheels is a new style of detachable sprocket, which can be taken off in less than a minute. The frame is what might be called a Humber-Raleigh-Munger pattern.

#### *Lumsden Changes Positions.*

A. E. Lumsden, who during the summer was connected with the Humber-Rover Cycle Company, now Montgomery Ward & Co., has left that concern and will travel in Illinois and Michigan for the Indiana Bicycle Company, of Indianapolis. He will not give up Chicago as his home, however, and will likely race under Chicago club colors as heretofore.

#### *A Slight Error.*

The Phelps & Dingle Manufacturing Company, Passaic, N. J., writes the REFEREE to call attention to an error in its last issue, wherein it was stated that the concern was after the American Ormonde company for infringement. The Passaic people do not intend to molest purchasers of tires, but will attack the makers of tires who are supposed to be infringers and as a result have brought suit against the American Dunlop Pneumatic Tire Company.

#### *Miscellaneous Trade Doings.*

Bigelow & Dowse, Boston, will handle the Sunol in the New England states. Rous, Hazard & Co., Peoria, have already commenced to turn out Ridges—American made—in quantities. The Kenyon Bicycle Manufacturing Company has applied for a copyright on the word Pacemaker, the name used for its wheel for the past year. A representative of Foster, Brown & Co. will shortly start west introducing

the Ivel. Only one sample was seen at the show, but five styles constitute the line.

The REFEREE and all latest cycling papers, periodicals and hand books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 48 E. Van Buren St., Chicago.—Adv.

Mr. Townsley, of the Derby Cycle Company, has just made a trip through the south, placing agencies in Vincennes, Evansville, Nashville, Montgomery, Birmingham and other places. He is now at the Philadelphia show.

The Sercombe-Bolte Manufacturing Company of Milwaukee is receiving many orders for the Bolte crank, and at present is engaged in filling an order for 1,500 pairs for the Sterling Cycle Works, Chicago. This crank can be removed from the axle by two turns of the clamp nut.

H. C. Martin & Co. of Buffalo will introduce, in three or four weeks, the Martin, a high grade production, at \$150. Only 200 machines will be made for '93, the future output depending on the coming season's experience. It may be relied on at hat sooner or later this house will manufacture on a large scale.

#### *That Cash Prize League.*

PHILADELPHIA, Jan. 12.—(Special)—It is more than probable that the formation of a cash prize league will be announced at the *Sporting Life* banquet to be held to-night.

#### *Englewood Cycling Club Officers.*

The Englewood Cycling Club's annual election took place Tuesday night and resulted as follows: President, F. H. Gere; vice president, L. R. Fyfe; secretary-treasurer, T. E. Rees; captain, H. T. Pyle; two directors, W. B. Fitch, W. S. Kennedy; delegates to Associated Cycling Clubs, H. T. Pyle, G. W. Dennison, H. W. Emerson.

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

# SINGER CYCLES.

BOSTON, MASS., Dec. 31, 1892

MESSRS. SINGER & CO.,

BOSTON, MASS.

GENTLEMEN:—My Special Modele de Luxe has been all, and more than I had ventured to hope. As your books will show, I purchased it September 2, and since that time have ridden it about 1,700 miles. It tips the scales at 29 lbs., and I have yet to see the wheel, that to my taste, approaches it in appearance. So far as I discover, it is as stiff and strong in every way as the 33 lb. Singer Modele de Luxe, which I rode with perfect satisfaction during the fore part of the season, until the lighter edition (The Special) was put on the market. Both my safeties were fitted with Heale pneumatic tires, and when I say that no repairs were put upon my wheels the whole season through, I mean that no repairs were put upon either machines or tires. Not many riders, whose mileage for the season has been nearly 4,600 miles can honestly say as much as this, and I am glad to express my appreciation of my happy lot by making this statement of the facts, which you are at liberty to use in any way you desire.

Yours truly, JAMES KELTIE, Captain Roxbury Bicycle Club.

## THE MILWAUKEE WHEELMEN.

*A Powerful and Prosperous Northwest Organization.*

The Milwaukee Wheelmen is the oldest bicycle organization in Milwaukee, and occupies a leading position among the foremost cycling organizations in the west. From a historical standpoint it may not be able to number as many years as some other clubs of a similar character, but from its beginning its every step upward and onward to influence and power in the cycling world has been a continued march. The work accomplished by this club is an open page within the memory of all, for its active life scarce bands the years of the decade. On the 21st of August, 1884, in the so-called early days of wheeling, a number of riders of the "good old ordinary" met and organized the Flat Foot Bicycle Club. History fails to chronicle the reason for giving a cycling club such a name, and the charter members, many of whom are still enthusiastic wheelmen, have forgotten the circumstances in the dim vista of the past. The founder of this unique organization was W. L. Simonds, the present chief consul of the Wisconsin division, a wheelman in the broadest sense of the term, and who is still one of the foremost figures in the cycling arena of to-day. In the following year, Aug. 28, the Flat Foot Bicycle Club passed into cycling history, and on the foundation of the old was reared a new club, the Milwaukee Wheelmen, which has since occupied a position of prominence in the cycling world.

The first president of the Milwaukee Wheelmen was W. L. Simonds, who skillfully piloted the club through its early vicissitudes. His term of office extended through 1885-6. He was succeeded by H. R. Miller, who administered the office during 1887-8. F. J. Schroeder was elected and served during 1889-90. In 1891 the members of the club, by unanimous vote, called into the executive chair A. Cressy Morrison, whose administration of the office was of such a brilliant character as to mark a new era in the club's history. As if touched by a conjurer's wand it awoke to new realizations, the membership trebled, and the greatest enthusiasm and good feeling prevailed. At the expiration of his term of office Mr. Morrison declined a re-election, and he was succeeded by N. E. Oliphant, the present occupant.

The secretary's office was filled continuously by Henry P. Andrae until 1890, when his business interests were such that he was forced to decline another term. He was succeeded by the present secretary, M. C. Rotier. The captain's office was held by Charles Wood during 1885; F. J. Schroeder, 1886-7; H. P. Andrae, 1889; F. Terry Andrae, 1890, and H. J. Rotier, 1891. The present incumbent is George Bartels. The experiences of the early days of Milwaukee wheel life were somewhat different from those of the present time. Prior to 1888 all the club runs were called from the court house square. They were always largely attended, and a great deal of attention was given to parades. An old-timer enthusiastically recalls these events, and says the boys always presented a handsome and striking appearance, mounted on their glittering high wheels and clad in their natty blue-grey uniforms.

On June 1, 1888, the Milwaukee Wheelmen secured their first club rooms, on the corner of Wells and Second streets. A year later, on the first of November they removed to 225 West Water street, where more commodious and convenient quarters were secured. The club rooms were tastefully fur-

nished, and a billiard and pool table added to the attractions. This was the wheelmen's home for two years, and in the wholesome atmosphere of good-fellowship and brotherly feeling things moved along harmoniously toward prosperity.

At the general election in 1891 a clean sweep of all the old officers was made, they declining further honor; and about this time the club moved into the present elegant quarters in the Loan and Trust building, which it has since occupied, and which are furnished with many of the attractions so essential to the happiness of wheelmen.

The Milwaukee Wheelmen have always occupied a prominent position both on the road and race path. Their annual Waukesha-Milwaukee road race has grown from a small beginning to be second in importance to the Pullman, considered the greatest annual event in

performances ever given in the theatre, the receipts amounting to \$1,100. Many minor social affairs for club members have been given from time to time, all of which have been highly enjoyed, and have added not a little to the success and entertainment of the members.

It has long been the day-dream of the members of the Milwaukee Wheelmen to have a club house of their own. Various projects having this object in view have been presented from time to time, and as many times abandoned, but the desire has remained unchanged, and the smouldering fire has again leaped into a flame, which seems strong enough to carry before it all obstacles.

*The Wheelmen's Club House.*

All wheelmen contemplating visiting the fair will find it to their advantage to put themselves in communication with

## ENGLISH PRESS OPINIONS.

*'Tis Their Own Fault.*

The leading French journal argues in a long article that the championships of the world held by the International Cyclists' Association will not truly merit their title, inasmuch as the rule limiting these championships to amateurs only will bar the best French riders from competing. We venture to point out to our French friends that the argument they so raise ought not to be an argument against the international championships, but against the action of the French themselves in persisting until lately in ignoring amateurism altogether in their cycling government. All other countries, save Italy, have their amateur classes, and the amateur classes, as a rule, are more powerful than the professional; yet the French set themselves to deliberately cut themselves off from the rest of the cycling world by allowing

A GROUP OF MILWAUKEE WHEELMEN.

cycling circles in the United States. During the last year they have given a number of race meets, and inaugurated indoor races at the Exposition building, where they erected a ten-lap track, and upon which a number of records have been made.

The club has also made an exceptionally fine showing in the way of social entertainments of a public character. Among those worthy of special mention is a grand banquet given at the Plankinton House last year, in which four hundred wheelmen and their invited guests participated in an epicurean feast which has scarce been surpassed by any of the brilliant gatherings which have made this hostelry famous. It was presided over by Hon. John Johnson, as toast master, and toasts were contributed by the leading professional and business men of the Cream City. The club also gave an amateur minstrel performance and a hard times smoker at Germania Hall, which attracted wide-spread attention, and the great success of which stimulated the entertainment committee to give a second performance at the Academy of Music in November, which was one of the largest attended per-

the National Columbian United Wheelmen's Association. This association guarantees to provide its members with rooms, either in club house, at hotel or with private families, as they may desire, at such prices as they may wish to pay, getting them the best that can be had for the price named. Rooms will be from \$1 and upwards. Meals can be taken at a restaurant on the European plan. Those staying with friends will be enabled to utilize their wheels in going to and from the fair, by using the club house storage rooms. There is no doubt that the transportation facilities will be entirely inadequate to accommodate the world's fair visitors at certain hours of the day. The independence of wheelmen at these times is manifest to all. Join the association now and have your room secured in advance. Bring your wheel and take advantage of the association storage plan. This association will endeavor to make Chicago the cycling center of the world in 1893. Come with your wives, come singly, come in clubs, come any way, but see that you come with your wheel. Address L. D. Taylor, secretary, 959 W. Madison street, Chicago.

cash or value to be raced for indiscriminately. We say nothing on the merits of the cash prize and strict amateur systems, but merely point out that France has cut a rod for her own back, and much as we admire the splendid qualities of the French champions, we can not sympathize with them for being the victims of a complication which they have caused themselves. There is, however, a great deal that might be improved in the management, etc., of the I. C. A.—*Wheeling.*

\*\*\*

*What Shall We Do With Our Amateurs?*

This is the burning topic among cycling legislators at the present time. The more the matter is probed the further off we appear to be from a sensible solution of the difficulty. All sorts of schemes and suggestions have been discussed, but no one knows how to grapple with a subject of such serious importance. Trade influences have undoubtedly been the main cause of the present state of affairs, but then the question arises, can the trade be dispensed with in connection with cycle racing? I say that it can not, and those

#### RACING BOARD TRIBULATIONS.

To be placed in a position where one is forced to accept the blame for another's shortcomings is an unenviable lot, yet, from circumstances which have lately come to our knowledge, this is just the position in which Chairman Raymond, of the racing board has recently been placed. That gentleman has been mercilessly assailed, and by no one more frequently than by the REFEREE, for what has appeared to the onlooker to be palpable neglect of duty, whereas, if report speaks truly, one of his subordinates is entirely responsible. We refer to the gentleman in charge of district number eight, embracing Illinois and other western states. It is now some ten weeks since the Chicago Cycling Club held a tournament at Washington Park. A representative of the club,—to wit, the captain—was sent east in the capacity of "inducer" with instructions to bring certain men to Chicago. The captain departed and brought home with him a number of the bright and shining lights of the cycling firmament. According to the statement of a club director, who ought to know, as well as anyone, the true state of affairs—that these men were brought here at an expense to the Chicago C. C. of \$250 or thereabout, beside the amount expended to feed and entertain them while in the city of the World's Fair. The racing board member in charge of district number eight is a member of the Chicago C. C. He is, furthermore, and was at the time the arrangements for this tournament were made, a director of said club. Yet he has been unable to discover any breach of the rules of the league, which expressly forbid (according to the interpretation put upon them) the payment of expenses by any other than the club which the racing man represents. We use the words "according to the interpretation put upon them," because the league has an unfortunate habit of construing rules to suit cases. For example, proof of the charges made above will be sufficient to warrant the expulsion of the offenders, although the word "club" does not appear in the rules, while only a year or so ago the all-powerful Amateur Athletic Union forced the league to surrender on an exactly similar technicality. But that is another matter. Let us see what else has happened lately.

The REFEREE charged some weeks ago that the expenses of certain Chicago

men who raced at Milwaukee, were paid by the Milwaukee club. A well-known Chicagoan was named as the "inducer." The Milwaukee club denied, or was reported to have denied, the charge. The visit of the Chicagoans was repeated, at Christmas, and again on New Year's day under much the same circumstances, except that the breach of rules was even more flagrant. It was said, among those who know all about the arrangements, that monetary inducements were offered to two riders to compete and accepted by one of them. Whether any such consideration was paid or not, the individual referred to in the report was present at Milwaukee, and competed. These exploits have been openly talked about day after day at the dinner table at that classic resort where Chicago wheelmen congregate about the noon hour daily. In cycle stores and in club houses the discussion has been carried on without an effort to disguise the facts. Telephones in public places have been used to inform Mr. So-and-So that his ticket to Milwaukee was in the hands of Mr. Such-and-Such. The REFEREE stated these facts, as facts, and was called upon by the chairman of the racing board (not the member in charge of district number eight) to substantiate them. We declined, on the ground that the facts might be as easily obtainable by the board's representative as by ours. Whether, during all this time, the member in charge was reminded of his duties by any of his superiors, they alone must tell.

What is the result? Simply that a number of men, becoming alarmed at the facts brought out, have been enabled to cover their tracks. One is prepared to show that he pawned his watch to pay his expenses—and, by-the-way, he is quite confident it wasn't a watch he won, because he never won one on which he could raise over a dollar or two! Another gave his "note" for the amount of his expenses, while a third says he paid his own fare, which was to have been refunded when he reached Milwaukee, and the only reason he didn't receive the amount was that he couldn't find the treasurer!

In due course, no doubt, all these riders, together with certain members of the Chicago and Milwaukee clubs will be called upon for evidence, some being required to make affidavits. This may or may not bring out some information from the racing men themselves.

Just now Mr. Raymond seems to be pushing things to a head and in consequence the member in charge has at last bestired himself and is seeking, by correspondence, to set at facts which were thrust under his nose by this paper weeks ago.

#### COLONEL POPE AND CASH PRIZES.

An attempt has been made by a Chicago daily and by a New York weekly to show that the REFEREE misquoted Colonel Pope in an interview on the cash prize question some weeks ago. These attempts were the outcome of personal antipathy to the writer of the interview, and one was so evidently actuated by malice as to lose any force it might otherwise have had. Having since thoroughly investigated the matter we feel assured that the colonel made the statements attributed to him by both the Chicago paper (minus the personal references) and the REFEREE. In our representative's interview the colonel talked specifically of "the proposed cash prize league" and approved of it. His remarks have been borne out with singular accuracy by recent developments. Our correspondent's critics tried to make it appear that he had reported the colonel as favoring the offering of cash, by

the L. A. W., for amateurs! To show just what was reported, we reprint that portion of the interview which relates to the subject and have no doubt that the colonel will gladly acknowledge its accuracy:

"What do I know about the cash prize league? Well, just enough that I will predict that it will go and be a success. No, I will not be financially interested, that is, I am not at present," said the colonel guardedly. "Do I believe in cash prizes? Yes, with all my heart. Why not? Why, some of my closest friends, Mr. Forbes (owner of Nancy Hanks) and several yachting friends all compete for cash prizes, and I have been competing for cash prizes in a business way and in a racing way for many years and it looks as if I have been successful, does it not? An association to govern the racing will be a success, and I fancy the base ball people will be the principal financial backers of the scheme. I also believe," added the colonel, "that such an association will purify the amateur ranks of the present professionalism. The principal base ball grounds, with cement tracks, will be used, and there will be little expense outside the building of the tracks, as the grounds and stands are all right for the purpose. The idea will not only benefit cycling, but will also be a good thing for the base ball people, who cannot but acknowledge the decline of base ball and the rise of cycling. The cash prize movement now has the endorsement of some of the progressive people in the country, and if properly governed the scheme cannot but create a boom for the sport."

#### LOCAL OPTION DISCUSSED.

We had begun to hope that the negro question would be bridged over by allowing each state to do as it pleased, but in the last issue of our local contemporary "a St. Louis lawyer" raises objections which seem to upset this plan entirely and which will at least sorely try the wit and temper of the local option brigade. This gentleman points out numerous difficulties, and wants to know what will be done in case a negro desires to be transferred, as is permitted other members, from his own division to one where the "antis" hold sway. The more familiar one becomes with this subject the more troublesome he finds it. We are inclined to think however, that it will simmer down to a question of yes or no and that the negro will be permitted to enjoy all the privileges of membership or none at all. In case local option prevailed whites and negroes would be brought together at large meets, in national championships and at various other times and they would be likely to be even more numerous than they are now for the reason that they would look with resentment on the members of those divisions from which they were debarred, and force themselves upon those members whenever an opportunity occurred.

#### THE CASH PRIZE LEAGUE.

It is a rather singular fact that nearly every writer who has touched upon the recently formed cash prize league, has assumed that open war between it and the League of American Wheelmen is sure to ensue.

There seems to be no good reason to anticipate anything of the sort.

The league has chosen to exclude professionals and frown upon the cash prize system. It has been urged for years to give cash prizes a trial, but the sentiment of a majority of the members has been opposed to the experiment.

The new association comes upon the scene to cater to the desires of those who believe in and are willing to compete for the wherewith to purchase, openly and above board, those commodities which so many of the riders, under the present system, obtain by stealth.

"The league has no right" (to use the language of one of its officers) "to play dog in the manger." If the cash prize system can be worked successfully all honor to the people who are willing to prove it. If not, the thanks of the league are due to the promoters for help-

ing it out of a dilemma and saving it the humiliation of a failure—for sooner or later the trial must come. Decidedly there should be no conflict. The one body caters to one class, the other to another. If the new body draws a few members from the old, as it undoubtedly will, it is better by far that it should be so than that the professional in disguise should remain in the league.

Though we entertain serious doubts as to the success of the new venture, we maintain that it is to the interests of all wheelmen to give it a fair trial.

#### EARLY TRAINING.

Nearly every day now one hears of some of the racing men about to begin training for the season's work. We doubt if such early training is advisable, at least in the majority of cases. With Zimmerman, and perhaps a few others, it is different. It is a well known fact that the man from Jersey requires more training than ninety-nine per cent of the racing men of to-day. To get and keep in proper condition it is required of him that he begin early in the season and put in a lot of hard work every day. Others could not stand this. With many—the majority, probably—a little training would be better. Zimmerman could begin work now and would not go stale during the whole season, while others could not stand over two months' training and racing before they would be useless. Racing men must remember that the coming season will afford so much racing that they are apt to work themselves out before the division, national and international championships have been held. The best races are invariably held in September, and early training and hard riding during the three summer months will surely unfit anybody, except possibly Zimmerman, for the fall events.

JOHN S. JOHNSON, of 1:56 3-5 fame, has had himself interviewed by a St. Paul reporter and he did not hesitate to say that the records next summer would lie between Rhodes, Zimmerman, Sanger and himself. Johnson is soon to go south to train and will go for the records. "He is confident that he can break every record he lowered the past season," the interviewer states. Johnson went south only a short time ago for the same purpose. He was confident he could break all records—but he didn't. Now he is going south again to break all records—but he won't. Johnson was, a year ago, a very modest, unassuming young man; we fear now that such qualifications have become foreign to him.

The cash prize association has been called "the cycling Siberia." But there is this great difference between the laborers, that one works the mine for his own benefit, the other for a despotic government. Doubtless some one will continue the simile and liken the exile to the "amateur" under league rule.

The Milwaukee club is arranging to hold an amateur skating tournament and has secured the promise of Johnson and Sanger to compete. The races are to be open to amateurs, and we presume the usual railroad ticket will answer the purpose of a receipt for entry.

The geared ordinaries displayed at the Philadelphia cycle show caused but little comment among the thousands who visited the show. The general opinion seemed to prevail that they will cut little figure in this country in the coming season's trade.

Charles Wesley is under arrest in Chicago charged with stealing a wheel from Miss Jennie Abraham.

THE VOTE IS GROWING.

HOW LEAGUE MEMBERS VIEW THE AMATEUR QUESTION.

A Decided Vote Against Makers and Clubs Paying Expenses of Riders—Professionals May Be Admitted to the League.

Still the vote rolls up and each week is noticed some great changes. Notwithstanding the inducements offered by the racing board, creating two classes, A and B, the latter to receive pay and expenses from makers, over two-thirds of those who have replied to the REFEREE's questions are opposed to clubs and makers paying expenses, while a little more than half are in favor of pianos, etc., for prizes. Cash prizes are evidently not wanted, and while there is a majority in favor of admitting professionals to the league those against such a proposition are gaining ground. Out of the 255 answers received this week, twenty-one were against publishing the names of applicants for league membership in the Bulletin, while 225 sent in votes for the proposition.

Answers in Brief.

Some of the marginal notes on the postal cards received are given herewith:

QUESTION NO. 2. Why not?—N. H. Brinkerhoff, Paterson, N. J. If not overdone.—J. E. Mastbaum, Danville, Ill.

Yes; for any kind of prizes.—Dr. John E. Davis, Columbus, O. Let the prizes be anything but cash.—G. B. Woodruff, Winsted, Conn. Provided they are not turned into cash.—F. A. Kirch, Westfield, N. J. Should be allowed to compete for medals only.—G. A. Palmer, Belmont, N. Y.

Yes; if any person or club will put them up.—E. Watkinson, Colchester, Conn. No, sir; medals are, or ought to be, enough for amateurs.—E. N. Knight, Kankakee, Ill.

Yes; if an amateur is paying his own expenses he ought to get something for it.—Ernest B. McKim, Roxbury, Mass.

QUESTION NO. 3. Professionals; we want no splitting hairs.—John S. Gage, Vineland, N. J.

Professional; too many classes will ruin the sport.—L. S. Mulford, Chicago. Middle class, if a good distinction can be made.—H. N. Gardiner, Northampton, Mass.

QUESTION NO. 4. Decidedly yes.—John S. Gage, Vineland, N. J.

Yes; they help the cause.—H. B. Walker, Chicago. Yes; all wheelmen should be L. A. W. members.—No. 3,487.

No objection if classed as such.—G. S. Beers, New Haven, Conn. Yes, for they strengthen the league.—F. A. Pollock, Plainfield, N. J.

Yes; but have them race in their own class.—Charles Millard, Newark, N. J. Yes; if the middle class be termed professionals.—Charles S. Hoyt, Cleveland. Yes. Do not see why you should bar professionals.—W. G. Jacobs, Circleville, O.

QUESTION NO. 5. To two-minute men.—D. S. Waskey, Colfax, Wash.

To all except in championships.—W. W. Deupree, Jack-on, Tenn.

The L. A. W. should not recognize

RESULT OF THE VOTE TO DATE OF JAN. 18:

|                                                                                                                                                   |                                   |                             |                               |                                 |                              |

cash prizes.—Lewis A. White, Waterbury, Conn.

To professionals, as that is the only difference between them and amateurs. G. W. Patterson, Elmira, N. Y.

QUESTION NO. 6. Sure.—H. S. Parr, Crown Point, Ind. Yes!!!—Leonard S. Mulford, Chicago. Decidedly yes.—F. A. Myrick, New York.

Yes! Yes!! Yes!!!—J. L. Yopp, Wilmington, N. C. Yes, every time.—G. B. Woodruff, Winsted, Conn.

They certainly should.—C. E. Wood, Syracuse, N. Y.

They should; the present way of doing it is n. g.—H. S. Fulper, Passaic, N. J.

Yes; as is the case in other organizations.—W. W. Deupree, Jackson, Tenn. Yes; if proposed change be duly published.—F. A. Pollock, Plainfield, N. J.

Yes; Bob Holm to the contrary notwithstanding.—W. G. Nicholson, Milwaukee.

I am not prepared to answer this; there are good arguments pro and con.—John S. Gage, Vineland, N. J.

I think it would be wise to have a mail vote in some instances, but it is often unsatisfactory.—F. R. Steele, Richmond, Va.

Yes; there are members (who would like to vote on some questions) who could not attend the convention.—W. G. Jacob, Circleville, O.

So far as I am able to judge I should say no. I do not think it well to have the constitution fixed so that it can be too easily changed.—John W. Vincent, Snow Hill, Md.

Some Ideas at Length.

Some of the following letters suggest many important changes that might be made to advantage:

SEVERAL GOOD IDEAS.

CORNING, N. Y., Jan. 12.—Editor REFEREE:—I take great pleasure in answering your questions, as it has always seemed to me that this amateur matter has as yet rested on a rather uncertain foundation:

1. Yes; but should be classed by themselves. Would suggest calling them "club" or "supported" amateurs, and have it announced who paid their expenses; they should not be allowed to receive any salary or remuneration aside from traveling and training expenses.

2. I believe that an amateur prize should always consist of some object in the form of a trophy which should have a suitable inscription, reciting what it was for and the conditions under

which it was won. A championship prize of this nature would possess a greater value than crocks, as it would be prima facie evidence of the winner's ability.

3. Men receiving expenses and cash or convertible prizes are professionals—they race for what there is "in it." Men receiving expenses only are amateurs. But as they are supported by clubs the prizes should be given to the club. Individual men, training at their own expense, are in my mind the true ideal of amateurism. They should receive the highest prize within the gift of the league; they are the men now neglected, who glory in the sport as a sport—the only Simon pure amateurs!

4. Yes; the league, which is now so powerful and which we all love for its glorious past, has outgrown the narrow idea that one of its main objects is to protect the amateur lamb (poor innocent) from the terrible professional wolf. It has now a far loftier ideal, one in which it requires the aid of all lovers of the sport to attend. On the broader field now before us we can all meet as friends, both amateur and professional, working shoulder to shoulder for the common good.

5. I hardly believe the league would be called upon to govern professional events, although I see no harm in it.

6. Yes; decidedly. It is the only way to know whom we are admitting to membership.

7. I think perhaps a mail vote would be best if properly conducted. Would suggest as a simple plan, that the proposed amendment be published, and that for four weeks, a ballot reading "for amendment, etc., as follows:" (Then follows text of amendment), and another ballot reading "For retaining original article as follows" (here to be printed full text to constitution as in operation). These two ballots would show every member at a glance the pros and cons of the matter and he could vote intelligently. These ballots to be attached to a prominent place in the Bulletin, so they could be easily removed and sent to the secretary.

CARL S. GRISWOLD.

WHERE ARE WE AT?

REAMSTOWN, Pa., Jan. 7.—Editor REFEREE:—I think the present difficulty the league is in regarding racing matters is the consequence of trying to straddle the fence between amateurism and professionalism. A middle class, as you suggest on your card, is what the racing board has been trying to create. Failing completely, we find ourselves in a position where we may well ask, "Where are we at?" To settle this question we must decide between a race by bought-and-paid-for entertainers, or one in which members compete for precedence only, the prize being a medal or something similar, being given, not as a reward, but as a token, showing that such precedence exists. Professionals are not necessarily demons, nor are amateurs angels. I cannot see why professionals ought not to be accepted as members of the league if they are gentlemen. But the league should not recognize any but purely amateur races.

PROVIDENCE, Jan. 10.—Editor REFEREE:—In reply to your circular asking a mail vote upon several points of current interest. I will say—personally—that I believe in high standards of honor and do not think a wild scramble for money, houses, lots, pianos, teams and merchandise, a fitting modern sequel—at least, in the great contests—to the renowned ancient simplicity of the

Olympian laurel wreath; in short, I consider that "honor is more than gold." In the minor events prizes for their value principally might be allowed, better with than without a limitation of cost, since doubtless many care to race principally for what profit there is to them in the business. These men might be called "promateurs," as I should prefer, and not be allowed to compete in the great events, especially the national events, so long as they remained "promateurs;" "amateurs" to compete, after entry of names as amateurs to, and allowance by, the racing board. Cash racing should be considered "professional" racing, by "professionals" only, who should not be allowed league membership, although cash racing might be held by and controlled by the L. A. W. If professionals were admitted to membership, as a right, in practice their admission would seldom be protested against on the ground they were not "acceptable" individually. The prizes at the great events I think should be more of an honorary character, although I believe more would be suited if they were magnificent as well—but not of a salable kind; in these "challenge plate" would be included.

I do not consider expenses—either in amount or by whom paid—worthy of any consideration whatever. Let each man prepare himself for racing as he sees fit.

I believe the rules should be fearlessly and in good faith strictly enforced.

I think it would be a good idea for the Bulletin to publish the postoffice addresses of applicants for membership, and that the constitution should be amendable by the national assembly at its annual (or a special) session, after a verbatim statement of the amendment—proposed by any division—has been given in the bulletin at least thirty days before the session of the assembly where it is to be acted upon. WILLIAM N. P. BOWEN

WANTS MEDALS ONLY.

FALL RIVER, Mass., Jan. 12.—Editor REFEREE:—In answer to your question in regard to L. A. W. racing I would say that, in my opinion, a racing man should be an amateur or a professional, according as the meaning of the terms now are, but I think that an amateur, instead of being rewarded with such bulky things as pianos, bicycles, horses, etc. (which are things that accumulate too fast with some of our racing men unless sold, and which belong more to the professional class, as they would have a chance to sell them), should be rewarded with medals, to be made of as nearly pure metal as possible, or at least as good as United States currency. These medals could be set with diamonds or precious stones, and could be of as much value as promoters of race meets want to make them. They are things that a racing man could keep in a very small space which would be as good as money to him at any time, and something to repay him for his time and all his hard work without any danger of his being a professional if he has the true amateur spirit, as he, knowing their value, and priding himself on the races they represent, would not care to sell them unless absolutely forced to do so. I do not believe in cash prizes, but I do believe in prizes of some value, in the way that I have stated. F. C. NICHOL.

WANTS TWO CLASSES.

GLENS FALLS, N. Y., Jan. 13.—Editor REFEREE:—In response to your postal card which has just come to hand, I am pleased at the opportunity of answering some of your questions: (1) I should

# RAGLAN CYCLES

LONDON, 33 HOLBORN VIADUCT, E. C.

say yes to this question. A racing man must have good training, and for this his expenses are large, and by receiving from a club or manufacturer this part, his expenses only, I can not see how it can degrade or in any way compromise the spors of wheeling or our L. A. W. organization. (2) Yes; why not? I believe in the league organizing another class of professionals to receive cash prizes, and for an amateur to receive any prize except cash. (3) We do not need three classes, simply two—an amateur and a professional. (4) Yes; it will help the whole sport of cycling to get these men under control of the L. A. W. and be able to make it an object to them to remain members. (5) Ye; the professional class. (6) It seems as though this would be quite necessary for the identification of persons, and again these addresses would be of use to these different cycle manufacturers which support the literature among cyclists.

J. R. LOOMIS, JR.

#### A MONTANA MAN'S IDEA.

HELENA, MONT., Jan. 9.—Editor REFEREE:—Answering your questions: It makes little difference who pays expenses, the main point is personal ability developed. Suppose a Jew or Jewess should win a ham, under the present L. A. W. law, he or she being Hebrews could neither sell nor eat it, but must pack it around forever and ever. It makes no difference for what one rides in a race, a \$10 note or a badge costing \$4 valued at \$10. Let it be prizes and cash or prizes or cash, then classify the races and not the riders. The racing committee should provide for both at the meets. Everyone can get a better view of things after hearing the different views presented in convention and no doubt the views of nearly everyone present will be modified, altered or changed at the time. It is my sincere wish that professionals will in some manner be retained in the league, either classed or otherwise. Like our government the voice of the people only can decide which is best, as no one member can see through it.

Dr. D. J. WAIT,  
Chief Consul, Montana division.

#### FAVORS CLASS RACING

SPRINGFIELD, O., Jan. 12.—Editor REFEREE:—I received your postal and enclosure and fill out said card and mail it to you. You will observe I have drawn my pencil through the words "makers and" as, in my opinion, if a makers pays the expenses of a man such as the question indicates he is paid for so doing and therefore gets cash and should be rightfully called a professional; while the man whose expenses are paid by the club to which he belongs may be a flyer but has

#### VOTING BLANK.

*Cut Out this Blank, and, After Filling In Your Replies, Mail to the Referee, Chicago.*

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs? .....

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.? .....

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals? .....

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership? .....

No. 5. Shall cash prizes be awarded to any class, and if so, which? .....

No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin? .....

No. 7. Shall the constitution be so changed as to permit of a change by a mail vote? .....

I certify that I am a member of the League of American Wheelmen and I have not previously voted on the above questions.

Name.....

Address.....

League No. (if possible).....

*A supply of these blanks will be forwarded to any league member on application.*

not the means to enable him to train as he should. In regard to the third question, although it has nothing to do really with it, I will say, I believe it would be best to make what I would call class racing; that is, put men that are nearly equal in speed in the same class and do away with handicapping which is always unsatisfactory.

L. A. W., 23,014.

#### LIMIT THE PRIZE VALUE.

AMSTERDAM, N. Y., Jan. 13.—Editor REFEREE:—Allow me to answer questions as follows: (1) No; (2) allow merchandise prizes, but limit the values say from \$5 to \$25; (3) anyone competing for prizes above the limit to be chosen as professionals and (4) exclude them from the L. A. W.; (5) as a L. A. W. member don't care how much cash professional receive; (6 and 7) yes;

the L. A. W. should not recognize cash prizes or the professionals.

J. A. BARTHOFF.

#### AGAINST RACING.

SNOW HILL, Md., Jan. 7.—Editor REFEREE:—Taking the risk of being classed an extreme or old fogey, I will say, that I do not approve of racing in any form, unless a person wishes to spurt occasionally to see what time he can make. I think that all right, but I think race meets, etc., injurious to the health of the racers and more or less demoralizing in their effect on the public. My idea of cycling is, health, pleasure and business.

J. W. VINCENT.

#### The Detroit Wheelmen's Squabble.

About the only thing of interest to

wheelmen in Detroit just at present is the little squabble that the various factions are having over the Detroit Wheelmen affairs. After having determined to dissolve, the dissenting faction looked about and instigated a movement to reconsider the motion and endeavor to carry on the club. The meeting will be productive of some surprises. Mr. Griffith has resigned from the club presidency and membership, and it is rumored that when the meeting is called to order what has hitherto been the supporting element of the club will be represented only by their resignations. With such a batch of resignations and more to follow, a not over rich treasury and very fair prospects of legal complications arising, it looks as though the Detroit Wheelmen, instead of riding in a blaze of glory as was planned, will simply end up in a very dissatisfied and ignoble manner.

#### Little Notes.

The promoters of the cash prize league look upon the fairs as a fruitful source of income. Fair associations have dealt liberally with professionals in years gone by.

A few members of the Metropolitan Association of Cycling Clubs of New York were in favor of holding a cycle show in New York, but found little promise of support among trade men. The project was, therefore, very properly dropped.

A. C. Banker, at present in Chicago, states that a contract will be closed in a day or two, by which the Columbia Rubber Company will manufacture the American Dunlop tire. Banker further says that his company closed an immense contract at Philadelphia with the Western Wheel Works, for solid and cushion tires, pedal rubbers, handles, etc.

## CASH PRIZE PROSPECTS

WHAT THE NEW LEAGUE HAS LAID OUT FOR THE COMING SEASON.

Many Serious Difficulties to Contend With—The Amount of Money Required—Some of the Rules—Egan's Fairy Tale.

The announcement of the formation of the cash prize league was made rather sooner than anyone, outside of the promoters, expected; indeed, we doubt whether even the prime movers in the affair thoroughly made up their minds until the eleventh hour to make the announcement at the Philadelphia banquet. Very few people, at the time the show commenced, were in possession of any definite information that the attempt was really to be made, but as soon as the talkative Egan commenced to circulate the story—as in everyone's mouth. And right nobly he stood up for his pet theories, and argued, hour after hour, first with one and then with another.

By means of an argument on our own account we were able to obtain a few details which have not yet, we believe, been published, as to the intention of the management.

As is now generally known a number of base ball men are the backers of the enterprise, and the races, if run at all, will take place principally on the grounds of clubs in the ball league. Of these there are a dozen. If the plans decided upon are carried out tracks will be constructed in each, each track to be a quarter of a mile in circumference, that being the regulation size adopted, and all be exactly alike as regards banking, etc., or as near alike as circumstances permit.

There will be two meetings of two days each, or four days' racing all told, each week, during a season of twenty-six weeks, and at each day's racing four events will occur—three the dailies have it, but four, according to Egan,—consisting of a novice race, a class race, a free-for-all handicap and a class handicap, from which men with records under a certain figure will be barred.

All races are to be officered by men appointed and paid by the league, and no rider who competes under any other management will be permitted to ride. One handicapper will cover the entire country, being expected to do his work by telegraph.

It is intended to work the state and county fairs. Any fair which can arrange suitable dates and offer sufficient money will be favored with a meeting. The money offered must be in the hands of the treasurer of the league one week in advance of the races, otherwise the engagement will come to an end. The money posted, the racers will be notified, the official officials will tie them to the scene of conflict, and, on the day announced, rain, or shine, regardless of condition of track, the races will be run. The racers will receive their money as soon as the sport is at an end and will go on their way rejoicing.

Every man will be a novice at the outset. As soon as he wins a race he goes into the class and on events. No cognizance of past records will be taken. It is a new deal and a new game. No one will be allowed to compete without first obtaining a license. It isn't a free-for-all game. There are some men who are not wanted; they are already on the black list, so to speak. Having once obtained a license the man may go out competing so long as he behaves himself. Tricksters will not be tolerated, for their license will be revoked. All this reads,

no doubt, like a fairy tale. But it shows just what the new body has to overcome to insure success. It has many things to get. For example:

Tracks, twelve, \$4,000 apiece; total, \$48,000.

Officials, say six, at \$1,000 apiece—maybe more, for honest men come high—total, \$6,000

Handicapper, one, say \$1,000.

Competitors—ah! there's the rub. Every man has his price, they say, but the sum required to get at some of the fast men will be too large for computation.

Prize money, two meetings weekly, at \$1,500 per meet, twenty-six weeks, \$78,000.

Traveling expenses of officials, salary of secretary and a thousand and one little incidentals will add, goodness knows how much more.

At any rate the association, according to its own showing, must obtain about \$140,000 from the dear American public to be whole at the close of its first season.

To do this it will be necessary to draw about 2,400 people at fifty cents apiece to every meeting, rain or shine. In comparison with the average attendance at amateur meetings this is enormous. The new league, however, has one great point in its favor as a drawing card, and one which it can, and no doubt will, use with deadly effect should there be a conflict with the league. We refer to its standing with the daily press. Some of the best press-workers of the day are found in the ranks of the base-ball men, and the favor heretofore found with the newspapers will no doubt be continued.

Before leaving the subject, we may as well mention a statement made by Egan during the Philadelphia show. It is generally supposed that the warning issued by the racing board was responsible for the stoppage of the *Sporting Life* car scheme. This is emphatically denied. "We were all ready," said Egan, "to go into court and ask for an injunction restraining the board from interfering, and, according to some of the best lawyers in Philadelphia, they would have been powerless to suspend the men. One of our ablest attorneys offered to carry the thing through successfully or make no charge for his services."

"But what caused you to abandon the trip?"

"The trade men. They didn't care to go into any unpleasantness. By the way, the L. A. W. is going to settle the promoter question, isn't it? If you'll tell me what the trade wants, I'll tell you what the L. A. W. will do!"

#### To Make a Long Ride.

Dr. C. Z. Ball, of the Quaker City Wheelmen, leaves the City of Brotherly Love the first of next June for a 10,000 mile trip through the United States. He will visit the world's fair, S. P. Paul, Yellowstone Park, returning, by train to the national meet, thence back to Yellowstone Park, continuing his trip to California and returning via Mexico, Texas, Louisiana, Florida and northward along the Atlantic shore line to his home. He expects to be gone a year. Dr. Ball rode 273 miles in 24 hours last year.

#### A \$3,000 Record.

An Indianapolis paper tells of a new bicycle record, one which may prove rather expensive. As an Indianapolis man was carrying his bicycle up the stairs to his office he let it slip. It ran 100 yards of stair space in 11 seconds, corrected time. At the foot of the stairs it collided with a man, throwing him down and breaking his arm and nose. He has entered suit for \$3,000 damages.

On a beautiful Sunday morning, about the middle of November, some of the Atlanta (Ga.) wheelmen enjoyed a club run over the road course to Fairburn, twenty miles distant. Some of them enjoyed the "run" back; others didn't. The cause? Capt. Kidd.

He might easily have been of the original vintage, judging from his venerable appearance and philosophical remarks. His mule certainly was of an original line.

To begin. The air was balmy, the road excellent and the scenery picturesque.

THE WHEELMEN CAME SPINNING BY.

esque. Cotton was ripe, persimmons were ripe and so was the "captain's" mule—for most anything.

The wheelmen came spinning by—and passed—all safely. Capt. Kidd was ruminating on the question of voting kangaroo style. The mule ruminated also

SUDDENLY JUMPED KANGAROO STYLE.

and suddenly jumped, kangaroo style—across the ditch.

The wagon stopped; the captain didn't—he held on to the helm (the reins).

Fifteen feet ahead he had decided to stop; he did so—on his head.

The boys stopped also and returned. They voluminously asserted their regret, and backed it up with cash enough to repair the vehicle and leave a good bonus remaining.

The captain simply swore various and sundry times that he "was an honest citizen"—but he took the money. He is

now like Keator, under the ban, and no longer "an honest citizen," like other good amateurs.

A factory representative from the east also enjoyed this particular run, aided and abetted by a jovial companion and a pair of good horses.

Capt. Kidd was transferred to the buggy, his damaged wagon hitched behind, and all were taken to the next town, where the necessary repairs were to be made.

The eastern visitor being delegated to lead the mule, and not being as well up in Kangaroo mules as he was on "the

RETURN—RIGHT ARM IN A SLING.

Result—right arm in a sling, mule afterwards chained to the axle.

But we are diverging. Leaving the captain proclaiming his "honesty" as a citizen, the boys rode over to Fairburn and later enjoyed a good dinner with a clear conscience.

No sooner this was done, however, when the minister of Fairburn came up and announced that the old reprobate, Kidd, true to his villainous name, was even then in Fairburn, swearing out warrants for the entire party.

Knowing the general friendly and hospitable feeling Georgia county sheriffs entertain toward wheelmen, the boys waited to learn nothing further, but with the advantage of a flying start and a down grade exhibited to the entire population of the town, who had turned out *en masse* how expeditiously a forced march could be made.

The eastern man and his friend were handicapped somewhat at the start, but with the assistance of four darkies and a liberal supply of small coin, a quick "boots saddle" was accomplished, and

THE MINISTER OF FAIRBURN.

not minding twisted traces and rein straps, good time was made toward Atlanta.

A few punctures made things further

We have already contracted to furnish several of the largest jobbers in our territory for the season of '93.

CORRESPONDENCE SOLICITED. AGENTS WANTED.

ROUSE, HAZARD & COMPANY, 89 G STREET, PEORIA, ILL.

IF YOU ARE MARRIED TO ANY MAKE OF WHEEL (Other than the Sylph), in other words, believe it as perfect as is possible to build a cycle for pleasure and comfort, it is useless for us to try to convince you there is anything better.

IF, HOWEVER, YOU ARE WILLING TO INVESTIGATE the many merits of Sylph Cycles, especially the Three-Part Spring Frame and how it works, we are more than positive you will be convinced they excel all other styles of spring frames and are as far superior to a rigid frame cycle as a Pullman car is superior to a freight for pleasure and comfort when traveling.

To meet the demand of scorchers we have just placed on the market a rigid frame Sylph, styled Model D. Cut of the machine will appear later. Watch for it; it has features distinctly its own. Catalogue and new circular "Preliminary Pointers" now ready. Agents wanted in all unoccupied territory.

ROUSE-DURYEA CYCLE CO.,

89 G Street, PEORIA, ILL.

interesting for the wheelmen on the homeward trip, and the boys to kick the railroad track—with some tall scrambling at cross switches—as a strategical move.

The best part of the joke however remains to be told. A prominent citizen of Fairburn went to Atlanta the following day for the express purpose of notifying the boys that although old Capt. Kidd endeavored to procure the warrant as stated he did not and could not have procured it as the town officials were really friendly toward the wheelmen and were quick to see the injustice of the request.

The record over the road course, however, made on that speedy return "run" was scarcely broken even in a road race which occurred during carnival week.

But the boys didn't run; they just thought—to a man—they just had better get home early, quite early in fact.

#### The Du Cros Family.

Harvey Du Cros of Dublin has six sons of whom he may well be proud. Mr. Du Cros and his six boys are all racing men and proudly display in several rooms of their castle no less than 2,000 prizes won on the path. All of the sons and, in fact the father, too, are expert acrobats and trick riders. The latter feat they rarely display in public. The father is an expert with the gloves, but is now so immersed in business that he will not again have a hand in the sport.

#### Saves His Money.

Hoeffler, the young trick rider, who gave exhibitions at the cycle show the first week, has managed by good speculations in land to increase his savings to over \$16,000. He has in addition a nice home and a large hall in which he practices during idle periods.

#### New York's Theatre Party.

The Metropolitan Association of Cycling Clubs' theatre party at the Brooklyn Theatre, New York, last Thursday night was well attended. It was a full-dress affair, and among those present were Mayor Gilroy, Commissioner of Public Works Daly, President of Park Commissioners Dana, Charity Commissioner Sheehy, President of Police Board Martin, Charles H. Luscombe, chief consul of New York; Howard E. Raymond, chairman of the racing board; W. Wood, vice-consul of New York; James R. Dunn, ex-president of the league, and Charles A. Sheehan, president of the Metropolitan Association of Cycling Clubs.

#### Quiet at Buffalo.

The past week in Buffalo has been of unusual quietness, and if it were not for the pool tournament between the Ramblers B. C. and the Press C. C., there would be nothing of any interest to wheelmen going on. The first of these meetings took place on Tuesday at the Press club house, and was witnessed by a very large crowd of wheelmen, in fact the boys made such a confusion that the men engaged in the contest could hardly get about the tables. The Press club was victorious at this time, being three points in advance of its opponent. The second meeting took place on Thursday,

and the Press was again victorious by several points. It is needless to state that the interest manifested at the first game was maintained, and that it will not flag is apparent. Never in the history of club tournaments has there been so much excitement and interest shown, and it is creating any amount of speculation between the two clubs. This interclub match will continue for several weeks longer.

The reception given by the Comrades C. C. at Turn Hall on Thursday evening was very successful and well attended. The decorations were some of the finest; so was the music, and there is no doubt that the club made some money from its venture.

#### The Saint's Didn't Appear.

After condescending to give up the proposed raffle and substitute an auction, the Oak Park C. C. members did not have the pleasure of the company of the good missionaries who were so exercised over the raffle. The missionaries had promised their support if the raffle should be given up for an auction, but not one of the committee put in an appearance. Judge Herrick was auctioneer and knocked down several articles to the missionaries, notwithstanding the fact that they were not present and did not bid. All the articles on hand were sold at good prices and a handsome profit was the result.

#### About the Country.

The Cambridge Cycle Club's fifth annual fancy dress ball is to be held at Union Hall, Cambridge, Mass., Jan. 19. Tuesday evening, Jan. 24, the Ripon Wheelmen, of Ripon, Wis., will give their first annual reception at Opera Hall.

The St. Louis C. C. gave an entertainment and hop at the Pickwick theatre

Thursday evening last. "Armande," a comedy-drama in five acts, was given by the Garrick Dramatic Society.

The Dayton (Ohio) Bicycle Club is making elaborate preparations to give another of its splendid minstrel performances. The event will take place at the Grand Opera House, Feb. 20, and the line is waiting for reserved seats, so the committee reports.

The Castle Point (N. J.) Cyclers have arranged to inaugurate their first annual theatre party at Ross' Theatre Jan. 20, the show for that evening being the popular "My Aunt Bridget's Baby," played by the well-known George Monroe.

#### To Entertain the C. C. C.

The members and friends of the Chicago Cycling Club will be given a concert by the Walter Emerson company at Rosalie hall, Feb. 15. Inasmuch as the company enjoys a splendid reputation for giving good entertainments, a good house is anticipated.

#### Telling Old Stories.

"A bicyclist can do the fake act without being found out," remarked the rider to the Pittsburgh Chronicle Telegraph the other day. "Murder will out. Did you see how Lenz exposed Tom Stevens' riding in Japan? Natives told him Stevens only rode on his wheel from Kobe to Yokohama. A man must cover the distance these days. Remember that Century run from Hamilton to Cincinnati, where Tom Roe and forty others rode on a train until ten miles of Cincinnati, got off and wheeled into town? They had made phenomenal time and were given credit for it until somebody gave the train racket away. Roe had sent a big account of the affair to a Chicago paper which he was representing. He quit work the next day."

ENGLISH PRESS OPINIONS.

Climate vs. Time.

*Wheeling* has never doubted American or French times because *Wheeling* knows from personal experience that climate has a tremendous effect on the human frame both mentally and physically. Why other cycling journals ever doubted American times we cannot say and do not even suggest. *Wheeling* addresses an intelligent body of readers, and they can judge the point for themselves. Taking the nearest country, for example, France, which we visit on an average three times a year, we know that when once in the dry, exhilarating atmosphere of Paris our desire for any extraneous stimulant to the frame, beyond that given by food at meal times, ceases. A man could easily be a teetotaler in Paris, and, as regards America, as a matter of fact most Americans are water drinkers. Why? No, not necessarily from principle, but because the dry atmosphere of America, like that of France, does not make alcohol a necessity. Now, if this is the effect of a dry climate on an ordinary individual, who has no intention of going in for physical exertion in the way of athletic contests, how much more must such a climate beneficially affect a trained man. We publish to-day a letter from Jack Keen, in which he bears testimony on this point, which, added to our own experience, places it beyond doubt that a man always can, and always will, do better performances in a clear, dry atmosphere than in one laden with damp, even if (occasionally) clear to the eye, like that of England. We believe that such a climate—a damp one—is better for the retention of clear skins amongst our womanhood, but it is dead against our athletes. This being so, no fair comparison can ever be made between times made in one country and those done in another. The matter, however, acts both ways. Send Zimmerman or Stephane suddenly here, and they could, as is proved in one case, do practically nothing until they got acclimatised, because they would come from a good, dry climate to a bad, damp one—a damp bad one, we might say. On the other hand, the Englishman who goes to race abroad, gains, because he goes from a bad climate to a good one. It evidence of this we may quote the fast times of the English amateurs at the Velodrome Buffalo in the past year. Cement had, no doubt, something to do with it, but climate also “stood in.” The same “authority” who doubted American times, and stuck to the ordinary long after the safety had replaced it, besides pooh-poohing the pneumatic tire, might, no doubt, say that cement had nothing to do with it, but that authority’s record as a prophet is so bad a one that the mere fact of “its” opposition to cement is sufficient to prove its efficiency. But we are on the subject of climate now, not cement. It must be perfectly clear to any traveled and intelligent man that it is an utter absurdity to compare the cycling “times” of one country with those of another, or even the performances of men; for whilst the Frenchman and American suddenly brought to England must lose physical power from climatic causes, the Englishman transported in like degree to either of the above-named countries must increase in vitality; always excepting the few who thrive better in a damp than in a dry climate.—*Wheeling*.

Cycling Versus Skating.

The hard frost which during the past few days has bound everything with a grip of iron has provided delightful

source of enjoyment to hundreds of ardent cyclists. The roads have been in splendid condition for riding, but even the most enthusiastic wheeler has been tempted to leave them, look up his skates and go in for pastime which, thanks to this changeable climate of ours, is unfortunately rarely possible. Winter riding is all very well with anything like decent roads, but even this pales before an hour or two on the ice. Skating has a decided advantage over cycling, in one respect at least, and that is that one is not troubled with cold extremities, which are inseparable from the pursuit of the wheel when the air is so keen and piercing. Do what a rider will, his feet soon become benumbed during the winter’s run, and it is this discomfort which prevents many devoted wheelmen from turning out in this season of the year. If he could only be reasonably protected against this drawback, nothing could equal a journey on his trusty wheel while the

talked of cement, at all events.—*The Wheeler*.

They May Prove Different.

It has become quite common now for every fresh adaptation of mechanical science to be derided and described as nothing new, tried before and found wanting, and so on. But it seems to be forgotten that many old ideas failed because of non-practical application, or because the world was not “educated up” to them. Such was the case with the pneumatic tire, and such may be the case with the great front driver, elliptical chain wheel, *et hoc genus omne*.—*Scottish Cyclist*.

Must Be Dangerous.

A well-known Northern land agent has hit on a remarkable plan for striking terror in the hearts of moonlighters. He is an accomplished cyclist, and in his lonely wanderings over desolate country

in all seriousness—must be for a good round sum of money, and should appear in all the sporting allies, the cycling weeklies, and in the *C. T. C. Gazette*, even though you have to pay for it as an advertisement. That you should never previously have been heard of without the confines of your own parish matters not a rap. You will find your name on every sportsman’s tongue, and the unrea oning among these (of which, if we are to accept the gospel accord ng to the late Thomas Carlyle, there will be many) will take you quite seriously to be a really high flier. Your fame may even extend to the North American continent, just as that of Mr. W. C. Sanger, who challenged Zimmerman to a match, has been bruited across the Atlantic.—*British Sport*.

Cyclists to be Numbered.

What is this we read? From our esteemed contemporary the *Cycle Record* we find that the Borough Magistrates of Kingston have forwarded a petition to the Home Secretary, praying that cyclists should be numbered and the numbers placed on the lamp, so that they can be seen day or night. The reason given for this step is the difficulty experienced by the police in identifying wheelmen in case of misconduct, which, we take it, means that the police do not always get told the truth, by the delinquent wheeler. Well, we are not altogether surprised, inasmuch as it is well known that the anti-cycling feeling prevalent among dignitaries of the bench generally results in the rider being dealt with in a manner the reverse of lenient. At the same time it is to be hoped that cyclists will be sufficiently strong to make their opposition to such a proposal should it come before parliament, very strongly felt. It is not every wheelman that would care to carry a lamp attached to his machine all day just for the sake of showing his regulation number to the minions of the law.—*The Athletic and Dramatic News*.

The Cuca Cocoa Race.

Judging from the remarks one hears on all sides concerning the Cuca Cocoa cup race in 1893, the London County Committee will not be able to save the advising board trouble, and the experts will be called together to choose between the numerous entrants. It seems almost a pity that the tricycle could not be eliminated from the field, but the conditions under which the trophy is run will not permit of it. On the granulated cork surface 450 miles should easily be covered. Frank Waller, the California long distance crack, has declared his intention of being present, even if he works his passage over before the mast. The London County Club is prospering, and a number of aspirants to the honors of the cycling and running paths are seeking admission to its ranks. The club has as yet no entrance fee, but such is the rapidity with which its ranks are filling that one is likely to be introduced at no distant date.—*Cyclist*.

Notes.

Texas league members are taking active interest in the movement to exclude negroes, and will go to the meeting to oppose them.

It is reported that Park Commissioner Brown, of Brooklyn, has promised to make a start on a bicycle road along Ocean Boulevard to Coney Island.

It is altogether probable that the table of comparative records now in use in connection with class racing will be abolished; and that men will be judged solely by their records at the distance of the competition.

GEORGE C. ("RIVERSIDE") SMITH.

roads are as hard as flint, but few will brave the severe cold for any length of time. With skating it is altogether different. A very few minutes on the ice suffices to send the blood coursing through the veins and diffusing a warmth and pleasant feeling which probably no other outdoor winter exercise affords. No wonder, therefore, that the sharp frost has been hailed with much glee, the lakes and ponds being everywhere alive with well-known cyclists. Skating, moreover, we need hardly say, needs less exertion than cycling—there are no hills to climb—while it is not so exhausting; but notwithstanding this fact, it is worth noting that distances can be covered in much shorter time by the wheeler than by the skater. Zimmerman, Harris and Schofield, for instance, are able to boast of better records than say Donoghue, Hagen or Smart. What a crack rider could do on the ice would be a very interesting experiment. The surface should be equal to the much

roads might possibly suffer the land agent’s not unfrequent fate of being potted from behind a hedge, were it not for a certain practice of his, well known to all the country side. He has put up small white marks on each side of his avenue, and every morning, as he flies towards the gate at racing speed, he fires right and left with his revolver, and never misses a mark. The respect the country people feel for this cyclist-marksman is unbounded. — *Irish Cyclist*.

How to Become Prominent.

To those to desire to achieve fame, and that at the least possible price, we would recommend the following method. Put in a few mediocre performances on your own particular heap, and then boldly flaunt a challenge before Harris and Schofield, or Shorland or Holbein, according as your tastes incline towards path racing or the more stirring road. Of course your challenge must be made

## IN THE "SWEAT BOX."

## How Easily Does the Pure Amateur Pass Through the Ordeal.

He was of a modest, unassuming appearance; he did not look like one who would violate any law set down; he looked innocent and said he was—maybe he was, maybe he wasn't.

He was a young man who had made something of a reputation for himself by his riding ability and his promateur proclivities.

In company with many others of his sort he was taken to task by the racing board of the League of American Wheelmen and was asked many and numerous questions.

He was not averse to answering the questions of the racing board or anybody else, for he publicly declared his entire innocence.

He was a young man without a situation for a short time, yet he traveled about the country, living at first class hotels, paying railroad fare, and winning bicycle races.

He was recently on an extended trip, and he paid his own way entirely—no one paid his expenses, directly or indirectly—he rode the wheel of a brother racing man, one that was won in a race—no maker could "induce" him.

Notwithstanding this his companions also rode wheels of the same make, but all borrowed from the one who had actually won them. [This, so far as at least two were concerned, is true.—Ed.]

The young man was plied with questions, yet answered them all—except one, and he did so with as much composure as possible under the circumstances. He was even helped out of a hole or two by other racing men who were listening to the conversation.

He admitted with great frankness that he had been out of employment and had not the money to make the trip mentioned. Inasmuch as he was considered a great rider and he desired to enter the employ of some bicycle house, he thought if he could borrow a certain make of wheel and ride it to glory in races or for records, he would popularize himself with the maker of the machine he rode.

He figured it out that he would have to have at least \$200 to pay railroad fare and board while on the trip, and if successful he would secure the employment with the makers of the wheel he rode at not less than \$18 per week and could soon pay back the \$200.

He had won many prizes—bicycles, diamonds, etc.—but these he could not dispose of for a consideration because it would jeopardize his amateur standing.

But money he must have and he had to borrow it.

A lady friend, knowing his trouble, offered to loan him the desired amount if he would secure her by an "on demand" note, with interest, and with the signature of one witness thereon. The name of the lady friend and her address the young man refused to divulge.

He got the \$200, he made the trip proposed, and he will, about Feb. 1, enter the employ of the makers of the wheel he rode—notwithstanding the fact that

it was not ridden to any great amount of glory.

His salary has been fixed at a certain figure, and from each week's stipend he proposes to lay aside a sum sufficient to take up his note in a short time.

Then his salary will likely be cut down a little.

See how it's done?

## ARE THEY SUSPENDED?

The Racing Board's Are Said to Have Been in Service.

The racing fraternity east and west has been all upset this week over the reported suspension of Tyler, Hess, Wheeler and Dornitge for having allowed their expenses to be paid while attending the dedication tournament of the Chicago C. C., and Lumsden, Githens and Steele on account of the Milwaukee trip. Rhodes, Johnson and Ballard are also reported suspended, probably for having made the trips to the Cream City and the south. As yet the report has not been confirmed, and while many do not be-

answer inside of ten days, and the suspensions were announced before the expiration of that time, it does not seem probable that any action has been taken by the board.

\* \* \*

## STORIES OF THE FLYERS.

How Zimmerman Exhibited His Prizes as Well as His Modesty.

Zimmerman was a prize himself to the Raleigh people. As he stood in his favorite pose before the Raleigh company's exhibit, people crowded and jostled him as they would any other mortal. When told who he was the same people stood at a distance in silent admiration. "So modest and unassuming, so loth to talk of his victories; he's my ideal of a man," said one enthusiastic lady of Philadelphia's "400." When she asked Zimmy to show her his prizes, the great rider escorted her around the stand on which hundreds of trophies were displayed, pointed out one or two and walked away. Modest Zimmy; he hated to talk of his great victories, and the exhibition of his prizes seemed almost a bore to him.

\* \* \*

## The Proposed Amendments.

To comply with the rules of the L. A. W. all proposed amendments to the constitution and by-laws not already pub-

THE QUESTION OF THE HOUR.

lieve the report, it smacks considerably of the truth.

W. C. Thorne, the western member of the racing board did not believe the report, inasmuch as he had heard nothing of it officially and was not at Philadelphia Saturday, when the edict is supposed to have been issued. Those returning from Philadelphia say Mr. Crowther denied point blank that any suspensions had been made, while a REFEREE correspondent states that Mr. Fourdrinier told him he (Fourdrinier) had seen the copy of the notices of suspension in the *Bulletin* office late last week—before he left Boston for the show. Messrs. Raymond, Crowther and Collister were the only members of the board at Philadelphia, and none of these would admit or deny the reported suspensions.

It is noticed that some of those who were at Milwaukee, and who are as deserving of suspension as those named above—escaped, or else their names were omitted in the despatches. George Smith was one of the eastern party, and who seems to have escaped.

Zimmerman was at Chicago, but did not ride; Davis, Munger and one or two others attended the Milwaukee races, but did not ride, and therefore these men's necks were saved.

Inasmuch as all Chicago men who went to Milwaukee were given (by the racing board) a number of questions to

lished must appear in the next issue of the *Bulletin*. The proposals already submitted are those of Mr. Watts, which, in effect, excludes colored people, and of the racing board, which makes radical changes in the amateur definition. We present the amendments briefly preferring not to comment thereon until all the amendments have been published.

The board proposes to establish two classes, both to be called amateurs, but divided into classes A and B. Class A will consist of men who compete for prizes under \$50 in value, who do not in any way receive pecuniary benefits from cycling, and who are, in deed as in profession, true exponents of the ancient idea of an amateur.

Class B will include the makers' amateur. He will be allowed to receive expenses and ride for manufacturers. He will be permitted to do about as he pleases, except that he must not sell prizes, ride for money or against professionals.

A wheelman having once forfeited his standing cannot be reinstated except by the National Assembly.

David J. Post gives notice that he shall move to commence the official year immediately on the adjournment of the National Assembly.

\* \* \*

## Two Frenchmen Matched.

Terront, winner of the road race from

Paris to Brest and back, and Carre, who was fourth in the big event and who afterwards made unsuccessful attempts to lower the record over the course, have been matched to ride a thousand kilometre match for £100 a side. The event takes place Feb. 24, on the track at the Palais des Machines, Paris. Both men are hard at work training, and as the French cycling public is deeply interested in the outcome, a good race is looked for.

\* \* \*

## To Overthrow the League.

So large was the number of racing men congregated at the show during the second week that a rumor went abroad that a meeting would be held and steps taken to form a racing association to overthrow the league. A meeting was held and a secret society formed. Those not admitted the first night had to go through a rigid and soul-harrowing initiation. Ed. Bode was the first victim, and so piercing were his screams that several candidates weakened and they fled down the corridors.

\* \* \*

## Josh Whitcomb of Cycling.

Joe Goodman "dubbed" Hoyland Smith the Josh Whitcomb of cycling. When Hoyland was spoken to regarding Zimmy's prizes and the great number of them he drawled out in his inimitable way: "Yes, but it ain't half of them." Hoyland is getting fat. "If there is a pure amateur on the path to-day, it's Hoyland Smith," said a great admirer of his. Providing he can obtain pacemakers another onslaught on the hour record will be made next season.

\* \* \*

## Sanger Will Go to Europe.

P. H. Sercombe had planned to take Wallace Sanger to England next April to capture the English championships, when the Milwaukeean could meet the Jerseyman on more equal footing. At the cycle show Sercombe and Papa Zimmerman met, and the former was invited by the latter to join the Zimmerman party on its English trip. Americans will not, therefore, have the pleasure of seeing these men meet until after the question of superiority is settled.

\* \* \*

## Schraeder Again Chairman.

Chairman Schraeder has been urged to accept the position of chairman of the Milwaukee Wheelmen's racing board again, and has consented, providing a competent secretary is furnished so as to relieve him of much of the detail work. Mr. Schraeder has certainly been successful as a race meet manager and is deserving of the compliment bestowed upon him.

\* \* \*

## Springfield's Dates.

Sept. 13 and 14 are the dates fixed for the annual tournament of the Springfield Bicycle Club. Preparations will commence at once to make this meet fully equal to those of the past, and the flyers from all parts of the world, who will be in this country this year, will be sure to meet in Springfield on the above dates.

\* \* \*

## No Cement Track.

St. Louis riders had expected to have a cement track at Sportsman's Park, but as the expense was found to be so great, the idea was abandoned. Many believe Pacific red gravel to be nearly as good for a track surface, and it is probable that this article will be used.

\* \* \*

## Yes, Somewhat, Indeed.

W. W. Taxis recalls the time when he could give Zimmerman over a hundred yards in a mile and beat him. Those were the days when Zimmy fell all over

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

P. O. Box 2225, NEW YORK, or - BIRMINGHAM, ENG.

# SINGER CYCLES.

BOSTON, MASS., Dec. 31, 1892.

MESSRS. SINGER & CO.,

BOSTON, MASS.

GENTLEMEN:—My Special Modele de Luxe has been all, and more than I had ventured to hope. As your books will show, I purchased it September 2, and since that time have ridden it about 1,700 miles. It tips the scales at 29 lbs., and I have yet to see the wheel, that to my taste, approaches it in appearance. So far as I discover, it is as stiff and strong in every way as the 33 lb. Singer Modele de Luxe, which I rode with perfect satisfaction during the fore part of the season, until the lighter edition (The Special) was put on the market. Both my safeties were fitted with Heale pneumatic tires, and when I say that no repairs were put upon my wheels the whole season through, I mean that no repairs were put upon either machines or tires. Not many riders, whose mileage for the season has been nearly 4,600 miles can honestly say as much as this, and I am glad to express my appreciation of my happy lot by making this statement of the facts, which you are at liberty to use in any way you desire.

Yours truly, JAMES KELTIE, Captain Roxbury Bicycle Club.

Reliable Agents wanted in the West, including Chicago. Send for our Catalogue.

# SINGER & CO.,

AND 2 WARREN AVE.,  
BOSTON, MASS.

himself on the turns and endangered life and limb of other contestants to an alarming degree. Zimny has improved somewhat.

Arranging Relay Races.

The members of the Sioux City (Ia.) B. C. and the Flour City C. C. of St. Paul are arranging a series of relay races between the club teams from Sioux City to St. Paul or vice versa.

How's This, Mr. Raymond?

The quarter-mile L. A. W. ordinary championship and quarter and half-mile New York state championships were won last year by W. S. Campbell, who has not been a member of the L. A. W. for two years.

Druggist vs. Cashier.

At Riverside, Cal., a five-mile road race is on the tapis between a druggist and a bank clerk. The contract is signed, and the course selected. While stakes are not mentioned it is understood that the race is to be "for blood."

C. C. W. Races.

The Cook County wheelmen have arranged to hold a number of contests on home trainers at the club house Saturday night. The events will consist of quarter, half and mile dashes, the winners to be given good prizes. All the home trainers in Chicago have been secured for the occasion.

Johnson's Record Again Questioned.

It is said, on what authority can not be ascertained, that on March 3, the Western Trotting Association will expose crooked work regarding Johnson's records made at Independence, where Eck and his protegee will be barred from all association tracks. This report led to frequent hot discussions at the cycle show, where the majority of the riders discredited the report. How Eck could bamboozle hundreds of people who witnessed the performance and who many of them, caught the time all right, sticks in the crops of the riders. The horsemen who did the timing were reputable horsemen. Their names were frequently published and it would seem that if aught was wrong in the matter these men would surely have been heard from. That a second application for these records has not been made to the racing board of the L. A. W. (the first application having been returned for better proof) looks wrong, but this could be easily remedied and may only be the result of carelessness. Eck said at Evansville last fall, that he had participated in his last "fake." He said this sincerely.

An Engagement Announced.

The announcement is made of the engagement of W. B. Macfarland, of the Riverside Wheelmen, to Miss May Van Sicklen, of Chicago. Miss Van Sicklen is a sister of N. H. Van Sicklen, the veteran racing man.

Whittaker and Barber engaged in a home-trainer contest at Philadelphia, the former winning. Elliott's town clock timed the race. This invention seems likely to prove a huge success.

A proposition is on foot to have the league constitution amended by the National Assembly and then ratified by the divisions. This is the method of amending the constitution of the United States.

The one man who is at present being benefited by the cash prize league scheme is Egan. He has obtained more free advertising than any of the celebrated scandal-decked beauties of the day.

CYCLING AT HAWAII.

Trick Rider Maltby at Honolulu—Some Fine Roads.

HONOLULU, Jan. 2.—It is now just about two years since my last visit to the "Paradise of the Pacific," as these islands of the sea are so justly styled. At that time there were about a dozen of the old style machines which were ridden occasionally, but never for practical use. They used to say here then, "Oh, this climate is too warm for cycling," but on arriving last month I found a great change, and I think Hawaii has (in proportion to its population, of course) kept pace with the other countries in the rapid progress made in cycling, for to-day there are not less than a hundred safety machines in use in Honolulu alone. The Columbia is most extensively used (fully three-fourths of all used are of that make) and many of them of the latest '92 pattern. There is a club here having about thirty members, known as the Pacific Wheelmen.

There is no track at present, but the Oahu Railway & Land Company is soon to build one at Pearl City, about twelve miles out on the line west, located on the picturesque harbor of the same name, which has been talked of for a coaling station for the United States navy. The club has given several successful race meetings, however, on the road, which will at once give an idea of the quality of same. The streets in the city and in the direct vicinity are macadamized, mostly level and excellent for cycling. The road out to Waikiki, along the picturesque shore is the most popular for riders. It extends along by the side of numerous banana plantations and coconut groves, which offer a most acceptable shade the greater portion of the way. With the exception of this road, which is about five miles in length, and that in the opposite direction to the northwest, to another pretty summer resort known as Moanalua, about eight miles distant, the country is mountainous, which would hinder greatly in the making of any long tours. The 6th ult. I was a participant in a moonlight run made by a party of twenty ladies and gentlemen out to Waikiki, through Kapiolani Park, to the grand old landmark, Diamond Head, which rears its lofty crest of lava rock (it being at one time a volcano) high above the blue Pacific on one side and pretty summer houses and tall, willowy coconut palms on the other, the first cliff to be sighted on entering these beautiful waters, and the last to be seen gradually fading away when departing.

A historical old spot this, and one beloved by Hawaiians and oft sung of by poets. A moonlight night is gorgeous in itself in this balmy land, but when the fairyland-like effects which are produced by the glorious light shining through the varied tropical foliage is enjoyed with a fascinating spin on the wheel over grand roads, one is apt to reflect that this seems about as near like what we believe heaven to be as anything we are permitted to find on earth. The 10th ult. I arranged an excursion on the Oahu railroad to Pearl City. Eight cars were well filled, including the royal car which carried her majesty Queen Kainalani and suite. The entertainment of fancy and character riding was given in a large dancing pavilion at Rimond Grove, the famous Royal Hawaiian Band assisting with church music, which is the same as it is to render in concerts at the World's Fair.

After the entertainment I had the honor of being presented to her majesty and was invited to return to the city in her private car. Her majesty seemed very much interested in cycling and was most cordial and unaffected. If she was

not introduced as a sovereign one would not know her as such from her manner or appearance. On my tour of the other islands I found very little cycling, largely because the country is too hilly.

The following week, after finishing my entertainments here in Hono'ulu, I started on a tour of the other islands, but visiting Mani and calling at Waituka, Paia, Huiku and Spreckelville, all of which are large centers of sugar plantations, the latter being the largest caterer to the sweet tooth in the world, having 40,000 acres on the one plantation. The laborers on these plantations have very little in the way of amusements and the exhibitions here were generally well attended. From Mani I next visited Hawaii, landing at Hilo Christmas eve and it seemed odd enough to have the thermometer register 80 degrees at this season of the year. The roads of Hilo are very poor, not at all suitable for cycling and there is very little of it practiced. I found only one wheelman here, E. D. Baldwin, a government surveyor, at whose home I was kindly invited to help eat a Christmas turkey. Gave three entertainments Christmas afternoon and evening and the following eve. At one of the exhibitions some of the natives became quite excited and threw coins on the floor for me to pick up, something after the style of the way coins are thrown from the decks of steamers, as they are nearing or leaving the wharfs, for the native boys (who are most expert swimmers) to dive, only some of the coins were dollar pieces. They would shout, as they threw them, all sorts of pet names, much to the amusement of the white part of the audience.

After finishing my work at Hilo (which is the only town of any size on Hawaii) I started for that wonder of the world, the ever active volcano of "Kilawea," which is a distance of thirty-one miles from Hilo, the first nineteen of which the road is good for cycling, although it is a gradual rise of 100 feet to the mile. The surface is macadamized, built with convict labor by the government and will soon be continued on to the Volcano House, but as it is now one has to abandon the wheel at the nineteenth mile for a pony. The first mile and a quarter after leaving the road is what is known as the "Fern Tree Trail." It is only a narrow path built of fern tree trunks laid close together, through a dense jungle of ferns and other tropical foliage, which makes the way most picturesque. The following trail of ten miles up the mountain is a hard climb and unless one is a good horseman will give more fatigue and shaking up than three times the distance over the average road on a wheel. On reaching the Volcano House late in the evening (though it was early morn when I left Hilo), after partaking of a hearty dinner, I started alone and on foot, cudgel and lantern in hand, down into the crater and had to make a walk of three and a half miles across the extinct basin of lava, the ragged and sharp surface of which will cut the best pair of cycle shoes one can get before they have been many rods. There are numerous cracks in the rocks where steam and smoke are constantly pouring forth, which would make one think it was quite likely to break out and take one in at any time.

After a tiresome walk at last you reach the banks of this lake of fire and gaze with astonishment down into this mammoth pit. Then the fatigue and trouble of the trip are at once forgotten. The mad waves of fire are continually dashing up against the massive sides of lava and when unable to break over they seem to unite in anger and rush together, causing a spout or fountain of

fire sometimes 100 feet high. The appearance of this phenomena is constantly changing and one could watch it for hours and see new wonders in its action. It is considered exceptionally active at this time.

I was obliged to start on my return ride for Hilo at 4 o'clock the following morning in order to catch the returning steamer for this place. The coast of ten miles straightaway, on striking the road again, was alone worth going up for. On my route back I called at a native settlement and experienced a "Loui Loui" treatment. The "Loui Loui," or sort of massage treatment, after a hard ride on the wheel, is as beneficial as it is novel. I will try and describe it, but, like many other things, it must be tried to be appreciated. The interior of a native hut has a very pleasant, clean appearance, with an odor of fresh grasses and wreaths of maile (the Hawaiian smilax). The interior is divided into compartments by sheets of snowy "kapa," or bark cloth, suspended from poles, and the floor—or ground—is covered with mats the size of the rooms made of leaves of "lau-hala," or palm. But I am describing the huts now for the Domi. After one has taken off his superfluous clothing he is invited to rest on a low couch made of similar material to that on the floor, but softer, and two pleasant looking native girls soon kneel beside the couch and commence operations, with a smile which displays some beautiful white teeth—all their own. They begin kneading the muscles of the limbs, tracing the course of those most fatigued, and by their scientific manipulations drive from them all aches and cause them to tingle delightfully. Each joint is flexed and reflexed until one feels as limber as possible. With a kind of rolling motion the knuckles are pressed into the angles or curves of the body, and one is kneaded into a state of blissful rest. The head is pressed between the palms of the hands, and by pricking the back of the neck they send any headache down the spine, and it gives one a sort of an electric thrill through the body and out the tips of the toes and fingers. All the time they keep up a kind of soft chatter which reminds one of a babbling brook in the shade of cool woods, and there is a fascination in the steady gaze of their soft black eyes. One soon feels sleep stealing over him, and he falls into peaceful slumber with the gentle swaying of a palm fan over his head. I believe this would be great for training, and I reckon Windle or Zimnie could ride records faster with an occasional "Loui Loui."

I intend returning by the next steamer to the coast, when, after filling a few engagements, shall return east and expect to give some exhibitions besides resuming my school work in New York.

MALTBY.

Complaint Against a Local Consul.

AURORA, ILL., Jan. 11.—Editor REFEREE:—I renewed my membership in the L. A. W. about the first of last June, with one of the local consuls; at least I gave him \$1, which, he said, he was going to send in with a dozen others. He sent in the others but forget mine. I have spoken to him several times about it and he does not seem to want to make it right. I will not say who it is, but I would like to know what is best to do. He still holds the office. Kindly advise me and oblige.

J. T. TAYLOR

[Present the case in detail to Chief Consul Gerould, 108 Madison Street, Chicago.—Ed.]

ECHOES OF THE SHOW.

Some Disadvantages Shown and Suggestions Made

Everybody was glad when the Philadelphia show was over, and if a record of the extensive and successful crowds caught in that Bourse building is kept in view six months from now, it will show that many who attended will not be able to answer the roll call. In other words, their names are more apt to be seen on marble slabs. It is generally thought to be the proper thing to assail the management of such shows when they are over, and with superior logic point out its shortcomings and tell how you would have run things to better advantage. There are always high kickers in everything, men who would woefully fall short of every expectation if they had the arduous and no little work to perform, as did Messrs. Bunnell, Hare and Baker, and after being the recipient of many courtesies at the hands of the gentlemen of Philadelphia, it is not my intention to in any way disparage the efforts the men of Quakertown put forth to make the cycle show of '93 a success. They worked hard, they were courtesy it-elf, and Mr. Bunnell has added still to his immense popularity with all. That Philadelphia is not a proper place to hold a show nearly all seem to admit—that is, the salesmen seem to think that way. The lack of proper heating could not well be laid at the door of the committee, as the opening of many doors let in that prolific pneumonia producer—Philadelphia's damp air. There was quite a nice bit of business done, and several important sales were made.

It seemed to be the opinion also in many minds that the future shows should be held in New York and Chicago alternately, with Cleveland in favor with H. A. Lozier and many of the Cleveland people and their friends. Mr. Lozier and others told the REFEREE correspondent that they would offer quite a sum to have the show in the city by Lake Erie. New York has a strong following, and there is little doubt that a large sum could be found as a greater fund to hold the '94 show in the national metropolis. It seems to be the opinion that the show of the future should be run by and for the manufacturer, and if there are any profits, he must get them, if a loss, he must bear it, and the management should be placed in the hands of a competent showman, who can "work" the press in a proper manner.

The Philadelphia press did not do its duty in booming the show prior to the opening, and scant was the attention paid the same through the ten days of its existence

A week, Monday to Saturday, is plenty for a show—plenty for all practical purposes—and no longer time should be encouraged. A show in New York or Chicago would get columns from the local press, where stickfals are going in the open-summer-car town of William Penn. The exhibitors show their goods principally to sell them, and while they depend to an extent on the agent, the public should see "what is what" in cycle production. A special time for

agents to visit the show, say from 9 a. m. to 2 p. m., and these hours for agents only, might do much to further sales. And the genial young men who tried to talk business when fourteen young Quaker sses wanted "a catalogue, please," will bear out this statement. The hours for the general public could be from 2 to 10 p. m.

RECENT ENGLISH INVENTIONS.

New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman,

A Bicycle Canopy.

John S. Barnes, of Detroit, has brought out a neat little article which ought to prove a blessing to the tourist and those who desire to ride in the sun. It is nothing more or less than a bicycle umbrella, called a canopy, and is made by the Bicycle Canopy Company, of Detroit. We show in a group of illustrations the many uses to which the little article may be put. The pictures

are from drawings made from photographs.

The canopy is suited to all wheels, conditions, position of the sun, direction of wind, size of riders, etc., easily adjusted, light in weight, easily folded and put entirely out of the way when not needed as a sun shade, in which position it becomes a handy package carrier. The canopy is nearly flat when open, and pointed in front, from which fact the wind has little or no effect on it.—*Adv.*

consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Nov. 30, give notice in the prescribed form of such opposition.]

THE RIDGE TIRE.  
No. 14,783. R. Stretton and H. A. Neithcott's "Improvements in tires for cycles." Aug. 15, 1892.—This invention relates to improvements in pneumatic or other air tires, and consists in providing them with an additional piece of solid rubber round the periphery or bearing surface of such tires. The additional piece

of solid rubber may be vulcanized onto or be otherwise attached to the surface of the tire, or it may be formed in one with the tire. The rib (B) on the tire (A) may be formed with a grooved or furrowed surface instead of the smooth surface shown in the illustration. The invention is fur-

ther claimed to make the tires less liable to puncture and to reduce the ground friction.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Dec. 7, 1892, give notice in the prescribed form of such opposition.]

MODIFIED BEVELED SPEED GEAR.

No. 527. C. H. Wallwork and R. J. Urquhart's "Improvements in velocipedes." Jan. 11, 1892.—The usual objections to the bevel speed gear are that it causes the wheel to rotate just two revolutions to one of the pedals, which frequently brings the gear too high and also puts all the working strain on one part of the wheel. This invention overcomes these objections in the following manner: The bevel toothed wheel fixed to the hub has preferably a larger number of teeth than the bevel toothed wheel fixed to the fork end, and the spindle or spindles carrying the intermediate wheel or wheels is or are inclined at such an angle and the angles of the teeth are so cut as to allow the intermediate to engage properly with the before mentioned bevel wheels. The bevel wheel fixed to the hub having more teeth than that fixed to the fork end produces a gear proportionately less than double

THE S. & P. PNEUMATIC TIRE.

No. 529. W. Swain & Phillipson's "Improve-

steel or other metallic tape (L) it may be coated with cement, india-rubber or other solution to allow of the said tape being thoroughly bedded. After the india-rubber or other tube (I) has been encased in the metallic tapes (L and M) the latter are covered by one or more layers of canvass or other material (M). If desired, the metallic tape (L) may be provided with projections (O) to ensure of the tape (M) maintaining its position thereon. After the entire ring or tube (I) has been covered by the tapes (L and M) the ends are secured together by means of a clip, soldering, rivets or other suitable material, or in any other convenient manner. Various modifications are described, but in each the metallic tape may be plated or painted to protect the same from damp and prevent deterioration by corrosion. An important feature of the invention is that the tape will give and take under all conditions of working at the same time maintaining a resilient action.

A DOUBLE ECCENTRIC SPEED GEAR.

No. 564. U. S. Martin's "Improved speed gear for cycles." Jan. 12, 1892.—The object of this invention is to provide means whereby the driving wheel may be made to rotate at a higher speed than the pedals. The internally toothed wheel (4) is rigidly attached to the crank axle (5). The hub (B) rotates freely on the axle (5) on ball bearings and is provided with a ring of external teeth (9). To connect the wheel (4) with the ring of teeth (9) (or in other words the pedals and axle with the hub and driving wheel) a third gear wheel (6, 7) is employed having a small ring of teeth (6) and a larger ring (7). This wheel (6, 7) is mounted eccentrically on ball bearings on the fork end so that its small ring of external teeth (6) engages with the internal teeth of the axle wheel (4) and its larger ring of internal teeth (7) engages with the external teeth of the hub wheel (9). The gearing up is in proportion to the number of teeth used on the different wheels.

Omaha Trade Doings.

OMAHA, Jan. 17.—The festive traveling men have made themselves numerous here this year. Perrigo has a register and has already the names of twenty-six thereon; about six made sales. Everything looks favorable to an increased trade in '93. Two new firms will be added to the list of dealers in retailing and one jobber. They are the Cross Gun Company, which will handle the Featherstone line, and the Standard Wagon Company, which will handle the Planet. A. H. Perrigo & Co., the pioneer house, will have the Victor, Columbia and Western Wheel Works line. M. O. Claxon, will continue with the G. & J. line, Imperial, Telegrams and Indiana Bicycle Company's line.

M. A. Grant will try it another year, with the Warwick and Worth. He has also added the Ariel, and the St. Nicholas for medium grades.

About 200 high grades were sold in '92—and from 300 to 400 boys' and medium grades. A great deal of new pavement was laid last year, mostly brick and asphalt, and several miles of old cedar block was replaced with brick. This mostly on the south side. This will help sales in that part of the city. Contracts have been let for many miles of new paving, which will commence when the weather permits.

Elliott's Chronograph.

One of the leading novelties of the Philadelphia cycle show was contributed by the Sterling Elliott, who has attained considerable fame for the several features he has introduced each year. At the last exhibition his dark secret made a great hit, and this year he had a new departure in his electrical chronograph, which is not only an exclusive novelty but it is also practically useful. The chronograph has a dial about 16 feet square and registers the minutes, seconds and fractions of a seconds. In the several speed exhibitions on the home trainers it registered the fractions of a second in a highly satisfac-

ments in the construction of tires for bicycles, tricycles and other road vehicles." Jan. 11, 1892.—The object of this invention is to prevent damage to the air tube, etc., and this is accomplished in the following manner: The india rubber or other tube (F) is first inflated, then covered with the canvass, flannel, leather or other suitable substance (K), which may be secured thereon by cement, stitching, india-rubber or other solution. Over the canvass or other substance (K) is wrapped in a spiral form the steel or other metallic tape

(L). After the tube (F) has been wrapped with the steel or metallic tube (L) the joints of same are covered in a spiral form by the steel or metallic tape, thus causing each layer to overlap the other. Before wrapping the canvass (K) with the

tory manner. The machine is designed for use at race meets or any athletic sports requiring accurate timing.

L. J. Phelps.

L. J. Phelps, of Phelps & Dingle, the well known pneumatic tire firm which makes the Ideal, is looming up prominently in the cycling trade. Mr. Phelps is a Vermonter by birth, and lived at Galesburg, Ill., for years, until locating himself in New Jersey. Mr. Phelps is a

prolific inventor and excited the electrical world a few years ago by inventing the inductive telegraph. He has taken out several patents, including that of the domestic gas machine, which his firm makes. He has several patents relative to tires, and other cycling devices now pending.

To Prevent Looking Back.

An ingenious device, and something quite original, has been invented and patented by Joseph Ketchum of Brooklyn. A mirror two inches in diameter in a suitable frame is clamped to the handle bar in such a position that a perfect view is afforded of the road or track in the rear of the rider. As frequent accidents both on track and road occur from the habit of looking back to see who is coming and where they are this convenient little accessory should become popular not only with the racing men but with the riding public generally.

Books and Pamphlets Received.

The REFEREE acknowledges the receipt of the following publications:

Rouse, Hazard & Co., Peoria, catalogue of Rudge cycles—Shows scorchers No. 1 in two weights, 26 1-2 and 29 1-2 pounds; roadsters Nos. 3 and 4, 41 pounds; roadster No. H 5, 46 pounds; ladies' light roadster No. 6, 35 pounds; racer, 20 pounds, and a triplet. Also cuts of the Overland in four styles—No. 1 roadster, 38 pounds; No. 2, ladies', 38 pounds; No. 3 roadster, 46 pounds, all on, \$100; No. 4, ladies', \$100.

New Howe Machine Company, Glasgow, Scotland, catalogue—Contains pictures of the factory, price list and description of eleven wheels, including light roadster, road racer, path racer, road racer No. 2, youths' safety, ladies' machine, roadster No. 10, roadster No. 14, tri-cycle, path racing Gordian, light roadster Gordian.

Bretz & Curtis Manufacturing Company, Philadelphia, Catalogue.—Shows Quinton roadster, 38 pounds, \$120; ladies' roadster, 34 pounds, \$150; special roadster, 30 pounds, \$150; racer, 24 pounds, \$100, and the Solid Comfort saddles.

Rouse-Duryea Cycle Company, catalogue of Syph cycles—Shows scorchers, model D, 30 pounds, \$150; diamond (spring), model B, 44 to 47 pounds, \$150; ladies' Syph, 46 pounds, \$50.

Rochester Cycle Company, Rochester, N. Y., catalogue—Shows the Rochester roadster, 39 pounds; scorchers, 31 pounds; racer, 25 pounds; No. 3, 44 pounds; No. 1 and sulky wheel.

Quinton Cycle Company, Coventry, Eng., catalogue.—Shows ten styles of wheels, including a racer, scorchers, geared ordinary and a handsome ladies' wheel.

F. K. Lapham & Co., Boston, Mass., pocket record manual.—Contains late records for all sports.

A. M. Scheffey & Co., New York, catalogue—Shows the Queen City and Wynnewood in five styles each, and a number of cheaper grades; also sundries.

Warman & Hazlewood, Coventry, Eng., catalogue.—Shows a large variety of Coventry Cross wheels, as recently described in these columns.

Eclipse Bicycle Company, Indianapolis, Ind., Catalogue.—Shows road wheel, 38 pounds; scorchers, 34 pounds; ladies' Eclipse, saddle and cranks.

The McIntosh-Huntington Company, Cleveland, Ohio, catalogue—Contains full description of the Crypto geared ordinary and front driver safety.

Make the Pacemaker.

The Kenyon bicycle works of Des Moines, Ia., present a busy appearance nowadays. This young concern has become an assured fact. It started in a small way one year ago and now occupies a two-story brick building specially built for it. The workmen are all busy on the different parts of the first hundred wheels for '93. The output will find a ready sale in Des Moines and Iowa. The wheel is a pretty diamond frame with 28 and 30 inch wheels, and latest pattern frame. The company will use Dunlop, Gormully & Jeffery and McIntosh tires. C. H. Curley, recently of Chicago, but formerly of Iowa, having been the Iowa champion on the path, will attend to the retail department in Des Moines the coming season.

George H. Pixley.

A stout, jolly young man is George H. Pixley, inducer extraordinary for the R. Lindsay Coleman Company, New York. Mr. Pixley is also handsome, a good salesman, and quite a swift bird when mounted on a Blackhawk. He commenced commercial life under the tutelage

age of Commodore Fisk, father of the world-renowned Jim Fisk, and Pixley talked neat stitches to the impressionable housewife for two years. Then he worked a year for Lozier & Yost, Cleveland, and is now eastern and southern traveler for the Barclay street cycle firm, having been with it for a year.

Thinks Well of the Gendron.

Col. George H. Day and W. S. Atwell, of Boston, examined the Gendron Wheel Company's display of wheels and agreed that the Gendron had made the most radical departure in the way of interesting and taking points of any firm shown at Philadelphia. This from such a service is a strong testimonial for Peter Gendron, J. F. Vogel and Mr. Fisher, who deserve praise for their splendid ensemble of beautiful wheels.

An Enterprising Young Firm.

The Shaw Cycle Company, of Baltimore, which started in business a year ago as a retail house has branched out in the jobbing and manufacturing line. G.

It has the best pedals

Each machine is supplied with a pair of rat-trap and rubber bars. A complete description of this valuable feature, and others equally so, is given in our catalogue. The McIntosh-Huntington Co. Cleveland, O.

## HIGHEST GRADE ONLY.

The "PERFECT" Pocket Oiler is unequalled in neatness, convenience and durability. Does not leak. It also regulates the supply of oil to a nicety, thus avoiding grease and dirt. Price 25 cents each. Handsomely nickel-plated.

HALF SIZE

Cushman & Denison,  
172 Ninth Ave., N. Y.

## HOLDERS.

Two sizes, one for oiler and larger size to carry a pneumatic pump. Easily attached to any wheel. Makes tool bag unnecessary. Oiler or pump is always convenient. Price 25 cents each. Handsomely nickeled.

Cushman & Denison, 172 9th Ave., New York.

## Two Important Points Covered---Saddle, Oiler.

The SALADEE Saddle is the most perfect connecting link between rider and machine ever devised. PRICE, \$5.00. Send for Circular.

The Metal Turning cycle Oiler is Guaranteed Tool Bag or soil who use pocket oilers.

Company's Magic Bitten not to leak and pocket. A boon to all. Price, by mail, 25c.

Electrotypes for Manufacturers and Dealers who wish to Catalogue.

## THE WHITTEN-GODDING CYCLE COMPANY,

Manufacturer of SALADEE Saddles, and Sole Selling Agents of MAGIC OILER.

We will be ready to close contracts for our Medium Grades shortly.

STOKES MANF'G CO.,

Makers of High Grade Bicycles only.

Office and Salesrooms, 293 Wabash Ave., Chicago.  
Factory, 236, 238 and 240 Carroll Ave., Chicago.  
Branches, Denver, Milwaukee, Chicago.

SEND FOR CYCLE DICTIONARY.

Edward Shaw, who is at the head of this concern, is a practical bicycle man, having spent some five years on the road as a wheel salesman. The new wheel, the Ivanhoe, is very handsome and from tests made appears to be unusually strong. Mr. Shaw says it is made of best tubing and drop forgings throughout, is finished in nickel and enamel in the very best manner, and the price is popular. These enterprising people are worthy of a large amount of patronage which we trust they will receive.

*An Exhibit Overlooked.*

The Columbus Bicycle Company, through not having its exhibit in place, was overlooked in our show report. The above concern occupied stand 31, which was in charge of C. S. Merrill. He showed two models, Ohio Diamond, \$100, and a smart looking light machine called the Columbus light roadster, \$150 which scaled 30 pounds. The Ohio diamond scales 42 pounds. One novelty of the above wheels was the adjusting handle bars, which Mr. Merrill thinks will command favorable attention. The Columbus Bicycle Company has reorganized and is branching out extensively.

*Peoria Trade Doings.*

The case of Bonnick & Co. vs. Kirkwood, Miller & Co., to decide the ownership of bicycles in bond here, will be heard before Judge Weed, Jan. 23. The case was called last week, but at the request of Bonnick & Co.'s attorneys it was laid over. The amount involved is \$8,164.

Rouse, Hazard & Co. have now the only retail cycle store in Peoria.

Kingman & Co., of this city, are manufacturing a high-grade bicycle which they call the Kingman scorchers. It lists at \$150, and is a very neat machine. They will build 1,000 this coming season.

H. G. Rouse will leave for California next week, for a six weeks' visit. Mr. Rouse takes this trip annually.

*Recent Patents Granted.*

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

489,501, saddle for velocipedes; Willard C. Rich and James H. Sager, Rochester, N. Y.; filed Feb. 17, 1892.

489,503, tire for cycle-wheels; Frank Sweetland, Angola, N. Y.; filed April 19, 1892.

489,645, velocipede; Joseph F. Whitaker, Hartford, Conn.; filed July 1, 1891.

489,714, bicycle and other tubing; John F. Palmer, Riverside, Ill.; filed Aug. 9, 1892.

489,840, velocipedes; August F. Vorkeller, Chicago, Ill.; filed June 9, 1892.

*The Seddon's Tire in America.*

William Bowden, of Seddon's Pneumatic Tire Company, Manchester, Eng., sailed Jan. 11 on the Majestic for this country in order to extend the business of this concern in the United States. The company has recently purchased a large factory for the manufacture of tires from the raw materials. The Seddon has become very popular abroad and no doubt Mr. Bowden will find a demand for it here. Letters addressed to him care the REFEREE, will reach him soon after his arrival.

*Andrae's 1893 Line.*

The Andrae cycles for 1893 consist of three styles—light roadster, 38 pounds, all on, \$135; road racer, 30 pounds, \$150; racer, 24 pounds, \$165. These wheels are built on Humber lines, with 11-inch head, 44-inch base and are fitted with Morgan & Wright tires and the P & W. saddles. The wheels are 30-inch front and 28-inch rear. H. J. Warner is now on the road and is meeting with considera-

ble success. The Andrae people also job the Majestic and numerous small wheels and make good hand and floor pumps.

*General Trade Jottings.*

New Howes will be handled in Kansas by William Taylor of Topeka.

Several enterprising citizens at Circleville, O., are arranging to start a factory and make two high grade wheels.

Hal Greenwood, traveling for Kingman & Co., sold one lot of 150 Road Kings in Lincoln, Neb.—a good order, considering the size of the city.

The Brandenburg Manufacturing Company, 52 Portland block, Chicago, announces that hereafter it will be able to deliver seventy-five pairs of Brandenburg dust-proof pedals every day.

The REFEREE and all latest cycling papers, periodicals and hand books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—*Adv.*

F. S. Beavis, manager of the cycle department of Rouse, Hazard & Co. Peoria, has just returned from a month's vacation in Florida and the south. His wife accompanied him. They report a very pleasant trip.

Fred Patee has left Rouse, Hazard & Co. and has been made manager of the Indiana Bicycle Company of Indianapolis. Report says the inducement to leave the Peoria house was a salary of \$8,000 per year.

The firm of Mason, Winn & Co., 599 West Madison street, Chicago, has been dissolved, H. J. Winn retiring. George A. and John Mason will continue the business at the old stand under the title of Mason & Mason.

The cycle show building caught fire on Wednesday evening. A man standing near quickly extinguished the flames, which had started at the base of the decorations, and retired unnoticed, with badly scorched and blistered hands.

Fred Merrill of Portland, Organ, and Prince Wells, of Louisville, are among the old-times who have placed orders with the Monarch Cycle Company for 1893. The judgment of Merrill and Wells as to the merits of a bicycle should be good.

The Monarch Cycle Company expects to manufacture this season at least 5,500 machines, for the majority of which it has material on hand. In the Monarch factory is an employe who has, under the watch, assembled a wheel in fifteen minutes.

The stockholders of the Central Cycle Manufacturing Company held their annual meeting last week, distributed the profits of the year, and elected as president L. M. Wainwright; secretary and treasurer, C. D. Johnson; directors, D. Switzer, H. T. Hearsey and L. J. Keck.

Good wheels and salesmanlike qualities served to place the Marble safeties at the top notch at the show, and this put Barrett in good spirits. He was one of the few men at the show to doff his coat when at work, and his exhibit was in the coldest corner of the building at that.

Mr. Bradley of the Bradley Chainless Bicycle Company returned home from England on Dec. 22. He attended the Stanley show and says he purchased special machinery and the best grades of material he could find, but returns too late to have a line of wheels produced in time for the show. "We shall make the best wheel first-class material and workmen can produce, in three styles only," said Mr. Bradley; "a racer to weigh 20 pounds or less, a roadster to weigh 35 pounds or less, and a ladies'

wheel, 40 pounds or under. We shall furnish any style or tire, pedal or saddle desired, but of course we recommend the use of those we decide to be the best."

C. H. Weld placed the following agencies for Royal safeties: Dayton Cycle Company, of Dayton, O., for that city and adjoining counties; Shaw Cycle Company, Baltimore; Logan, Gregg & Co., Pittsburg. The Royal Cycle Works showed six styles of handle bar at the cycle show.

Saturday night last a small fire occurred in the Featherstone factory, Sixteenth and Clark streets, the damage being about \$750. There was danger at one time of the whole factory being burned and a second alarm was turned in. The flames, which started in a small frame structure in an open court, were soon extinguished.

Two electric headlights were shown at the show. One is an English invention weighing a few ounces over two pounds. This has the lens fastened to the head of the machine and the chemicals in a neat leather pocket suspended from the frame near the head. The Chicago-made light weighs over three pounds and is contained in a lamp about the size of the regular oil head light. The cost of these lamps is the main drawback.

*Milwaukee's Youngest Club.*

The Comet Cycling Club, while ranking among the newer cycling organizations of the Cream City, has already won great favor both as a wheeling and social club. It dates its origin from the spring of 1892, and has at present a limited membership of twenty-five. The club has had so many applications for

R. S. BAIRD.

membership that the limit this season will, no doubt, be raised to fifty. Its membership includes the sons of many of the most prominent business men of Milwaukee, great care being taken to select the best material. The club has, during the past season, developed some remarkable riders, and has been represented in all the prominent meets in and around Milwaukee. The officers are Rickard Baird, president; Will Blakey, secretary; and James S. White, treasurer. Mr. Baird is prominent in social and business circles, and is a member of three of the leading social clubs of the city.

*CURRENT COMMENT.*

The cycle show is a thing of the past, but its memory will haunt the minds of very many for months to come. Like most expositions, its machinery has been cumbersome and in some places grinding; on the whole, however, the show has been a brilliant success and has ac-

complished much. My pet idea of an association has in no way materialized—no one seems interested, which proves that, as usual, the crank must be sat upon. However, every one is uneasy and wishes each in his heart of hearts that there was some sort of a business foundation under the cycle trade. The display of machines has been varied and exhaustive, and the display of cycle enthusiasm and wisdom reminds one of a display pyrotechnics (excuse the French, I must do it now and then, but I mean fireworks). The usual fairy tales have been indulged in to a very great extent. I am even told that some of the factories (generally those that have been on deck for six months or a year) have sold not only the '93 output but the '94 as well. On the whole, however, a nice clean business has been done, buyers have been plenty, and salesmen alert. All honor to the promoters and managers of the national cycle show for 1893.

\*\*\*

The banquet given by the *Sporting Life* was well attended and in a great measure enjoyed. However, when during its course the toast master announced the presence of a number of baseball magnates, and introduced one of their number, who informed the feasters that a cash prize league had been formed, a hush fell on the room like unto that in that famous Babylonian Hall long ago, when the specter hand traced "mene mene tke upharsin" on the wall.

Will the analogy continue? I hope not. This magnate scratched the back of cycling, so to speak, ate humble pie, loved us all like brothers, landed the good road movement, said he was honest several times, and then wound up by telling the crowd in a tearful manner that he was *living* on the public and that base ball had turned to sodom apples in his hand and he wanted cycle-riders to take the place of the Kelley's and Murphy's, who could no longer help him live on the public. He again asserted his honesty, and assured us that cycling was too grand for this earth and that he wanted to pull it down on a level with base ball, but that he would never, no never, crush the life out of it as he had out of base ball. No, it should live, for he would control the professionals, and he *must* get a living some how.

\*\*\*

I am pleased to say, however, that mighty little excitement followed the speech of the magnate, and we will probably attend L. A. W. races as usual and be spared the sight of "gent's" pool boxes, touts, etc., on the quarter-stretch and exhibitions of the jockey or base ball head work on the track, for which let us thank the native good sense which will *sometimes* show itself even in the trade.

\*\*\*

I regret that the eastern authority has seen fit to destroy the mask which has served me so long. I have a sneaking love for the name I have worn over my own for several reasons, but as I am known my usefulness is at an end if I have ever been of use. Therefore I bid my readers good-bye, forever.

LA COLE MAL TAILE.

*Recent Club Elections.*

Galesburg (Ill. Cycle Club.—President, Bert Tillen; vice-president, Bert Repine; recording secretary and treasurer, Harry Raymond; corresponding secretary, Bert Chappell.

Empire Wheelmen, New York.—President, John Hassinger; H. C. Krasts, vice-president; William Hactland, secretary; J. G. Monihan, treasurer; A. S.

Turner, captain; F. C. Turner, first lieutenant.

East Orange (N. J.) Cyclers.—G. K. Wallace, president; G. H. Graham, vice-president; A. S. Meeker, secretary; C. S. Whitman, treasurer; trustees, C. D. Hendricks, C. S. French, L. V. Young, E. Ketcham, Jr.

New York Bicycle Club—President, F. W. Kitching; vice-president, I. H. Charlotte; secretary-treasurer, J. B. Roy; board of trustees, F. I. Stott, P. P. Wilcox, I. C. Jimenes, Kingman T. Putnam, E. F. McMont and Charles L. Child.

Illinois Cycling Club, Chicago—T. L. Sloan, president; C. R. Street, vice-president; Carl Steen, secretary; George E. Kurtz, treasurer; E. M. Baine, E. G. Richardson, E. J. Porter, board of directors; F. J. Fanning, captain; W. P. Eisenberg, first lieutenant.

Waukesha (Wis.) Weeelmen.—President, Vernon Tichener; vice-president, Edward Morrison; secretary, Frank Evans; treasurer, W. B. Strong; captain, Samuel James; first lieutenant, Thomas H. Jacobs; second lieutenant, Thomas Allen; color bearer, Dr. M. G. Violet.

Maywood Cycling Club, Maywood, Ill.—John Farson, president; H. L. Pebbles, vice-president; O. L. Cox, secretary; H. W. Taylor, treasurer; C. A. Sturtevant, Dr. W. A. Matthew, W. H. Beynolds, Thomas H. Gale, F. M. Butler, C. E. Cox and Fred H. Wood, directors.

Mattowak Cycle Club, Brooklyn—President, William H. Hyde; vice-president, Charles B. Malloy; recording secretary, George W. Conover; financial secretary, Charles E. Sackman; treasurer, Richard L. Cohen; captain, Wallace Sheperd; lieutenants Irving Sheperd and Hans Lessen; board of trustees, C. Guyer, John McCarron, Edward Crommay.

The Sheridan Cycling Club of Evanston has elected the following officers for this year: H. M. Angle, president; M. J. Donoghue, vice-president; W. C. Roberts, secretary; E. L. Angle, treasurer; F. W. Radford, captain; W. O. Jones, quartermaster; J. W. Burns, color-bearer; George W. Muir, T. B. Blanchard, L. C. Lawrence, board of admission.

Riverside (N. Y.) Wheelmen.—President, James L. Miller; vice-president, J. F. Fitch; secretary, R. W. Harrington; treasurer, W. Walton; captain, Edward A. Powers; first lieutenant, J. W. Judge; second lieutenant, E. C. Potter; third lieutenant, C. Granger; color bearer, C. A. Weeks; bugler, C. M. Ertz; surgeon, C. G. Bohn; trustees, R. F. McCoy, C. B. Robinson, E. A. Rogers, T. Snell and Thomas Ward.

Elizabeth (N. J.) Wheelmen.—President, John F. Delmer; vice-president, Albert C. Ridley; secretary, L. B. Bonnett; captain, A. F. Calkins; treasurer, A. N. Lukens; first lieutenant, George A. Davey; second lieutenant, A. G. Drake; sergeant, D. H. McFarland; color bearer, W. Sawyer; board of trustees, Edward A. Faulks, C. C. McBride, E. C. Gilbert, Alan N. Lukens and George C. Pennell.

It is about time to stop making a wheelman of every political, theological and theatrical freak. The game is on too solid a basis and doesn't need it.

Andy Cahill has left Chicago for Buffalo, where he will do business for the Buffalo Wheel Company. Mr. Smith, of this company, is now doing Michigan.

Henry Seward, the REFEREE'S Milwaukee correspondent was in Philadelphia during the entire progress of the show, and passed through Chicago Tuesday on his way home.

## GOOD ROADS FOR MARYLAND.

*Permanent Headquarters Established at Baltimore—Ideas Suggested.*

"This convention shall mark the beginning of our efforts in the cause of good roads," was the text of the last resolution adopted by the road convention at the Y. M. C. A. hall at Baltimore last Thursday, before the final adjournment. The delegates to the convention felt that the good work had really begun. Delegates willingly took the floor to urge their respective ideas or to add something to the fund of general information, which the work of the convention has brought together to aid in formulating definite plans for future action.

### GENERAL OPINIONS AND DISCUSSIONS.

J. S. Robinson of Anne Arundle county:—"The cost is the grave question in this problem. Our interests are different, and we follow a line from that of forty or fifty years ago. I suggest that in view of the economic feature of the bonding system that when the permanent improvement of a road shall be made the annual cost of repairs will be less."

Mr. Williams' paper covered the entire ground, except the annual decrease in expenses. For fifteen or twenty years the county commissioners spent \$50 annually in repairing a certain piece of road in Anne Arundle county. Every spring the road was impassible. About ten years ago they sent down a lot of oyster shells, on which the freight was \$50. The farmers along the road hauled the shells and distributed them gratis. The road has not cost the county one cent since, and has saved \$450.

Samuel Cox, Jr., of Charles county, said: "Good roads in Charles county are due to a great many causes, one of which is not our road supervisors. The roads and bridges have been placed in the charge of an engineer many years ago, and under competent and intelligent supervision streams had been bridged at road crossings and the drainage properly managed. One natural advantage was the existence of a gravel bed within a half mile of every road in the county. The beneficial results of this management for two years could not be said to be eradicated by a return to the system of road supervisors.

William H. Weaver, Baltimore County:—"I am in favor of the bond system, but not that I will not have something to pay, for I have property in different parts of the city and country, and I am willing to pay my share. I feel that good roads will enhance the value of my property. We demand better roads; we are willing to pay for them and will fight until we get them. As president of the Hartford Road Improvement Association I have fought the Hartford Road Company for years. They made good and fair promises, but they never carried them out; they fought us off step by step, from the magistrate's office to the court of appeals. A few days ago we defeated them in the court of appeals, and I think they expected a licking, for our road is better now than for forty years. I say, now, go into this thing on a general basis and fight before the legislature. It will cost us \$700, but if we must spend our money, let us do it in a general way.

Pierre Choats, Baltimore County:—"I am willing to pay my share for good roads if it should be judiciously spent, but we must equalize the assessment.

Mr. Choats told of a neighbor who had to use five horses to drag a wagon on a dirt road for several miles to reach the pike, where only two horses were required.

Henry Williams, Baltimore:—"Baltimore County is in a different position

from any of the other countries on this question. The county has an assessed valuation of \$40,000,000, twice that of Washington County, and probably ten times as much as any other county in the state, outside of Baltimore county. The tax levy on roads must be increased, probably doubled, say from 15 cents to 30 cents on \$1, which means an increase in taxes of \$7 on a farm worth \$5,000. There are two ways of spending this money—little by little, taking forty years to improve your roads, provided you keep your money out of politics; and the other way is to use your road tax to pay interest on bonds and increase the sinking fund.

George R. Stevenson, Hartford county, favored the bonding system and suggested that a parent could leave his children no better inheritance than good roads which lead to industrial development.

### RESOLUTION ADOPTED.

President Davine appointed a committee on resolutions, and all resolutions offered by the delegates went to the committee without debate. The committee reported the following resolutions favorably and the convention adopted a report:

RESOLVED, the system of parceling out county roads among a large amount of supervisors is pernicious and should be condemned. [Offered by D. C. W. Smith].

RESOLVED, that the judiciary of the state be requested in their instructions to grand juries to call special attention to the provisions of our road laws and to insist on the faithful execution of said laws. [Offered by C. Gilpin, Hartford county.]

The executive committee, which will formulate a plan of road improvement for presentation to the legislature was reserved.

Planfield, N. J., has 1,613 wheelmen and 1,257 bicycles.

The National Cycle Show opens in London on Monday next.

New Jersey cyclers will hold a theatre party Friday of this week.

Windle is doing some road riding, and will go into training early this year.

Two hundred wheelmen attended the theatre party in New York, 12th, and dined after the show.

Buffalo is to be blessed by the presence of "Inducer" Young, who joins the American Wheelman staff.

Officials of Chicago and Milwaukee cycling clubs will no doubt be put on the rack by the racing board.

Make your guesses, gentlemen. Who, of the racing men, will be the first to go into the cash prize scheme?

The new league wants a cash prize handicapper. A good salary will be offered. Send in your applications.

Mr. Raymond is getting uneasy about the track promised for the international races. It should have been built before the winter set in.

Bob Holm, of St. Louis, is bound to figure with the minority, hence he votes no on the question relating to the publication of addresses in the *Bulletin*.

Here is hot shot from a Philadelphia paper: "Tom Dando, the noted wing paper, one of the proprietors of *Sporting Life*, was called on for a speech at the banquet. He stated that he could not make a speech, but would whistle a tune, which he did very cleverly. It would be a good idea if some of the men

who make tiresome speeches at banquets would learn to whistle

Zimmerman thinks it a great shame that he should have been used as an advertising medium by Sanger's friends. Zim. believes that good advertising is worth paying for!

At the commencement of last season Henry Goodman supplied Mr. Raymond with the mile records of seven hundred racing men. What other handicapper could have done it?

There is no truth in the story that W. J. Morgan is going to Australia. His connection with the scheme commenced and ended, we believe, with a letter to an acquaintance there.

A number of people have expressed a determination to test the executive committee's power to prevent the states, under the *Bulletin's* contract, having official organs of their own.

The Pennsylvania division seems determined to have a state organ. At a late meeting of the division some of the members claimed to receive the *Bulletin* as late as the Friday following the date of publication.

A typographical error in last week's REFEREE made it appear that \$10,000 in gate money was necessary to make the Philadelphia show management even. \$1,000 was the correct figure, and they covered it easily.

Lumsden's arrangement with the Indiana Bicycle Company is one of the best things ever offered to so young a man in the bicycle business. He is to take sole charge of the company's business in Illinois and Michigan.

People are beginning to talk about the next cycle show already, and seem to look longingly westward. Surely the World's Fair cannot go by without the makers getting together and forming that long-talked-of association.

It is reported that some of the capers of Chicagoans at Philadelphia got a famous auburn-haired six-footer into difficulties with a policeman, happily without serious result. The "push" will gradually work itself into the lock-up.

On a certain festive occasion during the show, D. H. Lewis delivered a short sermon to some of the frisky young salesmen who infest the cycle trade. His remarks struck home, and one or two who were hit forcibly promised to swear off!

Elliott's electric chronograph, which was shown at Philadelphia, seems to be a success, and not only from a mechanical standpoint, either. The dial is sixteen feet in diameter. One hand makes a complete circuit of the dial every second, another registers the seconds, and a third the minutes. This is intended to be placed where all the spectators can see it, and is started and stopped like an ordinary stop watch, so that the time made is accessible to all. It registers sixtieths of a second. As to accuracy, it was fully tested at Philadelphia and seemed to work perfectly.

WANTED—A traveling salesman on imported bicycles from prominent English makers. Preference given to one thoroughly familiar with the trade. Good chance to work up a good position. Address BICYCLE, care REFEREE. Eastern office, 21 Park Row, New York.

## Riders of M. & W. Pneumatics.

By using my Rapid Fastener these tires can be repaired as easily and speedily as any. No cutting strings, no lacing, no cementing. Can be applied by any one. Price, mailed, \$2.00 per set. Circulars free. You cannot afford to miss this. C. G. MILLER, Jr., - Shullsburg, Wis. Discounts and Electros to Dealers and Repairers.

# THE IDEAL PNEUMATIC TIRE

*INCREASING IN POPULARITY DAILY.*

Tires may come and Tires may go,  
But we go on forever.

Bound to be the Only High-Grade Tire Used in '93

Section of Tire.

R—Rim.  
W—Wire.  
C—Cover.  
I—Inflation Tube.

No Special  
Rims Required.

The resiliency is unsurpassed. The method of fastening to the rim is absolute and convenient. The tire cannot jump off the rim when deflated. The inner tube can be exposed for repairs in ten seconds and repaired as quickly. The material, workmanship and finish are the best that money will buy and skill produce.

The above illustration correctly represents the Phelps & Dingle Mfg. Co.'s Factory at Passaic, N. J., devoted entirely to the manufacture of Ideal Pneumatic Tires. Floor space sixteen thousand square feet. Capacity Two Thousand Tires per day.

A bill for injunction has been filed by us in the United States circuit court of the Southern District of New York against The American Dunlop Tire Co., to restrain them from selling their tires in this country in infringement of our rights. We hold broad patents on wire tires of very early date, and all infringers will be promptly prosecuted.

**PHELPS & DINGLE MFG. COMPANY,**  
PASSAIC, - NEW JERSEY.

# MORGAN & WRIGHT PATENT PNEUMATIC TIRES!

## NOTICE!

IN view of the fact that various imitations of the Morgan & Wright pneumatic tire have been placed upon the market, we have to direct the attention of manufacturers, dealers and the public in general to the further fact that there is but one possible way in which the Morgan & Wright tire can be made, and that this mode of manufacture has been fully secured to us by *letters patent of the United States, of January 17, 1893.*

We have spent thousands of dollars and many months' time in perfecting machinery and appliances for the economical manufacturing of these tires. We must insist, therefore, that due and full respect be paid our property rights in this matter, and we hereby further extend to all manufacturers and others contemplating the manufacture of pneumatic tires, a timely and kindly warning to avoid any and all invasion of our rights in the premises.

Very respectfully,

MORGAN & WRIGHT.

## MORGAN & WRIGHT PATENTS.

MORGAN & WRIGHT, the well known Chicago manufacturers of medium-priced, high grade pneumatic tires having an endless outer tube, laced at the valve, received patent rights covering four claims on last Tuesday morning. The most important point covered is the process of moulding instead of blowing the outer tube.

What Morgan & Wright claim as their invention is: (1.) Moulding an endless and seamless tubular tire sheath or casing upon an annular mandrel, and then removing the sheath from the mandrel without materially affecting or changing its characteristics, and to such end, opening the sheath to a limited extent through its seating portion, separating the mandrel at a point adjacent to the opening thus formed, and causing the sheath and mandrel to part from one another by way of this opening in the sheath. (2.) Moulding and *vulcanizing* an endless and seamless tubular tire sheath or casing upon an annular mandrel, and then removing the sheath from the mandrel without materially affecting or *impairing its integrity as an endless and seamless tube*, and to such end, opening the sheath to a limited extent along its seating portion, separating the mandrel at a point adjacent to the opening thus formed, and causing the sheath and mandrel to part from one another by way of this opening in the sheath. (3.) Moulding and *vulcanizing* an endless and seamless tubular tire sheath or casing upon an annular mandrel, and then completing the tire without materially affecting or impairing the integrity of the sheath as an endless and seamless tube, and to such end, opening the tube to a limited extent along its seating portion, separating the mandrel adjacent to such point, causing the sheath and mandrel to part from one another by way of the opening thus formed, *introducing an air tube within the sheath through this opening, and then closing the latter.* (4.) Moulding and *vulcanizing* an endless and seamless tire sheath or casing upon an annular mandrel having a detachable section, *splitting the sheath thus formed at a point over the detachable mandrel section and to a limited extent only, removing the detachable mandrel section through the opening formed by a split, and then stripping the sheath from the remaining portion of the mandrel, substantially as and for the purpose described.*—[The Bearings, January 20, 1893.]

## TO RIDERS.

THERE are only two ways by which an endless, seamless, tubular outer covering for pneumatic tires can be made. One is by forming the tubes by hand, joining the ends, filling the tube so made with water, steam air or gas, and thus forcing it out against the walls of an iron mould. This is the way all one tube tires are made. This method requires a high degree of manipulative skill on the part of the workman, while no matter what skill is exercised, the walls of the tire will vary in thickness. The Morgan & Wright patent method consists in making this covering over a steel core, having a removable section. By so doing, we make an outer cover as thick or as thin as desired and of *absolute uniformity* in density and thickness throughout, and thousands of tires made this way do not vary a particle from each other.

Another very important point in our method is, that it is the only way by which a tire can be made at reasonable cost, and hence can be sold at a low price. No wonder we have had imitators heretofore. These former imitators are now infringers upon our rights, and we ask all riders to assist us in sustaining our patents by refusing to buy imitations of our tires—and in thus asking, we offer the following facts as evidence that we are not monopolists:

The Morgan & Wright tire was put upon the market in the spring of '92 at a price from 50 to 300 per cent lower than any other pneumatic tire in the world.

We were the only *makers* in the world who made repairs without charge and faithfully followed our goods through the season.

The Morgan & Wright tires hold 80 per cent of all records on road and path for speed and durability.

We have never printed or said one word in detraction of other tires, and have nothing but good wishes for all who have had ingenuity and enterprise to invent and develop the various patented tires now offered.

If our imitators were offering you better tires or better prices we could not make an appeal to your sense of fair play, but the fact is they are not so doing.

The ingenuity, capital and honest dealing which have been used to bring out, develop and sustain the Morgan & Wright tire will be used to keep it in advance of any mere imitator.

## REMEMBER

ALL tires made by us have our firm name in raised letters on the side of the outer cover. Remember, also, the following quotation from the writings of a great man, viz:—

“NO MERE IMITATOR EVER YET ROSE ABOVE MEDIOCRITY.”

# MORGAN & WRIGHT,

## CONSTITUTIONAL AMENDMENTS.

That the meeting of the L. A. W. will be one of the liveliest in league history seems to be assured. The amendments offered are numerous and far-reaching, and so strong is the feeling on some of the points involved that the discussions are sure to be most interesting. When, a month or so ago the REFEREE conceived the idea of taking a mail vote of league members on various questions, it was with the idea of showing the attendants at the meeting the opinions of the majority. The votes are still pouring in and the result will not be definitely known until a few days prior to the meeting.

A number of proposed amendments emanated from the REFEREE office. They are, generally, based on the vote now being taken, and governed by the opinions therein expressed.

One of the most important points involved is that relating to the method of amending the constitution. There are two propositions put forward; one to permit amendment by the National Assembly, said amendments to be subsequently ratified by the division; the other to amend by mail vote. It is agreed by everyone that the present system is unfair and therefore unsatisfactory. In favor of the National Assembly idea is the fact that it is the method employed by the United States government and has therefore stood the test of time. Against it is the fact that absolute power is placed in the hands of a few men and that, however much interest a man may take in the affairs of the league, he can never hope for a chance even to express his opinion, except he possess influence enough to secure a seat in the assembly, and there are thousands of interested and clever men who would thus be deprived of any voice in the matter.

In favor of the mail vote is the fact that every man has an equal voice,—a very desirable state of affairs. Against it is the fact that the vote usually polled at division elections is usually small in comparison with the membership, indicating a lack of interest on the part of the majority of the members. It is a question, however, whether those who do take an interest in the league's affairs should not be allowed to rule. It will be noticed, by the vote on another page,

that the sentiment of the members is overwhelmingly in favor of a mail vote.

There is a point in connection with this question which must be remembered. The advocates of the National Assembly idea will of course make an effort to have their proposition brought before the meeting at the outset, so that, if it be carried, the meeting may at once adjourn and the various questions at issue come before the national assembly, thus shutting out, from debate or vote, many who will attend the meeting. This proposition will, no doubt, meet with vigorous opposition.

The next proposition we come to is to insert, among the objects of the league, "the encouragement and government of cycling," or words to that effect. Although racing is unquestionably one of the most interesting features of cycling, no mention of it appears in the objects for which the league exists. The desirability of the insertion of this clause seems to be too evident to need argument in its favor.

Shall professionals, provided they are otherwise acceptable, be admitted to the league? At present the vote is in favor of the festive pro., and he will doubtless have many friends. There are as gentlemanly men among professionals as among amateurs, and there are as reputable men in the league as among the professionals. The discussion will be interesting.

A question which will, of course, be discussed, is whether or not the addresses, as well as names of applicants for membership shall be published in the *Bulletin*. It is altogether likely that someone will ask that the present contract with the Wheelman Company be read, and this may show that the signers, on behalf of the league, exceeded the powers conferred upon them. There can be no question as to the sentiment of league members on the question. The vote is so overwhelmingly in favor of publishing the addresses as to be practically unanimous. But we believe the reasons advanced in favor of their publication are not always correctly given. In short, we believe that hundreds of members desire their publication for business reasons, and not because of the benefits which will accrue to the league. Would the publication of the address of the Lincoln club's dog, or of Leeming have prevented their admission? Probably not. The fact is that not one member in one hundred looks over the list. The fault lies in the system. Any person, black, white, amateur, professional, honest man or pickpocket, may send in an application, and with it the names of any two league members. It is not necessary to secure the permission of these members, nor are they ever consulted. We venture to doubt whether the prescribed two weeks always elapse before the membership ticket is mailed. Another point—two weeks notice is not sufficient. A member in California cannot receive his paper in time to enable him to oppose a candidate for admission. The publication of addresses will not remedy this, but it will furnish the manufacturer, the agent and the cycling paper a list from which to mail catalogue, circulars and sample copies. That's at the bottom of the agitation.

Everyone who attended the last meeting will remember the desperate efforts made to so hedge around the *Good Roads* magazine as to permit it to be passed through the postoffice at pound rates. The president and other lawyers of high and low degree twisted and turned the rules—and made a grand bungle of it

after all. The constitution provides that the league shall provide the *Bulletin* free, and yet the by-laws provide that any division may make a reduction in dues of twenty-five cents to any member not desiring to subscribe to the *Bulletin* and *Good Roads*. There will, of course, be no controversy over the correction of this error, except, perhaps, as to the exact form the correction shall take.

Another technicality occurs in article 8, clause c. At present one man may be a member of any number of league clubs, and may cast the vote of all of them. We have in mind a man who attended the last convention armed with the proxies of three clubs besides twenty-five independent proxies. It is proposed to amend so that a person may cast the vote of only one club.

The amateur rule, will be dealt with hereafter in a separate article. One or two changes in the by-laws are suggested. Article 2 provides that "the proceedings of all meetings of the National Assembly shall be published in the official organ." It is proposed to add to this a provision that the report of the treasurer be published in detail. The report has been ordered printed several times, and has appeared in such abbreviated form as to give little or no idea of the manner in which money has been expended. This, by the way, is through no fault whatever of the treasurer's. Economy in space probably covers the matter so far as the secretary is concerned.

Under article 5 a member against whom charges have been preferred must be tried by a committee consisting of the president and the chairmen of the rights and privileges, rules and regulations, membership and highway improvement committees. Perhaps someone may be able to offer a good reason why the chairman of the racing board should not be substituted for the man of roads and ditches, but the former would seem to be the proper man for the place.

## THE BULLETIN IN ERROR.

In the official columns of the last *Bulletin* there appeared a number of proposed amendments to the constitution of the L. A. W., among them a number signed by the editor of this paper. One of those so signed provided that the addresses as well as the names of applicants for membership, shall be printed in the *Bulletin*. This amendment is the outcome of the vote now being taken by the REFEREE. One of the questions asked is whether the addresses shall be published, and, as will be observed, the vote is overwhelmingly in the affirmative. The editor of *Bicycling World* has seen fit to make this statement:

The true animus of this action will be better appreciated by the membership at large when we state (nine-tenths of them would not otherwise know it) that Mr. Miles is editor of the REFEREE, a Chicago cycling paper, and never were motives more apparent than in this attempt to injure the stock in trade, credit—what you will—of a business rival. Any apparently necessary changes would come with much better grace from anyone else than an active business competitor. The motives which actuate these avowedly disinterested (?) efforts for the league's welfare are a trifle too apparent, and while we appreciate to the full the kind intentions of Messrs. Miles, Berger, et al, and are thoroughly cognizant of all they have done in this way, we yet must be permitted to conduct our business in our own way, and in accordance with the terms of our contract with the L. A. W.

And, moreover, we do not propose to submit tamely hereafter to false, malicious and prejudiced attacks.

It is time that the L. A. W. membership at large was informed of the true cause for these attacks which have been instigated by several of the cycling papers, whether appearing directly in their columns or not. There is an unwritten code of honor among business houses of reputation and standing, and when petty professional jealousy

and envy declare themselves in so shameless and open a manner, they force the shrewd and non-partisan observer to but one conclusion.

The editor of *Bi. World* has fallen into an error. We have never so far as our recollection goes, printed anything whatever concerning the publication of the addresses. We have never been guilty of "false, malicious and prejudiced attacks."

We have never been guilty of "petty professional jealousy."

And having been guilty of none of these things, we have never "avowed" our "disinterestedness" in attempting to have the addresses published. On the contrary, there will be found in another part of this paper an article written and in type before the *World* reached us, admitting, in so many words, what everyone knows already, that every man in the trade, ourselves included, is interested in their publication.

Let us call the attention of the editor of our contemporary to the fact that the REFEREE has always heretofore supported him. Here is a quotation from a circular issued from this office, asking for a mail vote, and which has been printed three or four times in these columns:

No. 6. Shall the addresses as well as names of applicants for membership be published in the *Bulletin*?

At present only the names of applicants for membership are published, and no alteration, probably, can be made until the present contract with the Wheelman Company expires. Some claim that the applicants cannot be identified without their addresses, while others are actuated by personal motives only.

If any fairer statement of the case could possibly be made our views of right and justice are sadly warped. We do not wish to see any man deprived of his rights. If the Wheelman Company has a contract with the league which permits it to hold the addresses and so obtain a revenue through its sale to people who need to use it, by all means let that contract be lived up to. If any mistake has been made the league must blame the man or men who made the contract. No man's business should be injured—perhaps ruined by the mistakes of others. But if such a mistake has been made, the constitution should be so amended as to guard against future errors. Our proposed amendment was handed in so that the matter might be properly discussed. And there commenced and ended our "selfish motives," our "disinterested efforts" and our "false, malicious and prejudiced attacks."

## WHET'S IN A NAME?

At the Philadelphia show a young salesman applied to a large jobber for a position. They talked business and came to an understanding. They were to meet the next morning and conclude the negotiations. In the morning the salesman appeared wearing upon his vest a badge indicative of membership in the "push." The negotiations were suddenly terminated, the jobber declaring that no person of any such class should ever enter his employ. We have since learned that an employee of the same house, for having violated the rules of good breeding at Philadelphia, has been discharged.

One by one the boys are learning that to maintain their positions they must devote more time to business and less to the boyish tricks for which a number of them have become famous. A few more examples will probably sound the death knell of "the push."

A. L. Kapp, of Buffton, Ind., will be obliged to any one who will give him information about Florida roads. He intends starting Feb. 1 on a two months' rip.

Among the callers at our eastern office last week were W. Bowden, Sedden Tire Company, Manchester, Eng.; Stephen Golder, New Howe company; Harry C. Wheeler, W. B. Troy; C. C. Meade and J. W. Kiser, manager and representative, respectively, Monarch Cycle Company; Charles W. Price, Milwaukee; J. Walter Thompson, advertising agent; S. G. Whittaker, Revere Rubber Company, Boston; D. H. Lewis, editor *American Wheelman*; Harry B. Arnold, New Britain, Conn.; Albert J. Elliott, National Columbian United Wheelmen's Association, Chicago; H. E. Saltenstall, Elizabeth, N. J.; W. H. Kirkpatrick, McKee & Harrington; Fenton S. Fox, Serconbe-Bolte Manufacturing Company, Milwaukee; Albert L. Pope, Jr., Kirk Brown, Philadelphia; Charles Measure, Union Cycle Company, Boston; Vincent Drymore, Boston; C. A. Persons, Person & Mueller; George S. Macdonald, Raleigh Cycle Company; W. W. Kenfield, Rochester Cycle Company; Harry Nevill, J. K. Stanley & Co., Coventry; W. S. Thorne, Jr., Red Star Illuminant Company; H. D. Harvey, John P. Lovell Arms Company, Boston.

#### Knapp Among Orange Groves.

The altogether gay and popular Wilbur F. Knapp writes interestingly from his post as Lower California hustler for the Overman Wheel Company as follows: "Start out on a trip south to-morrow; first stop, Duarte, where I expect to close a deal to supply William Twinkle with oranges for the feast he has proposed giving the professionals. Wonder what 'roasts' he will have? Am going to take a kodak with me to catch some of the names of towns in my district and study them later with the aid of a 'greaser' and a mouthful of olives. Shall also rustle up members for the league, Papa Bassett having offered me a fair commission and re-instatement, with 100 names; so soon expect to shed my suit of bright red for one of pure angel white. By the way, the colonel was here a short time ago and actually had forgotten me. I thought surely he would remember me after all I had cost him and the trouble I gave him when racing for him as an amateur, even should we have not seen each other until we met in heaven.

"Was over to Pasadena yesterday to attend the Valley Hunt sports, consisting of horse races, butchers' races, jack-ass races, greasers picking up handkerchiefs while riding horses at full speed, bicycle races, etc. The track management was fine, everybody managed it; and after trying to catch a finish a half-dozen times, saying nothing of being run into twice by some one mounted on a draft horse, and seeing three men knocked down by running horses in a race, I packed up my amateur photo kit—and right here I want to tell you that I am an amateur in that line—and walked into town, the car drivers all heing among the crowd watching (?) the races.

"Had a letter from Harry Kingsland the other day, and ought to be hearing from quite a few more in the frozen east. It makes me shudder to think of you poor devils freezing to death back

there and we here enjoying sunshine and flowers, with the best kind of weather for riding—warm and fine. Just imagine us out for a ride, running through orange groves, helping yourself to the best when you want it; good, fine, large and lucious oranges; and then to think of the poor, unlucky amateur, who did not make a good showing at the end of the season, feeding on a snowball diet and wearing out his racing suits, instead of the camel's wool underwear his 'inducer' should have bought him. Funny, this 'inducer.' Why, when I was an amateur we did business with the company direct; but suppose it is all the same. Kingsland ought to save some of his salary now—working for a brewery."

\*\*

#### The Amateur Athletic Union's Position. In a recent interview Secretary Sulli-

but had to do the other thing, like good boys. The L. A. W. is now too strong to be monkeyed with, and has yielded too much to the A. A. U. in the past.

\*\*

#### Albert and Margery.

Those two sly journalists, Albert Mott, of Baltimore, and "Margery," of Philadelphia, anticipated the supposed date of their annexation by two months. It is thought the trip from Baltimore to Philadelphia, and the poor walking in Philadelphia, resolved the engagement into a rattling finish—and no loafing race was theirs. Well, everybody is pleased to hear the news, and long happiness is extended on all sides. This is a pair where mutual tastes accord. Both are clever writers, both ardent cyclists, and both have many friends.

\*\*

#### About Trade Officials.

Now that the cash prize league has come, the writer, having contributed his little share for two years in early and late agitations, will leave others to hover around the flesh pots (there will be plenty of them looking for a job), and

and the Brooklyn man must have neglected his private interests frightfully to work for an organization which will forget him in a few years.

\*\*

#### Horrors of Class B.

In my opinion the racing board has not improved its position, but simply met an emergency—the cash prize league. We have still class A, which includes Colonel Pope, Birdie Munger, Tom Roe and Abbot Bassett, all still pure. But the new class B is very fine. A cyclist does not forfeit his amateur status by teaching for the purpose of effecting a sale, neither does he lose his "price of many pearls" by accepting a salary, nor by "bartering" pianos, coffins, etc. Still if he paces a professional he loses his "pearl of great price." Lend me your ears, good trade people. After you have thoroughly disgusted "Class B"—paid him all your profits, and he has a first mortgage on your factory—you will find that the racing board has dumped a monster into your counting rooms whose garments may be white, but whose salary will be awfully large. You will eventually curse the class B man. You

The above gives probably the best view of the Philadelphia show of any pictures taken, inasmuch as it shows a great portion of the hall and the exhibits.

van, of the Amateur Athletic Union, when asked what effect the new racing rules would have on A. A. U. contests was unable to offer a reply. Personally, however, he thought that the proposed rules were very good. He further said that the L. A. W. was now officially recognizing a class of riders which has been in existence for years. Secretary Sullivan would not admit that wheelmen who raced in the employ of manufacturers would be debarred from A. A. U. contests. He claims that the L. A. W. rules will be recognized by the A. A. U. So says the *Sun*. This seems to indicate that the union has determined not to risk a war with the league. At a recent meeting of the A. A. U. a question as to the standing of L. A. W. amateurs was frowned down. Delegate Luscomb had his little piece ready. It was thus: "You know the terms on which we affiliated with you. If you don't like our course, say so." The A. A. U. did not like it,

will move forward to other subjects. Now that the cash prize league is a "go," the promoters of that and also the L. A. W. racing interests should fire all racing officials connected with the trade. Among these are the handicappers, the referees and walking advertisers of manufacturers. The trade should be, and must be, divorced from officialism and racing. That timekeepers, referees and judges should be paid, goes without saying, and there should be no quibble about paying the chairman of the racing board a liberal salary for the arduous duties he has to attend to. Why any body of men should expect such services to be rendered free—and it is likely they do not—passes comprehension. Abbot Bassett is undoubtedly the hardest-worked man in the L. A. W., and no reasonable man objects to the remuneration he receives for his services. H. E. Raymond has done the best he could under the rules he had to contend with,

will sigh for the genuine amateur or professional once more—when your substance has been spent by the prodigal class B, abetted by the L. A. W. Just clip this out, stick it in the back of your ledger, and shoot me in five years if my prediction doesn't prove true.

\*\*

#### McCune Looking Forward.

J. B. McCune's business vision seems to be generally about correct. He has faith in the future despite the avowal of the man with the Italian name that things are going the the "demnition bow wows." McCune spoke eloquently on the subject at Philadelphia. "Why," said he, "when I went to the Pope Manufacturing Company in 1885 and asked for a license to manufacture Springfield roadsters, Colonel Pope looked at me in a pitying sort of way and said: 'McCune, our company can make all the bicycles required, or the

will be sold in America for years to come. You had better think twice before embarking in the business.' I told him then that I had noted the progress of the sewing machine business, which a few years ago had only an output of fifty-six to fifty-seven machines per day. Now the output is 150 per day, and the life of a sewing machine is twice that of a bicycle. I have no limit to place on the possibilities of the bicycle trade. It seems limitless; its future teems with grand possibilities, as the march of road improvement and public education goes forward."

So it seems, from McCune's statement, that the colonel did not anticipate the magnitude of the great industry he has fostered. Or shall we say that the far-seeing man of Massachusetts, talked, as he sometimes talks, to gain the better of a bargain, to discourage a competitor in what he saw was a grand field for his capital?

\*\*\*

#### Of Course There Is.

Last week's cash prize organ notes that the first cash prize meeting given in New Zealand was given in Eganstown, and suggests that there is something in a name after all. Of course there is. Patrick E., who is now minister to Chili and will soon get the sack by Grover C., and his brother dynamiter, James F., who has just been given his release from a 20-years' residence in Portland prison, are both Egans. Of course there's something in a name.

A young Englishman named Moat has been charged with manslaughter for having run into and killed a woman named Field.

William C. Brewer, manager of the Toledo Bicycle Company, will leave that concern on Feb. 1. His intentions have not yet been made known to us.

#### WHAT PEOPLE ARE SAYING.

*Stray Remarks Picked Up among Wheelmen.—Racing Board Matters.*

W. C. Thorne, the member of the racing board in charge of district number eight, who was taken to task rather sharply in our last issue for alleged neglect of duty, was seen by a REFEREE man lately and said:

"In one respect I would like to be set straight. When I was asked to serve on the board I figured that nearly all the work would be done during the summer months, and taking previous winters into consideration, had no idea that any great amount of work would be requisite then. My business position is such that during a part of November and December I am buried in work and am absolutely unable to attend to anything else. Mr. Raymond knew my position. I don't see that any great harm has been done, except that the men who went to Milwaukee in November got an idea into their heads that because they were not suspended then they could repeat the offense at will. Personally I do not see any sense in suspensions now. The rules will be changed, I feel sure, so that nothing is to be gained."

"What are the chances of some suspensions in the near future?"

"I think most of the men will clear themselves, but we shall no doubt catch a few of them."

MR. HEATH, OF MINNEAPOLIS.

The founder of the S. F. Heath Cycle Company, of St. Paul and Minneapolis, has been spending a few days in Chicago, introducing a pump which will be found referred to elsewhere. Asked whether trade in his part of the country kept pace with the progress elsewhere, he said:

"The increase has been gradual but regular. St. Paul isn't much of a wheel-

ing town; its streets are narrow and rough. Minneapolis gains steadily. No, the increase in the number of dealers has not been as marked as in Chicago, for instance. There are a number of hardware houses selling bicycles, but few exclusive cycle houses."

VAN SICKLEN ON CLASSES A AND B.

As a veteran racing man N. H. Van Sicklen is entitled to his say on the new rule, proposed by the racing board. It may be stated definitely that he doesn't believe in class A. "I am a good amateur," said he, "but though the proposed changes would increase my chances of winning very largely, I don't want to ride forever for \$50 medals. Besides, what are they going to do about road racing? I suppose they'll grant a license and allow all comers to race, but cut us down to \$50 prizes. Nice race the Pullman, for instance, would be under those circumstances. I expect some of the men will have shirts labeled 'Class A' outside, and 'Class B' inside, so that they may change them at will."

SOME MYSTERIOUS REASON.

Bliss, the ex-suspend, met Van Sicklen, the ex-captain, and the latter asked: "Have you claimed your Baltimore prizes?"

"No."

"Why?"

Then followed a whispered communication which caused some merriment.

"I don't believe Bliss will ever get his prizes," ventured a bystander.

"Why not?"

"Because they will claim that his entry blank was not properly filled out, and therefore he had no one but himself to blame for all the trouble."

"True, but they allowed him to ride, and having done that virtually admitted the validity of his entry, and became responsible to him for the prizes."

The reasoning seems to be sound.

ONE OF THE MILWAUKEE SUSPECTS.

"It was just this way," he was saying. "Schroeder told me to buy my ticket and he would give me the money when I got to Milwaukee. It happened that I wasn't very well, and I got no chance to see Schroeder, and came home without the money. I was on the verge of writing him for it when—well, boys, I didn't write, so I'm safe enough. But this Class A business isn't right. I don't make a profession of racing. I hold a position and race a little on the side. If somebody is kind enough to give me a railroad ticket, or if I am fortunate enough to find, when my hotel bill is presented, that the clerk has made a mistake and receipted it, that's no reason why I should never get a prize worth more than \$50."

THE TERMS WERE EASY.

"I have ridden a Blank wheel for a whole season," said a Chicago racer, "and have never received a cent from the maker—not even a machine. Why, when I went to Indianapolis and won several events Mr. ——— even went so far as to kick like a mule because a crank was bent. One day I went into the store and the manager said:

"———, the famous professional, has just been in and bought a racer."

"Bought?"

"Yes; he paid \$20 on account and pays the rest in installments of \$20."

"All right," says I, "I'll take one on the same terms."

"D'y mean it?"

"Cert; I'll pay \$20 now and another installment when ——— pays his next \$20."

The management of the concern has changed hands since then, and the new manager, who listened to the recital, said:

"Yes, and you'd have had a bargain."

We haven't set eyes on Mr. —— or the machine since."

### SALARIES IN THE CYCLE TRADE.

This was the subject under discussion in a retail establishment when the REFERENCE man dropped in last week, for be it understood, the salesmen are just now paying more attention to the problem, how to get more money, than to earning that which they already receive. A number of recent changes led up to the conversation.

"They tell me," said one, "that——  
left his position because the house  
wouldn't raise his salary to \$5,000."

"Yes," said another, "and I have it on excellent authority that —— is to get \$8,000 in his new berth."

"Eight!" quoth a third, "why, I know a lady to whom he said that ten was the figure!"

cle business. We didn't care to meet it, so he accepted with our full approval, and will join them on February 1."

"Is it true, as reported, that the recent trip of certain racing men to the south, had anything to do with his leaving?"

"It is not true. The one event had no connection whatever with the other."

We understand the title of "manager" has been conferred on the ex-Peorian.

THE SHOW AND OTHER THINGS.

William Herrick came home from the show with a face which said, without the aid of tongue, "influenza." Everyone caught it at the show, and many are still battling with severe attacks. But Herrick seemed satisfied.

"I did enough business, and got enough advertising out of the show," said he, "to pay for all the expense and trouble, including the doctor. Let's see

## RANDOM NOTES FROM AUSTRALIA.

*Christmas Time the Touring Season There.*  
—*What the Tylers are Doing.*

MELBOURNE, Dec. 23.—Christmas with us brings no snow, as you will imagine when I say that the thermometer to-day has registered close on 100 degrees in the shade; but Australians like a real hot Christmas, and in the bush keep up the good old festivities with soul and vigor. All the business houses in Melbourne close these holidays on Saturday, Sunday, Monday and Tuesday, and this vacation gives wheelmen a fine spell for touring. The experienced touring man here dresses simply while riding through the bush. He wears knickers, stockings, shoes, flannel shirt and straw hat. Nearly all over the colony of Victoria fair accommodation is to be had, the prices in the best towns being 2s. 6d. (60c)

"Will you walk into my parlor, said the spider to the fly!"

And so they go, these windy would-be salesmen, while any number of good men are to be found ready to jump at one-third of the amounts named.

"There are very few men," said Horace Bell, "who obtain any such salary. A notable exception is Rucker, of the Humber company. But then, in addition to being a first-rate business man, he is a mechanical genius. Take him in any part of the business, he understands it thoroughly. You can't floor him. He is one of the few in his class."

### FRED PATEE'S NEW POSITION.

Mr. Rouse, while in Chicago last week, corroborated the report that Fred Patee had resigned his position with Rouse, Hazard & Co. "He leaves us," said he, "with the best of feeling on both sides. The Indiana people offered him one of the best things ever known in the bicy-

—I sold 125 Sterlings in one lot, about a thousand pumps and 4,000 tool bags. The house is well satisfied with the result of the show."

"Was anything done about the formation of a manufacturers' association?"

"Not a thing. An attempt was made to hold a meeting at the Bingham, but only about eight or nine people put in an appearance. They can't form an association which will do any good. To be of any use an office would have to be maintained at New York or Chicago. My way of doing it would be this—to have a committee of valuers, to which every wheel in the market should be submitted to be "listed"—that is the committee should say what each wheel should be listed at. It should also fix the discounts. But then it wouldn't work, for the makers wouldn't live up to their contracts."

for meals and 2s. 6d. for bed, and there is little or no tipping of waiter. In ordinary places the charges for meals, etc., range down to 1s. 6d., or even 1s., but then you have to join with the common crowd, which, as often as not, contains men who sit down at the table as they come from the fields, with their coats off. In out of the way places I have toured for a week in the summer and never worn a coat or vest at all, and the people don't mind it.

## THE EXPENSE QUESTION IN AUSTRALIA.

This season will be known in future among racing men as the "migratory" one, for they are traveling about a lot, going hundreds of miles to races. At present a team is over in New Zealand, another lot are racing in Sydney, while to-morrow the largest number of riders

if paid through an independent governing body.

LAMBTON IS A RACE PROMOTER.

H. H. Lambton, who won the £200 first prize in the Austral wheel race on Nov. 19, has been promoting race meetings in Sydney, New South Wales. A two-days' race meeting was arranged, with prizes valued at 200 sovereigns, the chief race being the "Cyclists Summer Cup," a two-mile handicap run in two heats each day, and a final, the first prize being £50. The places in the first and second heats were won by L. Gollan, D. Charleston, G. Roth, W. C. Freeman, L. Herman and I. Williams. The second day's racing was put off indefinitely on account of wet weather. There were only 3,000 people present, so Lambton, it is said, will drop over a hundred

and fifty pounds in loss—a hole in his Austral check! He is at present further north, at Newcastle, where he is to run a race meeting on Dec. 24, and then has an idea of holding a cash prize meeting over in Tasmania.

\* \* \*

#### A SNAKE STOPS A WHEEL.

Although there are plenty of snakes in Australia, and it is a common thing for a wheelman when touring to run over one lying dead on the road, still we don't often hear of live snakes being encountered. A Queensland rider was pedaling gaily along a bush road on his safety when his wheels suddenly ceased to revolve and he was pitched forward on the road. A large black snake four feet two and a half inches long had become entangled in the chain, and hence the stoppage. The reptile was gliding out from among the spokes, when a knock from a billet of wood ended his gliding propensities.

\* \* \*

#### HOW LAMBTON WORKED IT.

Those who raced with Lambton in the Austral wheel race, when he won with 200 yards start, are awfully wild with the handicapper for allotting him such a large start. He simply "chucked" the prize at Lambton, and it was the most stupid piece of handicapping imaginable, and should shame the handicapper into retirement. In proof of this, Lambton, while running his race meeting in Sydney, challenged any rider in New South Wales to race a mile, and Lambton said he would concede fifty yards in the mile. Harry Lambton has also been attempting records, and generally showing up what a demon he is on the wheel, while before that Austral he was so sick it was said it was not safe for him to race.

Appropo of this, a little story might be given. It happened in a back room of

the pavilion at the training ground a few days before the closing of entries for the Austral wheel race. Bob is the caretaker of the ground, and Harry Lambton's trainer. Present Bob, Harry and half a dozen intending competitors for the big £200 race. Enters George, the handicapper. General conversation continues. Presently a deep sigh is heard.

Bob—"What's the matter, Harry? Ain't you well?"

"No, Bob, I don't feel very well."

Bob—"You should not have trained this afternoon, Harry, you're not strong enough. But never mind, Harry—let me cook you a chop."

"Oh, no, Bob, thank you, I can't eat."

"But, Harry, you must not get low spirited."

"I can't help it, Bob, I feel so bad inside. I don't think I can race any more."

"Oh, nonsense, Harry. Go and lie down."

"I think I will, Bob; I do feel so bad."

Exit Harry.

Bob—"Poor fellow! It don't look as though he's long for this world."

"Have a drop of something, George?"

"Whiskey, eh! I think I will—thanks, Bob."

A week later the handicaps appear for the big race, and the leading sporting papers said: "The handicaps for the Austral wheel race have been published, and as things look on paper, there is only one rider in it, and that Lambton."

And he won.

\* \* \*

#### ACCIDENTS IN VICTORIA.

So far there have only been two fatal bicycle accidents in Victoria. The first took place about eight years ago at Sanhurst, when a bicycle agent named

Crowle was riding along the street at full speed on an ordinary. The front tire came off, jammed in the forks and pitched Crowle fair on his head, fracturing his skull. The last fatality happened early in December. George M. Kingston—who a few days previously was riding in the Austral—was traveling along a smooth road on a racing safety bicycle, when a large dog suddenly ran out and into the machine. Kingston was thrown full force on his head against the curb, and died a few days later with a fractured skull. He was much respected, and deep sorrow was expressed for this untimely ending to a fine, muscular young man. His remains were taken by steamer to his home in New Zealand.

\* \* \*

#### COMING TO CHICAGO.

George Burston, president of the Melbourne Bicycle Club, will no doubt run across you some time after receipt of this letter, as he is just about to start for the Chicago exhibition. Burston has done as much bicycle touring, if not more, than any other man in the world, his longest trip being that of two years ago, when, in company with H. R. Stokes, he toured round the world on the bicycle, covering some 10,000 miles, eighteen months a wheel. He is a Victorian, has been riding for upwards of twelve years, and is popular wherever he goes with his merry face and open-hearted, frank manner. He will tell your boys all about the cash prize business. It is quite possible he may go to Japan before he gets to your show, as he means to spend a few weeks in the Jap's country, and will tour there a good bit on the bicycle.

AN IDLE BOY.

The Ramblers of Wallingford, Conn., announce a promenade concert and reception at the Armory on Feb. 8.

#### A Hartford Battle.

They had a "scrap" at the Hartford Wheel Club rooms recently—a regular knock-out affair, with all the professional trimmings. Tom Fahy vs M. C., while the sporty Harry Cornish, of the Boston Athletic Club, refereed. A pass-word was absolutely necessary to secure admission and guard against the police, and the details of the sanguinary affair were given us by a young man—a new member evidently—in a bank at Hartford. Said the informant: "You should have been here last night. We had a regular knock-out at the Hartford Wheel Club. It was to be a finish fight and one fellow knocked the other out in three rounds. All the leading cycling lights of Hartford were present, and things could not have been conducted better in the famous California or Coney Island clubs."

#### A New St. Louis Club.

The Business Men's Bicycle Club has just been organized at St. Louis, with twenty-five charter members, and with O. L. Rule president and E. W. Robert secretary. It will be a league club, and is organized principally for the purpose of encouraging the wheelmen who use their wheels going to and from their offices. As soon as the riding season is well under way quarters will be secured in the business center, where members can store their wheels during the day, and where daily and weekly papers will be on file; in fact, where they can get the same accommodations during the day that they get at the other clubs in the evening. It will not be run in opposition to the other clubs, as the objects are so different, and dues will be placed at such a figure that wheelmen already belonging to other clubs can join the new one also.

GEORGE TAYLOR'S RACE CHAT.

A Few Queer Things Seen While Attending Race Meets.

In traveling about, many ludicrous incidents are brought to notice. The man inexperienced in "bicyclic" affairs sometimes has strange ideas concerning racing men. "Lo, the poor amateur," thanks to the gibes of the unsparing and relentless cycle journals, is considered to be a creature of fearful and wonderful construction. Many are the conjectures concerning his origin and mode of subsistence.

I attended a western race meet a year or two ago, and while breakfasting with a certain prominent racing man, overheard a conversation between two worthy wheelmen, evidently of the *genus rusticus*, who sat opposite. It was evident that they had imbibed some of the current opinions. To our surprise, the conversation turned upon my friend, whose modesty concealed his identity. The dialogue was somewhat as follows: "And does So-and-So ride for — & Co.? He must get pretty good wages to ride the way he does. I heard that he gets \$8 a day and his expenses, besides what he makes backing himself," etc., etc. The countenance of the subject of all this was a study, upon hearing his merits discussed so coolly. Finally fortune intervened, or rather breakfast ended, and the critics took flight. This illustrates that the keen-edged pen of the press leaves its mark deeply graven upon the plastic mind of the uninformed.

It is remarkable what a craze possesses the public for record-breaking. Every man of the slightest sporting proclivities owns a stop-watch. They clamor for faster races—ever faster. Unless a race is run under 2:30 the public is not satisfied, and is never really pleased unless a record is broken. I have seen a grand stand call for a run-over when the time was under 2:24. No matter how spirited or exciting is the finish, the public cry is for time, always time. But this is not in accordance with the ideas inculcated in the racing man by his experience; he knows a thing or two himself. He knows that one of the axioms of the path is that pacemaking is fatal to success. Dr. Turner, an English cycling authority, has by a series of statistics prepared by him, demonstrated the amount of uric acid consumed in pacing each mile; showing also how the system is deprived of the strength needful for a finish. To the uninitiated it seems folly to think that pacemaking weakens a finish. The truth of my statements can not be fully realized by one who has never raced. Pacemaking makes a difference of ten ten or fifteen seconds in a mile. A man may ride in 2:20 with pacemakers who can not ride in 2:30 without them. Thus it is that special prizes are offered to pacemakers, as prizes at the quarter poles.

A peculiar thing which I have noticed is, the hallucination which possesses nearly every race meet promoter that his track is the only one. Upon several occasions last season I was gravely assured by reputable men that their respective tracks were without doubt the fastest in existence, and their line of

prizes the finest ever offered. I think that these same gentlemen (with some few exceptions) must have double refractory lenses in place of optics. Concerning the average list of prizes, I can only offer a suggestion that an official prize inspector be appointed to determine whether or not they are really worth three-fourths of list value.

A few words upon position. There is a great difference in the size and strength of different men. Why, then, should they all adopt the same position upon a wheel. The long-legged man, as a rule, sits well back, and the short man more directly over the pedals. For myself, I like my saddle some four inches back of the crank shaft, which position is favored by H. C. Tyler and other prominent racing men. The position is equally good upon road or path. However, no rule can be prescribed, for the correct position is the most comfortable. I can not condemn too strongly the extra low handle bar position adopted by so many road riders. A century run eliminates all the romance from such a position, and promotes a stoop in the

looked after in his absence by the sub-editor, a lady journalist, known to Dubliners as Miss Grimshaw, and to readers of the *Irish Cyclist* as "Graphis," an enthusiastic rider and writer, who is thoroughly up in the sport, pastime and trade of cycling in all its branches. Quite lately Miss Grimshaw has succeeded Mecredy as Dublin correspondent of the *Cyclist*, and she also contributes to a number of other papers, including the *Cycle Record* and *Cycling*.

To those who believe in amateurism, the rumors that are afloat to the effect that the N. C. U. national committee is at last inquiring into several grave cases of suspected professionalism are very welcome. It is said that some very strong evidence has recently come into its hands with regard to the payment of riders and pacemakers in a big road race, held two seasons ago, and that, late as it is, it will be put to use, and that the riders implicated will be asked to clear themselves. There is also said to be a case of tire-amateurism under consideration. In this instance, I am told, and I have it on the best authority, the inventor of a certain tire gave a sum of money to two men on the understanding that they were to make a record on his tire. When the time for the trial came he found that they were mounted on other tires, and that they were going for an altogether different

Paris Indoor Track, located in the Machinery Building of the Paris Exposition.

shoulders. The peculiarity of the wheel and the general adoption of a racing position by road riders seems to insure to us a race of hunchbacks.

GEORGE F. TAYLOR.

#### AFTER AMALEURS ABROAD.

Money Alleged to Have Been Paid For Record Breaking.

LONDON, Jan. 14.—Since the council of the National Cyclists Union decided at its meeting at Brighton last month to depute to the general committee the adoption of the acts of its sub-committee on international championships, little has been heard of the matter on this side. At present we are waiting with considerable interest to learn exactly how the preparations are progressing for the proposed first meeting at Chicago next fall. I hear that besides England, Ireland is almost sure to send out a team, and that it will probably include R. J. Mecredy, editor of the *Irish Cyclist* and winner of the four N. C. U. safety championships in 1890. Mecredy is getting on in years now, being thirty-two, but although he can not stay quite so well as he used to do, his sprint is as good as ever it was. He is very anxious to pay a visit to America, and regards this as a very favorable opportunity for so doing. He is a fine sportsman and a great enthusiast, and over here is most popular wherever he goes. If he visits America his paper will probably be

set of records. As they did not do what they had undertaken for him, he asked to have his money back again. They refused, and he reported the matter to the National Cyclists' Union, and it is now being investigated.

\* \* \*

Size and Looks Cut No Figure.

Cycling in its own way presents, perhaps, more physical incongruity than any other athletic sport. Certain well-defined physical lines are almost necessary to pre-eminence in the oarsman, the sprinter or the footballer, but in cycling such theories invariably fall out with actual facts. Even the best of present day racing men would be peremptorily rejected by an artist hard up for an athletic model, and the contemplative man's wonder grows with his contemplation of the speed leaders of the world of wheels. Zimmerman has been described as "long, loose, shambling, narrow-chested and decidedly lobsided" when seen walking; but once in the saddle his chief characteristic is an appearance of great power in action. A. W. Harris is what a horsey man would call "stocky," otherwise expressed, this means thickset. As seen walking across the track you would not be inclined to pick him out of an averagely-built half-dozen lads if you were looking for athletic eminence.

Going to the other extreme, the argument seems more accentuated, as we can

note on our fingers quite half a dozen fine, tall, strapping fellows, well up to six feet, who are lingering about the 100 yards mark, and not making a particularly brilliant show from it either. Were Osmond, Adams, Edwards, Harris, Schofield, Arthur du Cros, Lehr and Zimmerman placed before an athletic critic to whom they were unknown, or a breeder of thoroughbred horses, we would wager a trifle that he would not pick the fastest three on the first trial. Lung power and courage have more to say in cycle racing probably than in any other athletic contest, and when a little brains are added then we get a successful racing man as distinct from a mere record-breaker.

\* \* \*

#### Cement Tracks are Failures.

Gradually the people who have been such ardent advocates of cement tracks are learning that their hobby will not stand the test of time. Cement tracks are expensive to build and expensive to maintain. It a recent conversation Mr. Raymond gave us his reasons for opposing their construction in this country. He says that, from a personal inspection, he knows the Paris track to be cracked in many places, to be constantly undergoing repairs, and to be unsafe after rain. Why persist in advocating cement under these circumstances? The climate of the United States, far more trying than that of France, would make the experiment even more hazardous here than there.

No one has yet advanced an argument against board tracks. The only objection we have heard is that they would be "an experiment which we can't afford to try," which is no argument at all. Boards have been tried and found a success. They are not as expensive as cement; they are not expensive to maintain; they need no ground-keeper, and there need be no postponement of racing on account of rain. These advantages outweigh all that that has been urged against them, beside which all the board tracks ever constructed have been found exceedingly fast. We believe that, considering how short the time is between this and championship day, the Chicago track should certainly be built of boards.

\* \* \*

#### With Apologies to Mr. Shakespeare.

The "Two Gentlemen of Verona" seems to hit the Amateur of to-day:—

Professional:—Indeed, a sheep doth often stray, if the shepherd be awhile away.

Amateur:—You conclude that my master [H. E. R.] is a shepherd, then, and I a sheep?

Pro.:—I do.

Am.:—Why, then, my hours are his hours, whether I sleep or wake.

Pro.:—A silly answer, and fitting well a sheep.

Am.:—This proves me still a sheep.

Pro.:—True, and thy master a shepherd.

Am.:—Nay, that I can deny by a circumstance. [Johnson and Eck.]

Pro.:—It shall go hard, but I'll prove it by another.

Am.:—The shepherd seeks the sheep, [especially now] and not the sheep the shepherd; but I seek my master [some manufacturer] and my master seek not me [two suspensions last year] therefore I am no sheep.

Pro.:—The sheep for fodder follow the shepherd [manufacturer], the shepherd for food follows not the sheep; thou for wages followest thy master [the manufacturer], thy master for wages follows not thee; therefore thou art a sheep.

Am.:—Such another proof wilt make me say "baa."

Says William of Stratford, further: "They say best men are moulded out of faults, and, for the most, become much

more the better for being a little bad." Surely this is an encouraging state of things for all.

\* \* \*

*Sticks to His Old Colors.*

Holland, who recently joined the Maryland club, says he will not race for that club, but will ride under the colors of the Chesapeake club. The members of the Chesapeake had thought that "Billy" had left them. Fortunately this is not the case, and next season he will win many races for his old club, no doubt.

\* \* \*

*Race Notes From Abroad.*

Schofield is something of a skater.

Sunday races are all the go in Paris.

Holbein denies that he will leave England this year.

Linoleum is said to be the latest surface for tracks.

Frank Shorland, it is said, will ride a rear driver next season.

G. P. Mills is to again try for the Land's End to John o'Groats record.

The Cuca Cocoa cup race will be held July 21 and 22 at Herne Hill track.

The Herne Hill track is to be resurfaced and made the fastest path abroad.

Frank Bowden calls the National Cyclists' Union the Nonsensical Cyclists' Union.

The Scottish Cycling Union will arrange a twenty-four hours contest for this season.

Stage, O'Flannigan and Lamb are at Glasgow training for the professional races which occur this month's end.

Tommy Edge thinks Eck's message—"How much a week will you give for Johnson, Rhodes and myself to break all records," etc.—to the Sercombe-Bolte Manufacturing Company smacks rather of

the professional than the amateur. That's the way it looks to the ordinary mortal, surely.

Terront and Corre, the two French cracks, will ride their thousand kilometre race next month on the 400-metre lap track in the Galerie des Machines, Paris.

*Sport and Play* doubts if there can be found a man speedy enough to lower the Yankee's colors on their own soil if the L. A. W. throws open its championships.

Some of the members of the North Mail C. C., of Birmingham, recently tried for the hundred-mile record. Two covered the distance in ten hours and were nearly frozen.

They are still holding road races in England. The Blackpool C. C. of North Lancashire held a 12 mile race a few days after New Year's day, Blundell being first in 44 min. 2-5 sec. from the four-minute mark.

Suspension and rumors of suspension fill the air, and yet the N. C. U. can not please its critics. When it does nothing it is fatuous and moribund; when it moves it is a spoil sport. Funny, is it not? And in spite of it all the Union goes steadily ahead, and "the world continues to revolve on its own axletree onet in twenty 4 hours," as Artemus Ward said.—*Bicycling News*.

*Elected New Officers.*

The Lockwood C. C., of Jacksonville, Ill., has elected the following officers for 1893: President, George H. Scurlock; vice-president, Lenman P. Carter; secretary, Rollin M. Starr; financial secretary, H. Moseley; treasurer, W. R. Humphrey; captain, A. D. Black; directors, Messrs. Scurlock, Starr, Hairgrove, Black, Collin, Eddy and Carter.

## DAY DREAMS BY "PHCEBUS."

"I will take mine ease in mine inn," my feat are on the fender, my pipe is between my teeth, a mellow light has chased the shadows from the corners, the shades are down and I am very comfortable, for "mine inn" is a good one. Outside the wind is blowing in gusts that beat the sleety rain, that is falling, against my window, and whirls it in the faces of the unlucky few who, with heads bent and umbrellas held before them, are hurrying down the nearly deserted street. A wild night it is, and with that unctuous hypocrisy so common to us well-fed mortals, I murmur "God help the poor," and then watch in dreamy enjoyment (which is perhaps rather heightened by the fact that there are many in this mighty city who are suffering for common necessities) the blue wreaths of perfumed smoke grow thick about my head. "O, dark brown weed, within this wrapper lies a subtle genie that, loosed by fire, doth steal within the fortress of the brain, and there with matchless might doth overcome the fearsome wardens, grief and care." As the smoke eddies and drifts above me, with half-shut eyes I see visions and faces long forgot. What is this picture, shadowy and indistinct, but growing brighter? I see a mighty enclosure, on one side a wide and rapid river, at the other the gates of a city. I am sitting in an amphitheatre and all about me are rows on rows of seats, filled with handsome ladies and gallant men. In front stretches a splendid race track. Banners are waving, and somewhere the music of a soul-stirring march comes pulsing to my ear, and now a mighty shout goes up. Ladies spring to their feet and wildly wave handkerchiefs and parasols, men are screaming themselves hoarse, for on the track ap-

pear two lithe and handsome youths dressed from head to heel in sombre black and leading each a spider wheel—"Sandy" Sellers and George M. Hendee. A pistol shot and they are off; the vision fades; I do not want to see the end.

From the endless panorama of the brain springs out against the background of the blue smoke another picture, a small green enclosure, with the conventional "diamond" and pitcher's box, and around its sides a narrow yellow track. In the grand stands a slender audience, and at the further end a knot of racing men in many hued vestments. Again the pistol shot, and a gay field of riders go whirling by. Round and round the track they fly, and now a bell gives forth a dolesome stroke and from the hurrying throng a form darts out. "Tis Weber, Weber, Weber," a mighty cry goes up, followed by a long-drawn sob, for midway in the stretch his faithless machine has broken short above the little wheel and he falls forward on his head and knees with frightful force. Alas! thou whole-souled giant, that fall is the beginning of the end, and in a few short months the narrow grave shall hold a peerless champion.

Again a picture grows upon the air—a long, wide street, whose very width dwarfs the buildings on either hand; far in the distance, on a lofty hill facing the city and kingly street, is reared a mighty pile that, like the acropolis, keeps watch and ward over a nation. Its golden dome has seen the rise of a new civilization, and the street before it has echoed to the march of victorious armies. But now, upon its smooth and shining surface appears a procession of another and more peaceful sort, an endless chain of bicycles and their riders. At the head moves slowly on a gigantic figure mounted on a mighty wheel, Mahlon W. Beckwith, the president of the L. A.

THE REFEREE.

W., and a gentleman among gentlemen; and after him followed hundreds upon hundreds of cyclists, many of them boys, who now are famous men. The sport had not yet been degraded by the "push" nor yet by the badge-bedecked yap from Squodunk.

Other pictures do I see, some not near so pleasant, and I would fain hold all within the portals of my heart, for things seem not as they used and I am growing old.

But hark, a bell; 'tis time to fill the inner man and I must away.

PHÆBUS.

WHAT TRADE PEOPLE THINK.

Opinions Seem to Vary—Some for and Others Against the Paid Riders.

It is generally admitted that the trade has considerable influence in league matters, particularly in the racing department. In one sense this is right, inasmuch as the trade has had to furnish the bulk of the prizes given in track and road races for many years past. It would be small wonder if the trade would be for cash prizes, because then it would do away with the giving of bicycles, sundries, etc., for prizes. The opinions of the prominent trade people will, no doubt, be valuable, and are therefore given in full:

OVERMAN WHEEL COMPANY.

CHICOPEE FALLS, Mass., Jan. 20.—Editor REFEREE:—I beg to acknowledge your favor of the 16th inclosing blank for opinions on the amateur question. I believe that no question bearing upon the sport of bicycling is so important as this question of allowing the lines between amateurs and professionals to become wholly disregarded. At present there are bicycle makers who simply speculate on this feature of the management of the L. A. W. as a means of advertising.

Bicycle riders are being employed like any other hired men—their expenses paid, trainers paid, salaries paid, cash prizes given to them by bicycle makers—for what purpose? Simply for the purpose of selfish advertising. This should not be. It is simply preying upon the best interests of the sport.

I have in my possession documents which would drive some great racing men of the country out of the amateur ranks if they were exhibited. There should be a thorough house-cleaning, and every honest bicycle maker should lend his boots to kick at this great nuisance.

There is but one way to deal with this reptile which is gnawing at the life of bicycle sport. It is to take a large, sharp knife and cut the thing's head off square. Any trifling with it will simply put off the day when it must finally be dealt with. Let the line of demarkation be bright and clear. In this way the pure sport will be encouraged, amateurs will compete and make great, interesting and honest races.

At present it is simply a question of the hired men gathering together to take the prizes away from amateurs who can not afford to train for the races and compete with any chance of success. It is also true that the incentive to makers to buy such rubbish as racing records to advertise with is less than it has been, since it is getting to be a well understood thing that bicycle makers who have great features to advertise in their bicycles do not use bicycle records as a lever with which to get orders for their machines. Makers of featureless bicycles advertise records. We used to do it when we had little else to talk about. Trusting that you will undertake a work which will be felt as a real help to the sport of bicycling, I am, very truly yours,

A. H. OVERMAN.

SERCOMBE-BOLTE MANUFACTURING COMPANY.

MILWAUKEE, Wis., Jan. 18.—Editor REFEREE:—Replying to yours of the 17th, I take pleasure in enclosing herewith your list of questions all answered; and I have no motive in desiring that my opinion on any of these subjects be kept confidential. I believe in the League of American Wheelmen being as broad in gauge as the government itself and excluding no one of proper age on account of color or previous condition of having accepted cash prizes. If Prince and Whittaker are good men, I want to see them in competition with such people as Zimmerman, Sanger, Windle and others, providing they have not disqualified themselves by dishonorable acts that would render them entirely objectionable.

The league should have control of all events and impose such stringent measures preventing collusion, fraud and jockeying on the track that a suspension or expulsion would mean much. Under proper control there is no reason why every male person, of any color, over fifteen

years of age should not compete together.

I would decidedly recommend that the present system of prizes be continued; but in many cases where the money was put up to buy a suitable trophy, the prize winner, under proper control of the league, should have the privilege of accepting the money itself or the trophy that it would buy, as he saw fit. I would place a premium, however, on the amateurism of the sport, and establish a fashion to as large an extent as possible, that it is far more elegant to accept the trophy rather than the cash. Your truly,

P. H. SERCOMBE.

MAKERS OF THE LIBERTY.

NEW YORK, Jan. 19.—Editor REFEREE:—We are in receipt of yours of Jan. 17, together with blanks to be filled out. We beg to say that the writer filled one of these blanks out while at the cycle show, and handed it to your representative, Mr. Morgan. The expression given then is the opinion of this concern generally, and you are at liberty to use it as such. Very respectfully yours,

WILSON, MYERS & Co

UNION CYCLE MANUFACTURING COMPANY.

BOSTON, Mass., Jan. 20.—Editor REFEREE:—I am afraid you will have to excuse me from answering the queries on the form sent with your favor of Jan. 16, as I am not sufficiently interested in matters appertaining to the race track to be able to answer them intelligently. Yours truly,

W. MEASURE.

POPE MANUFACTURING COMPANY.

BOSTON, Jan. 19.—Editor REFEREE:—Your letter of Jan. 16, enclosing blank, is received; also one to Colonel Pope, and I wish to say for the company that we think it best not to reply to the questions. Our long experience has taught us that the opinions of manufacturers are under suspicion by the general riders, and that they would be inclined to oppose whichever side we might take. We also know that so important a question will be settled by the riders at large, as the manufacturers form only a small part of the whole league membership. We trust that you will understand our position regarding this, and not feel hurt because we do not reply to the questions. Yours truly,

EDWARD W. POPE, Treasurer.

MORGAN & WRIGHT.

CHICAGO, Jan. 18.—Editor REFEREE:—

"This is the way I long have sought, And mourned because I found it not."

I thank you for giving the opportunity to air my opinions upon the questions embraced in your circular. I do not like to be confined to "Yes" and "No" answers, but should I be called upon in connection with the many intelligent gentlemen composing your Board of Investigation, first having hired a hall at your expense, I should modestly await my turn, then having given an extra haul on my weather braces, I should say:

"Gentlemen, I am not accustomed to speaking in public on the stage, as you no doubt can plainly see." Here I should expect the gentlemen to look and see if they could see. I should then pay tribute in a burst of eloquence to the remarks of the preceding speaker, my brother, No. 8,674,798 of the L. A. W., after which tribute and the restoration of quiet, I should go on to prove that said brother had been "talking through his hat." Then would follow my views: I believe in no sect, schism or ism in connection with American athletics.

Worth makes the man, and Want of it, the fellow.

Every athlete of ability, or supposed ability, has a personal following of friends who take pride and comfort in his powers. These friends, be they individuals, clubs or communities, should be privileged to maintain their protegee, pay his expenses, pay him a salary, or do whatever honorable men may do to push their favorite to the front. If it is irregular for an individual to back a racing man, no law can make it regular for a club to do the same thing.

"Honor and fame from no condition rise; Act well your part; there all the honor lies."

I should ask their "Nibs," "the powers that be" of the L. A. W., or whatever other body of self-constituted autocrats who propose to arbitrate the destinies of American athletes, to take the Declaration of Independence and the constitution of the United States as a guide, and make a code which should be noted the world over for its Jeffersonian simplicity and which would hold all athletes equal before the law, and not have too thundering much law, either. I believe the ultimate desired end of athletic exhibitions is that they shall pay. To some, pay means glory, jewelry, imitation bronze statuary made of zinc; to others it means bread and butter, clothing and house furniture. I fail to see why a workingman, who happens to be physically superior to his fellows, should be degraded because he rides for money to buy a barrel of potatoes in preference to a small diamond with a large flaw in it.

You say in your notes: "It is generally supposed that many riders' expenses are paid by manufacturers." "Supposed" is good, very good. None of us positively know this to be the fact—we just guess at it. If we could only know we know it, how different it would be! There is a penalty attached to knowing, but not to supposing; and, in the face of the law and the penalty,

"we know nothing, no, not even that we know nothing."

Any law which encourages hypocrisy is a bad law. No law can be enforced against the will of a majority.

The L. A. W. member should be permitted to vote by mail, and vote often. The control of race meetings should be in the hands of paid officials, and such meetings should be on a business basis and made to pay financially. The first thought of a good business manager would be to cater to the public, and he would be thoroughly alive to the fact that the taking of money at the gate carried with it a legal obligation to give a good show. This acknowledgment would make short work of rowdyism, pugilism, pushism, trickery, slow races and other drags upon the popularity of the sport. About this time I should be gently requested to quit, and, after taking another pull at my lee halyards, I should yield the floor to some less eloquent but more conservative member who would talk for an hour upon the advisability of publishing the addresses of the league members. Yours very truly,

F. W. MORGAN.

PROMINENT BUT SHY.

Editor REFEREE:—Your favor of the 16th received and contents carefully noted. If you desire our views on some questions which you sent us we will give them, but not for publication. We do not care to have our name used. There is a difference in opinion among those connected with this house about what ought to be and what ought not to be in racing; however, without exception, we are all very glad to hear of the proposed amendment which divides racing men into the classes A and B. Hereafter an amateur will show by his class whether his wheel is given to him and whether his expenses are paid merely for the advertising. As it was before, this could not be distinguished so well.

We are well aware of what has been done the

VOTING BLANK.

Cut Out this Blank, and, After Filling In Your Replies, Mail to the Referee, Chicago.

- No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs? .....
- No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.? .....
- No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals? .....
- No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership? .....
- No. 5. Shall cash prizes be awarded to any class, and if so, which? .....
- No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin? .....
- No. 7. Shall the constitution be so changed as to permit of a change by a mail vote? .....
- I certify that I am a member of the League of American Wheelmen and I have not previously voted on the above questions.

Name.....

Address.....

League No. (if possible).....

A supply of these blanks will be forwarded to any league member on application.

# SHEOL

Is reached by a road paved with good intentions. Dealer, don't let your business go there because your wheels are made by men of "good intentions," but get our SMALLEYS, every one of which has a written guarantee with it.

COL. GEO. K. BARRETT will fix you up.

past season and what means were resorted to to bring certain wheels into greater prominence. Now that this company has brought out a racer, we have been approached by racing men who want to ride our wheels for so many pounds, of soda crackers per week and expenses. We are decidedly in favor of having the *Bicycling World* publish the addresses as well as the names of applicants for membership.

## HARTFORD CYCLE COMPANY.

HARTFORD, Conn., Jan. 20.—Editor REFEREE:—I am duly in receipt of your favor of the 16th inst., enclosing a blank covering a number of questions to be answered relative to the position of amateurs, professionals, etc., as connected with the cycling interests. I must beg, however, to be excused from answering these questions in detail. As our company makes no racing machines at all, we never come in contact in a business way with the racing man, and I may say also here, that there is scarcely any probability of our making a machine for the race path.

To your question No. 6, I will answer yes. Yours truly,  
GEORGE POPE.

## Buffalo Wanderers Install Officers.

Saturday evening the Buffalo Wanderers' club rooms were the scene of much jollification and gaiety. There was a large number present, and they were treated to a novel entertainment. The exercises opened with music, instrumental and vocal; the retiring president addressed the club and gave some excellent advice regarding the management for the ensuing year. Then followed the installation, which terminated in a supper provided by the club's caterer. The club's caterer is now serving hot suppers every Sunday afternoon from 5 until 7 o'clock.

The pool tournament between the Ramblers and the Press C. C. this week resulted in favor of the former club by several points, and the interest and excitement of the past week is still as great as ever.

The B. A. C. at present is giving its entire attention to boxing and wrestling exhibitions, and from the excellent management it gives these events, is reaping a golden harvest.

A challenge is out from the Ramblers Bowling Club to the winning team of the Press-Ramblers pool tournament for a series of match games of continuous pool.

## Disappointed in the Show.

The members of the St. Louis Cycling Club are all well pleased with the financial success of their dramatic entertainment given recently, but as to the success of the affair in the artistic sense, the less said the better. The club did its part in its usual thorough manner, but the Garrick Dramatic Society, which furnished the stage entertainment, consisted of about the worst lot of amateurs ever seen. However, the club has gained by the experience, and it is safe to say that there will be no fault found with the next attempt.

## At Jacksonville, Ill.

The Lockwood C. C., of Jacksonville, Ill., gave its midwinter dance Thursday night, Jan. 26, at the Fifth Regiment Armory. This is the second of the series that the club has been conducting this winter. It is also working up a genuine tramp social, to eventuate in about two weeks, which will probably be participated in by cyclists from neighboring towns.

William M. P. Bowen, P. O. Box 1513 Providence, R. I., is circulating a petition to the R. I. Highway Commission to recommend to the general assembly the principle that the state pay the whole cost of maintaining and of building the traveled radial roads.

We regret to learn that D. H. Lewis, of the *American Wheelman*, was badly scalded in a Turkish bath last Saturday.

It will be verified to the letter for ore,

## ENGLISH TRADE MATTERS.

## The Coventry Machinists' Company's Bad Year—Some New Things.

LONDON, Jan. 11, 1893.—The report of the Coventry Machinists' Company for the year ending Sept. 30, last, is very depressing reading. It is almost pathetic to find a firm which in the past has produced so much genuine and elegant work, machines which, from their sumptuous appearance and high repute, attracted customers from every rank of society, from royalty down to the elite of club riders, machines which have been pirated by makers abroad and sold with success to German riders—to find a firm like this going backwards and losing ground. Over £5,000 lost on the year's trade in Paris; over £2,000 lost in the United States, and over £5,000 dropped in Manchester—such was the desperate fortune of the company for last year. The London and Coventry branches, it is true, showed more encouraging results, some £8,000 profit being made, but the company will have to excite public imagination during the coming season to recover its once prosperous position. This is evidently in contemplation, as the company is now showing a new model E Swift safety light roadster with detachable Dunlop tires, weighing, with saddle and pedals, only 28 pounds. This appears a perfect and graceful mount, which ought to win approval when shown at the palace a fortnight hence, with the company's good-looking f. d. safety and other novelties.

## HUMBER &amp; CO.'S PLANS.

After a long period of stagnation there are, at last, several good things to be seen in the course of a stroll along the Viaduct. Of Humbers I know nothing. As for its London depot it is a temple of mystery, now that M. D. Rucker is no more to be seen there. A small boy, who knows nothing about the affairs of the great house, and cannot comprehend the curiosity of the pressman, repels all intruders. After going in a dozen times, metaphorically speaking, with bared feet and uncovered head, the pressman, whose intentions are generous, accepts the inevitable and gives up prying into a shrine where his presence is so coldly received. From Mr. Renouf, whom I met recently en route to Brighton, I extracted a precious piece of information. Humber & Co. will resolutely frown upon the f. d. safety in '93. When the little makers have exhausted all their ingenuity in chopping and changing gears, altering the frame and varying the size of the wheels—when the public insist in loud and forcible tones on having the f. d., and nothing but the f. d., then, and not till then, will the great firm bring forth certain perfections which it holds concealed at present, and cast upon the market a preliminary sample of a few thousand wheels of this pattern. And until I go to the Palace this all I know.

## NEW RAGLAN WHEELS.

Taylor, Cooper & Bednell, the Raglan makers, have at last brought themselves to produce a Crypto geared f. d. safety, which they will half display from beneath a bushel at the Palace. They still flinch from going to the ruinous risk of

exposing a f. d. mount in London. Even if someone didn't buy it, people would insist on putting questions, enough to disgust any firm with fine safeties on hand, like wall-flowers at a dance. And the 1893 Raglans are fine machines. Twenty-nine pounds is the weight of the road racer, with its new fork crown, roadster Dunlop tires, and handle-bar of large section tube.

Times have altered with the good Rover firm, and J. K. Starley, who believes a front driver can't be steered—an assertion which deserves to be nailed to the counter, like a pewter shilling—has deserted his mission in life to make cycles for riders of elephantine weight, and not content with surprising and delighting the world with a 30-pound Rover, is now making us rub our eyes and pinch ourselves by displaying a machine weighing 27 1-2 pounds—yes, full size—with roadster tires, saddle, pedals and, positively, a lamp bracket included. It looks as lovely as a rear-driver can, and I hope I may be privi-

then to a trader in cycle accessories, and now has assumed the status of a cycle agent. At the Palace Gamage will show a dozen safeties—one class being a popular roadster, with any tires to order, at \$69 cash, called the Hixem, and a second pattern, a best quality road racer safety, called the Gamage, at \$82 cash. From what I have seen of the samples, I think these wheels will find favor with the public, and the great cutter of prices will score once more.

## BIG BUSINESS IN CRYPTOS.

The Crypto Cycle Company sent away a large consignment of front drivers to the States just before Christmas and is very busily engaged in distributing the new type all over the country. Mr. Boothroyd explained to me recently the double gear, a swollen version, in appearance, of the familiar pattern. It seems internally it is an entirely different gear to that on the geared ordinaries.

It is called "double" because it enables a 30-inch wheel to be geared to 60 inches. It can also be arranged to gear up 2 1-10. For the present it is not being pushed, but for the extremely low sizes mentioned its ability will be apparent. Mr. Boothroyd is engaged in a most good humored paper controversy with J. K. Starley—who said a f. d. would

THE 1893 SWIFT.

leged to try one later on. But what will the Rover riders say who have pedaled their half-hundred pounds of metal about for years, when they discover the giant strides their favorite form has taken? Is the horrid little scorchers such a power in the land after all? Why not split the difference and be happy?

## MORE NEW WHEELS.

The Premier Cycle Company has attracted much attention with its new safety of helical tubing, which is sure to form a big feature at the Palace. I have not seen or heard of a machine on the road yet, but this will come in due course, doubtless.

Marriott & Cooper, of course, have something new in the form of a good-looking light roadster at 28 pounds. At the Palace they will show thirty machines, including the M. & C. front driver with the latest improvements, chief amongst which is a narrowed tread.

The New Howe company, notwithstanding that it was at the Stanley show will be found at the Palace, with its G'ordinary—the handsome f. d. recently introduced, and many fine examples of its latest safeties.

The London agency for the Elsworths—those beautiful wheels from the north of England—has been taken by A. W. Gamage, who has developed rapidly from a mere hosier, first to a cyclists' outfitter,

not steer easily—and the Crypto side doesn't look like coming off worst. A good season is anticipated for the Boothroyd tire, which seems to have quite stopped puncturing.

## SMALL NOTES.

It is rumored that next autumn the National show will be arranged to clash with the Stanley, but it is waste of good ink to discuss the matter. Mr. Sturme, of the *Cyclist* has been recommending iron mongers to become cycle agents, but the cycle trade is a little beyond the grasp of an iron monger nowadays, I think. The Preston-Davies tires have been reduced to the Dunlop standard. This will increase the sale of any already popular tire. The Raleigh Cycle Company will build front drivers this year. I have lately tried a new spring frame safety, the Shewdra, which Mr. Starley has also been testing. It possesses peculiar merit and more will be heard of it I am convinced. STANLEY.

## From Another Source.

LONDON, Jan. 11.—The dead season seems to have at last come to an end, and the trade generally is waking up, although a certain sense of depression has been caused by the publication of the balance sheet of Coventry Machinists' Company, showing a loss on the past year of over £5,000. The general

## AS A SUPPLEMENT

To former advertisement, we desire to state that the increase in demand for our Cement has been geometrical. In 1890 we sold 97,000 lbs. In 1892 more than 250,000 lbs. have left our factory, and has been consumed in the United States.

## Four Barrels of Flour, Weighing 1,000 Pounds,

Was placed on one of our unfinished wheels at the show  
JUST TO SHOW THEIR STRENGTH. . . .

Excellency, Beautiful Lines and Every Guarantee goes with our wheels. We make the Best Sellers of any medium grade wheels manufactured. Write us.

THE CRAWFORD MFG. CO., HAGERSTOWN, MD.

meeting of the shareholders took place Dec. 31 at Coventry, when some very straight talking occurred. But the general feeling of the meeting was that the directors in plainly stating the position of affairs, had done the wisest possible thing, and that they were to be commended for writing down the stock in hand at its lowest value, instead of bolstering up the business on a false basis. The causes of the year's loss were made obvious to all, and it was decided to take the necessary steps to remedy this state of things in the future. At the end of the meeting the directors were re-elected and the belief was expressed that the worst had been got over and that an early improvement might be anticipated. Personally I feel confident that the right thing has been done, and knowing the energy and business capacity of the company, Messrs. Singer and Turner and their right-hand man, H. J. Leake, I certainly prefer its prospects to those of several other firms which have this year made a show of paying a dividend, but are known to be over capitalized and rotten at the core.

## THE NATIONAL SHOW.

There is no doubt now that the national show will be a big success. Entries for over 1,700 machines have been secured by the committee, which, owing to lack of space, has had to decline something like three hundred of them. Excursions are being run by the railways from all parts, and her royal highness the Duchess of Teck has given her patronage to the exhibition. Advantage is to be taken of the gathering to hold a general meeting of members of the trade to discuss points of interest and promote any ideas or schemes which may be considered to be for the general welfare. It has been rumored that the next national show would be held concurrently with the Stanley show in November next, but this is not correct. I have the very best authority for stating that it will take place early in January, 1894, and that it will be held, as now, at the Crystal Palace. This was practically decided at a meeting of the committee held last night at Coventry.

## THE LADIES WILL MEET.

Another meeting which is to be held at the Crystal Palace during the show is that of the Lady Cyclists' Association, which, under the guidance of "Violet Lorne" (otherwise Miss Lillias Campbell Davidson, a lady journalist who contributes to quite a number of papers), and the fostering care of *Bicycling News*, is prospering quietly and steadily, becoming a most concrete and important organization. *Bicycling News*, by the way, has just completed its first year under the editorship of Ernest Godbold. During the twelve months it has progressed steadily in influence and literary excellence, and now holds an unassailed position as one of the most interesting of all the papers published on this side of the water. This reminds me that George Gatehouse, the ex-25-mile tricycle champion, who visited America in '86 in company with Percy Farnival, is now in the employ of Liffe & Son, the Coventry publishers and printers. Gatehouse is still the good looking fellow he used to be, but is now married and has settled down considerably.

## W. E. LEE ABROAD.

When in Coventry this week I had the pleasure of meeting W. E. Lee, of Devany, Hopkins & Co., San Francisco, who is over here making arrangements for this year's trade. One of his principal lines will be the Swift. Mr. Lee, who is at present staying with relatives in a picturesque part of Northamptonshire, remains in England until after the conclusion of the national cycle show, and

expects to reach 'Frisco again in the middle of February.

## SMALL TALK OF THE SHOW.

*Many of the Manufacturers Received Numerous Good Orders.*

Simon C. Levy, of Philadelphia, is meeting with success with his Cycle clock and speed calculator, and the handy little time-o'-day attachment will be seen strapped behind the head of many wheels next season.

J. B. and W. E. McCune occupied a lofty and unique position, inasmuch as they had their machines on exhibition, but refused to sell any. The reason is too well known—all the '93 output was sold some two months ago. This is of itself a flattering testimonial to a young but popular firm.

The inquiries for Mr. Whitten, of Whitten & Godding, were many. Mr. Godding, who was in charge, laid the many inquiries at the door of the REFEREE, which erred in stating that Mr. Whitten would be present. Mr. Godding did well as presiding genius of the show, and Mr. Whitten held Providence down.

C. W. Mallory represented the New Departure Bell Company, and did what Mr. Rockwell, of Bristol, considers a nice business. The New Departure people seem to be nearly at the head of the procession in the bell business.

There were many anxious enquiries for "Pop" Worden the early days of the show, and on the Thursday following, when G. W. did arrive, his stand was well patronized by friends and inspectors who wished to see the Remingtons for '93, in which Worden feels a pride.

Alfred Oliver, as an outfitter of Philadelphia, will make a strong bid for the patronage of cyclists, and showed a splendid lot of goods at the show.

L. Barrow, of Guest & Barrow, Birmingham, had one of the interesting exhibits, and the model M ladies' wheel commanded more than passing attention.

The friends of "Abe" Powell will be pleased to learn that the old-time racer of Philadelphia will in future manage the business of Lloyd & Co., of the Quaker city, who will make a wheel and handle Aew Howe.

J. E. Powers, of Boston, made his usual fine display of medals and badges, and his souvenir of the show was a work of art in itself.

Arthur Flavell, of Loyd, Read & Co., Coventry, although one of the late arrivals at the show, through more custom red tape, made a creditable display of Overstone wheels. Stephen Golder and Amos Shirley looked after new Howe interests.

One of the sights of the show was Crawford's four barrels of flour, weighing 700 pounds, which were piled on top of an unfinished Crawford bicycle. This was complete testimony as to the strength of the Crawford machines which are made in Hagerstown, Md., and are excellent samples of the good work turned out by Mr. Crawford the past three years. In finish and style the Crawford wheels are first-class, and they are ready selling, as Scherling, Daly & Gales, New York, have proved the past two years. Mr. Crawford would like to hear from jobbers and agents.

H. D. Reiersen, representing the Buckeye Cycle Company, of Cincinnati, states that his firm is looming up as the heaviest jobber in Ohio just now. Mr. Emerson, together with C. P. Warner, manager of the Baltimore house, was east recently.

Wilcox & Howe, Birmingham, risked pneumonia and other dread diseases by seeing the show through, and now writes

that their drop-forging connections have been considerably widened and strengthened, besides, Mr. Howe has advanced his position as orator of the Naugatuck valley.

Pardon W. Tillinghast made a unique claim at Philadelphia, that he had the handsomest sign in the building. The Tillinghast people got mixed up in the official catalogue and had to hustle for a stand at the last minute, but their tires bore inspection as usual.

The Grant Anti-Friction Ball Company of Fitchburg, Mass., reports a splendid business resulting from the Philadelphia show—its sales amounting to 2,000,000 balls from their exhibit.

D. Pettitt, manager of the Common Sense Bicycle Company, of Philadelphia, is meeting with much success with his diamond steel frame and hickory wheel cycles. C. C. Cope, the expert amateur track rider, is doing well for the firm on the road.

Charles Sulzner, of Philadelphia, was the only one to make a complete exhibit of his Faultless trouser guards Gem stocking fastener.

## RECENT ENGLISH INVENTIONS.

## New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Dec. 7, give notice in the prescribed form of such opposition.]

## AN AIR-PRESSURE GAUGE.

No. 17,196. J. M. Smith's "Improvements relating to pneumatic tire inflators for indicating or registering the pressure of air delivered." Sept. 27, 1892.—The title of this invention indicates its object, and the construction of the apparatus is illustrated by the accompanying drawings. The

pressure chamber (B) slides within the inflator tube (A) and the bottom of it (C) forms the piston. The inlet valve (D) is screwed into the piston (C), secures the piston washer, and projects into the pressure tube (B). The inlet air holes, to prevent return, are covered by a flexible material. The bracket (N) is designed to bear upon the tire and so remove the pressure from the fingers when inflating. To indicate the pressure of air a soft, cup-shaped washer (G) is fixed to the piston (H) by a screw (I), the said screw being perforated for the air to pass through. Mounted upon the piston (H) is the continuation tube (J) carrying the graduated, numbered scale (K). The screw (L) connects the pressure register with the tire valve by means of the usual flexible rubber tube. To provide the proper amount of resistance to the piston (H) a spiral spring (M) is used, the said spring working in the space between the outside of tube (J) and the inside of pressure tube (B) but pressing upon the piston (H) at one end and the inside of the cap (F) at the other. Supposing the piston (H) to have a surface equivalent to one square inch, the spring (M) should be capable of a variable pressure ranging from 0 to 40 pounds when half closed and to 80 pounds when fully closed. Air having been forced through the valve (D) into the tube (B) and then through the tube (J) into the tire, all being under an equal pressure of 40 pounds per square inch when tested by a standard gauge, it is plain there will be a force of 40 pounds exerted against the bottom of the piston (H). This will cause it to slide along the pressure tube (B) closing the spring (M) until it exercises an equal force of 40 pounds in opposition to the air pressure; the piston (H) automatically finds this position and rests. It is arranged that 40 pounds on the numbered scale (K) shall then appear at the outside of the cap (F) and a higher or lower pressure would be registered in a similar way. The apparatus may be adapted for use with existing inflators and various other modifications made.

## ANOTHER COMBINED FRAME AND INFLATOR.

No. 18,276. E. D. Loane, Jr.'s "New or improved combined bicycle and air pump." Oct. 12, 1892.—This invention relates especially to the combination with a bicycle frame, or some portion of the bicycle, of an air pump connected therewith, or formed of a part thereof, arranged to inflate the pneumatic tires of the wheels of the bicycle

wherewith the invention is employed, the same being so arranged as to be out of the way, and readily used with one hand, leaving the other hand of the operator free, thus avoiding the necessity of holding the pump while being employed, as has usually been the practice. The pump is described as being placeable within any of the tubular portions of the frame, or in the saddle or saddle support and is illustrated as being placed in the head tube, lower backbone, rear stays, upper backfork and arm of the L pin. If the interior of any of the tubes be not sufficiently smooth to constitute the pump barrel they may be bored out or a lining inserted.

## AN INFLATED SADDLE.

No. 18,122. G. S. Karr's "Saddle for velocipedes." Oct. 11, 1892.—The object of this invention is to construct a cycle saddle which will readily adapt itself to the form of the rider and will provide a firm, comfortable and convenient seat. The saddle consists of an air-tight receptacle (1) in the form of a pear or other convenient shape. This receptacle is composed of two pieces of air-tight material connected together and without openings except that which is closed by the valve (3). The valve consists of a rubber tube (4) forming part of the receptacle (1) through the passage of which passes the valve stem (5). Connected to the outer end of the rubber tube (4) is a collar (8). Fitted to the screw-threaded portion of the outer end of the valve stem (5) is a lock nut (9). The saddle frame (10) consists of a curved bar of metal of sufficient rigidity to sustain the weight of the rider when upon the saddle. Each horn (10a) of the saddle (10) is enlarged to serve as a rest for the receptacle (1) and is curved to follow the curvature of the said air receptacle when inflated. The air receptacle is enclosed in an outer cover of leather or other suitable material and is bolted to the enlarged horns (10a) of the frame (10) by bolts (15) and washers and plates. The back frame is in three pieces, the extremities being hinged to the centre so that they may move in towards each other to a limited distance when the weight is upon the saddle.

## Mr. William Bowden.

He is not as well known to Americans as he is to the people of Great Britain and Ireland, but he will be in a little while, depend upon it. William Bowden will receive the impress of popular approval from thousands he will meet in this country during the next few months

Five years ago the young man acted as honorary secretary of the Irish Cyclists' Association, of Dublin, and did much in making the Dublin tournament of the American team the mammoth success it was. "Welcome to Ireland, my boy," was his greeting as the men stepped off one of those infernal Irish box cars at Dublin. The other day when the REFEREE's eastern office was cawowed with cash prize cranks, tradesmen and sundry soiled amateurs, in walked a man who would be remarked anywhere, and the five-year-ago greeting was duly returned. Bowden is now manager of the Seddon Tire Company. Of course, there is only one tire, according to this enthusiast, and its name is Seddon. Well, this is what he is paid to say—and his success and the price of Seddon stock makes that part of the public which speculates believe that Seddon is a good wind instrument to conjure with. Mr. Bowden plunged into tire talk presently and unloaded a cart-load of proof; also a gorgeous catalogue which shows a Seddon tired sulky, said to be the first wind-shod

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

## THE WHITWORTH WORKS CYCLE CO.,

P. O. Box 2225, NEW YORK, or - BIRMINGHAM, ENG.

# SINGER CYCLES.

BOSTON, MASS., Dec. 31, 1892.

MESSRS. SINGER & CO.,

BOSTON, MASS.

GENTLEMEN:—My Special Modele de Luxe has been all, and more than I had ventured to hope As your books will show, I purchased it September 2, and since that time have ridden it about 1,700 miles. It tips the scales at 29 lbs., and I have yet to see the wheel, that to my taste, approaches it in appearance. So far as I discover, it is as stiff and strong in every way as the 33 lb. Singer Modele de Luxe, which I rode with perfect satisfaction during the fore part of the season, until the lighter edition (The Special) was put on the market. Both my safeties were fitted with Heale pneumatic tires, and when I say that no repairs were put upon my wheels the whole season through, I mean that no repairs were put upon either machines or tires. Not many riders, whose mileage for the season has been nearly 4,600 miles can honestly say as much as this, and I am glad to express my appreciation of my happy lot by making this statement of the facts, which you are at liberty to use in any way you desire.

Yours truly, JAMES KELTIE, Captain Roxbury Bicycle Club.

Reliable Agents wanted in the West, including Chicago. Send for our Catalogue.

## SINGER & CO.,

6 AND 8 BERKELEY STREET,  
AND 2 WARREN AVE.,  
BOSTON, MASS.

thing of its kind seen on the other side. Manufacturers will find Mr. Bowden a keen business man. We believe the Seddon tire will find a firm footing. Mr. Bowden tells us that it is among the possibilities that this firm will open a factory here, and that not only the cycle trade but the sulky trade will be looked after. The REFEREE'S English correspondent says of this tire: "Seddon's tire was the first of the detachable or wired-on tires to be put to any practical use, and it is a thoroughly good tire, both for road and path. Not only is it fast, but it has one great advantage—it is absolutely free from side slip. The company has just started a large factory at Openshaw, a suburb of Manchester, and is fully prepared for the big trade which it should undoubtedly have."

#### Heath's New Pump.

S. F. Heath of Minneapolis, was in Chicago this week showing a strong and effective shop pump, one that may be attached to any valve and without the aid of any couplings, which usually have a habit of becoming lost. The tube which connects the pump and valve is about a half-inch in diameter, and is placed entirely over the valve. A clamp is so arranged that it presses the tube against the valve on all sides and leaves no chance for the air to escape. It works to perfection on M. & W. and Dunlap valves.

#### Change of Location.

The James Cycle Importing Company has outgrown its modest quarters at 113 Adams street, and is now occupying rooms 980 to 990 Caxton building, 334 Dearborn street. A visit to this new home revealed a most attractive salesroom. The steady advance made by this conservative company, which, by the way, has just been incorporated, means permanency and success. It is showing its first consignment of '93 wheels, and will be glad to welcome callers. A table supplied with writing materials and copies of all the cycling papers expresses a genuine sort of hospitality. The newly incorporated concern has a capital stock of \$10,000, divided, between Messrs. Bridger and Holmes. Mr. Bridger will remain in actual charge, and will, no doubt, make the James, B. & A. and South Road wheels more popular than ever.

#### Improving Old Dunlops.

A Manchester, Eng., man named W. A. Foss, has hit upon a scheme whereby the old Dunlop tire may be easily repaired. He arranges old tires so they may be laced for a short distance where the ends of the inner tube join. By simply unlacing, the tube may be removed and repaired, no solution being necessary except for making the patch where the puncture is located.

#### Makes the Senator.

The United States Cycle Manufacturing Company, of Philadelphia, from its title might be taken for a large concern, but Manager Hill claims only a thousand output for '93. Recently a REFEREE correspondent inspected the wheels built by this company, which arose from the Ajax concern, that went under through different causes. The Quaker City people are making wheels chiefly for local

trade, but will be ready to extend their business if requirements warrant it. The company makes two grades, the best of which is the Senator, which lists at \$135, and is of the Humber pattern, and which the company claims is high grade in every particular.

#### Books and Pamphlets Received.

The REFEREE acknowledges the receipt of the following publications:

Wilson, Myers & Co., 55 Liberty street, New York, catalogue. Very handsome in design, and illustrations and splendidly printed, the cover page being especially worthy of note. Shows Liberty full roadster, 40 pounds; light roadster, 35 pounds; ladies', 33 and 31 pounds; road scorchers, 29 pounds; racer, 22 1/2 pounds.

Triumph Cycle Company, Coventry, Eng., catalogue.—Shows twelve styles of Triumph cycles, including five weights of the Chicago Triumph, a neat straight frame ladies' wheel, and a geared ordinary, the Mustang triumph.

Winton Bicycle Company, Cleveland, Ohio, catalogue.—Shows model A., 40 pounds; B, 30 pounds; C, racer, 20 pounds; D, ladies', 38 pounds; tandem, 48 pounds; triplet, 75 pounds.

Overman Wheel Company, Chicopee Falls, Mass., catalogue.—As usual a work of art, particularly the cover. Shows model E, 35 pounds; Flyer, 23 pounds; B, for heavy weights; C, same as B, but having spring forks; Victoria, ladies', 38 pounds; sections of Victor pneumatic and cushion tires and parts and sundries.

Warman & Hazelwood, Chicago and Coventry, catalogue.—Shows Coventry Cross, No. 2, \$145, f. o. b., Chicago; No. 12, \$150; No. 13, racer, 26 pounds, \$165; No. 14, 36 pounds, \$155; No. 15, road racer, 32 pounds, \$155; No. 0, ladies', 37 pounds, \$155 (all the above prices are with 1893 Dunlop tires, \$5 less with M. & W. tires); No. 17, geared ordinary, 37 pounds, M. & W. tires, \$160.

W. H. Dick, Dansville, N. Y., Vol. 1, No. 1, "Cycling Young America," a bi-monthly.

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

489,975, tire for bicycle wheels; John J. McCormish, Providence, R. I.; filed Sept. 29, 1892.

490,035, manufacture of pneumatic tires; filed W. Morgan and Rufus Wright, Chicago, Ill.; filed Oct. 24, 1892.

490,097, bicycle-seat spring; Henry Bergfels, Newark, N. J.; filed July 27, 1892.

490,239, bicycle canopy; Henry Hohenstein and Benjamin J. Apple, Savannah, Ga.; filed Sept. 13, 1892.

490,240, sleigh attachment for bicycles; William H. Bendure and Scott Tilbery, Fort Wayne, Ind., assignors of one-third to John H. Hartman, same place; filed Oct. 17, 1892.

490,252, bicycle; Anthony D. Jenkins, Philadelphia, Pa.; filed May 11, 1892.

Reissue 11,301, parcel-carrier for bicycles; Maurice E. Blood, Kalamazoo, Mich., assignor to Mary L. Blood, same place; filed Oct. 22, 1891.

#### The Neversink.

The Metropolitan Cycle Company, of Reading, Pa., showed its Neversink cycle—a peculiar name, by the way—at the show. The frame of the machine caused much comment. The Metropolitan people say they are greatly encouraged by the many orders that have been received for their new idea in frames. The company claims that since the long steering head has been made, true diamonds are not shown in the design of frames, and that with the long head wheel the head has been strengthened at the expense of the frame. The Neversink, it claims, is so arranged as to form a true diamond, and thus secure the maximum strength in the material used in the frames.

#### English Trade Jottings.

While the trade abroad has had a discouraging outlook, the English papers say that prospects are excellent.

In an apparently boasting manner the Wheeler remarks that if the Coventry Machinists' Company had only advertised in the Wheeler it would have been enabled to declare a dividend instead of suffering loss during the year just ended.

It has been said that the new Dunlop tire was given to creeping, but an

Englishman has ridden a set 300 miles, and could not discover that either tire had moved a particle.

#### Lamson's Excellent Line.

C. H. Lamson, Portland, Me., closed some important deals at Philadelphia for his Boss camera carrier, Tourist luggage carrier, and his new carriers for safety bicycles. Lamson's luggage carriers hold a deserved and prominent

position in the cycle world, and agents can sell Lamson's goods at all times. Mr. Lamson is a careful business man, and his old-time enthusiasm burns more brightly than ever.

#### Lost About \$300.

The Associated Cycling Clubs of Philadelphia lost about \$300 on the recent show, and lays the blame on the weather clerk. The attendance, though larger than that of previous years, was not up to expectations. Chairman Hare says some of the expenses could have been cut down, but the association thought it best to run things handsomely. The association has decided to give a show next year upon a much larger scale than ever.

#### General Trade Jottings.

W. A. Rhodes is on the road for the Monarch Cycle Company.

Bicycles are now made in Russia.

Gear cases are now being made of aluminum.

Mr. Bridger, of the James Cycle Importing Company, left Saturday for England to arrange for large and early shipments of the James.

In view of the stories now afloat as to the salaries offered salesmen, it is not to be wondered at that the public believes the prices of bicycles must come down!

The Brandenburg Manufacturing Company states that Feb. 1 is the date set for the delivery of pedals at the rate of seventy-five pairs per day, not immediately, as published last week.

Stephen Golder has closed a deal with the Schulenberg Cycle Company, of Detroit, for the state of Ohio for New Howes. He received a large order. This company also handles the state of Michigan for New Howes.

The REFEREE and all latest cycling papers, periodicals and hand books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

The Eclipse Bicycle Company writes us that it is pushing out wheels as fast as extra and night work can accomplish it, and that anyone who desires to handle must be lively in writing orders. Manesman tubing, which is pushing its way rapidly in the United States, is being used in the Eclipse, and all other parts are of equal calibre, so that the house believes its wheel the equal of any, though listed at only \$135. Territory is being taken up rapidly.

#### Raymond's Sharp Answer.

The racing board's investigation has brought out some queer incidents. When C. W. Davis had been the recipient of some three or four letters of inquiry from Mr. Raymond, as to this and that and the other thing, he felt that he

had answered about all he could, and replying to the last, wrote, in effect, this: "If you have any more questions, make them short, and enclose return postage."

Mr. Raymond might have taken this good-naturedly or otherwise, judging by his answer, which was sarcastic, to say the least:

"Dear Sir:—Pardon me. [Here two stamps were enclosed]. Yours truly, "H. E. RAYMOND."

Davis thinks Mr. Raymond came out ahead by long odds.

#### Famous County Management.

John A. C. Wright, secretary of the Moma County, N. Y., league for good roads, has issued the following circular to the residents of the county:

Having somewhat taken upon myself formation, as far as possible, of county organizations throughout the state, locally representing the national league, I take the liberty of enclosing suggestions which occur to me.

The national league does not advocate any special plan, as it does not wish to repel any friend of good roads. Its present purpose is solely to increase the road reform sentiment. However, as the state and county leagues may act independently in regard to road improvement, I include in my suggestions a scheme of state and county action. I believe that the county system is the best solution of the road problem, and that it is clearly demonstrated that under county management good roads may be built and maintained at the present outlay wasted upon bad roads (see Governor Flower's message) or at a somewhat increased cost, which will be fully compensated for in saving of wear and time, and in easier transportation and communication.

As state taxation is more indirect and is less felt locally, I think an effort should be made to have the "Richardson bill" passed, state action thus being easier to accomplish and more comprehensive than contemporaneous local action in the counties; then when the good road is in view, county action can be pushed and will be the natural sequence of state action; and should it be unwise to continue state management, the roads so built could be turned over to the county board when established.

#### Detroit Wheelmen Reorganized.

Last Wednesday evening at the club house of the Detroit Wheelmen a general meeting was held to consider recent club and board actions as regards the disbanding of the club. The former meeting was declared unconstitutional, as the required five days' notice had not been given. The action of the former meeting having been set aside, Mr. Smith, of luggage carrier fame, who occupied the chair, informed the club of a recent board meeting at which Messrs. Griffith, Huber, Bessler and Coquard had tendered their resignations and the same had been accepted. It was then moved to elect officers for the ensuing year, and B. J. Holcomb, a member since the days of the g. o. o., was made president; Clarence Smith, vice-president; Mark Gardner, secretary, and Edward Hines, treasurer. The important office of captain was given to W. O. Rands, under whose guidance it is hoped to bring out some racing talent, and also revive interest in road riding. E. S. Anderson, W. E. Sewell, George Thorne, J. T. Holmes and Bert Allen were elected directors. A committee was appointed to confer with the business men's club, with a view to consolidation. Taken all in all, the new officers think the Detroit Wheelmen are in better than ever before.

**BICYCLE BEARINGS OF TOOL**  
Steel. Cones and Bearings made of best tool steel insure smooth running and little wear. We make Bicycle Hubs, Cones, Cups, Ball Bearings, Axles, Nuts, Steps, Nipples. Also, Bicycle Roller Chain with case-hardened roll; Humber-pattern solid link Chain, Coasters, Lamp Brackets and all kinds of machine screws, etc. Send sample or accurate drawings of parts for estimates. We solicit your business and have the best facilities for doing your work. THE NEW BRITAIN HARDWARE MANUFACTURING CO., New Britain, Conn. 9-cow

HOW M. & W. TIRES ARE MADE.

Process of the Manufacture from the Beginning to the End.

It is doubtful if many even in the trade know exactly how pneumatic tires are made. Of course they know that the rubber is moulded, etc., but the details are such that few have had the opportunity of learning them. Not all tires are made alike, but a description of the process of making Morgan & Wright tires, taken from the patent office reports, will serve to demonstrate the general method employed. In these reports Morgan & Wright say:

In carrying out our invention we first prepare or arrange upon an annular mandrel having a removable section the material or layers we employ to construct the tubular sheath, and then place the same within a mold and subject it to com-

secondly, it would be necessary to lace the sheath along its entire seating portion, thereby materially adding to the labor involved and cost of the article produced, and finally, such arrangement would increase the weight of the tire by reason of

the weight of the lacing material and the weight of an annular closing strip which it would be necessary to place between the air tube and the entire length of a split extending along the entire length of the seating portion of the tire. By our method, however, we can make a short split, remove the mandrel through the same, and then close the slit by a most limited extent of lacing and an exceedingly short inner closing or protecting strip.

In the accompanying drawings, which illustrate the prominent steps we employ in producing pneumatic tires in accordance with our invention, figure 1 represents the annular mandrel having a removable section; figure 2 illustrates a layer of canvas applied upon the mandrel; figure 3 represents a layer of rubber applied upon said layer of canvas, so as to complete the sheath so far as necessary for molding; figure 4 is a plan of one of the mold sections; figure 5 is a section taken transversely through the mold containing the sheath and mandrel; figure 6 represents the sheath as it comes from the mold; figure 7 is a section taken transversely through the sheath,

and illustrates the formation of a short split therein; figure 8 illustrates the removal of the removable mandrel section from the sheath; figure 9 illustrates the way in which the sheath is stripped from the mandrel after the removal of its said section; figure 10 shows the mandrel with its removable section removed; figure 11 shows on a large scale an end of the removable mandrel section; figure 12 is a section through the sheath with the air tube arranged therein and in a deflated condition; figure 13 is a section through the tire on a line *u-u*; figure 14, looking upwardly so as to show the lacing; figure 15 represents the completed tire.

The annular mandrel (A) is made with a removable section (B), which can be temporarily locked or held in place in any suitable way, as, for example, by dovetail or tongue and groove joints, as illustrated in figures 1, 10 and 11.

In constructing a pneumatic tire we first take the mandrel with its removable section in place, as in figure 1, and apply upon said mandrel a

layer of canvas (2) as in figure 2. This can be rapidly and easily done by applying a strip of canvas which is cut bias, so that it can be applied and smoothed down upon the mandrel without wrinkling. We then apply upon the layer of canvas thus placed upon the mandrel a strip 3 (figure 3) of rubber, and thereby form a tubular sheath structure ready for molding and vulcanization. The tubular sheath structure thus applied upon the mandrel is then placed within a mold (B) and subjected to pressure and vulcanization. The annular grooves in the mold sections (4) can be formed so that when the sheath structure is subjected to suitable pressure the sheath (C) will be thickened along its seating portion as at 5, so as to adapt it to certain kinds of wheel-rims, it being observed that the pressure en-

LOW

BIRMINGHAM, ENG.

plied will properly distribute the rubber for such purpose. For other wheel rims, however, this extra thickness can be omitted. The thin rubber web or flanges (6) shown in figures 6 and 7, are simply incident to and illustrative of a slight leak

which takes place between the mold faces as an incident to the heavy pressure employed. These flanges are, however, readily pared off.

The sheath (C) as it comes from the mold, is an annular, seamless tubular structure, and owing to the mold pressure and the presence of an internally arranged mandrel, the tread portion of the tire will be of uniform thickness, well compacted, and desirably made comparatively thin. The sheath is then split for a short distance along its seating portion at a point over the removable mandrel section, as at 7 (figure 7), the split being of sufficient length to permit the removal of the said detachable mandrel section. As a simple

way of removing the removable or detachable mandrel section, the sheath can be placed against an abutment (D) and the mandrel sprung slightly open or apart at its joint by means of a lever (E) whereby its detachable section can be removed, as illustrated in figure 8. One end of the mandrel is then gripped by a vise or clamp (F) (figure 9) and the sheath then stripped from the mandrel. After thus removing the sheath from the mandrel, the edge portions of the sheath along its short slit are punctured for lacing, an air tube (G) introduced within the sheath, a short strip of canvas or like material arranged between the air tube and split and the sheath then laced as at 8, or otherwise suitably closed along its short split. The air tube can be easily introduced through the split and drawn through the sheath by what we

may term a threading process, it being our practice to give a string a hitch about one end of the air tube, introduce within the sheath, a weight on the opposite end of the string, turn the sheath so as to cause the weight to traverse the tubular sheath passage or interior until it again reaches the slit, and then draw out the weight end of the

string so as to draw the air tube within the sheath.

From the foregoing it will be seen that we mold an endless and seamless tubular tire sheath or casing upon an annular mandrel, and then remove the sheath or casing from the mandrel without materially affecting or changing the characteristics of the sheath or casing, that is to say, without impairing its integrity as an endless and seamless tube, and that to such end we open the sheath or casing to a limited extent through its seating portion, then break or separate the mandrel adjacent to the opening thus formed,

and then cause the sheath and mandrel to part from one another by way of said opening, which, while forming an outlet for the relative discharge of the mandrel, also provides an inlet for the subsequent admission of an air tube. The split formed as aforesaid is so limited with relation to the length or extent of the annular seating portion of the tire, and bears so small a proportion thereto, that regardless of its presence, the sheath practically remains an endless and seamless tubular structure.

The sheath, molded as herein described upon a mandrel, is also characterized by various features

of decided improvement over "blown tires"—that is to say, tires in which the tubular passage is shaped by the presence of a body of some gaseous fluid or liquid, since with the latter mentioned process it is not practical to render the sheet of uniform thickness and density, and moreover such process is expensive and disadvantageous in various other particulars.

By our process we also produce a tire having an admitted high degree of perfection and of tested merit as a racing tire, and in addition to

such qualities, we are enabled to turn out high grade tires in an exceedingly rapid way, and to

pression and vulcanization, so as to form a seamless annular tubular sheath. We then open or split the sheath to a limited extent along its seating portion, proportioning the length of the split with reference only to the removal of the short mandrel section through this short split in the sheath, and then strip the sheath from the remaining portion of the mandrel.

After this we prepare the edge portion of the sheath along its short split, for lacing, introduce an air tube provided with a suitable valved nipple, place a short closing or reinforcing strip between the air tube and split, and lace the sheath

along said split so as to effectively close the same. By thus forming the sheath upon a mandrel, we are enabled not only to uniformly compact the sheet of rubber involved in its construction, so as to render the same tough and durable, but also to render it of uniform thickness along its tread portion, and hence we can make the tire sheath comparatively thin and light. The lacing up of the short slit involves comparatively little time and expense, and the small quantity of lacing employed will make no appreciable difference in the weight of the tire.

Obviously, if the sheath should be formed upon an annular mandrel of one continuous piece, it would be necessary first to split the sheath along

its entire seating portion, thereby weakening the sheath and increasing the labor of the operator;

materially cheapen the production of the same. While as a matter of course the thickness of the tubular rubber sheet or layer forming the exterior portion of the tire sheath may be varied to suit the use to which the tire is to be put, it is observed that for racing purposes it is desired to make the same as thin as is consistent with strength and durability, so that when the sheath is distended to the limit or proximately the limit, it will by reason of the inclosed elastic cushion

formed by the inflated elastic air tube, have increased activity or resiliency.

Certain features herein embodied, either in the description or drawings or both, and comprising the sheath as an article; the separable mandrel; the formation of the air tube with flattened ends, and the air tube arranged with lapping end portions within the sheath, are not herein claimed, but from the subject matter of the applications filed by us respectively on Oct. 26, 1892, serial No. 450,068; Dec. 24, 1892, serial No. 456,204, and Dec. 24, 1892, serial No. 456,205, for letters patent of the United States.

Now With the "Wheeler."

W. S. Holding, whose portrait is shown herewith, was connected with the *Cycle Record* of Coventry as one of the editors. He has recently severed his connection with that paper to take control of the London office of the *Northern Wheeler*, which is

to be known hereafter as the *Wheeler*, a paper that has certainly jumped into prominence and popularity in a very short space of time. Mr. Holding will be located at 62 Ludgate Hill London, E. C., and will no doubt prove a valuable addition to the *Wheeler's* staff.

Once He Fooled Them.

Zimmerman has gained a great reputation for scooting from the banquet hall when called upon (or when he thinks he is to be) to respond to a toast and from all competitors in the finish of a race. But at the *Sporting Life* banquet he stood his ground. He wanted to scoot, but hardly dared to. He must have been promised that he would not be called on for a speech, else he would never have put in an appearance. Anyhow, Toastmaster Kennedy Child called upon him—as he did others, without warning, and after promising that they should be spared—and Jimmy had only to respond. His speech was short, in fact it takes up but a few lines of space:

Mr. Chairman and Gentlemen—Though I see no chance to "scoot" here, my esteemed friend, Mr. Kuen, has requested I should make a few remarks. I wish to thank you very cordially for your kindness, and to express to you my deep gratitude for your good will and opinion, and to hope that I may ever be deserving of them.

A. W. GUMP & CO. BURNED OUT.

The Dayton, Ohio, Firm Loses \$70,000 By Fire,

The large bicycle house of A. W. Gump & Co., Dayton, O., was completely ruined by fire and water on Wednesday night of last week, and the loss will not fall short of \$70,000, though the insurance amounts to \$44,500 on the stock. No one seems to know the origin of the fire, and it had gained considerable headway before the fire department received the alarm and got to work. It was a cold night, and the firemen had difficult work in saving the buildings on either side of the one occupied by Gump & Co. Be-

sides an immense stock of solids and ordinaries, the firm carried a large line of typewriters and late patterns of wheels, so that the loss will foot up much larger than the amount of insurance.

In the rear of the Gump store was a small building occupied by William Haas, who managed a bicycle repair shop. This building was safe and the damage was considerable. Many Dayton wheelmen who had their wheels there for repair will share in the loss. As soon as Mr. Gump saw his place of business in ashes he secured new quarters, and is now busily engaged on his season's business.

The Dates Differ.

Publishers of lamp-lighting tables may be advised that it is not sufficient to take a table for 1892 and merely alter the date to 1893, says *Bicycling News*. In many instances there is a minute difference in the time, and sometimes it amounts to two minutes. We had one list sent to us in which all the times and the dates of the full moons are wrong throughout.

In Germany any one using a lamp with red side-glasses is fined \$15.

It has the best mud-guards these are constructed of special fabric instead of steel and can be rolled up and carried in the pocket when not in use. Send for catalogue it describes this device + others. The McIntosh Huntington Co. Cleveland, O.

RIDERS WHO HAVE used the "Perfect" Pocket Oiler say that it is without an equal. That they can oil their wheels better and with less trouble than with any other oiler. Cleanest, neatest and best oil can in the world. Price, handsomely nickel-plated, 25 cents each.

HALF  
SIZE.

CUSHMAN & DENISON,  
172 Ninth Ave., N. Y.

"PERFECT" POCKET OILER Holder

Best and most convenient device for carrying an oil can on a bicycle. Thoroughly adjustable and easily attached to any part of the machine; no rattling; handsomely nickel-plated. For sale everywhere. Price, 25c. each.

CUSHMAN & DENISON  
172 9th Ave., - New York.

"PERFECT" Pneumatic Pump Holder

Best and most convenient device for carrying a Pneumatic Pump on a bicycle. Thoroughly adjustable and easily attached to any part of the machine. No rattling. Handsomely nickel-plated. For sale everywhere. Price, 25c. each.

Cushman & Denison,  
172 9th Ave., - New York.

THE RED STAR SOLID ILLUMINANT

FOR BICYCLE LAMPS.

A solid compound that will not leak or spill but stays where it belongs—in the lamp.

If you want a clean lamp, clean clothes and a clean machine, USE IT. There is no use telling you what a nuisance your lamp HAS BEEN. Use our illuminant and forget about the past. Price 50 cents per can.

THE RED STAR CHAIN LUBRICANT will also save you trouble. It is put up in stick form, very handy and convenient. Price 25 cents.

THE RED STAR LUBRICATING OIL is made especially for ball bearings. Price 25 cents per can.

For sale by all dealers. Samples sent on receipt of price. Send us a postal for our little folder.

RED STAR MANUFACTURING CO., 58 Front St., N. Y.  
P. O. Box, 1092.

ONLY First-Class, Reliable Houses use this medium to advertise their goods. If you are contemplating the purchase of a wheel—any grade, or sundries of any kind, you will find it to your advantage to patronize one of these firms.

# MORGAN & WRIGHT PATENT PNEUMATIC TIRES!

## NOTICE!

IN view of the fact that various imitations of the Morgan & Wright pneumatic tire have been placed upon the market, we have to direct the attention of manufacturers, dealers and the public in general to the further fact that there is but one possible way in which the Morgan & Wright tire can be made, and that this mode of manufacture has been fully secured to us by *letters patent of the United States, of January 17, 1893.*

We have spent thousands of dollars and many months' time in perfecting machinery and appliances for the economical manufacturing of these tires. We must insist, therefore, that due and full respect be paid our property rights in this matter, and we hereby further extend to all manufacturers and others contemplating the manufacture of pneumatic tires, a timely and kindly warning to avoid any and all invasion of our rights in the premises.

Very respectfully,

MORGAN & WRIGHT.

## MORGAN & WRIGHT PATENTS.

MORGAN & WRIGHT, the well known Chicago manufacturers of medium-priced, high grade pneumatic tires having an endless outer tube, laced at the valve, received patent rights covering four claims on last Tuesday morning. The most important point covered is the process of moulding instead of blowing the outer tube.

What Morgan & Wright claim as their invention is: (1.) Moulding an endless and seamless tubular tire sheath or casing upon an annular mandrel, and then removing the sheath from the mandrel without materially affecting or changing its characteristics, and to such end, opening the sheath to a limited extent through its seating portion, separating the mandrel at a point adjacent to the opening thus formed, and causing the sheath and mandrel to part from one another by way of this opening in the sheath. (2.) Moulding and *vulcanizing* an endless and seamless tubular tire sheath or casing upon an annular mandrel, and then removing the sheath from the mandrel without materially affecting or *imparing its integrity as an endless and seamless tube*, and to such end, opening the sheath to a limited extent along its seating portion, separating the mandrel at a point adjacent to the opening thus formed, and causing the sheath and mandrel to part from one another by way of this opening in the sheath. (3.) Moulding and vulcanizing an endless and seamless tubular tire sheath or casing upon an annular mandrel, and then completing the tire without materially affecting or impairing the integrity of the sheath as an endless and seamless tube, and to such end, opening the tube to a limited extent along its seating portion, separating the mandrel adjacent to such point, causing the sheath and mandrel to part from one another by way of the opening thus formed, *introducing an air tube within the sheath through this opening, and then closing the latter.* (4.) Moulding and vulcanizing an endless and seamless tire sheath or casing upon an annular mandrel having a detachable section, *splitting the sheath thus formed at a point over the detachable mandrel section and to a limited extent only, removing the detachable mandrel section through the opening formed by a split, and then stripping the sheath from the remaining portion of the mandrel, substantially as and for the purpose described.*—[The Bearings, January 20, 1893.]

## TO RIDERS.

THERE are only two ways by which an endless, seamless, tubular outer covering for pneumatic tires can be made. One is by forming the tubes by hand, joining the ends, filling the tube so made with water, steam air or gas, and thus forcing it out against the walls of an iron mould. This is the way all one tube tires are made. This method requires a high degree of manipulative skill on the part of the workman, while no matter what skill is exercised, the walls of the tire will vary in thickness. The Morgan & Wright patent method consists in making this covering over a steel core, having a removable section. By so doing, we make an outer cover as thick or as thin as desired and of *absolute uniformity* in density and thickness throughout, and thousands of tires made this way do not vary a particle from each other.

Another very important point in our method is, that it is the only way by which a tire can be made at reasonable cost, and hence can be sold at a low price. No wonder we have had imitators heretofore. These former imitators are now infringers upon our rights, and we ask all riders to assist us in sustaining our patents by refusing to buy imitations of our tires—and in thus asking, we offer the following facts as evidence that we are not monopolists:

The Morgan & Wright tire was put upon the market in the spring of '92 at a price from 50 to 300 per cent lower than any other pneumatic tire in the world.

We were the only *makers* in the world who made repairs without charge and faithfully followed our goods through the season.

The Morgan & Wright tires hold 80 per cent of all records on road and path for speed and durability.

We have never printed or said one word in detraction of other tires, and have nothing but good wishes for all who have had ingenuity and enterprise to invent and develop the various patented tires now offered.

If our imitators were offering you better tires or better prices we could not make an appeal to your sense of fair play, but the fact is they are not so doing.

The ingenuity, capital and honest dealing which have been used to bring out, develop and sustain the Morgan & Wright tire will be used to keep it in advance of any mere imitator.

## REMEMBER

ALL tires made by us have our firm name in raised letters on the side of the outer cover. Remember, also, the following quotation from the writings of a great man, viz:—

"NO MERE IMITATOR EVER YET ROSE ABOVE MEDIOCRITY."

## THE IMPORTING TRADE.

Taking into consideration the number of failures among importers of cycles during 1892, it is not surprising to find that among English houses the season is regarded as a disastrous one and that the American market is regarded with grave suspicion. Advices from the old country are to the effect that one or two houses are so disgusted as to have virtually decided to seek no further business in the United States.

This branch of the cycle trade is hedged about with considerable difficulty; in the first place the placing of an agency with a reliable, yet pushing concern; in the second, the dealings with the custom house, and in the third, the shipping of wheels in time to compete with American makers.

There is no doubt, for the proof stares us in the face, that in dealing with American houses some English makers have departed from those conservative lines which are popularly supposed to govern all lines of business in Great Britain. In their home market there are few agents who, with the same capital, could have secured half the credit given to houses in this country. Why this should be perhaps none of them can tell. Some who have suffered for their carelessness can see, plainly enough, when it is all over, how derelict they have been, while others seem never to realize that which almost anyone in the United States could have told them—that the chances were a hundred to one against them at the start.

One of the principal reasons for the poor luck—poor business policy would be better—of some of the English houses, is that the men sent to this country to represent them have been incompetent. This, perhaps, may offend the pride of some of those gentlemen who have visited us, but facts must out. The situation has become serious, and unless the proper remedies are applied other concerns may suffer the fate which has already befallen so many. Incompetent men—often such as have no pecuniary interest in the concerns they represent beyond the salary of the moment—have caused much of the trouble.

But there are others, shrewd enough in their own country and among men with whom they are in the habit of associating, who have gone astray. Their lack of knowledge of the business, customs, and size of this country places them at a

disadvantage. Their lack of acquaintance with American trade makes them dependent, to a very large extent, on hearsay evidence as to the standing and capital of houses with which they transact business. Their natural desire to do business and to do it quickly, so as to be able to return without delay all counts against them. Sometimes, in the cases of small concerns, the expense of the trip is a serious consideration, or, again, business in other directions is needing attention. All these considerations combine to rob the visiting salesman of some of his business sense, to dull his perception, and he falls into the grave error of placing his goods in the hands of men who are not financially sound and sometimes with those who are not inclined to be scrupulously fair in their dealings. All these things have, of course, been gone over time after time in every branch of trade, but they are just as true now as they ever were.

If the importation of wheels is to be carried on with any degree of success greater care must be exercised. It is better, by far, that some interested member make the trip, no matter how valuable his time may be, than that someone not absolutely reliable be entrusted with the mission, and it is better not to accept an order than to accept a risk with it. If American trade is worth seeking at all, it is worth seeking in earnest.

Inexperience with custom house methods has led, and will continue to lead, to endless trouble to both maker and importer. If the maker simply undertakes to ship certain wheels on a certain date, and does it (very few do) he need worry his head no further, provided the importer be a house of good standing. But the shipper who fails to carry out his contract in this respect, immediately places himself at a disadvantage of which the importer may, or may not, take advantage. We have in mind a case which will serve to illustrate our meaning. An American house ordered certain wheels. They were not shipped at the time specified. Business with the consignee was poor and as a result he refused to take the consignment from the custom house. Had business been satisfactory the story would, of course, have been entirely different.

It must not be supposed from this that the man who refuses to take wheels under these circumstances is always to blame. The demand opens up earlier each season. Any man who has been in the business a few years, can remember that it was but recently that the end of May was early enough for new mounts and that April was catalogue month. But to-day stock is in hand from American factories in February. The man with stock is the man who does the business. The man whose imported wheels are cleared at New York or Chicago a month or six weeks after his American competitors have flooded the market, is the man who gets badly left. Small wonder is it that an importer so placed declines to receive the wheels, and small wonder is it if, when he does take them, he finds himself unable to dispose of as many of them as expected, and then selling them at a loss, or perhaps not selling them at all, finds himself unable to meet his obligations.

Against unscrupulous dealers who will not hesitate to take advantage of a legal technicality, or of the slightest departure from the contract on the part of the maker, there is no protection. Cases of this kind are not numerous, perhaps, but they occur at times. Care in the selection of a representative is the only safeguard.

To sum the matter up, while it seems that the sale of English wheels in America is surrounded by serious difficulties,

there is nothing to show that, properly managed, it cannot be made profitable alike to maker and importer. On the contrary, a number of importers have been able to transact a most satisfactory business. But greater care in the selection of agents, greater promptitude in filling orders and greater care in the method of collections are absolutely essential to success.

THE REFEREE apologises to the *Irish Cyclist* for having unintentionally failed to credit the matter in its last issue headed, "Size and Looks Cut no Figure."

WE note with considerable surprise that *Cycling*, of Toronto, publishes a full-page picture of Fournier, the Frenchman, for A. C. Edwards, the English crack.

WE beg to remind the *Wheeler* that several of its recent issues have contained illustrations from the Christmas REFEREE for which no credit has been given.

## A GOOD DINNER.

There is a magic in the word. Man is but an animal at his best, and when he feeds he shows his nature even as the fabled companions of Ulysses showed theirs under the enchantment of Circe. I have known what hunger and thirst meant under the sun of a burning desert, when the swollen tongue cleaves to the roof of the mouth and the eyes sink in the skull till they look like those of a famished wolf; when the sight of food and water, even though the one were coarse and the other foul, drove one delirious with joy. Again I have known what it means to be pampered until the sight of rich wines turned one sick for very loathing. Now, between these two extremes, is a "good dinner" and a hungry man. "Health waits upon a good digestion, and appetite on both." He who sits down to the board hungry needs not fillets of beef and prune sauce, needs not olives and curry to force an appetite.

The most enjoyable meal that I ever remember to have had consisted of three courses: 1. Soggy boiled beans; 2. a chunk of salt pork, commonly known as "sow belly"; 3. corn bread baked in the ashes. But then I had ridden horseback more than 150 miles in two days, with one meal taken a few hours after starting.

What has all this to do with cycling? Well, I will tell you. I took a ten-mile spin over the snow this morning on a bicycle, and have just eaten my dinner. There is nothing remarkable about either of these feats, but for the first time in weeks my dinner tasted good. From the soup to the cheese everything was good, and I shouted aloud, "All hail to the doctor whose medicine is composed of rubber and steel, with plenty of fresh air and enough work added to start the sluggish blood through the veins till the heart pumps like a battering ram against the ribs and the breath comes short and quick, keeping rhythmic time with the humming feet." Oh, the joy of it, when the tense muscles act and react like steel, and the perspiration trickles down the face, and the body grows warm with moisture; when one laughs aloud for very lightness of heart as his wheel springs forward under the thrust of his legs; when all nature is laughing with him.

I have heard it said that the man who scorched and nor thought of nothing but the road in front of his burning wheel. 'Tis false. I have ridden across country at fourteen miles per hour, and every tree and well nigh every corner is printed on my memory. I saw a quail with her young ones scurry through the

weeds of a fence corner, and heard her low chuckle of warning as she gathered her brood about her and disappeared under my very eyes, in that strange way that quails do disappear. I saw a butterfly balance himself on a mullen stalk, and by the same token I saw a moss sparrow grab him and wing away toward her nest in a honeysuckle vine.

I saw a black and yellow gartersnake wriggle into the road, and steered my machine so that I might miss his sinuous and graceful body. I saw the wind come ripping across a field of sea-green oats just heading out, and I heard its rustle as it bent the slender stalks and rubbed them one against the other. I saw the track left in the dust where a terrapin had dragged his slow way athwart the road, and I caught a glimpse of his beady eyes and mottled shell as I tore past. I heard a robin call his mate across an orchard, and I saw a yellow-hammer go whimpering away, and an instant later heard the rat-tat-tat of his bill against an ancient apple tree.

I passed a country school, and mind me well the beaten yard, heard the shout of "pom-pom pull away," caught a glimpse of a shy, white-aproned school-ma'am and a score of sturdy young Americans, bare as to head and feet, clad not in velvets, but comfortable withal and full of life and animal spirits—the future great of this mighty land. I saw a mare and foal at play in a pasture lot, and heard the contented grunt of a giant porker in a muddy pool by the wayside. To my nostrils came the scent of May-weed and dandyion, and the soft perfume of apple blossoms. I heard the mooing of a cow and the plaintive bleat of her imprisoned offspring. As I passed through a deep cutting in a hillside I saw the glint of the sun on the sandstone and noted the deep green of the dewberry vines and the graceful tracery made by the shadow of the palm fern against a gray old rock.

I heard the creak and rattle of an old-fashioned windmill and the purling and spatter of the water running lazily and jerkily from the spout of a rusty iron pump, and I saw the green moss hanging on the side of the water tank, and noted that where the water had overflowed there was a shallow ditch, in the bottom of which were many small gravel stones washed white and clear. I remember an old rhyme that was running in my head, and which kept time to the swish of the tire: "And the knight is dust, and his good sword rust, but his scull is with the saints, we trust."

Why this somewhat gruesome theme haunted me I do not know, but it did. I saw a hawk balance himself over a barn yard, and heard the long-drawn "yawk-k-k" of the fowls as they scattered for safety, and I saw a rabbit hop easily away as I approached. I heard the song and clatter of a mowing machine and the voice of the farmer speaking to his team; and with all these pleasant things I felt the physical comfort that speed always brings, and the joy of life in every fiber. And when my sprint was ended I shouted again, "Hail, steed of steel!"—and ate a good dinner.

PHEBUS.

## Military Cycling in the South.

Major William W. Crane, of New Orleans has prepared and submitted a plan for the organization of a battalion of cyclists divided into two companies, to be attached to the militia of the state of Louisiana, and which, in addition to the ordinary service of cavalry as couriers and detached posts, will combine in its membership a number of telegraph operators and railroad men, which will enable it to present the additional advantages of a telegraph and signal corps.

Holding Down the 'Bulletin' Contract.

Among the callers at the REFEREE eastern office the past week were: George K. Barrett, Marble Cycle Company, Chicago; J. C. Dayton, manager *Sporting Life*, Philadelphia; E. C. Bode, Hill Cycle Company, Chicago; W. Bowden, Seddon Tire Company, England; Fenton S. Fox, Sercombe-Bolte Manufacturing Company; Stephen Golder, New Howe company, Glasgow; W. W. Kenfield, Rochester Cycle Company, Rochester; Mr. Perkins, Bloomfield, N. J.; A. B. Rich, New York; Harry Wheeler and W. F. Murphy, Brooklyn; Alex. Schwalbach and Mr. Quinlan, Gendron Wheel Company; Charles Duryea, Rouse-Duryea Cycle Company, Peoria; Colonel John Cockerill, editor *Morning Advertiser*, New York; Charles Price, Milwaukee; Harry Nevill, J. K. Starley & Company, Coventry; F. Dubois, Allsford & Co., Newark; G. E. Shaw, Shaw Cycle Company, Baltimore; S. T. Clark, Baltimore; G. T. Hall, Hall Novelty Company, Newark, N. J.

God Save the Irish!

Listen to this from R. Jay McCreedy, who has been handled rather cruelly by some American paragraphers, through his having published his picture seven times in one issue of our very readable Milesian contemporary, edited, to be

sure, by a very able bespeckled young Irishman, who knows "what's what" in cycling:

With the exception of the *Sporting Life*, there is no individuality about the American cycling papers, although in other respects they possess admirable features. There is no person or persons on their staffs who, by their writings, seem to become known personally to the readers, and to excite their friendly interest, except Frank A. Egan. Irish cyclists would not put up with them for a moment. It was the individuality of the "Scorcher" that kept the old "Blue 'un" alive so long, and it is to a great extent the individuality of the staff which leads to the present popularity of the *I. C.* All our readers know the Old File and take a kindly interest in him. Rotifer is quite an old friend of theirs, and his feats on the three-wheeler are hailed with delight. Graphis excites their liveliest interest, and they try to locate her paragraphs each week. Will Wagtail and Philander have a warm place in their affections, and R. J. McCreedy has been before them for so many years that even those who have never seen him feel that they know him well. It has always been our desire to make the individuality of our staff strongly defined, so that our readers would look upon them as old friends and not as anonymous and irresponsible writers whose very identity was uncertain. Some of the American papers can not understand this, and have seen fit to attack us in a very uncalculated manner, the subject of their immediate complaint being that we had published our portrait no less than seven times in one issue of the paper. Our readers will chuckle when we tell them that the portrait referred to was contained in the series of caricatures in the comic circular recently issued to the trade, and which included other members of the staff also. We reproduced that circular because it was really funny and calculated to please our readers, and we would not hesitate for one moment publishing portraits of the whole staff if we thought it would have the same effect—our American contemporaries notwithstanding.

Now that's particularly hard on the Charles A. Dana of American cycling journalism, and likewise on a few who

imagine themselves the particular electric lights of the down-trodden profession. To be sure there is not as much individuality about some American editors, as there is about R. Jay, for the simple reason that they are austere men and will allow their pictures to be published only once a year—on some anniversary occasion or such. Thus it is R. Jay has the inside position when the bell rings, as he can have his picture published seven times in one issue, which gives him a great advantage over his competitors for popularity and the individuality business, and it is no wonder he has stamped his individuality on his readers. They can't help themselves—they must bear it! If the cartoon, or seven ages of McCreedy which he published included "other members of the staff," the "staff" is so much alike that it would be hard to separate them. Possibly the salt water had an effect in impressing the particular individuality of the editor on his staff, and the composite nature of the cartoon was therefore misleading to thousands who "know" McCreedy, the rider. Again, "thirdly," as the preacher would say, the many personal "pars" in the *Irish Cyclist* about its editor may have also arrested the attention of his readers, which would tend to further stamp on him that individuality the editor admires. Possibly the Irish people like that sort of thing; Americans don't. Altogether the subject is one for serious meditation—for McCreedy.

#### An Imitation Busst.

There is a "fake" Busst strolling around these United States to a certainty, and all the cycling journals, including the REFEREE, have been favored with a call. Frank Egan was the last, and judging from the "personal" he gave the wanderer, it would seem that

the imitation Busst wanted to borrow. Says "Vintos" in the *Melbourne Standard*:

What does this mean? The Chicago REFEREE just to hand says: "Tom Busst, the Australian racing man, called in a down-town store the other day, and in his very English way remarked, 'I hear you are going for the cash in America shortly. The amateur pots are little use in any country, don't yer know.' 'Yes, there is a great stir over the question,' said the cycle salesman, 'and if you will call at the REFEREE office you will hear all about it, and can possibly give some information as to the workings of cash prizes in Australia.' 'It is a great success with us,' went on Busst, 'and it has stopped roping. There is little of that now on Australian paths, and the straight-out cash is responsible for the favorable change. The men ride better and harder for the rocks, and it is only a short time before the giving of medals will be entirely out of date!' On being asked how the giving of cash had stopped roping (or selling races), Busst said, 'Why, don't you see, if we went to a country meeting and were short of cash for expenses, we would stand in with a book maker and drop a race, and secure money that way. Now we go in and win, knowing the cash will pay our expenses, besides having the honor of securing wins.' Busst is a finely-developed young man who don't think much of Chicago. He says the principal features of the windy city are big buildings and lard factories." This proves very interesting reading, more especially as Tom Busst has not been out of the colony since he paid a visit to New Zealand twelve months ago. Evidently an Australian wanderer is trading on the great rider's name.

If the alleged Busst will now call at either of the REFEREE offices he will be presented with a club.

\*\*\*

#### An Unreliable Guide.

Said the little pink-covered Quaker sheet last week:

"Dead Broke" Wylie was in town last week and came face to face with Merrihew and McDani of Wilmington, and neither recognized the other, showing the recent items in the REFEREE to be a fake pure and simple. Mr. Bouggy was the first person who saw the resemblance in Wylie of the Wilmington trickster, and while in Chicago accosted him familiarly. Wylie did not return the greeting, and Bouggy is getting his revenge.

Mr. Merrihew must have been color-

blind or absent-minded if he did not recognize in the now Chicago resident his former townsman, Henry Wolff, erstwhile cycle agent of Wilmington, Del. The writer has nothing but the best of good wishes for a man of extraordinary nerve, but is willing to wager a little with "Cy Bicle" that the item in the REFEREE was correct in every particular.

\*\*\*

#### 'Tis a Family Squabble.

A bitter fight is raging between the stockholders and management of Madison Square Garden, New York. James A. Bailey, of circus fame, who is a stockholder, charges the firm with bad faith and extravagance, and running the concern for their own special benefit while the poor stockholder only gets a season's pass as dividend. Last year showed a deficit of \$17,000. Mr. Bailey may get control of the property.

\*\*\*

#### A Woman Costume Reformer.

Mrs. Lena Sitting, a leader in social and literary circles in Brooklyn, has invented a "duck's back bicycle skirt." The costume is of soft waterproof cloth, light weight, and there is no fear of a "windup." The skirt reaches only to the ankle. Mrs. Sitting has devised a legging with a rubber sole to match the suit.

#### The Ravenswood's First Death.

The Ravenswood Cycling Club lost last week one of its most valuable members, H. W. Carr. Mr. Carr had nearly reached the allotted three score years and ten. He was sixty-eight years of age, yet was an active rider, as was his wife and daughter and her husband, all members of the club. Mr. Carr's was the first death in the club since its formation, two years ago, and is particularly

sad, owing to his hale and hearty old age. He was enjoying perfect health and was at the club house only a few days previous to his death.

#### A Blessing to Tourists.

The Canadian customs department has just granted the petition of the wheelmen to admit free the wheels of visiting American cyclists when known to be bona fide tourists. If the visitors are unknown they will have to pay the duty, but it will be refunded on proper presentation being made at Ottawa.

#### Will Change the Constitution.

Next Thursday evening, Feb. 9, the annual meeting of the Associated Cycling Clubs of Chicago will be held at the Grand Pacific Hotel. The election of officers for the ensuing year will take place at this meeting, Messrs. Garden, Randall and Tuttle being mentioned for the presidency. The following amendments to the constitution will be presented:

Beginning with the year of 1893 any club joining the Associated Cycling Clubs after the first day of October shall be exempt from dues for the current year.

Each club of the association shall, before January 31 of each year, file with the secretary a certificate stating the names and addresses of the club officers and the total membership to date. Such report of membership to constitute the basis of determining the annual dues of said club.

Any club failing to be represented by a delegate at three regular meetings of the association, in succession, may, by a two-thirds vote of the delegates present at any regular meeting, attended by a delegate from such club, be expelled from membership.

#### In and About Chicago.

The Columbia Wheelmen hold the first masquerade of their third series at Central Turner Hall this Friday evening.

A progressive euchre party was given by the Ravenswood club Wednesday evening. Monday evening, Feb. 13, a full-dress reception will be held at the Royal League Hall.

On Wednesday evening of last week the Cook County Wheelmen gave a progressive euchre party. Eight tables were in play. The gentlemen's prize was won by Ed Backus and the ladies' by Miss Josie Strideron. Supper was served and dancing followed.

Last Monday evening the Illinois Cycling Club gave a New England party at the club house. The gentlemen appeared as New England farmers, the ladies as the farmers' wives and daughters. Refreshments were served in keeping with the occasion. Dancing was carried on in the hall.

At the Englewood Cycling Club house, pool, billiard and bowling tournaments are in progress, in all of which great interest is being taken. In the hand ball tournament lately closed, A. E. Gere, T. E. Rees, A. Reed and W. S. Farrant captured the prizes. The members who will take part in the annual minstrel show are now rehearsing. A German

was given in the club's splendid dancing hall last Friday evening.

Tuesday evening last the Lincoln Cycling Club Cornet Band gave a dance at Bowmansville. About thirty of the Lincoln club men went out in a sleigh. New instruments for the band will be purchased with the proceeds. William Herrick is now manager of the band, and A. V. Jackson musical director.

#### At Last! At Last!

"In accordance with instructions given the nominating committee at the meeting in Chicago, Nov. 3, 1892, we submit to you the enclosed ballot." Thus read the notice sent to the members of the Century Road Club this week. Inasmuch as the committee has had three full months in which to select a list of candidates, its work should be well done. The candidates are as follows: President, W. A. Skinkle; vice-presidents, F. W. Gerould, Thomas F. Sheridan, L. J. Berger, True L. Sloan, W. W. Watts; secretary, Burton F. White, Joe D. Guinea; treasurer, W. M. Brewster, A. Kennedy-Child, W. C. Thorne; chief centurion, William Herrick; official organ, *The Bearings*.

#### Road Legislation in Wisconsin.

Senator Apple of Wisconsin is coming to the rescue of wheelmen. A road bill has been drawn up and will be introduced by him at the present session of the legislature. It provides for the making of certain main country highways, about ten miles apart, state roads; put them in shape, and that they shall be maintained by a state commission. This would give a series of roads, and all farmers would be within five miles of good roads. This bill, in connection with others of a similar nature, will undoubtedly enable the committee to reach some kind of legislation in the matter of good roads.

## "ROVER" TALKS ON RACING.

He Wants the '94 Meet at Denver, and is for Pure Amateurs.

HOT SPRINGS, Ark., Jan. 20.—Editor REFEREE:—I notice my friend Louis Block, of Denver, takes exception to my remarks relative to their rarified atmosphere, and the probability of our eastern cranks being unable to do their best in that light air. He evidently misunderstands me. It is not my intention to discourage any of our racing men or say one word against Denver as the place for the '94 meet. On the contrary, I wish to endorse, and am personally in favor of it. Denver has many interesting features, and to attend a meet in that most beautiful of mountain cities, inhabited by a lot of the whitest wheelmen who ever drew breath, will be a pleasure to all. Denver people, particularly Denver wheelmen, never do anything by halves. If any one doubts my assertion, let him visit the city, stop at the Palace Hotel, view the magnificent buildings (which, by the way, are the finest the writer ever saw in a city of its size) and meet such men as Candy, Block, Gerwing, Boles, Carpenter, Hannan, "Hod" Kennedy, Miles, and a dozen others. If he don't leave Denver with a soft spot in his heart for the city and its people, he may draw on me for a new hat.

Our eastern racing men may be faster, and probably are, but, as I said before, they will respect 2:30 in Denver more than they do twenty seconds faster at Springfield. I do not think our men will be afraid to meet Denver's fastest men—they are sportsmen, and not afraid of defeat. When they meet the flyers of Colorado on their own tracks, they will, as I said before, have more respect for Block's best mile, notwithstanding his characteristic modesty in asserting that twenty-five or thirty seconds separate them.

## REGARDING THE GREAT QUESTION.

I believe the time has come when the league should do one of two things, viz.: Drop professionalism (namely "shamateurism") or anything bordering on it, and control pure amateurism only, or else make two, or even three classes, inaugurate cash prizes, paid pace-makers, class races and a black list for crookedness. This half-way business will more than likely fail, as it did before. The maker will support it until it ceases to be an advertisement, which it will soon do, then he will kill it. The trouble is to define an amateur, and say just when amateurism leaves off and professionalism begins. Strictly speaking, an amateur in any line of business or sport ceases to be such the moment he ceases to do anything else, and turns his time and attention to it, no matter who pays his expenses. By devoting his whole time to it, he soon becomes a professional, and is considered by the public as such.

Therefore I contend that our racing board should disqualify, or professionalize any man who does nothing but race, and cut him out of the amateur ranks. Limit the value of prizes to \$50, and have no class races, but have handicaps.

If they attempt to control professionalism, they should do so by offering cash prizes, and then make rules for that class which will prevent crookedness. It can be done. If the league dodges this question, which faces it now fairly and squarely, by "straddling," every honest member will want to see the newly-organized N. C. A. succeed and govern the sport as the National Base Ball League did that game.

Personally I want to see the league a purely amateur organization, no promateurism, athletic club paid amateurs, or professionals. Let that class be handled by men who know how to govern pro-

B, in these words—in the articles of alliance between the L. A. W. and A. A. U.

"Article 2 says: 'Every cyclist shall be subject to test as to his amateur standing exclusively by the provisions of the constitution of the L. A. W. defining an amateur.' That's why the A. A. U. must acknowledge and accept any brand of amateurism the L. A. W. chooses to stamp with its official seal, and if the A. A. U. don't like it, why it must lump it, or abrogate section 2 of the alliance. And they will still recognize class B as amateurs!"

Turning from the unpleasant aspect of amateurism these days, the reporter spoke of the days when Curtis rowed double with Frank Yates of Chicago, and competed in all-around competition for the honors with Elliott Burris, now manager of the New York Belting and Packing Company's tire department.

"LAYING 'EM OUT."

From an oil painting in the Chicago store of the Pope Manufacturing Company.

professionals, and if they can make a pure sport of it and make money, I can see no objection to their doing so.

ROVER.

## What President Curtis Thinks.

Trotting down newspaper alley, opposite city hall square, New York, the other day, a REFEREE reporter dropped into the office of the *Spirit of the Times* and found the ever youthful "Father Bill." "Come to ask my opinion about the status of class B, eh?" piped "Father Bill." "Well, to my mind, class B is only a designation for those men who have been such as the class B designates them for several years."

"Will the A. A. U. recognize them?" "Oh, yes; we can't well do anything else, and turning to the official handbook of the A. A. U., I find the reason why the A. A. U. must recognize class

"Yes, those were days of pure amateurism," sighed William, "and you can bet we paid our entrance fees and traveling expenses, too." Referring to Elliott Burris, whom the boys of that period, '75-'76, called Pete Burris, Curtis said that Pete was one of the gamest men he ever met in competition.

"Speaking of Burris," said Mr. Curtis, "he was one of the first amateur velocipede champions of America, and bought his wheel from Actor Hanlon, who brought it over from France, and Burris rode a race against Walter Brown, the professional champion at the velocipede game at that time."

Mr. Curtis then switched off to skating and showed a telegram from Thomas Watson Eck of Minneapolis, which stated that proof of Johnson's mile in 2:45 at the Flour City was on the road. "Yes, Tom knows it won't do to try and

fool me," said Mr. Curtis, as he gave that habitual wink, "besides, I can believe the time was done; the boy is undoubtedly a wonder, but let's have the proofs."

\* \* \*

## Milwaukee Race Matters.

Chairman Schroeder, of the racing board, has decided that no more indoor tournaments will be given during the winter. The track will be left in place, as there will be no exposition this year. In the spring the club may decide to give a series of races.

John Schmidtbauer, of the Milwaukee Wheelmen, has been presented with a gold watch by that organization. Schmidtbauer appeared in almost every race in the recent tournament, and rode when he knew he had no possible chance to win.

The Milwaukee Wheelmen's racing board has had a special medal designed for John Reitzner of the Mercury Cycling Club. Reitzner competed for the diamond Milwaukee championship medal, but was defeated.

\* \* \*

## Don't Think Well of It.

BALTIMORE, Jan. 29.—Baltimoreans do not, as a rule, think the cash prize league will amount to much, but Baltimoreans do not, as a rule, think much of anything. It is the opinion of the writer that it will be a success. I had a talk with Mr. McDonald, of the Raleigh Cycle company, last week and he said that the company would put a team in the "cash" circuit. When asked who they were to be he said Still G. Whit and ——. Well, he winked his other eye and said they were now pure amateurs and he didn't want to give them away, as "there is many a slip 'twixt cup and lip."

BALMORAL.

\* \* \*

## Sanger Will Compete.

On Feb. 7 and 9 the North Side Cycling Club, of Milwaukee, will give an amateur skating tourney at the Schlitz Park rink. This is the first tournament of the kind ever given under the auspices of a cycling club in that city, and the result is awaited with considerable interest. Milwaukee has a large number of "pure ones" in the skating line, who are more or less prominent on the race path, among them Sanger, Meiswinkle, Mitchell, Miller and Pierron. Meiswinkle is considered the fastest amateur skater in the city and Sanger is not far behind.

\* \* \*

## A Milwaukee Skating Tournament.

The two-day amateur skating tournament, to be held at Schlitz Park Tuesday evening, Feb. 7, and Thursday evening, Feb. 9, under the auspices of the North Side Cycling Club—not, as was reported, to be held by the Milwaukee Wheelmen—promises to be a great event, especially as this is the first attempt at an amateur skating race and the introduction of handicapping.

\* \* \*

## Buffalo's Latest Track Scheme.

There is another new scheme afloat for the purpose of establishing a large park, bicycle track and pleasure ground about two and one-half miles from Buffalo. The idea seems very promising, and as there is plenty of room for a park of this kind, it seems as though it would be a very paying investment.

\* \* \*

## Will Have a Racing Team.

The Michigan Athletic Club expects to be represented at Chicago and around the circuit by a team of three next year. It has the best riders in Detroit on its membership roll.

\* \* \*

## What Chicago Men Will Do.

Said a prominent Chicago real amateur Saturday night: "The cash prize

THE RUDGE IN 11 PATTERNS.  
THE SYLPH IN 3 PATTERNS.  
THE OVERLAND IN 4 PATTERNS.  
WESTEN WHEEL WORKS' LINE IN 19 PATTERNS.

Representing Highest Grades, Medium Grades, and Low-priced Safeties in all Styles and Prices. Offers a COMPLETE ASSORTMENT to both the Jobber and the Dealer. We are headquarters for the Western Wheel Works' goods in the west and have already contracted to furnish many of the largest jobbers in our territory during the season of 1893.

No jobber can name Lower Prices, or supply these goods more promptly than ourselves. Ours is a satisfactory line, and if you give us your orders we will do our best to please you. Agents wanted. Correspondence solicited. *Catalogue Free.*

ROUSE, HAZARD & CO., 89 G Street, PEORIA, ILL., MANUFACTURERS, IMPORTERS AND JOBBERS.

— HERE IS A NEW ONE —

THE SCORCHER SYLPH, MODEL D.

To meet the demand of scorchers—fast riders—who prefer speed rather than pleasure and comfort, we offer for the first time in 1893, **THE SCORCHER SYLPH.**

Like the Spring Frame Sylphs, which are pronounced by those competent to judge to be the Easiest Riding and Running Safeties on the market, *IT HAS FEATURES DISTINCTLY ITS OWN.*

Our '93 catalogue tells all about it, as well as our Spring Frame machines. These machines being novelties, it will pay you to investigate. Catalogues free. Good agents wanted.

ROUSE-DURYEA CYCLE CO.,

89 G Street, PEORIA, ILL.

league, to all appearances, has not a single convert in Chicago to-day. Chicago's races in the N. C. A. would therefore be only between strangers to the local path and, plainly speaking, would be a fizzle. The Chicago man thinks too much of his club, and racing in the N. C. A. would mean expulsion. It's class B that the Chicago men want."

Keator says if justice is done him he will be reinstated; if injustice, he will be expelled. Keator is probably right when he says he is no more guilty than dozens of others, including the eastern men who attended the Washington Park meet. Providing he is reinstated he will attend strictly to racing, riding under the red, white and black of the Lincoln club.

Tom Heywood, of the Lincoln club, will race this season. Heywood, with no training at all, rode a mile on the Parkside track last season in 2:38. Later he rode a mile at Washington Park in 2:31 and made an excellent showing in the races.

E. C. Bode now weighs 170 pounds. After his present six weeks' trip he will go in on training for the coming season. Two seasons back Bode surprised the west when he sprang into prominence on the path.

O. C. and A. Green, the young Blue Island lads, members of the Chicago club, who made such an excellent showing at Jacksonville and at home last season, will again be on the path.

Fred H. Brown will ride under the colors of the Cook County Wheelmen next season.

Leeming will train a team of flyers at Indianapolis and take them on the circuit.

Julian P. Bliss says he will not race next season.

F. Howard Tuttle will race for cash, so he says.

Miscellaneous Racing Notes.

George W. Dornsee, secretary of the Malden Bicycle Club, writes that E. A. McDuffee, the well-known Boston racer, recently fell from a scaffolding, breaking an arm and leg. Mr. Dornsee says that, notwithstanding sundry broken bones, etc., E. A. will this year wear the Malden club's red-circled star in many races. The Malden club also wants to match a road team of five men against any club team in America.

William Bowden, the astute Seddon tire man, has given Colonel Charles Burdette, as a prize for the person getting the largest number of league members, a high grade bicycle. To Mr. Raymond he gave a gold medal for the pure ones who will race for the same.

"It doesn't matter how you fix your rules—we'll get around 'em." Such were the words of a maker who is known as one of the most enterprising in America during the late show.

Bliss says he will make no effort to get his Baltimore prizes, because he is afraid of incurring the displeasure of men in authority.

William B. Young has allied himself with the Press Cycling Club of Buffalo, and will ride on its racing team this season.

Arrangements are already being made for the Missouri division meet, to be held at Sedalia. July 4 will be one of the dates.

Paris has become convinced that a cement track is not altogether successful, and a board track has been laid.

A petition has been circulated asking the management of the world's fair races to construct its track of boards.

N. H. Van Sicklen says there will not be a race run under N. C. A. rules.

Dr. Turner on Smoking.

In reply to our correspondent who wrote last week "On Smoking," Dr. E. B. Turner has found time to send us a few brief lines: "Your correspondent," he said, "might be James I. with his 'count-rblast,' he is so rabid against it; but speaking as a non-smoker, I can only say—(1) That smoking in moderation does no harm. (2) That a pipe is better than a cigar, and a cigar than a cigarette. (3) That people with weak hearts should not smoke. (4) That occasionally smoking in great excess causes disease of the optic nerve, and consequently blindness; though the strongest man of his age that I now know used, in his 'hot youth,' to smoke twenty-four strong cigars every day. (5) That smoking is actually beneficial to some people. (6) That it is, after all, the old question of use and abuse." These are Dr. Turner's opinions re the hygienic effect of tobacco. As regards the aesthetic, he suggests, with some humor, that it is a matter for the gentleman himself and the ladies whose lips are in his way.—*Bicycling News.*

"The Push" is Scattered.

"How they are scattered," said one of the "push" this week. "There is Tom Roe in New York, Bode in the west, Tuttle in Syracuse, Young in Buffalo, Lumsden in Indianapolis, Nicolet in Grand Rapids, and now Ballard is going to Portland, Ore. Barrett is on the road most of the time, Wagner is in the east, and a half-dozen more are scattered broadcast."

When Jimmy's Luck Changed.

They were playing cards at the Bingham House, Philadelphia, after the show had closed one night. Jimmy was in poor luck, and his hair, usually so erect on the forehead, reclined listlessly.

Harry Wheeler turned to the Jersey man and said suddenly, "Comb up your hair, old man," when up went Jimmy's hand to push the hair into place. His luck changed at once.

For Ireland's Championship.

While on a tour about four years ago, W. W. Kenfield, president of the Rochester Cycle Manufacturing Company, met Stillman G. Whittaker, and they played a game of billiards for the championship of Ireland. Ever since that time a fierce rivalry has existed between the pair, and several set-tos took place at the Philadelphia show. Now they propose to play a match for keeps some night, in Rochester or Buffalo, and have requested a REFEREE man to act as umpire. But as he expects to act as critic of the famous players, he can not well fill the important office. Besides, the danger of getting hurt would be large.

Of Course He Was.

The fact that a professional has crept into league ranks proves nothing in favor of printing the addresses of applicants in the *Bulletin*. Leeming is sufficiently well known in Chicago for his name alone appearing in the list of applicants to have aroused suspicion had any one considered the list worth reading at all. We think Editor Fourdrinier was pretty near right when he claimed that the people who cry the loudest for the publication of addresses are those who want to use them for business purposes.—*Cycling.*

A Case of Squeezed Lemon.

The bicycle dealers say no man has yet been held up who was riding a bicycle. Under the present patents, after a man has bought a bicycle there's no use in holding him up.—*Houston Post.*

TRICK riders are hard men to draw into a competition, but if it is possible to decide who is the champion of the world, the world's fair year is

surely the proper time to do it. It is now ten years since the occurrence of the only contest for the championship of which we have record. It is a strange state of affairs—Canary, Maltby, Kaufmann and half a dozen other, all claiming the title, and yet only one of them has ever engaged in a match! That one is Canary.

Trick riding commenced long before the days of the men who now figure before the public, but Canary was unquestionably the pioneer of the present style. He was, furthermore, the originator of a majority of the tricks now performed. Before his time there were numerous riders, the Stirks and the Martelles and many others, but they were not of the same style. They used small, specially-designed wheels, with heads which turned completely round, and possessing other features which rendered the feats they performed mere child's play in comparison with the tricks of to-day.

Dan Canary commenced life as a telegraph messenger boy in Meriden, Conn., and while waiting his turn in the office became addicted to balancing his chair on two legs, as a means of occupying his mind. When he became older he took to tricks on a bicycle readily, and about the year 1880 had become fairly proficient. The writer remembers a chat with him on the way to Boston, after the Springfield meet of '83. Dan was then under contract with Winslow, the skating-rink man, who, while paying him a small salary, was making considerable money out of the speculation. But Daniel wasn't the boy to remain long in harness, and decided to strike out for himself.

In a little machine shop on Canal

street, Chicago, almost opposite the primitive factory then used and considered a model institution by Gormully & Jeffery (Gormully's name flourished alone for awhile, though Mr. Jeffery was the active man) there worked a young man named Warren Wood. He had made, in spare moments, a machine something on the order of those used by stage riders, and both considered himself and was considered by his friends the king of trick riders—fancy riders was considered the proper title then, but that seems to have passed into oblivion. In the fall of '83 Wood issued a challenge to all comers, through a paper then boasting extremely limited circulation. The challenge, of course, was seen by no one interested. Wood insisted on his right to style himself the champion, and wrote a letter to the *New York Clipper*—the authority at that time—asking its opinion. The opinion was not favorable.

Soon after this a couple of friends of Canary's, then in Chicago, proposed a match. The negotiations were long and tedious, though not to be compared with those of the present day; but at last a match was made. On his arrival Canary made his headquarters at the John Wilkinson Company's store, then on Wabash avenue, and passers-by gazed in wonder as he rode up and down the sidewalk on

W. S. MALTBY.

one wheel, or sat across the handles at a stand-still just inside the store door.

The match came off at the Casino Rink, Twenty-fourth and State streets. The stakes, if we recollect rightly, were \$500 a side. J. O. Blake was the referee. From first to last there was but one in the contest. Canary won with the greatest ease, and so established his claim to the title of champion. He has never been deprived of it in competition. He once rode against Harry Tufts, at Springfield, but it was not a regular match for the championship. Canary won. Wood has never been heard of since as a trick rider, and is now, we believe, a resident of Newark, N. J.

Other riders began to flourish about this time and soon after. There was, for instance, Professor Wilmot, of Boston, a man with a bald head and abundant agility. The professor was a far more staid individual than most men in his line. He traveled this country over and then went to Paris, where, when we last heard of him, he was doing well.

Next comes Fred Sewell, a precocious

little chap, who did particularly well as a "top man." He was in partnership at one time and another with Wilmot, Hobbs, Speedwell and others. Where he is now no one seems to know.

Speedwell, one of Sewell's partners, was, like Wilmot, a clever "under man." He never made any claim to championship honors. It was not, and is not generally known that his real name was Mason, that he was a brother, in fact, of Elliott Mason. While with Sewell the pair were known as the Speedwell brothers. The two Masons once conducted a school on Thirty-third street, New York, and we believe Elliott has held the Columbia agency or been manager of the New York branch ever since. That was eleven years ago. His brother is not at present connected with cycling. He met with a severe accident, breaking his leg, and has not ridden since.

The next that comes to our recollection

NICK KAUFMANN.

tion is Fred Rollinson, "the Professor," a son of a well-to-do Devonshire man. No man in the bicycle business ever got into and out of more scrapes than he. His specialty was the dude act, in which he has been imitated by many but excelled by none. He was a "promoter" as well as a rider. He promoted a 26-hour race at the American Institute rink, in New York, in which John Young won, riding until he was absolutely blind, and getting a gold-plated brass medal for his pains. After a while Rollinson went west with a "combination," was taken ill, got into a lunatic asylum, was reported dead and buried, turned up in Australia three years later, and having made some money during the skating craze there, went to Europe, where he now is. Rollinson

DETACHED WHILE IN MOTION.

linson did considerable racing at one time, and was a competitor in the first six-day race ever held in America. It occurred at the Exposition Building,

Milwaukee, under the management of L. M. Richardson, now well known to the trade.

John Wilson—the same John who is

A COMMON SAFETY TRICK.

now down at Cottage City in the jewelry business—was a trick performer on the Star, but confined his attention to the neighborhood of Boston. Harry Higham, the 190-pound dealer in bicycles in Washington, was quite a trick rider as well as racer; indeed, before he left the old country he was rated A 1 among the few trick riders there.

A man who scoured the country over was Prince Wells. Prince is an assumed name, adopted because of the popularity in those days of John S. Prince. Wells is a native of Louisville. He was very proficient and probably one of the most daring men who ever rode. In due course he fell in with Ralph Temple, who was then performing under his own name—Friedberg—and the team of Friedberg and Wells became quite famous. After they separated Temple went to England, and there figured as one of the claimants to championship honors.

Temple was the first to introduce the female impersonator act into the bicycle business, and he did it so successfully that for a time even his friends were deceived. Maltby took up this feature and carries his blonde wig and spangled skirts with him to this day.

Among the amateurs, also, there were a few very good men, among whom Rex Smith, of Washington, was by all means the leader. He was the originator of the "upside down mount" now performed by nearly all trick riders. So clever was Smith that many believed him superior to Canary.

In turn there came upon the scene such men as Westbrook and Hurst, the Canadians; Kaufmann, Maltby, Nash, Barber, Ley, Minting and others. Nor was the game confined entirely to the male sex, for Annie Sylvester became so expert as to excel a majority of the men who then considered themselves in the front rank.

Meanwhile Canary had gone to England, where his success was phenomenal. His riding was a revelation—it seemed incredible that such feats could be performed. Dan became a hero. He was banquetted by clubs, and on one occasion performed a number of stand-still tricks upon the table. He visited all the leading and many of the smaller cities of Europe, drew salaries ranging from two to three hundred dollars a week, lived like a prince, and after a few years returned to America about as poor as he left it! Kaufmann and Maltby followed him to Europe, as did Temple, and the newspapers were filled to overflowing with challenges and counter-challenges, all of which, however, ended in smoke. One of the principal causes of the failures to agree was

D. J. CANARY.

street, Chicago, almost opposite the primitive factory then used and considered a model institution by Gormully & Jeffery (Gormully's name flourished alone for awhile, though Mr. Jeffery was the active man) there worked a

THE REFEREE.

## MAJESTIC LIGHT ROADSTER

OF ALL HIGH GRADE WHEELS

THIS IS THE HIGHEST.

Of all wheels this is the easiest to sell, because everyone wants it.

What can give a **CYCLIST** more pleasure than a trip through the open country on the highest grade bicycle made?

What can give a **DEALER** more pleasure than selling the highest grade bicycle made?

The **BEST** is always the **CHEAPEST**.

We give you the best for \$115.00 only.  
PNEUMATIC TIRES.

**HULBERT BROS. & COMPANY,**  
26 WEST TWENTY-THIRD STREET,  
NEW YORK.

that Kaufmann rode both the Star and ordinary, while the others rode the latter only. Kaufmann fell into the hands of Harry Etherington, one of the many

MADAM MALTBY.

men who have "risen from the ranks" with the assistance of cycling. Etherington is the man who brought the first team of English professionals to America. He was, at the time of Kaufmann's visit, the owner of *Wheeling*. He became the trick rider's manager. In due course he formulated a set of rules to govern trick riding, had them approved by representatives of the cycling press, and procured a medal, we believe, by subscription. No one being willing to compete under these rules, the medal was given to Kaufmann, who has ever since claimed the championship.

Maltby has made frequent and apparently earnest endeavors to secure a match. He once deposited \$100 with the *REFEREE*, which was covered by Canary. They met and talked—that's all. It was hard to tell who wanted a match and who didn't. This may be gleaned from the fact that the editor of one cycling paper who previously believed Canary willing to ride, changed his mind, while the editor of another paper, previously a believer in Maltby, changed his mind also!

Canary is in Springfield, Mass., Kauf-

WARREN WOOD.

mann in England, Maltby in Honolulu. All of them have traveled largely, Maltby, probably, most of all. He is a native of Birmingham, Connecticut, and

is now in his twenty-sixth year. He first rode in the fall of 1883, and about four months after learning gave his first exhibition. He traveled the states in 1884 and 1885 and in the spring of 1886 sailed for Australia, calling, en route, at the Sandwich Islands and New Zealand. He spent nine months touring the colonies, and during his stay appeared before each of the governors of the different colonies. His next movements were toward India, exhibiting a few weeks on his way both in Java and India. In the latter country he was the recipient of many handsome presents from the

ONE OF THE OLDEST TRICKS.

native princess. He reached England in August, 1887, where he joined the American team, and made a five-months' tour of Great Britain. During this tour he made a daring ride on one wheel on the pier wall at Aberdeen, Scotland, which was only twenty inches wide, twenty-five feet above the sea, and twelve feet above the pier. It was one of the most daring feats ever attempted. January 1, 1888, he started for a four weeks' tour on the continent. He returned to New York Feb. 6, 1888, completing a tour of about 60,000 miles. During '88 he made another tour of the states, and early in '89 again started for the antipodes and

A TEST OF NERVE.

spent about two years traveling throughout Australia, New Zealand and the Sardinia Islands. Maltby believes that in Australia he received the largest salary ever paid a trick rider, amounting to one hundred guineas for a performance. He has wisely treasured the golden egg, and in every-day life is a quiet, gentlemanly fellow. During the summer he conducts a riding school in New York and disposes of some wheels.

Some wonderfully daring feats have been performed by trick riders. It is reported that Temple duplicated Maltby's feat of riding along the coping of the pier at Aberdeen, but we can not vouch for the authenticity of the report. The most daring feat ever performed in public was Canary's ride down a narrow flight of steps from the gallery to the floor of the Mechanics' Pavilion in San Francisco.

Who is the champion? It is a difficult question to answer. Given the Star and the bone-shaker Kaufmann probably excels, because the other riders do not use them. Kaufmann and Barber are the more active of the present day riders. The former has not been in America for six or seven years, but Barber is considered by many to be the best man in America. If a match between these four men—Canary, Kaufmann, Barber and Maltby—could be arranged to occur in Chicago during the coming summer, it would not only be a most interesting event, but the first exposition of the real merits of the world's best man in competition.

#### Lost Coat and Confidence.

William Bowden, manager of the Seddon Tire Company, is a young man of a trusting disposition. So when several people in England, who had traveled in America, wished William good-bye at Liverpool, they said: "They will have that coat, Billy, before you travel far in America," referring to an elegant fur-lined, seal collar and cuff overcoat, in which William looked quite regal. "Oh, no, they won't! I'll watch 'em," replied Bowden, as he kissed his hand good by. As is the custom of all the foreign trade arrivals at the port of New York, William dropped into the *REFEREE* office to get his bearings, and his coat was duly admired and felt. Two days later—Sunday evening—the Seddon tire man was writing to his loved ones in England—one a ten pound boy, who made his appearance about the time the fond papa landed in New York. So with joyful heart, he wrote page after page, giving his impressions on big waves, icebergs, etc., his imported fur-lined coat resting easily on the back of his chair. The letter finished, he arose, crossed over to the Everett House lobby letter box to send it on its way, and lo! on his return to his chair the prediction of his friends came forcibly to mind—his loved coat was a goner! Bowden's grief was deep; a detective gave him little hope—and a cold snap which set in about that night considerably less. A thin summer coat did not battle successfully with Manhattan borean blasts. Now the Seddon tire man thinks the Yankees are "impudent thieves," and the Dublin man swears the American people will have to pay for that coat in some way. Just watch Bowden!

#### An Organization Perfected.

The postponed meeting of the Buffalo Associated Cycling Clubs transpired on Friday evening, and resulted in the election of the following officers: President, W. J. Packwood, W. B. C.; first vice-president, D. H. Lewis, R. B. C.; second vice-president, L. B. Clark, P. C. C.; secretary and treasurer, J. R. O'Brien, P. C. C. The association decided to distribute stock-subscription lists among the different clubs and dealers, with shares at \$5 each. There are to be 2,000 shares. It has been decided that the grounds or park shall be fitted up to accommodate all forms of outdoor sports as well as cycling.

#### Three Clubs to Consolidate.

A scheme is now on foot to amalgamate three of Milwaukee's prominent

clubs. The Calumet has for several years enjoyed the reputation of being the foremost social club in the city. It occupies an elegant club house on Tenth street, and has a membership of over 400. The project, as outlined, is for the Calumet to join forces with the Milwaukee Athletic Society and the Milwaukee Wheelmen. It is understood that the officers of the three clubs are very enthusiastic over the consolidation, and that the directors of the Calumet club are figuring on the estimated cost of the improvements. It is thought \$20,000, in addition to the \$30,000 already expended, will build an addition large enough to accommodate all the requirements of the three clubs.

#### Books and Pamphlets Received.

The *REFEREE* acknowledges the receipt of the following publications:

- Monarch Cycle Company, Chicago, catalogue.—Shows portraits of the officers of the concern, and four styles of Monarchs—road racer, 32 pounds, of very handsome design; roadster, model A, 37 pounds; roadster, model B, all on, 39 pounds; ladies' Monarch, 35 pounds; also complete line of sundries.
- Chautauqua Cycle Company, Jamestown, N. Y., catalogue.—Shows light roadster, 36 pounds, all on; road racer, 39 pounds, and a pneumatic sulkey.
- Quadrant Cycle Company, Birmingham, Eng., catalogue.—Shows six styles of tricycles, single and tandem; nine styles of safeties, in diamond and quadrant frames, and a ladies' safety.
- George R. Bidwell Cycle Company, catalogue.—Shows a Tourist roadster, 40 pounds; light roadster, 33 1-2 pounds; ladies' Tourist, 39 pounds; Bidwell pneumatic tire, Bidwell cyclo-meter and sundries; also catalogue of St. Nicholas Manufacturing Company's line.
- Horton, Gilmore, McWilliams & Co., catalogue.—Shows Coventry Cross racer, 22 pounds; roadster, 38 pounds; ladies' wheel, 38 pounds, and a line of cheaper grades.
- J. K. Stanley & Co., Coventry, Eng., catalogue.—Shows a new Rover racer, 22 pounds, with two 28 or 28 and 30-inch wheels; light roadster, 33 pounds; roadster, 38 pounds; ladies' roadster, 34 pounds; new Popular Rover, 40 pounds.

#### The 1893 James.

Probably no wheel that has been put on the Chicago market this year has attracted more attention than the James, the first lot of which was received Saturday last by the James Cycle Importing Company, 324 Dearborn street. The wheels received were road racers only and the one placed on the scales weighed only twenty-four and three-quarter pounds, being fitted with scorching saddle and M. & W. racing tires. The catalogue weight is twenty-eight pounds. There are several noticeable improvements in this year's wheels—more rake to the head, dust-proof bearings, an improved saddle post clip, head clip and lamp bracket combined, improved adjustment for the crank axle bearings, strengthened fork crown, and a lighter and neater chain. The wheel is handsome and substantial, and if it gains in popularity this year at the rate it jumped into favor last year, Messrs Bridger and Holmes will find trouble in keeping the supply up to the demand.

#### A Suggestion for English Makers.

The *Cyclist*, Coventry, winds up an account of some American failures with these words: "These continued disasters to American business will lead our makers soon to place no faith in the American tradesman." It is true some of the English firms have been hit rather hard at times, but it must be remarked that the English trade has been very considerable in this country for the past few years. To have an American representative on the ground at all times would be a good thing, as matters could be watched more closely. Some English firms are now appointing financial agents this side to look after the collections and general business.

## NATIONAL CYCLE SHOW.

A GRAND EXHIBIT OF GEARS, TIRES,  
NEW MACHINES AND NOVELTIES.

Many Extremely Light Wheels Shown—  
Front Drivers Seem to Attract the  
Makers' Attention—Elliptical  
Sprockets on View.

LONDON, Jan 21.—For the fifth time since January, 1889, when the Stanley show was first held here, the Crystal Palace is filled with cycles and everything appertaining thereto. It is impossible to dislike the palace once you have

THE PEREGRINE RACER.

reached it, although the eight miles' railway journey thereto, over the notoriously disreputable snail track known as the London, Chatham & Dover Railway, occupies from thirty-five to nearly sixty minutes, and is calculated to exasperate a saint. The palace is an enormous glass conservatory, the central transept extending for a quarter-mile in length. This vast promenade is occupied by the four lines of stands and stalls; the concert room and three large courts, named, respectively, the Roman, Greek and Egyptian, on account of their architecture, are also filled with exhibits, whilst in the galleries there is a show of domestic machinery consisting largely of sewing machines, and hidden away in the western corner is an extensive collection of machinery for cycle making, steel tubing etc. Flooded with natural light through its lofty glass roof by day, the show presents an equally effective appearance at night, when numerous powerful arc lamps shed a splendid illumination upon the flashing nickel and sumptuous stand decorations. A visit to every stand in the national show involves a walk of nearly one and one-half miles.

Yesterday many of the exhibits were late in arriving, in spite of the regulations insisting on their being in position by Thursday night. However, by the afternoon the show presented a finished appearance, much to the relief of

THE SPARRE.

the anxious-looking pre-smen encountered at every turn. There was by no means a large attendance of the public, but to-day greater animation prevails. The palace is warmed by means of hot water pipes placed below gratings in the floor, and although speaking generally the temperature is pleasant enough, there are places where icy draughts sweep round the unhappy exhibitors.

## ELEGANT DECORATIONS.

The stands of the large firms are conspicuous for their costly and elegant

decorations, whilst the smaller makers make tame displays with their limited exhibits staged on plain scarlet cloth. It is an enormous show, containing as it does some 1,400 machines shown by over 130 makers, whilst the other tenants of space bring up the total to 295. Although no side shows of any kind have been promoted by the National show committee, there is the palace pantomime every afternoon, and, when the brazen notes of the orchestra are not floating through the building, there are organ recitals and band performances, so that silence or dullness seldom prevails.

## FRONT DRIVERS AND GEARS.

It is impossible to walk through the show without being struck by the remarkable number and variety of the front driver safeties exhibited and the increasing diversity of gears employed. All the small imitative firms adhere to the Crypto gear, and the original frame design of the Crypto pattern f. d. safety. Several of the more progressive firms have adopted gears of the Perry type, consisting of four toothed wheels neatly cased in, as for example, the Abingdon and Eadie gears, whilst others have novelties of their own, notably the Leicester Cycle Company. Nearly all makers are agreed in curving and dropping the handle-bar outwardly (i. e. away from the rider) and attaching the handles at an abrupt angle in the direction of the

beyond small detail improvements, such as dust-proof and oil-containing bottom brackets, exquisitely perfect stems of chain adjustment, the introduction of larger and stiffer bottom tubes between the bracket and the back wheel, and neat, strong fork crowns—double hollow crowns having dropped out of fashion. Ladies' safeties, admirably geared, are numerous, and there is an all-round reduction in their weight. Tandem safeties are very scarce and military machines seem to be forgotten by the trade. The new system of web joints will not affect this year's trade in the least, as it is felt that unless the brazing up of the frames is performed with the utmost skill and success very serious consequences might follow. The elliptical gear wheel I have only discovered on one stand (up to the time of writing), that of the Raleigh Cycle Company, which is prepared to fit it to order to racers or roadsters as part of its well known interchangeable gear arrangement.

## THE LIGHT WHEEL CRAZE.

A strange craze seems to have taken possession of many firms of high repute. At the Stanley one or two well known makers displayed very light sample racers ranging from 15 to 17 pounds in weight. In the present show the lightest racer exhibited is a 12-pound Sunbeam on John Marston's stand. The Centaur Cycle Company has one scaling

MODEL D. ORMONDE.

rider's reach. Geared ordinaries from 40 inches to 48 inches in size are comparatively scarce. The front drivers range in size from 30 inch to 38 inch, and there is a notable increase in the smaller sizes compared with the proportion shown at the Stanley.

## THREE CLASSES OF SAFETIES.

The new type of safety may be readily divided into three classes, differing as regards the pattern of frame adopted. First, there is the familiar style, practically a reduced or dwarf version of the geared ordinary or rational, with which every one is familiar. Then we have a class with double backbones, stayed backbones, or ugly distortions of a diamond frame—the tubes starting from the top and bottom steering centres, being connected by a vertical tube near the seat pillar, and uniting at the back fork crown. These are invariably ugly and, I venture to think, rather unnecessary innovations. Finally, the very small wheeled variety is fitted with a perfectly straight single tube backbone, and back forks curving the reverse way, giving a castor-like appearance to the back carriage. The last named machines are very light, and admirably suited to riders below five feet seven inches in height, but if used by taller men the necessary elongation of the steering and saddle pillars would spoil the machine's appearance.

## NO CHANGE IN REAR DRIVERS.

There is nothing new in rear drivers

metal mud guards protect both wheels, the tread is narrow and the whole machine by no means heavy. Some beautiful rear drivers with Carter cases, and several tricycles were also shown.

The New Buckingham & Adams Cycle Company had an unique novelty in a tandem f. d. safety, with Eadie gear to both wheels, geared to 64, weighing 39 1-2 pounds, and although suitable for two riders, was only the same length as a single safety. This machine looks like a very fast racing instrument.

## SWIFTS AND ORMONDES.

The Coventry Machinists' Company displayed forty-six machines in all, in-

R. &amp; P. FRONT DRIVER.

cluding a multitude of Swift safeties and some dainty Marlboro Club tricycles and tandems, four Swift geared ordinaries with Crypto gear, and several safeties and tricycles for ladies. All the types presented are notable for elegance of design and superb finish. The Marlboro Club new model tandem is certain to obtain a large share of the limited trade now done in tandems.

The Ormonde Cycle Company had a compact exhibit comprising a Crypto geared f. d. on the familiar lines, a model C semi-racer r. d. safety, with tubular hubs, weighing 32 pounds complete with a gear case. The centres have been made slightly shorter for '93. The Ormonde racer weighs 22 1-2 pounds.

A patent adjustable steel sulky, capable of being taken to pieces and packed in a case and adaptable for use with various horses, was staged by S. Rowe & Co. It is certainly a very fine instrument and being, I believe, the only sulky in the show, will attract wide attention.

## R. &amp; P., SURREY MACHINISTS' COMPANY AND PEREGRINES.

Robinson & Price make a fine show of no less than eight front drivers and geared ordinaries in three different sizes; the 30-22-inch type weighing only 27 pounds.

Four racing safeties for Protier, Lambeyack and two other continental riders are shown by the Surrey Machinists' Company, with the new ladies' safety

ORMONDE G. O.

and a r. d. safety for Dr. Turner. This firm has not yet touched the f. d.

Next came the Peregrines by the Leicester Cycle Company, including many chain safeties and a f. d. safety fitted with Chapman's patent gear, a simple arrangement consisting of four bevel wheels central in position, cased in the hub, simple and light, of which a good

## SUNBEAMS AND THE B. &amp; A.

John Marston's stand, richly carpeted and railed, contained amongst its twenty-one mounts, a 30-22-inch f. d. safety (design S) fitted with the Sunbeam geared hub, which externally resembles the Crypto pattern. This machine, which is geared to 60 inches, has a double diamond frame which is very rigid. Starting from the opposite extremes of the steering centres the lower pair of tubes take a direct line to the back wheel pin, whilst the upper pair, after reaching the seat pillar and its tube stay, descend and converge at the same point, thus obviating the use of a back fork. Light

## E. C. STEARNS & CO., :::: Syracuse. N. Y.

deal will be heard in the future. The frame is of the diamond variety.

#### RALEIGHS, IVELS AND QUADRANTS.

The Raleigh f. d. weighs 31 pounds all on, and was shown in three patterns having 36-20-inch, 36-26-inch and 44-26-inch wheels, respectively. A Raleigh r. d. racer geared to 64, built for J. D. Sideley, of Belfast, weighed 21 1-2 pounds.

PREMIER ROAD RACER.  
(Helical Tube.)

An elegant ladies' safety turns the scale at 38 pounds. Besides the three dozen machines, this firm showed its new pneumatic tire, which is secured like a '92 Dunlop on one side of the rim and to the other by an adjustable wire and sharp hooks fastened to the rim, *a la* Preston-Davies. I saw this tire unfastened all round, the tube withdrawn, returned and all made secure again in a very short space of time.

The Ivel f. d. has Perry's gear to its 30-inch wheel. The Quadrant Cycle Company showed twenty-seven machines, including all the numerous tri-cycle models and the No. 22 racer, weighing 24 pounds. A new direct steerer has been added to the list of three-wheelers. Starley Bros. made a brave display with over a score of machines, several having the new pattern web joints.

#### M. & C., STARLEY AND SPARRE.

Marriott & Cooper staged four specimens of the M. & C. geared ordinary, which now has a double backbone. Several Olympia tandems were found here with ladies' safeties, racers and other mounts.

The Sparre cycles, by P. A. Sparre, of Paris, possessed indestructible spring wheels, similar to the Persil flexible wheel, only that coil springs were substituted instead of S-shaped ones. A metal tire is used and the machines are recommended for military use as strong and durable.

J. K. Starley & Co. staged an interesting exhibit of twenty machines. The dust-proof bracket of the firm is now fitted to all machines and is an important improvement. Besides a path racer for A. DuCros, weighing 21 pounds, I noticed some of the Popular Rovers, very excellent machines at a medium price, and ladies' Rovers, now constructed with straight frame tubes.

Hobart, Bird & Co. showed a novelty in a home trainer for a lady's use—a stand upon which indoor exercise may be taken on an ordinary safety—invented by Miss White, a riding instructress.

#### EXCELSIORS, HUMBERS AND PREMIERS.

Bayliss, Thomas & Co. presented a rear driver inlaid with mother of pearl ornamentation, two 38-inch Crypto f. d. safeties provided with very complete mud-guards reaching quite close to the ground, and a variety of their other patterns.

The stand of Humber & Co. was conspicuous on account of a magnificent array of silver trophies, won on Humbers, being on view. The '93 r. d. safety differs in nothing from that of last year. The great firm showed no f. d. model. An invalid chair cycle fitted with powerful brake, a tandem on Olympia lines with corrugated Dunlop tires for Major

Knox Holmes, the veteran rider, and a tandem safety were noticeable features of a splendid exhibit of forty-six machines.

The Premier Cycle Company had a fine show of thirty wheels, including, of course, some safeties made of the new helical tube, manufactured from a strip of steel rolled in two separate layers into scroll form and brazed. A 34-24-inch f. d. safety was shown. Some of the roadsters are still made of weldless steel, but the new helical tube is used for all the racers. Recent severe tests have proved the superior strength and lightness of the new tube.

#### TRIUMPHS, CENTAURS AND OTHERS.

The Triumph Cycle Company made a grand display with the Chicago Triumph, as the '93 safety is styled. The firm showed more patterns than there are letters in the alphabet.

The Centaur Cycle Company had fifteen very light safeties. The King of Scorchers special racer weighs 12 1-2 pounds; the Fairy Queen of Scorchers, ladies' safety, a very well finished and properly guarded machine, scales 28 pounds; another ladies' pattern comes out at 33 pounds, and a complete King of Scorchers roadster, with brake, guards, etc., only scales 30 pounds.

SUNBEAM F. D. SAFETY.

Taylor, Cooper & Bednell displayed an effective collection of thirty Raglans, most finished in light grey, and all desirable mounts.

Singer's exhibit was limited to twenty-five machines, for the most part of the Modele de Luxe brand, but including a tandem, a carrier, one 36-inch geared f. d. with Dunlop detachable tires and a Singer Velociman.

#### NEW HOWES AND BOWN'S EXHIBIT.

The New Howe company was compelled to confine its exhibit to parts, as its appearance at the Stanley debarred it from showing complete wheels. The bottom bracket I was shown reduced the tread to 5 1-2 inches. The New Howe ladies' safety has a singularly rigid frame, and all on does not exceed 36 pounds. The firm also uses 3-4-inch tube for its back stays, a plan which is being widely followed.

W. Bown shows a new pattern of the Æolus pedals weighing only 13 ounces per pair, the rat trap plates converging outwardly instead of being parallel.

Brown Bros. show a very good novelty in stands suitable alike for a r. d. or f. d. machine.

The Abingdon Works Company exhibits the various sets of parts for which it is famed, notably the Abingdon f. d.

set, including the gear, which is beautifully made and finished.

#### A HOST OF SUNDRIES.

Time does not permit to deal even hurriedly with the novelties in lamps, saddles and other sundries. Amongst the lamp makers also a mania for extreme lightness prevails just now, and Lucas & Sons, with their "Alumophote" at 103-4 ounces, holds the record up to the time writing. Constructed largely of aluminium the Alumophote is a gem of a lamp, but must nevertheless be regarded more as a toy than a serviceable adjunct to a machine.

Several new tires have been placed in the already crowded field of competition since the Stanley show, and most of these, together with all the familiar varieties, find places at the Crystal Palace. But for the reason already stated I must defer mention of them to a subsequent letter.

STANLEY.

#### Affairs of A. W. Gump & Co.

A report of the recent A. W. Gump & Co. fire states that they carried insurance to the amount of \$54,600. Their policies were in the safe, which went into the cellar and was filled with water. While all the books and papers were soaked for a couple of days, they were still legible.

ney" to his club-mates. By the way, Whympy will soon call at Buffalo, Cleveland, Chicago and other points west in the interests of his firm, Schoverling, Daly & Gales. As the lecturer at the museum says: "You will find him an interesting conversationalist and ready to answer any question" that will interest the questioner about the effete east, especially New York and Brooklyn. You will also find Mr. Whympy one of the smartest young business men on the road, and he sells Humbers, Gales and sundries.

#### As to the Sercombe-Bolte Tire.

It is said that the Sercombe-Bolte pneumatic is not original, but is of the same pattern or similar to the Holdtite tire of England, a number of which were brought to this country last season on Swift machines. The patent has not run a year yet in England, and would thus annul any American patents if applied for within the year in America. The Holdtite tire clinches into the rim differently, a sort of dovetail process, but the patent also covers the square insertion, as in the Sercombe-Bolte, but does not conflict with the Lozier principle. A gentleman from the west hunted up a section of the Holdtite at the show and attempted to convince Mr. Sercombe that his views were correct, with what success was never known.

#### Many Dunlop Orders.

The energetic Harvey Du Cros, of the American Dunlop Tire Company, has been for the past ten days in the west, and from the orders received at the New York office, it looks as if he had been more than successful on his trip. The '93 detachable Dunlop is meeting with great favor, and in the hands of the hard-working Du Cros brothers it must find its way on thousands of wheels this year. New York welcomes the Du Cros boys—four in number—to the national metropolis as permanent residents.

#### Thorsen & Cassidy's Line.

This young Chicago firm now has a splendid line of wheels and sundries. It has the exclusive Chicago agency for Western Wheel Works goods, is western distributor for Warwicks, and Illinois and Wisconsin agent for Remingtons. The house jobs Garford saddles in the west and does a big general sundry business.

#### For the Rental of Wheels.

The Columbian Bicycle Livery has been incorporated to do business in Chicago. Stores are to be opened in four parts of the city, the object of the concern being to rent wheels during the World's Fair. The capital stock of the company is \$10,000, of which \$2,500 is still on the market. Charley Sieg is interested.

#### The 1893 Warwick.

The new Warwick, model A, a cut of which is shown herewith, certainly is of splendid design, and as the Warwick company has always enjoyed a reputa-

tion for building good wheels, the new model should prove a success. It has 28-inch wheels, the rear being fitted with 2-inch Warwick tires, and the front with 1 3-4 inch. The wheel base is 10 1-2 inches and the weight 39 pounds. The wheel may be fitted with guards, brake, etc.

#### Whympy on the Road.

The committee in charge of the Kings County Wheelmen's Club says the *Announcer* is to be congratulated on its efforts to provide fellow-members and friends with a healthy and chatty club monthly. The little paper was the pet club idea of that distinguished literateur, L. B. Whympy, better known as "Bar-

## KIRKWOOD-MILLER FAILURE.

## Serious Charges Made—Goods Alleged to Have been Shipped to a Fictitious Firm.

According to the statements of the Peoria Transcript of Monday last, the creditors of Kirkwood, Miller & Co. stand but little chance of realizing any great amount on their claims. After quoting a statement of a member of the investigating committee the paper says:

When the assignment was made on Dec. 31, the schedules showed that the liabilities did not exceed the assets by a very great amount, and it was thought that if the firm was allowed to continue in business, the deficit might be made up. Some later developments would hardly warrant this conclusion. One of the investigating committee said yesterday that the liabilities were over \$200,000 now, and would probably reach a total of \$250,000. Meanwhile, the assets have been growing smaller and beautifully less, until the creditors will do well if they realize 15 per cent.

A prominent merchant, and one of the creditors, talked freely about the matter. He said: "We have found that the firm shipped goods all over the west during the months of November and December and consigned them to employees.

"HENNING & CO."

"In Iowa, Kansas and Nebraska, large consignments of goods were made to a firm named 'Henning & Co.'"

"Who is Henning & Co?"

"O, that is a fictitious firm created for the purpose. Henning is a man employed in the bicycle department of the house and lived here. I do not know but he is still living here. He was their bicycle expert, and I am of the opinion that his name was used without his knowledge or consent. The title of this fictitious firm was 'The Henning Buggy Company.' We have a record of a carload of buggies shipped to this firm, and they are charged to J. R. Miller on the books. J. R. Miller is a brother of the Miller in the firm. He gave a note to balance the account and that note was turned into the bank here for cash, discounted, of course. Then they would send a man out to the point where the goods had been shipped and he would either sell them at auction or induce some local dealer to take the lot. In each case the transaction was a cash one. They got money at both ends of the line, do you see?"

"We have letters from reputable dealers in which they send copies of threatening letters sent them by Miller, in which he urges them to send the balance of their accounts or take chances of being black-listed by him in the trade. Do you think he is in a position to do a very thorough job of black-listing?"

"We have also ascertained that Mr. Miller bought diamonds to the value of over \$200 for his wife about the time of the failure. She reciprocated by buying Harry a fine diamond stud."

AN ATTORNEY TALKS.

One of the attorneys in the case, who represents a firm caught in the failure, is also willing to be heard on the subject. He said: "It begins to look to me like one of the most rotten concerns on earth.

There has been considerable talk, one way and another, about the ready manner in which they got into the banks. Did you ever see one of the statements they gave the banks? Well, here is one. Look it over. It will do your hear. good. Shows them to be in good condition, don't it? Their statement to Bradstreet showed that they had something like \$65,000 over all liabilities. Now, outside of this their statement showed that Kirkwood owned property in excess of all liabilities amounting to \$71,000. That Allen C. Rush was worth \$74,000, with no liabilities. They were certainly entitled to a credit in the local banks of all they were getting—something like \$40,000. So it is not a matter of much surprise that they got the banks in the crash.

"About this time—December, 1892—the books of the firm showed their net assets to be something like \$88,000. It seems that they had asked the D. M. Sechler Buggy Company for an extension of their paper, and the firm sent De Golyer, one of the best experts in the country, out here to look at the books. He went over the books and stock, completing the work December 15, 1892, and reported the statement correct. This was fifteen days before the assignment.

"During the month of December they shipped many carloads of goods to various points in Iowa and all over the southwest. In most cases these consignments were made to the firm of 'Henning & Co.' Some of the goods went to traveling men. We have some interesting letters concerning the disposition of these goods that will be forthcoming at the proper time.

LEFT THEM PENNILESS.

"Allen C. Bush, the new member of of the firm, transferred his Pike County property on Dec. 29, two days before the failure, to Judge Orr and wife, both of whom have been garnished. On Dec. 26 he transferred his ranch in Missouri to a man named Ware, who is living in Chicago. In the statements made to the banks and commercial agencies, Rush was represented to have no liabilities at all. It now transpires that he is indebted to the amount of \$40,000 or possibly \$50,000 down in his district. I have interviewed one man from there. He was in the city a few days ago, and he had bills aggregating \$40,000 alone against Bush."

"Where is Bush now?"

"Well, suppose you tell me? The last account we had of him he was in Kansas, out of reach of our court officials, and we are inclined to think he will remain there.

"In the original schedule of assets filed at the time of the assignment, considerable stress was laid on the personal and real estate property of Mr. Kirkwood in Minneapolis. It now develops that this property is encumbered to nearly if not its entire value.

"As for Miller, citations were issued for him last Saturday night, and on Sunday he departed for Colorado. So you see not one of the three partners are in the jurisdiction of this court.

"The firm commenced business on a capital of \$13,000, and continued on the strength of wind and false pretenses. I regret that there are no adequate means in the present law to reach such cases as this. Our plan will be to show that a conspiracy existed, and to place the entire matter before the grand jury. It is not going to be an easy matter.

"I forgot to mention that out of an inventory of \$50,000 worth of goods, no less than \$20,000 are claimed as commission goods. That is to say, these goods are not the property of the firm. They were simply placed with them to be sold. The title to them was never relinquished by the consignors, but they are turned in as part of the assets. There are several petitions now before the county court asking possession of these commission goods, and the result of the hearing is only a matter of conjecture."

"I think the only course left open to the creditors is to try a forcible application of the conspiracy act. The law on the matter says: 'If two or more persons shall conspire together to obtain money under false pretenses, or to do an illegal act, injurious to the public trade, etc., they shall, on conviction of the charge, be liable to imprisonment not to exceed five years, and a fine not to exceed \$2,000, or both.'

A QUEER TRANSACTION.

"You will remember that a few days after the first schedule had been filed, an additional claim for something like \$5,000 came in for a carload of binding twine. Well, this car of twine was originally bought for March shipment, but at the urgent personal request of the firm it was shipped in December. We have found where they sold the greater portion of the carload of twine to Steve Bunn at about three-quarters of its value. That is to say, they stored the twine in a warehouse here, and sold the warehouse receipt to him. It is the same thing. This sale was made but a few days before the failure. Bunn gave them his check for the amount, but they did not pass the check into the bank. In that case, do you see, the amount of the check would have been passed to their credit. In order to get the cash, they sold Bunn's check to Tom Webb for the cash, and he turned the check into the bank and received his money all right.

"Now, to sum the entire business up in a few words, we have developed the fact that between Dec. 1, 1891, and Dec., 1892, assets to the tune of about \$117,000 have dropped into a hole somewhere. At least we are unable to find them."

"Do you suppose any one got them?"

"No, no," and he winked the other eye; "I think they went out for a walk and became lost."

The REFEREE has learned from another source that the liabilities are steadily increasing and the assets decreasing. The latter, says our informant, can not possibly exceed \$100,000, while at least double that amount is owing.

NO SWIFT FACTORY.

The Richmond, Ind., Enterprise Has Been Given Up.

For the present, at least, the Coventry Machinists' Company will not attempt to build Swifts in this country, the scheme to build a factory at Richmond, Ind., having fallen through. So far as can be learned it seems to have been a case of sour grapes on the part of one of the Richmond stockholders, M. C. Henley. The company had several offers of sites, among them one by Henley on the east side of the town and one on the west side. Henley's syndicate was to buy about 400 acres of land, give what the company needed free, and run in switches. The west side people offered land close to the railroad, within the city limits, and within a few moments' ride of the business portion. The latter offer Messrs. Marrett and Hill, "the English directors," thought to be much the better. They wanted to get what was best

for the bicycle company and not the land syndicate. The question as to the company's bad year had not been thought of except, possibly, as an excuse to kick over the traces. Anyway, when Henley found out that Marrett and Hill would not vote to go to the east side Henley said that he was through with the whole affair. Messrs. Marrett and Hill, not desiring to go on with dissatisfied directors or stockholders, voted to dissolve the company.

The west side people are now endeavoring to make arrangements to form a new company and locate the factory on the west side. But as the cost of building is so great now nothing definite will be done before fall, and in the meantime the several other propositions, some from other cities, will be considered.

The Bay City Bicycle.

In the building of the Bay City factory, says the Times, Henry B. Smith, S. M. Goodwin, M. F. Wilcox & Sons, and the few others who are interested, have moved cautiously and perseveringly, and it requires no experienced eye to see that they have builded well, and what they will do will redound greatly to the business advantage of Bay City in the future. The main building is 109x50 feet, two stories in height with solid brick walls and double trussed floor. In the northwest corner is a square-shaped room in which is placed a number of costly machines, especially designed for use in the manufacture of tools.

There are now in the factory, ready to be set in position, nearly thirty different machines.

In a building 30x30 feet north of the main building, is to be the blacksmith shop. A second story is to be erected and in this room the enameling will be done.

It will be fully six weeks before the National Cycle Works will be ready to begin operations. Before that time, however, the company expects to begin the work of bicycle repairing. It is the intention to remodel old machines and to make repairs of any kind desired.

The company has adopted the Morgan & Wright pneumatic tire and will this year produce a diamond frame machine.

A Northwestern Trade Association.

Representatives of W. R. Burkhard, M. F. Kennedy & Bro., St. Paul Hardware Company, F. M. Smith & Bro., C. W. Hackett Hardware Company, Northwestern Hardware Company, St. Paul; Snow Bicycle House, Smith & Zimmer, Kennedy Brothers, Pierson Hardware Company, Minneapolis and S. F. Heath Cycle Company, St. Paul and Minneapolis, met at the office of the latter last week and formed an association for the advancement of the interests of the trade. The officers elected were: Mr. Washburne of the Heath Cycle Company, president; F. M. Smith, vice-president; L. W. Zimmer, treasurer, and M. L. Merrill, secretary.

Many Using the Elliptical Wheel.

Mr. De Vore, patentee of the elliptical sprocket wheel and president of the Freeport Bicycle Manufacturing Company, while in Chicago this week, stated that twelve large manufacturing concerns had taken out licenses to make and use elliptical sprocket wheels, while four others had applied. The Freeport company will turn out 1,000 machines this season.

Will Handle the Crypto.

The McIntosh-Huntington Company has placed agencies for the Crypto geared ordinary as follows: Union Cycle Company, Springfield, Mass.;

# ESTABLISHED IN 1840.

To that vast army of cyclists reaching throughout America we cordially extend our greetings for the year; and with confidence and pride in our latest achievements we present to them, as models of speed, strength and lightness, the Lovell Diamond Cycles for 1893.

#### American Seddon's Tire Company.

When William Bowden had been in America less than ten days he closed an agreement of great importance, and which will result in the formation of the American Seddon's Tire Company. The deal was the result of an introduction to Sylvester G. L'Homedieu, of the Columbia Rubber Company, by a representative of the REFEREE. The amount said to have been agreed upon for the transfer of the American rights to the

new company is just double that reported in connection with the Airtite transfer, or \$2 0,000.

The American Seddon's Tire Company will be launched in a few days, the capital stock being, according to report, \$300,000. The Seddon tire is of the clincher type and is popular abroad. Two wires in the edge of the outer cover serve to hold the tire to the ordinary rim, each being fitted with a link and hook at the ends for the purpose of fastening the ends together, a bridge-piece (g) of metal being vulcanized to the edge of the tire at the point where the ends meet so as to allow a place of lodgement for the fasteners or hooks.

#### Joined the Liberty Force.

The all-round artist, Alexander Schwalbach, variously known as "Alec" and "Doc," has severed his connection with the Gendron Iron Wheel Company, which he served with a faithfulness which can not but meet with the good wishes for his future by his late employers. The Liberty people, through the alert Jake Bretz, secured a good man in Schwalbach, who is a walking cyclopedia of things cycular. He will talk Liberties with the same vim that he talked Gendrons for over two years, and will take charge of the Liberty up-town store at Central Park, New York. The genial "Doc" will take his family, consisting of wife, two daughters and a son, all cyclists, over to New York, after a residence in the city of churches of thirty-eight years.

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Anglinbaugh, patent attorney, Washington, D. C.:

- 490,495, tire for velocipede wheels; George D. Chamberlain, Springfield, Mass., assignor to the Warwick Cycle Manufacturing Company, same place; filed Aug. 10, 1892.
- 490,498, vehicle wheel; Joel H. Hendrick, Springfield, Mass., assignor to the Warwick Cycle Manufacturing Company, same place; filed Oct. 19, 1891.
- 490,450, cycle handle; Alexander Straus, New York; filed July 23, 1892.
- 490,587, velocipede; Francis P. McHardy, Chicago; filed March 11, 1892.
- 390,620, inflator for pneumatic tires; Seele H. Ellis, Waverly, New York, assignor to G. S. Scofield and F. M. Scofield, Greenwich, Conn.; filed May 29, 1891.

#### Big Demand for Dunlops.

The talk among cyclists and in the trade abroad is still of tires. The Dunlop people have, it is said, experienced an almost insatiable demand for their

new detachable tire, and all their factories are now working many hours overtime in the attempt to fulfill the orders they have received. The company is now engaged in building a factory in Germany, in order to meet the demand for its tires in that country. One firm of rim makers in Birmingham has received *carte blanche* to deliver as many rims as it is able to turn out between now and Easter, and orders for the wires and other materials have been given in much the same way.

#### Baltimore Dealers Organize.

At last the dealers of Baltimore have formed their association with a constitution and by-laws. Permanent officers have not been elected, however. The object of this combine is to protect one another from the sharp competition of past years. Dealers now offer a uniform price on second-hand wheels, and do not take them as part payment at all. Every dealer in town, with the exception of one, is in the combination.

#### Working Twenty-four Hours a Day.

At the tire factory of Morgan & Wright the molds are not allowed to cool, as night and day the work goes on with a full force at the benches. This popular tire of the season of '92 bids fair to surpass the past success in '93. The output for the present month will be very large. A complete set of tires is turned out, ready for delivery, every two minutes throughout the day.

#### Bornstein's Popular Wrench.

Henry Bornstein, inventor of Bornstein's improved pipe and vise wrench, manufactured by the J. A. W. Seaberg Machine Company, of Malden, Mass., is in Chicago this week. He received a number of orders early in the week for his wrench. This wrench is noted for its strength and is patented in America, Great Britain and Canada. The above company will exhibit at the World's Fair.

#### Chicago Trade in Brief.

O. Eggen, 681 Milwaukee avenue, has under way 500 machines of a Humber pattern.

The March-Davis Cycle Company has opened a temporary office at 96 North Clinton street.

Warman & Hazelwood have a large consignment of Lady Bird safeties in the custom house.

Two hundred and twenty-five complete rims and tires come from the G. & J. factory every day.

Four lines will be handled by the Taylor Cycle Company this season, Psychos, Tourists, Liberties and Rex.

The Charles H. Sieg Manufacturing Company, Chicago, has a couple of samples of the Falcon on hand.

The Charles H. Sieg company has secured the local agency for the Yost company's line of medium grade safeties.

The C. D. Hill Cycle Company closed with the Midland Cycle Company, Kansas City, for the state of Kansas, with an order for 100 Fowlers.

The Charles H. Sieg Manufacturing Company has started a factory in a small way for the manufacture of the Perfection repair kits.

L. B. Cox, manufacturer's agent for Stewart bicycle and athletic clothing, has removed from 152 Monroe street to larger quarters at 147 Fifth avenue.

A. J. Marrett, of the Coventry Machinists' Company, returned to Chicago on Thursday of last week. He brought back a collection of choice lantern slides of English cycling scenes and subjects,

with which he intends to entertain the members of the Lincoln club.

Gormully & Jeffery have recently shipped wheels to Japan, and received an order, accompanied by cash, from Russia, as a result of an ad. in a paper there.

The Quadrant Cycle Company will have its new store at 309 Wabash avenue completed in a very few days, when it will move from its present cramped quarters.

Harry Park, a track rider of considerable ability, at one time with the Siege of Pompeii, has entered the employ of the Henry Sears Company, whose bicycle department he will manage. Mr. Park is from Washington, D. C.

Business has picked up this week along cycle row. In a number of the stores sales of from one to five wheels were reported, and the dealers looked happy. All think the prospects for a large business this spring are most encouraging.

L. M. Wainwright of the Central Cycle Manufacturing Company, Indianapolis, was in Chicago Tuesday, when he disposed of 100 Ben Hur safeties to the Sieg company. This machine lists at \$90 with pneumatics. The Central company will turn out 2,000 Ben Hurs and 1,500 Centrals this season.

W. C. Anderson is not to enter the employ of the Indiana Bicycle Company, as was stated in a contemporary last week. An offer was made him, but A. G. Spalding & Bros. were loth to let him go, and held him to a verbal contract. Anderson has been with Spalding about three months. He returned last week from a trip in Indiana and Ohio with Credendas, and leaves this week to visit the jobbers in Illinois with the Victor line.

#### Miscellaneous Trade Matters.

A big exhibit of cycles is to be held at Paris in May.

The engagement is announced of Miss Rosie Stern to Joseph Goodman of Hartford.

Amos Shirley, New York, has given up carrying Humber, confining himself to New Howes.

Two new stores are being prepared for business on Broadway, near Eighth avenue, New York.

Harry Hanford has entered the employ of the McIntosh Huntington Company, for whom he will travel.

The Monarch agency for New York and Brooklyn has been placed with the H. H. Keffe Company of Broadway, New York.

The Surbridge Bicycle Works, at Cumberland, Md., have been temporarily closed on account of the bursting of water pipes.

J. C. Armstrong of Peoria had his King of Scorchers wheel, No. 22,267, stolen last week, and is offering a reward for its recovery.

The sacred precincts of Beantown will know Kirk Brown no more; he has gone to New York to push the Dunlop. The Du Cros boys have got him.

William West, late with the Kenyon Cycle Company, of Des Moines, has entered the employ of the Marble Cycle Company, at Plymouth, Ind.

L. C. Jandorf & Co., of New York, will handle eleven agencies this season, representing among others, the Raleigh, Smalley, Victor, Scorchers and Rudge.

In his century ride over the Elgin-Aurora course on New Year's day, A. H. Radell rode a 26-pound *Aeolus* racer fitted with Morgan & Wright racing tires. Radell weighs 180 pounds. The

road was in the worst condition the rider ever saw it.

The latest addition to the Monarch staff is F. W. Coulson, lately with Garford and the McIntosh-Huntington Company. He takes the road at once.

W. A. Shockley, the announcer, resigned his position last week with the Pope Manufacturing Company to accept Fred Patee's position with Rouse, Hazard & Co.

The Puritan Cycle Works of Portland, Me., writes that the name Puritan has been used by that concern for two seasons, and trusts that their right to the title will be respected.

A. A. Strauss, formerly with the New York Belting & Packing Company, will soon announce himself as an exclusive dealer in tires, and expects to place something good on the market.

C. E. Van Vleck, 310 Broadway, New York, has been appointed agent for the Sercombe-Bolte Telegram wheels for New York and Brooklyn. Other agents in New York city can get goods through him.

The REFEREE and all latest cycling papers, periodicals and hand books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—*Adv.*

The name of the Imperial Cycle Company of Portland, Ore., has been changed to the Pacific Cycle Company. It will handle among other wheels the Yost company's Falcon for Oregon and Washington.

Julius Andrae has the working model complete for a new ladies' wheel, which will be placed on the market this season. The frame is somewhat different from the ordinary. The weight will be limited to 32 pounds.

A report from Texas says: "The outlook for the trade the coming season is most encouraging. The wheels sold here are almost exclusively of highest grade. 'There's nothing too good for Texas,' is almost an aphorism."

M. G. Peoli, representing the Raleigh, is on the way to San Francisco, stopping en route at Omaha, St. Paul, Denver and Salt Lake City. He will return in time for the World's Fair exhibit, of which he will have charge.

A. M. Scheffey & Co., 92 Reade street, New York, are meeting with wonderful success in the sale of their Wynnewood bicycles, which, although ranking as medium grade, are finished up equally with many higher priced wheels.

The exports from England to the United States in cycles and cycle materials, for the three months ending Dec. 31 for the Birmingham and Coventry district, amounted to \$114,000, and about \$2,500 from the Wolverhampton district.

The Shaw Cycle Company, of Baltimore, has purchased the plant of the Clark Cycle Company and has had the stock removed to its store. With the addition of some special machinery and power it is enabled to do the best repairing and remodeling.

Charlie Price of Milwaukee, has allied himself with Van Vleck of 310 Broadway, New York, who will handle Raglans, as in the past, and Telegrams as a new line. Price will join one of the leading clubs in New York and will race under the club's colors.

W. M. Perrett has just closed a deal for the Bretz & Curtis Manufacturing Company whereby Quinton Scorchers will be handled in New England by Sidwell & Sabin, while the Buckeye Cycle Company of Cincinnati will look after the southern states. William "the an-

THE REFEREE.

nouncer" is now at Saratoga Springs, taking the water for his voice!

Fred Patee expects to be on the road to some extent for a couple of months and will then be "at home" in Indianapolis. It is said that Mr. Smith's primary object in securing Patee's services was to enable himself to take rest, made necessary by failing health.

The exhibition of saddles and sundries of J. A. Hunt & Co., Westboro, Mass., at the Philadelphia show was a decided success. Although this firm has been in market but a short time, it has stepped forward to take front rank as a manufacturer of cycle accessories.

Harry Nevill, representing J. K. Starley & Co., will, as soon as the tire-some New York custom house people let him, proceed westward, accompanied by J. K. Starley's beautiful Rover creation in safeties. The New York custom house has become worse and worse of late.

Elliott Mason, New York manager of the Pope Manufacturing Company, must be a mascot, for hardly a day passes in any kind of weather, and at any time of the year, that he does not record a few sales. Last week, with plenty of snow on the ground, he sold four Columbias.

Charles T. Buchanan, of the Toledo Bicycle Company, was in New York last week, and closed a deal with the Butler Hardware Company to handle the Dauntless in New York. The Dauntless should easily find its way into popular favor if the firm which has taken the agency pushes it.

Fenton Sanger-Fox, representing the Sercombe-Zolte company, Milwaukee, was cavorting around New York last week, and as is usual with F. S., he did something worth recording. He made a deal with Van Vleck, 310 Broadway, which amounted to the sale of several hundred Telegrams.

A rider who has figured often in central New York races writes to E. C. Stearns & Co. of Syracuse of his '92 Stearns: "I took it [his wheel] all apart, and I never rode a wheel a season and found the bearings in any better condition than they were; in fact the whole wheel is as good as the day it left the factory." Such unsolicited testimonials speak well for the Stearns.

Thomas O'Brien, a native of County Clare, will start on the road for Schoverling, Daly & Gales this week, his territory being New York and Pennsylvania. Mr. O'Brien has lived in New York for many years and is considered by "Barney" Whymper to be extra bright as a cycle drummer. The fact that he has had several years wholesome training with his house is an endorsement that he is "up to snuff."

The American Ormonde Co. has made extensive deals in the sundry line, and is prepared to talk large or small deals. Secretary Bridgeman is now taking a trip on the road, and President Willis says orders are pouring in from both him and the other travelers in a volume that bespeaks a successful year for his company. This concern is doing a splendid all-round business and is meeting with the cordial support of the trade in general.

President L. H. Johnson of the Premier Cycle Company is a Helical man these days—that is, he talks Helical tube from morn till night. That the Premier company will do well this year there is little doubt, and Mr. Hillman's new idea in tubing is likely to "catch on." The Premier cycle of '93, is the best thing the Coventry firm ever turned out, and it has turned out some pretty good things in the past. The Helical tubing makes a 28-pound roadster look quite 40 pounds,

| RESULT OF THE VOTE TO DATE OF FEB. 1:                                                                                                             |                  |                      |                |                    |                    |

but lightness with strength and graceful lines are the distinguishing features of this year's Premier.

Porter & Gilman will be the new agents to take up quarters in Cycle Row at the upper end of Broadway, New York, and will handle the well known Stover Bicycle Manufacturing Company's wheels for New Jersey, and act as joint agents with the Stover company in New York City. They will handle high grade wheels and sundries, and being young men of push will no doubt do credit to the Phoenix in and around New York.

THE VOTE ROLLING UP.

*Result of the Voting on League Matters Up to Date—Pros. Still Ahead.*

No startling changes have occurred in the voting on the questions submitted to the vote of the league members by the REFEREE. The postal cards are still steadily pouring in. We desire to remind those who have not already voted that the vote closes on February 13, and that supplies of voting blanks may be obtained at this office. A few opinions recently received are here given:

AGAINST PAYING EXPENSES.

MILWAUKEE, Jan. 16.—Editor REFEREE:—I see your efforts have been crowned with success. If race meet promoters have to pay racing men's expenses to get them to come, it is time the august racing board took a hand in the affair. Yours, WALTER G. NICHOLSON.

AN OLD TIMER'S OPINION.

BROOMSEDGE, Jan. 16.—Editor REFEREE:—I enclose a vote on the amateur professional business, though I am not a member of the L. A. W. I also enclosed one of your editorials. I certainly was surprised to see you call the old race meets of the time of Rowe, etc., and the meets of last summer "all amateur affairs." You know, and everyone knows, that the principal racing men of all those meets were no more amateur racers than Ben Butler was an amateur lawyer; and you know that without these men (or the promise of them), the meet did well that drew twenty people instead of 20,000.

Taylor boasted at Harvard last fall that he had made \$10,000 out of racing that summer—he was one of the stars at your "amateur affairs." The L. A. W. ought to drop racing altogether; it always did the league more harm than good. I suppose that you read the last few numbers in December of Harper's Weekly. What Whitney says is perfectly true, yet the ordinary man reading that account of the L. A. W. would set it down as one great fraud. W. B. GREENLEAF.

FAVORS CASH.

MANISTIQUE, Mich., Jan. 27.—Editor REFEREE:—In reply to yours of recent date, would say:

1. Anyone who races in the interest of a wheel or manufacturer should be barred from any race.

It is sport pure and simple, and we want not that with a string attached.

2. Yes; any legitimate merchandise or cash.

3. I should class as professionals all who could make a mile under 2:15, and grade them according to their speed.

4. Yes, as professionals—in union there is strength.

5. Treat all alike.

6. Their business as well as their full address.

While I do not approve of cash in every instance, yet it does seem unfair that many a worthy wheelman who cannot afford to travel over the country for real estate, etc., should be barred from many important races. Cash pays hotel and traveling expenses, then why not make "the long green" the prize? It is bosh to say that such would then be a farce. Put in honest judges and the public need not fear but that they shall get their money's worth. D. C. CURRIE.

A VOICE FROM THE COAST.

SAN FRANCISCO, Jan. 19.—Editor REFEREE:—I cannot say quite what I would like in the limits of your card, therefore write at greater length. The great difference between the two classes, amateur and professional, remains the same in all branches of sport. An amateur, as originally understood, is one who competes in various sports for the love of the sport, and who usually has some other means of existence. Men who, by reason of other occupation, cannot devote the principal part of their time to the particular sport in which they excel, cannot hope to compete with those who practically make a business of the sport, and as those who make a business of their sport are not usually satisfied with the triumph of winning, with its badge of little value, the line can be easily drawn at that point. Answering your questions:

1. No; for an amateur let a man's own bona fide club (if he has one) pay his traveling expenses only, for competition at distant points. His other expenses of living must be paid by himself anyway, wherever he may be, and the extraordinary expenses of preparation for the competition are the sacrifices the amateur sportsman always makes.

2. No; for the reason above stated.

3. There can be no middle class; a man is either amateur for the sport alone, or he is in it as a business, and it is as much his profession as law, medicine or any other branch of gain.

4. If respectable men adopt any sport as a profession, it is as respectable as any other profession, and they should be admitted to league membership in order that the league may exercise a supervision and control and keep the profession pure. The various bar associations among lawyers, and medical societies among physicians are fair comparisons.

5. For the above reasons, make the professional prizes cash. It is cash or its equivalent that is wanted; therefore give the winners the cash and let them expend it for any equivalent they wish. Not all the young gentlemen who have won so many pianos are capable of running a young ladies' seminary, and that is about the only place which will absorb an unlimited number of pianos. Many of the other prizes are equally absurd, and are competed for on account of the cash value they represent.

The above is the only proper solution of present conditions. A man may remain an amateur as long as he is satisfied with the condition, and graduate into the professional class without loss

of respect when he cannot afford to remain an amateur, or when he thinks he is fast enough or when he prefers to make it a business. A middle class cannot be entertained. They would not be recognized by any other branch of amateur sport, and any amateur competing with them would also lose his standing.

GEORGE H. STRONG,  
Chief Consul California.

Want Official Recognition.

On behalf of the L. A. W. and the National Association of Amateur Oarsmen, A. G. Spalding has appeared before the executive committee of the World's Fair and asked for the official recognition of the fair management. He requested that the fair managers award suitable medals to the successful competitors.

C. W. Davis and Miss Ballard Married.

The marriage of Cyrus W. Davis, one of the Chicago Cycling Club's prominent racing men, to Miss Estelle J. Ballard, a sister of E. W. Ballard, also a well-known racing man of the Chicago C. C., took place Wednesday evening at the home of the bride's mother, Mrs. Dr. Ballard, 99 Thirty-seventh street, Rev. Mr. Grannis of the Duncan Avenue Congregational Church officiating. Only the immediate friends and relatives of the contracting parties were present, and after the usual congratulations and a wedding supper, the bride and groom left for their new home at Windsor Park, which has been nearly furnished from the gifts of friends. Among the many presents were two—a piano lamp and a handsome chair—from the clubmat's and cycling friends of Mr. Davis.

A EUROPEAN TOUR THIS SUMMER.

A WORD TO THOSE INTERESTED.

I have laid out a tour through certain portions of France, Switzerland, Germany and Holland this summer, that, in my judgment, offers more for the money and time required than any yet planned by me. I shall start from New York early in June and shall be away about seventy-five days. The cost of the complete round trip will be but \$300. I will make arrangements for twenty people—no more. I shall be pleased to send more extended information. F. A. ELWELL,  
152 Pearl St., Portland, Me.

Pneumatics Applied For \$20.00.

TAKE out your wheels, crate securely and ship to us by express prepaid. We will apply Standard Make Pneumatic Tires, either single or double tube, in A 1 steel rims for \$20 per pair; frame spreading and general repairing done at proportionate prices; these are Snow-On-The-Ground prices, but our name is guarantee of work and material offered. W. W. STALL, 50 Tremont street Boston.

Another Great Test  
HAS PROVEN  
**THE SIMONDS  
BALLS**  
TO BE  
The Best in the World.

---

Read the following letter:

MILWAUKEE, Wis., Jan. 21, 1893.

SIMONDS ROLLING MACHINE CO.,  
Fitchburg, Mass.

GENTLEMEN:—For the past three months we have been testing the different makes of balls, and it gives us pleasure to inform you that the balls manufactured by you **run truer to size and surface than any of the other makes.**

We have tested them with the ball testing machine made by us and exhibited at the Philadelphia cycle show, and can truly say **they beat them all.**

Enclosed please find order for balls enough for 1,500 machines, which will be about one-half of the amount we shall need the coming season.

Very truly yours,  
SERCOMBE-BOLTE MFG. CO.

## RECENT ENGLISH INVENTIONS.

## New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Dec. 14, give notice in the prescribed form of such opposition.]

## A CHAIN CASE AND LUBRICATOR.

No. 19,933. H. French-Gillman's "Automatic lubricator and other improvements in cycle gear boxes." Nov. 5, 1892.—This invention is designed to operate in an air-tight cycle gear box as described by the applicant in his specification No. 15,338, and is intended to avoid the tediousness of oiling each link of the chain separately, by using an automatic lubricator, the same being fitted preferably

over the back chain wheel. The lubricator is constructed of a metal cylinder fitted at the top with a disc having a hole in it closed with a screw cap. A similar disc is fitted in the lower part of the cylinder having a hole in it and a tap (A) fitting the hole. The tap is turned by a wire (B) which passes through the cylinder and out at the top and is bent over to form a handle, and an indicator showing on the scale how far the tap is open. A cap (H) is hinged to the top of the cylinder. The bottom of the lubricator is provided with a hollow cone (G G) and in the cavity thus formed is placed a piece of sponge which allows the oil, with which the lubricator is filled, to drop onto the chain. The lubricator is filled with oil by removing the screw cap (D) and it is attached to the machine by the screw thread (F F). A perforated metal cap may be used instead of the sponge, and various other modifications may be made.

## THE PREMIER HELICAL TUBING.

No. 82. W. Hillman's "Improvements in the construction of velocipedes." Jan. 2, 1892.—The invention relates to the frame, seat pillar, handle-bars, cranks and other parts (excluding the wheels) which have heretofore been made of tubing or of rod metal, and consists in the employment in the construction of such parts of either parallel or tapered tubing formed of sheet steel, preferably of the character known as "crucible cast steel," it being essential that the steel employed should be of a high quality, such tubing being formed by coiling a length of such sheet metal of the desired width around a mandrel in such manner as to obtain an overlapping of the metal all along the joints of the tube, and soldering or brazing the joints at the ends and, if desired, at intervals, or all along the length of the tube.

A convenient method of making such tubing is to take a length of sheet steel of the required width, cut off one corner thereof at the angle required for the pitch of overlap to be used, and then to place such inclined corner in a groove formed in a mandrel, which is caused to revolve between a pair of adjustable jaws.

The mandrel lies between the jaws and the latter are adjusted to be a short distance clear from the sides of the mandrel, according to the substance of the metal used and the pitch required to be given to the coils. By rotating the mandrel the strip of sheet steel held at one end within the groove, is coiled around the mandrel, so as to form a tube with the edges of the steel strip overlapping each other to any required width.

This partially constructed tube is then secured by passing over it a clamp of the size required for the finished tube, which clamp, when the jaws are opened, will permit the tube to slightly expand and thereby free it from the mandrel, from which the tube can be removed. Or the ends of this partially constructed tube can be temporarily secured by means of rings passed over the same.

If desired, after removal of the tube from mandrel, it may be again twisted so as to regain the twist lost in removal from the mandrel and thereby obtain a tube as stiff as possible. In some cases a bush is secured in one or both ends of the tube, but where the end of the tube is to be placed in a socket the bush may be dispensed with.

The width of the strip of sheet steel and the relative pitch employed in coiling up the same are such as to secure an overlapping of the metal all along the joints of the tube and, in the case of cranks and handle-bars especially, the width of the strip of metal may be made so great as to make a tube of some considerable taper and consequently having a gradually increasing number of thicknesses from the smaller to the larger end thereof, or for a certain distance along the same. For cranks' solid ends, one bored and the other

slotted or bored as usual are secured to the ends of the coiled tube. For pedal-axle brackets a strip of metal is coiled up in a parallel direction

and the outer edge brazed along the tube thus formed. The frame tubes are secured to the bracket by sockets or otherwise. The illustration shows the tube (p) having collars (o) on its end prepared for brazing by the application to the interior of each end of an expander tube provided with dogs (q1) which, by means of the taper plug (q2), are forced outwards so as to firmly grip each end of the tube (p) between the dogs and collar. After both ends of the tube have been secured in the above or in any other convenient manner, the tube is loaded with a sufficient quantity of borax and splter, or other brazing or soldering materials placed within it, and it is then put into a muffle and submitted to such a heat as is sufficient to effect the brazing of the joints of the tube without injury to the character of the steel. If desired, the outside of the joints may be soldered or brazed.

## The American Rudge Factory.

The Rudge American branch factory at Peoria, which is illustrated herewith, consists of three stories and basement, with two wings, each two stories and basement. The location is on one of the bluffs overlooking the city and is reached by the electric cars, which cover the dis-

tance between the factory and the business centre of the city in fifteen minutes. The factory is already equipped with fine machinery, and additional machinery will be purchased as fast as needed. Rudge bicycles are now being turned out in the new factory from the finished bearings, forgings, etc., imported from the parent factory. Besides the Rudge, the Sylph and Overland cycles are made here.

## Cold Drawn Steel Tubes.

The manufacture of steel tubing has become an important branch of the cycle making trade in America. A number of factories are already in operation. English makers have a great reputation for this class of tube, but good tubes are already being made in our own country. The method of manufacture is simple enough if plant and tools of the best description are obtained. Most important improvements have been recently introduced into machinery of this description by a well known firm in Birmingham, Eng., Samuel Fisher & Co. Perhaps prospective tube makers will make a note of their address?

## Will Make the Lincoln.

The Radell Cycle Manufacturing Company has located at 14, 16 and 18 North Lincoln street. This company will manufacture the Lincoln safeties, do a large amount of repair work and manufacture rims. The Lincoln cycles are light weight, high-grade machines, containing no forgings or castings in the frame. Tubing only is used, being doubly brazed at the joints.

## March-Davis Burned Out.

Saturday morning last the building at 62 South Canal street burned to the ground. The March-Davis Cycle Company occupied the third floor and lost everything, the loss being reported at \$10,000. Preparations to begin operations at another location were commenced at once. The loss was fully covered by insurance.

## THE BEST OILER

In the world is the "Perfect" Pocket Oiler. Why? Because it does not leak, and is the handsomest and handiest oiler made. With this oiler it is an easy matter to oil your bicycle properly without covering yourself and the machine with grease. Price 25 cents.

HALF  
SIZE. CUSHMAN & DENISON,  
172 Ninth Ave., N. Y.

## HOLDERS.

To carry above oiler on a bicycle—No rattling—Easily attached to any wheel. Price 25 cents each. Handsomely nickel plated. Large size holder to carry a pneumatic pump at same figure (25 cents).

Cushman & Denison, 172 9th Ave.,  
New York.

## THE RED STAR SOLID ILLUMINANT

## FOR BICYCLE LAMPS.

A solid compound that will not leak or spill but stays where it belongs—in the lamp.

If you want a clean lamp, clean clothes and a clean machine. USE IT. There is no use telling you what a nuisance your lamp HAS BEEN. Use our illuminant and forget about the past. Price 50 cents per can.

THE RED STAR CHAIN LUBRICANT will also save you trouble. It is put up in stick form, very handy and convenient. Price 25 cents.

THE RED STAR LUBRICATING OIL is made especially for ball bearings. Price 25 cents per can.

For sale by all dealers. Samples sent on receipt of price. Send us a postal for our little folder.

## WANTS TO BE DIVIDED.

*California Seeks to Be Made into Two Divisions.*

LOS ANGELES, Cal., Jan. 22.—Editor REFEREE:—Are you going to the constitutional convention to be held in Philadelphia, Feb. 21? A California representative will, in all probability, be there with a proposed amendment to the constitution of the L. A. W. At any rate, California wants herself divided into two divisions, be it "fer th' askin'," or through a constitutional amendment. At first blush this is a little startling, coming as it does right in the midst of the "burning topic of the hour," i. e., the amateur question.

To us, of California, the separating of the state into two divisions is all-important, for league affairs in the southern portion of the division are in a state of innocuous desuetude (with apologies to Grover) and will so continue until it is practicable for a member to attend meets held in his own state.

The map of the United States does not convey much to the casual observer as to the size of California. "It looks large on the map," you say. But "large" is indefinite. Let me give you a few comparisons. California is larger than all of the New England states, New York and Pennsylvania taken together, its length being nearly 800 miles! A circle of eighty-five miles' radius from San Francisco includes all of the principal cities and the majority of the league membership in northern California, and all of the localities in which race meets can be held. A circle of the same radius from Riverside includes the principal cities and the bulk of the league membership in southern California. Between these two centres there are 150 miles of desert and mountains. The distance from Riverside to San Francisco is 550 miles, and the round trip fare \$35.

You need not be an expert mathematician to discover that a meet held in San Francisco, San Jose or any of the northern cities cannot be well patronized by members residing in the southern part of the state. 'Tis even so with a meet held in southern California. At the state meet, held in Los Angeles several years ago, there were four members from the northern part of the state who attended. What is the cause of this? Distance, time and expense.

By way of illustration, suppose that a division existed on the Atlantic coast as long as California. If you were a member of that division and resided in Boston, Mass., do you think you would attend many meets held in Richmond, Va.? (About the distance between Riverside and San Francisco.) Or, if you were a resident of New York City, would you not scratch your head at the idea of making a trip to Columbus, O., to attend a race meet? Come farther west. Even if you had a straight-away track from Chicago to Topeka, Kan., don't you think that it would be an impracticable distance to travel to division meets? That is our case exactly. We are as far separated from the northern circle centre as a member in Boston, Mass., is from a member in Richmond, Va.

This is not a sectional fight, as the movement has the endorsement of the California division board of officers, all of whom, with one exception are residents of the northern part of the state. They recognize the fact that it is in the best interests of the league, as it is only the fact that the members in the southern portion of the state hope some day to divide the division that keeps them members of the league.

The southern California division would comprise the counties of Los Angeles,

Orange, San Bernardino, San Diego, Ventura and Santa Barbara, the length being about 300 miles, with an average width of 150 miles, containing 44,901 square miles. The states of Delaware, Connecticut, Massachusetts, New Hampshire, New Jersey, Rhode Island and Vermont could all be placed within the boundaries of southern California and still leave 1,154 square miles to spare. The state of Pennsylvania would only be 314 square miles larger than the southern California division.

To briefly sum up the benefits to be derived from dividing the state into two divisions, I present the following:

1. It will increase the league membership.
2. It will advance interest in race meets by making it practicable for all members of each section to attend the division meetings, which is now almost impossible by reason of the distance, time and expense.
3. It will assist the cause of good roads by making it possible for members to tour to the meets. SHEW.

## "THE PUSH" AND THE CLUB.

*"The Colonel" Thinks the Former Will Surely Kill the Latter.*

After a careful pursuance of a recent article in the REFEREE, which might be called the rise of the cycling clubs, I could scarcely refrain from giving a thought as to what the fall will be, for fall they surely will, and it won't be many years before the fact that a man owns a bicycle will be no more a reason for his entering club life than the possession of a horse is to day. The days of big meets and big clubs are rapidly on the wane, and I think the chief cause of this is the rowdy actions of the so-called "push."

Last year, when we returned from Washington, the cycling papers gave considerable space to the badge fiend, and he, poor fool, was derided and decried as a menace to cycling. A far greater evil, however, was merely winked at by the scribes and allowed to pass without comment. To illustrate. When we arrived in Chicago and assembled at the club house one of "de push" opened his grip and produced a silver cream pitcher, three or four silver salt and pepper boxes, spoons great and small to the extent of a dozen or more, a few forks, a pair of pickle tongs, some napkins and a bronze statue from the top of a mantel clock. A number of others stood around and laughed and told about what they had secured, until a stranger might have imagined it to be the home-coming of a band of plunderers instead of a few members of one of the best known clubs in the cycling world.

A rug taken from the floor of a Peoria hotel is proudly pointed out by the members of a certain club. A well known possessor of a world's record and a few national records has furnished his table with a holder full of spoons bearing the marks of various hotels and restaurants all over the union. He defends himself by stating that the hotels expect it and set aside a certain amount each year under the head of "souvenir fund." I have heard them laughingly tell of how they tipped up the sleeper coming home from Washington, and how they demolished the furniture at Rockford, but I think the most flagrant case I ever heard of was that of the president of a large cycling club, and one of the best known men in cycling and trade circles, and the treasurer of the same club, who occupied a stateroom on a wheelmen's excursion and left it in the morning in such a filthy, wrecked and depleted condition

## AMERICAN SKILL BEATS the WORLD.

But we are not going to make a long story of it; it needs no argument for the most of us. Look at the cycles made in this country to-day, compare them to all foreign productions in every detail, if you will, and then let the American Eagle shriek while the wheels of industry hum.

But why not put American Tubing on them? Possibly you did not know it; then we will tell you. You can now get what is considered to be THE BEST COLD DRAWN SEAMLESS STEEL TUBES EVER PUT IN A CYCLE. Such Tubing! To say they are unparalleled don't half tell it all. Why, thick walls on a tube don't make it strong. It's the stuff that's put in 'em, and the process of making that weaves the strength in them. Thick walls on a tube make weight—just what you want to avoid. Strength and lightness is what you have been reaching for. Can we do it—well, try us. Yes, any size, from two inches in diameter down as small as a human hair. Hollow wire if you need it.

If you will tell us your wishes, and say quantity wanted, and sizes, we will cheerfully send you prices of the best tubing on earth.

that they were afraid to return the next evening by the same boat.

It must strike the average mortal as strange that a person who, under ordinary circumstances is a royal good fellow and accepted by polite society as a gentleman, should, when he dons the cyclist garb, so far forget himself as to commit deeds that if some people should commit would lead to their arrest. But under the garb of respectability they are suffered to continue unmolested.

Gentlemen, it can't help but be apparent to you that a continuation of such conduct will very soon bring a retribution for the sins of a few on the heads of the many, and the wheelmen, who have proven themselves the jolliest and most sociable combination that can be got together, must gradually disband because men with self-respect and brains will not long continue to link themselves with any organization that in any way reflects on them in any manner.

THE COLONEL.

## THE COLOR LINE.

*If the League Admits Negroes, the Southern Whites Will Step Out.*

Editor REFEREE:—I was sorry to see the fling in the REFEREE of Jan. 14 at the white wheelmen of the south who are at this time making a most strenuous effort to have embodied in the L. A. W. constitution a clause prohibiting negro membership. I did not see the REFEREE's fully-expressed opinion published previously and referred to in the above mentioned paragraph as having remained unanswered. I very much desire to say that the L. A. W. must perforce be a social or business organization. In the very nature of things it must be one or the other or both. I am a straightout Republican of the most uncompromising cast; I came of the old stock that made the United States possible and who later on made its indivisibility perpetual. I say this much to show my right to talk freely about this question. Since every possible precaution has been thrown around the league to insure its freedom from professionalism, it stands to reason that it must be a social organization. The negro never has, never will, and never can be the social equal and club companion of the genuine white man. I, who know the race in all its weaknesses and peculiarities, can hardly understand how an American citizen can fail to know the truth of the above.

Again admitting a false condition for the sake of argument, suppose he is worthy of being the companion, escort and visitor to the homes of the white people, would his accession to leaguishness add anything to the pleasure or influence of the league? Quite to the reverse; it

would detract from the dignity of the organization. All over the south, wherever mixed organizations have been tried, the negro has disgusted the white element, and the segregation has left the organization entirely in white or negro hands. No more pitiable instance can be cited than that of the Republican party of the south, whose latest feat of foolhardiness was to cause the nomination for presidency of a man to whom they could not give an electoral vote, and who was so unpopular in Republican states that there they would not accept the unwelcome thrust. Nowhere in the north that I have ever been did I find the negro the recognized equal and companion of respectable white people, and for those people who have none or at most but few negroes to deal with, to desire to force upon us a membership which they would not endure, is in exceeding poor taste. I have said this much in kindest argument. Now one more word. I know the feelings of the southern wheelmen, and if it comes to a final test and the negro is forced in, *nolens volens*, the southern whites will go out. This is not a threat, but a cool statement of a plain fact.

If the League of American Wheelmen desires to trade off the southern contingent of something like six thousand, the pick and cream of southern wheelmen, for a few negroes, and let the good name of the league become a laughing stock so far as the south is concerned, it has only to force the negro question. I was born and raised in the south, but I am not a stranger to any section of the union, and when I state the above facts I do so that the statement will be weighed, for, though a recent accession to the league, I am not a new hand in the fight it is making all along the line of wheelmen's rights, and I love the league and would most bitterly regret to see so poor a trade as the giving of our southern contingent for a few scattering uninfluential negroes. The truth to tell, the negro is not a wheelman, to begin with. We have in Dallas some five hundred wheelmen, and not a negro among them. The Dallas Wheel Club has settled the race question so far as it is concerned, both individually and collectively, and I believe the same is true of all other clubs in the state. The league has some 250 members in Texas. In all the state there are not fifty adult negroes who own or ride wheels. Every reader can see wherein further discussion is unnecessary. Very truly,

T. B. McCRAW,  
President, Dallas Wheel Club.

*Will Tour to Chicago.*

A number of people are arranging a party to tour from Dallas, Tex., to the World's Fair. The start will be made in May or June.

## WILL THE BOARD BE SUPPORTED.

Only ten days have yet to elapse before the constitutional convention assembles in Philadelphia and decides what shall be done with the racing men during 1893. It has been generally supposed, we believe, that the recommendations of the racing board would find favor, and that the passage of the amendments proposed were almost certain. The more we hear the matter discussed, however, the more we believe that the proposal to divide amateurism into two classes—in other words, to place semi-professionals in class B—will meet with stubborn opposition. Whether that opposition will outweigh the recommendations of the board, however, is quite another matter.

We have heretofore maintained that if we are to have any division at all, the names of the classes should be entirely distinct—that the middle class, the makers' amateurs, should be called promateurs, that there may be no misunderstanding as to the position they occupy. One of the principal charms of being a white man is the right to be called a white man, and we can see no possibility of a distinction among amateurs. A man is white, or yellow, or black. If he is yellow he can not be "white, class B." He is yellow, and any coat of whitewash which may be applied will wash off in time, the yellow streaks will show through the calomine, and the pursuit of the yellow metal will continue to be his aim in life just the same. We can not take a mongolian and class him with white men, even though we label him with a big, big B. Why? Because white men would raise too strong an objection. All this, with due apologies to members of the promateur class who will no doubt, for the sake of the argument, forgive the somewhat uncomplimentary, but, we think, forceful simile. But there are difficulties standing in the way of calling these men promateurs. An alliance has been entered into with the Amateur Athletic Union, one of the terms of which is that the union shall accept the league's definition of an amateur. Union officials, we understand, have stated that they would continue to recognize as amateurs the men placed in class B; but call them promateurs, and they at once cease to be members of A. A. U. clubs. Another and greater difficulty, however, is met with in dealing with the international championship

question. Under the rules of the recently-formed association "class B" would be eligible to compete. Promateurs would not. This is a case where "the rose by any other name" would not, etc. The meeting will therefore be called upon to adopt a strict amateur rule, a promateur class (the only honest way out of the difficulty) or class B. We regret to admit a conviction that the latter will prevail—not because the members will consider it the most desirable thing, but on the ground of expediency.

## TROUBLES OF IMPORTERS.

As we have previously noted in these columns, one of the great bugbears with which the importer of cycles has to deal, is the custom house. The necessary delays of clearance, however, are but an item among others. The greatest difficulty with which one has to contend, is to satisfy the appraisers that the goods have been properly invoiced. Serious differences of opinion between the appraiser and importer are of frequent occurrence. From the value set upon the stock by the appraisers there is absolutely no appeal. The question cannot be carried into court. Furthermore any house whose importations are listed at a smaller value than the appraiser considers correct, is liable to a heavy fine. It may interest many to know that one house—a house, too, which would not be intentionally guilty of wrong-doing—paid no less than \$35,000 in fines alone last year.

Under the conditions on which goods are admitted the importer is forced to make affidavit that he will sell his goods to everyone at the same price. In other words, he is required to swear to a formal lie. Only recently a custom-house official said to an importer: "Will you sell to everyone at this price?" Of course the importer replied that he would not. "Then why do you swear that you will?" "Simply because you force me to." The fact is that the custom house officer knows as well as anyone when the importer makes the affidavit that the clause in question is a matter of form which it is not intended, on either side, shall be carried out.

## BE EXPLICIT.

The cycling press indulges too often in generalities. It praises or condemns a person or contemporary in such general terms as to leave the reader in doubt as to what particular person or contemporary is referred to. This should not be. We are willing to give credit when due and to leave no wrong impression in the mind of the reader when censure becomes necessary. A man who had accomplished some great feat would find small satisfaction in the announcement that "a member of the So-and-So club had accomplished," etc., while that same club should not be condemned for the action of one member who had gone astray. It is not fair to refer in a general way to "one of the cycling papers." Let us all be more explicit, and, possibly a little more generous with our italics—that is, such of us as use them!

## THE SHOW OF 1894.

A year has elapsed since the REFEREE solicited and published the views of the cycling tradesmen of the country on the subject of a trade organization and the questions whether one or two shows should be held, and where. Many of the principal trade men, believing all the questions to be of importance, gave us their views in detail, a majority favoring one show, held east and west alternately, and being strongly in favor of a trade association. A contemporary is now going over the same ground and will

doubtless arrive at the same conclusions. Still nothing has been accomplished. Some of the leading houses feel that no benefit could accrue to them from the formation of an association. The smaller concerns fear that, should a proposition emanate from them, the large ones would hold aloof. There would be a variety of opinions as to the objects of an organization. One concern interested in maintaining prices, thinks a trade organization should aim to prevent price cutting. Another, whose policy it is to list wheels at high prices and offer large discounts, objects to this, and would probably evade any agreement on the point, anyhow. A third thinks it the duty of the trade to take care of its own interests in the matter of shows, etc., while a fourth thinks that such matters are better intrusted to others. We incline to the belief that no permanent organization will be formed at present.

But this is no reason why the promotion of a show by the trade in '94 should not be properly considered. The formation of a permanent organization for this purpose is not essential. During the coming summer the leading manufacturers will assemble in Chicago on more than one occasion. If at one of these times a dozen of them would agree to discuss plans for a show in '94 the promotion of such an event could probably be arranged. Many, possibly, can see no necessity for this, believing the Philadelphia management capable of continuing to conduct an annual show successfully. In this they are right, but it is reasonable to expect that some other section of the country should be given a chance. No other association has shown a disposition to follow the lead of the Philadelphians and offer its services and it therefore seems likely that the trade must assume the responsibility or continue to visit the Quaker City indefinitely. The World's Fair season offers opportunities for gatherings of many kinds. Why not make it a point to give to this important question the consideration, which, all will agree, it deserves?

## DIVIDE CALIFORNIA.

Californians seek to have their state divided into two divisions, and Vice-Consul Thayer is now in the east laboring among the delegates to secure their votes for the proposition. No fair minded man could vote against the division after hearing Mr. Thayer's convincing argument, the gist of which was published in Shew's letter to the REFEREE last week. The California league members want division, as will be seen by the following from the *Turf* of Jan. 28:

The vote on the proposition to form two divisions of the L. A. W. in California, which closed on the 30th inst., brought out only twenty-one votes opposed to separation. These came mostly for some unknown reason from Fresno and vicinity. Only 299 votes were cast, of which 275 favored separation, two indicated no choice and two were negative. The vote was not so large as the friends of the measure desired, but they are at least able to demonstrate that there is practically no opposition thereto. The next move will be on the constitutional convention to be held on the 30th inst., when an amendment will be urged permitting the separation of the counties of Santa Barbara, San Bernardino, Los Angeles, Ventura, Orange and San Diego and their election into a division of the league to be known as the Southern California division.

Mr. Thayer's chief argument for division is the fact that all the wheelmen in the northern portion of the state live within a circuit whose radius is eighty-five miles from San Francisco, while a circle of the same size, with Riverside in the center, contains all the wheelmen of the southern portion, and between the two circles is a desert several hundred miles long. On account of a twenty-two hour ride from one portion of the state to the other, and a \$35 fare for the

round trip, to say nothing of the wearisome journey, members in one portion do not attend meets held in another, and their interest is lost. There isn't a particle of doubt that if two divisions be made of California, the league will gain several hundred good members.

WE feel called upon to state that a number of attacks recently made on this paper by the *Bulletin* are unwarranted, and that some of its statements are not borne out by facts. We have sought no quarrel with that journal, nor have we, unless one or two of our humorous cartoons have been taken to heart by its editor, given any cause to that gentleman to apply to us some of the unseemly adjectives which have recently graced his pages. In view of the fact that the REFEREE was the first to speak its mind in favor of the paper we consider these attacks at least in questionable taste.

In a general way we agree with the tone of the *Sporting Life's* article on "the official organ of the L. A. W." But we cannot admit that "the present one is far and away the best the organization has ever had." Some highly-treasured samples of the *Bulletin* of Aaron's day forbid.

SOME of our contemporaries have just announced, with a flourish of trumpets, that Mr. Spalding denies that he is interested in the cash prize league! The fact that Mr. Spalding had so declared himself, was duly chronicled in the REFEREE five or six weeks ago.

## Relay Rides at Wholesale.

Mr. Billingsley of Springfield, vice-consul of the Illinois division, has become a promoter of relay rides on a large scale, and proposes to conduct them in such shape as will make them interesting because of their competitive complexion. His plan can, perhaps, be best described by quoting a letter just received from him. Here it is:

SPRINGFIELD, Ill., Feb. 7.—EDITOR REFEREE:—I am arranging for a series of relay rides from Springfield to the capitals of the different states bordering on Illinois, to take place as early in the spring as the state of the roads will permit, and to be ridden on the same day, starting at the same hour. The object is to stimulate recruiting for the L. A. W. It is proposed to manage the entire business by members of the L. A. W., and to make it as dramatic as possible—using local riders and having the local papers talk it up as much as possible, giving the names and other information about the men who will ride through their vicinity.

I have corresponded with the chief consuls of the other divisions, and the promises of co-operation are gratifying. It is proposed that the Illinois men will leave the message at the state line of the other states, where the men of the other divisions will receive and rush it through to its destination.

I am getting on well with the details in Illinois. If this proves to be the success I hope and expect it will, I will then arrange one from Chicago to St. Louis and from St. Louis to Chicago on the same day, and to start at the same hour—a la the Berlin-Vienna horse race.

Mr. Billingsley should and doubtless will receive the cordial support of riders and the press.

## Where Is He At?

The new manager of the Liberty uptown store in New York, no less a personage than Alex. Schwalbach, says that the amateur next season will be in about the same predicament as the pug dog that a negro threw aboard the express car of a moving express train in the south recently. The train was moving out when an almost breathless negro rushed into the depot and threw the dog aboard. "Here, where does he go to?" shouted the express agent. "Don't know; he's dun gone and eat his tag," returned Sambo. So this year, for lack of a tag, the festive amateur won't know at what station in the racing game to get off. He will have either lost or chewed up his tag.

### French Professionals.

A number of the French riders have signified their intention to come over here and take a crack at the cash prizes. Among these wheelmen are Terront and Corre, the fastest in France. If they come they will bring their own wheels, fitted with Burris-Michelin tires.—N. Y. Recorder.

The above is simply a little anticipation, which may, however, come off, as the fastest of the French riders believe in francs pure and simple when they race. The French professional is much of a gentleman, and would be a credit to the cash prize riders who will struggle for the dollars in America. The French professional is always "a tryer" and goes in to win every time, let the prize be gold eagles or a ribbon, and there the true spirit of the sportsman comes in. In all the writer's experience with French professionals (and several of them rode under his management in many races) they always behaved themselves as gentlemen. A dozen Frenchmen give less trouble than one English or American rider. The French rider who happens to visit America will find a warm friend in Elliott Burris, who introduced the Michelin tire to this country, and who is well acquainted with Frenchmen and their gentlemanly deportment. Welcome the French rider to America, be he amateur or professional.

\*\*\*

### A Dissertation on Amateurism.

A man prominent in the councils of the N. C. U. and one of the greatest advocates of pure amateurism in England writes our eastern representative as follows:

"As far as this country is concerned you are on the wrong horse, and while you allude to the payments you get for your brain work as cash prizes, you do not deceive this child. I know that you know better and can draw the line between being paid for mental or muscle work. Moreover, though it is apparently the business of certain outsiders in England to fling all the mud they can, we are really stronger in amateurs pure and undiluted than we have ever been. The day we draw our lines tighter we shall have a large accession to the path racing contingent. Of course these are wrong lines. When you see men in high places and in all grades of society go utterly wrong how can you expect Edenic purity anywhere? That is bosh—but not greater bosh than some people talk about amateurism. The inherent weakness of your position is this—nothing can kill amateurism. Theorize as you like, once a man crosses the line he is *outside*. Thus our Australian and French friends are very sick at not being allowed to meet English amateurs, and if you wipe out every amateur to-day a new lot will arise to-morrow and simply begin again.

"The wisest thing that has been said on the subject was said by someone your side: 'Disvisible prizes inevitably lead to crooked racing.' In Australia professional sprint running, once as popular as horse racing, is as dead as Pharaoh's mother's memory, by reason of crooked racing. Money prizes and no definition would wipe out cycle racing here and in America as effectually as professional cycle racing has been wiped out. It is dead with you and nearly dead with us,

and don't you forget it. If I am the last amateur left I will undertake to re-create amateurism in three years. That is the beauty of the whole thing and therein lies our strength, your weakness, and you can't alter it—thank goodness!

"I am glad to hear news of Zimmerman. He is a remarkably fine racer. Our riders were most distinctly below the average in '92. When you have fifteen or twenty riders, all of whom may fairly be put on scratch, it is clear you have not a *real* champion, though an average lot. Osmond at his best would have wanted a lot of beating. However, it is good for the sport to have such ups and downs, and at every athletic game every country has its 'bad time.' I have

are overdone with a big rush of visitors." If Hillier should visit America he will undoubtedly be well received.

\*\*\*

### Very Ancient News.

The American Cyclist evidently went into winter quarters early and is just emerging. This is one of its latest productions:

It was only a short time ago that we were able to call attention to the fact that a statement made by a rabid advocate of cash prizes that the broad gauged Colonel Pope was in favor of cash prizes, was, to say the least, a glaring blunder. Now it is stated that A. G. Spalding will have none of it so far as giving his support (money and business ability) to the plan is concerned. From an interview in the Chicago News-Record, it appears that Mr. Spalding told a reporter: "I have not a dollar to invest in it," and that the Chicago ball ground would not be used for cash prize races.

What is the writer driving at, anyway? Are the opponents to the N. C. A. resorting to deliberate misrepresentation, or manufacturing alarms for babes and sucklings? This is what the REFEREE

Chief Consul Perrigo and his braves, as they appeared at a recent smoker in Omaha.

no doubt that we will have a champion of the world some day.

"The next thing you have to tackle is the color question. For my part I love the old English maxim, 'Neither country nor color barred,' and if an African or Mongolian or any other cyclist whose amateurism is unquestioned, is good enough to win the amateur championship. I say at once, let him do so. I cannot see how he can be barred—can you? If any colored amateur comes to England—properly accredited—he will most assuredly be allowed to compete in our races. Turn this over in your mind."

\*\*\*

### Hillier Won't Come.

George Lacy Hillier, of England, writes that he will not visit America this year, and adds that he doubts if he will ever be able to do so. "In case I should decide to come," says Hillier, "I'd rather see you at home and in your usual grooves than come with a crowd—which I hate—and meet some Englishmen at every turn. I want to see Americans as they ordinarily are, and not when they

said about A. G. Spalding's position on the cash prize league, Dec. 9. It was part of an interview the writer had with Mr. Spalding at the Broome street store, with A. B. Barkman present:

You had a talk with my brother some time ago on the subject of the proposed cash prize league, and from what he told me somebody had been taking liberty with my name as financial backer of a proposed cash prize league. He told you exactly what I should have told you, and that is—I am not interested in any way with such a scheme, and won't be. But our ball grounds would make ideal places for the laying of tracks, and we would like to talk to a company or association, for terms of an easy character could be made. My many interests compel me to refuse to enter into many apparently profitable schemes of the kind proposed. But I believe the same would be a success from the start.

The Spalding interview occupied nearly a column, and still we are asked to receive the New England stuff as "news." Surely the quality of the Nutmeg state news is most strained. The same paper deliberately misquotes the kind remarks of the Coventry Cycle Record on the magnificent productions at Christmas of two western papers, this one included. This, of course, is the re-

sult of jealousy pure and simple. The same wonderful authority says: "The un instructed Atlanta Constitution editorially endorses the cash prize league." Clark Howell, one of the brightest writers if not the brightest writer in the south, will be pleased to learn that he is "uninstructed," and that Henry W. Grady, Jr., one of the best road racers down that way, who is also a member of the Constitution's staff, don't know anything about humbuggery in amateurism. Nothing like being a little "instructed" when you are talking or writing, and Messrs. Howell and Grady will no doubt feel deeply grateful to the learned amateur journalist of the Nutmeg state for calling their attention to their position on cash prizes, or anything else, for that matter. The same promotor of instruction says: "'Cash amateurs' are indigenous products of Australia and New Zealand only." Wrong again. The "cash amateurs" first found fruitful pickings in America and in the neighborhood of Hartford, where the soil was fertile and they grew amazingly in '84-5-6. Ask a certain editor and handicapper; they know the ropes well.

The next "instruction" is, "'Six-day grinds' is what the Scotch call professional cyclists." Which is also beautifully wrong. "Six-day grinds" are what we should call six-day tournaments in America.

If these few samples of "instruction," picked out at random, are the sort of items the editor is going to offer, the salaries of we "uninstructed" ones will remain at par. In the language of a past prime minister of Great Britain, the young man of Hartford is "intoxicated with the exuberance of his own verbosity."

\*\*\*

### Sunday Racing and Serfdom.

There is a distinctively bad ring about the cash prize association's proposal to allow Sunday racing. While not a religious man in any sense of the word, the writer unhesitatingly discourages and denounces the attempt to foster Sunday racing under the shield of any organization formed to encourage cycling and cycle racing. [No such motives actuate the N. C. A. The only object so far as we know, is to make money. No other professions have been made.—Ed.] Sunday is the day set apart by law as a day of worship and rest, and if we do not care to worship we can rest or work quietly indoors, as the writer generally does. Sunday is the bulwark of civil and religious liberty, a day of rest, and any attempt to make a day of sport of it will rob it of that respect it now enjoys. Any sport or amusement on the Sabbath day is not enjoyed with that zest that is present on week days, and it will lower the sport of cycling in the eyes of the world if Sunday racing is attempted. It is bad enough to see a half-clad, wild-looking person rush along the Broadway cable slot with Tam O'Shanter cap and dirty white sweater (like the writer observed last Sunday), but the possibility of laying the association open to adverse criticism by church people, and amenable to the common state laws will, I'm sure, make the N. C. A. pause before entering such a questionable cause.

The licensing idea of the N. C. A. is not apt to meet with the approval of men who enjoy independence. It is a kind of serfdom that has been in vogue in base ball, and men have been held in a bondage second only to slavery. The N. C. A. by this provision would control the entire pedaling output of the licensee for their natural lives, and the rider dare not take part in a Fourth of July race. The writer confesses that he has not as yet found time to carefully examine the rough rules of the N. C. A., and may be wrong.

## LIFE IN A HOTEL.

I am sitting where I can look down the lobby of a great hotel, and I can hear fragments of conversation as I work. It is funny, in the broad sense of the word—amusing, if you like it better—to sit and watch the various types of the human animal which frequent hotels. Before me is a collection of faces and figures that would make the fortune of a comic opera company. Over against the wall sits an old man, evidently a well-to-do countryman. His dress is of good material, but fits him only in places; he has a slouch hat drawn down over his eyes, an overcoat across his knees and a half-smoked cigar between his fingers; his chin rests on his shirt front and he is sitting on the small of his back—he is also snoring. The door opens and four or five becoated figures, each with a grip in his hand, come rushing up to the counter. The clerk, whose head would make a splendid sign for a hairdresser, grabs a pen and reaches it toward the first.

"Hello, Jimmie." "How'd do, Mr. Gripsack." And the clerk and No. 2 shake hands.

"No. 336 occupied?"

"Naw."

"Well, gi'me it. And say, Jimmie, got any mail for me?"

"Don't know; look and see."

"Oh, Jimmie, have a fire put in 336, will ye, and gi'me an extra blanket."

All this time the rest are waiting. Clerk bangs on his bell, a diminutive boy comes forward and proceeds to grab everybody's baggage, with the intention, no doubt, of lugging it up to the check room.

"Hold on there, boy," says No. 3, "don't get gay! Say, clerk, whenever you get to it I'd like to register."

Clerk turns withering glance on No.

3, spins the register around and then shouts to a passing waiter:

"Look here, Dave, did the laundry go up to 17? Well, he wants it. Get a move on!"

"Have the baggage out of 98," says some one; "want it for No. 4 on the P. A. and W."

Bang! Bang!

"See to baggage in 98."

"Mein fr'n," remarks a gentleman with a pronounced semetic face, "I tell you Hockenheimer know vat he been doings ven he solt dem goods; he makes money. I shust bets you two tollars dat he gets better ash 20 ber cent."

"What d'ye think of the '93 Columbia?"

"Bout same old thing."

"What's the matter with the Phoenix or the Sterling?"

"Oh, nothin', only them western fellows blow so much."

"Huh! Can't see much difference myself. Eastern chap's no slouch."

"Going down to club?"

"That cigar's the best thing for the money."

"Tell you how 'twas; ye see Jim Coleman, Bob Garrity and me, we made up with Smugler's girls and Mat Horney to meet them back of the Methodist church and go skating, and the old man got on."

"Did you hear that Jones had parted from his wife?"

"What, G. S. Jones of Swampstown? No, you don't say! Well, by jimmi—always thought that woman a little fly. Jehosaphat! what eyes she has!"

"Traded hosses with Hooker; got a fine little mare; trot in boot 35 flat-floated. Ought to see the hoss I swapped for her—haw, haw!"

"Played poke last night up in No. 41. Six of us had rolling good game; won \$3.35 in jack pots."

"You see we was down to Chicago, and Jim got a jag on; got ugly as sin, wanted to cut."

"No. 19 came round the curve up at Tree siding and ran slap into No. 8. Smashed up old Tom so that he can't run her any."

"Sold Smith seven carloads at 31-4, and would have got a bigger order, but—"

"Well, brother, how is the Christian Endeavor doing in your city? I was exceedingly glad to hear that the conference had returned you to your charge."

"Thank you, thank you, Brother Smith, I am told that your last effort created quite a sensation."

"How's slayin' aout your way, Sam."

"Mighty slim; down'd Dogberry they say it's good, but aout our way they aint none t'speak of."

In the corner are two elderly men well dressed and with the air of success all over them, they are talking politics, and are on opposite sides. What they are saying can best be understood when printed, thus:

"I don't believe that Chicago can get ready for the fair."

"Don't you believe it; when Chicago starts to do anything it ain't no Grant monument arrangement. Jest don't you worry. Roll up your other collar and get ready to come, cholera or no cholera."

"Here, porter, come and shine my shoes."

"New York Herald—paper."

"Send some ice water to 37."

"Say, Cholly, goin' to the show? I hear that it's great; wat ye say, les go."

"Can't do it, got to write to the house."

"Way Corbett knocked out Sully was a caution to snakes—seen the scrap myself."

"Had to come on and do my act in a

pair of tights three sizes too small, and when I did the final the blamed things busted in the back and you ought to heard the gallery yell."

And so it goes, the same old thing, over and over, and the shuffle of feet and the banging of doors is a constant accompaniment. It is no wonder that the average landlord looks pale and haggard or that his good wife is preparing for an early grave. Every conceivable type of Aryan face is represented, and many other races have a showing. Just now I can see a Dutchman with a face like a chunk of bologne; an Irishman, who might pass for McGinty; a Frenchman, two Englishmen, a Dane, four or five Jews, a Yankee farmer, a darky, and a Chinaman, and everybody seems to be inoculated with the fearful disease that is sapping the very foundations of life in this great nation—Hurry and Worry. No man seems willing to enjoy the hours, but each is anxious to economize every minute. Care and anxiety have written their names on every face, no matter how young, and faces that should be fresh and happy look drawn and prematurely old. We are a great nation and a rich one. Rome in its palmiest days was a pauper beside America, but we are not a happy nation, and we never will be, unless some great convulsion of nature or of politics destroys our might and turns the veneer of civilization back from the surface, leaving the primitive man but one alternative between savages and destruction—namely, to start all over again.

PHREBUS.

Ten tables were in play at the progressive euchre party of the Ravenswood Cycling Club last week. W. H. Chambers captured first gentlemen's and Mrs. W. T. Willets first ladies' prize. Dancing followed.

## NEGROES FIRST, CLASS B NOWHERE

*The Sentiment of Illinois Members on Various Interesting Topics.*

Illinois prefers the negro to class B, if the twenty-five good men and true, who assembled at the Leland Tuesday evening represented the sentiment of the average league member. It also wants the addresses of applicants published in the *Bulletin*, and would like every man to have a chance to cast a vote on any proposed amendment to the constitution. Furthermore, it is unalterably opposed to the proposal of the president to give a larger share of the dues to the national treasury and a smaller share to the divisions.

The chief consul was prevented by sickness from attending. Mr. Sheridan presided for awhile and the chair was then occupied by Mr. White.

The color line was first discussed, but opponents of the colored brother were in the minority and stood no chance. On motion of Mr. Erwin the meeting decided that it was in favor of allowing the matter to stand as it is at present and was not in favor of Mr. Watts' amendment.

The *Bulletin* was then hauled over the coals and the feasibility of a monthly organ, division organs, the publication of all league news through the medium of

the general press, etc., was gone over. The meeting finally contented itself with a demand for the publication of addresses.

On the amendment question the meeting seemed to find merit in both amendments, and finally recommended that proposed amendments should first be submitted to the national assembly for an expression of opinion and then referred to the membership at large by means of a mail vote.

Then class B was called up and disposed of with a promptitude which indicated that it had few friends.

"Move we are opposed to class B."

"Those who are in favor of—"

"I."

"Carri d"

"Adjourn."

"Those —"

"I."

And so it ended. The opinions expressed at the meeting may or may not carry weight, but there can be no doubt about Illinois' sentiments.

Six members of the national assembly were present.

\* \* \*

*A. H. Overman on Class B.*

"What do I think of the attempt to spring class B on the trade and sport?" said A. H. Overman to the REFEREE last week. "Well, this is what I think. As sure as you commence to mystify the public with your class A, B and C, of amateurs, just as sure will the public lose interest in cycle racing. They will be puzzled, and won't know one class from another: besides there is no found-

ation or room for such a hybrid amateur as class B. He is neither amateur nor professional, though more of the latter than the former, however. Tradersmen will rue the day if they attempt to support class B. My company knows a little about the class B boys. They come pretty high, as our books show. The L. A. W. racing board is attempting to fasten a barnacle on the trade, and the outcome will bear watching.

"You remember," went on Mr. Overman, "that as long as there was only one ball league, base ball flourished, but when they formed two leagues and commenced to quarrel, the public lost interest in the game. The same thing will happen if the L. A. W. attempts to mystify the public with alphabetical amateurs of different grades and price and tensile strength. Class B should not be allowed to attain life. If it does, smother it in its infancy. Down with class B!"

\* \* \*

*Sanger Sure to Go.*

On Saturday last it was positively decided that the trip to England contemplated by P. H. Sercombe and Walter Sanger was a go, and that they would sail about the first of June. It is intended to have Sanger enter for all of the English championships. So much has been said in the cycling press regarding the trip that now that it is an assured fact considerable interest will be manifested as to the outcome of the Milwaukee boy.

\* \* \*

*Probably California's Champion.*

David L. Burke, whose picture is here given, is a somewhat famous California racing man. His friends, and, indeed, the wheelmen generally, believe him superior to either Edwards or Foster. He is particularly dangerous if allowed to be up with the field at the last quarter.

Mr. Burke's progress should be watched just now, for it is his intention to visit the eastern tournaments this year. He has relatives in Chicago. Burke is not a

D. L. BURKE.  
A famous California rider.

popular man, being, we are told, somewhat inclined to err on the side of verbosity and vanity, a statement one may easily believe after a glance at the array of prizes which bedeck his manly bosom.

\* \* \*

*W. C. Thorne's Racing Ideas.*

W. C. Thorne is not at all certain that he wishes to be retained on the L. A. W. racing board another year. The office is no sinecure, as during six months of last year no less than 315 sanctions for race meets were granted, an average of two a day. "No man appreciates as I do," said Mr. Thorne, "the great number of county fairs held in the west. Each hold some cycle races and applies for a sanction. I have had applications come in something like this, 'Please sanction our bicycle races,' and others, 'Please send a sanction by return mail.' Of course these require personal correspondence to ascertain the facts, and some re-

quire more than one letter before ascertaining what we want to know.

"If all that were required were two or three meetings a year for the formation of rules, with perhaps a little more, I should not object. I think the chairman of the racing board should receive a salary and be allowed a clerk, so that the sanctioning business may be taken out of the board members' hands.

"What do I think of class B? What would I naturally think when I helped to form the amendment? No, I shall not ride any to speak of this season, although I believe I now have the fever. I am fat and must reduce some, a thing which, strangely enough, totting that new baby o' nights don't do. With him and all my work here at the store, I shall have little chance to think of cycling this season at all, this being World's Fair year and visiting time naturally of thousands of our country customers. George [Thorne] will have no time to race, Charlie will not, and Jimmie has just left Chicago for a two years' course in electrical engineering at Lynn, Mass., in the Thomson-Houston plant. The Thorne family will, therefore, do absolutely nothing to sustain its reputation this coming season."

In conclusion Mr. Thorne said he did not believe in amateurs traveling from one end of this big country to the other in the search for fame and the neglect of their business. "The country is too big and there are races enough near at home to work out a man's enthusiasm," said he.

#### Another Annual Event.

Chicago is to have another annual road race similar in nature to the Pullman. The Illinois Cycling Club is to be the promoter and manager of the event. The course will be over Washington boulevard to Oak Park, thence across to Riverside and return, probably via Ogden avenue to the Illinois Cycling Club. Owing to the difficulty encountered in passing the old Garfield Park track on Madison street, the start will necessarily be made at Fortieth street and Washington boulevard. The distance is about sixteen miles and the event will be open to all amateurs. The course is very similar in its nature to that of the Pullman. It was the original intention to run this race on Decoration day. This was at the time when it seemed highly improbable that the great annual Pullman race would be run. Now that the great race is undoubtedly to be run the time will be decided upon for a later date. Plans are still incomplete and were being kept secret, but a few facts leaked out the past week, substantially as given. Frank J. Fanning, captain of the Illinois Cycling Club, has the matter in charge.

#### Milwaukee in the Circuit.

The cycling fraternity of Milwaukee is jubilant over the assurance that the Cream City has been selected a member of the international racing circuit. Chairman Schroeder of the Milwaukee Wheelmen has been in correspondence with Chairman Raymond of the racing

board ever since it was decided to hold an international tourney at Chicago during the World's Fair, and the efforts have been successful. It is understood that the dates assigned will come on Friday and Saturday during the early part of August, immediately after the Chicago tournament. Arrangements have already been made for National Park, which contains a fine half-mile track which will be put into the finest possible shape.

\* \* \*

#### A Southern Pullman.

H. O. Fox, formerly of the Lake View Cycling Club, is now located at Birmingham, Ala. In a letter to F. E. Spooner, he says that the enthusiasm in cycling is on the increase. Mr. Fox is organizing a spring road race similar to the Pullman, for which the dealers of the town have already subscribed fifty prizes. Birmingham has but 150 riders.

\* \* \*

#### Will Have Teams This Year.

The Æolus club will have a score of representatives on the track next season, among them Frank and Will Bodach, Paul Teutsch, Walter Bray and Greggs. Ehler will not race.

The Minnette Cycling Corps will support a team on the track this season, and has secured Heumann and Stringer, the rival Elgin riders, and J. B. Woollas.

Captain Greenburg of the Columbia Wheelmen says he hopes to put a team on the circuit this season. The team selected last season, the five fastest men in the annual road race, were Fred Nes-

sel, Emil Ullbricht, L. Tagholm, John A. Erickson and Gunder Olsen. Mr. Greenburg will inaugurate competitions this spring for places on the team.

The Chicago C. C. has made no definite arrangements regarding the season's work, chiefly because the amateur question has not been settled. If two classes exist next year, many of the Chicago club's men will undoubtedly be in class B, so that until this question is settled the club's racing business can not be determined. A class A team will certainly be put out. The captain is now engaged in collecting complete records of the racing men for future reference.

\* \* \*

#### What Davie Post Thinks.

David J. Post is a loyal league man if ever there was one. He thinks Leeming, the pro, should be promptly fired, and with him Munger and Barrett, who recommended him. He was glad to learn that the dog story was a canard, pure and simple. Mr. Post says the very foundation stone of the league is pure amateurism, and that the running of cash racing by the L. A. W. would surely undermine it. The creation of class B, or makers' amateurs, would result in no good, says Mr. Post. There would be the same trouble as in 1886, when public interest was enhanced by the dealers who played their men to win the races, placing one man in a certain race to defeat such and such a man "belonging" to a rival, and thus keeping the cracks, Rowe and Hendee, in those days, apart. These were the very men

**E. C. STEARNS & CO., :::: Syracuse. N. Y.**

thousands came to see race against each other. He is for amateurism pure and simple, and professionalism as far as it can be carried successfully without degrading the sport. Thus he will express himself at the national assembly meeting.

#### A Chance for the "Pros."

Anticipating the adoption of the two-class amendment, one provision of which takes from the racing board the power of reinstatement and places it in the hands of the national assembly, and with a view of being perfectly fair to those "now under the ban of professionalism, who may believe they are wrongfully so," Mr. Raymond has given notice that the chairman of the board will receive and place before the assembly at the proper time, any application for reinstatement sent him previous to Feb. 20, provided, of course, all the facts in the case are presented. Then the board will decide the case. This probably includes all professionals except Leeming, who, at the same time, was declared a professional and was expelled from the league.

#### Even Liberty Saw It.

The following dispatch in the New York Sun aroused considerable mirth among eastern racing men, who know the amateur status of W. C. Thorne's Chicago pets. The joke was so loud that Liberty ducked her head on Bedloe's Island, and invited Jack Frost to cover her face with a snowy veil of purity:

CHICAGO, Jan. 16.—The proposed division of riders into classes, one of which may accept expense money, does not find favor with L. A. W. officers here. W. C. Thorne of the racing board is unalterably opposed to cash prizes.

#### For the Championship of the South.

The challenge of L. B. Anner, Mobile, has been accepted by Frank Mehlig, of New Orleans, for three races—half-mile, one-mile and five-mile—for \$150 a side and the "championship of the south." The winner is to take 65 per cent and loser 35 per cent of the gate receipts. The races will be run early in March, on the grounds of the Mobile Athletic Association.

#### Races Every Month.

The racing board of the Milwaukee Wheelmen has arranged to give monthly races at National Park during the coming season, which will be held on Saturdays that do not conflict with other events, such as the Waukesha road race and the state meet.

#### General Race Notes.

Feb. 9 was the date set for a meet at Orlando, Fla.

The New Haven B. C.'s Decoration day meet will be the opening of the racing season.

The Alpha Wheel Club of South Norwalk, Conn., has announced a ten-mile road race for June 17.

An inter-state road race between two teams of ten riders each from Philadelphia and Wilmington clubs, to take place on Lancaster pike about the middle of May, is among the possibilities.

The Buffalo dealers are agitating the propriety of the A. C. C. taking the management of the Martin road race. This would seem a desirable plan, but not unless Mr. Martin should give his consent.

There is considerable discussion going on as to who shall conduct the Irvington-Milburn road race this year. First A. B. Barkman (the originator) ran it, then the "Metropolitan Association of Quiet Ones" took a hand at it, but Barkman engineered it all the same. There

will be lively talking over the matter this year. It would seem that the club should be the people to conduct it.

Next Monday on the track of the Mobile (Ala.) Athletic Association, a large meet will be held in connection with the carnival. Anner, Gordon, Dunlop, Fearn, Mendenhall, Robinson, Sanders, Wilcox and Touart are among the entrants.

A report reached us that W. W. Windle has written Stephen Golder, of the New Howe company, asking if Mr. Golder would like him to ride a New Howe next season. The "amateurs" are looking around early this year, and wish to make their calling and election sure.

John S. Johnson lowered the five-mile amateur skating record at Minneapolis Sunday, making it in 15:20 4-5. Donaghue's time for the same distance is 15:36 2-5, and Hagen's (professional), 15:11. The first mile was made in 2:52, two miles in 5:54, three miles in 9:02 and four miles in 12:14.

J. B. McFadden, of Lewiston, Me., will give a meet as soon as the ground becomes dry. Bangor and Portland, same state, will also hold big meets, while the South Paris Wheel Club is talking of holding another meet at the Norway fair grounds in the early summer, perhaps not till the fourth of July.

#### YE GODS. WHAT NEXT?

From the "Wheeler."

#### A Talk with Maltby.

W. S. Maltby, the trick rider, was in Chicago on Saturday, stopping over on his way home from Hawaii. Mr. Maltby says that owing to the depression in money matters in these islands, because of the McKinley bill, he did not make as much this trip as formerly. He has traveled, all told, about 125,000 miles in these trips, alone the greater part of the time. When asked if he enjoyed it, he said: "Yes, I enjoy seeing the sights but get awfully lonely." He does not smoke at all, fearing it would make him nervous, and in his difficult balancing acts this might mean death. He considers Barber as clever a trick rider as Canary; says he is quicker but not so graceful. Maltby thinks Holt, the safety rider, who gave such clever exhibitions at the cycle show as an amateur and turned professional since, has a bright future before him. Maltby regrets having left Hawaii ten days before the revolution, as he would have liked to have been there. He says that the revolution was not expected for some time. Maltby learned in Chicago that he would have to give up Adelphi Hall, in New York, where his cycling academy was located last year. He has decided to locate in Chicago this season if the dealers will receive him kindly and give him their

patronage when they can. He will handle a couple of lines of wheels for his own trade only and agree not to talk wheel to a competitor's customers. He called on several dealers with this object in view Saturday.

Maltby has the exclusive right to sell, rent and teach at Chautauqua, N. Y. He says this is a snap, as he oftentimes has five instructors at work from early morning till dark. The sales are not numerous but a number are made for all that. He will retain this privilege for the coming summer. Maltby gives an exhibition in Warrington, Conn., this Wednesday and will be in Chicago again very shortly.

#### Associated C. C. Delegates.

The following are the delegates to the Associated Cycling Clubs of Chicago from the various city and suburban clubs:

Lincoln Cycling Club—J. D. Guinea, W. F. Tuttle, W. Herrick.  
Ravenswood C. C.—K. F. Peterson, C. E. Slater, F. E. Spooner.  
Chicago C. C.—R. D. Garden, C. P. Root, C. E. Randall.  
Cook County Wheelmen—O. R. Barnett, F. B. Hart, William Blair.  
Englewood C. C.—H. E. Pyle, E. L. Emerson, G. W. Denison.  
Æolus C. C.—A. W. Roth, W. E. Bond, W. F. Wick.  
Oak Park C. C.—C. E. Sturtevant, J. M. Stimpson, C. E. Fox.  
Minnette Cycling Corps—E. P. Eastman, C. E. Griffiths, W. E. Brooks.  
Lake View C. C.—C. S. Thomas, H. R. Parsons, C. A. Fox.  
Washington C. C. and Windsor C. C. disbanded.

#### Columbia Wheelmen Not Insolvent.

A rumor had gained ground last week that the Columbia Wheelmen of Chicago would soon go under. As the club has but lately entered a \$15,000 club house built for it, this was thought strange. George Greenburg, the popular captain of the club, made a vigorous denial of this, however. He stated that the club had available assets of \$2,800 over and above all liabilities; doesn't owe \$200, all told, and has \$600 due from members, 90 per cent of it being good. Several notes on the club furniture were taken up six months ahead. Greenburg will attempt to bring his club into the L. A. W. this season. He has gotten out individual club cards for all the members and the club will be a prominent factor in entertaining visitors this season.

#### Will Dabble in Politics.

From now on the Oak Park Cycling Club will take an active interest in Oak Park politics, casting its vote of 150 and more against any member of any church who was directly or indirectly interested in the recent "persecution." The club's vote will swing any election in Oak Park, and by so doing will place men in office whose ideas of christianity are more modern. These men have always been hostile to the cyclists, and the club has had to stand a good deal, such as the crusade against riding on the streets Sunday. "But now the club will make itself known," said one of the prominent members last week. The Oak Park club occupies an \$18,000 club house built for it and first occupied Thanksgiving eve of 1891. During October and December last, sixty members were admitted and a score of applicants will be voted on this month.

#### Will Not Build This Year.

The Cook County Wheelmen have a building offer of a very liberal nature from the present landlord. This may not be accepted this year. At present the club has decided to plunge and rent a magnificent three story and basement house at 294 Ashland boulevard. This will cost them \$140 per month until

May 1, and \$190 after that. The entire top floor is a dancing hall and off the first floor is a large conservatory well stocked, while a splendid lawn adds value to this magnificent house.

"A LADY OF PAR S."—Cycle Record.

#### Another Detroit Club.

The Cadillac Wheel Club, of Detroit, which has just been formed, is the outcome of the rupture in the Detroit Wheelmen. Some twenty members who had resigned met and formed the new club. The club emblem will be an elliptical sprocket wheel with twenty spokes for the following twenty charter members: Joseph M. Bresler, Eugene S. Bresler, Will E. Metzger, Leon Coquard, Joseph R. Martin, Stanley B. Huber, E. R. McConnell, W. T. Watson, F. S. Case, Gus M. Jones, C. A. Lightner, F. H. McGinnis, W. S. Hibbard, Robert J. Thompson, H. A. Griffith, Edwin B. Nall, Frank H. Shepard, John H. Johnson, August G. Nuppenau, William C. Futvoye.

#### Lady Bicyclist, or Wheelwoman.

The note of alarm which is sounded regarding the advent of the crinoline and its effects on the girls who are enthusiastic on the subject of physical culture, is touched upon in a Chicago paper. The crinoline is surely to be dreaded, but in the name of common sense and of pure English let a protest be entered against a descriptive phrase so lacking in euphony as "a lady bicyclist." Bicyclist is ugly and harsh in itself and not to be compared for a moment with the stronger word, wheelman, which is now so generally used. Wheelwoman as a natural feminine formation apparently needs nothing more to be desired in that it—the word—has a roundness and dignity of its own. But a lady bicyclist seems—still the word, of course—as awkward and far-fetched as scrub lady or the lady cook.—Pekin (Ill.) Republican Post.

#### The O. P. C. C. Programme.

The Oak Park C. C. has arranged a very complete schedule of entertainments for February and March. Feb. 2 the ladies auxiliary served supper at 6:30, an informal dance following. Last Saturday evening a stag party and entertainment was given. Thursday and Friday evenings of this week a Mother Goose entertainment, closing with a dance Friday evening is announced. Feb. 17, card party and musicale; Feb. 18, stag party; Feb. 21, formal party; March 2, entertainment, supper served by ladies auxiliary at 6:30; March 4, stag party; March 10, midwinter athletic entertainment; March 17, musicale; March 18, stag party; March 24, informal party; March 31, german.

# CLEVELAND BICYCLES.

And Jobbers Generally Throughout the United States.

ALL TELL THE SAME STORY.

New England Makers and Dealers Full of Business.

New England is always beautiful—winter and summer alike, and she looked well last week in her mantle of white. The REFEREE's first stop was at

Boston.

At William Read & Sons, the ever-smiling Atwell was busy in the saleroom, and stated that the season is opening earlier than it has for years, and that the prospects are both alluring and inviting for this year of our Lord for Atwell and New Mails.

The John P. Lovell Arms Company's manager, David R. Harvey, was up to his eyes in work getting off catalogues and electros of this year's Lovell Diamond, which is undoubtedly the best wheel this old New England firm has yet turned out.

Next to his firm's business the Somerville Bicycle Club finds place in Harvey's mind, and he is particularly eloquent over the forthcoming hard-times "ladies" smoker of his club. The "ladies" will be personated by the members of the rollicking lot of boys that swear allegiance to the prosperous Somerville club.

Surrounded by a bevy of male and female employes, Mr. Holmes, the outfitter, said he has had a busy time of it of late, as orders have poured in thick and fast for his different specialties used by cyclists. The air of activity which pervaded the place was sufficient evidence that Holmes was not talking through his cap.

In a dry sort of way Manager Ross of Singer's stated that he had not been tendered any nominations by either of the political parties, but was sure that '93 would be a good year for Singers and orators. He showed the REFEREE three of the famous Singer '93 models, which are in keeping with the solid work always put on the Singer cycle. The little spring steering locking device on this year's Singers will commend itself to cyclists. It ornaments rather than detracts from the appearance of the wheel. The '93 ladies' Singer is a graceful 33-pounder of elegant finish.

W. W. Stall, the old inhabitant of Odd Fellows Hall, maintains that prosperous and calm exterior that was a characteristic of the old racing man when a resident of Waltham. Stall will make quite a number of special wheels this year, of light weight and superior finish generally, and will ask \$175 for them. He is also making a specialty of converting solids and cushions at \$20 per convert.

The Union Cycle Company's traveler, Temple, was pushing a P. D. Q. through the snow on Boston Common, bound for New Hampshire, while McDowell and the other employes were engaged at the company's store on the avenue, attending to the volume of business their early announcements have brought them. The ever-courteous Walter Measure was at the factory hurrying up shipments, and altogether it looks as if the Union company will be "in it" this year, as usual.

W. C. Overman as well as others in the row, has made some changes in the

office and saleroom, with the view to more room, and the merry click of the typewriter showed that there was plenty of work on hand.

Both Dugmore and Dudley seem to be doing well, Dugmore & Co. being particularly pleased with the business their announcement in the Christmas REFEREE brought them. Dugmore is building a nice looking wheel called the Perfecto. Dudley is handling Premiers and several other good wheels.

Manager Aleck Hill of the Coventry Machinists' Company had just returned from England, and was pleased to find that in his absence George Seymore had made the basement of the entire store into one of the most complete and commodious repair shops in the city. A full line of '93 wheels is on exhibition, the Crypto by this firm commanding much attention. This year's Seymour saddle is much improved, and several offers from saddle firms to buy the patent outright have been received.

Elsewhere will be found a list of

Boston, and is gratified at the large sale of the cyclometer.

Newton.

The Hickory Wheel Company's shop at this place, a twenty-minutes ride from Boston, is where the Hickory cycle is made, and which since the reorganization of the company is presided over by A. W. Pope [a brother of the colonel] C. E. Walker and Sterling Elliott. The place presented a scene of much activity, and wheels piled in an express wagon showed that '93 delivery had commenced. The Hickory of '93 is a "thing of beauty and a joy forever." The man who gets one will not be ashamed of it in any way. The Hickory Cycle Company proposes to launch boldly out for the trade, and being backed with plenty of capital, energy and a good and taking thing in wheels, will no doubt do well. A. W. Pope is the counterpart of his distinguished brother, the same energy of speech, voice much alike, same expansive forehead, and is an extraordinary talker, having traveled much. As a sportsman Mr. Pope has on his vacation, which occurs every fourth year, shot and hunted much in foreign lands, and has killed a specimen of almost everything that runs, flies or swims. His treasurer, Mr. Walker, is well known in the trade,

THE 1893 JAMES.

the prominent makes the Very Cycle Company will handle.

Sidwell and Sabin will, as of yore, handle the Stover Bicycle Manufacturing Company's wheels, which need no introduction, and which have been well received in New England.

Manager James Underwood, as usual, lays claim to the prettiest store and best wheels in cycle row, and thinks '93 Quadrants will, as usual, bear inspection and riding.

Albert L. Pope, Jr., and Lon Peck did the honors, assisted by Kirk Corey. Albert L. stated that orders for '93 Columbias were coming in fast. By the way, Albert, Jr., may be seen on the path this season, but whether as racer or inducer deponent saith not.

The McCune Cycle Company is in possession of the Boston offices at 47 Franklin street, where all can be assured of a cordial welcome. This firm for a "young un" promises to develop into a young giant. Its strides are astounding many in the trade. J. B. McCune needs no introduction; he is one of the sturdy and clever pioneers in the cycle construction field, and is wonderfully informed in all its departments. W. E. McCune is developing a business sagacity and energy that must be pleasing to his father and friends alike. On the premises at 47 Franklin street is a school and improvised track, bath, etc.

M. H. Downes, inventor of the Novelty cyclometer, turned the same over to the Recording Instrument Company, whose place of business is 22 Chapen place,

and Sterling Elliott—well, everybody knows Elliott.

Providence.

The Tillinghast Tire Company is doing well with its '93 tire, which President George Vose says is the tire of tires. The orders on file he thinks proves this statement. Pardon W. Tillinghast is floating around the east with his samples, and reports the outlook as good.

Whitten, Godding & Co., the well and favorably known Providence firm, are doing very well in parts, saddles, oilers and their usual line of wheels. Their new cyclometer is catching on. The firm has no doubt that the '93 trade will be a heavy one.

Rankin & Bruce, with their various specialties, are doing nicely. Their toe clip and Monroe anti-friction are having a good sale. Belcher & Loomis and the other local firms, including Campbell, report the outlook as good for this season.

Hunt & Co., the Westboro saddle makers, are busy these days shipping orders, and the room for selection of various patterns has given Mr. Hunt a good grip on the eastern trade.

Worcester.

Mr. Curtis, the Worcester manufacturer of fine pedals, is not complaining of trade dullness—in fact he is having quite a time to meet orders, he says, and the busy aspect of his factory looks like it. Mr. Curtis recently met with the loss of an infant daughter, and for a time the life of his estimable wife was despaired of.

The J. J. Warren Company, maker of saddle leathers, saddles, tool-bags, etc., is busy filling orders, and has taken a prominent position in fine leather cycle sundry goods.

Springfield and Holyoke.

The Overman Wheel Company, through A. H. Overman, received the REFEREE representative kindly and paid the paper a high compliment. The firm is very busy with '93 wheels, and Superintendent of Agencies C. C. Morgan says things look A No. 1—in fact agents are clamorous for goods already. George H. Powell, the terror of advertising canvassers, looks sleek and happy and thinks some cycling journals awfully independent, but he says he must get the best even if it does come high. Mr. Overman is emphatic in his denouncement of class B, and all other paid amateur business, and remarked that it showed a weakness when wheels had to hold records before they could be sold.

At the Warwick Cycle Company President Rood, a keen business man, talked a few minutes and handled a huge stack of mail matter. He said: "I have been more used to the works in watches, than those in bicycles, but am learning fast, and the extent and possibilities of the business interest me very much." Kennedy Child was away—not in the capacity of speechmaker, but opening a New York depot.

The REFEREE man and Harry Palmer, of the *Sporting Goods Dealer*, dined with Mr. Keating and talked with President Bosworth, who is a busy man with other large interests besides the Keating Wheel Company. James Murphy of the firm is now down south appointing agents.

Hartford.

The H. J. Curtis business has been absorbed by the Columbia agency and the new Chainless Safety Company will shortly place its production on the market. The Pope Manufacturing Company is busy; so is the Hartford Cycle Company, over whose destinies Colonel George Pope and David Post preside. Frank Belden, the old Pope employee is now with the Colt's Arms Company and is also interested in a cycle agency.

New Britain, Conn.

The Corbin Lock Company will place a lock on the market soon and George Corbin, Jr., will personally superintend the sales of same. This is the largest lock concern in America. The New Britian Hardware Company is doing well with its excellent parts, and the factory presents a busy appearance. Harry Arnold is pushing the construction of his Windle light roadster, and hopes to make at least a hundred this year.

Bristol, Conn.

The New Departure Bell Company, through Manager Rockhold, took the REFEREE man under his protecting care and showed him the town. The New Departure bells really need no special introduction, as they are well and favorably known.

East Hampton, Conn.

The Starr Brothers Bell Company, is pleased with its bicycle bell business, and shows a nice, durable lot of bells. The Starr brothers make everything in the way of bells. The good sleighing this winter, they say, will do them good next fall, when the agents who have sold out all their old stock this winter will want new goods, as the past four winters have not been up to much for sleighing. The American Gong Bell Company is busy and reports a good demand for bicycle bells. Messrs. Bevin Brothers have had trouble with patterns and have not been able to fill orders, but hope shortly to be in a position to do so.

Middletown, Conn.

ing agent is packing away a display of furs and polishing up her stock of '93 wheels. Among the wheels she will sell this year are the Columbia, Hartford, and Western Wheel Works, and has just added the Rochester Cycle Company's bicycles. Miss Brockway will give several road and track races this year, as last, under her own management.

#### ALUMINIUM WHEELS.

*One That Has Been Used Steadily For Over a Year.*

We are in receipt of a communication on the subject of the use of aluminium in cycle construction from a gentleman who has given the subject considerable attention, A. W. King. He is comparatively little known in Chicago, having lived in this city only since Oct., 1891. For a very short time he was in the employ of the Chicago Bicycle Company, and since then in charge of Brown Brothers Manufacturing Company's bicycle depot, corner Jackson and Clinton streets. Mr. King was for a number of years technical superintendent of the Adler Cycle Works, Henry Kleyer, Frankfort, and of the Goldsmith Brothers Cycle Works, Newmarket.

The popular demand for light wheels has led some manufacturers to try various experiments in the way of constructing light steel frames. We have all heard much talk about aluminium wheels, but we know of no maker who has successfully accomplished the construction of an "all aluminium" machine.

In the first place, a serious obstacle in that direction was encountered in dealing with the brazing question; furthermore, there are the lugs, which if made of aluminium and designed as gracefully and light as we are accustomed to see them of steel drop forgings in some of the best modern makes, would not be anywhere near strong enough to sustain the continuous and varied strains brought upon them when put to actual test. Therefore, "all aluminium lugs" would have to be rather clumsy and bulky if calculated to do the same work as steel lugs, and would consequently be rather detrimental to the good appearance of any machine.

Mr. King writes: "Mannesmann of Remscheid, Germany, with his spiral, rolling, expanding combination process, has finally succeeded in producing aluminium tubing which, being of a sufficiently heavier gauge than steel tubing of the same diameter, is fit to be used in the construction of cycles."

"The next question of importance is now: 'How and by what means can such tubes be reliably secured to their respective lugs, be the latter steel or some other metal alloy?'"

"Brazing, soldering or any kind of ordinary screw joint is in this case entirely out of question, at least that was the view taken on the subject by the inventor of a rather ingenious and novel device (patented Jan. 31, '93, 490,896) for uniting the parts of machines without brazing. This device is simple in a degree, which involuntarily causes one to wonder why no one else ever thought of it before. Still, it makes a very firm and secure joint, more than strong enough to withstand all wear and tear that a good machine is liable to be put to. I have seen and examined a safety built on this principle and in use every day since last August by a rider weighing 185 pounds.

"The following is an explicit description of said invention:

"All lugs in the frame are designed with sockets instead of pins, to take in the tube ends. The latter are placed in their respective sockets, and the device,

consisting of a cylindrical and longitudinally split bushing containing a round and slightly tapering plug, is introduced into the tubing. This expansive plug is placed where the tubing is encircled by the socket of the lug, and the taper plug is by means of a screw forced into the split bushing which expands, and in turn slightly expands the tubing, thus securing the same in its socket in a most efficient manner. Tubing of a quality as used in up-to-date wheels will, if secured in this way, twist under the strain of a pipe wrench rather than loosen from its socket. The length of the taper plug is equal to the external diameter of the tube for which the plug is made, and the plug must fit the tubing snugly. In quantities these taper plugs can be turned out at a cost of about 2 1-2 cents apiece.

Apart from the great advantage of being able to use aluminium tubing and the lightest possible gauge of steel tubing for frames, there are other salient points in the application of this device by which manufacturers, dealers and riders all are benefitted. Brazing is entirely done away with, as even front fork and handle bar are built up with the taper plug. Fork sides are formed by 5-8 inch tubing. The natural temper of the tube is no longer destroyed by heating, nor the lugs or tubes overheated and burned or still further weakened by filling up. Riders will no more complain of loose pieces of spelter solder within the tubing of their frame rattling and singing

THE OVERSTONE.

as they ride along. Any damage done to the frame can be repaired "while you wait," in fact, according to actual test, a good bicycle man can assemble an entire safety, ready to ride, from the loose parts in one hour and a half.

"Here we have a machine constructed after a truly interchangeable system, each single part being completely finished before it is secured to another part of the machine. This also allows of a thorough and detailed division of labor in the manufacture of cycles, more especially of frames and front forks, a thing hitherto impossible. The manufacturer will in future times ship the complete frames of his safeties neatly packed in boxes 6x6x24, and the two wheels crated separately. The frame is certain to arrive intact at its destination. The agents will save freight and those in foreign countries considerable custom house duties. The dealer is enabled to make any repair himself without the employment of a forge, and in a superior and much more rapid manner than could be done up to the present.

"The inventor is building a small lot of sample wheels entirely of aluminium bronze, and some entirely of aluminium silver. This particular aluminium bronze is one-third lighter than steel, has the lustre of gold and a greater tensile strength than steel. Aluminium silver merely looks like silver, but possesses the same properties as the bronze alloy. Tubing, lugs, spokes, mud-guards and rims will be made of the two above-mentioned alloys, and a japanning or nickel-plating would only spoil the beautiful natural and last-

ing finish of a machine built of such materials."

The expansive taper-plug joint was invented by Mr. Kirsch-King. Patents have been secured in the United States, England, Germany, France and Austria, and we understand that the formation of a stock company for the manufacture of cycles built with application of his device, is contemplated.

#### Morgan & Wright's Tire Contest.

Morgan & Wright's tire contest closed last week. Great interest was taken in the affair, although the prizes were offered so late in the season many could not recall data or reckon mileage accurately. A splendid list for the coming season is soon to be announced, all being prizes well worth a season's try for. In the past season's contest for long distance H. E. Brayton, of Pueblo, Colo., captured first prize, John West of Chicago, second, and William R. Anglemire, of Rockford, third. Brayton had 3,400 miles to his credit, West 3,200 and Anglemire 2,970. In the second contest, for the greatest number of centuries on one set of tires without damage or material repairs, C. Arnold Wescott, of Chicago, captured first with twelve centuries and no punctures; F. E. Klipfel, the Buffalo centurion, second with eight centuries, one of these a double one, and no trouble with his tires; John F. Parker, of the Lincoln Cycling Club, was third with eight centuries and one puncture. There was hot competition for the third

'92, when the present position was offered him and he accepted. Mr. Walker is somewhat of a crank on cycling, and has pictures of most of the

old-time noted ones and of the modern champions. He was one of the organizers of the old Chelsea club, and was three years its treasurer and one year president. On leaving Chelsea he joined the Massachusetts Bicycle Club of Boston, of which he is still a member. The growth of the Hickory Cycle Company under its present vigorous management will wean the genial Charles Walker from his club life, and cares will frown that placid brow, but time can not dampen the cycling fire that burns within.

#### A. O. Very Cycle Company.

There are not many firms in New England which have climbed to such a height of importance in the jobbing and retail cycle trade as rapidly as the A. O. Very Cycle Company, of 245 Columbus avenue, Boston. Only a year ago this company moved to its present commodious quarters, the old store on Tremont street being too small to accommodate its growing trade. This year's business promises to eclipse that of last, and orders are pouring in already. A REFEREE representative called last week, and Mr. Very, pointing to a large stock of orders, said things were lively for this time of the year. The company is handling the Warwick, Liberty, Royal, Eclipse, Central and Reindeer.

#### David R. Harvey.

Most New England cyclists have met D. R. Harvey, manager of John P. Lovell's bicycle department. As a business man the young New Englander should feel proud, as he has done nobly with Lovell Diamonds and the department

under his charge. As the captain of the Somerville Bicycle Club he is most popular, and is interested in racing to a great extent in his locality. The Somerville club is now the second largest in Massachusetts, and all the members, from the captain down, are wide-awake when their club's interests are at stake.

#### A Little Late.

The publication of the cut of the Raymond invention of a pump for pneu-

series of prizes, with Will Codman of Winona, A. G. Harding of St. Louis, and D. H. Burt of Danville, Pa., very close together. Codman won, his ride being made on an Elliptic racer, 27 3-4 pounds, fitted with Morgan & Wright racing tires, from Winona to Rochester and return, a distance of 118 miles over hilly and rough flint rock roads, in eleven hours. He stopped two and one-half hours along the road. A. G. Harding received second for his round trip over the De Soto road course in 9:29, breaking the record of 11:56. D. H. Burt's century in 10:25 over the mountains of Pennsylvania on a used-out plank road was third best. All were good rides and splendid tests on the tires. For his trip from Michigan City, Ind., to the national meet at Washington, Wallace R. Lay was awarded a special prize.

#### Charles E. Walker.

He is not known as yet as "Hickory" Walker, but he is liable to be as the years roll on. Writing to the REFEREE he said: "Modesty forbids my saying anything about myself. I have no history; have yet to make some."

Not to be balked, the REFEREE man enquired a little, and with the aid of some history gained by acquaintance, can say that Charles E. Walker, treasurer of the Hickory Cycle Company of Newton, Mass., is twenty-five years old, was born in Chelsea, Mass., and is married. As early as '84 he had graduated from college and was working for the Pope Manufacturing Company at its Washington street place, and remained a faithful servant until

ILLINOIS CYCLE WORKS, 665-669 Carroll Ave., CHICAGO.

WE PROPOSE TO LET THE AGENT LIVE.

matic tires—made in the safety frame and worked by raising and lowering a long aluminium seat post—was a bomb-shell to R. M. Barwise of the Stokes company. Early last season Barwise put to practical use a simpler device on his Union and used it all season. In his device a rod similar to the regular pump is placed in the upright and fitted with a piston. This has a detachable handle, and when the handle is removed a hollow seat post fits over the rod and prevents it from rattling. The rubber attachment for the pump is attached under the crank hangers, and when not in use may be suspended in the upright. These attachments may be fitted to safeties for less than a half-dollar each. Raymond's invention shuts him out completely.

#### The New Web Joint.

According to our English correspondent's report of the National show, the makers of cycles are not disposed to adopt the new system of web joints this year, as it is felt that unless the brazing is performed with the utmost skill and success very serious consequences may follow. It is an idea, however, which having been introduced by a man recognized as one of the most practical of makers, but, at the same time, a most

ardent advocate of light weights, is certain to be followed, especially if a season's test on the Psycho proves its efficacy. The accompanying illustration shows just how the joint is made. It is here shown applied to the crank bearing case before the brazing or finishing processes have been applied. The bearing case is made from a piece of sheet steel, bent into the form of a tube with the edges left projecting as a fin to form the web in making the joint. The metal is bent with the grain running lengthwise. All the bending and shaping is done while the metal is cold. The web principle has already been used extensively in other channels, especially in the ties and lacing of bridges.

While on this subject we may mention that another form of joint, the invention of A. H. Radell, a Chicago mechanic, has, according to that gentleman, been pronounced by the heads of two large factories the strongest they have seen. An illustration and description thereof will appear next week.

#### The 1893 Overstone.

Arthur E. Flavell, representing Loyd, Read & Co., Coventry, has been showing the 1893 Overstone, a cut of which appears herewith. The sample wheel was fitted with the Dunlop detachable tire, and weighed 25 pounds. It has tangent spokes, 10 1/4-inch head, and in design is as pretty as any wheel on the market, while the makers' reputation for work is such as to insure a most excellent wheel.

Mr. Flavell, representing Loyd, Read & Co., has placed Overstone agencies

with the Buckeye Cycle Company for Ohio, Maryland, Virginia and Kentucky; with Schack for western New York, and with Cahill for Washington. As soon as Mr. Flavell finishes the business he now has in hand in Chicago he will start east and sail, shortly, for England. It is quite possible, however, that he will return to the United States later in the year, locate in New York or Chicago for several months and distribute his wheels from those points. He has come to the conclusion that better results can be attained in this way than by placing the agency for his wheels with one or two concerns for the whole country.

#### The Lovell Diamond, Model 10.

The new Lovell Diamond, model 10, or light roadster, a cut of which is shown herewith, contains all the points which now seem necessary in the make-up of a good wheel. It has a long wheel base, 28-inch rear with 2 inch tire and 30-inch front with 1 3/4-inch tire, Columbia tires, corrugated sheet steel rims, direct spokes, detachable cranks, 9 3/4-inch head, etc.

It weighs but 31 pounds and sells for \$115, being fitted with elliptical sprocket if preferred and every attachment that goes to make up a complete wheel. The past reputation of the Lovell Diamond as a reliable wheel and ready seller is sufficient cause to predict a very successful season for the John P. Lovell Arms Company.

#### The 1893 James.

The James has always been a leader in the matter of light road wheels, and this year the heaviest machine produced by the wonderful little factory over in Birmingham that is for sale in the United States, is under 27 pounds with a spring saddle and 26 pounds with a racing saddle and road tires. The details of construction show great experience and scientific skill. There is a ripeness about the work turned out by Harry James that is refreshing. Tubing from the old company is used; rims, Warwick's hollow; chains, Perry's; cranks, Southard; pedals, Bown's. Tool steel bearings and silver solder for brazing are used. The model, a cut of which is shown, speaks for itself. The first consignment of '93 wheels has already been sold, and the second arrives this week.

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

490,714, cushion tire; Woodburn Langmuir, Toronto, Canada; filed April 25, 1892.

490,658, pneumatic tire for velocipedes; Rudolph W. Huss, Chicago, Ill., assignor to the American Tire Company, Cleveland, Ohio; filed March 10, 1892.

490,950, clock-attaching device for cycles; Edmund Kuhn, Brooklyn, N. Y.; filed March 3, 1892.

490,751, tire-shrinker; William Lehmer, Chicago, Ill.; filed July 1, 1892.

490,837, air cushion tire; Joseph P. Lavigne, New Haven, Conn.; assignor of one-half to Reuben H. Brown, same place; filed July 6, 1892.

490,828, bicycle tire; Joseph P. Lavigne, New Haven, Conn., assignor of one-half to Reuben H. Brown, same place; filed July 6, 1892.

490,829, self-holding tire for bicycles; Joseph P. Lavigne, New Haven, Conn.; assignor of one-half to Reuben H. Brown, same place; filed July 7, 1892.

490,844, bicycle; George O. Draper, Hopedale, Mass.; filed June 9, 1892.

490,904, valve for pneumatic tires; William A. Gray, Elizabeth, N. J., assignor to himself and

Edward R. DeWolfe, New York City; filed April 18, 1892.

491,010, pneumatic tire; Harry Comstock, Fulton, New York; assignor of one-half to William J. Watson, same place; filed July 19, 1892.

491,012, bicycle bell; Lewis E. Ericson, San Francisco, Cal.; filed April 25, 1892.

491,040, bicycle attachment; Theodore Cummins, Dover, assignor of one-half to Jacob C. Van Horn, Marksborough, N. J.; filed Feb. 18, 1892.

491,057, bicycle garment; Margaret H. Lawson, Boston, Mass.; filed Sept. 1, 1892.

Trade Marks.—22,413, bicycles; Royal Cycle Works, Marshall, Mich.; filed Dec. 9, 1891; essential feature the word "Royal"

#### Abuses of Patent Rights.

Two gentlemen, who have had considerable to do with patents and patent laws, met in the REFEREE eastern office the other day and commenced discussing patent rights and their abuses. Alex Schwabach, who was an employee of McKee & Harrington when they sold the Lallement patents (worth millions) to the Pope Manufacturing Company for \$300, said a patent was chiefly valuable because it gave a man a right to go to law. "There is no doubt," said S. T. Clark, of Baltimore, "that wealth and a system of persecution are valuable as a means of sustaining alleged patents, and on the other hand, unless you have money to protect your patent, it will be of little use to you. Half the patents to-day are held by the flimsiest of excuses, and the courts are chiefly interested in the flow of coin into their treasuries." This reminded the writer what H. A. Lozier said to him in Philadelphia while talking of patents: "I was told to-day by the partner of a western concern that it would cost me \$5,000 for using a certain style of rim which they claim to own by patent right. I told him that unless the fight should be worth at least \$50,000 they'd better not tackle me, but confine their attention to repairs and small concerns whom they could easily bluff and terrorize—for they can't bluff me. This sort of thing has been overdone," continued Mr. Lozier, "and it is a burning shame that the matter has been allowed to go so far. It has been a system of bluff and intimidation all through, and concerns which lay claim to respectability have chased the little fellows like dogs do rabbits. I want them to chase me a bit for a change." And the big man from the shores of Lake Erie straightened to his full height and commanding presence, and his face betokened a fighting determination.

"Now about that lap brazing patent," said Mr. Clark. "I can show you lap brazing two years before that patent was said to have been taken out, and while a man should receive the reward for his brain production, property which has been public property for a time should not be granted as patent to anyone. Of course, if the patent laws give a man a right to patent somebody else's ideas that is a weak point in the law and should be remedied, as there is no doubt this patent business is much overdone at present."

#### Starr Bros' Bell.

The cut herewith illustrates Nos. one and three bells made by Starr Bros.,

East Hampton, Conn., who are doing a splendid business with a good assortment of bells.

#### Shows the Working Parts.

The New Departure Bell Company shows this cut to illustrate the "inner

works" of its famous bell, which is so well known that introduction is unnecessary. What Manager Rockwell claims

as special features this year are the interchangeable parts of the bell and the locking to the handle-bar device.

#### The Monarch Pump.

A handy instrument is this, and one which the makers claim gives less an-

noyance and fatigue than any other. The barrel is handsomely nickled and the case japanned. At retail, \$4.

#### Chicago Trade Notes.

George D. Moffat and family are spending the winter in Florida.

Hartford safeties will be handled in Chicago this season by the Pope Manufacturing company.

Mr. Shaw, of Foster, Brown & Co., New York city, importers of Ivel safeties, was in Chicago last week.

Rouse, Hazard & Co. have placed the local agency for the Rudge and Sylph safeties with the F. L. Douglas Cycle Company.

K. Franklin Peterson, formerly of the Spooner-Petersan Company, will shortly open an agency at 113 Adams street for the Aeolus.

C. W. Dickerson, of the Sterling Cycle Works, can now be found at the Stokes Manufacturing Company's store, to which place he has removed his office.

Hal Greenwood, now on the road for Kingman & Co., of Peoria, was in Chicago last week. He will shortly start for the Pacific coast to place Road Kings and Road Queens.

M. L. Dorr, manager of Thomas Kane & Co.'s bicycle department, is in the east looking into the agency question, his house having decided upon no wheel for the season as yet.

C. M. Fairchild, for the past year cashier at the retail store of the Gormully & Jeffery Manufacturing Company, has resigned his position and on Feb. 15 will take the position of financial manager of the Quadrant Cycle Company, of this city. Mr. Fairchild has had many years experience in the bicycle business.

"Bob" Lennie was in the city Saturday from a trip through Illinois for the Stover Bicycle Manufacturing Company. He reported the loss of but one customer and many new ones gained. He will do Ohio and Michigan next. Mr. Lennie says that the Stover company will shortly open a retail store in Chicago, Thomas Kane & Co. having dropped the agency.

Siegel Crafts, treasurer of the March-Davis Cycle Company, withdrew from active interest in the company last week. Charles Murray will probably act as secretary and treasurer. Mr. Crafts refused to assign his reasons, but it is said he

## A TEST FOR THE TILLINGHAST TIRE:

AND a test that has never been equalled by any other tire. A test that no other tire has been subjected to. At the Philadelphia Show the Crawford Mfg. Co., to show the strength of one of their Crawford machines, placed a machine upon a plank. To this machine they attached a platform and on this platform they placed four (4) barrels of flour; three (3) barrels resting directly over the saddle post and the fourth barrel resting on the head of the machine. It will be noticed by this that three-fourths of the weight rested upon the rear wheel. After this load of flour was placed upon the wheel, the end of the plank on which the rear wheel rested was raised up, and a 28x1 3-4-inch Tillinghast Tire, of the '93 pattern, inflated to sixty (60) pounds, was placed under the plank in a vertical position and directly under the rear wheel. This tire was allowed to remain in this position until the end of the show, about sixty (60) hours. After this great weight was removed from the tire it was critically examined and showed no sign of having been subjected to this severe test. In fact, this tire was soon after sold and placed upon a wheel, and is running to-day and shows no marks or signs of weakness on account of this test.

TRIUMPH CYCLE CO., Ltd., COVENTRY, ENG.

had sold the company's output and more for the season, and as his stock was ready sale, withdrew to invest his capital elsewhere. About \$2,000 was lost in the recent fire.

General Trade Mention.

Stephen Golder sailed from New York for England Wednesday of this week, to be gone but two weeks.

It is said four-fifths of the machines exhibited at the National cycle show were fitted with Dunlop tires.

W. M. Perrett starts west again this week to drum up Solid Comfort saddles for the Bretz & Curtis Manufacturing Company.

Hammond, Ind., is to have a bicycle factory. M. M. Towle has contracted for the construction of the buildings, in which a foundry will also be located.

A. Goodwin, late of Southampton, is now with the St. Andrews Cycle Company, of Romford, Essex, Eng., which makes the A. J. Buckingham and Hornchurch cycles.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co, 43 E. Van Buren St., Chicago.—Adv.

J. T. Skerrett is a new salesman now on the road for the Bretz & Curtis Manufacturing Company, and will look after the interest of the Quinton Scorchers and Warwicks in Pennsylvania, New Jersey and Delaware.

Mr. Mallinson, a representative of the Standard Cap Company, visited Chicago last week and sold a large order of caps to Gormully & Jeffery. The company does not sell at retail at present, but may arrange to do so later.

The Rochester Cycle Company has been incorporated with a capital stock of \$100,000. E. C. Stearns is president, J. C. Bowe vice-president and secretary, and H. E. Maslin treasurer. The new concern will make the Stearns.

Owing to the breaking of the piston of the main engine, the entire works of W. H. Wilhelm & Co., Reading, Pa., were forced to a temporary stop. This caused a delay of four or five days at a time when every hour is precious to the manufacturer.

J. M. Linscott, the Columbia and Hickory agent at Chelsea, Mass., says that affairs cycling are going to boom in his town this year, and orders for '98 wheels are commencing to pour in. Mr. Linscott's agency is the resort for cyclists in the neighborhood.

The Bretz & Curtis Manufacturing Company of Philadelphia, has lately added to its saddle plant, the immense sale making it necessary to put in more machinery and men. They tell us they are now turning out 1,000 saddles a week and are already preparing plans for 1894.

The Denver Cycle Manufacturing Company has been incorporated with a capital stock of \$25,000. The company is composed of G. E. Hannan, president; John Eppeneter, secretary and treasurer, and H. G. Kenney, superintendent. About 200 wheels will be turned out this season.

The Sercombe-Bolte Manufacturing Company is offering a reward of \$5 for information leading to the whereabouts of Julian F. Reid, formerly of Augusta, Ga., who, it is claimed, had a habit of having wheels sent to him C. O. D. and upon receiving same would suddenly change his place of abode.

The Eclipse Bicycle Company writes us from its factory at Beaver Falls, that it has heard it said that only one manufacturer in this country is using the

Mannesmann spiral steel tubing in his wheels, and states that whether any other manufacturer is doing so, does not concern it, but does want it known that the Eclipse wheel is built of this famous tubing.

W. S. Maltby, the trick rider, met A. J. Nicolet at the Palace Hotel, in San Francisco. Maltby was told by the dealers in 'Frisco that five eastern representatives had left the town disgusted and without placing an agency. Nicolet is representing the Grand Rapids Cycle Company. He goes from 'Frisco to Los Angeles, Salt Lake City and then via Denver home.

James T. Reber, formerly of the firm of Bard, Reber & Co., Eighth and Penn streets, Reading, Pa., has purchased the Metropolitan Cycle Works, Fourth and Cherry streets. He will engage in the manufacture of bicycles on an extensive scale and make a number of improvements to the place. Mr. Reber is a well-known young man and has been quite successful in business.

E. W. Ballard left Chicago on Sunday evening for St. Paul, where he will stop over a day en route to Portland, Ore. Ballard denies the report that his going has any connection with Rouse, Hazard & Co, or with the Rudge wheel. He will manage the Columbia Cycle Company and travel through Oregon, Washington and Idaho. Ballard may return in the spring, otherwise not until October, when he will be married.

The New York Belting & Packing Company desires us to announce that purchasers of its pneumatic tires will be protected from all infringement claims on the part of anyone, of any kind or nature. It has never been the policy of the company to manufacture goods which infringe legitimate patents; it states that during its business experience of nearly fifty years not one of its patrons have been called upon to pay any damages for infringement of patents on any goods it has made or sold.

William H. Roberts.

The cut below is a good picture of a smart sporting writer, who, strangely enough, combines with his athletic work a good roads crusade. Mr. Roberts as the sporting editor of the Brooklyn Citizen, undertook some months ago

a fight for the Brooklyn cyclists for good roads, and a special path for cyclists to Coney Island. This idea caught on, especially the good roads part, and Brooklyn to-day is demanding of her legislators better streets and roads in the suburbs. The citizens will get them, and to the Citizen's sporting editor much credit is due.

Brewster Not a Candidate.

W. M. Brewster was somewhat surprised to learn that he was being run for treasurer of the Century Road Club, and says he will not serve. Should the popular treasurer of the L. A. W. be elected he would no doubt accept the position, however, as he says the C. R. C. has a bright future, and any efforts for its good he would gladly make.

Sole Agents for  
United States.

Cleveland,  
Ohio.

HIGHEST GRADE ONLY.

The "PERFECT" Pocket Oiler is unequalled in neatness, convenience and durability. Does not leak. It also regulates the supply of oil to a nicety, thus avoiding grease and dirt. Price 25 cents each. Handsomely nickel plated.

Cushman & Denison,  
172 Ninth Ave., N. Y.

HOLDERS.

Two sizes, one for oiler and larger size to carry a pneumatic pump. Easily attached to any wheel. Makes tool bag unnecessary. Oiler or pump is always convenient. Price 25 cents each. Handsomely nickeled.

Cushman & Denison, 172 9th Ave.,  
New York.

THE RED STAR SOLID ILLUMINANT

FOR BICYCLE LAMPS.

A solid compound that will not leak or spill but stays where it belongs—in the lamp.

If you want a clean lamp, clean clothes and a clean machine, USE IT. There is no use telling you what a nuisance your lamp HAS BEEN. Use our illuminant and forget about the past. Price 50 cents per can.

THE RED STAR CHAIN LUBRICANT will also save you trouble. It is put up in stick form, very handy and convenient. Price 25 cents.

THE RED STAR LUBRICATING OIL is made especially for ball bearings. Price 25 cents per can.

For sale by all dealers. Samples sent on receipt of price. Send us a postal for our little folder.

RED STAR MANUFACTURING CO., 58 Front St., N. Y.

P. O. Box, 1092.

Roy Bicycle Oiler,

Handsomely nickel plated. For Bicycles, Typewriters, Sewing Machines, etc. It will not leak, therefore no tool bag soaked with oil, no soiled clothes or hands, always ready for use. The neatest, cleanest oiler ever placed on the market. The pressure on the steel pin releases whatever quantity of oil is required. This pin is intended to remove the dirt from all holes that require oiling, an important feature. Write for trade prices.

Price, 25 Cents, Postage Paid.

Roy Oiler Manufacturing Co., 77 Warren Street, New York.

FOSTER, BROWN & CO., 146 BROADWAY,  
New York, N. Y.

## Answer to Correspondence.

**WE** have many communications asking us what we mean by the **CONSTRUCTIVE** principle in our 1893 Pneumatic Tire. We mean this: 

 1st. It is a principle that causes the tire to have a decided inclination to stick to the rim under ALL circumstances, and an equally decided *disinclination* to leave the rim under *any* circumstances.

 2nd. It does everything that any or all of the mechanically fashioned tires in the world can do.

 3rd. It is what all have been after, but we got it.

The 1st Is  **CONSTRUCTIVE.**  
The 2nd Is  **INSTRUCTIVE.**  
The 3rd Is  **CORRECT.**

SEND IN YOUR VOTE.

Only One More Chance to Record Your Views.

Inasmuch as the next issue of the REF-  
EREE will appear Feb. 17, and the Na-  
tional Assembly meets Feb. 20, only one  
chance remains for those interested to  
voice their opinions on the many ques-  
tions which are to be brought up for con-  
sideration at Philadelphia. There can be  
no possibility of changing the result on  
questions 3, 6 and 7, but the others are  
close enough to allow of a decided  
change. It is to be regretted that only a  
little over a fifth of those who were sent  
postals have replied, but no doubt next  
week's receipts will change the propor-  
tion.

It is only fair to state that a number  
of answers (probably one in every  
twenty) to the first question were similar  
to this: "By clubs, yes; by makers, no."  
These were counted "no." During the  
past week at least a dozen misguided  
individuals wanted cash prizes for ama-  
teurs—think of it! Next week we shall  
publish the opinions of a number of  
prominent men on the various questions,  
and shall also review the state of the  
case at some length.

THE NEGRO QUESTION.

"Rover" Gives His Reasons for Barring  
the Blacks From the League.

Editor REFEREE:—With the coming  
meeting of the National Assembly there  
is to be a question before its members  
which is of more importance than the  
average cyclist of the north realizes,  
viz.: the advisability of admitting the  
negro to L. A. W. membership. The  
writer has for several years past spent  
his winters in the great and growing  
south; he has been a careful and close  
observer of southern people, both white  
and black, and has taken particular in-  
terest in the negro question, so far as it  
relates to the L. A. W., what effect it  
might have on the trade, etc., etc. For  
the benefit of the readers of the REF-  
EREE (your views on this matter being so  
broad as to be at variance with those of  
the writer, and also, I believe, liberal  
and broad enough to publish a letter in  
direct opposition to your opinion), the  
writer has concluded to give his opin-  
ions, which are based on a careful study  
of the south.

Don't admit the negro. Why? What  
is the L. A. W. and why do wheelmen  
join it? Some join it for the national  
sociability, in fact most old riders were  
attached to it for this alone. Do they  
wish to associate with the negro on an  
equal social footing? Others have joined  
because of its good roads movement.  
Will the negro help us in this direction?  
Manufacturers, people in the trade and  
members of the press have become mem-  
bers because it brings them nearer to the  
new rider and enables them to reach  
this class of trade, with catalogues and  
sample copies of trade papers, etc. Does  
the manufacturer wish to introduce his  
wheel through the agency of the negro?  
How large a percentage of the blacks  
can read and understand our cycle  
papers, and how many would subscribe  
for them?

Racing men are in the league because

it controls racing. Do they care to as-  
sociate with the negro on the path, in  
dressing-room and at the club? If all  
these factions which compose our mem-  
bership can see where the negro will in  
any single case increase or elevate the  
standard of the league, let them cry for  
the black's admission. Can any one tell  
what good the negro would do the  
league?

It is not a question of fairness, but  
rather a question of sociability. The  
league is largely a social organization, a  
national club; it is composed of amateur  
wheelmen. An amateur wheelman is  
a gentleman; does he care to be in a  
club which will admit to its ranks the  
negro, particularly the negro of the  
south?

Four years ago the writer would have  
said, "let this man of color be one of  
us;" but four years of travel in a country  
where they are most plentiful has cured  
him of his ideas of fairness in this direc-  
tion, and he believes the national board  
should close the doors of the league  
against the negro, the Chinaman and  
any race which can be of no help or  
value to it other than revenue derived  
from their dues. Personally the writer  
would offer no objection to admitting  
the negro, as he could stay away from  
meets, clubs or social gatherings if he  
did not care to associate with them, and  
that is just what the southern members  
will do.

I have yet to see the first southern  
man who will say that he will remain  
in the league if the negro is admitted,  
and I have consulted a good many of  
them. Gentlemen, if you prefer the  
negro to the southern gentleman, vote  
in his favor, and you will soon learn that  
the south will either organize a league  
of its own, or have none at all. I don't  
believe the division should decide this  
question. It is of national importance,  
and should be handled by the national

RESULT OF THE VOTE TO DATE OF FEB. 9:

|                                                                                                                                                   |                                   |                             |                               |                                 |                                 |

| No. 7. Shall the constitution be so changed as to permit of a change by a mail vote?.....                                                         | Yes.<br>786<br>73<br>859          | No.<br>209<br>18<br>227     | No Answer.<br>60<br>9<br>68   |                                 |                                 |

board. The south is rapidly growing  
and becoming of importance to the  
trade and cycling interest in general; its  
interests should be respected. We of  
the north don't consider the question of  
any importance, simply because we do  
not see the same class of negro that you  
find south. We exclude the professional  
because he rides for money and is said to  
be a detriment to the sport and trade  
interest, and because our Simon pures  
object to his society. Have not the  
southern members a right to object to  
the blacks on the same grounds, and  
should not their objections be respected  
and considered of as much value to our  
organization as the very few men who  
ride for pianos and medals, with a cash  
inducement from the maker on the side?

Bar the negro and then watch our  
southern membership increase. Only a  
few days ago the writer asked several  
young men why they did not join the  
league. Their answer was, "We will  
when we know the color line will be  
drawn."  
ROVER.

A Chicago Trade Association.

A cycle dealers' secret society seemed  
to be among the possibilities on Tuesday  
last. On that afternoon representatives  
of nearly every cycle house on the row  
gathered at Mr. Garden's office for the  
purpose of discussing various questions  
of interest to the trade. For some un-  
known reason a desperate attempt was  
made to preserve secrecy. The Quadrant  
people were not represented, those in at-  
tendance being R. D. Garden, Pope  
Manufacturing Company; C. F. Stokes,  
Stokes Manufacturing Company; J. M.  
Lyon, Century Cycle Manufacturing  
Company; F. Fanning, A. G. Spalding &  
Bros.; L. W. Conkling, Coventry Ma-  
chinists' Company; C. H. Sieg, Sieg  
Manufacturing Company; C. H. Plumb,  
Ariel Cycle Company; W. S. Gilmore,  
Marble Cycle Company; Art Taylor, Tay-  
lor Cycle Company; Harry Cassidy,

Thorsen & Cassidy; F. L. Douglas, F. L.  
Douglas & Co.; J. O. Blake, Gormully &  
Jeffrey Manufacturing Company; Hor-  
ace Bell, Montgomery Ward & Co.

There was little accomplished beyond  
an informal talk, but another meeting is  
to be held in a few days at which it is  
hoped an organization will be perfected.  
There is room and necessity for such a  
body.

Tom Roe's Proposed Trip.

And now Tom Roe of the Chicago C. C.,  
who in 1889 "rode" from San Francisco  
to Chicago, proposes to start from New  
York May 5 and make the trip to San  
Francisco in sixty days, and thereby  
make a new long-distance record. His  
route will be along the New York Cen-  
tral, Lake Shore, Northwestern and  
Union Pacific roads. We are not in-  
formed on the expense part of the trip.

A Wheel for Two Cents.

The Hill Cycle Company has adopted  
a novel plan of advertising. Its cata-  
logues will be numbered and forwarded  
to all applicants who enclose a two-cent  
stamp. On a certain date there will be a  
drawing and the holder of the lucky  
number will be given a wheel. Details  
in advertisement.

Where He Got the Name.

Prince Wells requests us to correct the  
statement made in our last issue that he  
adopted the name of Prince because of  
the popularity of John S. of that ilk.  
Prince, he says, is an old family name  
and was given him by his father.

The Æolus Cycling Club gives a mas-  
querade ball at Central Turner Hall,  
Feb. 17. A reception will be given at  
the club house Feb. 22, Washington's  
birthday. March 4, the ball team plays  
the Clover club, of Ottawa. There will  
be a stag reception at the club house  
after.

#### WHAT THE VOTERS SAY.

The will of the majority should be law; of that there can be no doubt. This applies as well to affairs of the L. A. W. as to any other body. There are occasions when the will of the majority does not govern, and this has been exemplified time and again in the L. A. W. The great difficulty is to ascertain what the majority desires. So great is the difficulty, indeed, that no rational attempt has ever been made by the league to overcome it. In other words, league members have never been given an opportunity to express their opinions.

With this fact in mind, the REFEREE determined to ascertain as nearly as possible the sentiment of the membership at large on a number of questions. Five thousand names were selected. First came the chief, vice and local consuls and secretary-treasurers, and the balance were taken from the states in proportion to their memberships in the league. To each was mailed a circular, with postal card enclosed for reply. The circular asked seven questions and gave a brief explanation of each. The vote closed on Tuesday of this week, up to which day 1,225 replies had been received.

We maintain that, inasmuch as each question was put with strict impartiality, this vote fairly represents the sentiments of a majority of the league's members, especially as, in most cases, the vote is so one-sided as to render a change in the result, if submitted to the entire league, extremely improbable. This vote should, therefore, carry considerable weight with the gentlemen who will meet at Philadelphia on Monday next. We have on record the opinion of 1,225 members, probably five times as many as will be present in person at the meeting, and therefore entitled to the utmost respect.

The various questions presented are taken up separately.

#### Do Not Favor Class B.

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs?

EXPLANATION.—Heretofore men whose expenses while in training and while attending race meets have been paid by their clubs, have been allowed to compete as amateurs. It is generally supposed also, that many riders' expenses are paid by manufacturers.

RESULT.—Yes, 320; no, 900.

It will be seen by this vote that the league is most emphatically opposed to two classes of amateurs, and in favor of

excluding men whose expenses are paid by either maker or club. A few voters erased the words "or clubs," signifying that they favored expense payment by clubs only. There were, perhaps, fifty such votes, and they were counted on the "no" side. The fact that nearly three out of every four members desire to return to pure amateurism should surely be sufficient to seal the fate of class B.

#### May Have Expensive Prizes.

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc?

EXPLANATION.—Amateurs have been allowed to accept the prizes named, as well as laundry bills, shaving bills, loads of ice, flour, hams, soda-water tickets, "merchandise to the value of," etc.

RESULT.—Yes, 689; no, 489; medals only, 20; various, 18.

The voters do not seem to regard it as an amateur proceeding to compete for prizes of great value. Indeed, a number of them favored us with such expressions as, "Yes, anything," "The more valuable the better," and such like. The majority in favor, over all other votes, is 162, a respectable figure and one which leaves little doubt as to the league's wishes.

#### Class Them as Professionals.

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals?

EXPLANATION.—It has been suggested that men whose expenses are so paid, and who compete for such prizes, be placed in a separate class, and called "promateurs," while others consider that they should be declared professionals.

RESULT.—Professionals, 525; middle class, 301; no answer, 288; amateurs, 31; various, 88.

The result in this instance is not so satisfactory as in some of the others. It will be observed that in 288 cases no answers were given. When this question was put, it was with the idea that those people who objected to expense payment would also object to expense prizes, but in this we were mistaken. Many voters erased the words, "and who compete for such prizes," or made some other explanation of their vote, so that the vote to place in a professional class seems to refer to the men whose expenses are paid. This bears out the vote on the first question, which says, as plainly as anything possibly can, "Give us pure amateurs." This vote effectually kills, in addition to class B, the proposal to establish a "promateur" class, which is the same thing under another name.

#### Admit Respectable Professionals.

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership?

RESULT.—Yes, 727; no, 489; no answer, 21.

Here is an indication that a majority of members are not opposed to the admission of professionals simply because they are professionals. This is what has been contended by a few level-headed men for years. The objectors to the admission of pros. have given as their reasons: 1. That the corner-stone of the league is amateurism; 2. that professionals are not fit men to become members. The first objection is a fallacy, pure and simple, unless the gentlemen who compose the league's committees desire to be classed as amateur lawyers, amateur road improvement advocates, etc. The fact is that racing is not mentioned as one of the objects of the league. Another fact is that a large number of the racing members are at this moment professionals in disguise. Still another fact is that a member well-known, by name, at least, to every member of the league, and a man who was recently called on to perform for the league an act of the greatest importance, is a professional. The social standing of the pro. is probably no lower

than that of the amateur. It does not follow that because professionals are eligible to membership, the league must take in every man, regardless of character. A man may be a horse-thief or a criminal of any kind and still be an amateur—but the league need not necessarily admit him. On the other hand, a professional may be a gentleman. We can point to a number of examples. Certainly he may very easily be much more of a gentleman than hundreds of the men who now boast membership in the league and carry its uniform and its emblem with them into all sorts of disgraceful escapades. Wherefore, we are glad to find a majority say, "if a pro. be respectable, admit him." He is a wheelman. His interests are identical with ours. He is often a traveler and therefore in a position to lend assistance which can hardly be expected of him if we close our doors in his face. There are many arguments in favor of the admission of the professional, but the vote in his favor is the most potent, after all.

To sum up the desires of member, as expressed in replies to these questions, it seems that they desire two classes only, amateurs and professionals, and that both may be eligible to membership.

No. 5. Shall cash prizes be awarded to any class, and if so, which?

EXPLANATION.—Many believe in awarding cash prizes to all; others that articles of jewelry, etc., should be awarded to amateurs and cash to others, all to be under control of the league.

RESULT.—No, 430; to professionals only, 415; to all, 237; yes, 22; scattering and no answers, 112.

The vote on this question is puzzling. Taking those who vote "yes," to "professionals" and "to all," we have a total of 674, or a majority of 132 who are in favor of cash prizes in some form or other. Combining those who vote "yes," and "to all," we have a total of 259, or 171 behind the number who vote against cash prizes to anyone. Those who vote "to pros." are, we take it, opposed to cash for amateurs, and adding these to the nos, we have a total of 845 against that departure, and 259 in favor of it, a very decided indication which way the wind blows, and one which should set at rest all doubts on the subject. It would also appear that 415 members—we place this interpretation on their vote—favor the offering by the league, or by clubs under its rules, of cash for professional races, which, added to the voters "to all," make a total of 652, or a large majority. But we have serious doubts whether, if the question, "Shall the league promote professional races and offer cash therefor?" were put, a majority would vote in the affirmative. The primary object of the question was to ascertain whether the league favored cash for amateurs. We are very thoroughly convinced that it does not—a position which the REFEREE has always firmly maintained, despite the kind efforts of a few persons to create an impression to the contrary.

No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin?

EXPLANATION.—At present only the names of applicants for membership are published, and no alteration, probably, can be made until the present contract with the Wheelman Company expires. Some claim that the applicants can not be identified without their addresses, while others are actuated by personal motives only.

RESULT.—Yes, 1,084; no, 98; various, 43.

This is a question which has been so thoroughly discussed that every member is or should be in a position to record his vote intelligently. The majority in favor of the publication of the addresses is so overwhelming as to make it practically a unanimous vote. We take it that there can be no question that some such amendment as that proposed will

prevail. We are under the impression that under the present contract with the Wheelman Company action thereon will have to be deferred until the contract expires. The object of the amendment, therefore, is to prevent a repetition of the mistake into which the league has fallen.

No. 7. Shall the constitution be so changed as to permit of a change by a mail vote?

EXPLANATION.—The constitution can not now be changed except at a meeting called for the purpose, and notices of proposed amendments must be published in the Bulletin thirty days before such meeting.

RESULT.—Yes, 908; no, 234; no answer, 70.

In this connection two amendments have been offered, one providing that the constitution shall be amended by the National Assembly, subject to ratification by the divisions, and the other that the proposed amendments shall be submitted to a mail vote of the entire membership. At this time it seems likely that something between the two will be adopted. Advocates of the former wisely argue that the men who compose the National Assembly are much better posted on the league's necessities than the membership at large, while advocates of the mail vote say, with justice, that under the other method no member, unless he is fortunate enough to be a member of the National Assembly, can have any voice whatever in league matters. It has, therefore, been suggested that the National Assembly should consider proposed amendments and make recommendations thereon, and that the amendments should then be submitted to a mail vote of the entire membership. This method seems to us to be about as common sense as anything we have yet heard of, and is likely to prevail.

The full vote on all the questions referred to above will be found in another column.

#### TESTIMONIALS.

It is the practice of one or two cycling journals to publish, in conspicuous position, laudatory remarks dropped here and there by trade men as to the value of the aforesaid journals as advertising mediums. The REFEREE has avoided this custom, believing these testimonials if not absolutely useless, at least of no interest to the reader, and fit matter, if published at all, for the advertising columns. There is no paper published, probably, which has not a large number of these documents pigeon-holed. At last one paper, to wit, the *Wheel*, does not stop at genuine expressions of satisfaction. Recently it published an item not only laudatory of its own greatness, but somewhat derogatory to its contemporaries. The individual from whom the remarks were said to have issued, denied, in the presence of three persons, having authorized them! Nor is this the only instance, for a few weeks ago a prominent firm was astonished to see one of its letters so contorted as to have lost its original meaning and to have been shaped into a testimonial of the most effusive kind.

By way of vanity the proprietor might now relate to his readers a conversation which took place one day between himself and one of his advertisers, while a REFEREE man stood by. In brief it amounted to this—that as the result of two ads., one in the *Wheel*, the other in the REFEREE, a stack of replies had been received from the latter, and not one from the former!

The REFEREE, however, did not feel called upon to announce the fact, to make invidious comparisons, or to call into question its contemporary's value as an advertising medium.

THE VOTE IS CLOSED.

LEAGUE MEMBERS HAVE EXPRESSED THEIR OPINIONS.

They are Evidently Satisfied with Pure Amateurs, but Will Admit Professionals to League Membership.

For the past seven weeks this paper has been receiving from league members their opinions on a number of matters pertaining to L. A. W. affairs. The result of the vote, as received week by week, has been published, as well as all letters, pro and con, on the questions under consideration. Of course hundreds have not voted, but then there are hundreds who care not which way things are run. However, the opinions of some 1,200 are recorded and it would seem this ought to be a fair expression of the majority of league members. The vote in detail is here given, while on the editorial page will be found a synopsis of the case.

WOULDN'T PUBLISH THE LETTER.

A League Member Prevented from Expressing His Views.

The REFEREE is in receipt of the letter which follows from a prominent Philadelphian, L. A. W. No. 32,787. He complains that a copy of the letter was sent to the Bicycling World with a request that it be published for the information of league members, but that it was evidently thrown into the w. p. b. At any rate he wants it published so that league members may see it before the National Assembly. The letter, as sent to the Bicycling World and L. A. W. Bulletin, is as follows:

PHILADELPHIA, Jan. 30.—Editor Bicycling World and L. A. W. Bulletin:—In what has been written on the subject of admitting persons to membership in the League of American Wheelmen, it appears to me that one important point has been overlooked. The constitution of the league, article 3, section 1, reads: "Any amateur wheelman of good character, eighteen years of age or over, shall, with the endorsement of two league members or three reputable citizens, be eligible to membership, etc." The blank form published weekly in the "official organ" reads: "Each applicant must give as reference the names of two L. A. W. members or three reputable persons." It does not require much study to see that the latter is in no way a compliance with the constitution. The applicant may give as "reference" the names of two L. A. W. members or three reputable citizens who never knew him and his name is duly published in the organ, and (supposing the individual is not known to any L. A. W. member in the city or town he hails from and consequently no objection is lodged with the secretary) at the end of two weeks he is solemnly declared a member of the league. What a tremendous farce! I once read of a certain canine which had the honor to be admitted to membership, and while I do not approve of throwing our doors quite that wide open as a rule, still I am glad that the canine was proposed for membership as it showed up our methods beautifully, and I sincerely hope may be the means of fully awakening the rank and file. Some one suggested that the three dogs ought to be expelled, but as a matter of fact the deed could have been accomplished without the aid of any member though I do not say that in the above case such was the case. Let us remember that it is not necessary for the person to sign as reference. All that is necessary is hat three names appear.

My memory goes back to the time before Abbott Bassett was secretary of the league, when any one who criticised the action of league officials was severely dealt with as a kicker, and I regret to see the same spirit manifesting itself; but the editors of the official organ, either in their official utterances or under a nom de plume, have recently been making some very personal remarks. The man who agrees with or commends the action of league officials is "the man of sense, the man of honor—the gentleman." By implication those who do not agree with the officials of our organization are the opposites. I am indeed sorry to differ in opinion with the popular editor-official, but really I do not think that all the wisdom and learning in the L. A. W. is confined to the editorial staff of its official organ.

I have called attention to the loose methods in

No. 1. Shall men whose expenses are paid by makers and clubs be allowed to compete as amateurs?.....

No. 2. Shall amateurs be allowed to compete for such prizes as pianos, teams, lots, etc.?.....

No. 3. If not, shall men whose expenses are so paid and who compete for such prizes be placed in a middle class or be classed as professionals?..

No. 4. Shall professionals, provided they are otherwise acceptable, be admitted to league membership?.....

No. 5. Shall cash prizes be awarded to any class, and if so, which?.....

No. 6. Shall the addresses as well as names of applicants for membership be published in the Bulletin?.....

No. 7. Shall the constitution be so changed as to permit of a change by a mail vote?.....

vogue at present, by which persons are admitted to our organization without the endorsement of anybody, and I now propose to offer a suggestion as to how the difficulty may be met, and as I am neither directly nor indirectly connected with any paper, cycling or otherwise, I trust that I may be able to do so without giving offense.

- 1. Amend the constitution so that no one can be admitted to membership without the endorsement of at least one league member.
- 2. Publish with the name of each applicant his full postoffice address and the names of those he gives as reference.
- 3. Send to every member named as "reference" a printed form asking for information as to the standing of the applicant, and provide that no application shall be accepted until at least one favorable reply has been received.

The Bicycling World and L. A. W. Bulletin, as I understand it, is supposed to be run in the interests of the league, and while it may be business for the Wheelman Company not to publish addresses of applicants (though I confess I fail to see it, as each member receives the World under contract with that company) it certainly is not business for us to admit to fellowship Tom, Dick and Harry without any indorsement or inquiry as to character. I like the World very well, but in its relations with the league its publishers should be given unmistakably to understand that the welfare of the league must be looked to before private interests are considered. The cry of "business rival" will not deceive the thinking membership. Our constitution is entirely too lax on the subject of membership, but I trust that in future we shall have "endorsements," not "references," from applicants. L. A. W. 32,787.

OPINIONS IN DETAIL.

The Life Guard Recognizes Two Classes, A. and B.

EDWARDSPOET, Ind., Feb. 13.—Editor REFEREE:—In reply to your circular with reference to certain vital questions coming before the L. A. W. convention of the 20th inst., I would say that I hardly know to what extent my reply will be taken as personal and how much may be interpreted as from Life Guard official sources. I must state our views as fully as I may, and will say that they are to a great extent my own; they are, therefore, to that extent semi-official as indicating the future racing rules of this organization.

1. We shall have a special class, amateur, for such competitors. Our organization, from its general expense fund, may provide barracks accommodations for our members, with a mess from commissary fund; but these two features are the only exception we shall make in favor of class A amateurs. Our class B will include club representatives whose expenses are paid by their clubs, and representatives of makers and dealers, whose expenses only are paid for them.

2. The prize offered for competition by the Life Guard is a continuous one, to be held only until the next season's meet. The value of this prize is not fixed. It will rest entirely with the executive of the guard as to the offering of "pianos, teams, lots, etc." A due regard will always be had to the fitness of the article for the purpose offered. The idea of offering such prizes which generally come from a desire on the part of business men to encourage and add to the in-

RESULT OF THE VOTE TO DATE OF FEB. 13:

terest of the meets, will be discouraged, and instead we shall suggest the substitution of a few continuous prizes of appropriate design bearing the name of the city or person offering, as the "Vincennes citizens' two-mile championship prize," to be held by the winner until the next annual meet.

4. Since moral character and physical condition, together with the age limit, alone debar men from the Life Guard, a professional is eligible to membership. Competition by this class is entirely distinct from the amateur grades and for cash prizes only. The Life Guard offers no money prizes, and this class is dependent upon outside sources for the purses.

6-7. Answering for a large majority of our members, who are also L. A. W. men, I say yes.

As our racing rules have not been completed, I am unable to give you more fully the position taken in the Life Guard. Many of us are L. A. W. members, and for the protection of the standing of such in the league, we shall endeavor to make our code such as will not place members of both organizations under the ban of the league.

T. W. SHERWOOD,  
Colonel Commanding.

PROFESSIONALS AND AMATEURS ONLY.

CINCINNATI, O., Feb. 3.—Editor REFEREE:—I desire to take advantage of more fully explaining my views than the limited space of your postal permits. I do not do this for the purpose of rushing into print; far from that, as I desire in case you see fit to make use of this letter or any part of it, for publication, that you do not use my name, but if a signature is necessary, use my L. A. W. number, 11,245.

To begin, I will state that my answers are all based upon a theory, which I maintain to be the correct one, viz.: There can be but two classes of riders, either the Simon pure amateur or the full-fledged professional. The situation, in my opinion, permits of no middle-class, for look high and low through all the authorities for a proper definition of both words, and one can find nothing to warrant the supposition that a person can be the former when his record in his special calling is tainted in the least with benefits derived in a financial way. My answer to questions one and two are made on this basis, for while I agree that a man can race as an amateur by having his expenses paid by the club to which he belongs or represents, he still receives no remuneration of a financial kind; for my answer to question two, he will receive only the award of merit, in the shape of a medal, while the club represented gains nothing in a substantial or financial way, because the money expended brings them but "glory," which is what amateurs are supposed to work for.

Again, if we permit them to have their expenses paid by makers, there is a direct benefit received, for they are then in the employ of the makers for which they are paid, and while riding for said maker they are advertising his wheel, in which case both the rider and maker receive financial benefit. By permitting the amateur to ride for such items as you name in your second question, you place him in the way of temptation, for I venture the assertion that there is not one of your so-called amateurs who has not at some time disposed of prizes won for a cash consideration, or its equivalent. There is nothing disgraceful in being a professional racer, providing honesty goes with it, but the man who poses as an amateur, wins valuable prizes and disposes of them, s

of much smaller calibre than the one who comes boldly to the front and proclaims his professional status. The great objection that is waged against professional riding is that it is liable to "crookedness" and dishonesty. The very thing you wish to avoid is given an impetus by permitting amateurs to race for valuable prizes, for while they are posing before the public as amateurs pure and simple, they are violating the laws under which they ride by selling or disposing of the prizes they won. Thus you are fostering a wolf in sheep's clothing, because you put a premium on deceit and dishonesty. Why should we not permit honorable professionals then in the L. A. W.? Admit them, I say; give up our ridiculous amateur standing, let him be placed in the professional class for all time to come. Let the former run races similar in every respect to those previously run, except that medals shall be the only prizes. The latter we could make class races for exclusively, no open or handicap races, but in each day's programme have a series of class races with a short time limit to each race, with the express understanding that no prize or purse should be awarded unless the time limit was made. This would give us first-class races, as it would permit of no loafing, and the "dear public" which pays to see good sport would be sure to have it. With this plan there would be practically no chance for crooked riding or dividing of purses, because a 2:20 rider in his class with a 2:25 time limit would have to have his hustling clothes on from start to finish, and so with every other class.

On the sixth question I have only to say that the present plan used by the Bulletin is an outrage. We have often had use for the names of L. A. W. members when we wanted to issue invitations for combined runs, and experienced much trouble in securing them. If the Wheelman Company is under the impression that the list of members, with residence for each, is its exclusive property, the national assembly should take decisive action and disabuse its befogged and befogged mind. It is a reform that is highly necessary for the welfare of the organization, as there is entirely too much ego about one wishy-washy official organ.

On question number seven I need only to call attention to the last editorial column on page 369 of the last Bulletin, to show how the proxy system is trying to be used to perpetuate "grandmother Bicycling World." Yours fraternally,  
L. A. W. 11,245.

A COMMON-SENSE ARGUMENT.

COLLEGE HILL, O., Feb. 2.—Editor REFEREE:—In explanation of mail vote sent by postal, I desire to state as follows: Personally and theoretically, I would be glad to see all forms and every degree of professionalism in all athletic sports forever abolished, and the amateur's reward confined to the honor of the achievement and a simple medal attesting the same. I fear the practical result of such a course would be poorer times in races and greater difficulty to induce good riders to enter races. It must be remembered that the wheel is still in process of evolution, and many of us like to see what can be done on a wheel. We take pride in our steeds and in what may be accomplished on them, although we may not have the ability or are not able to afford the time to develop high speed in ourselves. For this reason we welcome every opportunity to attend a fast race. It seems to me that the present methods produce good races which are popu-

The OVERLAND Roadster, No. 1.

Weight, 38 Lbs. Price, \$125.00.

Handsome in Design. - High in Grade.

THE Overland proved such a popular medium priced safety, and found so ready sale last season, we have added several new patterns to the line for 1899. As manufacturers of these wheels we stand back of them with our 13 years' experience in the cycle trade, and the confidence that they will give complete satisfaction, also prove the greatest money maker for the dealer on the market. We offer the following patterns:

|                                            |                 |

Agents, dealers and wheelmen looking for a strictly high grade medium priced safety are invited to correspond with us. Agents wanted throughout the United States. Catalogue free.

ROUSE, HAZARD & CO.,

89 G Street, Peoria, Ill.

MANUFACTURERS, IMPORTERS, JOBBERS.

The SCORCHER SYLPH, Model D.

Highest Grade. Rigid Frame. Weight 30 Lbs.

It combines the Proper Lines, the Correct Proportions, the Most Perfect Adjustments, the Least Weight with the Greatest Strength. In short, it is the nearest perfection yet attained in a cycle of its weight and design. Scorchers and hard road riders who prefer a light weight, rigid frame machine are invited to investigate. Its special features was the subject of much favorable comment at the Philadelphia Cycle Show, and the cycling papers have given it flattering notices.

For genuine pleasure and comfort for all sorts of riders, over all sorts of roads, cobble stone pavements included, the Spring Frame Sylph, in either Diamond or Drop Frame, is absolutely without an equal. We would be glad to mail you a catalogue free telling all about Sylph cycles. Good agents wanted in unoccupied territory.

lar with the spectators; local races, class races and time limits furnish sufficient opportunities to the ambitious beginner, and to the public sufficient guarantee.

Racers probably do convert such prizes as pianos into cash, but I do not think any of them could make other than a very precarious living from sums so realized. Doubtless the time will come when rules enforcing pure amateurism will have to be adopted. I do not think it has yet. I do not see why a racer may not receive his expenses from a club or firm as well as from some rich friend or relative on whom he is contented to sponge. I think if question seven were answered in the affirmative, it would involve too frequent and ill-considered changes. Very respectfully,

G. E. PERRY, L. A. W. 42,792.

NO PROFESSIONALS WANTED.

IONIA, Mich., Feb. 11.—Editor REFEREE:—Your policy is correct and will win friends. I think a large majority are crazy in regard to the racing question. The racing men want to govern the league or get it into a fight. This will end in harm to the league. We now have too many professionals that belong to the league. I say, fire them out; leave the professionals alone; have an amateur league or none. Let the L. A. W. furnish all prizes, and of guaranteed value; let every member pay his own racing expenses. Class your races and class your prizes—and no cash prizes. Have the official news printed on the last pages of the REFEREE and separate from all advertising matter, so it can be filed for reference. As to question No. 6, yes, by all means, and to No. 7, yes, give every member a good chance; we are no political ring.

L. A. W. 6,509.

FAVORS THREE CLASSES.

PUEBLO, Colo., Jan. 31.—Editor REFEREE:—Yours of a recent date at hand, and it gives me pleasure to find that some have taken in hand the subject of prizes in the L. A. W. For the first part, I am heartily in favor of cash prizes, and believe races would become better attended, with more contestants. I can see no harm in any individual or club paying the expenses for training and entering races. I believe there should be three classes, and to designate them by the amount of purse, and can not see anything wrong in so-called professionals becoming members of the league. I believe unless the league does something in regard to prizes in racing they will not prosper. Yours,

F. HAWES.

THIS MUST NOT PASS.

Indiana Legislators are Striking at the Wheelmen.

HOUSE BILL No. 215. A bill for an act touching the use of the highways of this state by riders of bicycles and like vehicles, and fixing penalties for the violation thereof.

SECTION 1. Be it enacted by the General Assembly of the State of Indiana. That whenever the rider of any bicycle, tricycle or like vehicle shall approach upon the highways of this state any single horse, or double team of horses, harnessed and being driven to any buggy or other carriage, with the purpose of passing such horse or horses, that it will be the duty of such rider of such bicycle, tricycle or like vehicle, to pass to the right and give the beaten path to such horse or horses. And should such horse or horses indicate that they are frightened by such bicycle, tricycle or like vehicle, it shall be the duty of such rider to dismount and so remain until such horse or horses have passed him or her.

SEC. 2. Any person violating either of the provisions of section one (1) of this act shall be deemed guilty of a misdemeanor, and shall be fined in any sum not less than five, nor more than fifty dollars.

This bill was introduced by a Mr. Schrader, and duly referred to the committee on roads. That body displayed singular ignorance of the rights of wheelmen, as established in nearly every state, by making the following report:

MR. SPEAKER:—Your committee on roads, to whom was referred House Bill No. 2, introduced by Mr. Schrader, have had the same under consideration, and beg leave to report the same back to the House with the recommendation that said bill be amended as follows: In the fifth line of section 1, strike out the word "carriage" and insert instead the word "vehicle," and add "or under saddle;" and in the eleventh line of section 1, after the word "vehicle" insert the words "or should the rider or driver indicate that such horse or horses are liable to be frightened by such bicycle, tricycle or other like vehicle;" and amend the penalty affixed by section 11 to read "not less than one or more than twenty-five dollars." And when the bill is so amended it do pass.

D. W. HEAGHY, Chairman.

Every wheelman knows, and every legislator should know—if he doesn't he

isn't fit for his position—that such a law, if passed, could not possibly be enforced. Time after time similar bills have been introduced, and in one or two instances passed, but it has long since been established that such a law is unconstitutional. As a means of educating the legislators and the public as to wheelmen's rights, it is perhaps as well that bills of this nature are occasionally introduced, for they are invariably handled severely by the press and as regularly consigned, in due course, to that ignominious end known to the press as the W. P. B., and to the legislator as the "table." The result is the same in either case. This particular bill is receiving the attention of the Indiana division through its chief consul, Thomas Hay, who calls attention to the fact that it "infringes on the constitutional rights of wheelmen, as decided by the Supreme Court of Indiana and various other states." Mr. Hay quotes, as authority, Holland vs. Barth, vol. 120 of the Indiana reports. The wheelmen of the state have been called upon to communicate with their representatives, and in due course the bill will pass into oblivion, leaving the Hoosier wheelman's rights so thoroughly established as to end for all time propositions looking to such unjust legislation.

Indiana law makers are not all Schraders.

B. and O. People Deny It.

A report appeared in a number of eastern papers lately that the B. & O. Railroad, hitherto the best friend wheelmen have had among the railroads, had decided to discontinue the carriage of cycles free. Mr. Picking, a Chicago representative, when shown the item, pronounced it a mistake, and said his road would continue on the old lines.

W. I. WILHELM.

A One-Time Famous Racing Man and Now a Prominent Manufacturer.

Who of the old school, and the new for that matter, has not heard of W. I. Wilhelm, of Reading, Pa.? Wilhelm was not only one of the fastest riders

in America a few years ago, but he was also noted for his clean riding and gentlemanly deportment on and off the track. He was more than moderately successful. He started riding in 1880, on a wheel he built himself, and, by the way, the Pope company made him pay \$10 license, too. When he rebuilt it, Wilhelm commenced racing, locally, in 1882, winning a two-mile club championship. In 1883, '84 and '85 he raced at all or nearly all the race meets in his section, and in 1886, '87, '88 and '89 took in a little of everything. Wilhelm and his Star were a sort of enigma to the boys. They never knew just what they were going to do. He met nearly all the men that raced, and has beaten about all of them at some

time or another, with the exception of Windle. That was when Crist, Rich, Foster and others were on the top of the heap. In '87, '88 and '89 he held nearly all the state championships, and also made a record around Druid Lake at Baltimore, in a ten-mile race, that stands to day. His record of 48 min. from Paoli to Fifty-second street, Philadelphia, sixteen miles, stood for a few years, when Van Wagoner reduced it something less than a minute, and Wilhelm again reduced his figures a couple of minutes. The twenty-one mile road race course from Meyerstown to Reading, on which the Penn Wheelmen hold their annual race, gave Wilhelm a race and a record, in 1888, of 1 hr. 14 min. In 1889 Van Wagoner won the race in 1 hr. 7 min., and a week afterward Wilhelm turned the twenty-one miles in 1 hr. 3 min., and that record still stands. In the seven or eight years of his racing he has won about two hundred prizes, and it was very cold when he returned home empty-handed.

Wilhelm also calls himself A. A. Zimmerman's father-in-law, for his father says it was Wilhelm's talking to him at Wilmington in 1888 that made "his boy." Of course his boy made himself, but Wilhelm says "its interesting and satisfactory to think you had anything to do with a rider like Zimmerman is to-day." In 1890 he began to settle down strictly to business, and always had charge of the Reading machine shop, but did not build bicycles. In the fall of 1890 the firm began manufacturing for the retail trade and boy's wheels, and up to May, 1891, probably built for its own use about 150 wheels. The balance of 1891 the firm turned out some 700 wheels, and disposed of them mostly at retail. In the fall of '91, however, they began to sell wheels to other agents, and branched into the wheel business ex-

clusively in 1892. They looked up a few good agents, and finding more orders coming than they could fill, enlarged the buildings, put in new machinery and tools, ran the shop twenty-two hours out of the twenty-four, and still had to refuse orders. They have built so far 2,800, and expect to get out 800 more this year. The outlook now is very favorable. Wilhelm says: "Of course we have had our little troubles with our wheels, even when we thought they were perfection itself; but then we were only going through what every other manufacturer did. Our 1893 wheels will be beauties, all of them, and prospects could not be brighter. If hard, consistent work will make a success of a thing it's bound to come." Wilhelm's father, W. H. Wilhelm, is the proprietor, and the son has charge of everything. The old racer says: "When I get to thinking of the good old days spent over this country of ours, of the friends I made, of the hard, hard work it was, I think I would willingly go over the whole thing again."

#### The New York Cycling League

Some time ago the Cohoes (N. Y.) Wheelmen suggested the organization of a league to comprise the clubs of that section of the state. The first formal meeting of the Eastern New York Cycling League was held in the rooms of the Troy Bicycle Club. Twenty-seven delegates were present, three from each of the following places: Albany, Troy, Cohoes, Mechanicville, Schenectady, Hudson, Amsterdam, Hoosick Falls and Saratoga. An organization was perfected by the election of the following officers: President, Ensign Homer, of the Troy club; vice-president, J. W. C. C. Schenectady Bicycle Club; recording secretary, C. A. Judd, Cohoes Wheelmen; corresponding secretary, J.

A. Barkhuff, Amsterdam Bicycle Club; commander, T. W. Neary, Cohoes Wheelmen; treasurer, N. T. Bryant, Mechanicville Bicycle Club. The object of the league is the improvement of roads, promotion of race meets, and the mutual interests, benefits and enjoyments of its members.

#### Wants to Match Kaufmann.

R. A. Punnett, of Rochester, noting the article on trick riders in a recent number of the REFEREE, writes to the effect that Kaufmann will, without doubt, be in America in April, and he would be much pleased to have a match of any kind and on any conditions at the World's Fair. He is willing to risk \$500 to \$250, or \$1,000 to \$500 on Kaufmann against any rider in the world. Mr. Punnett says for A1 trick riding we have yet to see Kaufmann, who has indulged in daily practice for seven years; that all the trick riding seen in America to-day is "the same 'aged' stuff as seen in the '80's, notably in '80, '81 and '82—very little advancement." Punnett adds this: "I think old-time records will show that trick riding was originated by Rex Smith, George Hendee and myself in 1879. I think Rex was first. Bert Owen, of Washington, came forward about that time also." It might be advisable for Mr. Punnett to put up a deposit as a guarantee.

#### Cycling in the South.

"Cycling in the south is not near so much the rage as it is in Chicago. In New Orleans I saw but one young lady riding a cycle. She rode it very gracefully and spun over the shell road at a high rate of speed without apparent effort. New Orleans has many miles of shell road, as smooth and fine as any of our boulevards, especially adapted to the use of cycling. The Southern Cycling Company, on Common street, is the

great bicycle department there. The manager of the concern told me that, compared to Chicago, the crescent city had not near as many bicycles in use.

"He attributed this more to the warm climate than he did to anything else. However, he believed that the bicycle would soon become very popular there. 'We are selling within the last month,' he said, 'more ladies' bicycles than we have sold for a long time.'"—Francis Holland, in *Chicago Herald*.

#### Cheap Rates to the Inauguration.

For the inauguration of Cleveland and Stevenson at Washington on March 4, excursion tickets, reading via Baltimore and Ohio Railroad, "The Picturesque Route," will be placed on sale at the ticket offices of principal railroads of the west, as well as the ticket offices of the Baltimore and Ohio Company. The fare from Chicago will be \$17.50 for the round trip. These tickets will be sold from Feb. 23 to March 3 inclusive, and will be valid for return journey until March 8, inclusive. The Baltimore and Ohio is the shortest route to Washington from nearly all points west. Its trains are vestibuled from end to end, and carry Pullman sleeping cars.

No railroad in America is better equipped than the B. & O. to transport with dispatch, safety and comfort the large crowd which will visit Washington to witness the inauguration ceremonies. Its long experience in transporting crowds to former inaugurations, G. A. R. Encampments, Knights Templar Conclaves, and similar gatherings on an extensive scale, will prove most valuable in arranging for the coming inauguration.

For more detailed information as to rates, time of trains, etc., apply to L. S. Allen, Asst. Gen'l Passenger Agent, the Rookery, Chicago, or O. P. McCarty, Asst. Gen'l Passenger Agent, Cincinnati, O.

-16-2.

#### Touring to the World's Fair

The Erie (Pa.) *Herald* states that twenty riders of that town will leave on the 10th of May to ride to Chicago and visit the World's Fair. After leaving Buffalo they intend to travel through Canada. Rumor also has it that a party is being organized in Kansas to ride to the World's Fair on bicycles.

## A BIG DEAL PROBABLE.

CHANGES CONTEMPLATED IN CONNECTION WITH THE W. W. W.

*Pope Company May Purchase—Other Large Concerns Interested—A Representative Goes Abroad to See Louis Schoeninger.*

Silently and under cover of the night, lest some prying individual should set eye on him and become curious as to his mission, Tom Coleman, an important factor in the "Co.," connected with the famous New York house of R. L. Coleman, sailed away to Europe. This was

LOUIS SCHOENINGER.

about two weeks ago, and in the usual course of events he should have reached his destination on Tuesday of this week. His mission is a highly important one, and was brought about substantially by the following circumstances:

## DECIDED ON A CHANGE.

Mr. Schoeninger, Sr., has for many years conducted, under one name and another, the business now known as the Western Wheel Works.

Having reached a point where the further pursuit of wealth or fame is of little or no object to him, he decided some time ago to make some changes in the business, with the result that two propositions are now under consideration, one of which, it is highly probable, will be consummated within the next few weeks.

Louis Schoeninger has for some years been an active partner in the business, and it is largely due to his energy and business capacity that the concern has become one of the most successful in the world. Some time ago, however, this gentleman was threatened with a serious illness, which made it necessary for him to go abroad. This circumstance rooted still further in the mind of his father the idea of making a change, and it was to see Louis that Tom Coleman went abroad.

THE FIRST TRANSACTION CONTEMPLATED was the sale of the entire business to the Pope Manufacturing Company, or representatives of that concern.

Negotiations were carried on and reached a point where everything had been definitely settled with the exception of securing the consent of Louis Schoeninger. It is said that the head of the concern was very strongly in favor of this plan, principally for the reason that he was

anxious to have his son rid of all business cares for the next few years or until he should have fully recovered his health. He determined, however, that he would be guided entirely by his son's decision. That gentleman objected, promptly and decisively, to this arrangement.

Then came a proposition to dispose of the business to a new company composed of the present stockholders, R. L. Coleman & Co., A. W. Gump & Co., the Thorsen & Cassady Company, Hearsey Cycle Company and one or two others who are at present largely interested in the disposition of the Western Wheel Works' output.

THIS PLAN FOUND HEARTY FAVOR with the concerns named, especially R. L. Coleman & Co., who have for a number of years conducted the eastern branch of the business and who were, as a matter of fact, largely instrumental in making the business the success that it is at present.

Tom Coleman went to Europe to lay all these matters before Mr. Schoeninger, Jr., and on his decision the matter rests.

When seen on Tuesday concerning the proposed transaction, Mr. Schoeninger said:

"I have arrived at a time of life when I am anxious to shift the work and responsibility of the business onto younger shoulders. I have all the money I need and am still young enough to thoroughly enjoy life, and as I am not anxious to amass millions to leave behind me like Jay Gould and some of those fellows, I do not see why I should not spend my time in comfort. I own, and have always owned, a great deal more than a majority of the stock of the company, and it is now certain that whatever arrangements are made, the control of the business will not pass out of the hands of my family.

"I cannot say when either of the deals contemplated will be closed, or whether they ever will be; it depends entirely on my son. We are in no hurry, for our arrangements for this season are fully completed, and every wheel that we can dispose of up to the end of next September has been disposed of. Our sales are

NOW AVERAGING \$5,000 A DAY, And during twenty-four days in January the business amounted to \$85,000.

"Despite the fact that we have 960 men at work, we can not turn out wheels fast enough. We ought to be in a position to supply 200 a day, but at present 125 is the limit.

"No matter which of the deals is carried out, I think there is no doubt that the capital stock of the company will be increased to \$1,000,000 and that the facilities will be increased proportionately."

## A FORTUNE FOR HIS INTEREST.

A representative of the Pope Manufacturing Company was questioned concerning the matter but could give very little information other than that contained in the foregoing. It seems highly probable, however, that the Pope Manufacturing Company was fully prepared to go into the deal, which explains the rumors recently in circulation as to the future movements of Mr. Garden.

From another source we learned that the price Mr. Schoeninger, Sr., was to receive for his interest in the business was \$600,000.

## ITS HISTORY IS EXTRAORDINARY.

The history of the Western Wheel Works is romantic in the extreme, and its story during the past five years reads very much like a fairy tale.

In Chicago's early days Mr. Schoeninger obtained, for a small figure, the ground on which the factory now stands,

and on a part of it conducted, for a long time, the old Western Toy Company. It was anything but a profitable business, however, and the manufacture of bicycles had only been engaged in to a very small extent, toy wheels being the limit of its productions.

During the year 1887 Mr. Schoeninger concluded that he would not be able to continue, and it is said that he actually had a pen in his hand for the purpose

## OF SIGNING AN ASSIGNMENT.

He was persuaded, however, to wait a day or two longer, and that brief period proved his salvation.

Lindsey Coleman gave him an order for 500 bicycles, his first stroke of luck.

Within a day or two a real estate man representing T. Z. Leiter called upon him, asking whether he would be willing to sell the ground on which the factory stands, and at what price, and take a ninety-nine years' lease. Mr. Schoeninger told him that he would think the matter over and give him an answer in a day or two.

The agent went away and Mr. Schoeninger proceeded to figure on the value of his property. On the principle that it was a great deal easier to come down a little than go up a little, he named a price that seemed to him tremendously high. His figure was \$60,000. This proposition he submitted to the agent, who, very greatly to his surprise, wrote that Mr. Leiter had decided to accept the offer, but that, desiring an income of \$4,000 a year from the property, on a six per cent basis, he would pay \$66,666 for the property.

With the money thus obtained Mr. Schoeninger enlarged the business and he has never stopped enlarging since. In other words, he has risen from a comparatively poor man to an extremely wealthy man in the brief period of five years, and now proposes to retire on his well-earned laurels.

It seems probable that in any event Louis Schoeninger will remain at the helm. On Tuesday morning Mr. Schoeninger, Sr., received a letter from one of his brothers in Germany, stating that his son's health was much improved and that he would be over in time for the world's fair, in as good condition as ever. Two of his uncles will accompany him.

## THE COLONEL SAYS IT IS OFF.

NEW YORK, Feb. 16.—No details of the proposed purchase of the Western Wheel Works by the Pope Manufacturing Company are obtainable in this city. Colonel Pope, while here recently, stated that the big Chicago deal the company had on hand was off definitely.

## Will Be No Quarrel.

Some people are never content to "let well enough alone." This class is now busy endeavoring to bring about strife between the ruling bodies of cycling and athletics. When the alliance now existing between them was entered into, the REFEREE was opposed to it. At present, however, it seems to be working very nicely, thanks to one or two clauses, which appeared simple enough at the time, but which the course of events has turned to the league's benefit. This alliance is what the mischief-makers are picking at at present, and class B is the lever. But they lose sight of the fact that class B is yet unborn, and that the indications are very strongly in favor of its never seeing daylight. Even should the league accept it, however, no reason exists for any rupture, at least on that ground. The men who would naturally go into class B would still be amateurs—save the mark!—and eligible to membership in union clubs. Why, then, all this needless fuss?

## HOW INTERVIEWS ARE MADE.

*A Ready-Made Article Designed for the English Press—Will it Work?*

Let no man believe that residents of the British Isles are slow to take advantage of advertising opportunities. A gentleman who recently visited these shores is, by this time, again on the other side. He prepared himself, before his departure, to meet the representatives of the English press all ready prepared with his "impressions," etc., and sailed away with two dozen copies thereof in his inside pocket. Here is an extract therefrom, which will doubtless appear, in due season, in various British publications:

For the first time in centuries America has not only recognized, but welcomed with characteristic appreciation, a rival to Columbus. The great Italian explorer discovered the virgin, undeveloped continent. It remained for — to discover the key to the commercial instinct of the keen, enterprising western nation of the present.

'he facts read like an extract from Rider Haggard or Munchausen, and furnish another striking exemplification of the maxim that "truth is stranger than fiction."

Mr. — left Queenstown on the R. M. S. Majestic on —. He arrived in New York on the —. After an enthusiastic and almost continuous levee for five days, during which he exchanged greetings with every citizen, cyclist, trade magnate and newspaper critic worth knowing, he proceeded to, etc., etc.

After telling what he succeeded in accomplishing, the interviewed one goes on:

Mr. — literally tore himself away from the congratulations of the trade fraternity and outside friends, and returned on —. The collection of newspaper comments he brought back with him furnishes an interesting study, not only to his immediate business connections, but also to those whose old-world ideas are occasionally revolutionized by the characteristic journalism of the great republic.

Then follows a number of extracts from American papers, and the victim of the interviewer concludes:

Drifting into a business chat, as Mr. — invariably does, without much waste of frivolous badinage, he said:

"I am thoroughly convinced from my recent investigations on the spot, that there is a magnificent future before the cycle trade generally in the United States. It was simply marvellous to see the instinctive promptitude with which the keenest expert grasped its many claims to merit. The recognition was as wide-spread and general as it was instantaneous, and without question I can say that the — has annexed America.

"I had not time this trip to get as far as Hawaii, but doubtless our conquest will include the disturbed section before my next campaign ends. After deposing their queen, they unofficially invited America to annex them, but they had not heard of us then."

## W. H. DE GRAFF IS DEAD.

*The Treasurer of the New York Division Succumbs to Pneumonia.*

NEW YORK, Feb. 14.—W. H. DeGraff, treasurer of the New York state division of the L. A. W., died suddenly of pneumonia on Sunday. The funeral occurred this evening.

The deceased was one of the most popular of New York cyclists. He has long been a leading member of the Harlem Wheelmen, of which club he was president up to the time of his death. "Billy" DeGraff, as he was called, was probably forty years of age, and has figured frequently in league politics. He was engaged in the furniture business and was supposed to be interested in the Bidwell Cycle Company. His sudden demise will be a surprise to every one who knew him, for he was apparently a man of strong constitution and in the best of health.

## Worse Than Our \$5,000 Law.

An old man was run down by a Paris cyclist and killed. The cyclist was fined \$25! This is worse than the Illinois law which allows railroads to kill as many people as they please at \$5,000 per kill.

### WILL IT BE HELD?

THE 1893 PULLMAN ROAD RACE  
THOROUGHLY DISCUSSED.

*North and West Sides Want It—Many  
Favor the Old Course—A Commit-  
tee Named to Consider  
the Courses.*

Doubts seem to exist in the minds of some as to the advisability of holding the Pullman road race over the old course, because of the presence of the world's fair and consequently great crowds. As a result of this doubt the west and north side factions are endeavoring to secure the great Decoration day race. The matter was brought up for discussion at the meeting of the Associated Cycling Clubs at the Grand Pacific hotel. A resolution was submitted by Mr. Root of the Chicago club which provided that preparations be immediately begun for holding the race over the old course; that the number of entries be limited to 150; that the entrance fee be fixed at \$5 instead of \$1 and that the handicap limit be eight minutes. There was a veritable howl when the resolution was read, and everybody had something to say. It was argued that inasmuch as thousands of people would be in Chicago on a holiday the boulevards would be almost packed with carriages and it would be impossible for a dozen to race down the old course, let alone a couple of hundred. This was the chief reason for wanting the race on the north or west side. It was also claimed that there would be no facilities for reaching Pullman, inasmuch as the Illinois Central road had failed to get its special trains out last year, and that the

wheelmen were not wanted in the City of Brick anyway.

Mr. Root, in support of his resolution, said it was doubtful if permission to hold the race could be had from the South Park commissioners and the city authorities if the number of starters should be unlimited. Mr. Randall stated that, so far as the Pullman end was concerned, there would be no trouble, as the riders could use the boat houses for dressing rooms.

Mr. Gerould, who was present, though not a delegate, thought the race should be run over the old course if permission could be obtained, and when this matter should be disposed of work on the details could be commenced. He thought the number of entries should not be limited, but that it might not be unwise to raise the fee to, say, \$2.

An amendment to the resolution provided that the chair appoint a committee of three, one from each side of the city, to look up the various courses and report at a special meeting. Messrs. Garden, Herrick and Fanning were named, representing the south, north and west sides, respectively.

Officers for the year were elected as follows: President, R. D. Garden; vice-presidents, F. J. Fanning and William Herrick; secretary, F. E. Spooner; treasurer, A. W. Roth. Messrs. Garden and Roth were elected unanimously, while Spooner secured thirteen votes to Root's ten for the secretaryship.

Resolutions were adopted providing that the president ascertain just what steps have been taken toward providing a track for Chicago for use during the world's fair and providing that a committee of five be appointed for the purpose of entertaining visiting wheelmen during the world's fair.

The treasurer's report showed receipts, during 1892, \$578.12; disbursements,

\$418.90; cash on hand, \$159.51. The last Pullman race occasioned an expenditure of \$392.15, or \$5.15 more than was received.

#### Roe, Tommy Roe.

Tom Roe is once more free, in that he is no longer with the Ariel Cycle Manufacturing Company. But his samples are still in New York. Tom is trying to arrange a ride from San Francisco to New York or from New York to San Francisco, to start May 1. The Buffalo Wheel Company and the New Howe company are considering propositions from Roe, who says this trip will be genuine in every particular and will be checked by the newspapers en route. Roe is also figuring with tire manufacturers to use a certain tire, which would be a great test of durability.

A REFEREE man was talking with Mr. Sea, assistant business manager of the New York World, the other day. He remembers Tom's trip for the Chicago Herald well, for he was the man who, for the Herald, bit at the scheme.

"We had a terrible time getting him to Chicago," said Mr. Sea, "as he wanted to quit five different times; but we got him there—well, never mind how we got him there; we had to do it."

Mr. Sea is not much impressed with trans-continental trips, and threatened to throw the REFEREE man out of the window when he suggested that Tom was ready for another.

#### 'Twas a Cruel Joke.

H. A. Lozier told a story at Springfield last year that was repeated, to the delight of a few who heard it, in New York recently. Said Lozier: "I once had a very nice and awfully particular traveling man; one who was so particular that he carried his own sheets, fearing to trust hotel sheets. He changed his sheets every night, and, of course,

charged the laundry in his expense account. He had no bad habits—he did not drink or smoke—but though such expenses were left off the list, it was fully made up by the bills for laundry, shaves, etc. Well, one night the boys who knew his extreme care in things cleanly, decided upon a cruel joke. Two of them invited him to the bar to drink a ginger, while two others placed a thin layer of limburger cheese between the solid and moveable soles of his shoes. The next day the poor man looked unhappy; he wanted to get away from himself, the smell being enough to cause everybody to give him a wide berth. He tried to talk business, but the would-be buyers showed him out of their places, and he became despondent. He examined his clothing, bought a dozen pairs of socks and scraped the bottoms of his shoes to no purpose—the smell would not down. Finally, out of compassion, one of the jokers unfolded the secret, and was threatened with arrest and a suit for damages for his pains."

#### Billingsley's Scheme Working Well.

Evidence is at hand that Mr. Billingsley's scheme to promote a number of relay rides is being pushed. A number of dispatches have appeared in the daily papers, and it has been arranged that the messengers between Springfield, Ill., and Madison, Wis., shall carry a message from the governor of the former state to the governor of the latter.

#### But He Wants Their Support Now.

One of the base ball men now interested in the cash prize league was so thoroughly opposed to wheelmen two years ago that he caused the arrest of two of them, who, as he argued, rode by his house at the rate of thirty miles an hour.

SUSPECTS BREATHE FREELY.

Cases Against the Racing Men Dropped by the Racing Board.

Just as we go to press, word reaches us that the cases against all the men charged with receiving expenses while attending races at Milwaukee and Chicago, and against Rhodes, Ballard and Johnson, under suspicion of being in the employ of a manufacturer while on a recent southern trip, have been dropped by the L. A. W. racing board.

Every man concerned has been questioned, and has replied in such a way as to preclude a possibility of conviction. Every inducer and managers of the meets have made statements denying any violation of the amateur rules, or have answered in such a way as to furnish no proof of violations. All that can be said in this connection is that, such being the case, there has been a vast amount of pure and unadulterated lying going on.

THAT WORLD'S FAIR TRACK.

Mr. Gerould Says the Delay is Occasioned by the League.

Will Chicago have a track this year? Probably the same question has been asked a hundred, yes, a thousand times, but no one has ever been able to give a positive answer. The REFEREE has been asked the question, we have seen the query in the English papers, and we have been waiting, hoping each week to be able to announce to the world the fact that plans had been adopted and work would begin as soon as the frost should leave the ground. But in this we have been disappointed, and we do not at this time know positively whether Chicago will have a track or not. There is hardly any doubt that we will, but we do not know it, nevertheless.

Mr. Raymond, as a representative of the league, went abroad and promised the International Cyclists' Association that when the foreigners were ready to come to the world's fair to train they would find a fine track ready. Supposing they should come now—or within the next thirty or sixty days—would they find a track awaiting them? Hardly.

Chief Consul Gerould says that nothing can be done toward the track until the league has officially decided to assume full charge of the race meet programme. The local clubs will have the entertaining of visitors to look after. A meeting will shortly be called of representatives of all clubs, without regard to the Associated Cycling Clubs, to arrange the programme for the meet. Mr. Gerould thinks the scheme of appointing clubs as a whole on the committee is a good one. "Local clubs must act together in this matter," says Mr. Gerould, "and there must be nothing done independently. We will have all we want to do and work together before the season is closed. Chicago's reputation must be upheld, and in organization only can this be accomplished. Just the moment the assembly has passed favorably we will go to work with a will, all together, and with a purpose which nothing can shake."

But, Mr. Gerould, this does not build

the track. The chief consul, with Mr. Garden, has the track matter in hand, and he says the track will be constructed whether the league is to run the meet alone or jointly with the international body. So long as the track is to be built, why not commence it now, and decide the other question whenever opportunity permits? There can be nothing gained by a dilly-dallying policy—go ahead with the work and have it all completed by May 1, when the fair opens. Then, if there are any strangers in town who wish to train, there will be a place for them.

It is generally understood now that the track will be constructed of boards and will be a half-mile in circumference, with suitable dressing rooms, grand stands, etc. Such a track will, undoubtedly, be the most practical for all-round use.

MODEST JACK PRINCE.

The Old "Pro." Flying High—The Value He Sets on Himself.

Two jokers were talking over old-time racing and old-timers recently, when Jack Prince's wonderful times down south came up for discussion. It was resolved to sound Jack on his condition and willingness to ride for a manufacturer, and the following letter was cooked up and written by a man who has had much correspondence and many a lark with John Skillington Prince:

NEW YORK, Feb. 4.—John S. Prince, champion bicyclist, Tampa, Fla.—Dear Sir:—I see by the papers here that you have beaten a horse at ten miles in the wonderful time of 25 min. I am a small manufacturer, making this year about 1,300 machines, and I know with such a man as you to do the racing on my machine (Humber pattern) it would be a great advertisement and no doubt increase my business and sales the way Zimmerman has the Raleigh's business. If you think you have any show of beating Zimmerman I have plenty of cash and will back you for any amount. Kindly answer immediately and let me know how much you will ride my machines for this season, I to pay all expenses. Trusting you will answer at once, I am yours, very truly,

I. C. ANDOVER,  
21 Park Row.

Jack bit and replied voluminously, enclosing a bundle of newspaper clippings which included that old 1884 Springfield "cut," which has done noble service in the glorious past.

ORLANDO, Fla., Feb. 7.—Mr. I. C. Andover—Dear Sir:—Yours to hand, forwarded from Tampa. You asked me if I could beat Zimmerman. Well, I could not tell who would be the winner if we should meet in a race, but I will say that I would love to have a go in a race with him, as the way I am feeling and riding this year I don't think I need be afraid of any man living on a bicycle. I have been training faithfully and hard for the past six months with the sole intention of trying to win the championship of the world this summer, and I feel as though I am sure to win it. I have ridden lots of quarters in 26 sec. and halves in 56 sec., and have gone the full mile inside of 2 min. I have not troubled to try for records yet, because I am sure to make them when I come north, and it would be more satisfaction to me to make them in the north than in the south, because I will get more credit for them there. I am more than anxious for the season to open in the north so I can get a go among some of the flyers. It can't begin too soon to suit me. I think I will sail for England about April 24 and stay there about six weeks, as I am dead sure I can win the championship there and return in time for the grand professional circuit racing at two different towns a week under the Sporting Life's new association.

Now, I will ride your wheel in all my races, as I move from town to town all over the country, and boom it up in all the papers and among all the boys, as they all come around me every town I go to, and of course all the talk is about wheels and races. In fact, I don't think any agent living could do you the amount of good that I could all over the country; besides, I should get such fine notices in the local papers about the

wheel. That is what an agent can not do. If we make a deal for me to be in your employment, of course I shall work faithfully for you in every way possible. I will work for you for \$100 per month and pay my own expenses, as I think that would be the best until I see you in April, when I come north. Then we can make permanent arrangements—and you should make me a wheel at once. I am glad yours are of the Humber pattern, as I think they are of the finest. I am on a Humber now, but not in their employment, as I was waiting until I came north before making arrangements with anyone. But if you wish to accept my terms we will begin at once if you decide.

Build me a wheel on the following lines at once: Front wheel, 30 inch; back wheel, 28 inch; handle, bar, 27 inches long, over all, drop very low; Brooks' racing saddle; put very large tubing in to make it very strong, as I don't like any spring in a wheel when on a spurt—I mean large in diameter—let it weigh about 24 pounds when ready for riding. I don't like them too light, as I weigh 170 pounds, trained down. Now I hope you will kindly take this letter in the same faith as it is written and not think that I am blowing about myself too much, as I really think all that I have said I can do. Of course I would not talk like this to the press, as they would think me talking too much, so you will please keep this private. I shall have a go for the 100-mile world's record in Savannah before I come north, and feel sure of success. Kindly let me hear from you at once by return mail and oblige. I am yours respectfully,

JOHN S. PRINCE.

WHICH CLASS—A OR B?

What the League's Mission on Earth is Supposed to be.

A or B—that is the question—whether it is nobler in the man to ride for glory and a parsley wreath, or to suffer the outrageous thirst for corner lots and speedy teams to overcome him, or yet again to cast his lot with those who ride for paltry gold, and thus by purchase sell himself to ride, to win; yea, more, to share the money at the gate and thus to end the thousand heartaches and the lack of pelf to which flesh is heir. Is it a consummation devoutly to be wished—Hamlet up to date.

The officials of the L. A. W. have performed many strange acts since first the noble organization gave its chosen delegates authority. Officers are no doubt necessary appendages to organization machinery, but it is a sad fact that, with few exceptions, the L. A. W. has been officered from the start with men possessing about as little sense and business qualifications as so many school boys. The L. A. W. is an organization whose whole primary idea was, and still is, the perpetuation of a great sport.

Bicycling, in its infancy, was a puny, sickly thing. Popular prejudice was against it, the very danger supposed to be connected with the bicycle was against it, and it grew very slowly. A few devoted men came together and formed a society: they were wise in their generation and they formulated rules for the guidance of wheelmen that were good; they said among themselves, "We have the most manly sport, the purest sport, and that which will be the most popular sport that has ever gladdened the heart of man; let us preserve it always in its native purity." And so they made the rule, a rider must be a gentleman; if he is a L. A. W. member and wishes to race, he must race for a prize, not for money; if he wishes to ride for money he must not join the league.

I can see no place for argument, I can see no reason for all the cavil that has been made over cash prizes or the A and B class rule. The man who rides for a thousand-dollar piano, which he may give to his father or "Uncle Abe," is not an amateur; he is a professional in every sense of the word. He has no right to own a league ticket, nor has the L. A. W. any fundamental right whatever to let him ride for such valuable prizes. Let him come out under his true colors—he will not last long, for the public will not go to see him ride for money. He can sell out too easily. However, that does

not interest the L. A. W.; we are not banded together to protect or to promote racing, except in a sense.

Our business and the business of the officers we elect, is to further the good of our society, to make bicycling a power in the land, to give to riders good roads, protection from abuse, and fraternal greeting wherever they may be, and to see that when they race together every man shall have a fair chance of winning his parsley wreath, if he rides like a sportsman and a gentleman.

Cast out the unclean thing; meddle not with the filth; he who handleth the smoked pot must soil his hands. Let us be once more what our predecessors intended we should be, "an organization for the improvement and perpetuation of bicycling as a sport, and as a means of increasing pleasure and business." Let it be a sport that we foster, not a money-making scheme. What earthly profit is it to the L. A. W. that Jones will ride for a team of horses but will not ride for a tin medal? If he for an instant questions the value of his prize, he is not a sportsman. It is not value that a league member rides for, but the joy, the glory there is in winning.

We have tampered too much already with this question—let us go back to the first principles and let the league be true to itself. If we never produce a man who can ride a mile in less than four minutes, we can produce men who will ride as fast as they can, and do it every time they try for the medal.

There will be no buying and selling, openly or otherwise; the "gent" will not be seen; there will be no wrangling before the judges' stand, and the spectators will enjoy the sport just as well as ever.

The men who want money will always race for money, and we have no means of hindering them, if we would. Why should we try?

Keep the L. A. W. clean, and it will not be long before a lot of soiled doves will be clamoring for reinstatement, just as they did only a few years ago, after threatening the L. A. W. with dire disaster and deserting in a body for Ducker's ill-fated scheme.

The base ball men may buy the flyers for a time, but men are fickle ever, and unless the flyers line the magnates' pockets with golden pieces, they will soon yearn for the pots and tin medals of the L. A. W.

Class B is a disgrace to the league; no one but a driveling idiot would ever have proposed such a ridiculous idea. There can be no grades in amateur cycling; an amateur is an amateur and a professional is a professional; that they can not marry and produce such a morbidite as would fill the requirements of class B.

PHŒBUS.

Look Out, Zimmy!

The Wheeler thinks that Harris should improve and that if he does he will be a very hard nut for Zimmerman to crack. Then the paper says this: "If Zimmerman does come o'er here during the season to again meet our best men, we wish him all luck, and we are sure that he will be warmly welcomed. One thing is certain, however, he will have a hotter time of it in England than he had last season. Without in any way wishing to disparage the Yankee flyer's performances, we think we are safe in saying that he will, should he visit us this summer, find our representatives in far better condition than they were on the occasion of his last visit, when English speedmen trusted too much to one man to lower Zimmerman's colors. It is impossible to withhold admiration of the un-

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

#### That New Leeds Track.

Much comment was made abroad over the contemplated quarter-mile kite track at Leeds. It turns out, however, that the track is not to be kite-shaped, but rather pear-shaped, four laps to the mile, and much on the plan shown in

the drawing which was printed in the *Bicycling News*. It is hard for Americans to believe that on such a track even reasonably good time may be made, inasmuch as the width is but twenty feet, and twenty-four on the straight, while the straight is only about a hundred yards long. With such short turns and so small a straight there seems to be little chance for a good spurt. It is likely the reason for this peculiarly-shaped track was the lay of the ground.

\* \* \*

#### Jack Prince's Programme.

This is the way Jack Prince is running things down in Florida, and it sounds very Jack-like. A bill of the play, or tournament hanger, reads as follows: "Amateur bicycle tournament at Orlando. There will be a grand bicycle tournament at Orlando on the new quarter-mile track on the grounds of the South Florida Fair Association Thursday, Feb. 9, under the auspices of the Orlando Bicycle Club. The track is composed of specially prepared red clay, laid down under the personal supervision of John S. Prince, the professional champion, and is pronounced by him one of the fastest in the world. John S. Prince master of ceremonies."

Then the bill says that the races will be run under L. A. W. rules and are strictly for "pures" only. The programme of four events winds up with the announcement that "the programme will wind up with a ten-mile race, straight dash, between John S. Prince, professional champion bicyclist, against five of the fastest pacing and trotting horses in the state, Mr. Prince to go the ten miles without a stop, while the horses relay each other every two miles."

The fastest five horses, dollars to doughnuts, were five able-bodied livery horses.

\* \* \*

#### Smith Wants His Prizes.

Chairman H. E. Raymond of the racing board has written George C. Smith as follows: "I shall at once investigate the charge made against Mr. Litchfield. If the facts are as you state, and some immediate settlement is not made, the club will not be able to run another meet."

The club referred to is the Warwick (N. Y.) club, at whose races George Smith won some "pots" which he has not yet received, although the races occurred last October. "Some settlement" should be full settlement, George thinks,

Smithy has also a grievance against the Chicago Cycling Club, which has not as yet turned over that Raleigh bicycle he won at the dedication tournament. The order of Captain Van Sicklen on the New York Raleigh factory was not honored, and Smith wants to know about it.

\* \* \*

#### No Arrangements Yet Made.

There is no truth whatever in the rumors now afloat that F. E. Spooner of Chicago will go to England as a representative of any manufacturer or as a rider of any particular wheel. The fact is that it is quite uncertain whether Spooner will go at all. His best friends realize how hopeless a task it would be for him to compete with such men as Shorland, and have advised him to stay at home. As to Waller's intentions, we are not definitely advised. He is at present at work as a machinist in one of the Indiana factories.

\* \* \*

#### Revivals Bad for Cycling.

Unless it becomes necessary to remove the track now in the exposition building in Milwaukee in the meantime, a race meeting will take place there Friday and Saturday, June 2 and 3. Revival meetings are to be held there in the meantime, however, and the wheelmen are fearful of losing their track.

\* \* \*

#### What We Want to See.

1. Expense payment stopped.
2. Men who receive expenses and salaries declared professionals.
3. Respectable professionals admitted to the league.
4. Cash prizes for professionals only.
5. Addresses of applicants for membership published in the *Bulletin*.
6. A mail vote on amendments to the constitution.

Why?

Because these things are the will of the majority of the members of the league. See editorial on the subject and refer to the vote in another column.

\* \* \*

#### Foreign Race Chat.

F. T. Bidlake says it is idle chatter to prate about the tricycle being dead, and that it will never be killed by the safety.

Ede, the "pocket Hercules," who has for a long time ridden an Ormonde, will soon forsake that mount and the company as well.

The English cycling press seems frightened over Sanger's proposed visit to England, inasmuch as he "has been seen to reel off a mile in 2:10 without pace-makers." We had not heard of this wonderful performance.

Lawrence Fletcher, it is said, will make an effort to regain the end-to-end record if Mills takes it from him. Mills has just discovered why he became so sleepy on his Land's End to John o' Groat's ride. He had been dosed with cocaine by his pacemakers, and a medical friend tells him that his nerves and muscles would naturally become numb after a brief stimulating effect.

The *Cyclist* wants to know "something about the \$500 on deposit at Chicago for Zimmerman, which Mr. Sanger is said to have put down," before he goes to England to compete in the championship events. The Sercombe-Bolte company deposited a certified check for \$500 with the *Chicago Tribune*, and inasmuch as Jimmy or his backers did not respond to the challenge, the *Tribune* returned the check to the concern.

A. C. Edwards, who was suspended by the N. C. U., has had his sentence reduced, so that the suspension will expire May 31 instead of Sept. 30. According to the *Athletic and Dramatic News*, "it

appears Edwards was invited to attend the race meeting at Bristol to compete in a scratch race. He accordingly entered. Being under the impression that it was an invitation race he sent no fees, but immediately he received an application for the fees he sent them by return of post to the secretary."

\* \* \*

#### A Little Too Fast, Jack.

The *Sporting Life* prints the following:

TAMPA, Fla., Jan. 28.—The ten-mile race at Sportsman's Park yesterday between Jack Prince, the world's champion professional bicyclist, and two horses, for \$200, was won by Prince. He made ten miles in 25 min.

\* \* \*

#### New Yorkers Going South.

A. A. Zimmerman, George S. McDonald and Harry Wheeler will be among the people who will visit Savannah for the tournament Feb. 22. A party will leave on the Savannah line of steamers Saturday, Feb. 18. Zimmerman may give an exhibition, but Wheeler will take part in the races. George Smith, of the Riversides, may also take part in the races.

\* \* \*

#### General Race Notes.

The Raisin City Wheelmen, of Fresno, Cal., expect to have a half-mile track for use this season.

The Columbia Cycle Club will hold its third annual race meet at Charter Oak Park, Hartford, Conn., July 3 and 4.

A Brighton man has offered a medal valued at \$25 to the first tricyclist who shall cover 400 miles in 24 hours on the Herne Hill track.

The Herne Hill track is said to be in fine shape and wintering well, no settlement having taken place, though the surface is a little broken at present.

Practice work begins much earlier in England than in this country. The Putney track is now open for practice, that at Paddington will ready about March 1, and Herne Hill shortly after that.

Burke and Edwards, the two California cracks, will, it is said, settle the question as to superiority at the Decoration day races of the Alameda Bicycle and Athletic Club. Coast records are apt to tumble, too.

The position given the L. A. W. on the union's governing board has been referred to too often lately as a "courtesy." It is nothing of the kind. It was a part of the "consideration" at the time the alliance was entered into.

Preparations for the twenty-five mile road race of the Associated Cycling Clubs of California, to be run on Washington's birthday over the San Leandro triangle, are now complete. It promises to be very largely attended.

Of the Philadelphia racers Bilyeu and Gracy will be pure, but the latter wants to sell his prizes. Geyler will ride in the class that pays best, while Taxis thinks class B would contain none but "hoodlum" cyclists and wants none of it.

According to the *Milwaukee Evening Wisconsin*, a number of prominent men in that city have stated their views very emphatically on a number of questions now disturbing the cyclists' mind. Mr. Andrae is reported as representing the majority of the Wisconsin delegates, and declared himself in favor of drawing amateur lines as closely as possible. He believed that the cash prize league would soon die a natural death, because the public would soon tire of seeing a few star riders after the novelty had worn off. As far as his opinion about amateurism is concerned, Mr. Andrae is in line with a large majority of league members.

#### A CONVICT LABOR LAW.

Mr. Ryder's Bill Read a Second Time in the Assembly, at Albany.

ALBANY, N. Y., Feb. 15.—Mr. Ryder's bill, providing for the employment of convicts in the construction and maintenance of public roads, read for the first time on January 24 and referred to the committee on prisons, passed to-day to its second reading. It provides for the appointment of five commissioners, with terms of office of five years each and with an annual salary of \$2,500 each and expenses. They are to be allowed a secretary at \$1,500. It is the duty of these commissioners to lay out certain lines of highway which are distinctly specified.

The remainder of the bill, stripped of technical verbiage, is as follows:

Except in cities and villages, the maximum width of such highways shall not be less than four rods, with a graded and worked roadbed not less than twenty feet in width. In determining the precise location, the commissioners shall, as far as practicable, follow the existing highways, and shall intersect the principal cities and villages adjacent to said routes.

The commissioners shall have power to widen or close existing roads, and to lay out new routes where in their judgment it is necessary to do so, for the purpose of obtaining better grades and more direct intersection of existing roads.

It shall be the duty of the state engineer and surveyor to furnish maps of the highways, to be designated by the commissioners. Whenever the commissioners shall determine the necessity of widening or straightening any existing highway, or for supplying material for construction, and shall furnish to the district attorney of any county a map showing the boundaries of the lands required, it shall be his duty to at once take such action as may be necessary to obtain legal possession of the premises so designated.

In estimating the damages to the owners of the lands so condemned, the appraisers shall take into consideration the benefits likely to accrue to the adjacent owners by reason of the proposed improvement. The expense incurred in the proceedings of condemnation and the compensation awarded

#### SHALL BE A CHARGE ON THE COUNTY

in which the property is located, and shall be assessed and paid by the supervisors thereof. The commissioners, after having filed a map in the office of the clerk of the county in which such premises are located, may at once enter into possession of said premises.

Whenever the lands desired to be used by the commissioners shall be the property of the state or of any county, city, town or village in the state, no compensation shall be allowed therefor, and their occupancy and use for such purposes shall be deemed the public use for which said lands were acquired by such state, county, city, town or village.

Whenever any of the highways herein designated shall cross any stream, the bridges over the same shall be constructed of stone, brick or iron. Whenever the spans of such bridges shall be less than twenty-five feet in length, the cost of said bridges shall be a charge upon the county in which they are located, and it shall be the duty of the supervisors of such county to pay to the commissioners the actual cost of the material necessarily used in the construction of the same. The cost of material for all bridges having a span of more than twenty-five feet

#### SHALL BE PAID BY THE STATE.

On each side of the highways herein authorized to be constructed, the commissioners shall cause to be planted such deciduous or perennial trees as are indigenous to the country, said trees not to be more than one hundred feet distant from each other, except where rock intervenes. The cost of said trees shall be a charge upon the county in which they are planted in the same manner as is provided for the payment of material for bridges.

Whenever the construction of any portion of the highways herein authorized shall have been completed through a county which it may traverse, the commissioners shall transfer the same to the county authorities, and it shall thereafter be maintained intact at the expense of said county and be a county charge. For the purpose of such maintenance, the superintendents of the poor and the sheriff of said county are authorized and directed to employ the labor of such paupers and tramps as shall be committed to their custody. The commissioners of highways of the several towns may levy and collect, pro rata, taxes on the lands adjoining the highways herein authorized, and expend the same in the improvement of the lateral highways in their respective towns.

#### THE CONVICT LABOR CLAUSE.

On the requisition of the commissioners herein named, or their successors in office, it shall be the duty of the superintendent of prisons, the managers of the Elmira reformatory and those having

# CLEVELAND PNEUMATIC TIRE

Lightest, Most Resilient and Swiftest Tire Yet Constructed.

The Cleveland Tire is the tire we ride.  
It fills our hearts with joy and pride.  
We're never left five miles from town  
On a country road when the sun is down;  
In case of puncture we're scarce delayed,

So quickly can repairs be mad ;  
But Light and swift and free we spin;  
On the Cleveland Tire we're sure to win.  
Try this tire, and we know you'll say:  
"I'll ride the Cleveland, come what may."

Cleveland Light Roadster,  
Weight, 30 Lbs.

Cleveland Racer.  
Weight, 21 Lbs.

CLEVELAND TIRE USED WITH CLEVELAND RIM.

NEW "I. C." VALVE.

Permanent Repairs in Less Than Five Minutes.

"Compressed air makes the finest spring  
if not ruined in the covering."

Our covering is of THREAD construction, causing the  
internal pressure of the air to act quickly and forcibly on all  
obstructions. COASTS better by far than any other tire.

CATALOGUE ON APPLICATION.

H. A. LOZIER & CO.,  
CLEVELAND, OHIO.

GEORGE E. LLOYD & Co., Corner Canal and Jackson Sts., CHICAGO, City Agents.

# OVERSTONES'93

GENTLEMEN:—

We have still some territory to let, and require good responsible agents to work it thoroughly.  
WHEELS ARE RIGHT, PRICES ARE RIGHT. What's the matter with writing for  
prices and terms? If not, why not?

Yours respectfully,

For LOYD, READ & CO., (Coventry.)

ARTHUR E. FLAVELL.

P. O. Box 2225,  
NEW YORK CITY.

## AS A SUPPLEMENT

To former advertisement, we desire to state that the increase in  
demand for our Cement has been geometrical. In 1890 we sold 97,000 lbs. In 1892  
more than 250,000 lbs. have left our factory, and has been consumed in the United States.

|                           |                                         |                                 |                                   |                                                   |

And Jobbers Generally Throughout the United States.

charge of the several penitentiaries of the state, to detail not less than two-thirds of the male persons in their custody to labor on the highways designated by such commissioners, at such times and places and in such manner as the said commissioners shall direct. It shall likewise be the duty of the superintendent of prisons, the managers of the reformatory and those having charge of the several penitentiaries, to provide suitable quarters and guards for the safe keeping of the details herein required; to provide the necessary working tools; to provide and clothe the persons so detailed, and in all respects maintain such persons in like manner as is now provided for their employment and maintenance in the several institutions to which such persons are committed. The details herein directed to be made shall consist of the better class of the persons confined in the several institutions and of those having the shortest terms to serve.

The persons confined in the several institutions herein named, after making the details called for by this act, shall be employed, so far as may be necessary, in the manufacture of clothing for those employed on the highways and of the tools and implements necessary to be used in the construction of such work as the commissioners herein named may from time to time require.

All acts and parts of acts in conflict with any provisions of this act are hereby repealed.

This act shall take effect immediately.

\* \*

*A Good Roads Advocate.*

Good roads will have another strong advocate in August W. Machin, the ex-assistant postmaster of Toledo, who is a prominent candidate for the offices of third assistant postmaster general, with every evidence of success. Mr. Machin has been prominent as an advocate in his district, and was one of the prominent workers in getting the roads of Toledo and surrounding district to their present first-class condition. Mr. Machin was in New York the other day, and after calling on the REFEREE had an interview with Mr. Cleveland, Mr. Whitney, and several of the advisors of the incoming administration, and many think that his chances for the position of third assistant postmaster general are very good. Mr. Machin says that if he receives the position, the subject of mail delivery on bicycles, and rural postal matters will come under his department for action, and as he is an enthusiastic cyclist he says he will use his every influence to promote the interests of cyclists and good roads. Frank Hurd, the well-known Ohio congressional free trader, is one of the prominent supporters of Mr. Machin, whose agents are already in Washington working in his behalf. It will behoove cyclists to put in a good word to their various congressmen and senators for Mr. Machin, and all said in his favor will help him attain a position which will assist the cause of good roads.

\* \*

*Doing Business in Minnesota.*

ST. PAUL, MINN., Feb. 14.—The most important bill introduced in the house to-day was by Allen J. Greer, providing for the appointment of a state highway commission. This bill provides for the appointment of three commissioners, one of whom shall be an experienced and practical engineer. The duties of the commission are to ascertain the defects and merits of the present roads and road-making systems, the supply of good road material in the state, and to investigate generally the subject of building and maintaining public roads, including the cost thereof, according to the various best methods now in use; to make and fully report in detail results of their investigation, with their recommendation to the next legislature. The sum of \$5,000, or so much thereof as is necessary, is appropriated.

\* \*

*We Want More Like Him.*

Governor Willey, of Idaho, is a road-improvement advocate, as witness a recent utterance of his: "However rich and productive our lands may be, without

means of communication to market our surplus, the markets of the world are closed against us. I know an isolated body of agricultural land in Idaho, easily capable of producing a million bushels of wheat per annum for export, that does not place in the market a single bushel, for the sole reason that it has no road."

\* \*

*The Trance is Wearing off.*

Boast as we may of the wonderful strides this country has made in manufactures, in railways, in commercial progress, it is half a century behind in road-making. It is about time that the country should wake up and take some interest in substantial road-building.—New York Recorder.

\* \*

*A Useful Pointer.*

The Indiana division does not confine its road-improvement literature to circulars or the press. Every one of its envelopes tells the story plainly on its face, "We want good roads." Here is a tip to other divisions and cycling men generally.

*"Dudes His Dear" on a Cycle.*

A writer in a paper called *Randall's Horse Register* attributes the low price of horses to cycling. "The bicycle craze," he says, "hurts the horse business, and has made every living man tired from Penobscot Bay to Puget Sound and from Sandusky on Lake Erie to the old shell roads out of New Orleans and Mobile. Formerly the young man, when he duded his dear, took her out in a narrow-seated buggy behind a trotter. Now he takes her out astraddle of a bicycle.

"But this will all change soon. The bicycle is the most cruel and selfish of all American inventions and soon we shall have an appalling list of new diseases for our medical colleges to diagnose, caused by too much bicycle riding. Weak-chested, bow-legged girls, with straddle gaits, will come to curse the fate that put them astride on the iron wheel with the inadequate seat, and bent-backed, kidney-affected and hollow-chested young men will stalk the earth and fill the doctors' offices with their aches and weaknesses. Then they will sigh for a trotter, for the healthy, breeze-inspiring trotter. Hence, in the near future, very near, the trotter will again come to the front, and fashion, which leads the world, will lead the way."

Perhaps. But in the meantime the wheelman smiles serenely and the manufacturer goes right along with his output, while the doctor who knows his business prescribes the bicycle for boys and girls alike. "The trotter, the breeze-inspiring trotter" is all right in its way, but the health-inspiring cycle gives us better exercise at smaller cost and warmer feet at bed-time!

*Schroeder Favors Cash Prizes.*

The Milwaukee *Sentinel* quotes Chairman Schroeder, of the Milwaukee Wheelmen's racing committee, as favoring cash prizes. Mr. Schroeder advances a new argument, as follows:

"The action of many riders at the recent tournaments of the Milwaukee Wheelmen has converted me to the cash prize proposition. After they had entered for the races the riders would often refuse to ride, and thus not only would the audience be disappointed but the people would blame the management of the tournament and claim that they had been defrauded by false advertising. Their claim was, of course, an unjust one, as we were powerless to remedy the wrong and were at the mercy of the fickle riders. Under the cash prize system we would have more of a hold upon the riders and would either compel them

to ride unless they had some valid excuse for refusing to do so, or else debar them from racing at other cities where cash prizes were offered. Then, too, I think it would stimulate interest among the racing men and put an end to the present system of subsidies to great riders from bicycle manufacturers."

*The Sidewalk Fiend.*

An Indianapolis rider is on trial for running into a pedestrian on the sidewalk and knocking him down, which causes the *News* of that city to print an editorial which must, of necessity, be detrimental to cycling and prejudicial to the interests of its devotees. In a city like Indianapolis there is no excuse for the use of sidewalks by wheelmen, and pedestrians naturally regard it as an infringement on their rights. Among other things the *News* says:

"The riding of bicycles on the sidewalks is not merely a nuisance, but an outrage, and arrest and punishment should follow every perpetration of it; and if we had a more efficient city government such would have long ago been the order of things. We have a law prohibiting the riding of bicycles on the sidewalks, while the Supreme Court has decided that bicycles are vehicles and as such have rights in the streets, and manifestly, no rights on the sidewalks. Even the little town of Richmond has too much self-respect and too much sense of obligation toward the rights of its citizens to allow bicycles on the sidewalks, but the city of Indianapolis, law to the contrary notwithstanding, allows these vehicles to take the sidewalks, and, as in the present case, to the harm of pedestrians. And this is by no means an isolated case. Little children have been knocked down frequently, while men, women and children are constantly frightened by these machines dashing past them. There is a law against it; there is repeated protest against it, and our city authorities calmly ignore both and permit the out age to continue."

*Called at Our Eastern Office.*

Among the callers at the eastern office of the REFEREE, 21 Park Row, New York, last week, were Samuel Snell and family, Birmingham; F. S. Fox, Sercombe-Bolte company, Milwaukee; C. E. Van Vleck, New York; Cassius M. Coolidge, New York; Sydney Bowman, Pope Manufacturing Company's up-town agent; Thomas W. Eck, John S. Johnson and Olaf Rudd, Minneapolis; W. Inghram, Omaha; S. G. Whittaker, Boston; M. Quinlan, Gendron Iron Wheel Company; Alex. Schwalbach, Wilson, Myers & Co.; Miss D. Stilger, Newark; H. Blyth, Standard Cap Company; Albert C. Vincent, Vincent Cycle Company, Buffalo; Andrew Cahill, Buffalo Wheel Company; J. B. Pugh, East Orange, N. J.; W. C. Marion, Indianapolis Bicycle Company; Tom Roe, F. J. Wagner, Chicago; Charles Price, ex-Milwaukee; C. A. Benjamin, E. C. Stearns & Co., Syracuse; M. Quinn, *Sporting Times*; W. E. Hicks, New York *World*; L. C. Boardman, New York *Recorder*; Arthur M. Plato, Portland, Ore.

*For the Bachelor Cyclist.*

According to the *Irish Cyclist*, a new use has been discovered for rubber solution. The bachelor, if he be a cyclist, need no longer bemoan his fate when the ends of his pants become frayed and he has no one to mend them. A certain city agent recently discovered that the evil-smelling solution, which is so necessary for the repair of an air tire, is equally serviceable to put a patch on the ends of one's trousers. The receipt is simple. Cut away the frayed ends and put on a patch of cloth which has been

prepared in the same way as the canvas of an air tire. It will make as neat a patch as the best tailor is capable of. With benzoline to remove the grease spots, and rubber solution to put on his patches, the bachelor cyclist is a point or two ahead of his fellows.

*Fat as a Food.*

A little good advice to racing men, who are soon to begin training, will not be amiss at this time of the year. According to the *Pittsburg Dispatch*, Liebig taught that fat split up in the body, and that the free carbon combined with the oxygen taken in in respiration to produce carbonic acid, and that it was by the act of respiratory combustion that the body heat was maintained. Fatty foods were hence considered necessary as heat producers. Recent investigations, however, show that, though fat is split up and combined with oxygen in the production of heat, especially during muscular exercise, the process is effected in the tissues by the action of the cells, and not in the lungs, as formerly taught.

The use of the fat is now regarded as threefold. 1. To maintain the body heat. In cold latitudes where the body is subjected to rapid cooling, fatty food becomes a necessity, so that the carbon may be easily supplied for combination with oxygen in consumption. Hence the Greenlander consumes large quantities of blubber and oil. 2. To produce force. A muscular tissue is only produced at the cost of oxidation in the tissues; fat is rapidly burned off during exercise. If absent, the tissues themselves would be wasted. 3. To prevent the use of albumen. A purely albuminous diet is wasteful. It has been proved experimentally that a small amount of meat food, taken in combination with bread and fat, suffices to maintain the albuminous structure of the body better than an exclusively lean meat diet.

Fat stored in the body as adipose tissue is a bank on which the body may draw for supplies of energy and heat when required. It is stated that in the Franco-German war of 1870 the German emperor, acting on the strongly-expressed opinion of Ebstein that muscular fatigue could best be supported on fat, gave orders that each soldier should have served out to him 250 grammes of bacon. It is also a well-known fact that fat animals bear deprivation of food better than thin ones.

*Cyclists in a Skating Race.*

Bicyclist and roller-skater Fred Zimbrich, who, to judge from performances on the wheel last season, promises to be heard from on the path this year, met and defeated Emmett McDowell, holder of a "diamond belt emblematic of the world's championship," in a five-mile race at Rochester last Saturday night. The race was the first of a series for "the championship" and a wager of \$400, besides a percentage of the receipts. The time was 15 min. 42 sec. McDowell is a brother of Eddie McDowell, the professional, of Philadelphia, whose motto—"I'll die or make good pace"—the elder cyclists of the country will remember.

*Voting at Rochester.*

Citizens are interested, cyclists are anxious, and candidates are desperate over a voting contest promoted by the Rochester *Herald* for the most popular cyclist in Rochester. At the conclusion of the contest, May 1, a light Columbia machine will be awarded to the one having the greatest number of votes. Fred Crosby, C. J. Iven and Charles H. Smith are the leaders in the voting.

## SMALLEY BICYCLES FOR 1893.

*Four Styles: Light Roadster, Road Racer, Track Racer (New Style Handle Bars), Ladies' Wheel. . . . .*

Agents Wanted in Unoccupied Territory.

STANLEY VS. NATIONAL SHOW.

*Preliminaries Arranged for a Settlement of a Long-Standing Dispute.*

LONDON, Jan. 31.—As an exhibition the National show has been a grand success; as a means of promoting business it has been, so far as the makers of cycles have been concerned, a distinct failure. One or two firms—the Triumph people and the Leicester Cycle Company—have done very well indeed, but with the majority of the cycle exhibitors business has been by no means what was anticipated, and most of them do not attempt to disguise the fact. The makers of accessories, on the other hand, have done very well indeed. Both the principal saddle people, Lamplough and Middlemore, have taken some excellent orders; Miller & Co. have done big business with their Lito lamp, a distinct novelty, and Perry & Co. and the Eadie Manufacturing Company, have concluded some important deals in parts and fittings. The latter concern, although it has not been in the trade a year, has already assumed quite an important position, and it was most noticeable that a very large number of the front driver bicycles on show in the exhibition were fitted with frames patented and manufactured by the Eadie company.

In tires there were again several novelties. Unboubtedly the best was that shown by Smith's Patents Company, the originator of the laced cover for pneumatics. Its latest invention consists of an inner tube covered by a protecting canvas flap and enclosed in an outer cover, which encases not only the tube but also the rim. The two edges are made so that they can be fastened together by means of short lengths of wire which pass between the spokes and thus keep the tire in position. The great objection to the many wired-on tires which have been introduced this season—that in rounding corners they bulge over and shift from their places—is thus overcome. The tire is made with the Surrey Machinists' Company's V-shaped hollow rim and is therefore very light. So far as can be ascertained it is both resilient and fast, and in case of punctures or other accidents it can be removed, repaired and replaced in less than five minutes. The North British Rubber Company, whose clincher tire has long held so good a reputation, has at last been persuaded to build a light tire and now turns out one in every way suitable for the road at the small weight of three pounds and thirteen ounces, including the rim.

The last few days of the show have been chiefly occupied by meetings dealing with next season's show. On Thursday there was a meeting called by the Cycle Manufacturers' Protection Association, at which two propositions appeared on the paper, backing up the Association and requesting it to hold the next National show on exactly the same lines as the present one. Unfortunately these propositions did not find favor with a large section of the trade, who objected to prolonging the war with the Stanley club and desired that some agreement might be arrived at whereby an amalgamation could be arranged and a repetition of this year's fiasco avoided.

To this end an amendment was moved to the effect that the association should appoint two or three members of the committee to meet and confer with any delegation which might come from the Stanley club with a view to discussing terms for amalgamation. This amendment was carried—to the intense surprise of the National show committee. Next day the Stanley club held a meeting of makers and others, and at this a resolution was passed recommending the Stanley C. C. "to appoint two or three members of the club as a committee to confer with the manufacturers' association with a view to promoting one show." Both resolution and the amendment at Friday's meeting were moved by R. L. Philpot, the general manager of the New Howe Machine Company, who comes cut with flying colors and is to be congratulated on the attempt he has made in the whole trade to put an end to the present unfortunate war. The committee of the manufacturers' association met yesterday and it is probable that the next show will be held at the Crystal Palace from Dec. 1 to Dec. 9, 1893. Both M. D. Rucker (Humber & Co.) and J. H. Ball (Nottingham Machinists' Company) put in an appearance at the show, pleased with the results of their trips to America, and both looking well after their travels.

#### THAT DEALERS' ASSOCIATION.

*Great Difficulty in Organizing the Affair—The Trouble.*

Unless all reports are decidedly wrong, the Chicago dealers' association is not having a very smooth time of it, and doubts seem to exist as to the success of the enterprise. At any rate there are a few houses which are decidedly opposed to the general rules as proposed to be laid down for the government of the local business concerns, and with one house already out and no less than three almost ready to withdraw, the success of the affair is considered by some quite doubtful. There was a long and interesting meeting in parlor K of the Wellington Friday, but nothing definite was decided upon. The trouble seems to be with the rules regarding the acceptance of second-hand wheels in exchange for new ones and the length of time to be allowed on payments. The proposed rules forbid the handling of second-hand wheels in any manner and permit only six months' time to be allowed for payment. This applies only to wheels selling for over \$135. A violation of the rules would occasion a forfeit of \$500.

C. H. Sieg says he will not go into such a scheme; he does not propose that anyone shall say how he shall run his business. Last year, he says, he did a good business in second-hand wheels and proposes to do so again. Then again, he says, he finds many cannot pay for a wheel in six months. He has allowed eight and even ten months to people known to be entirely responsible, though he would, of course, like to see all pay in six months. But he says he doesn't propose to lose a sale merely because a man wants eight months instead of six when he is responsible.

Mr. Plumb, of the Ariel company, talked much as did Mr. Sieg. He argued that a man would come along and say he had a good second-hand wheel he wished to trade in for a new one, but this proposition could not be entertained

because of the prohibiting rule. There would be no inducement for a new maker to offer. If no exchange were allowed, the prospective purchaser would simply say, "Well, I don't know your wheel, and as long as terms are equal I'll go and get a ——— or a ———; we know they are good." Then again, argues Mr. Plumb, a great deal of business will go to the city dealers outside of cycle row, and if not to them then to out-of-town dealers. "I wasn't put here for fun; I'm here to make money for my concern and I propose to do it," says Plumb. "For that reason I shall act as I think best for the interest of my company."

Mr. Lyon, of the Century company, said he was new to the trade and of course could not say just what he would do except that he should act as he thought best for the welfare of his concern.

#### DO CYCLE SHOWS PAY?

*A Statement of the Case Which Makes it Appear Doubtful.*

We reproduce below, from the English *Cyclist*, an article which seems to be worthy of careful consideration by exhibitors in this country. Briefly, the question presented is, did the National show bring the manufacturers \$400,000 worth of sales which would not have come to them through other channels? In this country, with a much smaller show, but larger average expenses, it appears that about \$200,000 worth of new business was necessary to cover the outlay.

The article is presented that the question may receive that attention which is due so important a matter, and not, by any means, for the purpose of discouraging the gentlemen who advocate a continuance of the annual exhibition.

The question of cycle exhibitions has been very much to the front lately, and the experience of the past few months has more than ever intensified the opinions which we have long held, that not only are cycle exhibitions as conducted in the present day, and considering the present condition of trade, absolutely unnecessary, but positively harmful when the general interests of the trade are considered, and taken collectively, an enormous waste of time, money and energy. This may seem rather sweeping, and when the special issues of the *Cyclist* are considered, it may seem strange that we should hold such views, but the fact nevertheless remains that, although the *Cyclist* receives a large addition of business in connection with every show, we hold these opinions, and do not hesitate to state them, although in direct opposition to our own interests. We will look first at the mere question of expense and the return therefor. We have by dint of enquiry among exhibitors been able to ascertain some figures that not only astonished us, but will, we think, fairly open the eyes of those who have never given the matter a thought. To take the National Cycle Exhibition, which has just been brought to an end, we think few people would believe the cost to the exhibitors collectively of an exhibition such as this. Take the exhibitors individually, let them for a moment consider and jot down their expenses, in the doing of which they will have to take into calculation—1. the price paid for their stand at the exhibition; 2. the cost of fitting it up; 3. the extra cost of preparing machines for the show. To this must be added cost of extra advertising and printing during the show, cost of transit of machines from the factory to the place of exhibition, cost of board and residence of exhibitor and attendants (together with their railway fares) for the fortnight or so that their presence is necessitated at the exhibition, also the wages of the attendants for the period named, and in addition to this a more or less extensive disbursement in the way of refreshments, and other civilities extended to actual or prospective customers, and many other incidentals. If these are fairly reckoned, putting aside altogether the indirect expense, or rather loss, to the manufacturers through the upsetting of the arrangements and routine of their works, we think it will be found that an exhibition costs few exhibitors less than £100; in fact, two firms who are not by any means amongst our largest houses, have indeed, given us the exact figures which their own exhibitions at previous Stanley shows had reached, in one case the figures being £99 and in the other £135, and in both instances economy in arrangement and expenditure was carefully considered. Drawing a line through these figures and basing a proportionate calculation thereon, we think it will be found that the direct cost to the exhibitors of the show we have

just seen closed has been something over £16,000. Now, for a manufacturer to see his own again, he must sell a sufficient number of machines for the gross profit upon them to counterbalance his expenditure, and if we take the average through the different classes of goods shown, and reckon them to bear a gross factory profit of 20 per cent, it will be seen that it is necessary, for the exhibition to merely pay expenses, that fresh business to the amount of £80,000 should be done. We think it probable that actual orders taken at the exhibition might possibly amount to this, because it has been the habit of late years for manufacturers who are exhibiting at an exhibition of this kind to specially notify their agents to visit them and place their orders at the show; and, apart from this, there are many agents also who, although they have practically decided with whom they shall deal the coming season, defer placing their orders until the show. As most manufacturers are aware, in such cases as these—and we believe they will be found to form by far the majority in the instance of trade done—the business would have come to them in any case, show or no show, therefore it is not fair to calculate what might be termed merely postponed business to the credit of the show. That £80,000 or anything approaching one-half of it, is done in fresh business, or that a sufficient number of persons are induced to take up cycling by seeing the machines at the show to anything like warrant the expenditure, we very much doubt; indeed in many cases where fresh business is done by individual firms, it is but the transference of business from some other firm to themselves and some of their own customers may in like degree be induced by visiting the show to place their orders elsewhere, so that even here the apparently new business done, when the show is taken collectively, can not in a fair proportion of cases be dealt with on the credit side. On the simple question of direct profit and loss, looking at the show as a gigantic business transaction, we think that we have shown plainly enough that the exhibitions are a failure. Another very serious effect of shows, such as the National or Stanley, and one that the lay mind will not, perhaps, readily grasp, is the effect they have in tying the manufacturers' hands in the winter months. Without a show, the manufacturer, as soon as his factory arrangements for new patterns were made, would get his travelers out, and would soon be in receipt of sufficient orders to enable him to work steadily on production, and even delivery. With a show looming in front of him, however, the agent holds his hand, and whilst he knows he will, in almost certainty, place his order with a particular maker, he refrains from doing so until the show, the result being that for some five or six weeks or a couple of months trade is delayed, and the mass of trade for the year, already confined by its very nature to a limited period, forced to be executed in a still more strictly defined and restricted time. As to the benefits which a show confers upon the public and trade, we venture to assert that they by no means compensate for the drawbacks we have already referred to. It is true that they bring men together and assist in cordiality of feeling between riders, makers and agents in all parts of the country and, indeed, of the world; but although this is very nice, it can not be put in the ledger. It is true that by a display such as that we have just seen at the Crystal Palace, such of the public who may not be aware of the extent of cycling or the importance of its trade, may be enlightened and impressed, but we hold that, however important this might have been ten or twelve years ago, when cycling and its trade were young and making their way slowly, few persons in England now are ignorant of the extent or value of cycling, and certainly, as we have pointed out above, the influence on the public mind can not by any means be equivalent to the expenditure undergone to secure it. The only other advantage that has been urged is that shows tend to prevent fixity of pattern, which it has been ascertained the manufacturers are desirous of securing; but our experience of recent shows leads us to the belief that the effect of shows is rather to intensify than to prevent this very bogey, fixity of pattern, which has been raised to scare the public. Manufacturers left to themselves, it is true, would not be in a hurry to introduce a new pattern whilst their old ones remained on their hands, but if any maker invented or came across a new idea which it struck him if placed on the market would give him an advantage over his competitors, he would not hesitate in his own interests to alter his patterns to introduce that machine and to push it, for all it was worth. If it proved a success, every maker, in his own interest, would have to follow suit—in other words, the strong competition existent in the cycle trade is quite a sufficient lever to keep matters in fair and reasonable channels, and to prevent anything detrimental to the interests of the public. Although we urge this matter very plainly, we are afraid that we look forward to an unattainable Utopia when we seek a time when there shall be no shows, for the simple reason that so long as there is "money in it" people will be found to promote exhibitions, and so long as there are manufacturers who—unlike the Clarke family of Wolverhampton and Manchester, who have never shown and who all do a thriving trade without showing—have not the courage to stay

## ANNOUNCEMENT.

# FREE: A FOWLER

## READ CONDITIONS.

**WE WANT EVERY READER OF THIS PAPER TO HAVE ONE OF THE FOWLER CATALOGUES.** It is a beauty and gives information that every rider and agent should know. A record will be kept of your name, address and number of catalogue. On March 31, 1893, we will announce the lucky number, and on receipt of the catalogue, we forward to its owner **ONE FOWLER WHEEL**, either 26, 32 or 36 pound regular \$150.00 wheel, in any color, and guaranteed for one year. Messrs. S. A. Miles, "Referee," and N. H. Van Sicklen, "Bearings," have full charge of the drawing.

**RULES.**—Applicants must send name and address plainly written and mention the "REFEREE." We must also have the lucky Catalogue returned to us after the winning number has been announced. **Everybody send in your name. Secretaries of Clubs:** Send in names and addresses of your members and you may get a \$150 wheel, which you can dispose of for the benefit of your Club.

**Agents:** Don't you want to handle the Fowler? Write us for terms and discounts, stating territory desired, etc.

away if they think some one else will be there, so long, we suppose, will shows continue.

### AMERICAN TRADE PROSPECTS.

*The Humber Manager Thinks Them Poor for the English Maker.*

The Cunard steamship *Servia* brought back to these shores on Monday week the well-known general manager of the Humber company, Mr. M. D. Rucker, who had been over to America settling some affairs of the company at Chicago, which was done in a journey extending just over six weeks, so rapidly can one travel now between the old world and the new. He came in for the tremendous weather on the Atlantic in December, but bar the first few days had a smooth passage back in January, just in time for the National show. We "ran him to earth" on interviewing bent, at Thames Ditton, a few days subsequent to his arrival, and after congratulating him on his healthy appearance (he brought typhoid from the States last journey) we started with—

"And what do you think of the prospects of cycling in the States?"

"So far as the progress of riding is concerned it is immense."

"Yes; but we mean the prospects of trade so far as England is concerned."

"Poor," was the reply.

"And why?"

"Because, the Pope monopoly having gone, there are plenty of American makers about, and they are now turning out lighter machines. Then, again, the mistake of some English houses who, just at the advent of the pneumatic tire 'boom' here, loaded the American market with a lot of solid-tired 'stuff,' has made a bad name for English machines. They forgot that the Americans are as 'cute' as we are. Then, again, the importation of parts into America has not been sufficiently provided for. Makers

sent machines, something went wrong, and the purchaser was three months before he could get his repair parts sent from England. American agents have seized on this, and used it as a lever to advise customers to purchase States made goods, which, coupled with the lighter machines turned out, has proved successful in many cases."

"But the McKinley tariff once removed—as it no doubt will be by the powers that be—surely will give English machines a new chance in the States?"

"I do not expect that they will take much duty off machines, though they probably will off 'parts,' and that will leave the English makers in a worse plight than ever as regards America, because the home makers there will then be able to build up light machines with English parts, for which they will pay little or no duty."

"Then you think that although cycling *per se* is strongly on the advance in the States, English trade chances there are not rosy?"

"That is so; particularly for new firms. It is no use going to America without a name already made in England."

"You went to Chicago on special business, was it not so?"

"Yes; a company which had done business with us required looking up, but I came back with 20s in the £1."

"The exhibition there will be a big affair?"

"Yes, something grand as far as I can judge."

"Oh, by-the-bye, who is to be your new Paris manager?"

"It is not settled yet. I am going over there on Tuesday, and will stay till things are settled. We shall, I hope, get a better man than we have ever yet had, and do more business than ever."

Then M. D. Rucker, who has recently

been standing 62 degrees of frost, wrapped his comforter round his throat as a protection against our damp English climate and departed.—*Wheeling.*

### The "Push" Will "Pull."

There is on foot among the few survivors of the "push" a movement to start a new society out of the mangled remains of the former, to be called the "pull." The object of the new organization is a praiseworthy one, as the main idea is for all to pull together for the interests of the people who employ them, a change which will undoubtedly receive cordial support from the employers. Welcome and long life to the "pull."

### One of the Old Brigade.

L. M. Wainwright is a hoosier by birth and choice. He has tested other

habitations, but they did not suit him. He became a wheelman in days when ordinaries of extra light pattern weighed seventy pounds or more. He had a fair turn of speed, too—3:45 perhaps! His popularity and business ability placed

him at the head of the Indiana division, of which he became chief consul. After awhile he went to St. Louis and sold wheels for Snitjer, but in 1890 he returned to Indianapolis and has since been president of the Central Cycle Company. The concern started out modestly and has branched out gradually until it has assumed a prominent position among makers of medium grade machines. Wainwright is an official handicapper of the L. A. W.

### Samuel Snell Arrives.

The *Servia* last week brought over Samuel Snell and family, and America will now have three more citizens, as among the Snell family are Archie and Sydney, two bright youths 11 and 13 years old, respectively. These two boys are expert cyclists and have taken part in boys' races in England. Mrs. Snell and three daughters also visited the eastern REFEREE office on their arrival with Mr. Snell, and the whole party will proceed to Toledo, their future home, in a few days. The Snells will be a welcome addition to the town made famous in cycling by Peter Gendron, J. F. Vogel and Joseph Yost.

Among the specialties Mr. Snell brought over with him was a felt pedal with white material to take the place of the rubber, and which will reduce the weight of a pedal eight ounces; a felt handle and a hollow rim drawn from a weldless tube bar of 26 gauge; also a splendid line of lamps, the tools for making same having been made in England.

### A Small Dealer's Complaint.

Said a small dealer (from a suburban town) last week: "No, sir; I refuse to handle any wheel on which I am offered a discount on an order for five, a larger discount on ten and a still larger dis-

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

*The RALEIGH CYCLE CO., Ltd.,*

Greenwich and Bank Sts., NEW YORK.

*GOOD AGENTS WANTED.*

count for twenty to twenty-five wheels. The dealer only encourages the cutting of prices when he tries to make me take four or five times as many wheels as I can handle, and that's what I must do to compete with a competitor in a city only seven miles away, who can sell wheels for what I pay for them and still make money. Now, look at it as I do. I contract for twenty wheels and can sell five. At the season's end I am left with fifteen machines on my hands. I must sell these at any price, and new models have come in and therefore cut the prices to death. Thus I sell myself out of profits for the season.

"Cut prices on new wheels? Of course I do, in a way. I sell the wheel for full list, receive the money and receipt for it. Then from the other pocket I bring out \$10, perhaps only \$5, and make a present of it to my purchaser. I have to do it; my competitors are doing it, I have to do likewise. The dealer loses by the deal, whereas, would he give me an equal chance with my competitors by giving me an equal discount on one or two machines I could, perhaps, build up a nice business in a season or two. The dealer knows I am a business man and do not want the wheel to ride. Then why not give me a fighting chance? I deal with the man who looks at it this way and if his wheel is as good as he says, he need not fret but that I'll push it and perhaps in the end sell as many wheels as expected."

#### *Overman Company in Detroit.*

Charley Overman, genial, smiling and bald—the latter is shown by his picture or we would not have mentioned it—spent a few hours in Chicago recently. He had just added one more to the Overman branches, the new one being at Detroit. The Overman company has found this method profitable. Last

season its 'Frisco branch, though conducted in expensive style, made money—we are not permitted to say just how much, but more than some of the \$10,000

beauties receive. The company now has branches in Boston, Detroit, Denver and 'Frisco, and rumor has it that a larger city than either may be added to the list before long.

#### *Tin-Pot Bicycles.*

Feather-weight or tin-pot bicycles rigged up for advertisement only or not for use should not be put where passers-by can touch them, but rather hung up out of reach, only to be looked at, which is really all they are fitted for. One of these toys was sadly disabled during show week by a small squeeze given the chain, nowhere near the force being put into it that would be used in driving the machine. The funny part was that some of the bits disappeared in the cracks between the boards of the flooring.

We take the above paragraph from *Bicycling News*, and while we must admit that there is not only truth but also some sense in the remarks, we may mention that all makers are not alike. We

well remember at the Stanley show, in the Crystal Palace, some two or three years ago, a very light solid tired machine being exhibited by Harry James. It was a James racer, and scaled just under fourteen pounds. Mr. James placed it at the writer's disposal, and offered two sovereigns if it were broken with fair riding—*Athletic and Dramatic News*.

#### *A Gold Medal Awarded.*

The Massachusetts Mechanics' Association has just awarded, through its committee of science and the arts, its "gold medal of honor" to Mr. Ellwood Ivins, of this city, for "his wonderful achievements in producing seamless tubing of high carbon steel, without the use of solder or weld."

This medal was accompanied by a diploma, in which the great value of his achievement to mechanics and kindred arts is expressed by the association. About a year ago Mr. Ivins received the same honor from the state of New York. Mr. Ellwood Ivins is a young man, considerably less than thirty-five years of age, and was born and has always lived in this city.—*Philadelphia Ledger*.

#### *Recent Patents Granted.*

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. F. Aughinbaugh, patent attorney, Washington, D. C.:

- 491,162, velocipede saddle; William J. Edwards, Chicago, assignor to the Union Manufacturing & Plating Company, same place; filed Dec. 14, 1892.
- 491,300, bicycle; Frank Sweetland, Angola, N. Y.; filed June 4, 1892.
- 491,966, pneumatic tire; Daniel H. Smith, Holyoke, Mass.; filed June 24, 1892.
- 491,335, bicycle lock, Edward Buisse, South Bend, Ind.; filed Aug. 12, 1892.
- 491,342, combined coasting pedal and lock for bicycles; Waldo G. Fay, Columbus, O.; filed April 2, 1892.

491,366, bicycle gear; William Mahoney, New York; filed March 31, 1892.

491,386, cycle tire; Alexander Straus, New York; filed Feb. 27, 1892.

491,429, velocipede driving gear; John Keen, Thomas R. Marriott, and Frederick Cooper, London, Eng.; filed Feb. 26, 1892.

491,463, fastening device for wheels, etc.; Henry C. Carver, Manchester, assignor to Edmund Drinkwater Carver, Wimbledon, Eng.; filed Oct. 16, 1891; patented in England, France, Belgium and in Germany.

491,475, support for velocipedes; Sterling Elliott, Newton, assignor to the Hickory Wheel Company, Watertown, Mass.; filed March 19, 1892.

491,479, pneumatic tire; Christian H. Grav, Silvertown, Eng.; filed July 28, 1892.

Reissue, 11,307, hydrostatic tire setter; Charles L. Grimes, Moline, Ill., assignor to William White & Co., same place; filed July 28, 1892.

Trade-marks, 22,453, tires for vehicles; Union Cycle Manufacturing Company, Boston, Mass.; filed Nov. 14, 1892; essential feature the word "Airtite."

22,454, bicycles, velocipedes and articles accessory thereto; Hulbert Bros. & Co., New York; filed Jan. 7, 1893; essential feature the word "Majestic."

22,455, bicycles, velocipedes and articles accessory thereto; The Yost Manufacturing Company, Toledo, O.; filed Jan. 11, 1893; essential feature the word "Falcon."

#### *A Factory for Dubuque, Ia.*

A report reaches us from Dubuque, Ia., that Secretary Samuels of the Board of Trade has been requested to find a suitable building for a bicycle factory. It is said that the projector of the scheme is a Stamford, Conn., man already in the business there.

#### *Ready For a Big Business.*

A. M. Sheffey & Co., 92 Reade street, New York, write us that they are prepared with the stock for the spring trade, and are already shipping samples daily, especially of their Wynnewood and Queen City lines. In addition to their store-room in New York, which is from floor to ceiling, they have three other rooms filled with machines. To save transportation charges many

wheels are shipped direct from the firm's factories to customers. A. M. S. & Co. were caught last year with a short stock, but they intend profiting by their experience, as the above facts prove.

#### A New House in the Trade.

Whitcomb, Foster & Co., whose headquarters are at 591 West Madison street, have made arrangements with H. C. Martin & Co. to handle the Buffalo Tricycle Company's line in Chicago. Mr. Martin was in this city for a few hours on Saturday last. The firm mentioned above is a new one in the bicycle business, and is fortunate in securing one of the best medium grade lines in the market.

#### Another New-Comer in Cycling.

The Queen City Cycle Company no longer handles the Columbia in Buffalo. A representative of the Pope Manufacturing Company recently placed the agency for his wheel with the Fairbanks scale people, another new house to the cycle trade.

#### As to Trade With England.

An American at present in England writes us that the recent failures in America have discouraged many who previously had longing eyes on the American market. He believes that the trade in complete machines is gradually coming to an end, but that the business in tubing, forgings and parts generally will continue on a paying basis.

#### They Are Believers In Water.

Buffalo men believe that when it has been made possible to utilize the water power at Niagara Falls, their city will become the greatest cycle manufacturing center in the country. Buffalo, we believe, has already ten manufacturers, and we know of two others who contemplate entering into the business before long.

#### Growing While Papa Is Away.

A large extension is in the course of erection at the Lozier works at Toledo. Indeed, the addition will be larger than the main building. Its dimensions are 200x52 feet. A large boiler and engine room, 60 feet long, is being built at the east end of the present building. The cost of the whole improvement, including machinery, is estimated at \$150,000. Meanwhile Mr. Lozier is enjoying himself in California.

#### It Should Have Read, Syracuse.

Last week we gave the name of the new company formed to manufacture Stearns bicycles as the Rochester Cycle Company. The capital stock of the new company is \$100,000, and the manufacture of the Stearns wheel will be carried on, as heretofore, at the old factory.

#### Henning Not to Blame.

Frank Henning, whose name was used by the late firm of Kirkwood, Miller & Co. in connection with the "Henning Buggy Co.," has shown that this was not done with his knowledge or consent. After being duly sworn he stated that he had never authorized the use of his name, and had never received any of the goods shipped to "Henning & Co."

#### Who Owns the Patent?

Phelps & Dingle have served papers on the American Seddon Tire Company, to prevent if possible, the new concern placing the Seddon tire on the American market, as the Passaic firm claims the Shradler patent covers both the Seddon and Dunlop tires. The latter company was served with papers some time ago by Phelps & Dingle. Manager Elliott Burris, of the New York Belting and

Packing Company, now says that all hands had best call and see him, as he has something in the shape of a royal flush which he thinks of playing pretty soon. In the meantime the trade and many anxious enquirers would like to know where they stand on the tire question.

#### Books and Pamphlets Received.

The REFEREE acknowledges the receipt of the following publications:

Union Cycle Manufacturing Company, Boston, catalogue—Shows the Union P. D. Q. (pedibus duobus quietus), weight 32 pounds, price \$150; Union No. 3, 37 pounds, \$150; Union 2:10, 35 pounds, \$150; Union No. 2, 42 pounds, \$150. Also the Airtite tire.

Perry Richards & Co., Wolverhampton, Eng., catalogue—Shows eleven styles of Empire cycles, including a tricycle, geared ordinary and front driver.

J. E. Poorman, Cincinnati, catalogue—Shows complete lines of the Warwick, Sterling, Union, Raleigh, Cleveland, Smalley and a line of cheap wheels and sundries.

Monarch Cycle Company, Chicago, catalogue—Shows road racer, 32 pounds, \$150, a very handsome wheel; roadster, model A, 37 pounds, \$140; roadster, model B, 39 pounds, \$145; ladies' Monarch, 35 pounds, \$150; sundries, etc.

Public Ledger, Philadelphia, Public Ledger Almanac for 1893—A valuable and most complete gathering of facts, dates, events, etc.

#### Warwick Company's Success.

The Warwick Cycle Manufacturing Company seems to have uninterrupted success in its efforts in connection with litigation. Since the organization of this corporation it has been the recipient of legal attentions from many of its competitors. It has been successful in connection with the Overman Wheel Company's suit, brought before Judge Carpenter, a judge of the U. S. Circuit Court, who handed down a decision on February 8. Probably no other manufacturing corporation has been so free from adverse judicial decisions.

#### Trade in Chicago.

The Monarch Cycle Company will shortly put out two more traveling men, making five in all.

Whitlock Brothers, formerly of the White Sewing Machine Company, will soon establish themselves in the cycle business on cycle row.

M. L. Dorr has returned from the east and states that he placed a number of agencies for the Mondamin front driver. This wheel has been nicknamed the "Monday morning."

Munger and Slusser will shortly be on the road for the Century Cycle Manufacturing Company with Arrows, New Howes and Planets. This company has greatly enlarged its factory at Indianapolis and is rushing work.

The Stover Manufacturing Company of Freeport has leased the store now occupied by the Hygeia Water Company at 267 Wabash avenue, between the Pope and Humber stores. It is stated that the store will be in charge of the veteran E. H. Wilcox.

Secretary and General Manager Kiser of the Monarch Cycle Company met with an unfortunate accident last week. In jumping off a moving train he fell and broke his arm at the shoulder, and is now at work with the injured member in a sling.

The Aurora Cycle Company is rapidly perfecting its plant, and by May will be turning out machines for orders. These wheels will be handled on the road by the traveling men of Frazier & Sons, the carriage builders, who are largely interested in the company.

With the advent of the Stover company to cycle row come rumors of at least three other firms locating on the row, among them N. U. Carpenter, Mr. Clementi, formerly of Sieg & Clementi,

It has the best (and only) gear-case.

This fully protects the gear from dust etc. Our catalogue describes it. Send for one.

The McIntosh & Huntington Co.  
Cleveland, O.

RIDERS WHO HAVE used the "Perfect" Pocket Oil say that it is without an equal. That they can oil their wheels better and with less trouble than with any other oil. Cleanest, neatest and best oil can in the world. Price, handsomely nickeled, 25 cents each.

Cushman & Denison,  
172 Ninth Ave., N. Y.

"PERFECT" POCKET OILER Holder

Best and most convenient device for carrying an oil can on a bicycle. Thoroughly adjustable and easily attached to any part of the machine; no rattling; handsomely nickel-plated. For sale everywhere. Price, 25c. each.

CUSHMAN & DENISON  
172 9th Ave., - New York.

"PERFECT" Pneumatic Pump Holder

Best and most convenient device for carrying a Pneumatic Pump on a bicycle. Thoroughly adjustable and easily attached to any part of the machine. No rattling. Handsomely nickel-plated. For sale everywhere. Price, 25c. each.

CUSHMAN & DENISON,  
172 9th Ave., - New York.

THE RED STAR SOLID ILLUMINANT

FOR BICYCLE LAMPS.

A solid compound that will not leak or spill but stays where it belongs—in the lamp.

If you want a clean lamp, clean clothes and a clean machine, USE IT. There is no use telling you what a nuisance your lamp HAS BEEN. Use our illuminant and forget about the past. Price 50 cents per can.

THE RED STAR CHAIN LUBRICANT will also save you trouble. It is put up in stick form, very handy and convenient. Price 25 cents.

THE RED STAR LUBRICATING OIL is made especially for ball bearings. Price 25 cents per can.

For sale by all dealers. Samples sent on receipt of price. Send us a postal for our little folder.

RED STAR MANUFACTURING CO., 58 Front St., N. Y.  
P. O. Box, 1092.

Roy Bicycle Oiler,

Handsomely nickel plated. For Bicycles, Typewriters, Sewing Machines, etc. It will not leak, therefore no tool bag soaked with oil, no soiled clothes or hands, always ready for use. The neatest,

cleanest oiler ever placed on the market. The pressure on the steel pin releases whatever quantity of oil is required. This pin is intended to remove the dirt from all holes that require oiling, an important feature. Write for trade prices. Price, 25 Cents, Postage Paid.

Roy Oiler Manufacturing Co., 77 Warren Street, New York.

and another organization. W. S. Maltby will also locate.

Tom J. Deupree of Deupree & Brodnax, Memphis, Tenn., the well-known road rider, is now located in Chicago and has joined the Lincoln Cycling Club. He is with the Columbian Accident Association but says he will never bother his cycling friends. Mr. Deupree still retains his interest in his southern business, which will be run by his partner.

E. C. Bode closed contracts for Fowler safeties last week with the Lee, Clark & Ressen Hardware Company of Omaha for 130 machines, and with the Sperry Cycle Company of Denver for 100 machines which with the order for 100 machines, from the Midland Cycle Company of Kansas City, closed early in the week, aggregated a splendid week's work. The last order sent in was for 100 wheels for the Heath Cycle Company of Minneapolis.

#### Small Trade Notes.

The Stearns factory now employs 100 men.

Marriott & Cooper have been granted patents on their gears in this country.

Walter Measure, of Union fame, was in Chicago last week "just looking around."

The Overman Wheel Company has opened a bicycle store at 262 Woodward avenue, Detroit.

The Hill Cycle Company claims to have sold all its output except that portion retained for distribution in Illinois.

Monfant & Ellis have opened a place in Sioux City, Ia., and will handle the James, Victor, Imperial and Warwick.

Hammond & Cooley, Batavia, N. Y., are making a very fine pedal, and report being ready to supply reasonable orders.

Frank G. Silvers is representing the Stokes Manufacturing Company in Michigan, and, as he says, "playing to good business."

The Columbus Sundry Company, 163 West One Hundred and Twenty-fourth street, New York, is a new concern in the cycle trade.

Articles of association of the Schulenberg Cycle Company have been filed at Detroit. The capital stock is \$10,000, one-half being paid in.

W. T. Mendenhall, for a time an advertising solicitor, has quit the business and will, it is said, manufacture wheels at Birmingham, Conn.

For fear that some one will buy it, the McIntosh-Huntington Company has placed the price of Shorland's Crypto g. o., which it is showing at \$500.

Humber & Co. probably have the record for light-weight racing machines—6 ounces; but this was only a model exhibited at the national show.

It is said that the ball bearing chain exhibited at the Philadelphia show, and referred to at the time in the REFEREE, contains 758 diminutive balls.

Alfred Du Oros has gone to Ireland to purchase and arrange for the importation of large quantities of canvas the same as used in the Dunlop tire abroad.

W. F. Blythe, brother-in-law of Thomas Mallinson, of the Standard Cap Company of New York, will represent the concern in New York and thereabouts, paying special attention to the bicycle agents.

The Bergfel saddles, made by the Newark (N. J.) Nickel Plating Company, are having a good sale, and are becoming better known and appreciated by those riders who are after comfort and strength in a saddle. The Bergfels, in speaking to a REFEREE representative, said: "We do not profess, neither do we want to make a featherweight saddle; we make saddles

that are comfortable and safe for the rider."

F. G. Weston, of Bangor, Me., has arranged with Palmer & Swain, of Waltham, Mass., to manufacture his cyclometer. He has been granted a patent in France, and has an application on file in England.

R. C. Lennie, the well-known representative of the Stover company, will be in Chicago from the middle of April until the close of the fair, in charge of the company's exhibit. He is now on an Ohio-Michigan trip.

Andrew J. Cahill, late of Chicago, was in New York last week selling Niagaras. Cahill reports business as good, and has become a real estate speculator since going to Buffalo, having bought some dirt near Niagara Falls.

"Elliptical tubing," says an exchange, "is coming into vogue as giving greater strength in the direction of the strains on wheel frames." Elliptical tubing was used in the back-bones of ordinaries as long as fifteen years ago.

Raleigh agencies have been placed with Andrae of Milwaukee, Burkhardt & Co. of Minneapolis, Gregory & Co., of Wiaona, and the Nebraska Cycle Company of Lincoln. A representative is doing the entire route to the coast.

Our attention has been called to a mistake made in a paragraph pertaining to the 1893 Warwick, which gave the weight as 39 instead of 29 pounds, and the wheel base as 10 1 2 inches instead of 43 3 4 inches. The head is 10 1 2 inches.

Charles Godfrey, Warren street, New York, will push the bicycle department of his sporting goods house extensively in the states of New York and New Jersey this year, and will handle the same line of wheels, the Lovell and New Mails, as usual.

As stated in the REFEREE recently, William Bowden, of the Seddon Tire Company, has offered a handsome jeweled medal to the International Cyclists' Association for the World's Fair races. He now offers a prize of \$25 for the best design for the same.

Carl Von Lengerke, of Von Lengerke & Detmold, Murray street, New York, will race again this season, using a Peregrine, of course. This concern has taken hold of the Warwick, which will give it a good American as well as a good English wheel—the Peregrine.

The exhibitors at the national show were compelled to have their stands ready by 11 o'clock on Friday and "notices ready to hand to gentlemen of the press." This last portion of the rules was even italicized. What a blessing it must be to be a press man abroad.

George T. Lewis will be the Gendron traveler in New Jersey, east New York and Connecticut. S. T. Valiant will handle the southeast, with headquarters in Philadelphia. Mike Quinlan will have charge of Brooklyn, vice Alex Schwalbach, and the New York office force will remain the same, with Mr. Getz in charge of the cash.

The McIntosh-Huntington Company, Cleveland, writes us that Barnum & Bailey, the show people, have purchased two Sunol bicycles, which will be used by expert riders in conveying dispatches, etc., to every town that the show visits. They will thus displace the mounted messengers who have hitherto been used for this purpose.

The Columbian Novelty Company, of Newark, states that, while the demand for its Lennox saddle has not been large, it is finding its way to many quarters of the country and is appreciated by the rider who likes a generous spring in his saddle. The company states that it in-

tends to merely introduce its saddle this year, and will push it extensively in '94.

Barbour & Stone, 77 Warren street, New York, have purchased the well-known Pomeroy Bros. Roy oiler and will handle it in this country and Canada exclusively in the future. They are now placing the article all over the country. The Roy has also been placed on the European market and is meeting with a warm reception.

Elliott Mason is tearing the Pope Manufacturing Company's New York branch store to pieces preparatory to putting in a new steel ceiling, new fixtures, a new plate-glass show window, with a fresh coat of paint and a general cleaning up all around. All the goods have been dropped to a sub-cellar, and 14 Warren street looks as if a sheriff had been around. Mr. Mason shipped several machines to Mexico last week and is selling wheels daily, notwithstanding the torn-up look of things in the store.

George R. Bidwell says it will be interesting to note the standing of the tire market about July 4, and thinks at that time, and not before, the question of perfection—or as near perfection as possible—will be decided as to pneumatic tires. Mr. Bidwell in a talk with a REFEREE representative stated that he thought some tire manufacturers would be hard hit this year, while others will be sorry they experimented with tires. In the meantime the force at the Bidwell factory has been doubled and is working nights.

The Raleigh cycle factory present a busy appearance. The other day when a REFEREE representative called on manager George S. Macdonald, wagons were being loaded with crated wheels for the south and the Pacific coast. The factory is now running three nights each week until 9 o'clock in order to facilitate shipments. Manager Macdonald has been working very hard of late, and was for several days more or less sick as a consequence. "But what are we to do when people are shouting for their wheels," said Mr. Macdonald.

The full-page advertisement in this issue, of the "Warwick made on honor" wheels, will attract attention from dealers and agents. The Thorsen & Cassidy Company, 60 Wabash avenue, Chicago, is the exclusive Chicago agent for this popular line of wheels. Its bicycle catalogue shows a full line of Warwicks, Remingtons, Singers and other high grade wheels, as well as nineteen different patterns of the Western Wheel Works' medium priced goods. A fine chart showing a most complete line of sundries has just been published by this concern.

#### A Complimentary Notice!

Some one, unknown, sends us a clipping from a paper, likewise unknown, reading as follows: "Wheelmen across the west will be greatly edified to learn that some twenty Chicago gents met the other night and did a lot of 'resolving' for the 'wheelmen of the west.' With Twinkle Erwin, Bruin Berger and Sammal Miles as chief resolvers, the whole proceeding is in line with that august body, the Three Tailors of Tooley street."

#### A Half-Century Sunday.

U. F. Knott and C. J. Schoening, of the River Forest C. C., made a half-century ride Sunday last, from Oak Park to Elgin and then south. The roads were reported in good shape south of Elgin.

#### A New Drive at Cleveland.

Plans have been made for a boulevard on the south side, Cleveland, which is to connect the drives of the park and thereby give a circuitous and handsome

drive from the Superior street viaduct through the heart of the city to Brooklyn, touching the most beautiful scenery in the city. When the drive is completed the wheelmen will have a splendid road to ride over.

#### It Doesn't Look Like It.

When it was announced that the Ohio division had decided to pay the expenses of four delegates to the meeting at Philadelphia on the 20th, and that the four would be decided by vote, we were told that ex-President Kirkpatrick would be "left." But not he. He is one of the ablest men the division has ever had and the members were not slow to recognize the fact. Kirk. will doubtless have something to say on the class B question.

#### Miscellaneous Foreign Notes.

C. P. Sisley has resigned the editorship of *Cycling* to conduct his new journal, *Up-to-Date*.

And now it is stated positively that the prince of Wales has no intention of becoming a cyclist. Really this is to be regretted, for should H. R. H. take to the wheel it would give many (who would otherwise deem it not quite the proper thing) a chance to follow their inclinations to ride now and then.

Two Scottish cyclists, Messrs. Kerr and McGuire, are on their way to Australia. They propose riding across Australia from Melbourne to Port-Darwin, a most difficult undertaking.

"Britons," not Britains, good Mr. Prial. There is only one Britain; but many Britons, and perhaps one or two good enough this year to repel the Zimmerman-Sanger invasion.—*Cyclist*.

#### In Spite of Bad Roads, Too.

It is said that there is one wheelman to every 133 inhabitants of France, and one in every 129 in this country.

#### Little Notes.

Bicycle races took place at Mobile, Ala., on Monday.

The St. Paul C. C. had a "skating benefit" Wednesday evening.

During 1893 New York will spend nearly \$1,000,000 on asphalt paving.

Two cycling papers flourish in Holland. One of them is ten years old.

The Inter Ocean Wheel Club, of Sioux City, Ia., proposes to join the league.

The Glasgow Tramway Company proposes using pneumatics on its cabs shortly.

The new rooms of the Grand Rapids (Mich.) B. C. were opened Friday last with a party.

The Ontario B. C. has broken ground for a quarter-mile track about a half-mile from town.

Lumsden, the Scotch professional, has applied to the Scottish Cyclists' Union for reinstatement as an amateur.

Home runs and two-mile handicaps won't amalgamate as well as maple syrup and buckwheat cakes.—*Cleveland Leader*.

The General Park Social Club, Chicago, has lately been formed. A number of wheelmen in the neighborhood of Central Park avenue are the prime movers in the affair.

The Cleveland Wheel Club has under consideration a proposition to erect a new club house. The club is preparing for a series of three ten-mile races on the Rocky River road.

The Pope Manufacturing Company's offer of a wheel to the first teacher who would find an error in a school book brought to light thirty-eight errors in geography, twenty-one in history, ninety

# RED CROSS HANDY ARTICLES.

Secure PRICES and ELECTROTYPES for your Catalogue. Send for Catalogue of New Goods.

## Red Cross Colored Enamels.

*FRENC HIMPORTED.*

For brilliancy, durability and high grade finish there is no enamel on the market equal to the Red Cross. We will warrant this enamel not to contain one particle of Asphaltum. We import the plain enamel direct from France, after which the colors are added by our expert chemist.

We can furnish it in the following 12 colors: White, black, cream yellow, rose color, robin egg blue, deep blue, orange, primrose, vermillion, light green, cycle blue and drab.

In addition to this line of standard colors we can furnish any color or shade desired. All our enamels are put up in neat cans with screw top. Either air-drying or baking furnished in bulk in any quantity desired.

## Red Cross Cycle Cleaner.

Removes all oil, grease, mud, dirt or stain and all rust of a few days' standing. Keeps away all rust from the bearings and sleeve of the spokes, thus lengthening the life of a spoke and wheel one half.

Softens and preserves the rubber in the tire. Removes the oil and grease from the chain like magic, leaving it clean and bright.

Does not scar nor scratch the enamel, but brings out a clear and brilliant finish.

Guaranteed to contain no acid and will not leave the wheel oily. One application is sufficient to guarantee its use ever afterward.

Manufactured by A. U. BETTS & CO., TOLEDO, OHIO.

# SUPERIORITY SOLID HIPMENTS COUPLED WITH COMFORT AREFULLY AND SATISFACTION SADDLES WIFTLY MADE.

BRETZ & CURTIS MFG. CO., - PHILADELPHIA, PA.  
Not the Largest but the Best Makers of Bicycle Saddles.

in arithmetic and sixty in grammar. Thirty-eight of these have since been corrected.

The Southern Athletic Club of New Orleans has decided to build an addition to the club house, in which will be provided a room for the use of the new company of military cyclists.

Friday evening last the Garden City Cyclers of San Jose, Cal., enjoyed a successful entertainment at the Auditorium, the comedy-drama, "Andy Blake" being given by Dion Boucicault.

A farmer suggests, in a Boston paper, taxing every cycle \$10 for road improvement, which leads the Albany Times-Union to enquire, "Why tax bicycles more than other vehicles?"

The Minneapolis Wheelmen expect to have a quarter-mile track this season. The lack of a suitable track has long worried the racing men of the northwest. Mr. Choate says it will be a "go."

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—*Adv.*

W. F. Cottier, of the Belsize B. C., England, rode 10,073 miles last year, averaging 45 miles per ride. His longest ride was 209 miles, and the shortest 54, while in September he covered 1,510 miles.

Harry Swindley thinks 21 1-2 pounds pressure sufficient for his pneumatic tires; a correspondent to the *Cyclist* says 50 pounds the least that would carry a 15-stone rider, while McCreedy says he finds 30 pounds about right.

Details of a plan under which a Fowler wheel is to be given away free will be found in our advertising columns. Club secretaries will do well to give the offer attention with a prospect of securing the wheel for the club's benefit.

The Middletown (N. Y.) Wheelmen have elected the following officers for the coming year: President, Charles Higham; vice-president, George M. Millsbaugh; secretary, Judson Hoar;

treasurer, Charles L. Swezy; captain, H. A. Smith.

Andy McGarrett thinks favorably of making Chicago his home, at least during the World's Fair. He says if he moves to the windy city he will have to take out naturalization papers.

An English rider who has owned four machines has figured the cost of riding per mile on each. All were by the same maker, and the cheapest machine cost most in the long run, or 2.013 pence per mile. The second in point of price proved the most economical, the cost being 0.723 pence per mile.

The Johnstown (Pa.) Cycling Club held its first annual banquet last week, and the menu included resillient turkey, Para gum tongue, elliptic potato, Wylie dead beats, pneumatic oranges, ball-bearing California grapes, scorchier ice cream (?), cushion sponge cake and bolts and nuts.

The demand for the Red Star Solid Illuminant from abroad has grown so large on account of the law for the use of lamps on bicycles being so rigidly enforced there, and because the solid illuminant meets all the requirements of the most fastidious rider, that William S. Thorn, Jr., treasurer of the Red Star Manufacturing Company, sailed for England on the *Britanic* Feb. 1 to close contracts now pending and appoint agents for the sale of the specialties manufactured by his company in England, France and Germany.

## Have You Seen the Curtis Combination Pedal?

*Either Rubber or Rat Trap.*

*The Best Pedal in the Market. Absolutely Dust Proof.*

—PRICE, \$7.00—

We call the attention of bicycle riders and dealers to the fact that we can furnish them with a rat trap plate that can be put into the same pedals as the rubbers are used in. Price, \$2 per set of four, postpaid

REED & CURTIS MACHINE SCREW CO.,

EXIT CONSTITUTIONAL CONVENTION.

The time-honored but absolutely nonsensical constitutional convention of the L. A. W. is a thing of the past, and never again, unless the delegates to the National Assembly openly declare themselves incompetent to conduct the affairs of the organization will the proxy-hunter and the club representative wield the power heretofore allowed him under the constitution. From this time forward the national assembly will conduct the entire business of the league without let or hindrance from any source whatsoever. We do not mean to say that the system heretofore in vogue was entirely nonsensical. That term is intended to apply more to the method in which the system has been carried out. There was one seemingly insurmountable difficulty about it, however, viz.: the time consumed in the counting of proxies.

We have yet to learn how the membership at large will accept the innovation. Certain it is that a great many will seriously object to being thus cut off from all possibility of expressing their opinions and registering their votes.

There is one way in which the membership at large may still be heard. It is through the election of delegates to the national assembly. This is a matter which has received far too little attention so far, and one which will stand ventilating at a later date.

GUILTY BUT NOT PROVEN.

Since Mr. Chairman Raymond and the members of the racing board begun their investigation as to the standing of certain pure amateurs, said pure amateurs have exhibited a remarkable amount of nerve, yet fearing they would be pounced upon and punished in some frightful manner for their many wrongdoings. But their trials and tribulations are now over; they have been investigated—and, incidentally, advertised—and declared—well, "guilty but not proven" seems to fit the case. Probably not one of the members of the racing board believes these men innocent, but proof is lacking. Proof! proof!! proof!!! This is the cry of the racing board. Every man was asked numerous questions as to expenses, sale of prizes, etc., and without an exception answered them, under oath, too, in such a manner as to leave nothing for the board to do

but say, "Why, you're innocent in the eyes of the law."

With all due respects to Mr. Raymond and his colleagues, this investigation was carried on in a poor manner. Those men could have been proved guilty, but for the method of investigation employed. Paragraph b, article 4, section 7, of the by-laws says, "It shall be the duty of the board to make inquiry regarding any wheelmen whose amateur status is questioned, and all protests or charges shall be entered with the chairman," who shall provide for an investigation, etc. It is not required that charges shall be entered in order to investigate. This is borne out by the fact that an investigation was made.

Bear in mind the fact that an investigation was made. The same paragraph (b) in the by-laws says: "Pending investigation, the party [person is meant] against whom these charges are brought, may be suspended from the track." No suspensions were made pending the investigation; direct charges, in writing, were made against Johnson, et al, by Frank Egan—but no suspensions pending, etc. Still further along the same paragraph (b) says: "Suspicious circumstances, which are, in the judgment of any member of the board, sufficient to make the status of any wheelman a matter of reasonable doubt, shall be the basis of an investigation in the absence of formal protests or charges." [The italics are ours throughout.—Ed.]

Would it have been antagonistic to the rules by which racing is governed by the league for the board to have suspended every man whose name was mentioned in the REFEREE as having had his expenses paid while attending the meets at Chicago and Milwaukee, to say nothing of those on the southern trip—that is, pending an investigation? In the absence of formal protests or charges, was there not reasonable doubt?

The REFEREE'S charges must have been such as to create a reasonable doubt, and they did, inasmuch as an investigation was held. Then why were the men not suspended pending this investigation?

If a member of the board, to whom had been assigned the task of investigating the amateur status of any particular man, had called the suspect before him and had put him through a rigid cross-examination, there would have been little trouble in making out a case. Bushels of proof would not have helped things in the least, for the suspects would have made their denials under oath just the same, and the case would have ended. The board was lax in its investigation.

A DECISION THAT SEEMS UNJUST.

In the earlier days of cycling we were prepared to receive almost any court decision or authoritative order which was against the wheelman, or cycling in general. In later years, however, these decisions and orders have, at least from the wheelman's standpoint, been more in keeping with justice and fairness, and for this reason a recent decision of a Maryland jurist rather surprises us. It certainly is not in keeping with the tone of many state supreme court decision on the rights of the bicycle on the highways. The case referred to was that of Dr. W. S. Twilley, of Baltimore, in the Kent County circuit court. The question to be decided was whether riders of bicycles could be compelled to dismount while crossing a bridge. The commissioners of Kent and Queen Anne Counties had established such a rule; Dr. Twilley violated it and was fined. Judge Robinson sustained the rule, and the doctor took an appeal. The case has been argued in the the court of appeals, and a decision

is anxiously waited by the Maryland wheelmen in particular, and those throughout the country in general.

This does not seem to be a case of equal rights on the road, as regards the respective owners of wheels and other vehicles. It would seem to us as unfair to compel a man to unhitch his horse, and make him haul his buggy across the bridge as to compel a wheelman to dismount. We cannot discover what the commissioners seek to gain by enforcing such a rule, except to prohibit fast riding—and what harm, to the bridge, could fast riding do? Armies, when crossing bridges, usually "break ranks," but something is to be gained thereby. Not so in the case of a number of wheels, however.

THE CREDIT SYSTEM TO BLAME.

Some of the English papers of recent date have seen fit to take the American cycle trade to task for its alleged loose business methods. This was occasioned, no doubt, by one or two failures, by which some English makers suffered considerable loss. No one regrets such occurrences more than the REFEREE, and only a few weeks ago this paper pointed out a way wherein the English maker could better protect himself. No one is absolutely safe from loss as long as the credit system is in vogue. Failures are bound to come—in England as well as in America. As a matter of fact, there are more failures in the cycle trade abroad than in this country. It is hardly fair to judge the whole trade by what has happened in the cases of a few unfortunate ones. The cycling trade in America, on the whole, is in a very sound condition and capable of handling the home output in its entirety, as well as a goodly share of that of the English houses. The only thing needful of very close scrutiny is the standing of any particular house in the world of finance.

"INDUCER" YOUNG'S SENSATIONAL ADMISSIONS.

I hardly think it necessary to make an explanation in regard to "Inducer" Young's sensational admissions," published in connection with Mr. Raymond's lengthy report on the recent investigation of the amateur standing of certain racing men. Somehow or other I feel that my reputation for honest purposes and honorable methods will bear as close inspection as will that of the man who made the "sensational admission." But upon second thought, and more for the purpose of placing the paper I represent in the right light, I have concluded to say a few words.

Mr. Raymond says "Mr. Young also stated that Root, of the REFEREE, admitted to him that they were only doing this thing for the sake of creating a sensation, and for the purpose of roasting the racing board." Let me say that Mr. Young knows only too well that this statement was made without the least foundation of fact, and he likely made the remark for the sole purpose of "letting himself down easy," as it were. What I did say was this: "We do not care, particularly, to see the men suspended. We are not after the men; we are after the racing board and are trying to make it do its duty"—that is, to make an investigation, and we accomplished our purpose.

For some eighteen months Mr. Young lived at my house. Naturally enough we rode in one another's company—on the wheel and on the train—to a great extent. We talked over the REFEREE'S charges frequently and more than once have I said to him, "You know they [the men] are guilty," and his reply would be on this order: "Well, supposing they are, what's the odds; what do

you care? What do you want to roast your own club-mates for—the eastern men are worse, jump on them, too."

Mr. Young's statement regarding the tickets to Milwaukee is amusing, inasmuch as he offered me a ticket (which I refused) free of cost if I would take the same and say nothing about it. He admitted he gave tickets to several men, and if I were to tell all Mr. Young imparted to me the result of the investigation would have been different. But what Mr. Young told me was in confidence—it was told to a club-mate and a companion—and it has been kept in the same way.

In conclusion I have to say that if Mr. Young's charges were true, my newspaper experience has been such as to prevent my telling office secrets to one known to be incapable of withholding such from the general public.

CHARLES P. ROOT.

WE cannot exactly agree with Sylvester Baxter wherein he says, in an article, that horses and other draft animals will eventually disappear entirely from the highways, but we do agree with him when he says that "the filth incessantly deposited in the city streets, is almost wholly due to animals." It is not difficult to agree with Mr. Baxter on another point, that with the bicycle the wear and tear to the highway is reduced to a minimum.

FRANK EGAN claims that he has received a full hundred applications for licenses to ride under N. C. A. rules. We should like to know from whom; certainly not the best men the country has produced, inasmuch as a majority of them have expressed their intentions of remaining faithful to the league. Print the names, Mr. Egan, and let us know who the unfortunates are.

CHARLES P. SISLEY'S new paper, *Up-to-Date* may be up to date, but it is hardly up to expectations.

Fate of an Anti-Bicyclist Bill.

In the Indiana house of representatives a few days ago a representative asked that the anti-bicyclist bill recently introduced by Mr. Shrader be made a special order of business. He declared that his mail had consisted of little else beside letters from wheelmen and their friends for a week past, and that he had been unable to attend to anything else in consequence! The fate of the bill is securely sealed, and Chief Consul Hay is happy in consequence.

Oh How Wise.

It is reported that the Pope Bicycle Club will employ no racing men this year. If this is true and all manufacturers would follow suit this would come nearer solving the amateur racing question than anything else.—Detroit Journal.

For a New House.

The directors of the Sheridan C. C. have rented the Y. M. C. A. building at Davis street and Chicago avenue, Evanston, and will arrange it in a most convenient way for their purposes. Possession will be had May 1.

After Johnson.

Cahill, of the Buffalo Wheel Company, is negotiating with Johnson to ride a Niagara racer during the coming season, but arrangements have not been completed.

Another Chicago Club.

Rome O'Connell, W. T. Bernbeck and others have incorporated the Prairie State Wheelmen.

# THE CONSTITUTIONAL CONVENTION

## NEGROES NOT BARRED.

CLASS B AMENDMENT WITHDRAWN—  
PRIZE VALUE LIMITED.

*Constitutional Convention Done Away  
With—Addresses Will Not be Pub-  
lished—Reports for the Year  
—Important Meeting.*

Constitutional conventions of the League of American Wheelmen will be heard of no more. The league, through its representatives, assembled at Philadelphia on Monday, last, so decreed, and by the adoption of an amendment offered by Mr. Sheridan threw the management of the league, bag and baggage, into the hands of the national assembly. The meeting was held in the lecture room of the Union League Club on Broad street. Only a favored few knew, prior to their arrival in the city of Brotherly Love where the gathering would hold forth, but by hook or by crook they found their way, in due course, to the scene of operations. There, during the morning all was hustle and confusion. As usual the whole morning was consumed by the credential committee, and that body found itself confronted by a much harder task than has ever been known on previous occasions. That its duties were by no means easy will be gathered from the fact that the 300 persons present carried the proxies of not less than 10,000 members. A large majority of these were in bunches of twenty-five, but several league club representatives cast over 100, the Illinois club's representative voting 271, while the vice-consul of California topped 400. It was, therefore, absolutely impossible to commence business until 2 o'clock.

### CALLED TO ORDER.

President Burdette, then, with the aid of a salt-bottle, in the absence of a gavel, called the meeting to order, and the credential committee read its report. This formality disposed of, Mr. Sheridan moved that that portion of the proposed amendment relating to the method of amending the constitution be taken up and acted upon. The Pennsylvania division, through its secretary-treasurer, lodged an objection to the acceptance of a number of proxies which had been obtained through the medium of the *Bicycling World*. There

Burdette.—"The gentlemen will please come to order."

was a long and monotonous discussion over this question, but the proxies were finally allowed to be counted.

### SHERIDAN'S AMENDMENT.

Mr. Sheridan's amendment originally provided that the constitution should be amended by the National Assembly, subject to ratification by the divisions. The latter portion was eventually withdrawn and the amendment was adopted, by a unanimous vote:

ARTICLE 10, SECTION 1.—This constitution may be altered or amended by a two-thirds vote of the delegates to the National Assembly voting in person or by proxy at any regular meeting of the assembly, or at any meeting called for the purpose, of which sixty days notice shall have been given; but no amendment shall be made or considered unless thirty days notice thereof shall have been given through the columns of the official organ.

Thus the constitutional convention, heretofore so great a farce, was entirely wiped out.

### INVITED OUTSIDERS TO THE ASSEMBLY.

Luscomb.  
Ex-president, lawyer  
and orator.

The president stated that those members who had proposed amendments and were not members of the assembly were invited to be present at the meeting of the assembly, so that they might be heard. This was, practically, all that was accomplished by the constitutional convention, which thereupon adjourned.

### THE ASSEMBLY MEETS.

*Various Reports Read—Munger and Barrett Scored—International Races—The Racing Board's Report.*

The president announced a brief recess, but inside of half an hour the national assembly was called upon to answer the roll call. As a result 139 members answered, though it is known that enough to swell the total to 150 were outside the hall, and 77 votes were represented by proxy—an excellent representation, and one which evidenced the deep-seated interest taken in the questions presented.

### ONLY A SHORT REPORT.

The president was not ready to present his report in full, and said it would be printed in the *Bulletin*. He reviewed briefly the events of the year, dwelling particularly on the subject of highway improvement and the bureau created for the furtherance of that object. As a result of the publication of *Good Roads*, he said, there was a balance in its favor, including its assets, of \$2,200. Furthermore, the executive committee had been offered \$25,000 for the franchise. The magazine had now a circulation of

over 40,000 copies per month. "The subject of road improvement," said the colonel, "has taken it beyond the seemingly selfish objects for which it formerly existed, and wheelmen have become philanthropists. These are the words uttered to me by the president of the United States." The president closed by recommending a very serious consideration by all of the questions to be presented.

"I will read my report"

and, in due course, a proposal emanated from Mr. Adams, of the Massachusetts division, that the accounts should be submitted to an auditing committee. A brisk controversy ensued between Colonel Burdett, who took the floor, and Mr. Perkins, but the whole matter was finally adjusted by a motion from Mr. Luscomb, that the expenses be placed under separate heads and published in the *Bulletin*, so that the members may see to what purpose the funds are devoted. The treasurer's report was then accepted.

### BARRETT AND MUNGER SCORED.

The report of the membership committee brought to the surface the cases of Barrett and Munger, charged with "conduct prejudicial to the interests of the league," in that they had endorsed the application of a professional for membership. The sparring was warm. A motion to expel both men seemed about to prevail, when an apology from Munger was read and an amendment offered to suspend him for six months. Eventually, after half an hour's argument, the matter was referred back to the committee to take such action as it seemed proper under the rules.

### MR. POTTER'S REPORT.

On behalf of the highway improvement committee, Mr. Potter presented a report full of statistics. Six New England states are busily engaged pushing road matters. Governor Russell's com-

mittee, particularly, is doing good work. The governor of Rhode Island, like his predecessor, is a strong advocate of good roads, and a Rhode Island league has been formed. No less than five bills

Dunn.—A gentlemanly ex-president.

have been introduced in New York, and the present favorable appearance of things is due largely to the press. Coming west, Douglas county, Neb., is, alone, expending \$150,000 on roads. Mr. Potter recommended the publication of popular articles in pamphlet form, to be supplied to road associations and the like at cost, and that the league invite the co-operation of the carriage associations and others interested, so that all may work together to one end. The report was accepted and the recommendations referred, with favor, to the executive committee.

### INTERNATIONAL RACES.

On behalf of the International Race committee, appointed to arrange for world's fair races, Colonel Burdett reported that Mr. Gerould, the member in charge of the selection of grounds, etc., recommended the acceptance of a proposal from the Chicago ball club. As nearly as could be gleaned from the report, the club offers the use of its grounds for one-third of the gross receipts, the league, of course, to build the track and pay all expenses. Mr. Gerould estimated the receipts at \$30,000 and the expenses thus: To ball club, \$10,000; track and other expenses, \$15,000; profit, \$5,000. Of course this is purely guess work. Mr. Raymond's appearance on the floor was greeted with genuine enthusiasm. His report, being of great interest, is dealt with fully. Mr. Raymond said:

### MR. RAYMOND'S REPORT.

"We feel bound to state here, that when we took office we found the most meagre records of the past thirteen years in evidence of racing board work, but \*\*\* we have endeavored to correct the affairs of this committee by starting afresh. \*\*\* We will now hurriedly mention some of the things which we have compiled, and which will be found among the effects of the chairman's

Brewster.—"The balance on hand is"—

Raymond.—"Limit the prize value to \$150."

office which were not there when we took office:

"Address book of racing men, containing now over 1,000 names and addresses; address list of clubs, league and non-league; address list of all colleges interested in sports, address list of all athletic clubs, record book containing existing records, sanction book dated, showing that in the year 1892, 566 sanctions were granted for meets and bicycle events. It may be interesting to know that July 4 carried off the honors, with seventy-eight sanctions; September 5, with forty-two, and May 30 with a poor third. A book of reinstatements, suspensions, and expulsions, showing that of over 200 cases investigated, 139 received punishment. In this connection we would state that we have seen reason only to reinstate four men. \* \* \* There are now filed in the office of the chairman over 5,000 letters received by him and answered during the past year. This does not, by any means, represent the number of letters written, as hundreds of them were sent out, not replies to any received. The above figures average sixteen letters each week-day the year round, but of course the proportion is larger in the summer months.

"We impress this upon you not so much to place the labor before your eyes, as to absolutely fix upon you the responsibility of caring for the vast interest, which has grown up in our midst, called racing. You cannot ignore it, its friends are legion, and we believe it to be our duty to lay before you the fact of just how many thousands of our members are interested in this branch of our organization."

Mr. Raymond then pointed out some of the advantages of the sanctioning system and continued:

"The states leading as regards number of sanctions granted are New York, 105; Massachusetts, 66; Ohio, 47; New Jersey, 43; Pennsylvania and Michigan, 34 each; Connecticut, 22; Iowa, 20; Illinois, 19. Thirty-one states are shown on the sanction books as holding meets."

After rehearsing a case which occurred in Massachusetts in which a number of suspended men entered for a race, Mr. Raymond said;

"It has been the known policy of the league for years to ignore road racing, or rather to not govern that branch of the sport. \* \* \* We ask that this assembly place the seal once for all, determining just how far, or not at all, the future racing boards are to allow racing rules and amateur rules to cover violations on the road. \* \* \* We are confronted by an enormous increase in this class of racing, and the time has come when it should be finally settled by this assembly, and not by any racing board, as to just their powers as regards recognition of road racing. \* \* \* We ask your consideration of the following:

"Resolved, that from this time out, no rule of this organization shall in any way be construed so as to effect any act committed by a racing man as such upon

the road, save and except a case of infraction of the amateur rule.

CHAMPIONSHIP EVENTS.

"There has been much said urging the throwing open of our championships to the world. We are not prepared to suggest any such mode of procedure. Our championships are distinctly American championships, and not world's championships. We believe that American championships should be held by Americans, and that an open event to which every amateur in this country will be eligible is the proper definition of the term American championships. We suggest this for the consideration of the new board."

Then followed a chapter on records. Mr. Raymond blamed the cycling press for accepting and publishing records before they have been accepted by the racing board. He gave the Johnson records as an example, and commended Springfield and Hartford for the prompt manner in which they had attended to

ception enabled us to fix the crime positively on the violator, and he was expelled.

CHANGES WERE SUGGESTED.

"Time went on and we felt that violations of the rules were increasing daily, yet it is not egotism to say that unusual labor, resulting in pecuniary loss to your board through neglect of business, brought forth no results, as absolute proof could not be obtained; all interested combining to shield the guilty. The clamor became so great that at the October meeting of this board the subject was taken under advisement and it was decided to give to the league, through a constitutional convention, the opportunity to be honest to itself and adopt, if it saw fit, new rules, establish a separate class for the riders and assume jurisdiction over them. The rules were therefore drawn up; before announcing them England and other foreign countries were consulted as to the bearing they would have on future international intercourse, and it was found that the same condition was confronting each alike, and that similar steps were under advisement. The same result was aimed at by all through different channels. Our rules were then made public. By the time this report is placed before you, you will have passed upon them.

the requirements of the board in this respect.

STOOD LOTS OF ABUSE.

"Possibly no previous board has been compelled to take the same amount of abuse, through the fault of the national assembly, than your present board. All the imperfections of the amateur rule and our inability to convict under it has been heaped on our devoted heads, and we wish to unload at your door. \* \* \* It has been admitted, time and again, that money has been taken to keep up a track or for similar purpose—anything to evade the amateur law. They need not have been so careful. A club was beyond our power; what right had we to question the source of its income, and so the comedy went on. We wrote a letter to thirty-two manufacturers of racing wheels, asking them if they had contributed toward the support of racing men; twenty-seven replied, and in the negative, except one, and we state here that in that twenty-seven every maker of prominence is included. The one ex-

Whether you accept or reject them, we are conscious of having done our duty, and can feel no shame or chagrin in case of defeat, and shall feel no special elation in event of success, as we deem the rules but the outcome of expediency and an issue of the times. The only thing we hope for is that the present amateur rule will not be renewed in its present shape and that the constitutional convention will not ask its next racing board to carry a millstone round its neck. We ask you to remember that your board serve you without hope of gain, and almost certain loss, through an absolute love for our sport, and they should not be made a target for abuses over which they have no control.

Bunnell. — "I am in favor of cash."

Prial. — "I believe what Mr. Luscumb believes."

in that twenty-seven every maker of prominence is included. The one ex-

"It is impossible to go into all the details here, but publicity has been given the matter in other channels and, we hope, read and digested by you. The proof necessary to convict the men concerned could not be had. In every case an affidavit was filed with the board from the men. We have no resource but to believe that the sanctity of an oath is superior to mere hearsay, and so the proceedings, after most numerous correspondence, has been dropped.

"The responsibility for this state of affairs is yours, and yours alone, and with the international races before you, and a season second to none, it is no light responsibility to assume. If the rules as proposed are rejected, we trust that circumstantial evidence will be made sufficient to convict.

"We have done the best we know how with a hard subject, and lay our burden down here, thankful that withal, the season under our management has not been devoid of its redeeming features, and that a brilliant future for the present year is before you. We have a warm hand-clasp for all who care to greet us, and thanks for all who have in any way assisted us. We forget all that has been unpleasant and remember only the pleasant features of our service for the league for the year 1892."

The report was accepted and a vote of thanks tendered Mr. Raymond for his excellent service. This concluded the reading of the reports. The election resulted in the re-election by a unanimous vote, of the old officers. The meeting then adjourned until 9 o'clock Tuesday morning.

WATTS' AMENDMENT LOST.

Nothing to Prohibit the Negro From Joining the League—Class B. Amendment Withdrawn—New Racing Rules.

At 9:20 Tuesday morning the meeting was called to order by Vice-President Sheridan, a large majority of the members being seated. The liveliest interest was manifested in the proceedings.

The event of the morning was the discussion of Mr. Watt's amendment to bar colored men from membership, and it resulted in the most interesting debate in the history of the national assembly. Mr. Watts first took the floor, and it was ably supported by members of the southern division.

Mr. Watts' speech was bris and to the point. He pointed out that the possible admission of colored men had a depressing effect on the membership of southern divisions, and said that if the word "white" were inserted, a large number of men now awaiting the decision of the assembly would come in. Later, after the secretary had stated that there were but six or seven colored men in the league, Mr. Watts said, "Strike out your six or seven colored men and we'll give you 5,000 white members."

ARGUMENTS FOR AND AGAINST. Mr. Sheridan took the floor and op-

Watts. — A gentleman from Kentucky, sir.

posed the amendment. While he would not say he actually desired the admission of negroes, the league could not afford to oppose itself to the principles adopted by the United States.

Then came Mr. Luscomb, who presented a suppositious case: "I meet a friend who sees my league button and says, 'Ah, what is that?' 'That,' I say, 'is my L. A. W. button.' 'Oh, yes,' says my friend, 'my colored coachman wears the same button.' Mr. Luscomb then proceeded to place himself on record as opposed to the colored man.

Messrs. Atwater, Dr. Gray, Dr. Holmes and Davis (Mo.) followed in the order named, all against the negro. Mr. Willison, of Maryland, spoke strongly in the same strain, and Mr. McBride declared that in no organization under the sun had an attempt to induce colored men to affiliate resulted in anything but trouble. "Nor, in my opinion," said he, "will such attempts ever do so."

ELLIOTT WAS HUMOROUS.

Sterling Elliott delivered a five-minutes oration which was brimful of humor and common sense. He was strongly in favor of the colored brother on the ground that the best way to educate an ignorant man is to encourage him by

showing him that he may, in due course, attain the positions held by his superiors. To exemplify his meaning, Mr. Elliott said: "I once had a neighbor whom I didn't like; he was a mean cuss. We had had a contro-

versy and couldn't agree.

Every time we met I felt as if I wanted to fight him and no doubt he felt the same toward me. Did I try to drive him away? No. I went to the editor of a paper, gave him a dollar and told him to send my neighbor the paper. Then I commenced writing articles for the paper. I didn't mention anyone's name, but I touched constantly on the point of disagreement. In four months my neighbor came over and asked me to come in, and apologized for disagreeing with me."

Mr. Elliott believes in the education of the negro by means of league literature and the other advantages accorded league members.

SPEECH OF THE DAY.

Mr. Potter favored the negro, as did Mr. Pontius of Indiana.

The speech of the day was made by ex-President Kirkpatrick. He said he was reluctantly compelled, by order of his division, to vote against the negro, but personally he was very thoroughly opposed to the amendment. Mr. Kirkpatrick spoke from a patriotic standpoint, and said, "If we are to go down, by all means let us go down with our colors flying and loyal to the principles of our nation." It was declared by other speakers to be the finest effort ever known in league history.

WANTED LOCAL OPTION.

During the discussion Mr. Perkins of Massachusetts, Mr. Latham of Connecticut and others, endeavored to have the constitution so amended as to make it necessary for an applicant for membership to secure the endorsement of two members in his own state, the object, of course, being to dodge the issue and give the states local option. This did not meet with favor at the hands of the south-

ern delegate and was voted down. After the discussion had lasted nearly three hours, a motion was made and carried that the debate close at 1 o'clock, and that Mr. Watts be given the privilege of closing.

This he did, touching briefly on the arguments of his opponents, but scoring no new points of interest.

The proxy vote was called for and the secretary proceeded with the roll call. The Ohio delegates, for some reason known only to themselves, asked for the privilege of voting last. The result was as follows: In favor of Mr. Watts' amendment, 108; against, 101. As a two-thirds vote was necessary, the motion was lost. On the announcement of the result, Mr. Watts said: "We heartily thank those gentlemen who have voted with us, and to our opponents we extend the hand of good fellowship," a brief speech which elicited hearty applause.

During the morning session two orth-

Crowther—"We have been lied about."

There also seemed to be an idea that this was another method of shutting out the negro, and the southern men were outspoken in their objection to its passage. Dr. Brown objected, on the ground that chief consuls could not take the time necessary to determine whether or not the applicants were desirable. Mr. Hay withdrew that portion of his amendment relating to local consuls, and a vote was taken on the remaining portion with this result: Yes, 82; no, 95; The amendment was, therefore, lost and the article as finally adopted, was exactly as it stood previously, except that the words "or three reputable citizens" were removed. In other words, the endorsement of two league members is now essential.

At this juncture, Mr. Luscomb arose and asked the passage of a resolution of sympathy with the friends of the late W. H. DeGraff. Mr. Luscomb spoke feelingly of the demise of his old friend, and was followed by Colonel Burdett. The reso-

Sheridan—"The brains of the league are in the National Assembly."

"No prize value of more than \$150 shall be offered or awarded in any cycle race, except in the case of international championships."

POWER OF THE RACING BOARD.

Mr. Raymond also proposed this addition to the by-laws, article 4, clause e:

"The racing board, through its chairman, shall have the right of censorship over the character of prizes offered in cycle races, and may withdraw or with-

hold its sanction to race promoters, provided its decision excluding any prize or prizes is not complied with."

Thayer—"We want two divisions."

Not a moment was wasted over these propositions. The meeting seemed very willing to get through the business in hand with all possible speed, and Mr. Raymond's suggestions were adopted promptly. Thus was what promised to be a troublesome measure disposed of.

BURDETT'S AMENDMENT WITHDRAWN.

All other proposed amendments to the racing rules were withdrawn, as was Colonel Burdett's proposal to devote one-half the initiation fees and dues, instead of "an annual per capita tax of 50 cents," to the uses of the national body.

Section 5, article 5, was amended by the addition of a clause providing that if a division fails to hold an election, a special election shall be called by the secretary of the league, the result to be announced in the *Bulletin* not later than January 15 succeeding.

The president's term of office was reduced from two years to one year.

END OF THE AMENDMENTS.

Article 7, section 1, was amended by striking out the words, "without charge." The clause provided for the mailing of the *Bulletin* to league members, and the words "without charge,"

Carey.

Gilman.

Oliver.

Wells.

Beckwith.

VISIONS OF BY-GONE DAYS.

amendments were considered. President Burdett took the floor in opposition to the proposal to add the words "and to govern racing" to the objects of the league, claiming that the addition would necessitate the government of professionals and road racing. The amendment was lost. A long discussion then took place over a number of amendments looking to a reduction in the size of the national assembly, and in the end the representation of states was fixed at one in 400, instead of 200 as heretofore.

California's amendment, looking to a division of that state, was ably presented by Mr. Thayer, and the state divided into two divisions to be known as Northern California and Southern California.

#### TUESDAY AFTERNOON'S SESSION.

Addresses Will Not be Published—New Racing Rules—Prizes Limited in Value—Help for the Racing Board.

When the meeting was called to order, after lunch, the article came up for adoption. Mr. Hay submitted an amendment providing that applicants for membership must be endorsed by the local consul in his neighborhood, and the chief consul of his state. A number of objections were made, on the ground that it would be impossible to determine where each consul's jurisdiction ended, and that in many districts no local consuls are appointed.

lution, of course, prevailed. Doctor Brown then offered a similar resolution regarding the late Sanford Lawton, whom he characterized as one of the noblest men and best friends the league had ever known. On behalf of the Massachusetts division, in which Mr. Lawton resided, Mr. Perkins ably and feelingly seconded the remarks of Dr. Brown, and the motion prevailed. Mr. Lawton was an old official of the league, and had resided for many years in Springfield, where he was universally beloved. Mr. DeGraff's demise is still fresh in the minds of our readers.

#### THE "BULLETIN" WINS THE FIGHT.

The next matter in order was the proposition to insert the words "and full postal address," in that clause which provides for the publication of names of applicants for membership in the *Bulletin*. It was supported by the Pennsylvania and New York divisions, but rigorously opposed by representatives of two or

were in conflict with the postal laws. Mr. Dean of the Wheelman Company opposed the passage of the original motion, which was intended, wholly and solely, to prevent any possibility of trouble between the *Bulletin* and the postoffice authorities, and in so doing intimated his belief in a very pointed manner that the mover was actuated solely by personal motives.

Fourdrinier.—“Will you abolish your weekly paper?”

He eventually half withdrew this, and professed to accept the amendment as offered, “in good faith.” Had Dean given the matter that careful consideration which it should have received from a man in his position, he would have noticed that the stand taken by him was not only unjust but absolutely ridiculous. The intention of the mover of the resolution was fully covered in the amendment finally adopted.

The consideration of one or two items of minor importance brought the constitutional amendments to a close, and the meeting proceeded to the consideration of the by-laws.

#### ONLY ONE PROXY NOW.

A protest was raised against the consideration of those amendments proposed by persons other than members of the assembly, and was over-ruled by the chair. An appeal was taken and the chair's decision was not sustained. “Hurry” was the watch-word, especially as it seemed probable that the business in hand might be finished at this session.

Heretofore it has been the rule that any member of the assembly may cast three proxies besides his own vote.

“The chair overrules the protest.”

Mr. Perkins moved to amend this and allowed but one proxy to be voted. Reference was made to the “proxy-hunting,” so familiar to some members of the league. Mr. Luscomb supported the amendment, which met with but small opposition, and was eventually carried.

Then ensued the consideration of a number of resolutions.

#### MISCELLANEOUS BUSINESS.

Mr. Luscomb introduced one which virtually continued the international championship committee and gave it full power in the matter of arrangements for the world's fair races. It was carried.

Mr. Gerould came up smiling with a proposal that the meet of '93 be held in Chicago, which was also carried.

Mr. Post moved an appropriation of \$1,500 to defray the expenses of the office of chairman of the racing board. Carried. Mr.

Fourdrinier.—“We are prepared to defend ourselves.”

Raymond explained that this money was needed badly for the hire of a clerk to attend to the routine work of the office. He then submitted a number of applications for reinstatement, of which only one received favorable consideration.

The acceptance of Mr. Saltonstall's offer of a cup to go to that country whose representatives score the greatest number of points in the international championships; invitations from Denver and Asbury Park for the meet of '94 and a vote of thanks to the Pennsylvania division for the courtesies extended during the meeting brought the meeting to a close.

#### SECRETARY BASSETT'S REPORT.

*The League Prosperous—Gained 10,624 Members Last Year.*

Secretary Abbot Bassett read his report, which was as follows: We number to date, February 13, 34,304 members. Last year of even date our membership was 23,680. Our net gain has been 10,624 members. This net gain is larger than the total membership of the league (10,264) when the writer was elected your secretary, six years ago. Of the 24,112 members enrolled during the year ending April 30, 1892, we renewed 17,790 and lost 6,322. We have very much more than made up our loss by enrolling 16,514 new members.

Bassett.—The secretary.

#### THE LEAGUE'S MEMBERSHIP.

The following table shows our mem-

bership by divisions, etc., up to and including list published Feb. 17:

|                            |      |                      |         |
|----------------------------|------|----------------------|---------|
| California .....           | 1059 | W. Virginia .....    | 83      |
| Colorado .....             | 282  | Wisconsin .....      | 597     |

# EXTRAORDINARY LIGHT, YET VERY RIGID OUR 20-POUND RUDGE RACERS.

You Will Know Them By Their RED RIMS.

THE 20-pound Rudge Racers are the lightest safeties being made or sold regularly in America this season. While remarkably light, they have proven sufficiently strong and rigid on the track for riders of ten times their own weight. In trial after trial to beat existing World's Records—of which they have won many—these wheels have shown no signs of weakness in any part

Lightness, Wonderful Stability and  
Wearing Qualities are Characteristics  
of ALL RUDGE CYCLES. . . .

WE ARE SHOWING 11 PATTERNS FOR SEASON OF '93.

RUDGE RACER, - WEIGHT, 20 LBS.

Machines are now being turned out in the Rudge American branch factory in Peoria, under our own supervision, from finished bearings, forgings, etc., imported direct from the parent Rudge factory. Write for Catalogue. Investigate.

—AGENTS WANTED.—

**ROUSE, HAZARD & CO., - 89 G Street, - PEORIA, ILL.**

EXCLUSIVE MANUFACTURERS AND IMPORTERS FOR THE UNITED STATES.

#### HOW THE CASH WAS DIVIDED.

Our total receipts from the memberships last year was \$33,912, and we show a gain of \$15,248.50 to date.

The table below shows the division made of the cash received from membership fees. The column on the left gives the proportion of dues credited to the treasurer, and that on the right shows what sum of money went to each division:

Bassett—"The ladies, God bless them."

| TREASURY.                       | DIVISION. |
|---------------------------------|-----------|
| California.....\$ 523 00        | \$1114 50 |
| Colorado.....135 00             | 822 00    |
| Connecticut.....1370 00         | 2298 50   |

| Total, .. .. .        | 1102                |

#### MISCELLANEOUS INFORMATION.

Of our membership, 20,218 on the Atlantic coast, 4,237 is west of the Mississippi, 9,822 is in the middle states and 27 is foreign.

We have constituted two new divisions, two sub-divisions and nine consultates.

We have gained 97 league clubs. Four states, viz: New York, Maryland, Iowa and Pennsylvania, have adopted the three-fourths rule for these clubs.

The following table will show the num-

ber of new clubs by divisions and the total clubs by divisions:

|                              | NEW. | TOTAL. |
|------------------------------|------|--------|
| California .. .. .           | 5    | 10     |
| Colorado .. .. .             | 4    | 5      |
| Connecticut .. .. .          | 1    | 13     |
| District of Columbia .. .. . | 0    | 1      |
| Illinois .. .. .             | 0    | 14     |
| Indiana .. .. .              | 0    | 1      |

| Washington .. .. .           | 2    | 2      |
| Total .. .. .                | 97   | 233    |

#### Our income to Feb. 1 has been:

|                       |             |
|-----------------------|-------------|
| Applications, .. .. . | \$31,370 50 |
| Renewals, .. .. .     | 17,790 00   |
| Card Cases, .. .. .   | 772 25      |
| Uniform, .. .. .      | 192 14      |
| Veteran Bar, .. .. .  | 76 50       |
| Total, .. .. .        | \$50,301 39 |

Of the total received from membership fees, \$49,160.50, I have credited to divisions \$31,700.50, and to the treasurer \$17,460.

The expenses of the secretary's office have been:

|                                       |            |
|---------------------------------------|------------|
| Salaries (not including secretary's), | \$1,355 00 |
| Rent, .. .. .                         | 361 00     |
| Postage, .. .. .                      | 983 48     |
| Sundries, .. .. .                     | 309 86     |
| Total, .. .. .                        | \$3,008 34 |

#### Prominent People Present.

Among the gentlemen in attendance the following, prominent in league matters, were noticed: Messrs. Mergenthaler, Kirkpatrick, High, Skinkle, Collister and Dunn, of Ohio; Minor, Hay and Wainwright, of Indiana; Watts and Johnson, of Kentucky; Dean, Perkins, Kerrison, Robinson, Drown, Hodges, Fourdrinier and Seward, of Massachusetts; Latham, Post, Marion and Miller, of Connecticut; Boyle, Hare, Brown, Perkenpine, Bunnell, Kane, Weld, Dimon, Collins, MacOwen, Edwards, of Pennsylvania; Sheridan, Webb, Gerould, Palmer, Stimpson, White, Patee and Randall, of Illinois; Schimmell, Bressler and Metzger, of Michigan; Perrigo, of Nebraska; Luscomb, Potter, Cossum and Wood, of New York; Dr. Gray, Sterling, Elliott, George Atwater, Dr. Santee, Pennell, Howard, Simonds, Bidwell, Place, Merrihew, Brewster, Goodman, Peck, Tracey, McBride and Dr. Brown.

#### What Will Canada Do?

Since class B has been knocked out, it is not known what the Canadians will do. The executive committee of the Canadian Wheelmen's Association met at Toronto Saturday and discussed the professional question. The feeling was strongly against the cash prize system and also against makers' amateurs. The feeling was decidedly in favor of ruling out makers' amateurs from purely amateur races, and making a separate class for them. The executive committee will make a recommendation to the annual meeting of the association, which takes place at Toronto next month, and if it is adopted the result will be that nearly all the riders in Canada will be ruled out of pure amateur events.

## THE ILLINOIS CLUB'S ANNUAL.

## A Twenty-five Mile Course Already Laid Out.

The Illinois Cycling Club has appointed as a committee on its proposed annual road race, the following gentlemen: E. J. Porter, chairman, F. J. Fanning, Charles Stephens, Charles P. Smith, Charles Hagaman, N. Trivess and Frank T. Fowler. The committee wants to make this a twenty-five mile race and has thought favorably of the following course: Starting at Halstead street, west on Washington boulevard to Oak Park, thence south on the river road to Riverside and around the church to Oak Park avenue, which runs parallel to the river road about two blocks farther east, north on this road to Washington boulevard and east to the finishing point. In explanation it may be said that Washington boulevard is now opened straight through Garfield Park and by spring the road bed will be completed. This course is the one which the Illinois club will

the prizes awarded to the winners. This is a very good plan, as it gives the rider several opportunities of competing, as it were, in one race, and should an accident happen upon any occasion, there is the satisfaction of knowing that his chance is not thrown away, and that he can again compete for the medal or prize as the case may be. We consider the plan an excellent one, inasmuch as it does away with the regular road-racing scramble. There is no crowd of men rushing through towns and villages together, and one man, though he may be travelling at excessive speed, is less likely to draw the attention of the public, or authorities than would be in the case of a crowd. If road racing in the Liverpool district is to be carried on during the present year, as we have reason to think it is, those clubs which indulge in road racing would do well to follow the excellent example set by the Catford C. C.—*Athletic and Dramatic News*.

\* \* \*

## Remarkably Fast Times.

Tom Eck and his team of crack skaters, John S. Johnson and Olaf Rudd, passed through Chicago Tuesday en route to Minneapolis. Johnson will keep in shape ten days to take up any

friends know of these remarkable performances, Eck said they had hoped to get the records and send them north. Johnson says his mother paid all his expenses, that he can show receipts for nearly every cent paid out, and that, furthermore, he has every prize he ever won, except a wheel, which he gave his brother, who is using it at the present time.

\* \* \*

## Crocker and Rowe Again.

Willis B. Troy was in the city for *Sporting Life* and, incidentally, to talk cash prize league. Chicago men have no place in their heart for the cash prize doctrine. Troy stated that he was mainly employed keeping his mouth shut—his statements heretofore having been so misconstrued. He did state, however, that Crocker, Rowe and others of the old time pros. would ride in the N. C. A., but not Prince. The N. C. A. will promote three twenty-four-hour contests for large cash prizes and will make a specialty of twelve-hour contests throughout the country on outdoor tracks.

\* \* \*

## Rochester's Big Track Scheme.

The Rochester Wheelmen's League proposes to have a twenty-five mile course around the city. The league will first attempt to get every rider in the city to join its ranks, assessing each only fifty cents, which will serve as initiation fee and dues for the first year. At half a dollar a head—and considering

nasium and that about the first of next month he would go to Savannah, Ga., to train for his English races, for which Mr. Sercombe and his protege leave May 18 with the American party. Mr. Sercombe did not claim Sanger could defeat Zimmerman, but that after equal chances in training he was willing to risk his pile on Sanger.

\* \* \*

## Local Race Notes.

John Mason, of the Illinois Cycling Club, says the time is coming when the west side will have the Pullman road race. This will not occur within the province of the present generation, however.

Gus Steele will be a member of the Rudge team this year and leaves for the south the first of March to train with the team which will be under charge of A. L. Atkins and Trainer Eck, who thinks Steele capable of 2:10.

The Lake View Cycling Club has decided to place no racing team in the field this season, but will devote the money to the promotion of road races for club members. So disappointed are some of the club's speedy young flyers that they will adopt the colors of some other organization.

\* \* \*

## General Race Notes.

The clubs in and about New York city will soon organize a road-racing league. The Pawtuxet Valley (R. I.) Wheelmen are considering the advisability of holding a tournament early in the sum-

Proposed Half-Mile Clay Track at Chicago, upon which the International Races will be held.

urge the Associated Cycling Clubs to adopt, should it be found necessary to drop the old Pullman course. The race to be conducted by the Illinois club may be held July 4 this year and about a month later in after years. The meeting of the Illinois division (usually held July 4) in Chicago in August makes the running of the race July 4 possible for 1893.

\* \* \*

## A New Plan for Road Racing.

In order to carry out their programme, and cater for their road riding members, the Catford C. C. have hit upon a very novel plan. No actual race will take place, nor will any competitions be over a distance of less than fifty miles. Each month time competitions will be arranged on a system something similar to sealed handicaps. A route will be selected, and entries received up to a given date, when the handicap will be framed. The competition will start at the beginning of the following month, and extend right up to the end, so that riders may compete at any time during the month that they may think proper, or they may make several attempts over the course, and, at the end of the month, submit proofs of their performances to the committee, when the sealed handicap will be opened, the positions ascertained, and

skating challenges that may be made, and will then rest six weeks before beginning training for the season's bicycle races. Johnson and Eck were not at all pleased with the way they were handled in regard to that southern trip. It was because of incessant rain, Eck said, that no records were broken, but he knew they could have been if the track had been good when the weather was. To substantiate this statement, he told what Johnson, Rhodes and Ballard did in practice, and said he could get any number of affidavits that the times were right.

At Macon, Ballard rode a quarter from a standing start in 31 1-4 sec., and Rhodes a half in 1:02 1-5, standing start. Both of these trials were made when the track was very muddy. Johnson covered the mile at different times in 2:08, 2:08 1-5, and 2:09. All of these rides were simply warming-up trials, Eck said. At Nashville Johnson, paced by a triplet, with Rhodes, Ballard and Farmer up, rode a half inside of one minute. The triplet only was timed, and made the distance in 1:00 1-5, while Johnson beat the triplet out fully seventy-five yards on the sprint. Thus Eck figures it that Johnson's time was considerably under a minute.

When asked why they did not let their

that there are about 5,000 wheelmen in Rochester, no more than half of whom, however, are expected to join—the league will be in a fair financial condition to undertake the building of the circuitous bicycle path. The expenditure will be nominal, inasmuch as the public highways will be used for the most part. There are several miles of cross roads and side paths which are in a demoralized state and in need of the improvement which the league promises. Many citizens who were never astride a wheel have signified their willingness to improve the ground on their premises, through which the path will run.

\* \* \*

## One Bicycle Event.

As a result of the meeting of the world's fair championship committee of the A. A. U., the programme for the athletic tournament to be held at Chicago Sept. 14, 15 and 16, was finally adopted Saturday at New York. It embraces every athletic event, handicap and scratch, including a five-mile bicycle race Sept. 14.

\* \* \*

## Sanger Going South, Too.

Parker H. Sercombe, of the Sercombe-Bolte company, stated while in Chicago that Sanger is now in training in a gym-

mer at the Kent County Park in conjunction with the Naragansett Wheelmen.

The Columbus Cycle Club, of Hartford, will, as usual, hold its annual tournament on July 3 and 4.

As a result of the several indoor tournaments, the Milwaukee Wheelmen have \$1,400 in the treasury.

We should like to know where that \$10,000 championship purse, which the N. C. A. proposes to offer, is coming from.

The St. Catharines Bicycle Club is arranging for a big meet, open to wheelmen from the United States as well as Canada, for May 24.

The Kansas City C. C. has had a meeting to talk over a race meet for Decoration day, and a committee will report upon the matter this Friday evening.

The Peoria bicycle club has definitely decided to give a big meet this year, the first since 1891. This simple announcement is enough—everybody knows how well Peoria can give a meet.

M. A. Holbein will branch out into other twenty-four-hour work this year. He is contemplating walking twenty-four hours, and his friends think him capable of covering a century.

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

## CREATED A SENSATION.

THE REFEREE'S "IDLE BOY" STIRS UP THE AUSTRALIANS.

*Speculation as to His Identity - A Remarkable Four-Day Ride - Tom Busst Getting Well - Australian Race News.*

Your REFEREE of Dec. 2, contained my first letter, and when it reached these shores there was a sensation in wheel circles. A Mr. Schwalbach, who edits the cycling columns of the *Sporting Standard*, and who is also secretary of the Victorian Racing Men's Association, in his paper quoted largely from the letter, premising his remarks with a note that the letter was from the pen of R. M. K. Gollan, who, by the way, is the cycling editor of an opposition paper, the *Sportsman*, and also opposed to Schwalbach, because Gallan helps to run the Melbourne Bicycle Club racing board, which is at loggerheads with the racing association. Seeing that Gollan didn't write the letter at all, you will notice the fun. Poor old Schwalbach was entirely nonplussed by his bold, erroneous statement, and the REFEREE episode was the talk of all the rooms for a week. Gollan spent a morning with a solicitor trying to work up a libel case against the *Sporting Standard* and "Jimmy Mullins, the working chap," Elliott and "L. Hermann, the one-eyed bloke," were also to rank in the case. After a lot of worry the case was allowed to drop and Gollan wrote a strong letter to the paper denying the authorship of the letter.

\*\*\*

As before mentioned there are two bodies here, each trying to rule the roost, the Melbourne Bicycle Club and the Victorian Racing Men's Association. The club is old-established and has a lot of gentlemen riders connected with it; the association has lived through two seasons, and, as a local scribe tersely puts it, is simply a "jockey club." Only racing men are allowed to join, and you can easily imagine what a very nice government would evolve from such a body. Funds were awfully scarce, the printed rules had to be paid for, and the majority of racing men didn't care a darn for anteing-up the five bob a year—some of them hadn't got it—and the M. B. C. laughed up its sleeve at the association. Then Chairman Lennie and Secretary Schwalbach, of the jockey club, said we die or do. They called a meeting last week and passed a resolution boycotting all riders from racing at race meetings run under the association's rules unless they were paid up members. As half race meetings are run under M. B. C. rules and most people hate boycotting, then we anticipate the jockey club will die, and that soon.

We riders who don't happen to belong to the Toff club (M. B. C.) cannot see why Fatty McCulloch—the secretary, Muirhead, the Kerrs, Thorne, Lambton and a mere handful should boss the whole show, but we would like to see a fair club representation and governing council. However, the baby idiots can fight till both sides are *non est* and then we'll step in and do it.

\*\*\*

T. D. Scott, a wiry Victorian rider, has made a record for the journey between Adelaide and Melbourne, a distance of 589 miles in 4 days, 20 hours. The previous record was 6 days, 14 hours. Scott is as plucky as they make them. On one part of the way there is a 90-mile desert, a

lonely hole of a place, abounding with silent salt swamps, sand ridges, and stumpy scrub; hawks, owls, snakes, rabbits and wild dogs are the only occupants of this drear region. Scott reached the commencement of this place late in the afternoon, and rushed into it and spent the night there alone with his tin billy which he boiled when he wanted tea. The moon did not rise till midnight, and when it came it was in the last quarter and gave as much light as a lamp with a damp wick. To finish up he made a plucky ride of 223 miles in 24 hours. Towards the end of his journey he was pretty well asleep on his machine, but Cadby, who paced the last 50 miles, kept him moving all through the night, and from early milkmen and baker's carts they got a feed at daylight, and soon after reached Melbourne.

The ride has surprised a lot of fellows here because it was made on a racing bicycle weighing only 261-2 pounds. The pneumatic tires, no doubt, saved it from collapse. Scott only weighs as much as 184 pounds of potatoes, so no machine would groan under his weight.

\*\*\*

A report has been going the rounds that

took his fee—two yellow bobs—and did me no good. Then I heard of Dr. Rose, I went to him and said, 'Doctor, I want you to tell me what's wrong.' He stripped and sounded me all over and then said, 'Are you a rowing man?' 'No.' 'A foot baller?' 'No; but doctor why do you ask?' 'Because you have strained yourself and are bleeding from the spine, or in other words your life is ebbing away.' Then Busst told him he was the cyclist, and remembered he had strained himself at Adelaide some eighteen months previous, when he was beaten by a few inches by Davis, for the championship of Australia. Most of the fellows here scorn the idea of Busst bleeding from the spine. They say it's his kidneys, affected by all the drugs he has swallowed. Anyhow, he does look a bit faded. The doctor, however, promises to cure him in six months; so some day you may see him race in Chicago and you will see what a wonder he is.

\*\*\*

During the New Year holidays a team of five Victorian road riders met a similar number of South Australian riders in a fifty-mile intercolonial road race at Adelaide, S. A. The Victorians, who

is as good as ever. His wins on Dec. 31 brought him £42. He is wiry in build, and rides like a gust of wind all through.

\*\*\*

Is there any chance of Windle or Zimmerman coming over to the Austral meeting to be run in Melbourne next November? They can depend on a right good welcome and plenty of scope to pick up a few hundred sovereigns at various meetings throughout the town and country. Mind, we have no such word as professional in our dictionary here. All riders are simply cyclists, because, we say, it is not possible to make a living out of cycle racing as a profession.

\*\*\*

James Copland, at one time captain of the Sydney Bicycle Club, and also one of the best known wheelmen in Australia, was found in a house in Sydney in a dying condition. He died soon after, and as poison was found in the room, he is supposed to have committed suicide. He was not in good circumstances.

## Sydney Barton Bowman.

A genial personality, with an energetic and concise way of expressing himself, a very level business head for young man, rather good looking and well developed physically and mentally are the chief characteristics of the up-town New York agent of the Pope Manufacturing Company, and also proprietor of Bowman's Adelphi Hall cycling academy. He is quite young, only just out of his teens, and is a strict vegetarian. "Sid" Bowman, as his intimate friends—and they are many—call him, is a close friend of Zimmerman and H. E. Saltenstall, the donor of the thousand-dollar world's fair competition cup for cyclists, and as a pure amateur of class B he ranks with Saltenstall, as Sid naively declares he was never fast enough to command a salary. Bowman is a member of the Elizabeth Athletic Club's cycling division, New York A. C. and Hudson C. W., and although having just taken unto himself a wife, intends racing this year when business permits, as he declares himself to be in the best condition—from a health standpoint—of his life. Space will not permit us to give a detailed account of his many victories, but it is sufficient to say that he has vanquished from scratch such men as Taxis, Rich, the Murphys, Crist, Van Sicklen and Van Wagoner. This will be his fifth season on the track, and he will doubtless add a few more laurels to our club by leading the van in many a hot finish. Mr. Bowman's record for the mile is 2:14 1-2, flying, and barring the famous Zimmerman, he is without doubt the fastest man in New Jersey. He rode a mile in practice at Springfield last fall in the good time of 2:11, flying start.

## Setting the First Mile Stone.

C. E. Salter, of the Ravenswood Cycling Club, and Ed J. Porter, Illinois Cycling Club, have been appointed a committee to arrange for the laying of the initial mile stone of the Century Road Club. A year and a half ago this stone was donated to the club by the Stover company, of Freeport. It is intended as the forerunner of a complete line to Milwaukee along the Sheridan drive. The committee has obtained permission from the park authorities to lay this stone at the intersection of North avenue and the Lake Shore drive in Lincoln Park. In time, it is hoped, the members of the C. R. C. throughout the United States will adopt the plan of their Chicago brethren, and lay similar stones along the highways.

SYDNEY B. BOWMAN.

Tom Busst was going to die. I suppose you know who Tom Busst is. He is a cycling John L. in Australia. We believed at one time he could, on a wheel, lick creation—Lanky Osmond to boot, and he was going home to try, but the N. C. U. barred the way with their stupid amateur definition. Anyhow, Busst's speed was a street ahead of any other riders out here. A big, powerful, long-limbed fellow, full of animal spirits, a good hearted chap, so high spirited that he would not let his own father boss him even as a boy. An official at a race meeting once tried to prevent him starting in a race, but Tom squared up there and then, and rather than have his clothes spoiled the official preferred to retire. Everyone knew Busst had been ill, but they did not imagine anything serious. Busst stopped me in the park the other day and said, "Well, old man, I'm devilish bad." "You don't look well, Tom," said I. "No, I've been to half the doctors in Melbourne, and only lately found out what's the matter. Dr. Fitz, our leading medico, said I was simply a case of worry. He prescribed some stuff,

have gained a good name as road riders, simply ran rings round the South Australians, beating them by thirty-four points against six points. They well deserved the licking they got, because S. A. riders are noted for their jealousy, and can not smile at defeat, as Englishmen, or rather Australians, should and usually do.

\*\*\*

The fifty-mile road record for the Australian Colonies is 2 hr. 52 1-4 min., made by Keating in Tasmania on Jan. 9.

\*\*\*

There were 6,000 persons on the Adelaide Oval, S. A., to witness the international bicycle races on Dec. 31. A team of nearly twenty Victorians were racing, but they were most unsuccessful in scooping up the gold, only securing £17 among them. The hero of the meeting was Richard Davis. This man is a daisy at racing, and one of the few riders in the world who can make pace all through and finish up with a running sprint. He has won a hundred races or more, including a £200 Austral, and he

### NO RIDING IN THE GROUNDS.

*But Provision for the Care of Wheels Has Been Made.*

The world's fair people have decided that bicycles shall not be ridden in the grounds. According to the *Herald*, President Higinbotham made this statement in regard to the matter: "We have decided against allowing them [wheelmen] to ride through the grounds. That course seemed to be necessary on account of the danger to pedestrians, who might be injured by reckless riders. But we have made arrangements to take care of the wheelmen. A number of check-rooms will be built near the gates, where they can leave their wheels. These check-rooms will be inside the grounds, perhaps under the elevated railroad that runs through the park. The rooms will be fitted up with apartments for dressing, so that men can brush the dust from their clothes and remove other evidence of a ride over the dusty or muddy streets. Rooms will also be provided where women cyclists can arrange their toilets after a ride to the grounds. The charge for using these rooms will be small."

The fair management recognizes the fact that on days of special importance 10,000 wheelmen will be at the grounds. Unless some provision should be made to care for their wheels, these 10,000 people would not go to the park by wheels, but would have to depend upon the trains. Inasmuch as the absence of this number from the trains would relieve the transportation facilities, Major Kasson of the bureau of public comfort has originated the plan of building two courts, which has been approved by Director of Works Burnham. This is what Major Kasson has to say on the subject: "We have decided that the 'wheel' presents a means of transportation that

has been overlooked, but which will have a perceptible influence on the travel between the city and park. It would be folly to expect bicyclists to use their wheels unless something were done for their accommodation. In consequence I have laid before Director of Works Burnham for his approval a plan for providing two courts at Fifty-ninth and Sixtieth streets entrances. These courts will be of sufficient size to accommodate 8,000 wheels. They will be each 200 by 40 feet in dimensions, covered with glass and built on rather unpretentious lines.

"Attendants will be maintained in each court, who will receive the wheels, check them and then place them in racks where they will be kept until the return of the owners. There will be assembly rooms for the riders, both men and women, and in connection all toilet conveniences will be provided. From these assembly rooms entrances will be established to the ticket offices, and special gates will open directly into the park.

"No person without a bicycle will be permitted to enter the wheel courts. They will be maintained sacred to the bicycle enthusiast. And right here let me say that the charge for the service will be very light. We are now in consultation with prominent wheelmen as to what it would be right and proper to charge. It is hoped that many wheelmen all over the state and even from other states will be induced to visit the fair on their wheels. But even in and around Chicago there are said to be 60,000 bicycle men, and of these a large number will be ready to take advantage of these courts. The plan is, of course, subject to alteration by Mr. Burnham, but this is the outline of it, and it will be adopted substantially as I have given it to you."

### THE LATE W. H. DE GRAFF.

*A Man of Sterling Qualities and a Lover of All Sports.*

"W. H. De Graff dead?" was the query which went the rounds last week, and the more intimate associates of the dead secretary-treasurer of the New York division would inquire with incredulity, "Billy De Graff dead?" Yes, William Henry De Graff is dead, and the sudden information given Monday morning of last week of his unexpected taking off Sunday was only too true. The Saturday previous a letter from his place of business informed the eastern representative of the REFEREE that W. H. De Graff could not keep an appointment, as he was confined to his home with sickness, and would not be out for some time. This was news, as the late secretary-treasurer was seen on Broadway only a few days before that, looked passably well, and exhibited that look and bluff manner so well known to his friends. It was last summer that the writer became intimately acquainted with him, and the first introduction was given by Frank Egan, cycling editor of *Sporting Life*. A number sat in the press stand at the Manhattan field last summer, when Frank said, "Hello, there's 'Pop' De Graff."

"Who is 'Pap' De Graff?" was asked. "Don't you know Pop De Graff?" replied Frank. "Don't tell him you don't know him; everybody in these parts is supposed to know Pop De Graff. Why, he is the father of the Harlem Wheelmen, and has stood by the club in fair and foul weather. The club has cost Pop a good deal of time and money. You must meet him" went on Frank, and the introduction took place. A little later we were all on the boat that met Zimmerman, and we got more intimately acquainted. I learned to like

"Pop" De Graff. On several subsequent occasions we met him as the most prominent, useful and popular member of the New York division. He undoubtedly was the most unselfish of all the officers of the division. Not one word of complaint or censure have I ever heard against him.

Mr. De Graff attended a boxing competition at Coney Island some two weeks ago with a party of friends. The night was a most miserable one, the train service poor, and a cold was possibly contracted which led to pneumonia and death. He loved cycling with a love next to that of his family, to which he was a devoted husband and father. He loved all forms of manly athletics, and was a hale fellow well met. His services in behalf of cycling can not be well computed; his purse and time were always ready for its welfare. If he had lived he would have been a millionaire, as his father is president of a wealthy New York bank, and owner of much realty. His age at death was forty-one—the prime of life—still the candle went out. The Harlem Wheelmen have lost their honored head, and cycling an enthusiastic friend. Flowers and trees seemingly die in the winter, but there comes a glorious budding and blooming at springtime, when life once more appears. It is hard to think that such a life as W. H. De Graff's is gone out forever. May we not expect many more springtimes of such an existence as his, and the friend of many is not dead forever, but will be seen again in another life, and possibly many. Nature teaches us this lesson, and it is a hope many fondly cling to, for the sake of those who have gone before.

The Press C. C. of Boston made \$6 out of the fall tournament at Saugus.

Savannah has the honor of having the first cement track in this country, and it remains for the beautiful Georgia city to ascertain what merit there is in that material in connection with cycle racing. The track, which is to be the pivotal point of all bicycle sports and contests in the south, is recognized as the finest in that section of the country. All who have ridden on it speak in the highest terms of its qualities. The idea of a park and track originated with the Savannah Wheelmen almost at its inception, and it was hardly organized before the construction of one was discussed. The project was kept steadily in view, and on many a run to Thunderbolt the availability of certain cities was considered, even though there seemed to be no hope of ever obtaining one of them for that purpose.

#### DECIDED TO BUILD.

In the early fall of last year, the conclusion was finally reached that it would not be advisable for the club alone to attempt such a task, and it was decided to effect an organization of wheelmen and outside business men for this purpose. An option was secured on seven acres of ground, on the line of the electric railroad, which was ultimately closed, the price being \$3,500. A stock company was formed and a charter applied for. Four hundred shares were issued at \$25 each, payable in installments of \$1 per month. The stock was all subscribed in less than two months. On Dec. 5 the charter was granted, and on Feb. 13, so rapidly was the work pushed, the track was declared complete. The grand stands were up several days ago, the grass is now growing and a fine turf forming on what was three months ago a pine forest.

#### HOW THE TRACK IS MADE.

In the track proper the greatest inter-

curves to thirty feet. It is banked on the curves for a 2:10 gait.

#### OTHER FEATURES OF THE PARK.

The other features of the park are in keeping, in general excellence, with the track. The grand stand is admirably arranged, as secure as it is possible to make it, and has a capacity of 2,000. The bleaching boards have a further capacity of 1,500. The cost of the track and improvements was nearly \$10,000. The park is not intended to be devoted solely to bicycle sports; it is intended to be a general athletic ground, the inclosure to be used for base ball, foot ball, and other games. The grounds are well situated, being of easy access from all parts of the city. Here all the local games of the southern base ball league will be played this season, and here, it is expected, the foot ball contests and other sports of the city will mainly take place.

#### THE RIFLE RANGE.

A rifle range is a third important feature. Like the track, the range is pronounced by experts to be the finest of its class in the south. The range is 200 yards, and there is a grand stand and shooting box attached. The wheelmen's association has a team of fine marksmen eager to accept challenges from any quarter.

#### COMFORTABLE DRESSING ROOMS.

Every arrangement possible has been

having been taken to beautify the grounds with flower beds.

The value of the park in building up a healthy interest in legitimate sports cannot be over estimated. Its influence

Savannah Track Association's two days' tournament.

Of course Zimmerman was the magnet that attracted the crowd, who struggled through a foot of snow to reach the

The Track and Grand Stand, from Thunderbolt Road.

will be felt, not only in Savannah and Georgia, but throughout the entire south. Already the news of what Savannah has accomplished has aroused a spirit of emulation in a number of other cities, and the probability is that similar organizations and similar parks will be the result elsewhere. The south has been

the good ship Kansas City, which rode proudly at her moorings at the Savannah line pier. Passenger Agent Davis had made every preparation for the accommodation of the cyclists, and a crowd of fifty or more thronged the steamer's saloon to say *au revoir*, among them being Joseph McDermot, L. C. Boardman, Sydney Bowman, Joe Judge, Billy Perrett, John Palmer, H. Kirkpatrick, Tom Roe, Charlie Price and others. Among those who had secured state-rooms were George S. McDonald, John S. Johnson, Tom Eck, Arthur Zimmerman, S. G. Whittaker, Harry Wheeler, S. H. Persons and the REFEREE's eastern department manager. All but the first three answered the roll-call, and the others, through engagements which prevented, were expected to train it to the tournament.

The Recorder artists, Disber and Painter, made sketches of the party, and as the boat whistled four loud blasts of defiance to the El Rio—the new Morgan line steamer—for a race, we moved out from the dock with three encouraging and hearty cheers from those who would have liked to have been with the party. The elegant new El Rio got five minutes start, but before forty minutes had been recorded the Kansas City (the fastest of the Savannah line) drew abreast of her would-be rival, and the Kansas City's passengers were duly delighted. A salute from the K. C. was courteously answered, and the new "flyer" was soon astern and forgotten.

Captain Fisher was aware of the importance of at least one of the party, and Steward T. L. Gains gave us the best positions in the way of staterooms and places in the diningroom. "The ship is yours," said Steward Gains, "do what you like"—and the majority of the passengers did not consider the five young men who came aboard with wheels the quietest lot they ever saw; all agreed they were extremely lively. Whittaker paying special attention to the old lady passengers, who fairly worshipped him. Zimmy's sapped experiences with the waiter, and Harry Wheeler paid special attention to a fair convent pupil of Albany, who informed us that she was going home to see her papa, and who was taken in charge by the champion as soon as she found out his standing in the wheel game, Wheeler being decidedly "out of it." From that time forth the pretty girl in black had eyes for no other than Arthur Augustus, who is extremely sweet and as winning in a love affair as in a race. The contest for first position between Persons, Wheeler and Zimmy

Bonaventure Road, Savannah.

made for the convenience and comfort of those using the park. Below the grand stand, facing the track, are six well-equipped dressing-rooms, 30x20 feet in size. There are also bicycle racks, etc.,

deficient in proper sporting spirit of recent years, but there is reason to believe from such evidences as the Savannah Wheelmen and their park afford that the renaissance is at hand.

#### HONOR TO WHOM HONOR IS DUE.

The five gentlemen to whom the honor of originating the plan of this park, and to whom the work of pushing the project through to success is due, are C. S. Richmond, S. M. Whitesides, R. H. Polk, W. J. Lindsay, and Henry McAlpin. The officers of the association are C. S. Richmond, president; W. J. Lindsay, vice-president; S. M. Whitesides, secretary; W. P. Ott, treasurer. The board of managers consists of these officers and Henry McAlpin, C. Saussy, and R. H. Polk. All of these have manifested the deepest interest in the park project, and, being men of much energy and ability, the management could not have fallen into better hands.

#### ZIMMERMAN'S SEA TRIP.

The Merry Party Which Went to the Savannah Tournament.

SAVANNAH, Feb. 20.—It was a merry party that gathered at the foot of Spring street, New York, Saturday afternoon to see several who, as had been announced in the daily papers, were going to the

Rifle Range and Portion of Track, from Stand of Rifle Range.

est naturally centers. It is of cement, quarter-mile circuit, and banked one foot in five on the turns. It is thirty feet wide in the middle of the turn onto the home stretch, and fifteen feet wide on the back stretch, widening on the

to accommodate the public. Nothing, in fact, has been left undone that was suggested as likely to add to the value of the park or to its attractiveness to sporting men and the general public. The artistic eye will also be appealed to, steps

# CLEVELAND PNEUMATIC TIRE

Lightest, Most Resilient and Swiftest Tire Yet Constructed.

The Cleveland Tire is the tire we ride.  
It fills our hearts with joy and pride.  
We're never left five miles from town  
On a country road when the sun is down;  
In case of puncture we're scarce delayed,

So quickly can repairs be made;  
But Light and swift and free we spin;  
On the Cleveland Tire we're sure to win.  
Try this tire, and we know you'll say:  
"I'll ride the Cleveland, come what may."

Cleveland Light Roadster,  
Weight, 30 Lbs.

Cleveland Racer.  
Weight, 21 Lbs.

CLEVELAND TIRE USED WITH CLEVELAND RIM.

NEW "I. C." VALVE.

Permanent Repairs in Less Than Five Minutes.

"Compressed air makes the finest spring  
if not ruined in the covering."

Our covering is of THREAD construction, causing the  
internal pressure of the air to act quickly and forcibly on all  
obstructions. COASTS better by far than any other tire.

CATALOGUE ON APPLICATION.

CLEVELAND, OHIO.

GEORGE E. LLOYD & Co., Corner Canal and Jackson Sts., CHICAGO and Cook Co. Agents.

# OVERSTONES'93

GENTLEMEN:—

We have still some territory to let, and require good responsible agents to work it thoroughly.  
WHEELS ARE RIGHT, PRICES ARE RIGHT. What's the matter with writing for  
prices and terms? If not, why not?

Yours respectfully,

For LOYD, READ & CO., (Coventry.)

ARTHUR E. FLAVELL.

P. O. Box 2225,  
NEW YORK CITY.

## AS A SUPPLEMENT

To former advertisement, we desire to state that the increase in  
demand for our Cement has been geometrical. In 1890 we sold 97,000 lbs. In 1892  
more than 250,000 lbs. have left our factory, and has been consumed in the United States.

And Jobbers Generally Throughout the United States.

was a veritable walk-over for Zimmerman.

The sea was not at all angry, and off Cape Hatteras, when we expected rough weather, we found things tranquil, with only a spouting whale to disturb the placid surface. A quartette from the Syracuse University kindly gave three little impromptu concerts, which everybody appreciated, and the quality of singing was in the championship class.

Our passengers numbered about seventy-five, and were a pleasant lot, and the pleasant lot of officers made the three days on board pass nicely. The parting between Whittaker and the old ladies, and Jimmy and the fair one in black (whom we all were given the privilege of calling sister and addressing as Olive), was pathetic to a degree.

We landed at Savannah, and it looks as if our stay in this beautiful city will be one continued round of pleasure. The voyage has had a wonderful influence on the colds of the party. Everything in the nature of a cough has succumbed to the invigorating and healing warm sea breeze, which prevailed the last thirty hours of the trip.

Zimmerman will not ride at the tournament, but he may give an exhibition just to show himself to gratify the crowd. After the races he will proceed to Brunswick, Ga., his training ground, which is 96 miles from Savannah. His quarters will be at Warren Leland's Orglethorp Hotel.

#### RECEPTION BY SAVANNAH CYCLISTS.

When the steamer Kansas City reached her dock at Savannah Monday evening, a crowd of Savannah wheelmen, headed by President C. S. Richmond, W. P. Lindsey, R. A. Polk and S. M. Whitesides, gave the cyclists from New York a rousing three cheers from the dock. "Is Zimmerman aboard?" was shouted to the steamer. When the gang plank was made safe a crowd of fifty trooped aboard, and little speeches of welcome were made in the saloon, and then the party of visitors were seized and bundled into hacks and whirled to the magnificent De Soto hotel, where a large number was assembled. A second and more formal welcome was extended by the mayor's secretary and others. After rooms had been secured a moonlight stroll around the beautiful park and city was indulged in, and "Zim" and party retired with a high opinion of Savannah and her cyclists. The best racers of the south are here, and Wednesday and Thursday will see some good sport.

#### The First Day's Races.

SAVANNAH, Feb. 22.—The first day's races passed off smoothly. A large crowd voted the meet a success. The weather was glorious, but a high wind prevailed. Zimmerman rode an exhibition quarter against Wheeler, beating him out a foot or so, in 34 1-5 sec. The track was pronounced perfect and good times were made. The summaries follow:

One-mile novice—Johnson, Charleston, 1; Geus, Savannah, 2; time, 3:12 1-2.  
One-mile open—Isaac Baird, Charleston, 1; Harry Wheeler, New York, 2; time, 2:46 1-5.  
One-mile, Savannah Wheelmen—Conneral, 1; Williams, 2; time, 2:51 1-4.  
Two-mile, handicap—Johnson, 275 yds., 1; Wheeler, scratch, 2; time, 5:27 1-2.  
Half-mile, open—Baird, 1; Welch, 2; time, 1:45 1-4.  
One-mile, 2:35 class—Johnson, 1; Williams, 2; time, 3:01.  
Quarter-mile, open—Baird, 1; Williams, 2; time, 35 3-4.  
One mile, handicap—Williams, 120 yds., 1; Geus, 110 yds., 2; time, 2:36 1-4.  
Two-mile, 5:50 class—John Baird, 1; Conneral, 2; time, 5:47 3-4.

The Kansas City C. C. will in all probability give a race meet on Decoration day.

## FRESH FOREIGN NEWS.

### FRANK SHORLAND WILL HEREAFTER RIDE A HUMBER SAFETY.

*Wass Suspended for Having Taken Money for Riding a Certain Tire—Proposed Changes in N. C. U. Racing Rules.*

LONDON, Feb. 11.—A sensation has been caused by the announcement that F. W. Shorland, the long distance rider, is leaving the Crypto Cycle Company, the successor of Ellis & Co., with which he has been ever since he left off being a school-boy, to enter the services of Humber & Co., for whom he will henceforth act as traveler. Needless to say, also, he will ride one of the Beeston-Humber machines in his races. It is a curious fact that for some time past various rumors have been circulating in connection with Shorland's name. First it was stated that he was entering the employ of the Whitworth Works Cycle Company; this was contradicted, and then it was reported that he was joining the New Howe ranks. More lately, and somehow this never oozed out, he was negotiating with the Dunlop tire firm and but for some misunderstanding he might now have been in its employ. How his latest move will be taken to have affected his amateur status remains to be seen.

#### BOWDEN ON AMATEURS.

Talking of amateurism reminds me that a good deal of feeling has been created by some disparaging remarks on the N. C. U. made by Frank Bowden, of the Raleigh company, to an interviewer of the *Irish Cyclist*. Mr. Bowden seems to assume that all the prominent riders are in the pay of manufacturers of cycles or tires. Those who sit in the seat of the scornful thrust their tongues into their cheeks and reply that Mr. Bowden, being a cycle manufacturer, really ought to know something about these affairs; and they smile when they read his later announcements that there is no truth in any statements to the effect that Zimmerman will ride any other machine than the Raleigh, and laugh quietly to themselves when they come across obviously inspired paragraphs to the effect that Jimmy has become a shareholder in the Raleigh Cycle Company.

#### NEW SCHEME PROPOSED.

Although defeated in his attempt to bar all members of the trade from acting as delegates and committeemen to the National Cyclists' Union, Dr. E. B. Turner is by no means discouraged from carrying on his crusade against the shamateurism which at present pervades the racing path. His latest panacea is a general licensing scheme, and I have had the opportunity of perusing the draft scheme, which will probably be placed before the council of the N. C. U. next month, with a view to its coming into action on the first of May. Briefly it provides for the dealing with applications for licenses to race as amateurs from all riders who have got beyond their first year's novitiate. A licensing fee of five shillings is to be charged to each rider, and in the case of riders not connected with the trade, the applications will be dealt with by the committees of the various centers. But trade men and those residing outside of England and Wales who wish to race will have to make application to a special committee, from which all people connected with the trade are to be rigorously excluded. Each applicant of the latter class will be required to sign a declaration defining exactly his position and stating that he receives neither pay-

ment nor expenses for racing, no bonus for winning races, and that he is not allowed undue time for training, racing or record-breaking. Licenses will be granted only on the distinct understanding that the statements in this declaration are absolutely true, and that they may be withdrawn at any time by the N. C. U. licensing committee. Those of the centres of the union which have considered it are strongly in favor of the scheme, and it seems almost certain that it will be carried.

The council meeting at which this is likely to be brought forward is to be held in March, when all the officers and committees for the year are to be elected and any proposed alterations of rules have to be brought forward. It is evidently anticipated that the meeting will be a long one, as it has been arranged that it shall begin at 6 o'clock on a Friday evening and then adjourn at 11 o'clock until 2 o'clock next day.

#### A. E. GOOD SUSPENDED.

The latest addition to the ranks of Midland racing men is Ben Tuke, the Irish Champion C. C. man from Dublin, who is now situated at Coventry. There he will have his old comrade, Arthur DuCros, as a training companion. When in Dublin Tuke could in practice always outprint any of the other men in training, but when it came to races he nearly always failed to come off. A. E. Good, of the Catford C. C., who last year showed almost first-class form, has been suspended for alleged "roping" at Cardiff last September. If what I hear of the evidence against him is correct, he is likely to be absent from the path for some time to come.

#### ROE'S '89 FAKE RIDE.

*The Swarthy Chicagoan Tells Why He Rode On Trains.*

Editor REFEREE:—In your issue of Feb. 17, I notice the "Senator" quotes a few remarks of Mr. Sea, of the New York *World*, who, in '89, was business manager of the Chicago *Herald*. As Mr. Sea has seen fit to open old sores and tell his hard-luck story of "How we got him through," and about my wanting to quit five times, will you kindly allow me space enough to tell Mr. Sea (if it has slipped his memory) why I wanted to quit.

In the first place, I sprained my ankle very badly the fourth day out from Frisco, and if I had had real good horse sense, should have quit at once, instead of worrying along sixty-eight days more on one leg.

Second reason for wanting to quit: The *Herald* during the last half of the trip, sent out a sporting editor to—well, I don't know exactly what they sent him for. He gave Munger, Barrett and myself the magnificent sum of \$5 on which to drink ourselves to death.

From Kansas City to Chicago, twenty-two days, I was allowed the enormous sum of \$5, that is outside of the \$5 I borrowed of Robbins at Peoria for a special purpose (see Munger). For the same twenty-two days out, this alleged manager charged Gormully & Jeffery just \$30 per day as my expenses. Was it any wonder I wanted to quit?

As to how they got me through, that is easily explained. Owing to the condition of the roads through Kansas, Missouri and Illinois, and my bad ankle, I was unable to make any headway, or, at least, not enough to satisfy the *Herald* unless I took the train, which I did in each case at the positive orders of the same manager.

I would get my orders to reach a certain town, say seventy miles distant, by night. "We don't care how you get there," the telegram would read. No

man with two good legs could have done it, much less a side-wheeler with one paddle broken. I took trains, but not freight; I went first-class, disguised as an ordinary American citizen, with the aid of Barrett's glasses and Jack Robbins' hat. I traveled during the trip 2,800 miles, 400 of which on trains by order of the "Chicago Herald, S. Guy Sea, manager." The trip was a fake, pure and simple; no one ever heard me say otherwise. It was what I was paid to do, only I did not get the pay. No Simon pure feeling kept me from taking it.

During the trip I propose to make I want everyone to watch me day and night see if they can discover any fake.

TOM ROE.

Atchison, Kas., has a new bicycle club.

Cycling on the ice on the Hudson has become immensely popular of late.

The Century Wheelmen of Philadelphia are greatly enlarging their club house.

The Buffalo Ramblers will hold a souvenir century run over the Dunkirk course June 25.

Ministers' clubs seem to be quite popular nowadays. One has just been formed at Pueblo, Colo.

A number of Harrisburg, Pa., wheelmen contemplate touring to Chicago in May to visit the world's fair.

Paul H. Caldwell is president and H. C. Fenn secretary of a new club just formed at Sioux Falls, S. D.—name not yet selected.

The cycling thief should not be turned away empty. He should be filled, well filled—with shot.—Cincinnati *Commercial Gazette*.

W. G. Rankin & Co., Providence, will give a twenty-five mile road race about April 15, with ten prizes, consisting of bicycles, gold medals, etc.

The members of the Brooklyn Bicycle Club have subscribed \$2,000 toward the building fund for a summer club house at Bath Beach or Bay Ridge.

The Morey Cycling Club, of Denver, was recently organized by the employees of the C. S. Morey Mercantile Company. It is composed of about twenty members.

Charles Carr, of the Century Wheelmen, Philadelphia, has offered a cup to be awarded to the member attending the greatest number of runs during the year.

W. W. Kern, general passenger agent of the Jacksonville Southeastern road, has just issued neat bicycle permits to league members, over all branches of that popular road.

To every member of the East Orange Cyclers who rides over 1,500 miles this season a medal will be given and an extra bar for each thousand miles over that amount.

The Providence Ladies' C. C. has elected officers as follows: President, Miss Ethel Warner; vice-president, Mrs. Q. B. Briggs; secretary-treasurer, Miss Annie L. Rittman; captain, Miss Annie G. Duteemple.

The typewriter backache is rapidly gaining as secure a position among the ills of humanity as the "bicycle stoop." It should be guarded against as far as possible by a high seat and a footstool.—Albany *Express*.

## THE ELLIPTICAL SPROCKET.

*Johnson Does Not Think It as Fast as the Round on the Sprint.*

The champion flying-start miler and skater, John S. Johnson, made his headquarters at the REFEREE'S New York office while in the east, and this paper's representative learned many things about that southern trip, elliptical sprockets, the Independence records and several other things of a more or less interesting nature. Johnson was asked, in the interest of the trade and cyclists generally, his opinion of the elliptical sprocket.

"Well, I would not use it in a race again, and I will tell you why. First of all I would say that I never asked or received one dollar for the records I made with the elliptical sprocket wheel, and I quit using it because I found the round sprocket faster on the sprint. Mind you, for a long, steady pull I believe the elliptical sprocket to be a good thing, in fact faster than the round sprocket, but in finishing a hard sprint give me the round every time. I discovered the difference in favor of the round when Fred Patee put me on a Rudge at Chicago after the last tournament, and I have not lost a race since; and rode and won nine. Why, Rhodes could beat me when I used the elliptical, and when I changed to the round sprocket I could beat Billy easily. I will stick to the round sprocket and would not think of using the elliptical again."

Then Eck corroborated Johnson with this: "We tried the elliptical in every kind of way, up hill, down hill, on level roads and long and short sprints, against the wind, with the wind. Nobody gave it such a thorough and practical test as we did, and I found a verdict as follows: The elliptical is a good thing for road races, up-hill work and record-breaking when pacing is had, but a man on a wheel with an elliptical sprocket can't finish a race and sprint home like he can with a round sprocket. You can bet," said Eck, "we would not have changed unless we were satisfied as to its merits. I was under salary to the firm and we changed Johnson's mount voluntarily, and results proved that our conclusion was right. Johnson has ridden the fastest quarter and half-mile ever ridden since he changed, and if he don't open most people's eyes this season I will be more surprised than New York was this week when we won the skating championship from a supposed invincible."

"Was I satisfied with the southern trip? Well, no; not exactly. The weather spoiled what would have been a bigger sensation than the one from Independence, and I'll bet a thousand dollars that what we did there was all right and no one can prove anything to the contrary. There were several hundred people present when Johnson went for those records. They can't keep the boy down with all their fake crying; we are on top and mean to stay there. No one can prove that I ever had a lap scored more than was made, neither can they prove that I ever faked a record. Talk is cheap, but proof is a difficult thing."

"What wheel will you use this year?" "I don't know yet; three firms have been after us. We will use the Burris-Michelin tire in all our races, as I think it is the best made."

## HITS AND SLAPS.

It has taken a long time to drive "the push" to the grave, but from present indications that element is not only to the grave but well into it. At any rate it is dead, and the next act will be to set the

stone with "Here lies," etc., thereon. The push was not, however, the only objectionable element found in cycling; there is the club liar and the fresh young man. The first named is harmless, inasmuch as he allows from 50 to 75 per cent discount on his stories. The fresh young man, however, gives no discount.

He is, in plain words an unmitigated nuisance—at the club house or on the run or on the street—everywhere, in fact. I happened in one of Chicago's largest and most popular cycling club houses recently. I should have enjoyed myself but for the presence of the fresh young man who met me in the billiard room, slapped me on the shoulder and remarked, "Well, ho'd they 'stack up,' old man?" I might not have thought so much of the incident had it been an old friend instead of a nearly total stranger, and what made it all the worse was the f. y. m. treated all alike, even those who were old enough to be his father. I could not begin to remember the slang phrases he used during the course of a half-hour, but "Cop the dough," "I guess nit," "I like that—not," were a few of them.

The f. y. m. is usually the one to use the club house most, while his dues are the last to be received by the treasurer; he it is who manages to break the furniture, scratch the walls and destroy the files. The f. y. m. should be eliminated.

\* \* \*

The fool has planted his memory with an army of words.—Shakespeare.

Never be grandiloquent when you want to drive home a searching truth. Don't whip with a switch that has the leaves on, if you want to tingle.—Henry Ward Beecher.

There are writers on the cycle press who are afflicted with pedantry—and why? Is it because of a lack of argument their writings must appear well, even at the cost of good English, and with a full complement of foreign words and italics? It may do well enough for space writers, but the average reader does not care to be burdened with big words, which at the best seem to have been dug up for no other purpose than to appear big. But, to quote Matthew's "Words; their Use and Abuse," "Solomon tells us that there is nothing new under the sun; and this itching for pompous forms of expression,—this contempt for plainness and simplicity of style,—is as old as Aristotle."

High-flown language is not necessary; as Southey says, "It is with words as with sunbeams,—the more they are condensed, the deeper do they burn."

\* \* \*

What a change has come over the festive traveling cycle salesman! A year ago one could meet this individual and he had sold the entire output, yet he was still on the road, with no prospects of getting home in a hurry. This year it is different. He does not tell you the sales are double the number of wheels he expects to turn out; he tells you he sold a hundred or fifty or twenty-five machines, and more than likely he expects to stay out some time longer in order to dispose of the output. Last year he told you the trade was grand, but it wasn't; this year he tells you "trade is rotten," but chances are it will be remarkably good. A queer genius, this traveling man, and queer stories he can impart.

HOTSPUR.

## Work Against the Crinoline.

The Toledo Blade is correct in the opinion that lady bicyclists will never willingly adopt the hoopskirt. Nevertheless it behooves the goddesses of the whizzing wheel to be up and doing. Let them organize a league and work against crinolines as their brothers are working for good roads.—Minneapolis Tribune.

## IT HAS COME TO PASS.

*The Oak Park C. C. Broken Up by the Social Feature.*

The Oak Park Cycling Club will soon be a thing of the past, if reports be true. The new social membership has increased to such proportions as to almost totally eclipse the cyclists, and is now, through right of power, about to drop the word cycling and make the club a purely social organization. A prize of \$25 has been offered for a suitable name, and a mail vote of the members is being taken this week. This vote can have but one result. The cycling interests of the club must be dropped. The club numbers 212 members, or more, and only a half-hundred of these are cyclists. This same scheme has been attempted several times, and on former occasions has failed. In December last the social element stole a march and brought in sixty members, thereby increasing its strength.

Years ago the cyclists of Oak Park banded together and formed the Oak Park Cycling Club. The club increased and a house was secured. The building fever struck them, and by hard, persistent, and unselfish work, the present handsome \$18,000 club house was built. The cycling membership would not support such a house, and non-riders were admitted by the score. The cyclists needed them; but the non-riding element grew so rapidly it could not help see its power. There are other cycling clubs now going to destruction in the same way, and the sooner such clubs call a halt the better. Better to live in a modest house and enjoy cycling, than to sink all identity in a palace.

Exit the Oak Park Cycling Club.

## THE BIG FOUR TOUR.

*Recollections of the Enjoyable 600-Mile Ride.*

While overhauling a long-forgotten drawer in my secretary, I came across a small book of coupons marked "Touring department L. A. W.; annual tour, 1886; B. B. Ayers tour-master," and it has recalled to my mind some of the pleasantest memories that I have archived. The idea originated in the fertile brain of the prince of wire-pullers and chief of good fellows, B. B. Ayers, along in '888, and developed into what was known as the Big Four Tour Association, L. A. W. The one in question was the third and last, if I remember right.

The clans were gathered at Buffalo and started on a most eventful and enjoyable jaunt from the parade ground on the morning of Sept. 6, and finished on the evening of Sept. 20 at Harper's Ferry. The officers of the party were B. B. Ayers, George Dakin, G. H. Orr, E. H. Wilcox, W. T. Williams, N. B. Schmidt and Charles W. Adams. There were thirty-four men in the original party, twenty-three of whom finished the whole trip, but nearly every day saw additions made up from local clubs, so that at all times the procession was a long one.

Many points of interest were visited, among others Luray caverns, the National Bridge, the Seven Oaks Battlefield, Old Point Comfort and Harper's Ferry. The party was feted, danced and petted all along the line, and in the main had a splendid time. Some magnificent riders were developed and some lasting friendships formed. It was on this trip that George Dakin met with a well nigh fatal accident on a long and dangerous hill near Ithaca, N. Y. His machine ran away with him and finally threw him, fracturing his skull and causing internal injuries that have left him an invalid for life. This unfortunate occurrence very nearly ended the tour and

left a gloomy effect that took some days to dissolve.

Among the boys were several who possessed fine voices, and a glee club was organized, which at every stopping-place amused the crowd, and many a soft-eyed southern maiden remembers, no doubt, the "Good night, Ladies" warbled under her window by Brother Orr and his five assistants. The farmers were notified through the papers of the coming of this new invasion, and in many places they were strung along the highway for miles, with all their children and women folks waiting to see the strange sight of men who had ridden two wheels 600 miles just for fun. Whenever we passed a wagon filled with these people or a crowd on a street corner, on a signal from the leader every hat (for we all wore immense straw hats) would come off at once, and as one man the question would go forth, "How do you do?" The effect was in most instances very amusing. In one case the grizzled old Virginian who drove the mules answered in the slow, positive manner peculiar to his people: "Purty comfortable, thankee. I reckon you'n's is tolerably petered," which was undoubtedly a fact.

The tour as a means of enjoyment was an unqualified success, and the expense per man was very light. I wonder why some geographical genius doesn't get up another on the same lines in these days of the safety and air tires? It would be very enjoyable and a much larger party could be foregathered. Tours to Europe are common—but our own broad land has many attractions, and the expense and loss of time are items of much importance. Why not try it, somebody. PHOEBUS.

## Catches Bicycle Thieves.

Detective Frank Zies, of this city, is a terror to bicycle thieves, to whom he devotes all his time. Last season he recovered forty stolen wheels and sent "over the road" a number of thieves. Mr. Zies rides a wheel, and finds it handy in many a long chase; and he takes to the sidewalk when necessary. Mr. Zies is a large man, and if reports be true, a very speedy rider. He carries, strung by a strap from his shoulder and under his coat, a Colt's revolver with a barrel twenty inches long. One cycle thief pulled a "gun" once, but quicker than his was the drawing of Zies' "barker," when the thief, as he spied that long barrel and the determined eye behind it, begged for his life. Detective Broderick is associated with the above gentleman in the good work.

## [Jimmy a Capitalist.

The Raleigh company writes to this effect: It may surprise many of the friends of A. A. Zimmerman to know that he is becoming quite a capitalist and is interested in various concerns. Prominent among those that Mr. Zimmerman is interested most largely in is the First National Bank of Perth Amboy, N. J., which has lately been organized with Zimmerman as chairman and a director. Zimmerman is also interested to a large extent in the Raleigh Cycle Company, holding a considerable number of shares of that company's stock.

## Entertained C. C. Members.

The members of the Chicago C. C. were treated to some excellent music Saturday night by Edwin S. Timmons, the flute and saxophone soloist. Interesting card, pool or billiard games seemingly had no charm for "the boys" while Mr. Timmons was playing, and it is safe to say his services will again be demanded by the club.

QUEEN OF SCORCHERS.

A CLEVER ENGLISH WRITER.

C. W. Hartung is Recognized as an Authority on Trade Topics.

Probably no writer on the English press is better known than C. W. Hartung, who is recognized as an authority on trade matters. But he does not confine his attention to the trade, for he takes a whack at cycling in general almost every week. His reports of the Stanley and National show were cleverly written, showing the man to be exceedingly well posted in all that pertains to cycling. Mr. Hartung is under no obli-

gations to any man or maker, and on this account, perhaps, can give a better view of things than many others. He is something of a cycling politician, too, as we frequently see his name mentioned in connection with meetings of the National Cyclists' Union.

## CHICAGO TRADE BRIEFS.

Where Traveling Men Have Been and What They Have Done.

Mr. Smalley, of the Marble Cycle Company, was in Chicago last week.

Otto Merpall has returned to his old position with the Taylor Cycle Company.

Burton F. White has begun a suit against the Derby Cycle Company for \$1,500.

At the Hill Cycle Manufacturing Company's plant, 135 hands are employed.

Harry Park, who is something of a track rider, is now with the Henry Sears Company.

L. A. Buchanan has entered the employ of Thorsen & Cassady, for whom he will travel.

D. B. McIlwain, representing the Manne-man Tube Company of New York, was in Chicago last week.

Barney Whymper, Schoverling, Daly & Gales' energetic traveler, was in Chicago Tuesday and left for Indianapolis.

The Sieg company has arranged to take 1,000 Imperials for Chicago trade for this season. This concern handled 600 of these wheels last year.

E. W. Ballard writes that the first man he met on his arrival in Portland, Ore., where he has gone to assume the management of the Columbia Cycle Company, was A. J. Nicolet, who was waiting to sell him a bill of goods. Nicolet is having a successful trip in the

west, in the interests of the Grand Rapids Cycle Company.

The McIntosh-Huntington Company's prize of \$200 for the best series of half-page advertisements, has been awarded to E. A. Wheatley, of Chicago.

Frank E. Weaver, representing the Eagle Bicycle Company, of Torrington, Conn., is traveling in the west. Mr. Weaver was in Chicago on Monday.

Mr. Momford, of Momford & Ellis, Sioux City, Ia., agents for Warwicks, was in the city last week, accompanied by Mr. Henning, a prominent rider.

The James for '93 was on the market in Chicago three weeks ago. The James Cycle Company reports very excellent business, and is in a position to deliver wheels on receipt of orders.

Hal Greenwood resigned his position with Kingman & Co. of Peoria last week, to go with the Thorsen & Cassady Company, for which he left for a short trip in Michigan on Thursday.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

H. C. Tilleston returned last week from a trip west for the Stokes Manufacturing Company. His stops were at St. Louis, Kansas City, Omaha and Lincoln, and his sale: 437 wheels in all, including medium grades.

The Thorsen & Cassady Company now has five men on the road. Mr. Cassady is visiting the large jobbers, L. A. Buchanan is traveling in Illinois and Indiana, C. D. Cutting in Wisconsin, Hal Greenwood in Michigan and Charles Sterner in Iowa.

A. H. Perrigo, the Omaha dealer, was in Chicago last Friday enroute to Philadelphia. His last season's business amounted to \$30,000, and he made a record, carrying over but one '92 model. His line including the Victor, Columbia, Sterling, Cleveland and Hartford.

J. J. Ross returned from the western part of Illinois last week, where he has been travelling for Ames & Frost. He found the trade only fair. Mr. Ross left at once for the south, where he will make only a few of the important towns, returning for a two weeks' trip in Michigan.

Said a local manufacturer last Friday during the severe storm: "Last year at this time we were all swearing because it wouldn't snow, and now we swear because it does. Last season our stock was hardly under way and this season, at the same time, we are prepared to ship any number of wheels."

M. E. Meader, secretary of the Ariel Cycle Company, passed through Chicago last week en route to Goshen, Ind., after a nine weeks' trip to the Pacific coast. Trade was none too good, yet he made several good sales. He met a number of traveling men returning disappointed, several with no orders at all.

The March-Davis Cycle Company is rapidly recovering from its late fire. The factory, now located at 96 North Clinton street, is in active operation, and within a week a number of machines will be turned out. G. M. Davis, father of W. E. Davis, the president of the company, has taken an active interest in the com-

pany, and is now the treasurer. Mr. Davis, senior, is a wealthy manufacturer and a valuable acquisition to the company.

The Hill people are greatly elated over this news from Denver: "The Fowler is beginning to score, even at this time of the year. Sam Van Buskirk, of Denver, recently rode twenty-one miles on the road in 1 hr. 10 min. on a 30-pound Fowler, geared to 59 1-2 inches. This is about an eighteen miles an hour pace, and the time is exceedingly fast for winter riding."

Æolus safeties will be handled in Chicago and vicinity by the Æolus Cycle Importing Company, Messrs. Spooner and Salter, room 527 Garden City block, Randolph street and Fifth ave. Mr. Peterson was a member of the Spooner-Peterson Company, which retired from business last fall. Mr. Salter is ex-president of the Ravenswood Cycling Club. The Æolus is a well-known and popular wheel, and the new concern should do well.

## HE MAKES SADDLES.

A. L. Garford a Rich Man From a Small Beginning.

It would be difficult to find a man who has become more prosperous in recent years than A. L. Garford, of Elyria, Ohio, who is at the head of the saddle making concern, the Garford Manufacturing Company. Mr. Garford began business in a small way and when safeties were made in less numbers than now. But by turning out desirable

goods, his business increased wonderfully, until now there is no concern in the country which does a bigger business than the one at Elyria. He is enthusiastic over anything pertaining to cycling and, of course, cycle saddles in particular.

## GENERAL TRADE NOTES.

Paragraphs About Trade Men, Wheels and Business.

It is said Tom Roe will ride a Niagara on his trip from New York to San Francisco.

The inner tube of a 28-inch Dunlop racing tire is said to weigh but five ounces.

F. C. Gilbert & Co. will open a cycle store at Main and Elizabeth streets, Rahway, N. J., about March 1.

Rouse, Hazard & Co. have just shipped four wheels to Java. An order for nine was shipped in October last.

Howard A. Smith & Co., Newark, N. J., write that their "Encyclopedia of Cyclers' Wants" is ready for mailing.

A test was recently made at Franklin, Ind., of the Dobbins-McKenney closure tire. The test given it by Mr. Taggart was to take a board six feet long, drive it full of wire nails, some being full two inches long, and file them sharp. These were run over repeatedly, the rider

weighing more than 160 pounds, and no signs of deflating were observed.

Sydney B. Bowman, the well-known racing man, will open the Maltby riding school, under his own management, March 1.

A. W. Gump & Co., Dayton, O., write that it will be several weeks before they can recover from the effects of their recent fire.

The American Firearms Company, recently incorporated at Milwaukee by A. B. Myers, Richard Thomas and James Peley, is to manufacture bicycles.

Cushman & Denison's oiler will save you much trouble and annoyance. It is cheap, cleanly and economical, and can be obtained of any dealer for 25 cents.

A. L. Shader has opened a large and nicely furnished agency on O street, Lincoln, Neb. He will do a retail trade with the Union and Columbia as his leaders.

W. H. Dodds, of 29 Lafayette avenue, Detroit, has secured the James and B. & A. agencies. Andrew Rudolph is manager of the business and is credited with being a good salesman.

Tom Eck has written Prince Wells a very flattering testimonial of his stick grapholine, which was used on the wheels ridden by Johnson, Rhodes and Ballard early in the winter.

Sam T. White is now doing Wisconsin, Minnesota, Iowa and Dakota for the Monarch company. C. C. Mead is working south from New York state to Florida, and Coulson has started toward the Pacific coast.

A representative of a New York cap house predicts that there will be a dozen concerns offering bicycle caps to the trade in a few months. This same salesman stated that he disposed of \$10,000 worth of bicycle caps last year.

Bayliss, Thomas & Co., Coventry, are making extensive shipments of Excelsiors to Howard A. Smith, of Newark, and G. C. Cribbs, Milwaukee. A representative of this journal recently counted a hundred cases ready to ship Feb. 11.

F. H. Henning, formerly with Kirkwood, Miller & Co., of Peoria, has embarked in the cycle business for himself under the firm name of the F. H. Henning Cycle Company. The company is incorporated and will do a retail business.

A recent caller at the REFEREE office said: "Trade in small towns is awful. I met six or seven men at one hotel, all trying to sell wheels. The trouble is they are out too early. Every town of 200 people will be visited by wheel salesmen this year."

E. J. Day, of the R. L. Coleman company, Barclay street, New York, reports business as—well, its some German term and means "way up," in English. E. J. wrestles at night, after a hard day's work for Coleman, with patents and the prospective millions there is in them.

Durant McLean, manager of the American Roulette depot, says that a large consignment of these famous English wheels will arrive in New York in about ten days. Two smart looking wheels, a racer and light roadster, together with others, are the in New York depot, 40 Courtland street.

Superintendent Perkins, of the Liberty company, is the latest to announce a perfect valve, and in truth Perkins' little instrument looks as if it were pretty near the correct thing. The valve is the outcome of much experimenting by the man of Rockaway, and he expects that all will use it before many moons.

Twenty-seven traveling men in bicycle interests have visited Omaha during the winter. Immediately upon arrival they

A GREAT MANY KNOW

THAT

# MONARCH BICYCLES

Are the Best in the World

You will be convinced likewise upon investigation. Write for terms and territory.  
1893 Catalogues sent upon application.

THE MONARCH CYCLE CO.,  
42, 44, 46, 48, 50, 52 N. HALSTED ST., - CHICAGO.

## *INNOCUOUS DESUETUDE.*

There is not a semblance of the above in  
THE STEARNS '93.

MODEL. A.

Every line is one of grace, denoting desirable position, comfort, strength and speed.

All riders take to it at sight.

The favorable comments at Philadelphia speak volumes.

The agency can be secured by responsible agents in unoccupied territory at a living discount.

E. C. STEARNS & CO., :::: Syracuse. N. Y.

hie themselves to the store of A. H. Perrigo, who is an ideal host. Mr. Perrigo cannot take all the agencies but is not averse to telling the traveling man where he is most likely to meet with success.

The Nubian Iron Enamel Company's works, at Hasner avenue and the Bloomington Road, Cragin, were entirely destroyed by fire last Friday afternoon. The loss on the building and stock was \$5,500 and \$12,000, respectively, with \$10,000 insurance. The cycle trade used large quantities of the company's goods.

C. E. VanVleck called on the REFEREE last week and stated that at 310 Broadway, New York, the sales of Telegrams and Raglans would be large. It is reported that the cute Fenton Sly Fox, of the Sercombe-Bolte company, had a clause put in Mr. VanVleck's contract that the latter must not sell, give away, or dispose of any other wheel but Telegrams as a domestic article.

Red Cross Specialties.

Among the Red Cross specialties of A.

U. Betts & Co. of Toledo, is a cementing needle which is cheap and effective. The sharp point renders it unnecessary to mutilate the tire. The needle is about an inch and a half in length, has a screw thread socket at base, milled head, and tapers gracefully to a point. The needle is hollow to within an

eighth of an inch of the point where there are several small holes to allow a flow of cement. A "dog extermiator," shown in the accompanying drawing, is another of their specialties.

Hearsey's Perfection Stand.

In another column will be found an advertisement of H. T. Hearsey's Perfection stand. It seems to be one of the

simplest yet invented, does not strain the wheel, and, being small, does not detract from the appearance of the wheel. It is operated by a lever and is reasonable in price.

Two Concerns Made One.

The Shelby Steel Tube Works and the Shelby Bicycle Manufacturing Company have consolidated, the new concern to be known hereafter as the Shelby Steel Tube Manufacturing Company. The capital stock has been increased to \$400,000. Over 225 men are employed at present, and the plants, which are located a mile apart, will be known as No. 1 and No. 2. At a meeting of the directors of the consolidated enterprise,

D. L. Cockley was elected president and B. F. Williams secretary.

To Guard Against Puncture.

With an object in view of preventing puncturing a tire, or at least lessening the liability of the same, W. A. Warren, of Buffalo, has invented a tire which is shown in the accompanying sketch. The thickened tread (E) is primarily to raise the air tube out of contact with the inner surface of the outer covering, forming spaces (f) between the tube and covering, thus isolating the tube from the outer covering and putting it out of reach of a sharp stone or other sharp object which might puncture the outer cover. The ridge (or thickened tread) can be made a part of the air tube, only reversed, and the same result will be accomplished.

Fine House Decorations.

Hutchison & Phillips, cycle dealers at Sioux City, Ia., have in their employ an artist who has decorated the store. On one wall he has painted in oil a picture of a road race with a score of riders finishing in a great bunch, with a man on a Union P. D. Q. in the lead. In the center of the ceiling he has a large reproduction of the Columbia calendar, and for a border he has a representation of numberless riders mounted on wheels. The firm's leaders are Unions and Columbians.

Who Wonders at It?

The Louisville Post says that the inmates of Jeffries Brothers' cycle emporium are in a bad way. It all occurred last week. Tom was struck dumb, Howard blind, Joe Bona paralyzed and old Uncle Charlie, the colored porter, caught St. Vitus dance. A man walked into the store during the rainy weather, asked the price of a wheel, laid down \$150, took the wheel and went away. For such an occurrence at this time of the year it's a wonderany of them live to tell the tale.

The "Pusher" Among Cycle Salesmen.

I read a great deal against the "pusher" who goes out to sell goods, and from what some say it might be inferred that these were the most dangerous foes the wheel trade can have. It is stated that some of these gentlemen receive as high as \$8,000 and \$10,000 a year, in addition to their expenses and that, because of this tremendous outlay, they feel compelled to enlarge their efforts and to sell goods at any hazard. This, thus runs the argument, results in many retail merchants being overloaded with stock, which they in turn must unload, often doing so at loss, and the outcome is that the trade is demoralized and the business brought into difficulties easily avoided.

I have heard the story for so many years, not applied to the wheel business but to all branches of trade, that I fear it has lost its power to influence me. My observation is that the man who can sell goods to responsible parties is always in demand, and that that demand fixes the salary he receives. It matters not whether he earns \$1,000 or \$10,000 so far as the house employing him is concerned; indeed the larger his sales the less the relative expense of maintaining him on the road, for the low salaried man eats as much, costs as much for railroad fare, and "incidentals" as does his more highly paid competitor. It is the business done that counts, the "something accomplished, something done" that earns the high salary, and this is what the

It has the best chain.  
being fitted with one of our own manufacture which we believe excels all others. Our catalogue describes it.  
Send for one! The McIntosh & Huntington Co. Cleveland, O.

THE BEST OILER

In the world is the "Perfect" Pocket Oiler. Why? Because it does not leak, and is the handsomest and handiest oiler made. With this oiler it is an easy matter to oil your bicycle properly without covering yourself and the machine with grease. Price 25 cents.

HALF CUSHMAN & DENISON,  
SIZE. 172 Ninth Ave., N. Y.

HOLDERS.

To carry above oiler on a bicycle—No rattling—Easily attached to any wheel. Price 25 cents each. Handsomely nickel plated. Large size holder to carry a pneumatic pump at same figure (25 cents).

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. . . During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

# SINGER CYCLES.

**Specifications:** 28-in. wheels speeded to 56-in., Singer ball steering, Singer ball bearings to all running parts, including pedals, patent roller (anti-friction) chain, Singer patent steering lock, weldless steel tube frame, handle-bar and forks. Enameled, and with parts plated.

Price, with pneumatic tires, less guards and brake parts as illustrated, - - - - - \$135.00

AVERAGE WEIGHT, as illustrated, less saddle and pedal, 33 lbs.

We fit our safeties with the Dunlop, Acme or Morgan & Wright pneumatic tire, as preferred. Each of these tires is fully guaranteed.

Reliable Agents wanted in the West, including Chicago. Send for our Catalogue.

## SINGER & CO.,

6 AND 8 BERKELEY STREET,  
AND 2 WARREN AVE.,  
BOSTON, MASS.

"pusher" registers each and every day he is out, and is why he receives the large salary. And for my life I cannot see why it is a harmful thing for the sales to be made by one man, instead of three or four, as is the case when the "pusher" is tabooed.—The Idler, in *Toledo Journal*.

#### Ives & Coleman's Valve.

The I.-C. valve, which is illustrated herewith, is the joint invention of J. F. Ives and F. B. Coleman, and inasmuch as it is used by the New York Belting and Packing Company and the Lozier company, there should be merit in it. The moulded rubber (B) is fitted or sprung into the thread shank (A) and is screwed into the metal stem as shown in C, D and E. The peculiar shape of the valve rubber (B) on the cone-shaped shank (A) admits air around its side at each stroke of the pump, as shown in E, and closes automatically, as shown in B. For deflating the tire a pin is provided on the end of the cap as shown in F, which elongates the rubber and allows the air to escape around its side, as in E. A felt rubber on the shank (A) is provided to absorb any oil from the pump. The standard size of 3-8-inch, No. 27 gas pipe thread, has been adopted for convenience.

#### Some Big Sales.

A writer in the *American Implement Herald*, of Indianapolis, has this to say, among other not over favorable things, regarding Kirkwood, Miller & Co.'s failure:

In 1892 matters looked more favorable. At the beginning of the season their crack bicycle salesman was reported to be selling 100 to 200 bicycles a day, mostly high grade pneumatics; with the implement and vehicle departments in equally good condition.

Little wonder is it that the firm could obtain almost unlimited credit if it could make people believe such stuff. Of course nobody in the bicycle business ever heard of such wonderful doings, else there would immediately have been a suspicion that every thing was not right.

#### For the Repair Shop.

A. B. Hoyt & Co., 21 Park Row, New York, have introduced a valuable adjunct to the repair shop, a machine that will not only roll rims out of the rough metal, but will convert solid or hollow rims to those for cushions and pneumatics, and without removing a spoke. The machine also straightens bent or crooked rims, and will, it is said, do work in twenty minutes what it now takes repairers a day to do. A boy can operate the machine. It stands three feet high, and is illustrated in an advertisement elsewhere. Alsord, the Newark agent, writes that he would not take \$500 for his machine if he thought he could not get another. The price is \$50.

#### Projectile Tubing.

Anglo American company, which will handle the entire output of the Projectile Tubing Company, at least the bicycle part of it, is enthusiastic on the tests that have recently been made by experts. It is well known that the English and American war departments use projectile tubing made by the Projectile Tubing Company. The projectile tubing is cold drawn, and will be guaranteed in every particular.

#### New Tubing is Made.

A new method of making weldless cold-drawn steel tubes, suitable for bicycle making and other machine work where strength, lightness, and accuracy are required, has been invented by Messrs. Taylor & Challen, Birmingham, says the *Practical Engineer*, and is now

being carried out by the Metallic Tube and Flask Company, Birmingham. The steel from which the new tubes are made is of special quality, and is received from the steelworks in the form of sheets. Circular flat discs are then cut out of the sheets; these discs are pressed into the form of shallow cups, which are then pressed successively through dies of decreasing diameter, thus reducing the diameter and increasing the length of the cups until the flat discs of steel have assumed the form of tubes of the required length.

#### The Schulenburg Line.

The Schulenburg Cycle Company of Detroit, which has just been incorporated, is to go into business on a large scale. It will handle the following lines: New Howe, for Michigan and Ohio; Triumph, Michigan, Ohio and Indiana; Derby and Relay, Michigan. Traveling men are already out. The store at 188 Jefferson avenue, in the heart of the city, has been secured, and will be opened in March.

#### Publications Received.

The REFEREE acknowledges the receipt of the following publications: George R. Bidwell Cycle Company, New York, pamphlet—"Air: Its Hard and Soft Side." Louis Jordan, 71 Randolph street, Chicago, catalogue—Shows the Jordan Special light road-

ster, 25 pounds, \$150; Jordan Special roadster, 32 pounds, \$140, also the Sercombe-Bolte and a cheaper line.

Howard A. Smith & Co., Newark, N. J., pamphlet—"Encyclopedia of Cyclers' Wants." Gives illustrations and prices of almost every known sundry; also shows the Excelsior in four styles.

Eagle Bicycle Manufacturing Co., Torrington, Conn., catalogue—Shows the Eagle-Altair, No. 1, 30 pounds, \$150; No. 2, 33 pounds, \$150; No. 3, racer, 21 pounds, \$165.

Nottingham Machinists' Company, Ilkeston, Eng., catalogue—Shows rims, hubs, heads, pedals, cranks, frames, etc.

Stover Bicycle Manufacturing Company, Freeport, Ill., catalogue—Shows Thoroughbred Phoenix A, 33 pounds, \$150; B, 34 pounds, \$140; C, \$150; D, \$140; ladies' Y, \$150; Z, \$140; ladies' Paragon, \$135. As usual the brownies were there.

Lloyd, Read & Co., Coventry, Eng., catalogue—Shows Overstone special light roadster, 34 pounds all on; semi-racer, 25 pounds; racer, 20 pounds; ladies', Popular, front driver, girls' safety and the Overstone saddle.

Coventry Cycle Manufacturing Company, Coventry, Eng., catalogue—Shows seven seven styles of Severe cycles, including a neat racer and a front driver.

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. F. Aughinbaugh, patent attorney, Washington, D. C.:

491,563, automatic inflating device for rubber tires; Robert M. Keating, Springfield, Mass.; filed Dec. 5, 1891.

491,578, tilting seat for bicycles; William R. Mercer, Terre Haute, Ind.; filed July 8, 1892.

491,620, pneumatic tire; Willard A. Warren,

Buffalo, N. Y.; filed Oct. 24, 1892.

491,739, cyclometer; Elwin J. Merry, Magog, Canada; filed July 16, 1892.

491,845, trousers protector; Richard T. Mathe-

son, Brooklyn, N. Y.; filed March 17, 1892.

491,937, wheel hub; James S. Copeland, Hartford, Conn., assignor to the Pope Manufacturing Company, Boston, Mass.; filed Nov. 21, 1892.

491,938, ball bearing; Sterling Elliott, Newton, assignor to the Hickory Wheel Company, Watertown, Mass.; filed June 15, 1892.

#### He Was Only Joking.

A prominent manufacturer said last week: "I can very readily see that to be in the bicycle business today I must lie, and lie big. Yes, I have sold my output and am about to greatly enlarge my factory. I will have to start on my '94 line in August to supply orders next spring if business keeps on"—and then he laughed.

#### Bicycle Agents Whipped.

Charles J. Conolly and Robert Thomson are shrewd business men in Rochester, but the cunning of a Penfield farmer got the best of them a few days ago. The rural individual, Frank Mindnich, entered Conolly's place and picked out a \$105 machine, deposited \$10, and gave his note for the balance. The same day he bought a Victor from Mr. Thomson, tendering his note in payment. In both instances Mindnich represented to the agents that he had fifty acres of land in

pressed, the arm (D) is set in motion and consequently the pump (C). It might be supposed that the air pressure would increase with each turn of the wheel, but not so. As the tire becomes harder the pump works the less, so that the pressure is kept at an even gauge.

#### RECENT ENGLISH INVENTIONS.

##### New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Jan. 3, 1892, give notice in the prescribed form of such opposition.]

##### AN IRISH PNEUMATIC TIRE.

No. 740. A. Nicholson's "Improvements in pneumatic tires for cycles and the like." Jan. 14, 1892.—The object of this invention is to fix pneumatic tires to their rims, that they may be readily detached without the aid of special appliances. The rim (a) is formed with two tubes (b, b1) extending round the rim, one on either side, and provided with narrow slits (c) opening into the tubes and extending round the rim. The canvas cover (d) to which is attached the rubber tread (e) is then laid in the groove of the rim, and afterwards one edge, which is formed as a seam or fold, is inserted through the slit (c) in the tube (b), and is expanded by means of a cane or other suitable core (f) so as to prevent it being again

drawn through the slit (c). The air tube (g) is then placed in position and connected to the inflating valve, and the other edge of the canvas cover (d) is then passed through the slit into the groove (b1) and expanded as above described. The air tube (g) is then inflated, and draws the edges of the canvas cover firmly against the internal surfaces (b, b1) and thus secures them in position. A suitable arrangement for inserting the cores (f) is shown at p. A portion of the rubber tread (e) is pushed up or back from the cover (d), and at this point a portion of the fold of the cover is removed. The rim (a) is provided with a notch and with a slot for securing a tongue (m) on the tread (e) when the edge has been expanded. Preferably the core (f) is inserted in two parts passing, in either direction from the point (p) until they meet at the diametrically opposite point. The opening is then covered by the flaps (o and p), which are secured by passing the hook (m) through the slot.

##### GROSE'S CHAIN COVER.

No. 3,162. J. G. Grose's "New adjustable chain and chain wheel cover and lubricator for cycles." Feb. 18, 1892.—In carrying out this invention a light frame of metal is made the proper size and shape, and over it is formed a leather cover with the opening at the bottom, the opening being closed and the leather or similar material being secured to the frame by lacing. To the top of the frame is attached a lubricator (a) through which flows a supply of oil for keeping the chain and chain wheels constantly lubricated. To effect this object more readily, a small wick is passed through the lubricator, so that its end

touches the chain; the wick also prevents the oil from running too freely. The covered frame is fitted over the chain and the chain wheels, and is secured to the machine by means of cross bars (b, b1) the ends of which are secured in the top and bottom of the frame (c), and are clipped to the framework (d), thus securely keeping the cover in position. The back end of the frame (c) is bolted to the rest, so that the back wheel of a bicycle may be taken out without removing the whole of the frame. The bolt holes in the back end are slotted so as to enable the framework to be elongated if required. Holes are cut in the cover to receive the crank axle and back wheel axle, and from these holes slits are cut to the bottom of the cover to enable the same to be drawn down tight. The illustration represents the safety bicycle.

##### OWNER'S TANGENT WHEEL.

No. 3,617. A. Sharp's "Wheels and pulleys, including cycle wheels." Feb. 24, 1892.—This invention relates to the building of wheels generally, but in cycle wheels the spokes are made in

THE I.-C. VALVE.

Penfield, valued at \$165 an acre. He went so far as to give a written guarantee of his possessions. The dealers felt themselves amply secured. Three days afterward a bank official notified the agents of the worthlessness of the notes. The wheels were replenished and Mindnich will be prosecuted for obtaining goods under false pretenses.

#### An Automatic Pump.

To describe the invention of R. M. Keating, of Springfield, Mass., in detail would require a page of the REFEREE, but in short it is an automatic pump. In

the accompanying cut C is the pump, with valve, piston, etc; D is the lever, and B is a piston which operates this lever. When the tire becomes soft and the weight of rider and where compresses the same it operates the lever (D), being connected by bar (A) with the tire. Thus it will be seen that with each turn of the wheel, the tire being com-

# **SUPERIORITY SOLID HIPMENTS** **C** **COUPLED WITH COMFORT** **S** **ATISFACTION** **SADDLES** **WIFTLY MADE.** **BRETZ & CURTIS MFG. CO., - PHILADELPHIA, PA.** Not the Largest but the Best Makers of Bicycle Saddles.

pairs, one piece of wire forming a pair of spokes. The middle of the wire is bent round the hub at b, and its ends are fastened to the rim by nipples in the usual manner. The surface (b, b) of the hub round which the spokes are wound may be smooth, in which case there will be a small flange at the inner ends of the surfaces (b, b) to keep the spokes in place. The spokes are preferably wound round the hub so that half the spokes will leave the hub near the inner edge of the surface (b), and the other half will leave the hub near the outer edge of the surface (b). If the arc of contact between each length of wire and the hub be sufficiently great, the frictional grip of the wires will be sufficient to keep them in place without the hub slipping. To increase the grip and therefore decrease the necessary arc of contact, grooves (d, d) may be made on the surfaces (b, b). These grooves will form right-hand screws at one end (e) of the hub, and left-handed screws at the other end (f). The wheels are so arranged that the driving strain has a tendency to tighten the spokes. When the required tension is on the spokes, the parts of the wires in contact with the hub may be brazed or soldered thereto.

## Cheap Rates to the Inauguration.

For the inauguration of Cleveland and Stevenson at Washington on March 4, excursion tickets, reading via Baltimore and Ohio Railroad, "The Picturesque Route," will be placed on sale at the ticket offices of principal railroads of the west, as well as the ticket offices of the Baltimore and Ohio Company. The fare from Chicago will be \$17.50 for the round trip. These tickets will be sold from Feb. 23 to March 3 inclusive, and will be valid for return journey until March 8, inclusive.

The Baltimore and Ohio is the shortest route to Washington from nearly all points west. Its trains are vestibuled from end to end, and carry Pullman sleeping cars.

No railroad in America is better equipped than the B. & O. to transport with dispatch, safety and comfort the large crowd which will visit Washington to witness the inauguration ceremonies. Its long experience in transporting crowds to former inaugurations, G. A. R. Encampments, Knights Templar Conclaves, and similar gatherings on an extensive scale, will prove most valuable in arranging for the coming inauguration.

For more detailed information as to rates, time of trains, etc., apply to L. S. Allen, Asst. Gen'l Passenger Agent, the Rookery, Chicago, or O. P. McCarthy, Asst. Gen'l Passenger Agent, Cincinnati, O.

-16-2-

## A Woman's Plea.

She is only a woman, but she is doing more real work for cycling than the whole of the Associated Cycling Clubs of New York. Mrs. M. L. Peck is the embodiment of energy, and as a worker for the good of cyclists is unsurpassed. She undertook to form a woman's division in the Columbian parade, and succeeded admirably; she next essayed to form a club comprising both sexes, and, judging from the crowded condition of the club rooms, Excelsior seemed to be a title very becoming to what is now a very healthy young club. Mrs. Peck's latest effort is to impress New York that as taxpayers cyclists should share the benefits of the results of public expenditures on the roads. The following letter, to which the New York World gave prominence (but ran that cute little ad., "When she was a baby we gave her Castoria" right under it), explains itself:

While you are bringing to the notice of the speedways advocated by Mayor Gilroy and Commissioner Heintz, I wish you would call the attention of the powers that be to the fact that there is a large number of men and women who are riders of the bicycle, possibly ten of these where there is one who is the owner of a fast horse. Therefore anything that should be done to open and construct speedways ought to include the interests of cyclists. I, as president of the Excelsior Cycle

Club of this city, with all the other cyclists, desire that provisions for the wheels be made along the side of said speedways. We are taxpayers as well as are the owners of fast horses, and we know that the wheel is a means of healthful exercise and recreation for men and women. As you are always willing to champion the cause of the people, and have done noble work in advancing the cause of good roads, and know that the riders of the silent steed have done and are doing as much for the advancement of good roads as perhaps any other class of people, I hope you will give us the benefit of your influence in securing us a place in any new driveway which may be established.

Mrs. M. L. Peck,  
President of the Excelsior Cycle Club.

## Trick-Rider Barber on Rules.

W. H. Barber writes the REFEREE as follows as to the rules which should govern in a trick-riding contest: "If the four riders whom you mentioned could

be brought together, and could agree upon rules, it would be most satisfactory. The proper thing would be for all to have wheels made exactly alike, allowing, of course, a difference in size, according to the rider's reach. The contest should take place three months after date. It does not matter to me what style wheel be selected. I think you will agree that it would be a very fair way of solving the problem, and determine who has the best control over the bicycle, as you know and everybody else knows, there is nothing in this riding of all shaped wheels, such as a Star and half wheel; and should they be allowed in a competition it would not be a case of who is best or who's who. Mr. Whitaker has been boasting of his victory over a cripple in Philadelphia. I would be pleased to arrange a race with him, either on home trainer or on the track, this summer, for any sum up to \$500."

## And Cahill Collapsed.

Our friend Cahill, of the Buffalo Wheel Company, had a rather amusing experience while in New York. With a view of showing his ladies' wheel to the greatest advantage, he thought it would be a good idea to have a photograph taken of the wheel with a pretty lady upon it. To this Tom Roe expressed approval, and furthermore undertook to get the consent of a very pretty young lady to fill the bill. At the time appointed Cahill was introduced to Miss Lottie Mortimer, and having thanked her for her great kindness in consenting to allow herself to be used as an advertisement, proceeded to arrange details, when he was somewhat astonished by the young lady asking, "Well, Mr. Cahill, would you like to have it in short skirts?"

"Wha-a-t?" said Cahill, in surprise. "Oh, I mean," added the young lady, "I mean in my French dancing costume."

Cahill gasped for more atmosphere, reached the door, and learned from the stoical Roe that the young lady in question was the celebrated skirt dancer now the rage of the New York theatrical world. It took some time before Cahill recovered, as he murmured, in his Liffey banks accents, "Well, I wonder what my directors would think if that deal had gone through?"

## A Quarter of Them Wheelmen.

Of the 450 members and guests of the Rochester chamber of commerce who sat down last Thursday evening, and enjoyed the annual banquet of Rochester tradesmen, at least 100 were riders of the bicycle. This announcement is made by the local representative of the REFEREE with a brilliant spark of pride. To know that nearly a quarter of those who participated in the leading social event of the year were wheelmen, something should be refreshing to bicyclists universally.

## Elaborate but Costly.

The Cook County Wheelmen have signed the lease for the three story and basement house at 274 Ashland boulevard. The monthly rental is \$190. This is a large figure, for a cycling club to pay, but is reduced nearly half by the revenue derived from the rental of four bachelor apartments to club members.

## Editor Carter Now.

E. C. Carter, the well-known cross-country runner, and A. A. U. handicapper, has joined the newspaper ranks by assuming the editorial and business management of that first-class club monthly, the *New York Athletic Club Journal*. Mr. Carter is well known and well liked, and both the literary and business department of the paper will no doubt look up to the mark at all times.

## Sacred to the Push.

Tom Roe recently wrote on a marble slab in an eastern hotel these words: "Sacred to the memory of the Chicago push, which died of S. E. A." Some friends laughed on reading it, and asked what S. E. A. meant. After a sort of thoughtful pause, Tom replied, "Swelled expense accounts."

## Club Run for Sunday.

The first run of the season for the Chicago C. C. will be held Sunday, leaving the club house at 9 and riding to Michigan City via Michigan Central railroad tracks.

**BICYCLE BEARINGS OF TOOL**  
Steel. Cones and Bearings made of best tool steel insure smooth running and little wear. We make Bicycle Hubs, Cones, Cups, Ball Bearings, Axles, Nuts, Steps, Nipples. Also, Bicycle Roller Chain with case-hardened roll; Humber-pattern solid link Chain, Coasters, Lamp Brackets and all kinds of machine screws, etc. Send sample or accurate drawings of parts for estimates. We solicit your business and have the best facilities for doing your work. THE NEW BRITAIN HARDWARE MANUFACTURING CO., New Britain, Conn. 9-cow

#### RESULTS OF THE NATIONAL ASSEMBLY.

The puff and bluster of the past year over the *Bulletin's* contract, and the result of last week's meeting in Philadelphia has shown one thing which the average league member will fancy strange. It is that the executive committee is a greater power than the national assembly—that it has the power to make contracts which prevent the league amending its own constitution! Of course, such a thing is ridiculous and absolutely untenable, but that is just what the meeting decided, nevertheless!

The executive committee and its appointees, in caucus assembled, decided, before the meeting opened, which propositions should or should not prevail. In consequence the proposition to have the addresses of applicants published was strongly opposed. The member who offered the amendment explained that, of 1,225 men who had voted on the question, about 1,000 had voted in the affirmative. But that didn't matter. The delegates were not there, apparently, to represent the ideas of the men who sent them—and, in a good many cases, paid their expenses—but to give vent to their own feelings, which they did.

#### Why the Amendment Was Lost.

It was decided that the contract with the Wheelman Company, which says nothing about addresses, could not be broken. The mover of the amendment said he had no intention that it should be, but that he desired to prevent such a contract being renewed. He then asked the chairman whether, in case the amendment prevailed, it would annul the present contract. The chair could not answer, and neither, apparently, could any of the lawyer members. The amendment was voted down, not because the delegates would not have liked the addresses published, but because of the contract. And thus was the sovereign power of the president and his committee established.

Throughout the debate on this question a desperate attempt was made to throw discredit on the cycling press. It was charged with selfishness unadorned in this agitation. Thus it happened that when another amendment relating to the *Bulletin* was reached, the friends of the latter were so afraid of some covert

trick that they refused to accept an amendment proposed wholly and solely for their own benefit. A word as to the "selfishness" of the cycling press.

#### Postal Law Violated.

The Wheelman Company has violated the postal laws from the day its paper became the league organ, by mailing as second-class matter, at pound rates, a paper which was, under the constitution of the league, free to every member.

The postal laws exclude any paper for which no consideration is paid, or even in case its subscription price is nominal. The Wheelman Company has also violated the postal laws by enclosing in its paper a loose supplement, an offence for which another cycling paper was once detained in the postoffice for four days or more!

A complaint from the cycling press containing these charges, the first particularly, would have led to an investigation which would have ended for all time the life of the present *Bulletin*.

If the cycling press is so utterly devoid of consideration for league members, so utterly selfish as the delegates, in their wisdom, seemed to think, why have these abuses been allowed to pass? But to return to the amendment.

#### To Cover Up Defects.

Article 7 provides that the league should distribute an official organ to the members without charge. At the last constitutional convention, Colonel Burdett endeavored to show to a body of men who knew nothing whatever about the matter, how the laws could be turned and twisted so as to allow the *Bulletin* and *Good Roads* to pass through the mails at pound rates. But the colonel was a little befogged himself, and in consequence failed to accomplish much. He put *Good Roads* on a good footing by inserting in the by-laws—in the by-laws, mind—a provision that of the dues collected, twenty-five cents, should be considered the subscription to *Good Roads* and twenty-five cents to the *Bulletin*, forgetting, evidently, the constitutional right of members to receive the *Bulletin* free!

It was to cover this defect that a cycling press man proposed to remove the clause relating to the two publications from the by-laws, and make it a part of the constitution, thus doing away with all possibility of dispute.

#### Mr. Burdett Should Explain.

Colonel Burdett is a lawyer. Mr. Dean is a lawyer. Yet, so bitter were they in their opposition to the cycling press that the colonel declared the proposed amendment would have just the opposite effect to that which the mover professed to desire, while Mr. Dean stated his belief that the proposal cloaked a scheme to injure the *Bulletin*, and was promptly called to order by the chairman (Mr. Sheridan) for his pains. We challenge Colonel Burdett to substantiate his statement. We charge that it was absolutely false, and that the colonel should explain his position. The cycling press has been placed in a false light—charged, almost in so many words, with an attempt to injure the league. It is an injustice to every member of the cycling press of America.

We have no desire to injure the league or to place any obstacle in the way of its *Bulletin*.

We are aware that the Wheelman Company has spent thousands of dollars in perfecting its plant, and that it would be a rank injustice to annul its contract at this time.

#### Wheelman Company Not Forgotten.

We have not forgotten that when, two years ago, the Wheelman Company was entitled to some hundreds of dollars for space used in excess of that named in

the contract, it generously declined to accept the amount.

But we believe that the interests of the membership of the league should be the first consideration, and that, when the present contract expires, it should be beyond the power of the executive committee to bind the league for another five years by a contract similar to that now in force, and which, despite the request of members of the assembly, who surely have the right to hear it, was not read to the meeting.

And so, gentlemen of the league, although you have expressed yourself pretty plainly, your wishes will not be granted this year. It behooves you, therefore, in electing your officers for the next assembly, to select those who will give greater consideration to the desires of their constituents and less to the fads and prejudices of "royalty."

#### Object of the League.

What is the principal object of the league? We presume no doubt exists in any member's mind that the improvement of roads occupies the pride of place. But how far behind it is racing? Not a great way. And yet "racing" is a word unknown among the objects for which the league is supposed to exist. Nor does the assembly think it should appear there.

The one thing on which a man's membership in the league depends hinges on racing—amateurism.

The league has received more advertising and gained more members through racing than from any other two causes combined.

The league is on the verge of promoting the first international championship the world has ever known.

The league has a racing board whose doings excite more attention than those of all other committees of the association combined.

The chairman of that board is also chairman of the international racing association, and his report last week was received with greater enthusiasm than that of any other officer.

And yet, dear reader, racing is unworthy to appear as one of the objects of the league.

#### Racing a Great Factor.

Whatever work the league engages in—that, surely, is one of its objects. A greater number of members are participants in and promoters of racing than any branch of cycling. Unless the promotion or government of racing is included in the objects of the league, what right has it to dabble in it? What are the members? Amateur lawyers? Amateur road reformers? Amateur defenders of wheelmen's rights? No; none of these. They are amateurs as defined for the purpose of racing—a definition which has no place in the constitution unless racing is one of the league's objects.

The president took the floor and argued against the adoption of this resolution, offering as one of his reasons the plea that it would necessitate the government of all classes—a plea without foundation.

We are at a loss to understand this inclination to snub and ignore one of the league's principal objects, especially in view of the enthusiastic reception accorded the chairman of the racing board and the immense interest which is sure to attach to this branch of the sport and pastime during the coming season.

#### Anti-Negro Sentiment Growing.

The southern members of the league showed wonderful pluck on one point. They refused to accept any substitute whatsoever for their pet amendment. It was with them the insertion of the word "white," or nothing. Two methods

were proposed of beating around the bush and providing them with means of keeping negroes out of their divisions, but, by protest and vote, they insisted on standing or falling by the original motion.

They were defeated, as almost every one expected they would be, but it is worthy of note that the anti-negro sentiment has grown wonderfully in the league. At the constitutional convention held in Hartford only eighteen months ago, the meeting positively refused to entertain a motion of this sort. It was tabled without consideration. But at Philadelphia the anti-blacks actually had a majority, 108 voting in favor of and 101 against the motion. It required a two-thirds vote to amend. Under these circumstances it is not unlikely that the question will be raised again, especially in view of the fact that, by the passage of other amendments, the southern divisions are given better representation in the national assembly than they have heretofore enjoyed.

Before leaving the subject it may be pertinent to ask why, when the names of the Ohio division men were called, they asked for the privilege of voting last. They had been instructed to vote against the negro, but it was with great reluctance that they did so, and a strong suspicion prevailed that, had it been necessary to do so in order to defeat the motion, they would have ignored the instructions of their constituents and voted according to their own desires.

#### The New Amateur Rule.

All recommendations relating to the amateur definition were withdrawn. Mr. Raymond became convinced that the two-class movement could not prevail, and wisely yielded, offering, however, some amendments which give the board a greater hold on the racing men, and a chance to convict on circumstantial evidence. All things considered, this seemed to be the best way out of the difficulty, for had the amendments offered been debated, the assembly would have been sitting yet!

#### SACRILEGIOUS ADVERTISING.

L. A. W. 30,006 writes from Hartford to the official organ protesting against sacrilegious advertising. He says, among other things: "A certain firm in a recent issue heads its advertisement with a parody on words of Christ. When manufacturers can only sell their wheels by resorting to the grossest sacrilege, I think they had better close their shops and quit the business. This same tendency extends to other forms of advertising, and if it keeps on we may expect to hear other dealers hawking their wares at the end of a distorted Scriptural quotation." We believe that everyone who has any desire to keep cycling and cycling journalism free from the objectionable features which are found in some other lines, will agree very heartily with the sentiments of this gentleman. On more than one occasion the REFEREE has been favored with advertisements of this nature, some of which have been refused absolutely and others toned down, on our own responsibility, to what we considered reasonable bounds. Hereafter no advertisement of this nature will be allowed to appear in our columns.

#### MODESTY.

Modesty goes a long way toward making a popular and successful racing man. In the long list of prominent riders, past and present, can any one find more popular and successful racing men than Zimmerman, Wandle, Tyler, Taylor and Lumsden? Does the racing man live who is more modest and reserved than any one of those mentioned? We could name other very modest and successful

men—it is not necessary, and we except our foreign friends, inasmuch as we are not acquainted with their characteristics. We hear it said that Johnson is modest, and perhaps he is naturally so, but he is getting out of the habit rapidly. He declined to talk about himself to a Syracuse reporter—but he managed to squeeze in this much:

From the age of fourteen I rode a wheel, and a few years later I won my first event. I attended all the meets in and about my home, and rarely came out second best. The eastern people think I am a green rider, but the fact is I had forty medals and a good track record before I tried for the championship. [?] I rode the mile in the time stated, and can do it again with a few seconds to spare, and I don't brag. One thing is morally certain, I have been misused by the eastern wheelmen. When I get into a race every man in the crowd tries to prevent my winning. You can not understand it, but when a dozen men pocket you it is no easy thing to get out. I have been thrown time and time again, but no attention is paid to it. If Zimmerman or Windle finishes first in a race, the cycling papers make a great howl, and while I often get second place, beating out the best men in the country, no comment is made of it. But this does not bother me, for I am not looking for newspaper notoriety.

Then he said he wouldn't say he could beat Zimmerman, but could "make better time." And again:

I am looking forward to an easy time in the races in the spring. Zimmerman and other fast riders will go to England, so I have decided to remain in America and scoop in the prizes.

These little expressions from the man of 1:56 fame are not only indicative of extreme modesty, but pure amateurism. Fancy, if you can, a "really and truly" pure amateur talking in such a manner, or even having such thoughts in his head. If John S. Johnson used those words, he is no nearer a pure amateur—at heart—than is John S. Prince, who is at least what he pretends to be. We can not recall the name of a single racing man of any note who has talked as much and said as little—except as to himself—as the "Minneapolis wonder." We doubt if Zimmerman, during his stay abroad, spoke as many words in the presence of newspaper men as did Johnson while in Syracuse. There may be a difference in the kinds of modesty—there certainly is between that of Minnesota and the kind found in Jersey.

THE case of George Nesbitt, who was recently sentenced to five years' imprisonment in New York, after confessing to the charge of forgery, calls to mind the fact that few persons in any way connected with cycling have been found guilty of crime. Even further, few have been charged with having committed crime. Cycle thieves are plenty, but not one in a hundred is a cyclist; there are frequent cases of embezzlement, but few in the cycling world. There are very few cases wherein cyclists have been mixed up in any serious difficulties. It is gratifying to know this, and our only hope is that this same condition of affairs may continue and that the general public may be acquainted with the fact.

We have a suggestion to offer the *Bulletin*, inasmuch as Mr. Watts' amendment did not pass. From a name alone one can not distinguish a man's color, and as the addresses are not to be published, it might be a good plan to print the names of white applicants in Roman and those of colored in full face, thus—

34,164. T. Willie Rockingham, ..... Boston  
34,165. Ebenezer Loftus Brown, ... Louisville

This, we think, would do away with any misunderstanding as to the color, and would also give our southern friends unlimited opportunity for kicking.

POOR Johnson! POOR Sanger! Did two men ever have such a hard time of it on the race path as these two? It's doubtful, indeed. Johnson, when he

does not finish first, is always placed in a pocket, a plan prearranged by the other contestants in order to make sure of preventing him from winning. And Sanger, when he does not win, is always fouled, or thrown, or something of the kind, for the same purpose. But Zimmerman, and Windle, and Tyler, and Taylor and Lumsden, and a few others are beaten, fairly and squarely, when they do not cross the tape first. POOR Johnson! POOR Sanger!

#### They Don't Like It.

According to the Louisville *Post*, "the refusal of the assembly to draw the color line has caused not only the local wheelmen but those in all of the southern states considerable indignation. The constitution of Kentucky prohibits negroes from being members of the state association, but the change in the national constitution will necessitate a change in the Kentucky constitution. The Louisville wheelmen, however, will take a determined stand against negroes being members of their division of the

SHE TAKES HIM, YET STURNS HIM.

NOTE:—A two thirds vote is necessary for the adoption of an amendment. Mr. Watts' amendment barring colored men in the league, was lost, the vote being 103 for to 101 against. The League is compelled to take the negro, though a majority are opposed to him.

L. A. W., and should a colored brother attempt to take advantage of the privilege offered him by the national assembly to join the local association, he will undoubtedly have a quietus put on his application. It is not likely, however, that any of the negroes in this city would care to offer for membership in the face of such sentiment." [There has been no change in the league's constitution bearing on the color line. Negroes have always been eligible.—ED.]

#### Another Mile Stone.

The Ravenswood club is the first to respond to the call of the Century Road Club for mile-stones. This club has raised the money for a handsome stone, to be placed at the three-mile point, at the foot of Fullerton avenue in Lincoln Park. The Ravenswoods wished to present a handsome marble shaft, but were informed that all must be alike, 5 1-2 feet long and one foot square, and marked plainly with the mile mark and the Century Road Club emblem.

## THE FACTS ARE GIVEN.

### THE FAILURE OF THE RECENT INVESTIGATION OF THE RACING BOARD.

*Letters Which Place Some Riders in a Queer Position—The Referee's Statements Are Fully Substantiated.*

In a recent issue the REFEREE announced that the investigation by the racing board of charges against men who competed at Milwaukee and elsewhere, had been abandoned, the board being unable to obtain proof that they had accepted expenses, as charged. The REFEREE was primarily responsible for the investigation. Mr. Raymond has since published all his correspondence relating to the matter, and we therefore feel called upon to publish the facts which will be found below:

On December 17 Mr. Raymond wrote

stated, in answer to questions,—most of them under oath—that they were not guilty, but from all of the replies received by Mr. Raymond we shall extract evidence which, combined with the letters we reproduce, will leave no question that the charges were well founded and that the REFEREE was not, as has been charged (we have Mr. Raymond's authority for this), printing this matter for the purpose of "roasting the racing board."

#### THE MILWAUKEE CASES.

Extract from letter from Henry Andrae: "I had heard it said that the railroad fares of Chicago men had been paid by the Milwaukee Wheelmen. \* \* \* The Republican House says that the riders paid their own bills."

Messrs. Schroeder and Lindsley say nothing in their letters concerning the hotel bills. Perhaps, however, the following letter will help to solve the question whether they were paid by Mr. Schroeder, or whether, as stated to Mr. Andrae, they were paid by the men. The original letter is still at the REFEREE office:

#### REPUBLICAN HOUSE,

Charles F. Kletzsch Company, Proprietors.  
MILWAUKEE, WIS. Dec. 4, 1892.—MR. FRED J. SCHROEDER, City.—Dear Sir:—We are in receipt of yours of yesterday with enclosed check for \$102.90, for which kindly accept our thanks. We were apprised yesterday of the fact that one of the Chicago papers published an article which reflected upon the conduct of the Chicago and Milwaukee Wheelmen while stopping with us. We wish to inform you that we have made no complaint and have no reason to make one, and the remarks attributed to us did certainly not emanate from any one connected with this hotel.

We very much regret that such has happened, and trust that it will in no wise affect the good feeling which has always existed between the League of American Wheelmen and ourselves. Yours obediently. C. F. KLETZSCH COMPANY.

There may be some who are still in doubt. Very well then—

Extract from affidavit by H. A. Githens, Chicago:

"I competed at Milwaukee at three different times. \* \* \* On Christmas and New Year's tickets were bought by Milwaukee Wheelmen and sent to me. \* \* \* On Thanksgiving \* \* \* I purchased my own ticket, but when I left I was informed that my hotel bill was paid."

Another.

Extract from letter from H. H. Wylie, Chicago:

"Bill (Nov. 24 and 26) was probably \$15, and was paid by entertainment committee of Milwaukee Wheelmen. Broke the rules at Milwaukee; never before. Willing to stand the consequences," etc.

Mr. Wylie added that he had a — of a time. He had. It was on this occasion that "Inducer" Young laid Wylie out in pugilistic fashion in the hotel, and it was the antics of a few of these members of the "push" which led to the report referred to in the letter printed above.

Still another.

Extract from affidavit by A. L. Leonhardt, Chicago:

Milwaukee, Dec. 26 and Jan. 2, I do not know the amount nor who paid the bill. I was told 'it is paid' when I wanted to pay."

These extracts are surely sufficient to convince any reasonable man on the hotel bill question, and we will pass along to the railroad fares. We desire the reader to note that we offer not one word of hearsay evidence, but that all the matter offered is quoted from letters and affidavits of persons interested.

Let us read together the following letter from the chairman to the inducer:

JOHN SCHROEDER LUMBER COMPANY.

General office, foot of Walnut street.  
MILWAUKEE, Nov. 15, 1892.—MR. W. B. YOUNG, Chicago.—Dear Billy:—In speaking with Githens and also Winship, I think I omitted to say to

We did not say, however, as we might have done, that the Chicago member was well aware of the facts and that proofs of the charges had actually been shown him.

Mr. Raymond then wrote to D. H. Lewis, of Buffalo; L. J. Berger, of Chicago; Rouse, Hazard & Co. and Fred Patee, of Peoria; F. J. Schroeder and A. B. Lindsley, of Milwaukee, all of whom were supposed to know more or less about infractions of league rules. He got no satisfaction whatever. The men who rode at Milwaukee and elsewhere

them that I would furnish them transportation from Chicago to here and return if they will enter and ride at the tournament, and also entertain them free of charge while they are here. Will you kindly see them and mention this. Would do the same with Lumsden and Munger if they would come. Of course I don't expect them to pay any entry fee either. Please do all you possibly can to bring all your best men. Will send you transportation in a few days for yourself, and also will send it to the others as soon as I know positively how many are coming. Yours truly,  
F. J. SCHROEDER.

Extract from letter from R. W. Slusser, Chicago:

"Was approached on one occasion, but negotiations did not proceed to the comital stage. Davis, Young and Keator told me that their expenses were paid to and from Milwaukee and while there."

Extract from letter from L. J. Berger, Chicago:

"My assistant, Sinsabaugh, tells me that Young did offer to pay his fare to Milwaukee but Sinsabaugh did not go. \* \* \* It had been alleged that Wylie had refunded money received by him from Schroeder, so that he would be in a position to "peach" on some others whose expenses had been paid. He mentioned this in conversation with me, and indignantly denied that that was his purpose in refunding the money, so I assumed he had received expense money."

Extract from affidavit by Gus Steele, Chicago:

"Billie Young wanted to give me a ticket, but I would not take it. \* \* \* I could have received expense, but someone told me not to."

More than once reference is made to railroad fares having been refunded. Some of the riders claim to have receipts for hotel bills, and one even sent the receipt to Mr. Raymond, evading a question on this point in this manner. How they became possessed of these receipts is shown by a letter from Mr. Schroeder to the inducer—dated Milwaukee, Jan.

7, if we mistake not—wherein the former tells the inducer how he answered Mr. Raymond's queries, what he said, etc.—for the object, evidently, of posting the inducer on what answers he should make. It was suggested to the inducer that he (the inducer) see the men and tell them that they would be furnished with receipts for railroad fare, etc., and that receipts for board would be obtained from the Republican House for the men who boarded there. The letter closed with this classical expression: "What the h—otel, Bill."

The Milwaukee man appears to have realized that something must be done to head off the investigation. He, therefore, wrote Mr. Raymond an answer as stated above.

#### KEATOR'S TWENTY-FIVE DOLLAR LOAN.

Extract from letter from L. J. Berger, Chicago:

"One day at the rag-shop table, Keator and Spooner were discussing the matter of payment of expenses to Milwaukee. Spooner said something about the \$15 which the REFEREE said Keator borrowed from a Milwaukee man. Keator replied, "It was not \$15 at all; it was \$25."

#### THE EASTERN RIDERS.

*What has Become of the Cases Against the Riders at the Chicago Meeting?*

We have not yet been informed whether or not the charges against a number of eastern men, of receiving expenses to the Chicago meeting, held at Washington Park in October, have been investigated.

The charges are these:

1—That the fares of the men were paid by the Chicago Cycling Club.

2—That their living expenses while in Chicago were defrayed by the same club.

We have no proof to offer, except it be

in the form of an affidavit by two representatives of this paper that the vice-president of the club admitted to them that the charges were true. That gentleman stated that the expense of bringing the men to Chicago, was between \$250 and \$300, beside the expense of feeding them while there.

The gentleman has since denied having made this statement.

We do not know that the captain of the club went east for the purpose of securing the attendance of these men.

We do not know that any statement of the receipts and expenditures of the tournament has been submitted to the club.

We do not know whether the treasurer is in a position to tell how the money was expended, or whether the committee in charge of the races alone possesses the information. There are other things which might be mentioned in this connection, which, however, as they furnish no proof of guilt, need not be mentioned unless some of the gentlemen interested care to prolong this matter by denials. And, by the way, the REFEREE's columns are open to all for that purpose.

#### THE SOUTHERN TOURISTS.

Johnson, Ballard and Rhodes visited Nashville and other southern cities and stayed there three weeks or a month—all attempting to beat records—all mounted on the same make of wheel—all trained by Tom Eck—all under the watchful eye of Atkins—all paced by men who had nothing to gain—and all in search of—what? Why, health, of course! Not dollars, directly or indirectly. Oh, no—health.

Who paid Eck? The men say they didn't. Therefore Eck must have been there in search of health, too. And Tom is, as a rule, a pretty healthy specimen.

Well, they got the health, but they

didn't get the records! Incidentally, they didn't get some other things—except Ballard, and it was necessary for him to go nearly to the shores of the Pacific to get his. While there he will sell the same make of wheel as he rode in the south, and he will ride the same make in his races. Let us hope that with a portion of the salary he receives he will pay off the "note" on which he realized money to go to Nashville.

We are bound to admit that the gentleman who engineered this trip possessed a "great head," and whatever may or may not have occurred, the racing board is not to blame for its failure to convict.

Tried on circumstantial evidence, the men would have probably been convicted. We have in our possession a letter admitting that the house which manufactures the wheel they rode, "is, in a way, connected with the men, but not in such a way as to endanger their amateur status." That may mean little or it may mean a great deal, but it is not proof.

That's all. We have duly noted and reported the charges and rumors. We have submitted such information bearing on them as we possess. Therefore, dear reader, having pressed the button, we leave you to do the rest—viz.: To form your own opinion.

#### To Have a Club Paper.

The Illinois Cycling Club is about to issue a monthly paper, similar in its nature to the Kings County Wheelmen's *Announcer*, a bright little sheet published by the K. C. W. of Brooklyn. This is designed to take the place of the regular monthly bulletin, and to bring out the latent talent of the club. Mr. Whymper, of Schoverling, Daly & Gales, editor of the K. C. W. *Announcer*, was in Chicago last week.

RIGID AND  
SPRING FRAME

SYLPHS!

MODELS A, B, AND D.

SYLPH CYCLES

RUN EASY,  
STAND UP WELL,  
WEAR WELL.

FOR AN EASY RIDER,

Want our Model D.  
It Weighs 30 Pounds.  
The Model is PERFECT.  
Is Very Rigid—Reliable.

Our Spring Frame safeties give their riders mere genuine pleasure and comfort—more complete satisfaction than any other cycle on the market to-day. Those who ride them say so; others that try them will say so. We invite you to investigate. Send for catalogue. Good agents wanted everywhere.

ROUSE-DURYEA CYCLE CO.,

89 G Street, Peoria, Ill.

F. L. Douglas Cycle Co., Chicago, agents, 284-286 Wabash Ave.

The Most Satisfactory and Complete Line of Bicycles in America.

THE WESTERN WHEEL WORKS' 19 PATTERNS

Of Safeties in Cushion and Pneumatic Tires.

THE line embraces 20, 24, 26, 28 and 30-inch wheels, thus meeting the requirements of all sizes of riders, from a 5-year-old boy or girl up to a 250-pound lady or gentleman rider. THEY ARE SO POPULAR, SO WELL KNOWN, and meet with such ready sale that no dealer's or agent's stock is complete without them. We are the largest jobbers and absolutely headquarters for these goods in the West, and Guarantee Bottom Prices to the trade. Many of the largest jobbers in our territory have placed their orders with us for '93. We would be glad to hear from others.

We are manufacturers of SYLPH, RUDGE and OVERLAND Cycles in 18 patterns, also offer the largest line of BARGAINS in new machines to be found in the U. S. We invite correspondence from dealers everywhere, and assure them we have exceptional facilities for taking care of their trade and a Superior Line to select from. Agents wanted.

ROUSE, HAZARD & CO., - 89 G Street, - PEORIA, ILL.

#### TAKES THE LEAGUE TO TASK.

The *News-Record* had a full report of the L. A. W. national assembly and an editorial comment thereon, part of which follows:

The League of American Wheelmen is not an insignificant body. According to a report made to its national assembly, now in session in Philadelphia, the organization has a present membership of 34,184 and is growing at the rate of 10,000 a year.

The object of the league is not simply sport, though it encourages racing on the wheel—strictly amateur racing, be it understood. It has other and better reasons for existing. For one thing, it aims to bring about an improvement in the highways of the country, which now, as a rule, are well-nigh impassable nine months out of twelve. If it shall accomplish this and nothing more it will deserve the gratitude of all travelers—and this is a nation of wayfarers.

The present meeting is an important one and the legislation enacted will decide the future of the organization. If the delegates do their work with wisdom and good judgment the League of American Wheelmen will go on increasing in power and influence even more swiftly than in the past.

Coming as it does from one of the most fair and influential of the great Chicago dailies, there is much food for thought in its lines.

The *News* has always been friendly to wheelmen, has said many kindly and timely things, and it is a pleasure for one who remembers so well the very sarcastic and sneering paragraphs that were launched at things bicyclic, only a few years back, not only by the Chicago papers, but by news gatherers all over the country, to read such lines,

\*\*\*

I am surprised to learn from the report printed in the same paper of the national assembly, that the color line was not drawn and that for another year, at least, the "darky" may enjoy the rights of L. A. W. membership. Of course it is folly to

comment on the point now, but there has never been so staggering a blow delivered at the welfare of our organization, and I greatly fear that the quasi sentimental notions of the northern delegates will put a stop to the 10,000 yearly increase most promptly.

The report sets forth that only one northern delegate voted against the admittance of the blacks. All honor to him, say I, if he did come from that foreign country, New Jersey. The very soulful remark of Mr. Sheridan, that "there are black men with as white hearts as any man with white skin," is exceeding touching and no doubt very true, but is in no sense germane to the question. It is not his heart, but his skin that is the trouble—not the individual, but the race that is in question. Wherever the negro has been admitted on terms of equality with the white man, there has been turmoil in religion, politics, or society. In business or pleasure, wherever the two races have mixed there has been trouble. It was not sentiment or political preference that the national delegate had to decide upon, but the welfare of the L. A. W., and like a parcel of foolish boys they have followed their leaders into a most uncomfortable and disastrous scrape.

\*\*\*

I sincerely trust that the L. A. W. members south of Mason and Dixon's line will not let their natural feelings run away with their good judgment and withdraw from fellowship, for it is not likely that in their own province they will be troubled with black applicants. It will be only among the high-colored and semi-colored denizens of barber shops and ten-cent restaurants in the north that the new recruits for the new department will be drawn—and it will be seldom that white men will be called

upon to associate in any way with even them.

It seems to me that there is something wrong somewhere, "something rotten in Denmark" in league affairs. It is a great pity that some strong brain cannot be found, some organizing Napoleon, with strength, skill and nerve enough to steer the rudderless ship even with a self-made oar. Between class A or B, cash prizes, the league organ contract, the color line, and Chairman Raymond, I fear that the old hulk is bound to come to grief.

Maudlin sentiment enough has been poured out at L. A. W. banquets, rivers of ink have been wasted, praising this and condemning that, but the same fool business and social policy goeth on forever. What is the matter with making the L. A. W. a man's society, and governing it as men—and white men at that?

PHCEBUS.

#### Aided and Abetted By Zimmerman.

Zimmerman, Whittaker, and Wheeler played a bold game on C. A. Persons while on the boat en-route to Savannah. They were engaged in a game of cards in the smoker's room. Persons became indebted to Wheeler to the extent of ninety-five cents, which he paid with a dollar bill, receiving his nickel in change. He owed Zimmerman forty-five cents, so took out his "roll" and laid a crisp \$5 note on the card table. Whittaker, who was a spectator, slyly picked up the bill and placed it in one of the apertures of the table and the game proceeded, Persons not seeing the move. When the hand was finished Persons thought of his bill and at once asked if anybody had seen it.

Perspiration stood out in small beads on Persons' forehead, and he nervously dashed into every pocket. He counted his money over but could not make

things tally. Zimmie brought out a crumpled \$5 and a \$2 bill and wondered if he had by mistake appropriated Persons' new bill. Wheeler remarked that the same had aged considerably if that was the case. Then Persons thought that it was easy for a bill to look old, particularly when carried as Zimmie does his cash, and said it really looked like his.

"Well, here it is, if it is yours," said the champion, and Persons eagerly grasped the old fiver. Persons then left the saloon, and Whit pulled out the new bill from its hiding place, and gave it to Zimmie. This balanced the account. Persons forgets that he still owes Zim forty-five cents, and doesn't know the trick played upon him. Persons is not much of a sport after all, the boys think, his limit being a penny.

#### The National Capital.

The City of Washington is an object of perennial interest to all patriotic Americans. Not alone because it is the great throbbing heart of the mightiest and grandest republic the earth has ever known, but also on account of its material magnificence. All Americans take pride in its beautiful avenues, majestic architecture, stately homes, and well stored galleries and museums as things of grandeur and beauty in themselves, apart from the historic interest with which they are invested. It is a hope and aspiration of all "YOUNG AMERICA," at least, to some time or other visit the Capital of his country.

The Baltimore & Ohio R. R. offers unequalled facilities in aid of this desire. All its through trains between New York, Philadelphia and Baltimore on the east, and Pittsburgh, Cincinnati, St. Louis and Chicago, on the west, pass through Washington. Its fast Express trains are vestibuled from end to end and heated with steam. Pullman's latest and best productions in the way of sumptuous Drawing Room Sleeping Cars are attached to all its through trains. The present management of the B. & O. have made vast improvement in the last two years, and the road is to-day one of the foremost passenger carrying lines in the country. Through tickets via B. & O. R. R. can be procured at all the principal ticket offices throughout the United States.—18-2.

RACING AT SEVENTY-SEVEN.

Major Knox-Holmes Covers 115 Miles in Ten Hours.

G. Lacy Hilliers, in the *Cyclist* Year book, describes a race which probably will not be equalled. His own language tells the story best:

At this time [Aug., 1886] there was training on the Crystal Palace track the "Grand Old Man" of cycling, the well-known veteran, Major T. Knox-Holmes, who, at an age when many a man seats

MAJOR T. KNOX-HOLMES.

himself in the chimney corner and avoids violent exercise of any sort, took, with juvenile enthusiasm to the sport of tricycling, and during the year 1884 devoted much of his time to long-distance rides upon the Crystal Palace track. As a result of some chaff which went on, a match was made between Major Knox-Holmes on his tricycle and G. Lacy Hillier upon an ordinary bicycle, the condi-

G. LACY HILLIER.—In 1886.

tions being that the major was to receive one mile start for every year's difference in the ages of the two riders in a ten-hours' ride, so that the major received forty-nine miles start. The day chosen for the race—Sept. 29—was singularly unsuitable for long-distance work, as there were constant showers of rain and a strong, cold and gusty breeze, the result being that the track ran somewhat dead, and the riders suffered much from windage. The major was accompanied throughout the whole of the journey by G. Santer on a bicycle, and a number of tricyclists at various times

chipped in to pace him; and G. L. Hillier was assisted for thirty-five miles from the start by W. Brown, but was then left alone until quite late in the afternoon. The result might have been expected, as the major won with great ease. At 101 miles the veteran commenced to create tricycle records, and continued to do so up to 115 miles, which he covered in 9 hrs. 58 min. 58 sec.—a splendid performance for a gentleman seventy-seven years of age, and one which will remain uneclipsed by any man within ten years of the major's age for many years to come. Hillier in the course of the race beat records from fifty-one to fifty-four miles, and from 101 to 146 miles, covering the latter distance in 9 hrs. 59 min. 54 sec. This performance practically brought long-distance path racing to a standstill for two years, no attempts of note being made at distance during that period.

### RACING IN AUSTRALIA.

A Referee Correspondent Thinks Strangers Have a Poor Show.

Editor REFEREE:—I should like to correct an impression which your Australian correspondent would leave in the minds of your readers—that is, in regard to an American rider's chance of "picking up a few sovereigns" over there. To begin with, nowhere is cycling so degenerate as in Australia. As far as I could see that is largely due to the cash prize system in vogue there. Besides, open betting is encouraged at the races. Dozens of bookmakers pay license to the clubs. The result is that the sport is looked down on by the most respectable people. Indeed, very few gentlemen and no ladies ride. I am but writing the plain truth when I state that the sport is in the hands of a most disreputable lot.

I spent six months—from October, 1891, to April, 1892—in Australia, doing a good deal of touring, and was much touring, and was much disgusted to find cycling so unpopular among the better class of society.

A racing man from America, no matter how good he may be, would stand a very poor chance of making his expenses. The prizes are usually small and the races are not numerous occurrences. One must remember that there are few towns of any size in Australia. Melbourne, Sydney, Brisbane, Adelaide and Ballarat are a long way apart. Besides these towns there are not half a dozen other towns of over 10,000 inhabitants. These places will not average two race meetings a year. Supposing they did, then there would only be twenty race meetings.

The Australians pride themselves on the amount of money they spend for sport. However, most of it goes in horse racing and but comparatively little in cycling prizes. The great brag of Australian wheelmen is, of course, "the Austral." It is run during the spring meeting of the Melbourne Bicycle Club. This meeting occurs on one afternoon each November. I have a programme of the 1891 spring meeting before me. I notice that on that occasion the prizes aggregated an equivalent for \$1,680, to be distributed in twelve events. Considering that \$1,000 was first, \$200 second, and \$50 third prizes in the "Great Austral" two-mile race, there did not remain much money to go for the other

prizes. Then, too, there were 811 entries. [But only a handful of starters.—Ed.]

Again, the Australian Wheelmen dislike prizes going to anyone outside the club which is holding the races. Every race is a handicap, and the handicapping is most unfairly conducted. For example: Two Englishmen, Tom Warwick and S. Turner, were out there when I was. They were fairly fast men, but in every race they entered they were either put on scratch or worse. In one three-mile race I know Tom Warwick to have been placed 200 yards behind scratch.

It is almost needless to add that in their three months' experience on the Australian track these chaps were never "in it." Should anyone wish to know more about cycling in Australia, I shall be pleased to furnish him information.

F. M. HUGGINS,  
Mansfield, O.

### THE TRIANGLE ROAD RACE.

The California Cracks all Beated By a Three-Minute Man.

The first annual twenty-five mile road race given by the California Associated Cycling Clubs occurred on Washington's birthday over the San Leandro Triangle. It was a success in every way, but seemed to be full of surprises, the first place going to a mere novice, who had the limit. It was expected surely that either Foster, Bell, Edwards, Alexander or Wells would win the time prize, and a mighty shout went up when George Faulkner of the Acme club pulled in ahead in the good time of 1 hr. 19 min. 4 sec., whereas the scratch men's time was worse than 1 hr. 23 min. The day was warm, a fair wind was blowing, and the roads were in fair condition, but dusty in places. Foster and Edwards, two of the scratch men, seemed to have no difficulty in getting away from others who started from the same mark, but apparently fought each other against making pace. When about a half mile from the finish, Edwards started to spurt, but shortly after Foster passed him and beat him to the tape six seconds. Both of the men appeared fresh and were riding in good form. The probability is that they over-rated their own ability and under-rated that of some of the men who were allowed a start over them. Faulkner, the winner of the time medal, had 3 1-2 min. handicap, and was consequently alone through a greater portion of the race. At any rate, he was placed in such a position as to receive no aid from those ahead of him. He finished third, and it is more than probable that had he had pacemakers he would have broken the twenty-five mile road record and won first place. The order of the finish was as follows:

| POSITION.                    | H'D'CAP. | TIME.       |
|------------------------------|----------|-------------|
| A. Griffiths, B. C. W.....   | 12 min.  | 1 24 24 2-5 |
| J. Sampson, Acme.....        | 7 "      | 1 22 04     |
| George Faulkner, Acme.....   | 3 1-2    | 1 19 04     |
| C. N. Loughton, B. C. W..... | 10 min.  | 1 26 18     |
| W. H. McDonald, Acme.....    | 11 "     | 1 28 09     |
| T. C. Dodge, B. C. W.....    | 6 "      | 1 24 20     |
| Al Burgess, S. J. R. C.....  | 9 "      | 1 27 42     |
| B. W. Bernhard, S. F. B. C., | 8 "      | 1 25 45     |
| Walter Foster, B. C. W.....  | scr.     | 1 22 29 1-5 |
| W. J. Edwards, G. C. C.....  | scr.     | 1 22 32     |
| C. T. Davis, G. C. C.....    | 5 min.   | 1 22 36     |
| Grant Bell, Acme.....        | scr.     | 1 22 38     |

### The World's Fair Track.

Chairman Raymond and probably President Burdett will reach Chicago about the 10th of this month. A meeting of the committee on international racing matters will then be held. Chief Consul Gerould says that the track has been decided upon, a half-mile of burnt clay (the latter not altogether decided), fifty feet wide on the home stretch, thirty feet wide at the back stretch and well banked for so large a track. The

grand stands will be built to almost surround the track (as illustrated in last week's REFEREE) and will seat fully 25,000 to 30,000 people. Upon a final decision of the committee, surveyors will lay out the stakes and work will begin at once. This work will take at the most not over sixty days, so that Chicago's world's fair track, it can be safely said, will be ready by June 1 at the latest, and probably by the middle of May. The date of the meet is Aug. 5 to 12 and the races occur Aug. 7 to 12. The programme of the championship contests has not yet been arranged. The international contests will, however, occur on the last two days.

### Terront Defeats Corre.

The thousand-kilometre (621 miles) race between Terront and Corre, which ended Sunday, was won by the former, who covered the distance in 41 hrs. 58

min. 52 sec. and was ten kilometres ahead of his opponent at the finish. The race was held on the 400-metre lap board track in the Galerie des Machines, Paris, and fully 20,000 people saw the finish. Terront, it is cabled, established a record, remaining in the saddle on the track during the first twenty-five hours, then descending owing to an accident to his tire.

### Will They Turn Professionals?

The air is full of rumors about the probable suspension of several of our best "amateur" racing cyclists, says *Sport and Play*, whom it is well known are in the employ of makers for the sole purpose of riding their machines, though the N. C. U. are reluctant to precipitate matters by suspending the suspects. Personally I should hail with immense satisfaction the suspension of about twenty of the English cracks, because it would then face the question at issue and the legislation of professionalism would soon become an acknowledged fact. There are, I know, at the present time a dozen or more first-class riders who would turn professionals to-morrow if they were assured of having sufficient race meetings promoted, where cash prizes were offered. Of course the desired result can never be attained by the occasional suspension of a single man. If a whole batch of riders were at once declared ineligible to compete as amateurs, I have no doubt there would soon

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace you tyre. This repair taking but two or three minutes.

be lots of first-class money meetings arranged. *Sport and Play* could be depended upon for three meetings a season with £200 cash prizes at each. Who speaks next?

#### Harris Coming to Chicago.

Any information regarding the movements of our English cycling champions, says *Sport and Play*, is bound to be acceptable at this period of the year, especially in view of the approaching visit of the American riders. A. W. Harris is "getting ready." I have this morning received a letter from Mr. Harris, Sr., in which he informs me that the "lad," who is now in excellent health, commences training to-day (Monday), and every effort will be made to get him thoroughly fit for the early races. He will compete at *Sport and Play* Easter tournament, at which he hopes to make the Brookes challenge cup his own property. After this he will prepare himself specially for the N. C. U. championships, and will leave England for Chicago the second week in August, in order that he may have a cut at the Yankees on their own celebrated speed tracks. Properly fit and acclimated, I have no doubt he would worthily uphold the honors of the old country.

#### Mr. Atkins Makes a Point.

Editor REFEREE:—Why is it the racing board still clings to an eighteen-inch track measurmen? In the olden time, when we had to build our own tracks and only laid a curb and used no fence around the infield, it was all right; but now all our races are held on regular horse tracks, with picket or rail fences all the way round, and as the half length of the standard safety bar is fourteen inches, the man doesn't live who can ride eighteen inches from the curb; instead, as I tested by practical experiment with several men many times last fall at Nashville and Macon, the riders followed a line about three feet out from the curb. The over distance the men have to ride is not so much as it is the bother and expense of a survey, and re-setting or locating anew of all the intermediate poles and distances. Now we have the amateur question all settled perhaps the board can find time to attend to this little detail.

A. L. ATKINS.

#### Savannah's Second Day.

The second day of the Savannah meet was as successful in every way as the first day, the races being even more interesting. The quarter-mile egg race was won by C. C. Boyle, C. L. Wilson being second and W. W. Fretwell third. This may be termed the Richmond egg race, as the school principal is the inventor. It consists of every man having to pick up an egg with a spoon or ladle out of a chalked ring at the start, an egg for each competitor being in the ring, about a foot in circumference. The rider must pick up the egg with one hand, mount his wheel, ride to the second egg, deposit the first egg in the ring, pick up the second egg, bring it to the start, place it in the home nest, ride off and bring in the other egg, and the game is won. China or celluloid eggs were used, and the race created the best fun of the day. The summaries follow:

Half-mile, open—W. J. Baird, 1; J. L. Johnson, 2; Steve Welsh, 3; time, 1:15. Baird won easily by a yard.

Three-mile, handicap—W. J. Baird, 150 yards, 1; J. L. Johnson, 225, 2; D. G. Farmer, 375, 3; time, 8:09 1-5. Baird caught his men in the first quarter and won as he liked; a good race for second place.

One mile, handicap—Isaac Baird, scr., 1; C. L. Williams, 80 yards, 2; D. F. Farmer, 3; time, 2:37 1-5. Baird could have given Williams another

hundred yards and then beaten him. The time is record for the south in competition.

Half-mile, boys—F. R. Anly, 1; A. Meyers, 2; time, 1:41 1-5. It was a neck-and-neck finish.

One-mile, 2:25 class—W. J. Baird, 1; C. C. Boyle, 2; C. A. Persons, 3. A limit of 2:45 was placed on this race, and the younger Baird showed his form to be near that of his brother, the Irish road champion. Persons, the saddle man, was beaten out by the novice, Boyle, but the New Yorker stated that the third prize was better than the second and was out for that.

Half-mile, Savannah Wheelmen—D. G. Farmer, 1; F. K. Williams, 2; W. W. Fretwell, 3; time, 1:27 3-5. Farmer won by five yards.

Quarter-mile, open—Isaac Baird, 1; J. L. Johnson, 2; Steve Welsh, 3; time, 34 1-5. This was also southern record, and was won "hands down."

Ed Wilson had a walk-over in the consolation (being the only one not winning), in 2:50 3-5.

A match race between Steve Welsh, of Charleston, and C. L. Williams, of Savannah, concluded the tournament, Welsh winning in 2:50 3-5. The prizes were distributed on the track by President Richmond, who, in a neat speech, thanked the people for the royal support

signature of the officials being in type-writer instead of the autographs. Eck says the correction was made and the claim given to Mr. Devore of the Freeport Bicycle Company, who was to forward them to Mr. Raymond.

\* \* \*

#### Keator is Reinstated.

Roy Keator has received notice of the raising of his suspension by Chairman Raymond, who says Keator's statements being sworn to and the accusations by Harris of Saginaw, being mere statements, causes him to reinstate him. This, too, is on Keator's promise to steer clear of further trouble of the same sort.

\* \* \*

#### The Pullman Road Race.

The Associated Cycling Clubs will call a special meeting for Thursday of next week, to act upon the report of the committee appointed to determine upon the feasibility of holding the annual road race over the Pullman course, and to in-

on the Milwaukee track have placed him among the leaders in this line of athletic sports. He will give a chance to all the local "flyers" to meet him during the coming season, both on the path and on the road, and will no doubt place some records for the quarter, half and mile in the Pacific northwest this coming season, equal or better than the record now standing in California.—Portland (Ore.) *Telegram*.

\* \* \*

#### Will Have the Track.

Unless something now unforeseen happens, the projected track of the Minneapolis Cycle Track Association will be built. Although no ground has as yet been selected, it is expected matters will be hurried along so that by May or June everything will be finished.

\* \* \*

#### MISCELLANEOUS RACE TALK.

*Little Paragraphs About Prominent Riders.—Future Meets.*

Bliss will likely ride a Rudge this season, so he says.

A new track, three laps to the mile, is to be built at Akron, O.

Jacksonville, Fla., is not to be behind the times and will give a tournament shortly.

The Crescent League of Plainfield, N. J., is arranging for a series of races to be run this summer.

Each member of the Peoria club guarantees \$5 toward paying the expenses of this year's tournament.

Rhodes denies that he will race on a Monarch this year. He is sick of the west, and seeks a job in his old home, Boston.

Monticello, Ill., will have a grand meet this year on the occasion of the Platt County fair, with A. W. Moore as manager.

Chairman Schroeder of the Milwaukee Wheelmen's racing board is said to be training and will be seen upon the path this season.

Steenon, late with Kirkwood, Miller & Co., and later at the Rudge factory, has entered the Liberty factory and will be a member of the Liberty team.

Johnson, in writing to a friend in Chicago, states that he will ride a Stearns racer this season. The company is building him two sixteen-pound wheels.

Baltimore's Associated Cycling Clubs will give races in May or June. The Maryland club will give the Baltimore meeting of the international circuit.

A good reason for annexing Hawaii—It would give Zimmerman more room, as this country is entirely too circumscribed for his abilities.—Peoria *Mirror*.

It is hard to tell for what club Johnson will ride this year. He has been claimed by the St. Paul C. C., Milwaukee Wheelmen and Syracuse C. C. Which will it be, Johnson?

Kelly and Draper, the tandem team of the Schuylkill Navy, are having a tandem built on Raleigh lines, on which they will go for records this season, among other things promising an attack on the world's twelve-hour path record.

The Wilmington Wheel Club is trying to arrange a team road race against some Philadelphia club. It insists, through S. Wallis Merrihew, that the team shall be composed of the members of one club only, forgetting that when the Chicago C. C. insisted upon this same thing in 1890, it backed down.

The following is about as nearly correct as the Milwaukee *Sentinel* usually gets anything pertaining to cycling: "The decision of the League of American Wheelmen to abolish cash prizes and to limit the value of prizes to \$150

As a Christian once did, the pure amateur stands at the cross roads and knows not which way to go.

of the Savannah Wheelmen's first tournament.

\* \* \*

#### A Five Mile Denver Race

The five-mile road race of the Denver Ramblers was held Wednesday of last week over the Sanl Creek course. There were forty-six entries. Considering the adverse wind, good time was made. The order of finish was as follows:

| POSITION. | H' D' C' P. | TIME. |
|-----------|-------------|-------|
| Parsons   | 1:45        | 17:45 |
| Feebles   | 1:45        | 17:50 |
| Pugh      | 1:45        | 16:55 |
| Hurburt   | 1:30        | 17:45 |
| Cyphers   | 2:30        | 18:45 |
| Sylvester | 1:15        | 16:42 |
| Belden    | 1:45        | 17:14 |
| Lynchon   | scr.        | 16:30 |
| Taylor    | scr.        | ....  |

\* \* \*

#### Johnson's Records.

This Friday is the time set for the promised "expose" of Johnson's records by the National Trotting Association. Whether the "expose" will come remains to be seen. At any rate the records have not been accepted by the racing board. The claim for record was sent back to Johnson for correction, the

investigate such other courses as should be offered. Mr. Garden says all difficulties can be done away with and that the presence of the world's fair visitors is a great argument in favor of the old course. These people have all heard of the Pullman and, naturally, are desirous of seeing so great a race run. Mr. Garden thinks, however, that '94 will see some other and more desirable course brought forward, and that the Pullman road race of '93 will be the last.

\* \* \*

#### Race at Houston, Tex.

The five-mile road race of the Magnolia C. C. at Houston, Tex., held on Wednesday of last week, was won by Robert Gill in 22 min. 25 sec. The course was nearer six than five miles in length, and a strong wind prevailed.

\* \* \*

#### Seem to Fear Ballard.

E. W. Ballard, of Chicago, holder of the quarter and half-mile indoor records, has arrived in Portland and will make his home in this city. Mr. Ballard is one of the youngest bicycle racing men in his class, and his remarkable performances

is one of which no genuine amateur can complain. As soon as the value of the prizes he wins becomes a matter of importance to the rider, his place is among the professionals."

It has been definitely determined that Fort Scott is to have the meet of the Kansas division for 1893. A mail vote of the board of officers resulted in four votes being cast for that city. No other city received any votes. Chief Consul Harris, being a resident of Fort Scott, took no part in the proceedings. The Solid City Wheelmen promise to outdo themselves on July 4 and 5, when the meet is to be held.

Chairman Schroeder of the racing board of the Milwaukee Wheelmen denies the rumor that the Waukesha road race will not take place this year. The reason alleged for not holding the race was that the monthly tournaments of the wheelmen, which are to be held during the summer at National Park, would detract from the interest in the affair. Chairman Schroeder says that during the month when the road race will take place no tournament will be held.

\* \* \*

#### 1893 FIXTURES.

##### MAY.

- 30—Pullman Road Race, Chicago.
- 30—New Haven (Conn.) B. C.'s annual meet.
- 30—Massachusetts division meet.
- 30—Martin road race, Buffalo.
- 30—Irvington-Milburn road race.

##### JUNE.

- 17—English championships on Herne Hill track.
- 17—Alpha Wheel Club's 10-mile road race, South Norwalk, Conn.
- 24—Prince Wells' second annual 10-mile road race, Louisville.
- 27-28—Kentucky division meet, Harrodsburg.

##### SEPTEMBER.

- 13-14—Springfield (Mass.) B. C.'s annual race meet, Hampden Park track.

#### An Anecdote With a Moral.

It was a delightful, sunny day in that balmy southland. He was a well made man and was considered quite an expert on the wheel, and was also something of an inventive genius. He lived in Savannah, and was on his way to the splendid new cement track at the Savannah Wheelmen's park. On this occasion he was riding hands-off. He has been known to ride with his feet off, especially when approaching ladies, and sometimes he even takes his hat off under similar circumstances. Such a thing as being outdone in style or speed never irritated his cerebellum. He sat there as proud as a lord, thoroughly enjoying himself, his bicycle and his surroundings. He rode some distance thus, when alas! The click of a chain! A bicycle was overtaking him. Enough! He pedalled faster, but still that sound kept on. Faster still, and yet that sound was there.

Hurriedly stealing a glance over his shoulder he beheld a mere boy (to all appearances) peddling steadily onwards. With a look of disgust he grasped one horn of his handle bar with his left hand, while the other steadied the pipe in his mouth and the bicycle, responding to the increased power, glided rapidly over the road. He listened, the clicking grew louder. He grasped the right horn of his handle bar with additional speed as the result, but still that sound grew louder. Remarkable he thought. He who prided himself that no other wheelman in Savannah could pass him on the road, to be so persistently followed by a mere lad.

He listened again. Alas! the sound was upon him. Removing the pipe from his oral cavity he leaned slightly forward, but all to no purpose, for still that sound grew louder. Dashing his pipe to the ground he bent all his energies in a vain effort to distance this mere boy, but

to no avail, the sound grew into a whirlwind and like a flash the boy flew by and was soon a dim spectre in the distant future.

"Remarkable," he thought "a mere boy to run like that. I do wonder if that boy has my secret? Can it be possible that he is beating me with the fruit of my own industry? He certainly went like lightning—I wonder if that machine is driven by electricity?"

With a troubled mind and a crestfallen brow he arrived at the park and observing the object of his contempt riding around the track, modestly enquired who that little fellow in blue tights was, whereupon he was told that the little fellow in blue tights was the "Irish champion."

He said nothing, walked away, got his machine, hailed a passing car, placed his machine on the front platform, paid his fare and returned to town a sadder but a wiser man, and is now said to be working night and day on perfecting an electric motor for bicycles.

Pride cometh before a fall.

All men are not fast men.

Moral:—Never allow yourself to fall into slow habits. MOUNT HOLLY.

#### Wheelmen's Club House.

L. D. Taylor, secretary of the National Columbian United Wheelmen's Association, was in attendance at the national assembly at Philadelphia, doing quiet but effectual work for the association he represents. The more that wheelmen look into the plans of the association, the more evident it becomes that their interests will be well looked after during the entire season of the world's fair, as well as during the league meet; and that a membership in this association will assure them in advance that they will be comfortably cared for. The club house is now under roof and will be finished in good season. The association has also secured control of four large hotels during the meet, and will be able to concentrate wheelmen near their club. Clubs as well as individual wheelmen contemplating going to Chicago should put themselves in communication with the secretary, 959 West Madison street, Chicago.

#### Will Charge For Bicycles.

The baggagemen of the New York & New England road have been notified to charge one-half cent per mile for bicycles accompanied by owners, with the proviso that the minimum charge must not be less than fifteen cents. On the Consolidated road the rates are those usually charged for express or baggage. At a meeting of the National Association of Baggage Agents it was decided to send a committee to the meeting of the American Association of Passenger and Ticket Agents on March 21 to urge the placing of a tariff upon all bicycles carried in baggage cars.

#### To Elect Officers Monday.

The Ravenswood Cycling Club election occurs next Monday evening. There has been a clash between the riding and a few of the non-riding members, of a pleasant nature, however, and the cyclists will elect a straight ticket from the following: President, Grant Newell; vice-president, W. H. Chambers; secretary-treasurer, Art Zipf; board of directors, four to be elected, C. H. Newton, K. F. Peterson, H. Oldam, W. F. Cobb, George Burt and T. F. Thorne; captain, J. C. Howard.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list, FLETCHER & CO., 43 E. Van Buren St., Chicago.—Adv.

## FOREIGN TRADE NEWS.

"TWO SHOWS OR ONE," SEEMS TO BE THE GREAT QUESTION STILL.

*The Front Driver Still in the Ascendency, Notwithstanding Great Opposition—Complaint About V-Framed Wheels.*

LONDON, Feb. 18.—Sufficient time has now elapsed since the close of the National show at the Crystal Palace to enable an accurate judgment to be formed of its effect upon the section of the trade which exhibited. Cycling clubdom ignored the show, and although the palace was frequently crowded to the point of inconvenience along the narrow gangways between the stands in the central transept, very little business was transacted, and towards the end of the week many of the stand attendants abandoned their posts from sheer ennui. Had the show been one of birds, or cats, the crowds of children, mammas, nurses and the miscellaneous public would have been there just the same, for the palace pantomime was the real loadstone. During show week *Le Veloce Sport* headed one of its articles thus: "The Stanley Show Has Been Business, the National Show Is a Show," and this tersely and truly described the affair. Since the show closed the exhibitors of cycles have received a drawback of 25 per cent. on their space rent, but this return has been withheld from the exhibitors of tires and sundries (who were already indignant at the high charges and inferior positions they had to put up with) much to the annoyance of this important section. The dissatisfied stall-holders have agreed together not to support another exhibition promoted by the Manufacturers' Association.

#### ARRANGING FOR THE NEXT SHOW.

Two trade meetings were held during the show. At one, called by the Manufacturers' Association, or National Show, limited, instead of a resolution pledging those present to support the next National show, an amendment was triumphantly carried urging the committee to meet the Stanley Club with a view to arranging for only one show annually under the joint control of both bodies. At the second meeting, held the next day outside the palace, and summoned by the Stanley Club, there was a good attendance of the trade and a resolution was passed asking that the club would elect a small committee to meet the National directors and endeavor to arrange for a joint show in or about December next. It is stated that the National Show, limited, has secured the palace for its next show, to be held in December, but no doubt this matter will be arranged should an agreement be arrived at between the two bodies. Up to the time of writing, strange to say, nothing has been mutually settled, and the prospect of one united show, under joint management or otherwise, is still wrapped in uncertainty. The Stanley Club is most anxious to meet the trade and has extended its offer of joint management, with an equal division of profits and risks between the two bodies. On no account, however, will the Stanley adopt the "no show" policy for which all the very largest firms heartily yearn. That there will be at least one big show before the end of '93 may be regarded as practically certain. The Agricultural Hall, Islington, is at the exclusive refusal of the Stanley until shortly before midsummer, when the club will have to definitely decide upon taking it or not. There is room beneath

its roof for more machines than were displayed last November, and if necessary an adjoining building, Berner's Hall, can be acquired for the occasion.

#### ABOUT FRONT DRIVERS.

The half-hearted and laggardly attempts made by the large firms on the Viaduct to produce some geared f. d. safeties for exhibition purposes, do not appear to have yielded them much result, and recently, in the course of a stroll along the great cycle mart, I noticed only three specimens displayed in the windows. No doubt when the season's history teaches its lesson, and the heavy stocks of rear driver parts have been partially disposed of, some further attention will be given to the new mount with which the progressive firms are doing very fair business. Thomson, James, Begbie & Twentyman, Rickard, Jelley & Co., Wooster and numerous smaller firms, unencumbered with large stocks are turning out a good proportion of these machines. All the efforts to boom the rear driver in the correspondence columns of the cycling press, by writers sheltered under *noms de plume*, seem to exert little check on the steady progress of the new type. It is true that some safety men, who have never ridden an ordinary, find it takes a few weeks to become thoroughly at ease on the geared safety, and whilst thoroughly appreciating the comfort of the mount, such riders declare they could travel faster on a light rear driver. But this is not to be wondered at, because the methods of obtaining maximum force adopted on a rear driver are so different. On the other hand, I have not met a single old ordinaryist who has tried a front driver and given it up again in favor of the safety.

#### NEW CRYPTO FACTORY.

The Crypto Cycle Company has taken possession of the long disused factory in Clerkenwell Road, formerly occupied by Linley & Biggs, when Whippets were the boom. It is full of valuable machinery, and, beyond being a trifle defective in its lighting, is the best factory of its kind in central London. The gear-making branch of the Crypto trade will be carried on here for the present. Mr. Boothroyd is entirely unaltered by the success of the Crypto machines; he continues to devote the closest personal attention to their manufacture; he is accessible to any one, and as willing as ever to allow any known rider to fully test a sample machine and become convinced of its merits before placing an order. I believe that this policy largely accounts for the rapid strides the firm has made. Courtesy converts casual inquirers first to customers and afterwards to perambulating advertisements.

#### AGAINST V-SHAPED MACHINES.

There was quite a chorus of disappointment among lady riders who went to the National show at the number of V-framed safeties exhibited. The V pattern frame is fatal to the set of a woman's frock when awheel, and to her convenience in mounting. It is doubtless a shade lighter, easier to build, and possibly cheaper, but I notice that all the best makes still have the curved frame—notably Ridges, the Referee, Raglan, Psychos and the New Howe.

#### THE REFEREE A FINE MOUNT.

Mention of the Referee reminds me that I recently enjoyed some mud-riding on a beautiful specimen of a "Referee Speed Cycle"—as the transfer ran—of 1893 pattern. My object was to test a pair of detachable Dunlop tires, fitted with non-slippers. I soon discovered that they were "everything they ought to be," and then couldn't help noting the many good points about the safety itself. In its naked condition it must

E. C. STEARNS & CO., Syracuse, N. Y.

have been a really light machine, but it was loaded up as the fullest of full roadsters. Besides brake fittings and foot-rests, it had fine large mud-guards, which really kept the rider clean, a comfortable hammock saddle, a fitted tool bag, Carter's chain case, and rubber pedals. With this wonderful equipment I weighed the machine and found it scaled 41 pounds. The handle bar of one-inch tube lent the machine a fine appearance, and the straight tubes from the bracket to the back axle, the narrow tread and the perfect rake of the steering pillar and forks all added to my appreciation of an undoubtedly high-class rear driver.

#### A NEW CYCLE BOAT.

F. W. Zimer, whose power gear the public would not take on at any price, nothing daunted, is now deeply engrossed in a cycle boat on very novel lines, at present on exhibition at the Royal Aquarium. The boat is very narrow (less than 24 inches at the widest part) and yet by reason of its movable side floats, actuated in a semi-automatic manner by the occupant, it lives safely in rough water. Zimer has fully tested it down in the lower reaches of the Thames, and during the coming summer he will make coasting voyages in the boat and cross the channel. Pedal propulsion, in connection with a pedal wheel or screw at the stern, is employed in the Zimer boat, as in Fred Cooper's hydrocycle. A good deal is sure to be heard of Zimer's invention. The inventor is very sanguine of its great future, which I can not predict until I have made a trial trip in the craft.

There is nothing stirring in the country with regard to the elliptical sprocket wheel. The New Howe company is prepared to fit it to order. Humber's have no intention of touching it for the coming season's machines. Among riders the topic is as dead as a door nail.

#### A CHAIN CASE THE THING.

That a chain case, either with or without an oil bath, is indispensable to every rear-driving roadster, all riders are now agreed upon. Leaving out cost, the Carter case adds a substantial fraction of weight to a light safety, and many riders after wrestling with the subject in preparing their order for their '93 mounts, have hit on some compromise. Not a few have gone for one or other of the many light cases on the market, sacrificing the oil bath. The lubrication of the chain is secured by a piece of lamp wick which depends from a lubricator above the case, and allows oil to drip *very slowly* upon the chain. J. & F. Van Hooydonk of Holloway Road, London, make a very light, efficient and inexpensive case of painted wire gauze, which is pronounced by its many users to be first-class.

#### GOOD FOR MILK BARROWS.

The Persil Flexible Wheel Tire Syndicate, limited, possessed of large capital, is going ahead, I hear, on extended lines. It had a conspicuous exhibit at the National show and I am promised a trial of a machine fitted with the plain, flat, rubberless, metal tires, connected by a series of S-springs with an inner vein. Pending that trial I can't see the ghost of a chance for the invention in cycling. For light milk barrows, ambulance carts, and similar vehicles, it should prove very successful.

#### THE TORRILHON TAKING WELL.

The Torrillhon self-repairing pneumatic tire, limited like the Michelin from France, shows distinct signs of catching on with English riders. The air-tube is fitted inside with a series of exquisitely thin overlapping flaps of rubber. A little water is pumped into the tire before use, and the flaps are instantly sealed

over any escape-holes created by punctures causing an outrush of air. I am in a position to state that under practical tests upon the road this tire sustains all that is claimed for it. It may be treated as a pin-cushion all day long with perfect impunity. Unlike the Closure tire its lightness and resilience are unimpaired by the anti-repairing arrangement. The Dunlop tire is now fitted, to order, with the Torrillhon air-tube—a fact which speaks volumes.

#### FIFTY PER CENT REAR DRIVERS.

Calling the other day upon Begbie & Twentyman, whose business-like methods are very commendable, I gleaned in the course of a conversation on trade matters that at the present time their monthly output of machines was made up of 50 per cent rear drivers, 35 per cent tricycles and 15 per cent front drivers. These figures are rather interesting, but it must be remembered that 75 per cent of the firm's business is outside the United Kingdom, where dark ignorance largely prevails amongst the agents respecting the future of front drivers.

#### HUMBER FRONT DRIVER.

F. W. Shorland has transferred his services from the Crypto firm to Humber & Co., limited, whose sole British representative he now is, and R. L. Ede, late of the Ormonde Cycle Company, has also been absorbed by the Beeston firm, being established at the London depot. Shorland will positively ride a rear-driver this year. He declares he will have to give up racing, however, for serious business duties, although he will assert his claim to retain the Cuca cup. My own private impression is that the autumn of '93 will see Shorland merrily racing on a Humber front driver—as yet in the womb of the Beeston factory, pending the dispersion of the conflicting chain safeties.

#### A LIGHT TANDEM.

Fearnhead & Co., of Little James street, Eray's Inn Road, W. C., are turning out some splendid work from their excellent factory. I lately inspected several of their finished machines which will bear the closest examination of a fastidious critic, having much beside lightness to recommend them. They have just completed a tandem safety weighing 48 1-2 pounds fitted with the new Guthrie chains, and 28 and 30-inch wheels. This racer will be set spinning on the path by sundry tandem pairs during the season. Fearnhead & Co. are also busy with front drivers. They have two patterns, one of which has curved front forks, like the Triumph.

STANLEY.

#### Publications Received.

The REFEREE acknowledges the receipt of the following publications: Dayton (O.) Bicycle Club.—Programme, handsomely illustrated, of its minstrel show, Feb. 2.) A. B. Barkman New York.—Gustav Kobbs's road map of New York and New Jersey suburbs. Prince Wells, Louisville, Ky.—Very complete sundry catalogue. The McIntosh - Huntington Company, Cleveland. Three handsome catalogues, devoted to sundries, the King of Scorchers line and the Crypto line. Ames & Frost Company, Chicago.—Catalogue of Imperial cycles, showing several models, including the racer and a ladies' wheel. Also parts for military cyclists. John P. Lovell Arms Company, Boston.—Catalogue showing fifteen styles of the celebrated Lovell Diamonds. Morgan & Wright, Chicago.—Pamphlet containing price list and instructions in repairing M. & W. tires; also full description of the same and their records.

The Lincoln Cycling Club Cornet Band will appear on wheels this season as a bugle corps, and will take a prominent part in the ceremonies incidental to the laying of the first mile stone of the Century Road Club on election day.

## ALL FOR GOOD ROADS.

### MINNESOTA LEGISLATORS ENTHUSIASTIC OVER THE MATTER.

*Bills Prepared and Now Before the Senate and House—Little Granger Opposition—A Cyclists' Road Not Wanted—Other Matters.*

MINNEAPOLIS, Minn., Feb. 25.—The sentiment in favor of the good roads movement has been quite general here, although comparatively latent, until during the past year the Minnesota division of the L. A. W. commenced an active campaign. First, resolutions were prepared and their passage secured by various political parties and organizations, calling for action by the legislature. We then appropriated \$100 from our division treasury to pay the expense of organizing a good roads convention. With this money and the resolutions above mentioned as capital, the sentiment throughout the state was thoroughly roused, and a large and representative convention of about 400 of the leading citizens of the state was held at St. Paul, Jan. 25 and 26, while the legislature was in session. We held six enthusiastic sessions, three of which were held in the chamber of the house of representatives upon invitation of the house, which adjourned for that purpose. The convention chose for its chairman a judge of high standing who sits upon the bench of one of the leading judicial districts of the state, Hon. H. R. Wells of Fillmore County.

#### EVERYBODY ENTHUSIASTIC.

The degree of enthusiasm exhibited by the members of the convention may be correctly inferred from the fact that Judge Wells, Governor Nelson and other men of sound conservative judgment felt called upon to counsel moderation in the action to be taken in the convention. Carefully prepared addresses were read by prominent men of the state, and resolutions were passed calling for radical changes in our highway system, the most important of which were the abolition of the poll tax and the working out of the road tax, and abolishing the system of supervision by about 11,000 incompetent farmer supervisors throughout the state, etc., etc. These three changes were heartily endorsed.

#### BILLS INTRODUCED.

A committee was appointed by the convention to present its ideas to the legislature in the form of legislature bills. The bills covering all the points have been introduced in both branches of the legislature. Since the bills introduced incorporate the ideas recommended in my address to the convention, and with one exception were all prepared with my assistance and sanction, I am scarcely in position to speak of their merits, except to say that while they do not provide for a complete highway system, I think they go as far as the present condition will justify. The bill which I did not prepare and the convention did not recommend leaves it optional with the several townships of the state whether or not they will make the changes, and to determine the same by a popular vote.

#### LITTLE "GRANGER" OPPOSITION.

But little active "granger" opposition has been manifest here. There are men in both city and country who oppose every specific measure, chiefly because of misinformation or lack of careful consideration. There are also a few in both city and country, who fortunately have comparatively little influence, who make the objection that the movement is in

the interest of bicycle cranks. I am proud to say, however, that the large majority of Minnesota's citizens are too intelligent and too well informed to allow this "argument" to have any weight with them. An individual who expresses long-eared sentiments by attempting in that manner to prevent progress usually brings disgrace and ridicule upon himself. This reform has gained too much momentum, and the majority in this state are too well informed to allow any serious or permanent delays to result from opposition based upon a reason as flimsy and foolish as that.

#### BILLS WILL BE PASSED.

But little progress has been made during the past year in the actual construction of highways. The sentiment has not been sufficiently crystallized until recently, to manifest itself in highway construction throughout the state generally. A permanent State Road Association was formed at the convention, and supplementary organizations are being formed in every county and city. The legislative bills are in the hands of and are heartily supported by the most influential men in the legislature. And having in addition to this the sanction of so representative a body as the convention, we have every reason to believe that they will become laws at this session of the legislature, and that the sentiment in this state so heartily in favor of highway improvement will soon materialize in the form of improved highways.

A. B. CHOATE,  
Chief Consul.

\* \* \*

#### CYCLISTS' ROAD NOT WANTED.

*Clevelanders Against Building a Special Roadway.*

"The wheelmen of the city are about as much interested in the boulevard project which is now being talked of as any other class of citizens," says the Cleveland Plaindealer. "In point of fact they are even more interested than any other class, as the boulevard will mean more to the man who owns a wheel than to the man who does not ride. Among the local riders no one other subject is being discussed pro and con, and the scheme is now perhaps the only theme of talk and discussion in the club houses and in the streets, among the members. Strangely enough none of the Cleveland wheel clubs has taken official action or notice of the boulevard, but some action is likely to be taken in the near future. That most of the local wheelmen are heartily in favor of a boulevard need not be said. A ballot taken among them would result in a decision in favor of the boulevard by a nine-tenths vote. It would not be the strict truth to say that the riders are unanimously in favor of the movement to have a grand boulevard in the city, but that most of them are heartily in favor of it is a fact that cannot be denied."

"There has been a plan talked of to construct an asphalt track the whole length of the boulevard proper for the sole use of the wheelmen. The idea is to have it of proper width to allow riders to ride four abreast. This is to be kept in good condition at all times and would be one of the finest courses for bicyclists in the world.

"Strange to say, although on first glance this would seem to be just what the riders want, there is not the unanimous feeling in favor of the asphalt track that there is for the boulevard itself. It has its shady side as well as its bright one. Said a well-known bicycle rider yesterday to a Plaindealer reporter:

"While I am in favor of the scheme of giving to Cleveland a beautiful driveway and road for riders, I am decidedly against the idea of making a separate road for bicycle riders. It would do

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel; and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

## THE WHITWORTH WORKS CYCLE CO.,

# SINGER CYCLES.

Specifications: 28-in. wheels speeded to 56-in., Singer ball steering, Singer ball bearings to all running parts, including pedals, patent roller (anti-friction) chain, Singer patent steering lock, weldless stell tube frame, handle-bar and forks. Enameled, and with parts plated.

Price, with pneumatic tires, less guards and brake parts as illustrated, - - - - - \$135.00

AVERAGE WEIGHT, as illustrated, less saddle and pedal, 33 lbs.

We fit our safeties with the Dunlop, Acme or Morgan & Wright pneumatic tire, as preferred. Each of these tires is fully guaranteed.

Reliable Agents wanted in the West, including Chicago. Send for our Catalogue.

## SINGER & CO.,

6 AND 8 BERKELEY STREET,  
AND 2 WARREN AVE.,  
BOSTON, MASS.

# THE RACING BOARD

The above head line has nothing to do with our bicycles---we simply put it there to attract your attention and to hold you while we call to your mind the superior advantages which our ARROW bicycles offer in the way of special mechanical features. We don't want to bore you with a long-winded article, but we do want you to notice our DETACHABLE REAR SPROCKET WHEEL. This is something which you should not overlook.

An extra sprocket wheel can be carried in your vest pocket and the gear can be changed with no other tool than a small pocket wrench, no alteration of the chain being necessary.

Our catalogue will tell you all about it and several other points of interest and value.

## CENTURY CYCLE MFG. CO., 295 WABASH AVE., CHICAGO.

more harm to cycling than any one thing that I can think of. I'll explain why that is so. You know what a fight the riders of bicycles had before their rights to an equal use of roads with the drivers were recognized. Finally we achieved our ends and now the man who rides the humble wheel is allowed as many privileges as the man who drives a thousand-dollar trotter. Now then, I contend that in the new boulevard, where the rider confined to the track which has been spoken of, people will again believe that his rights ought to be abridged and that he should not be allowed the use of all roads in the city as freely as the horseman. Then again, I don't believe in taxing people to build a road for bicycle riders. I say build the common roads good and then the cyclists will not ask for asphalt.

"There is a great deal of similar feeling in the local clubs and the members are likely to oppose any scheme to build a special road for riders."

\*\*\*

### West Virginia In Line.

West Virginia does not propose to be at all backward in the matter of road improvement. The Edwards bill, now before the legislature, provides "for the making and construction of public highways, and for the employment of convicts thereon." In general terms it is like the bill now before the New York assembly, and will undoubtedly be passed.

\*\*\*

### Hard at Work

The Brooklyn good roads association intends to do all in its power to have the bill passed which embraces the passage of a resolution for a cycling path to Coney Island on the right hand side of the boulevard, which shall be exclusively for the use of cyclists, and shall be made of asphalt.

\*\*\*

### Must Have Them.

"Good roads we must and will have. Vote for them! Work for them!"—New York Recorder.

And now Cincinnati threatens to tax bicycles.

Pasadena, Cal., has just organized a new cycling club.

The St. Augustine (Fla.) B. C. has secured quarters in the Mission building.

The Kentucky division meet will be held June 26, 27 and 28 at Harrodsburg.

We have heard that a Boston girl was so modest she would not ride with a man whose wheel was "stripped."

In all probability the next encampment of the South Dakota National Guard will have a company of cyclists in attendance.

The Lowell (Mass.) C. C. has elected the following officers for 1893: President, G. A. Stevens; treasurer, D. D. Snyder; secretary, Arthur Butterfield; captain, C. E. Snyder. The officers with O. Saunders and H. O. Brooks compose the board of directors.

The Jackson County Wheelmen of Kansas City, recently organized, have elected the following officers: President, A. T. Hillyard; vice-president, J. F. Cannon; secretary and treasurer, P. E. Nelson; captain, E. S. Hall, lieutenant, C. H. Curran. These, with R. A. Bruns and Charles Jaques, constitute the board of directors.

Fresno, Cal., has a new club in the Raisin City Wheelmen, whose officers are as follows: President, J. F. Ewing; vice-president, B. B. Craig; secretary, E. F. Greeley; financial secretary, B. Henry; treasurer, George H. Monroe; captain,

A. H. Greeley; trustees, E. R. Higgins, C. K. Kirby, Jr., T. G. Hart, M. A. Madary and A. J. Seamans.

The wheelmen of Harrodsburg, Ky., are preparing to have a big parade during the division meet there.

C. R. Brown has succeeded C. R. Culver as the Springfield (Mass.) Bicycle Club's gymnasium instructor.

The Ramblers' Company and Cycling Club, Chicago, has been incorporated by Emil F. Verban, F. D. Ehlert and E. G. Ledwig.

T. J. Raisbeck, of the Harlem Wheelmen, has been appointed secretary-treasurer of the New York division in place of William H. De Graff, deceased.

The Alabama division has grown somewhat. Sept. 1, last year, there were but fifteen members; by Oct. 15 there were thirty, and now the number is 150.

The new officers of the Windsor Locks Wheel Club are: President, A. W. Glover; vice-president, Joseph Reed; secretary, L. F. Saxton; treasurer, D. A. Allen; captain, H. M. Johnson.

H. A. Eibach, a Rockford, Ill., bicycle manufacturer, was arrested Saturday for criminal libel upon a warrant sworn out by Rev. G. J. Kannamacher. It is alleged that Eibach wrote letters reflecting on Mr. Kannamacher's conduct toward female members of his congregation.

The West Side cyclists of Saginaw, Mich., have formed a club and elected the following officers: President, A. E. Tomlinson; vice-president, S. W. Jennings; secretary, Charles E. Estabrook; treasurer, Charles Khuen; board of directors, J. C. Hohn, Dr. E. T. Loeffler, Oscar Archard and W. H. Overton.

The Albany (N. Y.) B. C. has elected the following officers: President, Robert C. Folger, vice-president, Charles H.

Armstrong; secretary, Charles E. Frisbee; treasurer, Henry D. Purchase; financial secretary, E. Eddy Safford; trustees, William M. Honig, George C. Angus, John R. Taylor; captain, Edward P. Van Liew.

The Milwaukee board of officers has been invited to hold the spring meeting at Grand Rapids, and has accepted for some time in April.

The Century Road Club election closed last Friday with a total of 251 votes cast. The committee has not counted the vote, and results can not be made known until next week.

California evidently holds records for one thing. Last week 385 applications for league membership were sent to headquarters in Boston. They are hustlers on the coast. Probably the dividing of the state into two divisions had a good effect.

Friday evening last thirty-seven lady cyclists met at the office of Mrs. Dr. J. B. Dillon and organized the Cincinnati Women's Cycle Club. The officers are Dr. Viola Smith, president; Miss Mary Warner, vice-president; Mrs. Dr. J. B. Dillon, secretary; Miss Ella Thielman, treasurer.

The Denver Cyclists' Union has elected the following directors for 1892: G. E. Hannan, E. S. Hartwell, J. C. Epeneter, W. T. Cornwall, J. R. Rivers, Austin Banks, J. J. Rutherford, Louis Block, O. E. Boles, A. V. Stauffer, J. A. McGuire, W. E. Miles, C. A. Stokes, E. Anderson, H. Salmon.

William A. Fletcher, 43 Van Buren street, Chicago, has just received a number of the *Cyclist's* annual and year book for 1892. He has a limited number of copies for sale, also a few National show numbers of the leading English cycling papers. The annual is a most interesting publication.

## ABOUT INDIA RUBBER.

Valuable Information for the Purchasers of Pneumatic Tires.

Without going into technicalities, we wish to give riders, in a word, some knowledge of the composition and properties of India rubber and the effect of manufacturing processes. India rubber is vegetable, the sap of trees. There are many varieties of rubber plants, from the common milk-weed to lordly trees in the forests of the Amazon. The supply of commerce is obtained from South and Central America, Mexico, Africa and the East Indies. There are over sixty varieties of rubber in commerce, and there are wide differences in quality and composition. Ordinary crude rubber has two components, fibrous and viscous, and there is much variation in the proportion of these components in different rubbers. When rubber is sheeted out by means of hot calender rolls, the fiber is laid lengthwise of the sheet; hence the sheet will resist stretch lengthwise much more than crosswise. A sheet of rubber warmed, then stretched and frozen, will retain the stretched length, or nearly so. If again warmed it will regain the original length. Rubber dissolves in naphtha, carbon-bisulphide, and mineral oils. Vegetable oils, such as castor, linseed, cottonseed, have comparatively slight solvent action at ordinary temperatures. Rubber distills at 300 deg. centigrade. It resists the action of acids and alkalis to a marked degree. It is a hydro-carbon containing no oxygen. Its specific gravity is about .97, water being 1.00. Vulcanized rubber is made by grinding intimately together rubber and sulphur, and bringing about chemical unity by means of heat. Pure vulcanized India rubber, such as used in bicycle tires, will tear like wet paper if a small nick is first made on its edge; the same piece, with smooth cut edges, will resist a powerful

things; do not listen to dishonest trade talk.

Pure rubber, vulcanized, is much more sensitive to decay than that which is compounded with mineral matter to give it body.

The compounding of rubber with mineral matters is for the same purpose as compounding linseed oil with white lead or oxide of zinc.

Different properties in vulcanized rubber are secured by mixing mineral matters into the rubber before vulcanizing. The properties, such as soft, hard, elastic, rigid, flexible, etc., are of the utmost value in fitting the rubber for thousands of purposes, and the compound is not added for the sole purpose of adulteration. Pure India rubber would be of comparatively little use for mechanical and other purposes.

The successful manufacture of India rubber is the work of a lifetime, and the thinking man can learn something new regarding it almost every day.—Morgan & Wright's catalogue.

## THE TRADE IN ENGLAND.

Evidently Picking Up Somewhat — The Persil Tire Concern.

BIRMINGHAM, Feb. 18.—The trade is at last waking up. There is no doubt about it this time. On several occasions there have been little spurts, and for some time past a few houses have been busy with special lines for foreign markets; but now the trade as a whole is hard at it, and this includes not only the cycle builders, but the makers of tires, rims, tubes, stampings, balls, nuts and bolts. Among the busiest is the Triumph Cycle Company of Coventry, which has already as many orders on its books as it wishes to have. It is working from 6:30 in the morning to 9 at night, and machines are leaving the works as fast as they can be made. M. J. Schulte, one of the managing directors, has invented a dust-proof and easily adjustable bottom bracket, which is being fitted to all the company's principal wheels, including, of course, the

have ever been able to do with a 63-inch gear and a rotary wheel. For sprinting on down-hill grades or along the level I did not like it so well, but whenever there was any hard, straight forward shoving required, it answered excellently. The machine itself was a very light one, weighing with mudguards to both wheels only 27 1-2 pounds. It was fitted with the new Dunlop detachable racing tires, and although I rode over much newly-laid metal and over all sorts of rough roads in my endeavors to test both machine and tires most thoroughly, neither showed the slightest sign of weakness or give.

The New Buckingham & Adams Company, of Birmingham, is also very busy, and is, in fact, employing two shifts of

before they could go on to purchase this also. Then they took samples up to the Harrogate Camp and having found one or two men well known in the cycling world to act as directors, they proceeded to work a few professionals and enthusiastic amateur cranks and issued their prospectus. They started the boom in Dublin, where there was big business being done in tire shares. Two brokers went over, one from Bradford, the other from London, and so rigged the market that the shares were quoted at a heavy premium. Then the promoters unloaded. In their conversations they quoted all sorts of people in praise of the invention; said Mecredy thought it faster up hill than a pneumatic and that "Dublin, the home of the Dunlop," had received it

JORDAN SPECIAL ROADSTER.

men, one lot leaving work when the others come on. In this way it is able to keep the factory going 120 hours each week.

Among the tire makers the Northern Rubber Company of Retford seems to be likely to take a prominent place with the Roth tire.

Thomas Smith & Sons, of Saltley, the big factors, have placed an order for 5,000 tires and rims, and mean pushing it thoroughly with the trade.

Mr. Middlemore is doing great business this year with his saddle, and he deserves to do so. The quality of his goods is always first-class, and in Mr. DeLatre, the manager of his cycle saddlery department, he has a thoroughly good man. The latter one day this week booked an order for 5,000 saddles and 4,500 tool bags from one firm alone.

William Bowden, of the Seddon Tire Company, arrived back from America at the end of last week and his return was immediately noticeable in all the cycle papers which this week contained particulars of his successful sale of the American patent, and also the intelligence that in Dublin the shares of the Seddon Company had risen from £3 to £13. Dunlops now stand at £20, and I am told that the directors confidently anticipate that they will before this time next year reach £25. The Persil tire shares which once reached 42 shillings are now back again at par, much to the disgust of the poor investors who bought them under the impression that they would boom in the same way as the Dunlop and Seddon shares had done. As a matter of fact there is nothing whatever in the invention to anticipate anything of the sort. The whole thing has been more or less cleverly worked by a band of company promoters, of the Hebrew persuasion, I fancy, who worked the shares up to a premium and then unloaded. I say "more or less cleverly worked" because I believe that, as a matter of fact, after paying a good round sum for the patent rights they discovered that a previous patent existed and they were compelled

with open arms. The next act is likely to be before the official receivers or the public liquidator of companies.

## CHICAGO TRADE IN BRIEF.

Where Traveling Men Are and Have Been—Small Notes.

E. V. Allison, the Louisville cycle dealer, was in Chicago last week.

Birdie Munger leaves this week for a trip through the west to sell Arrows.

M. A. Meader, secretary of the Ariel Cycle Company, was in town last week.

H. C. Tilletson is now in Wisconsin for the Stokes Manufacturing Company.

Harvey Pound was in Michigan last week for the Quadrant Cycle Company.

Mr. Daly, of Schoverling, Daly & Gales, New York, was in Chicago last week.

Otto Merpall leaves this week for a trip in Michigan in the interest of the Taylor Cycle Company.

The Stokes Manufacturing Company is preparing to supply Chicago cycloedom with bicycle suits, all of the Bloomer style.

Mr. Pratt, of the Elastic Tip Company, of Boston, called on the Chicago trade last week. He made several nice sales.

The Stokes Manufacturing Company is doing a large sundry business and has sold thus far this season more sundries than it sold all last.

L. W. Conkling will not go to Salt Lake City this trip, but at Lincoln turns back. After reaching Chicago he will take an eastern trip.

A. B. Perkins, of Perkins & Richmond, Grand Rapids, Mich., was in Chicago last week with W. T. Wilmarth, of the Grand Rapids Cycle Company.

Morgan & Wright have had much new machinery put in the factory, and with two shifts of men, working night and day, are making probably as many tires as any concern in the United States. The firm is receiving orders in great

JORDAN SPECIAL LIGHT ROADSTER.

pull before breaking; this is important to know in judging of the quality of a rubber tube or sheet. We have many times seen a heavy man skidded the length of our office by pulling hand over hand on one of our inner tubes, and the same tube can be picked to pieces by an enterprising salesman who cultivates a sharp thumb nail. When testing a piece of pure rubber, look below the surface of

Chicago Triumph. I found him the other day experimenting with an elliptical sprocket, which he believes has not yet been thoroughly exploited. For his own part he is inclined to believe it. At his request I went off for an hour's ride on one of his latest pattern wheels fitted with elliptical sprocket, and although it was geared to 68 inches, I found that I could ride up-hill more easily than I

ALBERT W. MOORE,

Sole U. S. Agent.

Masonic Temple, Chicago, Ill.

numbers from all parts of the country and from unexpected sources.

The Century Cycle Manufacturing Company, of Indianapolis, is rushing things. The Chicago house received a shipment of Arrow safeties last week.

J. C. Patterson is on the road for the Century Cycle Manufacturing Company. Mr. Patterson is well known through his connection with the Chicago Bicycle Company.

The Quadrant Cycle Company now has on exhibition samples of its '93 machines. The light road wheel weighs 27 pounds. The ladies' wheel is a very handsome machine.

E. C. Bode was in the east for the Hill Cycle Manufacturing Company last week. He has made his last trip for the season, the company having practically sold, according to report, its output.

"General" Poorman, the Cincinnati cycle dealer, has written the Marble Cycle Company, expressing himself well pleased with the '93 model and well convinced that the Marbles will be "right in the swim."

W. M. Richmond, a prominent cyclist of Knoxville, Tenn., was in Chicago last week. Mr. Richmond left on Monday to visit the Ariel Cycle Company's factory at Goshen, Ind. He has arranged to handle Ariels in Tennessee and territory adjacent.

F. Howard Tuttle, representing E. C. Stearns & Company, Syracuse, N. Y., was in Chicago over Sunday, having just returned from the west. He carries with him samples of models A and B Stearns, weighing 28 and 34 pounds respectively. The Stearns is certainly a handsome, well-designed and well-made wheel. The brake of the model B is a feature. The rod which connects the brake spoon and the lever extends through the head, entering at the top of

the handle-bar, and is readily removed. The bearings of the Stearns seem to be exceptionally good, inasmuch as the wheels run evenly and smoothly. Mason & Mason have been given the agency for the west side.

Fowler safeties will be handled on the west side by the Graham Cycle Depot, 786 West Madison street, opened this week by C. E. Graham, of the Cook County Wheelmen. F. H. Brown, the likely young flyer of the Cook County Wheelmen, is connected with the company.

Two very clever ideas of Munger's are embodied in the Arrow, made by the Century Cycle Manufacturing Company. These are the pedal attachment, which allows of a material narrowing of the tread, and the detachable rear sprocket wheel, by which the gear may be changed at short notice without taking a link from the chain. The extra sprocket wheel may easily be carried in the pocket.

The C. H. Sieg Manufacturing Company has had its store at 275 Wabash avenue handsomely fitted with electric lights. On the north wall is a large frame with black background, on which a full line of nicked cycle accessories is displayed, and on which a cycle wheel will be arranged to revolve by electricity. Along the rim of this wheel colored electric lights will be placed, the whole presenting a novel appearance.

## SEASON BEGUN AT BOSTON.

*The Prominent Dealers Hold Receptions and Serve Lunch.*

Washington's birthday in Boston is usually the opening of the season in the cycle trade, and as a result a majority of the dealers held their annual openings at that time. The McCune Cycle Company, however, put the mat-

ter off for a week, or, rather, to Friday. The new Boston office at 47 Franklin street has been handsomely fitted up and no less than a thousand invitations were issued to attend the opening, and of that number fully 800 responded. The large gymnasium room was cleared and shortly after 8 o'clock dancing began, lasting until well into the night. Refreshments were served and addresses were made by several of the visitors, as well as the members of the company. Among those from out of town who were present were: E. C. Bode and N. H. Van Sicklen, Chicago; H. J. Hall, Raleigh Cycle Company, New York, and W. W. Taxis, the Philadelphia racing man.

The Union company on Washington's birthday served a fine lunch to all those who braved the storm in order to see what the concern had to offer the trade for this year.

Gormully & Jeffery had a band in attendance, as it was their first day open to the public since remodeling the store.

The Overman Wheel Company's store, which has recently been enlarged and remodeled, was also thrown open to the public on this day.

Sidwell & Sabin had a display of their new wheels, besides a full line of Quintons.

The A. O. Very Cycle Company opened its store with a display of Libertys and Warwicks, which are its leaders, as well as the Royal, Eclipse, Central and Buffalo cycles.

Singer & Co. have a large stock of wheels on hand. They have hit upon a new idea, guaranteeing wheels forever rather than for but one year.

W. W. Stall has a full line of Clevelands, Darts, Hartfords, Bostons, Monarchs and other wheels, besides his own special, ranging in weight from 24 pounds upward.

Mortimore & Co. opened on Washing-

ton's birthday at Houston's old stand, 69 Berkeley street, and showed a full line of Psychos and Vikings.

William Read & Sons, flooded with orders, were anxiously waiting for the snow to disappear so that they could begin shipments. The trade in Boston appears to be in a healthy state and the dealers look for a good business this spring.

## RECENT ENGLISH INVENTIONS.

*New Ideas in Tires, Machines and Other Devices.*

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Jan. 18, 1893, give notice in the prescribed form of such opposition.]

## SLEEVES FOR AIR-TUBE POCKETS.

No. 4,438. J. Moseley and B. Blundstone's "Improvements in and connected with pneumatic tires." March 7, 1892.—This invention relates to pneumatic tires in which the air-containing tube is included within a canvas or similar tube or pocket. In such tires it is frequently necessary to examine and repair the air-containing tube or valve through which it is inflated, for which purpose the pocket has to be opened and afterwards stitched or otherwise secured. The object of this invention is to avoid the necessity for the stitching or patching of the pocket after examination or repair of the air-tube or of the valve, and to make that part of the pocket which may have been opened stronger rather than weaker than before. In order to effect this one or more sleeves of canvas or textile tubing are arranged around the pocket and one is drawn over the opening which has been made in the pocket after the air-tube or valve has been attended to. The sleeve effectively closes the opening in the pocket and permits the tube to be safely inflated. In the case of the sleeve arranged to protect the opening through which the valve passes, a hole is made in it for the passage of the valve, so that when the air-tube is deflated the valve may be readily withdrawn. One of the sleeves may, if desired, be

HAPPINESS WITHIN THE REACH OF ALL.

An even temper and cheerful smile  
Are blessings we all admire;  
Would you have these graces all the  
while;  
Just ride the Cleveland Tire.  
No other can with it compare  
In causing happy faces.  
You'll never once have cause to swe-  
sigh;  
For—you'll win in all the races.

We believe the Cleveland  
Pneumatic Tire to be the ONLY  
Scientifically Constructed  
Pneumatic Tire on the market.

The longitudinal threads  
have been omitted from the  
tread portion, making an ex-  
ceedingly Light, Resilient  
and Swift Tire.

OVERSTONES==='93

GENTLEMEN:—

We have still some territory to let, and require good responsible agents to work it thoroughly.  
WHEELS ARE RIGHT, PRICES ARE RIGHT. What's the matter with writing for  
prices and terms? If not, why not?

Yours respectfully,

For LOYD, READ & CO., (Coventry.)

ARTHUR E. FLAVELL.

P. O. Box 2225,  
NEW YORK CITY.

AS A SUPPLEMENT

To former advertisement, we desire to state that the increase in  
demand for our Cement has been geometrical. In 1890 we sold 97,000 lbs. In 1892  
more than 250,000 lbs. have left our factory, and has been consumed in the United States.

|                           |                                         |                                 |                                   |                                                   |

## PERRY & CO., BIRMINGHAM.

A complete assortment of these goods carried in stock by the Anglo-American Iron & Metal Co., 213 Pearl St., New York.

employed to cover the ends of the pocket to strengthen their junction. In most cases, since the deflated tire may be drawn through the pocket for a considerable distance, instead of opening the pocket at the precise spot where repairs to the air-tube are required, it will suffice to have permanent openings at equal distances apart, each of which is normally covered and protected by one of the short sleeves. Thus, when it is necessary to mend the air-tube it is deflated, the nearest sleeve is drawn back, and the air-tube is pulled through the opening until the part to be repaired is exposed. If the permanent openings are employed, their edges may be bound, or be protected by tapes solutioned or otherwise secured thereon. These sleeves are now used on the Heale tire.

### A PROMISING PNEUMATIC.

No. 4,469. E. J. Pippet's "Improvements in and relating to pneumatic tires." March 7, 1892.—This invention relates to an improved method of attaching the outer cover of a pneumatic tire to the rim so as to facilitate its removal in case of repairs or otherwise. The rim (A) is of the ordinary crescent or any other suitable section. The cover (B) is made of rubber reinforced with canvas in the well-known manner and is preferably molded in an approximately arched shape in cross section. The edges of the cover (B) are enlarged in any suitable manner to form beads (b b). Over the rim is placed an end-

less band or hoop (C) made of any suitable metal or material—preferably tinued steel. This band or hoop may be either flat in cross section or curved, and it preferably has its edges beaded as shown. When the band or hoop (C) is made curved it is preferably made flexible at the centre of its width by perforating it with a series of holes, so that the pressure of the air-tube on it causes it to flatten out and so more tightly grip the cover or to the rim. The air tube (D) is of the usual construction, made of pure rubber, and it is fitted with any suitable form of valve for inflation and deflation.

To attach the tire to the rim the air-tube (D) is first placed over the band or hoop (C). The band or hoop is then pushed over one edge of the rim (A) until one edge of the cover (B) can be placed between the edge of the band or hoop and the rim. The band or hoop is then pushed back over the other edge of the rim and the other edge of the cover is placed in position. The band or hoop is then pushed back into a central position as shown

in the figure, and the air-tube is inflated. To remove the cover to get at the air-tube this process is reversed. An alternative method of removing or attaching the cover is to prise the endless band or hoop up with a screw-driver or lever on one side until the opposite side if the cover can be withdrawn or inserted as the case may be.

### THE REFEREE CHAIN.

No. 4,787. G. L. Morris, W. T. Wilson, N. H. Strickland and H. Parsons' "Improvements in and relating to driving chains." March 11, 1892.—In this chain every link is like the others but the chain may be made in different pattern, the illustration showing one of them. All are on the same principle, the end of one link being made to pass between the forked ends of the next and so on. The two ends of the link may be connected either by a single bar or by a pair of bars; in the latter case they are preferably extensions of the fork. To prevent the sides of the fork closing up as the connecting pins are riveted up the eyes of the

bosses are provided with bushes which keep the sides of the forks apart. As these bushes are loose they may be readily hardened, thus allowing the rivets or pins to be soft, which facilitates the making up of the chain. Referring to the drawing, A represents the boss at one end of the link and A1 the fork at the other end, the boss of one link being fulcrated to the fork of the next by the pin (a). When two side bars are used the boss is preferably recessed to allow the chain to be of one uniform exterior width, and the link may for convenience in construction be divided longitudinally into two parts by splitting it centrally and vertically through the boss.

### The Jordan Specials.

Probably no wheels placed on the market this season have a neater appearance than the light roadster and roadster made by Louis Jordan, 71 Randolph street, Chicago, illustrations of which are shown in this issue. The wheels weigh 25 and 32 pounds, respectively, and list at \$150 and \$140. Weldless steel tubing is used throughout, the joints being lap-brazed, Bown's bearings are

also used. The wheels are 30-inch front and 28-inch rear, handle-bars bent to suit the purchaser, gear and tires as desired. Mr. Jordan's reputation as a fine repairer and gunsmith is a guaranty as to the quality of the material, workmanship and finish.

### The 1893 Road Queen.

The Road Queen for 1893, manufactured by A. Featherstone & Co., Chicago, is a wheel that should strike the popular fancy. A REFEREE representative was shown a sample last week. It was fitted with the Dunlop detachable tires and did not exceed 33 pounds in weight. The dress guards, made of light perforated metal, seem to be all that could be desired; the pedals are small, neat and exceedingly smooth running.

When the machine was lifted and the rear wheel set in motion it ran noiselessly and smoothly and its oscillating properties were greater than the patience of the man lifting the machine, and this while the bearings were adjusted so accurately that not the least side motion was noticeable. All in all the Road Queen is a splendid wheel, handsome in design and finely finished.

### Derby Cycles for Chicago.

The Derby Cycle Company, 162 Canal street, Chicago, is working two forces of men, night and day, to keep up with its orders. J. N. Townsley is now in Ohio. It is said of Mr. Townsley that he never strikes a town but that he places an agency and the agent then appointed is always the leading one in the town. In Chicago, Derby cycles will be handled by Whitcomb, Fowler & Co., 591 West Madison street. Mr. Whitcomb has been for some years connected with the White sewing machine, and is known as a hustler. The firm will handle the retail trade of Chicago from the west

side store and will canvass the city thoroughly and appoint sub-agents among hardware dealers. The Derby catalogue for '93 is an artistic piece of work, the cover being in three colors with the trade mark in the center. This is a wheel with a number of horse shoes in the center. These are of course emblematic of good luck, significant of the happiness coming to a rider of the Derby. Over 150 men are now employed by this company.

### A Good Deal.

Whilst in Detroit this week W. M. Perrett, representing the well-known Quinton Scorchers, was successful in closing with the Schulenburg Cycle Company of that city for the state agency. This house originally intended to make New Howes its leader, but being disappointed in shipments, decided to handle the Bretz & Curtis Manufacturing Company's famous wheel and push it. The fact of the Quinton enjoying a splendid reputation for workmanship, we are safe in saying that the Schulenburg Cycle Company has made no mistake in its selection.

### Contains Interesting Matter.

Morgan & Wright's catalogue made its appearance last week. The designs of the tires manufactured by the firm are shown, together with information regarding the diameter of rims for the various models. A chapter on repairs and how to make them is an excellent idea. Photographs of a rider in the various stages of making a repair indicate very clearly that it is not necessary and is a loss of time to take a tire off the wheel to make a repair. A chapter on India rubber and its properties, another of notable rides of the season, and yet another of records held by riders using the tires, are included in this book. On

Have You Examined

---

---

THE CREDENDA PNEUMATIC TIRE?

---

---

You will find it a strictly High Grade, Inner Tube Pneumatic, and a mighty good one, too. Not a cheap hose pipe. Not so bad that we have to promise to give you a new one next year before you will have it at all. Do you know that \$6.00 a wheel is a pretty good price for hose pipes? Smart buyers usually get them for \$9.00 per pair. **CRE-DENDAS** are not fitted with hose pipes. We don't build them that way. They are "**GOOD AS GOLD**" and sell for \$115.00.

A word to the wise is sufficient. Send for catalogue.

the back page, the prize list for '93 is published. This may be seen in the firm's "ad" in this issue.

### Wouldn't Let Him Go.

Hal W. Greenwood was a fortunate man last week, inasmuch as he held two excellent positions in the cycling business. Hal was in the employ of Kingman & Co., of Peoria. This firm wanted to send him to the Pacific coast. He would not go without his wife, so he resigned, and accepted a position with the Thorsen & Cassidy Company. He had arranged to leave for Michigan when a telegram was received from Kingman & Co. refusing to let him go. He could not prevail upon them to do so, and left last week for Kansas City, accompanied by his wife. Kingman & Co. are more than pleased with his work in the past.

### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

492,060, 492,061, 492,062 and 492,063, tricycle; Waldo V. Snyder, Canton, O.  
492,285, bicycle gear; Emil Gundelach, New York; filed July 23, 1892.  
492,375, bicycle saddle; William Steers, Boston, Mass.; filed March 30, 1892.

### Back to the Old Love.

George M. Hendee has decided to return to his old home, Springfield, Mass., where, as a boy, he was the town's idol. On Wednesday last he announced to Hulbert Bros. & Co. his intention of leaving them, which he will do in about two weeks. He goes into business for himself. He has secured the Indiana line for small territory and expects to get the Rudge for the whole of New England. His business will be in operation in about a month.

### Fletcher Is Manager.

W. A. Fletcher, the popular cycle news dealer, 43 Van Buren street, has been made manager of the Columbia Bicycle Livery, the headquarters of which will be at his store, with branches at all the parks in the city. Mr. Fletcher believes that the transportation facilities for world's fair use are entirely inadequate and that many out of town wheelmen will be only too glad to be able to rent wheels. He will rent nothing but new wheels, which will be fitted with 11-2-inch cushion tires. Pneumatics will be kept on hand, of course, but he thinks the cushion will prove most desirable.

### Miscellaneous Trade Talk.

George K. Barrett returned from his eastern trip last Saturday.

George Collister, of Cleveland, and W. E. Metzger, of Detroit, did New York and Hartford together after the Philadelphia meeting.

The National Columbian United Wheelmen's Association has favored the REFEREE with a large, neatly framed picture of its building.

Mr. Wyman, formerly with the Simonds Rolling Machine Company, and now representing the Indiana Bicycle Company, covers all the New England territory for the latter concern. His

headquarters are still at Fitchburg, Mass.

Hammond & Cooley, Batavia, N. Y., now turn out 300 pairs of pedals weekly. Considerable new machinery has recently been added and a large force of men is at work.

O. C. Rellihan, of A. G. Spalding & Bros.' bicycle department, captured the Plzen Cycling Club's order for seventeen bicycles. Victors, at list price and for cash, was the order.

Among the new corporations is the F. H. Henning Cycle Company, of Peoria. The capital stock is \$5,000 and the incorporators Frank H. Henning, George B. Foster and Howard W. Pouter.

W. Christiansen, of the Columbia Wheelmen, has entered the employ of George E. Lloyd & Co., Jackson and Canal streets, who have the agency in Cook County for Cleavelands, and handle Victors and Credendas.

The Truesdail Machine and Arms Company, dealer in sewing machines, bicycles, etc., at 604 North Fourth street, St. Louis, has assigned to Robert H. Hern, for the benefit of creditors. The assets are placed at \$9,000.

Mr. Perkins of the Rockaway Manufacturing Company tells us he has between 500 and 600 men at work, and that the output of Libertys will reach 8,000 this year. The concern has thirty acres of ground and the buildings cover 60,000 feet.

After the Philadelphia meeting, Fred Patee ran over to New York and sold a good order of Indiana wheels to Hulbert Bros. & Co. He also placed the agency for the Springfield, Massachusetts district with George M. Hendee. Patee left for the Hoosier capital Thursday night.

Five cycle salesmen were in Oshkosh, Wis., Sunday—H. C. Tilleston, Stokes Manufacturing Company; S. T. White, Monarch Cycle Company; Martin Bowbeer, Lindsay Bros.; Milwaukee; Crane, of the Racine Hardware Company, and Winter, of Hibbard, Spencer, Bartlett & Co.

The Aeolus Cycle Importing Company has removed from 527 to 727 Garden City block. The location was opposite the entrance of the Italian consul's headquarters, and wheelmen found it impossible to pass through the stench of garlic and cigarettes made by the "dagos" waiting for an audience.

### What The Recorder Thinks.

According to the rules, no rider can accept pay from a maker for riding a wheel. Oh, what a farce! What hypocrisy! Within the week three manufacturers, to my certain knowledge, have opened negotiation with Johnson, which includes his trainer, Eck. If the deal comes to light, what will the racing board do in the premises. Every one interested in cycle racing knows men are paid for riding wheels. What show does a man stand in a race against these makers' amateurs? None at all. The former rides at off times, the other is fit and fine, from the opening of the season to the close. One is a racer, the other a roadster. It does not make any difference what distinction is made as long as the difference is shown open and above

board. Take a race meet with sixty to one hundred entries. A dozen cracks take all the big pots, and the novices (?) and second-raters get all on the outside. Stringent rules are now in force and we wait developments. — New York Recorder.

### Wheelmen as Curios.

Our bicyclists, about eighteen in number, are wishing for a nice spell of weather so they can take a spin of a few miles, the plan now being to go west. In their behalf, should they go as far as Phillipsburg, the *Journal* asks that they be not monkeyed with, even if some of them do venture out with short pants and a little different from the ordinary paraphernalia. Our bicycle club is all right.—Smith Centre *Journal*.

Phillipsburg always takes good care of Smith Centre people. Send the "curios" over, Brother *Journal*, so that our people can see what they look like.—Phillipsburg (Kas.) *Herald*.

### The Perfection Stand.

Every dealer, agent and wheelman should have one. Price, full nickel, \$2.00; nickel and enameled \$1.50. A liberal discount to the trade. Write for illustrated sheet. The bicycle is released instantly from the stand by pushing lever down with foot. Manufactured by H. T. HEARSEY & Co., Indianapolis, Indiana.

Send For Prices AND TRADE DISCOUNTS OF RANKIN'S PAT. TOE CLIP. Sample Pair by Mail, 50c.

## CONTRIBUTORS ALWAYS WANTED.

We are always ready to pay for live, entertaining contributions. If you have anything to offer, send it along. We want correspondents in cities where the REFEREE is not already represented.

## TO THE NATIONAL ASSEMBLY.

We have about come to the conclusion that any man connected with the cycling press who imagines the rest of the cycling world will, under any circumstances, deem it possible for him to perform an unselfish action, is akin to an idiot. We have tried it and know whereof we speak. Nevertheless we deem it fair to ourselves and to other cycling journals to state that the man who, at the recent assembly meeting, accused all the papers "except the *Bulletin*" of making fun of and belittling the league had either very little regard for the truth or a very limited acquaintance with the institution he sought to rebuke.

Every cycling journal controlled by men of average common sense is a friend of the league. Every one of them realizes that on the league depends, to a very great extent at least, the future of cycling. League or no league, cycling will go on forever, but it is only by organization that the good work now and heretofore carried on can be accomplished.

But the cycling press is not, by reason of its friendship, made blind to the necessities and the shortcomings of the league. The press is in a better position than nine-tenths of the men in power to judge what the members desire. No constitution, no president, no executive committee, no chief consul, no racing board, no official organ is perfect, and if the cycle press can discover in any of these a flaw which can be remedied, what is its duty? To stand idly by? To flatter the administration and find nothing but cause for praise in its actions? No. Rather, we think, does the press show its friendship and its desire to improve and perpetuate the league by pointing out such errors as may be found.

In the constitution of the league the editor of this paper discovered a clause which seemed to him to imperil the life of the league's official organ. He suggested an amendment which seemed to cover the defect. What was the result? The president and the chairman of the

committee on rights and privileges (the latter a member of the organ's editorial staff) took the floor and created the impression that the proposed amendment cloaked a scheme to injure the *Bulletin*. They could not believe it possible that anyone, in the same line of business, should bring forward a proposition which was designed solely for the benefit of themselves and their paper. So they took the bull by the horns and left the impression on the minds of the assembly that the proposer of the amendment had been actuated by selfishness to such an extent as to attempt to rob the league of its official organ.

If the gentlemen referred to have since taken the trouble to investigate the matter they must know that they were guilty of an unwarranted and altogether contemptible action. But they have not thought it worth while to explain away that a tion, or to try to remove the impression they created.

In consequence of this all sorts of preposterous reports have been circulated. Here is a specimen clipped from a late issue of a small cycling journal:

For some time past the REFEREE has had a series of amendments printed therein and the public invited to vote upon them. No one ever noticed one insignificant little line that read thus, "Except as hereinafter provided," and truth to tell that one line did not appear among the questions that the votes are being solicited for.

Samuel sends in his little list of amendments and explains that they are offered in accordance with the mail vote taken.

Strange to say no one analyzed those amendments, and until they were taken up in the assembly for action, no thought was given as to the chance of such a boomerang, and it remained for Mr. Dean, of the *Bi. World*, to see through the little scheme and he forthwith exposed the same. Had the amendments gone through it would have been all up with the league's *Bulletin*.

The man who wrote this accepted, blindly, the statement of the gentlemen referred to above. Had he looked for facts he would have discovered that there is not an iota of truth in his remarks. Mr. Dean "saw through" no scheme. Items of this kind show that it is necessary that some explanation be made. Therefore we rise for that purpose.

We quote from the constitution of the league, as it stood prior to the late meeting:

Article 3, Section 4. (a) Each applicant shall pay to the secretary of the league an initiation fee of one dollar and the sum fixed by the division of which he shall become a member or by this constitution for annual dues.

Article 7, Section 1. The league shall provide and furnish an official organ to be known as the *L. A. W. Bulletin*, which shall be distributed to the membership without charge.

Now let us turn to the by-laws a moment. Here we find this—

Article 1, Section 6, last six lines:

Any division may, by a majority vote of its board of officers, reduce by the amount of twenty-five cents the annual dues and renewal fees to any member not desiring to subscribe to the publications of said bureau [the road bureau] and the *L. A. W. Bulletin*.

It will be evident to everyone that this portion of the by-laws was unconstitutional. The constitution provided that every member shall receive the *Bulletin* without charge, while the by-laws refer in so many words to a "subscription." The constitution furnishes the fundamental laws of the organization; therefore the *Bulletin* was bound to be forwarded free to every member. There was no charge for it whatever; no consideration, no subscription price.

Now, what do the postal laws say on the subject?

We quote then:

## SECOND CLASS MATTER.

The conditions upon which a publication shall be admitted to the second class are as follows:

Here follow the conditions and then (see Chicago Quarterly Guide, page 18),

Provided, however, that nothing herein contained shall be so construed as to admit \* \* \*

publications \* \* \* for free circulation or for circulation at nominal rates. \* \* \* Subscription price must be shown [see page 20, Chicago Quarterly Guide] by the publication, and will be deemed nominal within the meaning, etc., when \* \* \* the publication is issued for and distributed among the members of a society, association or club upon payment of regular dues, with no distinct and sufficient charge for the publication.

Under this law was it legal to mail the *Bulletin* to league members at the second class rate? We think not. But, had we realized that by trying to keep the organ out of the difficulty we should have been accused of half the crimes in the calendar, we would have seen it at the "demonstration bow wows" before moving a finger.

To try to straighten things out, the editor of this paper suggested amendments which would have removed all reference to the matter from the by-laws and would have made those portions of the constitution which have any bearing on the matter read as follows:

Article 3, Section 4. (a) Each applicant shall pay to the secretary of the league an initiation fee of one dollar and the sum fixed by the division of which he shall become a member or by this constitution for annual dues, EXCEPT AS HEREINAFTER PROVIDED.

Article 7, Section 1. The league shall provide and furnish an official organ, to be known as the *L. A. W. Bulletin*, the subscription to which is included in the dues hereinbefore provided for.

Any division may, by a majority vote of its board of officers, reduce by the amount of twenty-five cents the annual dues and renewal fees to any member not desiring to subscribe to the publications of the league.

These suggestions were offered in the belief that they would lead to such amendments as would place the *Bulletin* beyond all harm. If there were any legal points involved which were not thoroughly covered, the league has a committee, composed largely of lawyers, to which all amendments are supposed to be referred, which should have suggested such changes as were necessary. For example, the proposed change did not provide a "distinct and sufficient charge" for each of the league's publications, a point which the committee on Rules and Regulations, whose duty it is to "present in proper form" all amendments, should have covered.

We presume that every intelligent reader has long since discovered that the harmless words, "except as hereinafter provided"—the boomerang, the scheme, the death-knell of the *Bulletin* over which there has been so much anxiety, related, wholly and solely to that clause which provided for a reduction of twenty-five cents from the dues of those members who didn't care to subscribe to the league's publications! Perhaps the people who have maligned us will now have the manhood to acknowledge their error or explain to those who have been misled wherein lies the "scheme" which caused their fear and trembling. We have stated our case. The gentlemen who think so lightly of the cycling press are cordially invited to state theirs. Our columns are open to them.

One word more. We stated last week that the mailing of a loose supplement with the *Bi. World* was not in accordance with the postal laws. We find, however, that the supplements have contained no advertising matter. This being the case, the supplement is legal, and we hasten to correct our error.

## EDUCATE THE FARMER.

"Print and paper are wasted in sending good roads literature to cyclists who are already converted; the farmer should receive it instead." So, very wisely, remarks Mr. Harris, the chief consul of Kansas, in an article in this issue. Kansas, says Mr. Harris, is an agricultural state; all our energies must be directed toward the education and conversion of the farmer. Mr. Harris only voices the

sentiment of thousands in this matter.

We venture to say that one-third of the issue of *Good Roads* distributed judiciously among the granger element and the men who frame our laws, would do more for the cause than do the 35,000 copies sent to league members. It is, perhaps, necessary to keep the league member posted on the progress of events, but this can be done through the medium of the *Bulletin*. What percentage of the league's members reads *Good Roads*? We believe more of them read the *Bulletin*, and are sure that very many more read *Bicycling World*.

The importance of Mr. Harris' suggestion has not been urged with sufficient force heretofore, and the executive committee has, perhaps, been beset with too many difficulties during the first year of the magazine's life, to give it such attention as is its due. But now *Good Roads* is prospering; it has a large advertising patronage; it is, as the president told the national assembly, \$3,200 ahead, and is therefore, doubtless, in such position that its managers will be better able to judge whether the present channels of circulation are the most desirable and the most likely to achieve the desired results.

## WHO AND WHERE IS MR. BROWN?

It matters little to Independence whether one Brown or the L. A. W. racing board, or any other authority accepts Johnson's 1:56 3-5 for a flying mile. Independence has accepted it and so have a majority of independent American record preservers. But who is the man Brown who, it was alleged was about to make such a terrible expose? Is there such a man as Brown in the record town of Independence?

The following letter from Mr. Williams, a man (according to the turf papers) of unquestioned integrity, should seal the already tightly closed mouth of Mr. Brown. Technicalities may prevent the acceptance of the record, but that Johnson's performances were honestly accomplished there seems no doubt. Mr. Williams' letter is as follows:

INDEPENDENCE, IOWA, Feb. 21.—There has never been any question by people living here as to whether or not Johnson obtained his record over this track according to rule. Hundreds of people saw him accomplish the feat, and nearly as many watches timed him during the journey. I drove the runner and timed him as accurately as it is possible for a person to do under the circumstances, and I am satisfied that there is no ground at all for anybody questioning the record. Our track has been measured several times by the county surveyors, and I can furnish you, if necessary, affidavits from them as to the length of same.  
C. W. WILLIAMS.

For the purpose of setting at rest all disputes over the matter, we have requested Mr. Evans, a gentleman whose name figured prominently in connection with these records, to obtain for us affidavits as to the times and distances, particularly from the starter as to the exact distance Johnson was set back at each trial. We have no doubt, whatever, as to the times and the acceptance or rejection of the record depends mainly on whether it can be shown that Johnson traveled the full distance in each trial.

## THE LEAGUE ACCOUNTS.

At the recent meeting of the national assembly L. A. W. Dr. Brown explained in detail the method of checking and paying the bills of the league. It was generally conceded to be an excellent one, but the doctor omitted to explain that the system was due to the inventive genius of the treasurer, Mr. Brewster. But, no matter how perfect the system may be, there was merit in the stand taken by the Massachusetts men that a committee should be appointed to examine the accounts. It was not that they de-

sired to check over the "additions, multiplications and divisions," as the president sarcastically suggested, but they believe, and the average member will probably agree with them, that no committee should be the sole judge of what is right and wrong, desirable or undesirable in the matter of expenditures—in fact, should have absolute control of the funds of the league. In a sense the league is a corporation and every member is a stockholder. Where is the company which permits three of its officers to control its funds, and never calls for an examination? What club permits three of its officers to carry on its financial affairs in this way? As Mr. Perkins very properly stated, it is not a question as to the committee's integrity—it is a question of business. No man, and no committee has the right to expect such a privilege. As well might the treasurer complain because he is expected to give a bond, as the executive committee because an examination of its expenditures is asked. "Some men are bald on the outside, and some are bald on the inside," remarked Mr. Potter, and, judging from the fact that the financial statement was swallowed whole by the assembly, without the least hint being given as to the uses to which the money had been put, we judge that Mr. Potter was right and that the final passage of his remark is particularly applicable to that body of men to which it was addressed. It need hardly be said that no one who took part in the discussion on this question doubted for an instant the accuracy of the report so far as figures went. What they wanted to know was to just what purposes the money was devoted, and they had the right to know it. But, unfortunately, might isn't always right.

## SERVES HIM RIGHT.

On Monday a decision was rendered by Judge Dunn on the sidewalk question. He held that the ordinance of the city of Evanston prohibiting bicycle riders from riding on sidewalks was a valid one. The case came before the court on an appeal taken by Ben W. Lord, who was fined \$10 by an Evanston justice for riding his bicycle on the sidewalk. The defense held that the ordinance was unreasonable and beyond the power of the city to pass, and therefore void. It is to be hoped this is the last of such cases. They only hurt the cause of cycling. Wheelmen have been fighting for years for their rights on the road, acknowledging all the time that they have no business on the walks. And now comes a man living in that enlightened suburb, Evanston, who seeks to spoil all the good work done. Mr. Lord and his attorney should have known that bicycles have been declared vehicles by nearly every state supreme court in this country, and of course, as such, have no rights on sidewalks. But for this Evanstonian's ignorance he must pay well, not only the fine of \$10 imposed by the justice, but the court costs as well. It serves him well right, will be the verdict of all wheelmen.

THE amount of ignorance displayed by supposedly well posted cyclists is astonishing. Right in Chicago, where there exist several cycling papers, and where the dailies devote column after column to cycling in all its branches, there is a frightful lack of knowledge even among league and club members. Several days had elapsed since the close of the National assembly and the publication of reports of its proceedings, yet hardly one in a dozen prominent cyclists knew of the changes in the racing rules and the constitution. It is not expected that all cyclists shall be posted on such affairs, but it does seem reasonable to expect racing men and those who talk nothing but cycling to be familiar with at least the important changes. It would seem that wheelmen would rather hear the news than read it.

Among the callers at our eastern office recently were: Mr. Ensworth, H. A. Lozier & Co., Cleveland; Fred Coningsby, Brooklyn; W. S. Maltby, A. A. Zimmerman, Joseph McDermott, W. H. Kirkpatrick, W. H. Barber; W. G. King, Ames & Frost Company; R. F. Kelsey, *American Wheelman*; Charles Randall, Chicago; Mr. Collins, Collins & Nutall, New York; H. C. Palmer, *Sporting Good's Dealer*; Norman Bartons, Roy Oiler Company; V. J. Kelly, Philadelphia; Henry Crowther, *Bicycling World*;

monthly started by Frank Mudd of the latter city, and afterward relinquished to "Bob" Polk. The writer met this gentleman in Senator John Morgan's state eight years ago, and had not forgotten the genial Robert, but was rather agreeably astonished to find that he was President Richmond's right hand man in the building of the finest quarter-mile track in the south, if not in America. It certainly is the most radical departure in track building, and it is safe to predict a most prosperous future for cycle racing in Savannah—and a prominent national position for the cement track.

Mr. Polk is manager of the telephone exchange and held a similar position in Montgomery, while President Richmond is the principal of the Commercial Col-

Arthur Flavell, Loyd, Read & Co., Coventry; W. Shaw, Baltimore; H. E. Salt-onstall, Elizabeth; A. J. Cahill, Buffalo Wheel Company; Fenton S. Fox, Sercombe-Bolte Manufacturing Company; E. S. and John Seddon, Seddon Tire Company, Manchester, Eng.; Harry Chapman and wife, Leicester, Eng.; George M. Hendee, Springfield, Mass.; Charlie Price, New York.

\*\*\*

## Attractions of Savannah.

Readers have been told all about the sea trip from New York to Savannah, and the warm reception by the monarch of entertainers—the Savannah Wheelmen. It would take columns to record the many—yea the multitude of big and little courtesies extended to the party.

President C. S. Richmond of the Savannah Wheelmen, is to be congratulated, and so is R. H. Polk, known to cyclists of auld-lang-syne as "Bob" Polk, ex-editor of the *Bicycle* of Montgomery, Ala., a

lege Institute in Savannah. Chief Consul Whiteside—a bro'h of a boy surely—W. J. Lindsey (of Lindsey & Morgan, cycle agents), are all prominent in Savannah cycling, as well as others whose names are less familiar to the writer. Jay J. Ross, who sells Imperials for Ames & Frost, did good service as judge, and Stillman G. Whittaker as announcer made the official positions of W. C. Marion, "Birdie" Munger and "Billy" Perrett shaky in the extreme. The Boston announcer mingles comedy and lurid "joshing" for the benefit of grand stand and "bleachers" and the most cruel sallies failed to upset his sang froid.

"Whit" in announcing a six-year-old midget, who gave a quarter-mile dash, stated that "this young man will endeavor to beat Jack Prince's quarter-mile record of 26 seconds, which the L. A. W. won't accept." On the conclusion of the dash, he announced that five seconds had been clipped from John Shillington's performance, which made

the grand stand howl with delight, and Prince, who was present, roll on the grass in the enclosure. Whittaker wore a diamond the size of a teacup, and looked imposing in a ship's officer's gold-laced cap, with English bloomers for leg-wear.

The track itself is bounded on one side by mammoth fragrant Georgian pine trees; and on the other, a little distance away, by a forest of beautiful oaks, draped with graceful wavy moss, which hangs veil-like from the branches. Sweet smelling, budding and blooming fruit trees line the way on the road to the track, and if the American continent had been searched a more charming place for a track could not have been found.

The Savannah climate is simply superb in winter and the blooming camellias in the public park, and the perfect forest of sturdy trees which fill the park and line the street, give the city the right to the title of "the forest city." The people are charming and hospitable, the young men very agreeable, and the ladies—well, my pen cannot do them justice—they are simply "out of sight," to quote champion Zimmerman, and "Zim" ought to know, as he is a much-travelled man.

As a training resort for northern men in winter or early spring, Savannah will command attention. The hotel accommodations are A 1, the De Soto being without a doubt perfection. The streets of Savannah fill the heart of the cyclist with joy and thanksgiving. Bro. Potter and Colonel Pope would undoubtedly hold a thanksgiving meeting if they visited Savannah; for mind you, Savannah streets a few years ago were only noted for the depth of sand that concealed terra firma, and the unsuspecting mule was liable to drop to China before he reached the wharf with his cotton bales.

The principal points of interest are Thunderbolt, on the Warsaw river, where fish and the festive oyster can be raked out, this river being an arm of the ocean, which shimmers less than two miles away. A very good electric car service conveys one from the city to Thunderbolt. A party consisting of Messrs. Zimmerman, Prince, Ross, Whittaker, Wheeler and the writer visited Thunderbolt and was entertained at Postmaster Doyle's elegant residence facing the river there. He also has a passable half-mile track, where lies the remains of Jack Prince's half-mile four-foot board track, and where Jack competed against six able-bodied livery and trotting horses. Negro girls, to the time of exquisite negro plantation melody, opened oysters on the wharf, and hastily ran into a shed when the gray Chicagoan, Jay J. Ross, attempted to take some snap shots at them. But he succeeded in getting a few good pictures.

Bonaventure, the oldest burial ground in the south, is possibly the greatest place of interest in Georgia, as there, beneath the giant wide-spreading trees, draped with flake-like moss, repose the illustrious southern dead. Men whose deeds in war and peace are emblazoned on the pages of southern history sleep side by side; men whose slaves would willingly die for them lie here, and men whose slaves, no doubt, would and did skip from them are also laid away.

Thursday night, being moonlight, in company with Prince, we rode to Thunderbolt (four miles) and returned by the oldburying ground, whose tombs looked ghostly enough as the pale moonbeams struggled through trees and moss, and faintly lit up the surroundings.

"They say," said Jack, "that ghosts and goblins promenade here at midnight," but we climbed the fence, and after strolling through dead-land finally

COVENTRY, ENGLAND.

perched on the gravestone of one, who, the faint lines on the flat stone said, "had been noted for his charity."

We talked of slavery days, and the debate on the negro at Philadelphia, and the images of Lloyd Garrison and Wendell Phillips arose before me, and their burning and impassioned appeals for liberty were in fancy followed by the dropping of shackles, and a loud hosanna of thanksgiving to one who said: "All men are equal before God."

We talked of the petty tyranny of society and social status, and then agreed that all men must die, and we felt comforted.

"It is 12 o'clock," said Jack.

"And no ghosts," I returned, and we scaled the fence and pedalled in turn a disabled pneumatic tired wheel, famous for its three straight lines when chasing rabbits! Jack had burst his tire, but my Imperial had defied shells and ghosts.

Another point of interest is the Hermitage, where an old slave plantation still stands, and where the wail of fathers, mothers, sisters and brothers have in the dim and misty past risen in their hour of bereavement. It is, happily, over. Giant moss-covered trees abound here. It is one of the favorite runs of the Savannah cyclists.

The streets of Savannah, by the way, are full of cyclists. Fully 600 fly around the streets of asphalt on high grade wheels, with Ramblers and Ormondes in the lead.

Then comes a time of parting and resuming the stern duties of life, and it was with regret that I parted with Zimmerman, Richmond, Polk, Whittaker (the latter continued south,) Prince (who went to Florida,) Ross (who was hunting up Imperial agents,) Harry Wheeler (who was looking after Premier interests), and many others who came to the dock. Thus concluded one of the most

pleasant outings of my life, and after another pleasant two days' captivity with Captain Fisher and Purser Bridges and the other jolly officers of the Kansas City, we reached New York Sunday, Feb. 26, and once more mingled with the surging throng of Broadway, with pleasant recollections of Savannah, her cyclists and people generally.

\*\*\*

*She Wore Bloomers.*

A REFEREE man was talking to Elliott Mason in New York the other day, when he heard the words, "I am to deliver three lectures on physical culture for ladies in New Jersey, and would like to get an 'ad.' for my programme."

The voice was pleasant and that of a woman. Its owner proved to be a well, a female—anywhere between the ages of thirty and forty—that uncertain age in woman when ten years are but a span. "Yes, I'm to deliver a series of three lectures and the bicycle clubs are to be present," and here she deftly picked up a gray skirt and exposed a beautiful pair of "bloomers," from whose capacious side pocket she drew the advertising programme "dummy," and with a graceful sweep again dropped the skirt. Mason, although a married man, looked staggered, and as for Richards, the willowy, curly-headed salesman, he looked as if he would like to be anywhere but there. His moustache looked blue. "Your Newark agent, Eldridge, only offered me five dollars for a page and it's worth twenty-five," continued the woman, "and my lectures are given always to crowded houses." She kept up a volley of praise on her scheme that would out-do Sam Jones. The cruel Richards referred her to the Newark agent again, and she confided to the REFEREE man that bicycle agents "are close-fisted anyhow," and once more

picking up that skirt she dropped the "dummy" into the pocket of the carmine "bloomers" and walked out into the cold world in a stately manner.

\*\*\*

*Roe as An Artist.*

In his spare moments, when not supplying the newspapers with "copy" about his proposed ride across this both blooming and barren land, Tom Roe puts in his time painting and printing signs. When the usual occupant of the REFEREE eastern office got back from Savannah the place presented an appearance similar to John Wanamaker's famous bargain counter. Mottoes were everywhere:

"No money loaned to amateurs."

"Heaven help the rich, the poor can beg."

"—— class B."

"Time is money. I have ten years to wait.—Tom Roe."

To the latter Artist Merrick added: "I have not. Will call again Feb. 24, 1903."

Then there was a handsome monument in cardboard with the inscription: "Class B. The Push. R. I. P."

Tom is popular, humorous, and withal not as bad as he is painted, his large expense account, erratic and eccentric conduct notwithstanding. As a press worker, too, Tom is a marked success, and for a man who owns up that he has "faked" and will "not do it again," Tom Roe succeeds in getting himself much talked about.

\*\*\*

*Made Off With the Pants.*

A good story was told last week about "Doodle" Robinson, the English apostle of amateur purity, who floated to our shores in 1884. He only had one pair of trousers, and that needed attention by the tailor, so "Doodle" asked if the

tailor would give him a pair to wear while the repairs were going on. The distinguished air of the customer and that large Ducker diamond medal impressed the tailor, who loaned Mr. "Doodle" a new pair of superior American make, and the Englishman was so impressed with the quality and style of the American goods that he forgot to redeem his old pair. That Washington tailor would like to see "Doodle" even at this late date!

\*\*\*

*Seeming Indecent Haste.*

Before the late treasurer of the New York division was fairly laid to rest his successor was appointed. This was to many an exhibition of indecent haste. W. H. De Graff did his duty nobly, and a reasonable time should have been allowed to elapse before his successor, Mr. Raisbeck, was notified that he was to fill the dead treasurer's shoes. Mr. Raisbeck, however, is a worthy successor to the late De Graff, and was not responsible for the seeming haste of his appointment. He is at the head of the Raisbeck Electrotype Company.

\*\*\*

*Apologies.*

H. L. Saltonstall of Elizabeth, donor of the international championship cup, called at the REFEREE office to say that he is not a class B amateur, neither is Sidney B. Bowman. The "comps" made me say, in the Bowman sketch, that both of the Elizabeth men were of that class. Apologies to both of the class A racers.

Philip Green, of the Cook County Wheelmen, is now a resident of Farnham, Erie County, N. Y., and is connected with the Sprague Corn-Cutting Machine Company.

PERMANENT  
SUCCESS.

## RUDGE CYCLES.

For twenty-one years Rudge Cycles have been on the market in one form or another, and have given such uniform satisfaction in the many countries in which they have been sold that their name and fame is known all over the world.

Their Success Has Been a Permanent Success and Indicates That They Give An Honest Equivalent to Their Riders.

## MILWAUKEE MENTION.

*Club Houses in Demand—A Gift to the Mercurys—Winter Amusements.*

The club house fever has broken out in earnest in cycling circles in this city, and from present indications it will be but a few months before all the leading clubs will be quartered in houses of their own. The Milwaukee Wheelmen, by almost unanimous vote, on last Saturday evening authorized their board of directors to purchase the Morawetz residence on Milwaukee street, on the east side, for a club house, the cost of which is \$10,000. The club will furnish it in first-class style, with gymnasium, bath, etc. As the location is central and the property well adapted for the purpose, it will be popular and fill a long felt want.

The Mercury Cycling Club has instructed its board of directors to look around for a suitable house on the south side, with a view to rent or purchase. Both of these clubs have been very successful in their financial efforts during the past year, which has put them on their feet and gives them courage to go ahead.

Last Monday evening P. H. Sercombe, of the Sercombe-Bolte Manufacturing Company, presented the Mercury Cycling Club, of the south side, with a life-sized figure of Mercury, mounted on a pedestal, which will hereafter ornament the parlors of the club. The Mercury Cycling Club is in every way worthy of its name, as it is one of the most progressive hustlers in the club line in the city. A speech of acceptance was made by the ex-president of the club, and other members made timely remarks, all thanking the donor for the beautiful gift.

The handicap pool tournament of the Milwaukee Wheelmen gives every evidence of being a great success. Sixteen of the crack wand pushers of the club

have entered to contest. On Monday Coleman and Savage, and Wegner and Stinner will open the tournament, which will continue through the week.

## A Russian Contemporary.

The REFEREE has been favored with a sample copy of a Russian cycling paper—that is, it appears to be Russian, having come from St. Petersburg. But not being Russians we cannot even tell the name of the sheet. This is the name, however:

## ВЕЛОСИПЕДЪ.

We notice that the Gormully & Jeffery Manufacturing Company has a page advertisement of its tire. The following is reproduced from the paper, not because it is of any especial interest, but simply to show an apparent conglomerate of transposed, inverted, upside-down and wrong-end-to of English letters:

## Письма из редакцию.

Милостивый Государь,  
Г-н Редактор!

Для жителей провинции, не имеющих возможности лично осмотреть несколько систем велосипедов за отсутствием такого магазина, где можно было бы увидеть разную конструкцию машин, и выбрать действительно хороший велосипед, удовлетворяющий современным требованиям техники, бывает необходимо выбирать для покупки велосипед по прейскурантам. Но тут-то и представляется не малое затруднение. Каждый продавец, конечно, хвалит свой товар, выставяя его хорошие качества и скрывая недостатки. Таким образом, много, часто очень ценное (регулировка и т.п., конструкция спущь, пере- ) выписывается, а такими же словами, как "часть прекрасного никелирования" и "лучший холостой прейскурант".

## Now He's In Jail.

Readers of the REFEREE will remember that a short time since Jacques Licco Adutt, Vienna, Austria, world's fair commissioner from Turkey, purchased a bicycle in Chicago to go there with all the fixin's. Saturday Adutt was arrested on a charge of forging notes to the extent of \$30,000 in his native city,

## ARRANGING A PAUL REVERE RIDE.

*The Massachusetts B. C. to Study History While Asheel.*

The Massachusetts Bicycle Club is arranging what it terms a Paul Revere ride, to take place April 19. The Boston Post describes the programme as follows:

"Captain Peck will call a club run for that morning before daybreak. The participants will be assembled, awaiting, possibly, the display of two lanterns aloft in the belfry tower of the old North Church. The signal given, the party will start and follow with historical accuracy the exact route taken by Paul Revere, departing from his example, however, in endeavoring not to alarm the good country folk. Briefly sketched, the route will be about as follows: Charlestown, Main street, skirting Bunker Hill to Charlestown Neck, Sullivan square, Winter Hill, Craddock's bridge to Medford, to West Medford. High street to Arlington, Arlington avenue, turning Heights, following the main street to Lexington.

"The club will breakfast here. The exercises of the day will find an appreciative audience in the new arrivals. To Concord the cyclists will then wheel, following the route of the British soldiers, stopping to examine all historical spots and listen to facts and explanations from members of the committee who will have been appointed to look into the historical details of the events which the different houses, monuments and stones mark. The noonday exercises at Concord, the bridge and the use with the British musket ball embedded viewed, the club will return, following directly the road over which the red coats retreated, even to Cambridge Common, and from thence the party will return to the club house. It might

be added that doubtless the evening before the ride there will be a club meeting, at which papers will be read relative to the Concord and Lexington battles, and the facts leading up to the beginning of the American Revolution."

## MEN WE ALL KNOW.—NO. 9.

C. R. FRANCIS,  
The capable young attorney of the Illinois Division.

## Steady, Boys, Steady.

The Portland Review states that the L. A. W. has 300,000 members! Papa Bassett will surely have to give way when that strength is reached. The life membership is placed at 15,000! The Review has a readable cycling column, however.

Thomas Stevens is abroad lecturing on "Across Asia on a Bicycle."

- 30—New Haven (Conn.) B. C.'s annual meet.
- 30—Massachusetts division meet.
- 0—Martin road race, Buffalo.
- 0—Irvington-Milburn road race.
- 30—Rome (N. Y.) Cyclers' meet.

JUNE.

- 3—Press C. C. meet, Buffalo.
- 16-17—Century C. C. meet, Syracuse, N. Y.
- 17—English championships on Herne Hill track.
- 17—Alpha Wheel Club's 10-mile road race, South Norwalk, Conn.
- 24—Prince Wells' second annual 10-mile road race, Louisville.
- 27-28—Kentucky division meet, Harrodsburg.

JULY.

- 4—Watertown (N. Y.) Cyclers' meet.

SEPTEMBER.

- 13-14—Springfield (Mass.) B. C.'s annual race meet, Hampden Park track.
- 26-27-28—Inter-state Fair Association meet, Trenton, N. J.

THE NEW RACING BOARD.

Reduced to Five Members and the Trade Excluded—Far West Not Represented.

On Thursday morning J. M. Erwin of the Lincoln Cycling Club, ex-secretary of that organization and of the Associated Cycling Clubs of Chicago, received telegraphic information of his appointment as a member of the national racing board.

Mr. Garden was first recommended for the position, but it was given out that trade and cycling press men would be rigidly excluded. This plan has not been carried out.

The board, we understand, consists of Messrs. H. E. Raymond, chairman, L. A. Miller, George D. Gideon, W. W. Watts and J. M. Erwin.

Mr. Raymond needs no introduction. He is already famous.

Miller is a resident of Connecticut. He is an old racing man and, during three

H. E. RAYMOND—BROOKLYN.

or four terms of office, has proved a docile subject.

Gideon is a Philadelphian, was a racer before many of the high moguls ever saw a bicycle, has an abundance of

back-bone, and will prove an ornament to the board. Gideon has been on the board before.

Watts was on the board last year and is considered a painstaking and impartial, though hardly a thoroughly experienced member. We know of no better man in the south. Watts is the "editorial writer" of the *Southern Wheelman*.

Erwin—"William Twinkle" Erwin—will probably find favor with all Chicagoans. He is well posted, reliable, witty. Official handicapper in '93, and gained much experience. He is connected with the *Chicago News-Record*.

LATER.

NEW YORK, March 9.—[Special.]—The National Cyclists' Association convened at the Fifth Avenue Hotel at 1:50 o'clock to-day. President Byrne was chairman and Frank Egan secretary. New York was represented by P. T. Powers and G. B. Talcott; Brooklyn by Mr. Byrne; Washington by F. S. Elliott; Buffalo, St. Louis, Milwaukee and Baltimore by proxies; Philadelphia by Daniels, Dayton and Egan. Members of the press were debarred from the meeting, which promises to be a prolonged one. The constitution is elaborate and comprehensive and was the first matter discussed. Little interest is manifested by outsiders, but the leaders say success is assured.

NEW RACING ORGANIZATION.

West Riders Form a Club Different from Any Now Existing.

At a meeting held late last week at the residence of H. J. Winn, an organi-

J. M. ERWIN—CHICAGO.

zation was born which is to be known as the Chicago Racing Wheelmen. Temporary officers were chosen as follows: President, F. W. Morgan, of Morgan & Wright; vice-president, Frank T. Fowler, Hill Cycle Manufacturing Company; secretary, A. D. F. Simmons; treasurer, H. J. Winn; captain, Charles F. Smith; first lieutenant, C. H. Stephens; second lieutenant, Emil Ulbricht. The organization has for its object the encouragement of track and road racing. It is designed as a cycling and athletic club with, no social features whatever, inasmuch as not one cent of the club funds can be expended except for the direct encouragement of cycling. No expensive club house will be maintained. The money received from dues and initiation fees will be expended in fitting up training quarters in

different sections of the city, providing them with baths, sleeping accommodations, etc. Competent trainers will be engaged. The club membership will include active and associate. Into the first will go only those capable of riding under the official timer's watch inside certain specified times as set forth by the governing board. Loafing among active members will not be allowed; the man so accused will be suspended and relegated to the associate class, if the charges are substantiated, from which he will be taken only upon displaying the requisite speed and interest in the sport. An associate member may have a trial against time and, succeeding, be forwarded to the active class. No dead-wood will be permitted to remain, a man giving up cycling or losing interest in the sport being requested to resign.

Thus it will be seen that the funds of the club are always in the hands of the active riders, the board all being active riders, an officer being liable to suspension just as quickly as any member. The club has plans laid out for a track. The

L. A. MILLER—MERIDEN, CONN.

charter list was opened with fifteen names. The organization proposes to be represented by a crack team at all the meets this year.

ZIMMERMAN WILL RETIRE.

Like Stars in Other Lines He Will Make A Farewell Tour and Then Become a Spectator.

Zimmerman intends to make this year his last of racing and has an eye on some active manufacturing interest for '94, but says: "Even when I retire I'll want to go to all the tournaments to see the boys race. There is a fraternity among racing men—a sort of interest—fascinating and binding, which makes it so hard to quit racing and relinquish all interest in it."

SHORT RACE TALK.

What the Flyers are Doing—Preparing for the Season.

The Bordeaux-Paris race is set for May 27.

The Riverside Wheelmen will give a meet some time in July.

Another six-day professional race is being arranged at Glasgow, Scotland.

The Bay-City Wheelmen of San Francisco are contemplating building a track.

A. C. Banker thinks the L. A. W. should amend the rule limiting prizes to \$150 in value so as to give the racing board the privilege of allowing a special prize of any value to be offered at meets,

the magnitude of which should warrant it.

Rhodes, despite rumors to the contrary, will remain in Chicago this summer. He is preparing for an active season on the

W. W. WATTS—LOUISVILLE.

path and declares he is after Zimmie's scalp.

George Gatehouse, the old-time English racing man, will again be seen on the path.

Gus Steele left for Indiana last Saturday to recuperate ere beginning active training for the season.

A. C. Edwards, the English crack, will continue to ride under Polytechnic colors, notwithstanding rumors to the contrary.

The Montgomery (Ala.) races were postponed from Feb. 28 to March 8. The events on the programme are two quarters, a half and a mile.

W. F. Heumann, of Elgin, is now on the road for the Freeport company. Heumann is Stringer's only opponent in Elgin, and is a man of fine physique.

Rather a large machine to get lost, yet one of the Rudge triplets, used for pacing in the south early this winter, has been lost ever since the team's return.

John S. Johnson and his trainer, Tom Eck, left Minneapolis early this week for Hot Springs. Johnson is to go into active training. It is rumored other speedy pedalers will join Eck there.

Arrangements are being made to have a third or half-mile track built in the Toledo exposition building. It is to be built with a brick-dust surface. It is proposed to charge \$5 for season tickets.

We are informed that J. S. Johnson has arranged to ride a Stearns wheel the coming season, shod with Burris-Michelin tires, and that a trip to Hot Springs will contribute to his preliminary training.

Cycling has offered a five-guinea gold medal to the first Britisher who beats Zimmerman in a championship event. They evidently fear that Zimmie has already a pretty good hold on the events.

C. A. Stringer, the Elgin flyer, has been sick since Jan. 1 with inflammation of the bowels. This may destroy his chance on the path for the early races of the year. Stringer's victories on the path last season numbered nearly two score.

According to a Philadelphia paper, at the last meet of the Associated Cycling Clubs, held last September, the entire team of the Chicago Cycling Club was entered officially by the club, Lumsden and Munger being successful in winning prizes. After the meet the club refused to pay the entrance fees of the team,

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, OR SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

HEAD OFFICE AND WORKS: Town Mead Works, Fulham, S. W.

LONDON SHOW ROOMS: Coventry Machine Co., Ltd., 15 & 16 Holborn Viaduct, E. C.

COVENTRY DEPOT: 21 Warwick Lane, Coventry.

AGENTS FOR BIRMINGHAM: Thos. Smith & Sons, of Saltley, Ltd.

AGENTS FOR SCOTLAND: New "Howe" Machine Company, Ltd., Glasgow.

and the committee has refused to award the prizes won. The two men in question, desiring to secure the prizes, sent money to cover their individual entries, but the committee still holds the prizes, claiming that the entire team was entered by the club, and until the club pays the entrance fees due, no member of the team has any claim to the prizes.

The Associated Cycling Clubs of Chicago meets this Thursday evening in parlor 1, Grand Pacific hotel, to consider the subject of the annual Pullman race, and listen to the report of the committee, Messrs. Garden, Herrick and Fanning.

G. D. GIDEON—PHILADELPHIA.

America is not to have a monopoly in "queer" prizes. R. L. Ede, the English crack, has been presented by his club with an iron fender and fire irons for breaking a record.—Chicago Journal.

What records would Ede be apt to break with an iron fender or fire irons—or both?

That "Barney" Whympier is getting frightfully gay is evidenced by the announcement in his own paper, the *Announcer*, that he will ride a French Humber this season and will train with W. F. Murphy. The young man of New York and Brooklyn will need watching by the more sober members of the K. C. W. and *Announcer* staff.

#### The New Herne Hill Surface.

The new surface of wood, with cork as a crevice filler, that Hillier will adopt for the Herne Hill (London) track, will be a radical departure in track laying. It will be a successful experiment, however, if laid correctly, as many have believed that road surface (especially for an indoor track or in dry weather) makes the fastest track. A third or half-mile road track will enable a top-notch to beat all records when the conditions are favorable. The remarkable performance by Johnson in the mile over the ten-lap track in Milwaukee goes to prove this, as do the performances on the various indoor tracks in this country and England. The new surface is to be laid, according to *Sport and Play*, by a company which has "collected the business processes and methods which have gone to make the new surface a possibility, for it is wood, prepared wood, laid under a new system, and possessing many merits as a track 'skin.' It will prove very fast; it will not slip in wet or dry weather; it is absolutely anti-suction; it is much less injurious to fall on than cement, and much easier to mend; it will not crack; in short, wood, as treated by the new company, will form an ideal track surface, and as this concern will lay tracks under their system, employing a staff of practical workmen, at a

cost considerably less than that of any good racing track in the kingdom, there is little doubt that the new surface will rapidly become popular."

#### L. A. W. Racing Rules.

Jack Prince tells some amusing stories of the lack of knowledge about the L. A. W. south of Mason and Dixon's line. It was at Orlando that Jack recruited a club for the L. A. W. Many of the members had not heard of such an institution. One young man, thirsting for knowledge, asked Jack what the L. A. W. meant and what were the chief objects of the association.

"Well, you see," said Jack, "it is an organization of young men to promote racing."

"Well, what are the chief rules of the scheme," persisted the amateur.

"Oh," said Jack, "the principal rules are the front man must keep the pole."

And the thirsty man went away satisfied as to the simplicity of L. A. W. rules.

#### All the Champions Coming.

What a crowd of cracks will take part in the international races at Chicago in August! This, of course, providing all reports be true. Harris' father says he will be here; the *Irish Cyclist* says its editor, McCreedy (who, by the way, has been racing a dozen years or more, and will never see thirty again), will try for championship honors; Africa will send W. Newby-Fraser and L. S. Meintjes; Tom Busst of Australia wants to take part; Protin, the "Belgian Zimmerman," is likely to cross the pond; Canada will send Wells and others, and Uncle Sam will have a dozen or two on hand, including Zimmerman, Windle, Tyler, Taylor, Lumsden, Taxis, Munger, Bliss, the Murphys, Dorntge, Sanger, Johnson, Barrett, and—well, nobody knows who may turn up in the meantime. It will require about a score of heats to kill off the little ones, and then it will be a battle royal for first, with—(whom do you say?) a strong favorite.

#### Raymond Wants Aid.

Chairman Raymond has addressed a letter to all the chief consuls of the league asking for correct lists of the local consuls, in order to place in their hands a copy of the new racing rules when out, and to ask them to spread the information in the neighborhood in order to "protect the racing man to the extent that he may know what he is about if he breaks rules." There will be about twelve pages in the book (in addition to the regular rules) which will contain definitions of rules, official entry blanks, score sheets, timers' sheets and hints to race promoters. The divisions are asked to order a number of copies of the rules (at 4 cents each) to be distributed among the racing men and the clubs. Mr. Raymond's scheme is a good one, for the average racing man is ignorant of the racing rules.

#### The Boys Want a Chance.

TORONTO, Can., Feb. 28.—Editor REFEREE:—You will greatly oblige me by publishing in the next issue of the REFEREE something to the effect of having in Chicago at the time of the international races a boys' championship of the world. I think the most favorable distance would be one-half mile, and age, under fifteen years. Any older than that could hardly be called boys, and a long race would not be a fair test. I can assure you that it would be well attended by boys from all over the world, especially from the United States and Canada. I know that this is what the boys of Canada want, to have a fair

test with other boys of different countries, and I hope this will be carried through. A CANADIAN BOY CYCLIST.

P. S.—Please show this to Mr. Raymond, president of international races.

#### Indoor Meet At Buffalo.

Saturday night at Buffalo 3,000 people saw eight interesting bicycle events, given under the auspices of the Sixty-fifth regiment A. A. at the arsenal. The Press C. C. riders captured a majority of the events. Charles J. Griffith was referee; D. H. Lewis, R. M. Harding and C. F. Richter judges. The results were as follows:

One-mile, open—first heat—Louis Noeller, P. C. C., 1; W. A. Grinnell, P. C. C., 2; time, 3:39.

Second heat—John C. Penseyres, P. C. C., 1; L. A. Callahan, P. C. C., 2; H. S. Thompson, R. W. 3; time, 3:13.

Final heat—Penseyres, 1; Callahan, 2; Thompson, 3; time, 3:00 3-5. Penseyres ran away from the others, who fought for second.

One-mile, novice—W. G. Holden, P. C. C., 1; F. A. Foell, P. C. C., 2; H. W. A. Becker, M. A. C. C., 3; time, 3:02. The winner made pace all the way and crossed the tape only a little in advance of Foell.

Two-mile, lap—E. C. Bald, P. C. C., 1; J. S. McFarland, M. A. C. C., 2; M. Dirnberger, P. C. C., 3; time, 7:15 2-5; Ball, 42 points; McFarland, 33; Dirnberger, 37.

Two-mile, open—J. C. Penseyres, 1; H. S. Thompson, 2; H. G. Holden, 3; time, 6:35 3-5.

Five-mile, open—E. C. Bald, 1; J. C. Penseyres, 2; L. A. Callahan, 3; time, 14:59 2-5.

#### Worcester Wheelmen are Jubilant.

"In spite of the howling of a little clique of Boston wheelmen who have aspired to run the cycling world," says a Worcester paper, "the only race tournament which can be held in the Massachusetts division, L. A. W., on Memorial day, will be held in this city over the Agricultural grounds track. The few wheelmen who have attempted to knife the aspirations of the Bay State Bicycle Club and have been ingloriously defeated, will, of course, be disgruntled, but everybody else in the division will undoubtedly be satisfied that the big race meet of the spring is to be held in Worcester.

"May 29 and 30 will be days of cycling glory in this city, for all wheeling New England, except a small part of Boston, will be on hand to take in the excitement of what will be, given favorable conditions, the biggest cycling race meet ever held in Massachusetts."

All this means that Worcester has obtained the racing board's sanction for a race meeting on the date named. The club will spend \$1,000 on entertaining visitors. Windle has been admitted as a non-resident member.

#### They Want a Board Track.

For the purpose of sounding a number of persons on the board track question, the REFEREE recently submitted to them for signature a form containing the following:

The undersigned desire that the track to be laid for the world's fair races be constructed of boards, believing that faster time and better general results will be attained thereon than on any other surface.

The persons to whom it was presented signed, almost to a man. Among them were the following: E. W. Ballard, H. R. Winship, R. D. Garden, J. M. Erwin, D. H. Lewis, W. A. Rhodes, R. M. Slusser, A. C. Banker, John Palmer, M. A. Hosford, L. D. Munger, C. W. Davis, J. P. Bliss and J. M. Lyon.

#### They Don't Like the Limit.

"What do you think of the \$150 limit, boys?" asked the REFEREE of Zimmerman and Wheeler.

"Holy smoke," replied Wheeler, "is that true?"

"I think little of it," replied Zim, whose face was a study. "Do they

think I am going to travel away out west to win a \$150 prize? Well, that is tough. No more teams or pianos. But," and a smile lit up the faces of both men, "that lets in bicycles. They must have thought of tournament managers and manufacturers when they put in that limit. There is some balm for our wounded feelings, after all. But it's tough, isn't it? No teams, no pianos and no real estate!"

#### Wheeler Wants to Go Abroad.

H. C. Wheeler is making every effort to be Zimmerman's companion to Europe, and as the boys are very companionable, it would be a good move to have Wheeler go with Zimmerman, as he is lively and will keep the champion in good humor all the time, and there's much in that. Wheeler would make a good stable companion, and if trained with Zimmerman would be of much benefit in open events as a pacemaker and ally. Wheeler, however, is a good-natured, lazy youngster, and would require a stern trainer to keep him up to the work. McDermott could do that.

#### What There Is in It.

Purser Bridges, of the steamer Kansas City, is totally unsophisticated as regards what constitutes an amateur, so one day at the dinner table he asked:

"What is there in racing for an amateur, anyhow, Mr. Zimmerman?"

"Oh," replied "Zim," "if you are any good you can get a wheel free, and if you are an extra good flyer a manufacturer will pay you a good salary!"

And a smile flitted over the faces of two of the three New Yorkers present.

#### Springfield's Leading Events.

The Springfield (Mass.) Bicycle Club has announced as the two principal events of its diamond tournament, Sept. 13 and 14, a Springfield invitation race for the first day, and the Springfield international race for the second. Five prizes of diamonds will be offered in each race, valued at \$150, \$125, \$100, \$75 and \$50.

#### The Permit Granted.

President Garden, of the Associated Cycling Clubs, announces that he has obtained from the South Park commissioners the necessary permit in order that the Pullman road race may be run over the south side boulevards. This assures a continuance of the great road race over the old course.

#### The National Cycling Association.

NEW YORK, March 9.—The National Cycling Association meets at 12 o'clock to-day. There seems to be every prospect of success. The eastern minor base ball men are likely to become interested with the gentlemen already named.

#### Tricks in All Trades.

Stories continue to pour in about cruel jokes the New York to Savannah crowd played on the innocent C. A. Persons, the saddle man. The boys had a hack placed at their disposal to carry them from the hotel to the race track and Persons was invited to go along. On the way the price of the hack was discussed. When one of the party proposed a dollar per head assessment for defraying the cost of the hack. Each of the party "ponied up" a dollar, including Persons, Jay. J. Ross acting as treasurer. All except Persons had their dollars refunded, and poor Persons was not even allowed a taste of the good things his dollar provided for the conspirators later on.

Brooklyn has a Sabbath Observance Bicycle Club—nice name, anyhow.

## THE ROADS OF KANSAS.

WHEELMEN THE SOLE WORKERS IN  
THE GOOD CAUSE.*Progress of Three Years—Plan to Encourage Wide Tires—No Politics in Road Reform—An Unexpected Delay.*

FORT SCOTT, Kas., March 4.—The only steady and consistent agitation of road improvement that has ever been carried on in Kansas has been the work of wheelmen, and, it is almost needless to say, of wheelmen belonging to the L. A. W. Compared with a majority of divisions ours is small, and our income is correspondingly light, yet it is safe to say that within the past three years the movement has received a greater impetus in Kansas than almost anywhere else. It was a singularly fortunate circumstance that Mr. Davis, until recently our chief consul, besides being in love with the subject, was the owner and editor of an excellent newspaper, and still more fortunate that he was willing to devote the necessary time to the work. Widely differing from him as I do as to the means of obtaining better roads, I deem it the barest justice to set down here my appreciation of his zeal in keeping before our people the end desired. Indeed, Mr. Davis was a pioneer in one branch of the agitation which is now recognized by the national governing body as of the greatest importance. The *Kansas Wheelmen's Library*, published by him quarterly, commencing more than two years before *Good Roads* was started, filled with excellent arguments favoring the reform, and distributed by thousands among the people of the state, paved the way for the latter publication, and was, I believe, for a long time the only magazine of the kind. When I state that the membership of the division at no time during this period exceeded two hundred, the magnitude of the undertaking will be appreciated. The idea was perhaps not original with him, but he was at least the first to put it in successful operation.

## THREE MEASURES PROPOSED.

After three years of faithful service, Mr. Davis retired from office in December, 1892. The new board determined to strike at once for tangible results. According to our plans three measures were to be proposed to the legislature of 1893 for adoption. The first provided for macadam roads by bonding townships containing cities of the third class; the second authorized the commissioners of counties containing cities of the first and second class to levy a general tax of four mills annually for the same purpose; the third abolished the system of "working" the roads, made all road taxes payable in money, to be expended under contract, and sought to encourage the use of wide tires by forgiving a certain proportion of taxation to every person using wagons with tires of not less than four inches. The three bills, taken together, formed, to my mind, an admirable body and comprehensive body of legislation; they were clear and well worked out in detail. It was believed that with the strong support which had been promised us by members of both houses, one or more of them might pass. Of the three measures

## THE THIRD STOOD THE BEST CHANCE

of being enacted into law, mainly because it provided for the expenditure of little money, and thus tended least to antagonize the granger mind, and because the idea of issuing bonds was lack-

ing. As an entering wedge it would have been excellent, and under its provisions many miles of Kansas could have been made good for travel during all but three months of the year, and passable at all times.

Unfortunately for the bills, as, indeed, for legislative business of all kinds, the lower house of legislature split in twain on the first day of the session. Two houses have been in existence since. A long and threatening political dispute resulted, and the legislature will shortly adjourn without having transacted any business beyond passing appropriation bills—matters which, somehow, are never forgotten. All that we can do is to wait till the next session, two years hence, in the meantime waging a campaign of education.

## INTELLIGENT MEN FAVOR REFORMS.

The intelligent opinion of the state is strongly for the reforms we urge. Lawyers, business men, artisans in the large towns, are practically agreed. The question is not regarded by them as in any sense a political one, but rather as a business proposition, affecting the nearest interest of all. Nor do we lack newspaper support. The most influential papers of the state are with us. These include the *Fort Scott Monitor*, *Topeka Capital*, *Wichita Eagle*, *Junction City Tribune*, *Humboldt Union*, and a large number of others. Of the members of the present legislature we relied on Mr. Thatcher of Lawrence, Mr. Butler of Fort Scott, and Mr. Glenn of Tribune, himself a wheelman and member of the L. A. W., in the house. If all the members averaged with these gentlemen in point of intelligence and reasonableness, the bills would have been plain sailing; but in our legislature, as in most others, the farmer is present—and present, as it happens this year, in great numbers.

## WHERE AMMUNITION IS WASTED.

The American farmer, as everyone knows, is the real Bourbon of the race—slow to acquire ideas, but extremely tenacious of them when once attained. It is upon him that the force of the agitation ought always to have been, and must in future be directed. Print and paper are wasted in sending good roads literature to cyclists, who are already converted; the farmer should receive it instead. Ours is purely an agricultural state. The farming class is the chief repository of power, and is quite aware of the fact. For years almost without number its members have been accustomed to witness the formal ceremony of "working" the roads; most of them have never seen an improved highway; they are quite reconciled to the present crude and wasteful system. And just now

## A FIT OF ECONOMY IS ON.

Hatred of railroads, of money lenders, is voiced by thousands; the words "bonds" and taxes are in ill repute. There is only one way to obtain the money necessary to improve the highways, and that is by pledging the public credit, which involves the use of both bonds and taxes. It may be guessed that any plan calling for these would hardly receive the support of the farmer element, a majority of which is at present violently discussing political questions—the iniquity of capitalists, the danger of monopoly, their own oppressed condition—without perceiving the immense importance of the practical question that is at their gates.

## THE GOOD WORK GOES ON.

So, for the present the movement is blocked. The agitation will be kept up, converts will be made, and I trust that two years hence some good bill will pass. The farmer means well and wants to do right; he can be persuaded, but

not driven; it must be our task to show him that his prosperity is largely dependent on good roads. To this end we are not only willing, but eager to combine with all classes of citizens. We want county and state organization, the most earnest agitation, the most thorough discussion of the subject. If our present plans do not miscarry we can promise this.

I am glad of an opportunity in this connection to commend the brave and consistent action of Chief Consul Choate of Minnesota at the road convention recently held in that state. If we do anything in aid of this movement, let us do it openly as members of the league, without whose intervention the question would have been postponed a hundred years. Let us say to the world at large:

"It is true that we desire these reforms, largely because we are interested in the sport as makers, or dealers, or riders. But to a great extent is interested every business man, every artisan, every man who plants a corn row or threshes a bushel of wheat. We do not pretend to be disinterested. All are interested alike, for better roads mean a larger share of prosperity to each."

HENRY E. HARRIS,  
Chief Consul Kansas Division L. A. W.

## FRED MERRILL'S SKYCYCLE.

*The Oregon Man Proposes to Fly to the World's Fair.*

Fred T. Merrill, of Portland, Ore., is a practical joker. He can tell a wonderfully improbable yarn with a wonderfully straight face; in fact he tells his stories as though he meant them. When

Fred T. was in Chicago in December on his way to the show, he told the *Tribune* a long yarn about a man seventy years old who had never seen a railroad or a train, and who was so afraid the locomotive would leave the track and chase him that he actually hid behind the depot. The *Tribune* people believed him and printed the story. Now he has worked off another story on the dear old sheet, which, seeking to be enterprising by publishing Washington editions, fairy tales, etc., bit savagely at Merrill's "skycycle" story.

When Merrill was returning home after the show, he stopped off a week in Chicago. He called at the REFEREE office and said he had something great to spring on the public, and intended to give it to the *Tribune*. He wanted a picture drawn, and was referred to Mayer, the REFEREE artist. Mayer not being in at that moment, Merrill called on Cox of the *Bearings* and the picture was duly drawn. Then it was tucked away in the *Tribune* office for a month or more, and finally, with Merrill's story, brought to the public's attention last Sunday. In order that the

skycycle may not be misrepresented, the *Tribune's* story is printed in full:

A "skycycle" to fly through the air from Portland, Ore., to this city is one of the latest announcements of attraction coming to the fair. Bicycles to run on land and water have proved a success, the former especially so, and now Oregon, the web-foot, moss-backed state, is trying a new field for the wheel. Fred T. Merrill, a dealer in bicycles in Portland, who was recently in Chicago, has a new machine which is intended to navigate the air. It is called a "skycycle," and was invented by a brother of Joaquin Miller, the poet of the Sierras, who resides at Eugene, Ore. Mr. Merrill is making arrangements for the manufacture of the new machine to be commenced as soon as a few minor changes have been made. He gave a partial description of the machine, refraining from minute details because the inventor has not yet patented some parts on which he is now experimenting. With a view of reducing slightly the weight of the machine. Mr. Merrill said:

"We have already used a heavy machine made of wood, ascended thirty feet from the ground, ridden 200 yards, made curves and described a circle of 100 feet in diameter, alighting safely. The machine, all of aluminum, we intend to have weigh less than forty pounds, and can reduce it to thirty pounds if we can get along with a lighter balance wheel than now used.

"Each machine will have a parachute attached to the handle bar, which can be opened at will should the machine descend too rapidly in case of breakage, or if the rider should stop pedaling. Our intention is to ride but a short distance above the ground, that being determined by the nature of the country over which we are traveling and the strength of the wind currents encountered, as well as their direction.

"As to speed, we intend to average thirty or forty miles an hour, and with the wind favorable at least fifty miles can easily be made. The machine is propelled by the ordinary motion of the feet, as with a bicycle on the ground. Gearing attached operates the wings, and the steering is by the handle, which moves a fan tail or rudder. Beneath the machine hangs a swinging balance weight to prevent the wind from turning the machine over and to give better steerage way, the same as a center board is used in a sail boat to keep its course against the wind.

"In starting we imitate a crane or other large bird, which runs along the ground a short distance, using its wings at the same time, then rising in the air. Our skycycle will run on the land even with but a single wheel, and at the same time the wings are set in motion. All other machines made for aerial navigation require either steam or electricity for motive power, and thus, adding materially to the weight, require a large and more cumbersome machine. We dispense with that, as the motive power is furnished by the rider, and our machine is consequently much lighter than any other ever invented.

"The wings and rudder are steered or changed in position by the hands of the operator, and he is left at perfect liberty to look over the country above which he is traveling, simply keeping his feet in motion. When high up in the air and desirous of sloping downward, he can cease pedaling and turn the wings in such a manner that with the momentum already attained he gracefully comes sailing down like a bird that stops fluttering and floats with extended wings.

"I hope that Mr. Miller and myself will ride here on skycycles from Oregon and visit the world's fair. That is our intention."

But Merrill didn't tell the *Tribune* what he proposes doing with the balancing weight when he is making his run-along-the-ground start, nor of what material the wings are to be made, nor how they are to be worked. But this is where the secret end of the affair comes in. Yet the dear old *Tribune* swallowed the story.

## The Ever-Talkative Trick Rider.

W. S. Maltby arrived in New York last week, and has been looking around for a site for a riding school, as he found buildings in Chicago were quoted in the many thousands this world's fair year. Maltby may take hold of Charles Schwabach's school on Flatbush avenue, Brooklyn, which is the most magnificent of any around New York. Maltby says if Kaufmann will meet Barber in a trick-riding contest under equitable rules, he will find part of Barber's stake money. Barber called at the REFEREE eastern office last week and stated he would shortly leave a forfeit and challenge to Kaufmann.

W. F. Cameron, vice-president of the Chicago C. C., is in the south for a month's vacation.

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

## GOOD DAKOTA ROADS.

NATURAL HIGHWAYS UNEXCELLED  
EVEN BY THOSE IMPROVED.

*The Soil is Such that the Passage of the  
Settlers' Wagons Makes Them  
Nearly Perfect—A Letter on  
"Bill No. 215."*

MITCHELL, S. D., March 4.—The great question of road improvement, which the League of American Wheelmen has been so intelligently and aggressively agitating, has been looked upon by the South Dakota members of this organization with the heartiest approbation. The conditions in this state are such that all they can do is to approve what is being done in other states and not join in the crusade locally. The conditions referred to are that this state is blessed with a system of *natural* highways that can hardly be excelled in any section of this country, no matter whether the roads be as nature made them or roads upon which there have been expended much time and money by man. All over this broad prairie state there is a network of excellent roads, formed by the continued passage of the settlers' wagon, aided by no other means whatever. The soil of the entire eastern portion of the state is such that it absorbs moisture readily, hence there is but very little mud at any time of the year; it packs hard and hence makes a hard bed, and there are but few days in the year that the farmer cannot draw a heavy load of produce to market. About the only improvement made in the road is an occasional filling up of a "slough" or "dry run," as the low places are called.

There is only one section in the state known to the writer where road improvement could be agitated upon the grounds that improvement is needed. This, however, is only necessary in the valley of the Missouri river, running from Yankton to the south-eastern boundary of the state, but even the uplands of this section abound in good roads. It is a very small part of the state.

There being, therefore, but little necessity for road improvement agitation but little of it has been done, either by the league or through the efforts of any other organization or individuals. The South Dakota division of the league is at this time but in its swaddling clothes, and the officers have expended so much time in bringing up the membership from three in the spring of 1892 to 103, its present mark, that but little else could be done other than in trying to bring our riders into the league fold. By a short time, as soon as the new league year is at hand, it is hoped that the present membership will be at least doubled, when other and equally important work will be assumed and pushed vigorously for the league's benefit, the question of road improvement notwithstanding.

The South Dakota cyclist now resides in an unusually favored country in respect to its natural roads, but the league is appreciated by him as a body in which he can see great possibilities and he joins in the hope that the eastern cyclist will soon be able to enjoy his spins over as good road surfaces as he himself enjoys, for everyone of us who at present reside in Dakota came from some section in the east but a few years back, where a good section of road was a scarce article and where good riding for any great length of time was unknown. Having had experience in the eastern states the cyclist of this state cannot but help pray for the day when good roads

the country over will be an actual condition, and whatever they can do from their northwestern situation they will cheerfully do.

W. J. HEALY.  
Chief Consul.

## OPPOSED TO BILL "NO. 215."

*A Prominent Indianian's Letter of Good  
Sense and Justice.*

Hon. Joseph K. Edgerton, of Indiana, is a friend of the wheelmen and has taken occasion to condemn that notorious bill, No. 215, which, if passed, would compel wheelmen to dismount when meeting horses on the road. Mr. Edgerton has written a very strong letter to the members of the Indiana general assembly. It is not only interesting as pertaining to this case alone, for there is much information in it which will, at some time or other, be of great service to wheelmen. For this reason we reproduce the letter in its entirety:

AN EXPRESSION OF OPINION.

I have received from Fort Wayne a type-written copy of house bill No. 215, which I learn has a favorable report from the committee on roads of the house. I must confess to great surprise that in this age of improvement in public roads, and in all manner of vehicles for their use for pleasure, health and business, a legislator of Indiana should have been found to father such a bill as No. 215; and much more am I surprised, that a road committee of either house could recommend its passage. To make it a law would be simply an outrage upon the rights of, I may say, tens of thousands of owners and riders of bicycles in Indiana, who have, by the decisions of our supreme court, as much right to use the highways of the state as the owner of a carriage, or buggy, or any other vehicle drawn by horses. Why not? This bill would seem to be the narrow expression of some man's spite, who has possibly had a foolish or half-broken horse scared by a harmless bicycle, and would visit his revengeful wrath upon every bicyclist, man, woman or child in the state. The business of making and vending bicycles has become one of the large industries of the United States, employing millions of capital and thousands of skilled workmen. A first-class bicycle is a perfect work, both in material and mechanism, requiring a high order of mechanical talent. The vehicle itself is one of great utility, both in a sanitary and a business point of view, and the means of pleasure and recreation to multitudes of men, women and children. Its large and increasing use in all civilized countries is proof of this. In Fort Wayne more than one thousand bicycles are in daily use, during the proper season for their use, and there is scarcely a town of any importance in the state which has not its bicycle riders, if not bicycle clubs, including the most intelligent of its citizens.

BICYCLES HAVE EQUAL RIGHTS.

Upon what principle of justice or common sense is the bicycle to be selected from all other road vehicles for virtual condemnation by the law-making power, and made to give way, as a dangerous thing, to every other vehicle that may, perchance, have a fool horse attached to it, or an ill-tempered or stupid driver. Upon what basis of facts or figures, as to the danger from the bicycle, or damage done by its riders on public highways, as compared with other vehicles, is it, that this bill is proposed? Assuming the constitutional right of the legislature, which is denied, to pass such a bill, subjecting this class of road vehicles to burdens and inconveniences not imposed upon vehicles of other classes, the proof of the necessity of the bill to the public welfare, should be of the strongest character. There is no such necessity, nor proof of it. The bicycle, in accordance with its nature and use, has a right to its proper use of any public road. The right, like any other rights, is to be used, and not abused, and the legislature has no constitutional right to say that it shall have less of road privilege, proportionate to its nature, than any other vehicle. Its right to the proper share of the "beaten path" can not be gainsayed. The legislature might just as well say that a farmer's wagon, loaded with wheat or any other grain, must "give the beaten path" to the fast driver of a fancy fast team, who wants to use the public road at a 2:20 gait. "The beaten path" of any highway is supposed to be wide enough for vehicles to pass each other without collision. A bicycle occupies but little of this "beaten path," and there is no reason to say that it must be stopped at the roadside, perchance in a ditch, because some horse may look askance at it.

CYCLISTS BOUND TO BE CAREFUL.

The bicycle is no more dangerous to travel than any other road vehicle. Its rider has usually intelligence and skill. His own safety requires both. He is bound to use his vehicle and the roadway so as not to injure any one else lawfully using it, and he is responsible for his careless or

unlawful use of it. In no way has he any inducement or interest to obstruct a public road, or cause damage to any one lawfully using it. No law can prevent accidents on public highways, because of frightened horses, nor define what will frighten a half-broken or foolish horse—an umbrella, a wheelbarrow, a child's wagon, a barking dog, a squealing pig, an unsightly stump, an exploding pistol or a firecracker, a boy's kite, or a wind-blown piece of paper, or a stone cast by a bad boy—in fact, a multitude of unforeseen things may start a horse on a runaway, or cause some horses to "indicate that they are frightened." The man who takes the road takes its risks, and if he is unlawfully injured by the act of neglect of a bicyclist, he has his lawful remedy, the same as in any other case. Why should he have more? The law's protection is sufficient now, without any such unjust and revengeful law as that proposed. If lawful vehicles need additional protection by statute, the bicycle needs it quite as much as any other, because of the fact that no vehicle in use is liable to be obstructed, and harassed by vicious boys, and ignorant and ill-tempered men, as the bicycle itself, however innocent and harmless be its use.

WHEELMEN DOING THEIR PART.

There is one consideration expressly appealing to the legislature of Indiana, calling for justice, if not favor, to the bicycle. No state is more concerned in having good roads. They are the crying want in our own county and in many other counties in the state. With no class of citizens using the public highways is there stronger desire or greater effort in behalf of road improvements than with the men who make or own or ride bicycles. The bicycle, above all other vehicles, demands for its perfect and safest and most profitable use good, if not perfect, roads. The bicyclist is doing his part to that end. The road literature which has for several years past given the public the best ideas and plans for good roads, has emanated from the brains and pens of bicycle men. To no two men, perhaps, is the whole country more indebted for intelligent and well directed help in the cause of good roads than to Colonel Albert A. Pope, president of the Pope Manufacturing Company, makers of the Columbia bicycles, and his able coadjutor in roadwork, Mr. Isaac B. Potter, chairman of the highway improvement committee of the League of American Wheelmen and editor of the magazine, Good Roads.

BICYCLE A PUBLIC BENEFACITOR.

The bicycle is a public benefactor, not a public enemy, and entitled to the favor of the laws rather than to be obstructed and injured by the narrow and causeless hostility which has inspired this bill No. 215.

It is about time Indiana had emerged from the era of corduroy roads, and the twilight of the dark ages of civilization, and learned that the world is moving onward, not backward, and that the bicycle is one of the vehicles of its more rapid and profitable movement.

I trust our legislature will have the good sense to reject this needless and unjust bill, and that your influence as a representative as well of the bicyclists of Allen County as all other citizens will be used to defeat the bill.

JOSEPH K. EDGERTON.

## The Road Movement in Dakota.

GRAND FORKS, N. D., Feb. 25.—Editor REFEREE:—Your letter of recent date received and contents noted. In reply will say that up to six months ago there has never been anything done for the cause of good roads. All that has been done at all has been done since I was appointed chief consul last December. I have had some letters printed in the papers, and there have been several articles written on the subject. This winter I got a resolution through the legislature requesting our congressmen and senators to do all in their power to help push through any movement for good roads that may come before congress. No one has ever taken any interest in good roads but the wheelmen in our state, until this winter I got the editors of the papers interested in the work.

I am not prepared to say what the feeling of the granger element is as to good roads. I have not talked with any of them on the subject. We have not done much here as a division, because our membership is very small, and what is done I have to do alone, and I can not give it the time it requires. I am doing all I can and hope and feel quite encouraged that next year I can get a bill before the legislature; but we have to get the people educated up to the subject.

MILES E. HARBIN.

Chief Consul North Dakota.

## WHAT BRADT CLAIMS.

*His Record of Eighty-Six Days from  
New York to the Coast Still Stands.*

Nelson A. Bradt, of Johnstown, N. Y., is now in Chicago. Bradt lays claim to the trans-continental record, New York to San Francisco, in eighty-six days, April 9 to July 4, 1891. He rested twenty-four days in all, riding sixty-two days, averaging 71 1-3 miles a day, and covered 4,420 miles, nearly 1,200 miles more than was covered by Stevens, who consumed 103 days in the trip. Bradt rode an Eagle ordinary, solid tire, and clings lovingly to his g. o. o. He weighed at the start but 113 pounds and added five pounds to this on the trip. He states that the expense of such a ride need not exceed \$3 per day throughout. His expense was \$420, including a month's touring in California and a return ticket. He says further that he has enough money and time to spare to go after Tom Roe's record, should it be lower than his own. Bradt says Tom will have to ride 75 miles every day to make the trip in sixty days. The way in which the trip should be made is to ride as rapidly as possible to the centre of Kansas, resting there several days before beginning the toilsome ride across the prairies.

Bradt undoubtedly holds the New York-Chicago record, but which he has never claimed. He took a different route from either Neilson or Checkley, following the line of the Delaware, Lackawanna & Western road to Buffalo, thence via the route of the relay ride. His cyclometer recorded 870 miles and his time was nine days and two hours. From Chicago his route lay through Quincy, Kansas City, straight through Kansas, Colorado Springs, Denver, with a detour to Leadville, Salt Lake City, Reno, Nev.; Sacramento and San Francisco. Bradt never has demanded recognition of this ride for record purposes and probably never would had Tom Roe not announced his trip as being for the purpose of establishing a record.

## A Friend in the Post-office.

August W. Machen, of Toledo, has been appointed to the position of third assistant postmaster general, and cycling will have a staunch friend in the incoming administration. Machen will push the interest of cycling in the proposed delivery of rural mail by cycle-mounted carriers. He will also put in his best efforts for good roads, and as Postmaster General Bissell, of Buffalo is said to be an earnest road advocate, much good may result from the appointment of Mr. Machen, especially as the suburban delivery will, it is said, come under his care.

## The National Capital.

The City of Washington is an object of perennial interest to all patriotic Americans. Not alone because it is the great throbbing heart of the mightiest and grandest republic the earth has ever known, but also on account of its material magnificence. All Americans take pride in its beautiful avenues, majestic architecture, stately homes, and well stored galleries and museums as things of grandeur and beauty in themselves, apart from the historic interest with which they are invested. It is a hope and aspiration of all "YOUNG AMERICA," at least, to some time or other visit the Capital of his country.

The Baltimore & Ohio R. R. offers unequalled facilities in aid of this desire. All its through trains between New York, Philadelphia and Baltimore on the east, and Pittsburg, Cincinnati, St. Louis and Chicago, on the west, pass through Washington. Its fast Express trains are vestibuled from end to end and heated with steam. Pullman's latest and best productions in the way of sumptuous Drawing Room Sleeping Cars are attached to all its through trains. The present management of the B. & O. have made vast improvement in the last two years, and the road is to-day one of the foremost passenger carrying lines in the country. Through tickets via B. & O. R. R. can be procured at all the principal ticket offices throughout the United States.—182.

## WORLD'S FAIR EXHIBITS

## MAKERS AND IMPORTERS PREPARING FOR THE BIG EVENT.

*Many Seem to be Backward, However, and Can Give No Information—Some of the Spaces Assigned.*

The date of the opening of the world's fair is now so near at hand that most of the exhibitors should be in a position to state, with tolerable accuracy, of what their exhibits will consist. The cycle department, as is generally known, is located in the gallery of the Transportation building. Whether or not the display will be in keeping with the importance of the industry cannot be foretold. Some firms, which intended to show, found it impossible to secure sufficient space to so display their machines as they desired and consequently withdrew. A large majority of the leaders will be there, however, and the following communications furnish some details as to the intentions of a few of them:

*Wilson, Myers & Company.*

NEW YORK, Feb. 27.—Our space at the world's fair, Chicago, is as follows: Assignment B 49, group 83, class 520, department 306. Our Mr. Bretz and Mr. James H. Johonnot will, in all probability, be in attendance, jointly or separately, together with representatives from our Chicago agent's establishment during the exhibit.

We will show machines similar to those shown at the Philadelphia cycle show in various finishes, and also parts of same in the various processes of manufacture. The tires we will show will be those of the American Dunlop company, the Ideal, and the Columbia Rubber Works tire. We do not deal in sundries. All the parts of the Liberty will be shown in the rough and various stages of completion. In connection with the novelties, we will, in all probability, exhibit a ten-pound pneumatic tired racing machine geared to seventy-two inches, to be constructed of steel throughout, and we believe the lightest racing machine in the world, and one capable of carrying an experienced rider in track events. We will also make a particular point of our new patented crank-hanger bearing, with its dust-proof attachments, and the Liberty hubs and non-breaking tangent spokes. The entire exhibit will be first-class in all particulars, and we believe will be such as to demand attention and favorable comment from all parties visiting the fair.

WILSON, MYERS & CO.

*Monarch Cycle Company.*

CHICAGO, Feb. 23.—In reference to our world's fair exhibit, would say, our assignment number is B 31, department 254, group 83, class 520. We shall occupy 345 square feet of space in the Transportation exhibits building in section F of gallery. We shall make an exhibit of from twelve to fifteen Monarchs, four styles, in various finishes, and shall have a representative in attendance during the entire season. At the present time we do not call to mind any special feature which we shall produce in connection with the exhibit.

MONARCH CYCLE COMPANY.

*Sercombe-Bolte Manufacturing Company.*

MILWAUKEE, Feb. 24.—The space consigned to us in the Transportation building is in section F, entresol floor, opposite column 7. Our space is 25x12 feet, or 300 square feet. It is not as much as we wanted, and is hardly enough for a

creditable exhibit of our goods. However, we have accepted the space and will try to make a creditable exhibit. The main feature will be the showing up in detail of every part of our machines, showing the material and workmanship that enters into the construction of the Telegram cycles. We will also show in detail every part of our Telegram (quick repair) pneumatic tire. In addition to our full line of wheels, novelties, etc., we will exhibit one of our ball testing machines, which we are now using in our factory for testing all the balls that enter into our machines. It is made in our factory and will be in operation at the fair by a young lady, who, in addition to Mr. Fox, will have charge of our exhibit. We shall show fork ends, cranks, tubular connections, which are our patented specialties, and which we are now selling to the trade both in the rough and finished state.

SERCOMBE-BOLTE MAN'F'G CO.

*Lozier Manufacturing Company.*

TOLEDO, O., Feb. 21.—At the present time we can only give you in a general way an outline of what our exhibit will consist of.

You are familiar with the Cleveland wheels in general, and the exhibit will be composed of standard patterns of these wheels, Nos. 3, 4, 5 and 6, the No. 3 being a double diamond frame road wheel of about 36 pounds weight, complete. No. 4, which is our standard diamond frame pattern, will be put up in different weights, from 27 to 33 pounds, with either 1 3/4 or 2 inch tires, elliptical sprockets if ordered. No. 5 is our ladies' wheel, double drop frame with laced dress guards, weight about 32 pounds. No. 6, or Cleveland racer, will be a 22-pound wheel fitted with racing tires, or a 25-pound wheel with road tires. There will also be a general exhibition of parts and sundries as manufactured by this company. Portions of our exhibit will likely be finished in all of our standard colors.

THE LOZIER MAN'F'G CO.

*Kenwood Manufacturing Company.*

CHICAGO, Feb. 22.—The number of our world's fair space is F 24. It is just inside the golden door in front of the offices in the transportation building. We have 529 square feet, which you will see is a liberal space, with which we hope to make a creditable exhibition. We have not yet been able to go into any very complete details of this display.

KENWOOD MAN'F'G CO.

*Warman & Hazlewood, Ltd.*

CHICAGO, Feb. 27.—We have an excellent position and will show probably fifty machines on a space 43 feet by 12 feet, as well as a full line of sundries and parts of machines. We shall exhibit the various tires, pneumatic and otherwise, used by us, showing all details. Our Mr. Warman, assisted by staff, will be in attendance.

WARMAN & HAZLEWOOD, LTD.

*Hartford Cycle Company.*

HARTFORD, Feb. 23.—The number of our space at the world's fair is F gallery, post 22, in the Transportation exhibits building.

In regard to our exhibit, we are at work on it now and cannot tell exactly what it will be, as it is not yet complete.

THE HARTFORD CYCLE CO.

*Gormully & Jeffery Manufacturing Company.*

CHICAGO, Feb. 21.—Inasmuch as there was considerable delay in assigning space, and still further delay in submitting plans and rules, we are unable at this time to give a definite idea as to what shape our exhibit at the world's fair will assume. This is partially due also to the absence of our Mr. Gormully. We shall exhibit a full line of Rambler

bicycles, the G. & J. pneumatic tire, and the G. & J. racing tire. We have not yet fully decided who will have charge of our exhibit; but inasmuch as we are on the ground, the chances are that we may have several different representatives. Our exhibit will be located in the Transportation building, section F gallery, at post 20.

GORMULLY & JEFFERY MAN'F'G CO.

*Derby Cycle Company.*

CHICAGO, Feb. 21.—Our space at the world's fair is in section F of gallery. Do not know number. Our exhibits will be Derby bicycles and parts of same only.

Do not know yet whom we will have there.

DERBY CYCLE CO.

*Bradshaw Manufacturing Company.*

PATON, Feb. 27.—Our space is 8 1-2x10 feet B 54, department 373, Transportation building, section A gallery, opposite post 1. Owing to the small space we have we cannot exhibit as many machines as we should like to. As it is we shall exhibit five or six Young America long distance \$15 bicycles for boys and girls. We shall also show up several new features, concerning which we are in correspondence with the world's fair committee at present. We shall be represented by one of our eastern salesmen.

BRADSHAW MANUFACTURING CO.

A number of other houses have responded to our request for information, but are not in a position to state what they will do. Others claim that they are not fully advised as to space, but all promise information at an early date.

The Raleigh Cycle Company's space is in the English exhibit, and Mr. Macdonald is not informed as to the position. George L. Davis will be in charge and Mr. Macdonald a frequent visitor.

The Union Cycle Manufacturing Company writes that it intends to let the world see that when it comes to making bicycles, the Americans can hold up their end about as well as the Europeans.

The American Seddon's Tire Company says that Mr. Bowden has the number of the space and he is, at present, in England.

The Overman Wheel Company will be represented, if at all, in the Spalding exhibit.

*From the Divided State.*

William F. Knapp, who has been for some time in charge of an Overman store in Los Angeles, writes from that ever-blooming country to the following effect:

I have had a most pleasant trip through our northern territory. There is some of the finest country through there I ever saw. Farmers can put in their grain to harvest at any time they see fit, and this year being world's fair year, work on grain fields is from one to two months ahead of last season. Why, really, all you have to do is watch, and when you see a field ahead of others, in work, you can bet all your English made clothes that the hardy son of toil who owns it is getting ready to go to the fair; and he is going to have a "rip-snotin'" time, too. He'll come back broke, sure. In all towns I visited I have suggested a town clock, well lighted at night, and a green light above the hotel I am stopping at! Eastern salesmen in the "bi." line would do well to address me for routes, best hotels and the best man to buck against our trade. And don't forget to tell Tom Roe that in his proposed trip across the country, if he comes via Los Angeles, and I am properly persuaded—mind, I say properly persuaded—I might ride from here to Frisco with him. Or is that a small, dust-proof ad.? You see Tom has rubbed up against pros for so long he is liable to have a fault or so of theirs. Tom's forte is not hard work, by any means.

Mr. Bernays was down to see us Sunday, and seemed pleased with the work of this branch. He was going to take us by surprise, but lo, the River Kern got on its high hoss, swept the bridge away, and gave Mr. Bernays two days in which to look over the bi. trade in Delano. In the meantime we received a telegram stating that the Victor had been awarded the premium over all other makes at the preliminary world's fair at San

Francisco, and when he did arrive, three days late, he was shown the good news and there was much rejoicing! Still another to-day; this time the Victor pneumatic tire awarded the premium, as usual. All were in for the plum. Did you know this was a Victor year?

*The Smith Brothers In New York.*

The Dart trade mark is quite familiar to the cycling public, and to the Smith brothers belongs the honor of making the first drop-frame ladies' safety in America, if not in the world. This was at Washington many years ago, the identical wheel which Mrs. W. E. Smith still rides on special occasions. The Smith Brothers have always been conspicuous for their boldness in originality, and have led in the matter of frames. They are bicycle mechanics by birth, it might be said, as they have been making wheels ever since the first rubber-tired ordinary appeared. C. V. J. Smith is an inventor of note, and quite a list of patents have been issued to him. For many years the brothers plodded along in a small way as manufacturers at Washington, and were responsible for the starting of quite a factory. A New York capitalist suggested that there was a field in the national metropolis for them, and the new factory at Sixty-seventh street is the result. True, they are not employing a thousand men, but the place looks as if much business was being done. The Smith Wheel Manufacturing Company still runs its Washington place, W. E. Smith being there last week to direct things. The firm will turn out less than one thousand wheels, but expects to increase its facilities next year.

*Publications Received.*

THE REFEREE acknowledges the receipt of the following publications:

Buffalo Wheel Company, Buffalo.—Catalogue showing the Niagara roadster, 38 pounds, all on; scorcher, 28 pounds; Maid of the Mist, 36 pounds; racer, 21 pounds.

Grand Rapids Cycle Company, Grand Rapids, Mich.—Catalogue of Clipper safeties, showing scorcher, 35 pounds; ladies' Clipper, 40 pounds; roadster, 38 pounds.

O. J. Faxon & Co., Boston.—Catalogue of the Puritan bicycles, showing two styles, roadster and scorcher, weighing 35 and 32 pounds, respectively.

William Newton & Co., Newcastle-on-Tyne.—Catalogue of Elswick cycles, showing model E, light roadster; D, roadster; F, racer; special racer built to order only, and in four styles; K, roadster.

W. A. Lloyd & Co., Birmingham.—Complete list of frames, wheels, hubs, pedals, heads and other parts and sundries.

*Fitting Up a New Store.*

Angle Brothers, Evanston's only cycle dealers, have rented the Y. M. C. A. building, corner Davis street and Chicago avenue. The Y. M. C. A. has taken temporary quarters elsewhere, pending the building of its new quarters. Angle Brothers will occupy the store on the corner, 20x80 feet, and will use the gymnasium for a riding school during the day. The Sheridan Cycling Club has rented quarters in the building 25x40 feet, including the use of the gymnasium with its lockers and shower baths in the evening. The Angle brothers, Harry and Ernest, and their head clerk, are officers of the cycling club. Their leading lines are Columbias and Sterlings.

*Echoes of the Philadelphia Show.*

Mrs. W. E. Smith, the pioneer woman rider of America, has been confined to her bed for several weeks past, the result of a severe cold contracted in Philadelphia. Mrs. Smith is a popular member of the New York Excelsior Club, and her many friends will be sorry to learn that her physician speaks gravely of her case. Lou Crandal, the bright young salesman of Howard A. Smith & Co., Newark, has been dangerously sick for a month past through a Philadelphia cold,

## A HAPPY DEFINITION.

Referring to the pages of the recent Century Dictionary, we find the word bicycle defined as follows: "A very light, two-wheeled vehicle, propelled by the feet and steered by the hands, called the 'Tourist.' It is handsomely and expensively made by the GEO. R. BIDWELL CYCLE CO., 308-310 West Fifty-ninth Street, New York. This is the only bicycle we know of in this country, though we believe there are other spurious imitations."—*Cent. Dict., Vol. 1, P. 172.*

THIS IS A FACT,

AND SO IS THIS ABOUT

## RESILIENCY.

Have you ever thought exactly what resiliency means? It means literally the power possessed by a body of returning to its original position, when moved from that position by a second or foreign body. A good watch spring is perfectly resilient, and so is a pneumatic tire if it is *properly* made. Applied to a pneumatic tire resiliency *actually* means the possibility of riding upon *air*. The ideal tire would be a column of compressed air pinned to a steel felloe by a thought. The *next best* thing to this is the Bidwell Pneumatic with its

MYSTERIOUS CONSTRICTIVE FABRIC TUBE.

THINK IT OVER—and write for the true secret of a Pneumatic Tire.

"AIR: its hard and soft side."

# GEO. R. BIDWELL CYCLE CO.,

308-310 West Fifty-ninth Street, New York.

Factory: Colt's West Armory, Harford, Conn.

Tire Factory: 49-51 W. 66th St.

Writers on trade topics can always find a market for interesting and instructive matter at the REFEREE office. We shall be pleased to arrange with competent writers for regular contributions.

#### "DO BUSINESS OR COME HOME."

*Salesmen Called In.—Big Deals and Big Salaries.—Broken Contracts.*

A well known cycle traveler dropped into my apartments yesterday and naturally enough the conversation drifted to trade topics. The writer picked up many interesting notes relative to the condition of the trade, its future, etc., from this bright and hustling inducer, who represents one of the largest houses in the business. He says "bicycle drummers are thicker than cactus in the southwest." While in Indianapolis recently he met no less than fourteen cycle travelers who spent Sunday at the Bates Hotel. Monday six of them got telegrams to

"DO BUSINESS OR COME HOME."

They went home. My guest informs me that bicycles are to-day the most difficult goods to dispose of on the market. When asked what he thought of the big contracts reported to have been made by some of the travelers for new concerns, he gave me a knowing look from the corner of his eyes, and said:

"That's all straight enough; any one can get that kind of contracts. It's easy to sell \$20,000 worth of wheels to a firm worth \$5,000 or \$6,000 (and that tied up in stock half of which is worth fifty cents on the dollar), ten machines to be shipped at once, balance as ordered."

"But," said I, "these orders are said to be bona fide"

"Suppose they are, what difference does that make. The manufacturer don't want to give the wheels to them and they have no capital to pay for them. Even if they were shipped and paid for, if there is no market for them, it will only injure the wheel in that country, and demoralize trade." And here he warmed up to the subject.

"BIG CONTRACTS ARE A CURSE

to the trade. They are rarely filled—and if filled usually work backwards.—Why, I know of a manufacturer who made a contract with a firm worth a quarter of a million for 750 machines last year at a big discount, in fact the discount was bigger than what was left! They had about one-half the wheels shipped them, and were so over-stocked that they squirmed and kicked around until the manufacturer let them off. Although he had refused small orders at a better price earlier in the spring, supposing he had his entire output sold on contracts that were all right, yet he could do nothing so late in the year."

"Why did he let them off?"

"Because he supposed they would give him a good contract for '93, which they did offer to do at a

PRICE LESS THAN IT COST TO MAKE.

"Talk about selling and delivering 500 wheels of one make between Denver and the Mississippi and south of Minnesota or Dakota. It's all nonsense. I'll bet there

won't be half of them delivered and paid for.

"If all the wheels were made, delivered, paid for and in use that we fellows sell—as we tell it—every man, woman and child in the United States would have two bicycles.

"What is the use in lying? Why can't we look the situation fairly in the face and admit that trade is dull, that there are more travelers than buyers?"

A KING OF SALESMEN.

"What do you think of Charley Smith's nerve in gobbling up the 'Kings of Salesmen,' at big salaries?"

"Smith is all right, and while you are talking about 'Kings' he's one of 'em. There is a man who can give us all cards and spades, and beat us. A man who can make a single contract for 12,000 wheels, say nothing about it to any one, but go home and superintend the building of them and make his own collections; a man who can sell, build, deliver, get his pay for 20,000 bicycles, without

never pay him that 'little \$900' he spoke of."

A THREADBARE SUBJECT.

It is really amusing to note the consistency of the average wheelmen. I notice "Rugby" in *Sporting Life* calls the "free ad" man down. I agree with him on that point. But what's the matter with the fellow who, under cover of a correspondent's card, advertises a wheel for which he is agent and tries to "show up" a mechanical device which has met with favor in the past, and which is being sold by a competitor?

"Rugby" goes for an antiquated idea, which few people want and less care about—yet, he seems to think the public is interested in his arguments against it. Not long since he carried on a controversy over the name of "Mitchell" with Charley Duryea, in which

HE LOST HIS TEMPER

and line of argument with the man of mechanics. "Mitchel-Rugby" undoubtedly is right when he says the public don't want any such contrivances, yet that does not prove Duryea to be mechanically incorrect.

It looks as if "Rugby," who is a South Dakota Victor agent (at least I am so informed by a well-known traveler) had an "axe to grind" and that the paper for

toga hotel, on Dearborn street, and completed the body, which is to be known as the Cycle Board of Trade of Chicago. The officers elected are as follows: President, C. F. Stokes; vice-president, R. D. Garden; secretary, F. L. Douglas; treasurer, J. O. Blake.

Any one to become a member of the board must be a dealer in Chicago, and it is the desire of those already in to have everybody join. One of the objects of the board will be to recover wheels stolen from members of the organization, as well as to guard against the many frauds which come to light almost daily. Nothing as yet has been done in the matter of second-hand wheels, renting, discounts, etc.

The charter members of the board are as follows: Pope Manufacturing Company, Montgomery Ward & Co., Stover Bicycle Manufacturing Company, Century Cycle Company, Thomas Kane & Co., F. L. Douglas Cycle Company, Coventry Machinists' Company, Ariel Cycle Manufacturing Company, Taylor Cycle Company, Thorsen & Cassidy Company, Gormully & Jeffery Manufacturing Company, and A. G. Spalding & Bros.

The board of directors consists of Messrs. Stokes, Garden, Douglas, Blake, Gerould, Marrett and Taylor.

#### A SHOW FOR NEW YORK.

*People Who Want It There Have Discovered a Suitable Building.*

A number of people in New York are anxious that the cycle show of '94 shall be held in that city. It is known that New York trade men were approached with a view to holding a show this year, but did not enthuse. However, quite recently a meeting was held at the house of one of the Madison Square Garden people, when a few parties interested in the project were present. Enough has been said to warrant the belief that if the trade says so, New York will have the next show.

This is the first news of the proposition, but in order to make equitable terms with the garden people for the building, the projectors have been looking around for another suitable building, and have discovered a desirable place—little known to people, however, in New York or the outside world. It is right at the Grand Central depot, Forty-third and Lexington avenue, a good central position enough. The furniture dealers are now holding an exhibition there, and New York Press Club will commence a mammoth fair for the purpose of raising sufficient funds to complete its new home down town.

The Grand Central Palace, when completed, will probably be the most unique building of its kind in the world. It covers the entire block bounded by Lexington avenue, Depew place, Forty-third and Forty-fourth streets, and has been designed for the special purpose of giving New York a structure fitted for exhibits and fairs carried on upon a mammoth scale.

The building is six stories in height. The inside is constructed entirely of iron, and is absolutely fire proof, all of the floors being laid over a solid bed of cement. The ground space covered by the building is 200x275 feet, and including the roof garden, affords more than 31,000 square feet of floor surface. Every foot of this area is perfectly lighted by the sun during the day and by electricity at night.

Entering from Lexington avenue one finds at the left a splendid restaurant and cafe. On this floor are also the offices, the reception rooms, and the hall for the exhibition of heavy machinery. On the second floor is the main auditorium. The central section of this will

THE SERCOMBE-BOLTE BALL-TESTING MACHINE.

the aid of printers' ink, and with half a dozen office men, is, to my notion a rustler.

"Salaries? Oh, we \$900 a year fellows aint in it any longer. I used to think I had a good thing, but since the other manufacturers get to paying \$8,000 and \$10,000, I have come to the conclusion that I had better go back on a farm. That reminds me of one of the boys who said nothing less than \$2,500 would get him. When I made my arrangements for the next year my employer showed me an offer from the same fellow, who was

WILLING TO QUIT WHERE HE WAS

and work for \$1,000. Oh we angels, of cycling commerce are 'foxy' and don't intend that any one shall beat our time telling truth."

With that my friend picked up his soft hat, donned a big storm overcoat with a large seal collar and hustled down town to see a prospective agent who might order a line of samples.

After he had gone I could not refrain from thinking: "There is a man who does business for the future; who sells more wheels than many of the so-called 'kings' and whose transactions must be satisfactory to his house or they would

which he corresponds is perfectly willing to help him grind it under cover of a nom de plume, and at the same time allow him to prostitute its columns with the "free ad" which he objects to so seriously.

"Rugby" is starting off under his new name evidently with an object in view, namely, that of "roasting" a maker whom he does not like. My experience as an old newspaper correspondent and business man has taught me it does not pay to advertise my competitors by belittling and deriding their productions, be they of the factory or pen.

I like to read "Rugby's" writings and think he should give us something better than arguments on back-numbers. He is capable of doing it all right.

TEDDY THE RAT.

#### AN ORGANIZATION PERFECTED.

*The Cycle Board of Trade of Chicago Now Fairly Under Way.*

A cycle board of trade has been in process of formation for some time in Chicago, but until Wednesday night no definite organization was formed. At that time the representatives of the leading houses in Chicago met at the Sara-

# HAPPINESS WITHIN THE REACH OF ALL.

An even temper and cheerful smile  
Are blessings we all admire;  
Would you have these graces all the  
while;  
Just ride the Cleveland Tire.  
No other can with it compare  
In causing happy faces.  
You'll never once have cause to we—  
sigh;  
For—you'll win in all the races.

We believe the Cleveland  
Pneumatic Tire to be the ONLY  
Scientifically Constructed  
Pneumatic Tire on the market.  
The longitudinal threads  
have been omitted from the  
tread portion, making an ex—  
ceedingly Light, Resilient  
and Swift Tire.

Used in connection with the CLEVELAND RIM.

AGENTS: Anglo-American Iron and Metal  
Co., 213 Pearl street, New York.

accommodate 8,000 people, and is surrounded by a glass dome sixty-five feet high.

The two floors immediately above the ground cover more than 80,000 square feet, or a space much larger than that occupied by the Actor's Fund Fair in the Madison Square Garden. On the fifth and sixth floor there are 120,000 square feet of exhibition surface, making it possible to hold two or more exhibits at the same time. There is space enough surely. The main floor, however, is sufficient for a large bicycle exhibit.

### CHICAGO TRADE BRIEFS.

#### Movement of Traveling Men—General Local Trade Talk.

A large shipment of Quadrants was received last week.

A. C. Banker left the city Saturday to be gone a month.

W. A. Shockley called on the local trade Friday last.

M. A. Meader, of the Ariel Cycle Company, is in the east.

Harry Cassady had a very successful trip in Michigan, from which he returned last week.

Thomas F. Rockwell is on the road in the interests of the Stokes Manufacturing Company.

L. W. Conkling left for Texas Thursday in the interests of the Coventry Machinists' Company.

George Webb of Aurora was in Chicago Saturday. He says the Aurora Cycle Manufacturing Company is devoting its time to getting out sulky wheels and attachments for Frazer & Sons, who are the owners of the plant. The season's output of wheels will probably not be large. Those turned out, however, will be models of the wheel builder's

art, embodying good points from prominent makes, with many original ideas.

The Freeport Bicycle Manufacturing Company expects to turn out 1,200 machines this season.

Henry Andrae of Milwaukee was in Chicago Saturday, returning home from a four weeks' trip east.

A. E. Lumsden was in Chicago this week; also his employer, C. F. Smith, of Indianapolis. Mr. Smith says trade is fair.

L. J. Ollier was in the city the past week. He is now traveling in Iowa for the Nebraska Cycle Company of Lincoln.

R. C. Whayne, the Louisville (Ky.) cycle manufacturer and dealer, was in Chicago this week endeavoring to place an agency for his wheel, the Southern.

M. J. Budlong, agent for Columbia wheels at Rockford, Ill., has been secured as salesman for the Chicago store of the Pope Manufacturing Company.

A. H. Radell has withdrawn his interest in the Lincoln Cycle Works, 21 North Lincoln street, and will shortly establish himself in a store on Dearborn avenue near the bridge.

L. M. DeVore, patentee of the elliptical sprocket wheel, denies the figures recently published decrying the efficacy of his patent: as a speed maker. He will shortly answer the argument.

Dasey Bros., 3109 Prairie avenue, Chicago, are busily at work on model wheels of extremely novel manufacture, on which they hold several patents. No drop forgings are used whatever, the brazings being entirely different from anything yet presented. The frame weighs seven pounds and is extremely strong. This wheel will be known as the Daisy Scorchers. Only two or three will be manufactured this season. Next year

the brothers will go more extensively into the business.

The Hill Cycle Company secured space on Saturday in "Bicycle Row" of the Transportation building for an exhibition of Fowlers. The bicycle exhibits are on the second floor and east side of the great building.

L. W. Conkling returned last week from the west. He took large orders for Swifts in Council Bluffs, Lincoln, Des Moines, Davenport, Milwaukee, Racine, St. Paul, Fairbault and Sioux City. Among the new agents are H. Berg & Son, Davenport; G. B. Grosvenor & Co., Dubuque; Hutchinson & Phillips, Sioux City, and Snyder & Straub, Fairbault. F. R. Birmingham, Des Moines, Ia., and S. M. Ladd & Co., Morrison, Ill. the latter have recently entered the bicycle business and will handle Swifts.

### GENERAL TRADE NOTES.

#### Paragraphs About Trade Men, Wheels and Business.

G. E. Geigan, the Baltimore bicycle man, has removed from Madison avenue to 527 West Baltimore street.

The Luburg people expect to enter largely into the trade with the Sprinter and Traveler safeties and a well-stocked sundry department.

George Hilsendegen, of Detroit, is trying to purchase the 13 1-2 pound King of Scorchers, exhibited by the Centaur Cycle Company at the National show.

Porter & Gilman, the Phoenix agents for New Jersey, and joint agents for New York city for the Stover products, are now in their very palatial quarters at 1773 Broadway — Central Park cycle row—and report business good. Mr. Porter is the well-known author of "Cycling for Health and Pleasure," and "Wheels and Wheeling," the former

having passed through three editions, being now out of print. Mr. Porter is one of the old-timers, and is full of anecdotes of auld lang syne in cycling.

The Knight Cycle Company is preparing for the market the Knight, a Humber-pattern machine, at \$150 and the Nox All (a novel name at any rate) at \$115. M. & W. tires will be used.

Arthur E. Flavell, Loyd, Read & Co.'s Coventry representative, sailed for home on the Britannic last Wednesday. Mr. Flavell made many friends during his trip. He expects to return in August.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

C. F. Martin, of Clinton, Mass., writes that he has purchased the plant and the business of the Clinton Cycle Company, and will operate an extensive repair shop separate from his salesroom, on another street.

The Michelin tire is highly recommended by Lumsden, the Scotch champion, who says it was the only tire in the late forty-eight-hour championship contest at Glasgow which did not burst or puncture.

W. W. Kenfield, of the Rochester Cycle Company, in his travels east closed contracts with people in nearly every city of importance. W. E. Sanborn & Co., Columbus avenue, Boston, gave him a rather large order.

The business heretofore conducted under the firm name of Frasse & Co., at Nos. 90 to 94 Park Row, has been sold to the Frasse Company, which assumes all the liabilities and collects all accounts due the late firm. The company will continue business at the old stand until

# HICKORY WHEELS

With Ball Bearings and Pneumatic Tires.

We are a little late  
in getting out our  
"Ad."

But are in good  
time to fill your or-  
ders for our High  
Grade Hickory Bi-  
cycles. . . . .

MICHIGAN ♦ WHEEL ♦ COMPANY,  
LANSING, MICHIGAN.

May 1, 1893, after which date it will re-  
move to 19 Warren street.

Alex Schwalbach, Wilson, Myers &  
Co.'s up-town manager, opened a Liberty  
riding school at Fifty-fourth street and  
Broadway March 1.

The Batavia Pedal Company has suc-  
ceeded to the business of the Hammond  
& Cooley Manufacturing Company. The  
capital stock is \$40,000.

George S. Brodanck, the agent of  
Brunswick, Ga., was present at the  
Savannah tournament and made ar-  
rangements to handle Imperial, Premier,  
and Raleigh cycles.

Henry Goodman, for years in the Pope  
company's factory office, is now with the  
Hartford company and will soon be on  
the road. Henry is not sure he will be  
able to officiate as a handicapper this  
year on that account.

Secretary Freidenstien of the Anglo-  
American Iron and Metal Company, New  
York, will sail for England next week—  
this for the information of his many  
English friends, especially Messrs.  
Bown, Sanders, Loudon, and Smith.

Eugene F. Bates, president of the Blue  
Jacket Wheelmen, of Greenville, S. C.,  
has acquired the business heretofore con-  
ducted by Bates & Ferguson. Among  
the wheels handled are the Columbia,  
New Mail and Western Wheel Works'  
line.

George T. Reed, the North Charles  
street, Baltimore, agent for Niagara  
cycles for Maryland, is showing some-  
thing new in cushion tires, for which he  
has obtained a patent, and which he  
proposes to sell outright or place on the  
market himself.

In a recent notice we stated that Bar-  
bour & Stone had purchased the Roy  
Oiler. The Roy Oiler Manufacturing  
Company was really the purchaser, and

of this company Norman Barbour is sec-  
retary. He is at 77 Warren street, New  
York, the headquarters of the company.

The American Bicycle Company, for-  
merly of Springfield, Mass., will here-  
after conduct its business at Grand  
Rapids, Mich., where it will, in addition  
to continuing to sell the Columbia and  
other wheels, make a specialty of repair-  
ing. The latter branch will be under the  
care of A. H. Chapin.

On May 1, the Illinois Cycle Works,  
now at the corner of Wood street and  
Carroll avenue, Chicago, will remove to  
Sacramento and Carroll avenues. The  
factory will be 50x150 feet, one story, and  
the company will run its own engines.  
Mr. Winn states that he has sold all the  
wheels he is sure he can make this season.

G. Minturn Worden, having disposed  
of the Remington output for this year,  
is now figuring with several New York  
architects on spring and summer wear-  
ing apparel, and gives it out to his  
friends that this season's will completely  
place in the shade his last year's attrac-  
tions. This is authentic—it comes from  
"Pop" himself.

A. B. Barkman has little time to talk  
road race or cycling politics these days  
at Spalding's Broome street store. He is  
busy selling Credendas and the Over-  
man company's line. To a certainty  
this year's Credenda is a stunner, and  
for \$115 will be hard to beat. The wheel  
is the result of careful designing, it is  
said, by Barkman himself. Those who  
have not seen this year's Spalding Cre-  
dendas should do so at once.

Fenton S. Fox of the Sercombe-Bolte  
Manufacturing Company of Milwaukee,  
ran into New York Monday and closed  
a deal with Charles E. VanVleck, 310  
Broadway, who becomes a tire distrib-  
uting agent for the east for the Milwaukee  
manufacturing company. Fox reports

thrifty business, and among other tran-  
sactions a deal by which Thomas J.  
Seavens, 518 Broadway, opens retail  
stores in Albany, Troy and Saratoga  
Springs, handling Telegram cycles.

William Bowden, of the Seddon Tire  
Company, is again in this country,  
for the purpose of completing arrange-  
ments regarding the manufacture of the  
"Red 'Un," as the Seddon tire is known  
in this country.

Harry Chapman, who for three years  
successfully managed the Leicester Cycle  
Company, which makes the Peregrine, is  
now in the United States with the idea  
of joining some progressive firm. There  
is no denying the fact that Chapman  
knows a thing or two about building  
road wheels, for he has made it a study  
for several years. The success of the  
Peregrine is, no doubt, largely due to his  
efforts.

A correspondent at Beaver Falls,  
where the Eclipse is made, writes us that  
the company is giving employment at  
present to 350 men, many of whom con-  
tinue at work until late in the evening.  
Wheels are being shipped at the rate of  
three car loads a week. As to the merits  
of the Eclipse, our correspondent assures  
us that its running qualities are unex-  
celled, and that it has passed, success-  
fully, through very severe tests.

George Marshall, an engineer in the  
employ of the Pope Manufacturing Com-  
pany, was killed Thursday evening,  
March 3, while shutting off the elevator.  
It is run by an electric motor, and in  
turning off the current he handled the  
wrong wire. Death was instantaneous.  
Marshall was twenty-three years of age  
and well liked by all the employees. The  
Pope Manufacturing Company was to  
give a supper to its employes last Tues-  
day evening, but owing to this unfortun-

ate occurrence it has been abandoned  
for the present.

## BUILDS LIGHT WHEELS.

*Harry James, of Birmingham, a Pioneer  
in This Branch of Cycle Construction.*

Harry James, of Birmingham, was  
one of the first, if not the very first, to  
make extremely light machines. When  
only solid tires were in vogue he made  
very light wheels, and many other

HARRY JAMES.

makers had them down to 27  
pounds and under, and they lived  
to tell the tale, too. Last year his  
racing wheel weighed 23 pounds, this  
season it is three pounds lighter; the 1892  
road racer weighed from 26 to 27 pounds,  
while now it is in the neighborhood of  
25 pounds. The James factory is built

## WHAT?

## The Model "B" Flier.

Weight, as you see it, 30 1-2 lbs.; with brake and mud guards, 33 lbs.

Do you want a wheel that you can rely on? Then send to our nearest agent, or write for photos and catalogue.

### WE WANT AGENTS.

## ILLINOIS CYCLE WORKS, 665-669 Carroll Ave., Chicago.

in the form of a square and is four stories in height. In this building 250 men are employed turning out five patterns of the James, the path racer, 20 pounds; road racer, 26 pounds; roads'er, 30 pounds; ladies', 26 to thirty pounds, and the geared ordinary. Mr. James is a man between thirty-five and forty years of age and his family circle is formed by seven people. He is his own designer and superintends the work. Mr. James has made a great success of building light wheels, and as a result is well off.

#### The S.-B. Ball-Testing Machine.

The Sercombe-Bolte company's ball-testing machine, which is illustrated in this issue, is described by the Milwaukee concern as follows: It is the only device of its kind in existence, and is made, not to sell, but to test and as-ort the balls used in Telegram cycles. It is a well known fact that in a bearing the balls should not only be perfectly spherical, but they should be of uniform size when used in the same bearing. Where three or four balls in the same bearing are ever so slightly larger than the rest, the entire strain comes on the larger ones, thus causing friction and often crushing the balls. This devise is the only dial machine ever produced for detecting irregularities in size and surface, and it measures accurately of 1-64 to 1-1000 of an inch. The finest tissue paper is about 1-1000 of an inch in thickness. Divide this thickness into sixty-fourths, and the fineness of the measurement is almost beyond comprehension. It measures accurately the thickness of a lead pencil mark on a piece of paper, and will show whether a soft pencil or a hard pencil has been used. So practical are its results that every ball manufacturer in the country has sent samples of balls to the Sercombe-Bolte Manufacturing Com-

THE BICYCLE ENVELOPE.

pany for an official test and report. The balls are not only assorted with great accuracy, but this machine measures many times closer than any other device ever made, and for the rapidity of work in assorting is ten times faster than any ordinary micrometer. By this device all balls of proper surface and uniform size are placed in separate boxes and so assorted that only balls of the same size are placed together in the same bearing.

#### Makers of the Puritan.

O. J. Faxon & Co., of 3 Appleton street, Boston, are among the new concerns in the manufacture of bicycles. The firm starts out with a modest announcement which has the ring of sincerity: "This is intended for those readers who do not know us. To those who have seen or ridden the Puritan, we need no introduction." The superintendent for the company is Harry Hedger, a capable mechanic, a gentleman well and favorably known as a small manufacturer of excellent wheels in Boston. The firm further says: "Our reputation as manufacturers of iron and steel products for more than forty years is sufficient guarantee that in offering a high grade

bicycle to the riding public, we shall give full value for every dollar received, and the purchaser of a Puritan will get a machine that will please him every time he rides it.

"We have at the head of our manufacture a man of more than twenty years' experience in England and America in all branches of bicycle making, and we do not hesitate to say that the number of Puritans already in use shows that we have assembled a superior corps of mechanics in every department of its manufacture.

"We shall produce only a limited number this season, but expect to have them perfect in every detail so that the Puritan may attain a reputation for speed and wearing qualities second to none."

The Puritan is a graceful looking wheel, as the cut in the advertisement elsewhere shows.

#### How Oliver Received an Order.

A good story is told about Ned Oliver. When he joined H. A. Lozier's staff, he was told to make a trip with the Little Giant as a good article to sell. It was Edwin's first trip and it behooved him (according to his own story) to make

some sales. Edwin was equal to the task. He gave a little dinner in Pittsburg and invited all the people he thought would serve his purpose. A man in Pittsburg, Ned learned, was about to launch into the trade, so Ned arranged with each man at the dinner party to call on the to-be agent and ask if he sold the Little Giant, or if he intended selling it. The would-be-agent was immediately plied with Little Giant prospects, and as the callers increased he was anxious to get that famous wheel. So when Edwin called two days later, he was welcomed with open arms and left with a large order. It is said Oliver avoids that side of a Pittsburg street now, as he would a dread disease.

#### The Bicycle Envelope.

The accompanying cut illustrates this device. In brief, it is an envelope of stout brown paper in which the machine can be placed before crating or when storing for the winter. It is designed to do away with the wrapping which has heretofore occupied a great deal of time and has not been entirely satisfactory. The American Ormonde Company handles it.

#### Travels With Success.

W. M. Perrett reached Chicago Saturday in the interest of the Bretz & Curtis Manufacturing Company. At Detroit the agency for Quinton Scorchers in Michigan was placed with the Schulenberg Cycle Company. At Cincinnati, the Buckeye Cycle Company placed a good order and took the agency of the state of Ohio. W. G. Schack, Buffalo, gave him an order for the northern New York state agency. George H. Harris, Syracuse, New York, secured the local agency, and at Rochester a nice order was received from the Novelty Carriage Works. In addition

# Saddles - Saddles - Saddles - Saddles

By no means wishing to cast reflections on American productions, we still maintain that English Saddles---Lamplugh's and Brooks'---have the undefinable something about them that makes them really "a source of pleasure and joy forever" in more ways than one.

We have just received a large shipment of Lamplugh's No. 218, No. 255, No. 268 and No. 405; likewise Brooks' Speedwell B 19 Racing Saddles---the latter weighing just 12 ounces each. We know of nothing to equal these.

**SMITH WHEEL MFG. COMPANY**

921 H Street, N. W.  
WASHINGTON, D. C.

he captured orders for saddles all along the line, the Ariel Cycle Company, Marble Cycle Company, Yost Manufacturing Company, Royal Cycle Works and others, giving orders. Mr. Perrett will be in Chicago a week, and hopes to place the Illinois agency for Quintons with a local dealer. His talk is of immediate deliveries, and in that alone he has a strong talking point.

*A Southern Expert.*

C. M. Rushing, secretary-treasurer of the Georgia division L. A. W., is looked upon in Savannah as a wonderfully expert mechanic, and one of the best posted men on cycle construction. He is a mechanical engineer and the Savannah boys say that he has wheels and things cycling in his "boko"—a new substitute for the word head.

*Bayliss, Thomas & Co., of Coventry.*

During a REFEREE representative's stay in England he paid a visit to the works of Bayliss, Thomas & Co., who

kept well supplied, for we saw a number of crates of machines ready for shipment. All agents will have an ample

JOHN SLAUGHTER.

supply of parts to replace anything lost. Trade with Bayliss, Thomas & Co. is very good. The principals are all well known men, Mr. Thomas being at the head of the Coventry fire brigade, a magistrate and holding several other important trusts. J. R. Coombs is the manager of the concern.

*Will Make The Fashion.*

The Bailey Manufacturing Company was formed last week for the manufacture of bicycles. This was formerly the Elliott Manufacturing Company. The Elliott roller ball bearings have been dropped altogether, both on account of expense and lack of appreciation by the public. The company's headquarters are in the Springfield building. At present the plant is small, but the new company expects to enlarge another season, occupying a plant of its own. H. R. Bailey is known as a mechanic. The wheel now manufactured is called the Fashion. It is a machine providing for a sudden change of gear, having on the rear wheel two sprocket wheels, one on each side. In case of change of gear, the rear wheel is turned around, altering it from 56 to 63, or vice versa. There is little trouble about this, and the bother of carrying an extra sprocket is done away with. One hundred machines are nearly completed and 200 more will be started at once. J. R. Lowe, a real estate dealer in the Chamber of Commerce building, is actively interested in the company. Mr. Elliott has retired altogether, to engage in architectural work.

*Hickory Wheels From Michigan.*

The Michigan Wheel Company of Lansing is pushing its Hickory wheels energetically. Heretofore the company has catered principally to the buggy trade, but we are promised a cut at an early date of the bicycle recently perfected, and which is to weigh thirty-six pounds. The company writes us that the wheel will be strictly high grade.

*Hope for Creditors.*

There is hope for some of Kirkwood, Miller & Co.'s creditors—more hope than there was a few days ago, at least. It will be remembered that some \$8,000 worth of wheels, shipped by Bonnick & Co., Coventry, and in bond at the government warehouse, were claimed by the assignee (for the benefit of the creditors), while Bonnick & Co. petitioned the court to return the goods to them, claiming that until the duty was paid the goods were only in transit and had never

come into the possession of the firm now defunct. The court delivered a lengthy decision, refusing to grant the prayer of the petitioners.

*The Elliptical Sprocket Wheel.*

In answer to an inquiry as to the advantages of the elliptical sprocket wheel, the editor of the *Scientific American* says: "The only advantage we can see is in the increase of power that may be put on the crank by the weight of the rider in its horizontal position, at which moment an extension of the diameter of the sprocket driver is made by the vertical position of its longest elliptic axis—increasing as it does from its horizontal position to the vertical, and decreasing to the horizontal, twice during a revolution. There is no absolute mechanical gain during an entire revolution of the elliptical drivers, by virtue of their ellipticity, but the advantage lies in the facility of economizing the weight of the foot tread at the best points in the revolution of the sprocket ellipse by enlarging its radius at the moment of greatest foot pressure."

*Hendee's New Store.*

From the time he commanded attention as the amateur champion in 1882 and '83, George M. Hendee has been an interesting figure in cycling, and the Springfield boy has never done anything to lower him in the respect of cyclists. As an amateur he was fairly worshipped by the Springfield people and cycling America generally, and as an energetic young man in the field of trade he has

GEORGE M. HENDEE.

fairly kept pace with his contemporaries. The announcement that Springfield would soon greet her favorite cycling son as a permanent resident created much talk. His parting with Hurlbert Bros. & Co. was most friendly, and it is satisfactory to know that his four years' service with the prominent New York firm is appreciated. Hendee entered the trade with McCune as a traveler; later was with Stall, and then entered his late employers' house. One reason for Mr. Hendee's change—and probably the greatest—was his disinclination to travel. Then again the desire of most ambitious young men to branch out for themselves no doubt had something to do with it. At any rate all who know him will wish him well. The store at Springfield will be situated on Main street, corner State, and it is to be fitted up handsomely. A fine repair shop will be located in the rear. Mr. Hendee will carry a large line of wheels and has large territory for several makes, including the whole of New England for the Rudge, Sylph and Overland.

*Peck & Snyder's Line.*

W. W. Stillwell, of the old established firm of Peck & Snyder, has been more

than successful with the bicycle department. This year Mr. Stillwell is very much in the cycle swim, having a hand comprising the following winners: Raleigh, Stearns, Road King and Queen, and the handsome Nassau, which lists at the popular price of \$120. A very judicious selection of mounts is backed by remarkable energy and foresight, and the securing of the old Raleigh corner at 1790 Broadway, near Central park, gives Peck & Snyder a favorite up-town agency. The Nassau is a diamond-framed, Humber pattern, Credenda tubing wheel of elegant finish, fitted with Phelps & Dingle Ideal pneumatic tires. W. Hobbs is assistant to Mr. Stillwell in the Nassau street headquarters, whilst L. P. Brown, Jr., is manager of the up-town store. A full line of sundries is kept.

*Another Chicago Factory.*

Ernest Ullbricht, Emil E. Ullbricht and F. A. Frees have incorporated the Mercury Cycle Company. Ernest Ullbricht, is the father of Emil, who is well known on the road and path around Chicago and Frees is nephew of Mr. Ullbricht. A factory is now started, in fact is well along in work, at the corner of Chicago avenue and Carpenter street. According to our advices the Mercury will be a high grade wheel, listing at \$165. The road wheel will weigh twenty-nine pounds, and the racing wheel ten pounds lighter. The wheel base will be 43 1-2 inches and head 7 1-2 inches. The tread will be but five inches. Bearings will all be of tool steel and dust proof. Warwick hollow rims and Scotland cranks will be used.

*Recent Patents Granted.*

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

- 492, 436, hub-protector; Edgar F. Ryder, Providence, R. I., assignor to the Atlantic Manufacturing Company, same place; filed April 21, 1892.
- 492, 510, shoe for cycle-wheels; Herbert Gregory, New York; filed Oct. 16, 1892.
- 492, 580, pneumatic tire; Charles E. Hadley, Chicopee, Mass., assignor to the Overman Wheel Company, Hartford, Conn.; filed Oct. 31, 1892.
- 492, 667, tire-tightener; Michael J. Fitzgerald, Aravaipa, Arizona; filed Nov. 7, 1892.
- 492, 740, gun-clip for bicycles, James S. Cope, and Hartford, Conn., assignor to the Pope Manufacturing Company, Boston, Mass.; filed Nov. 17, 1892.
- 492, 754, velocipede; Stephen Waterman and Charles H. Luther, Jr., Providence, R. I., assignors to themselves, and Kenneth Lee, New York; filed Aug. 24, 1892.

*Boston, Mass.*

Singer & Co., of Boston, have adopted the plan of hanging wheels on scales in the window, saddle and all on.

Charles Tilden has started on a trip through the west in the interest of the Pope Manufacturing Company.

The Union Cycle Manufacturing Company shipped more wheels the last week in February than on any previous week since the company has been in business.

*Cranks, Shaft and Pedal Pins One Piece.*

A new contrivance for cycles is here illustrated. It is the invention of W. H. Fauber, 35 Van Buren street, Chicago. The cranks, crank shaft and pedal pins are all of one piece, and the usual nuts, bolts and keys are done away with. The inventor claims for the device that the weight of the cranks, shaft and hanger is reduced one-half, the tread may be narrowed to five inches or less, there are ten to fourteen less pieces in the make up, and no corners or keys to catch the trousers or skirts. Fauber & Norton are the owners of this patent, and thus describe it: "The sprocket axle, cranks and pedal pins are made in one piece. To

THOMAS BAYLISS.

are known the world over as being amongst the leading cycle manufacturers. The members of the firm, Thomas Bayliss, John Thomas and John Slaughter, have all been connected with the trade since its commencement. The various shops are all under the superintendence of skilled managers, mostly sons of members of the firm, specially trained for the posts they occupy. The firm is able to take care of any reason-

JOHN THOMAS.

able quantity of orders. Bayliss, Thomas & Co. realize that they must ship in time, and the agents appointed on Mr. Hadden's trip (Howard A. Smith, of Newark; John Malpas, 48 Sheriff street, Cleveland; John Hoyle, 5 and 7 Madison street, Chicago; George C. Cribb, Milwaukee, and George F. Bostwick, Toronto, Canada) are evidently going to be

remove from frame, unscrew jamb nut (N), bearing cone (C), ball cups (D and E), and the axle comes out through slot in sleeve on under side, which in use may be closed by a shield (G) held in place by ball cups (D and E). All the

bearings are screwed on the crank axle, which is made of tough steel, the axle proper being large between sprocket and jamb nut so that the cranks can be repeatedly bent and straightened without getting bearings out of true."

#### RECENT ENGLISH INVENTIONS.

##### New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Jan. 11, 1893, give notice in the prescribed form of such opposition.]

##### THE M.-J. PNEUMATIC TIRE.

No. 4,627. R. Mansell-Jones' "Improvement in pneumatic tires and rims, to hold the same as used for cycles and other vehicles." March 8, 1892.—This invention has the now usual object of rendering the detachment of the outer cover and the air-tube easy for repairing purposes. The rim (A) of the wheel is of the ordinary crescent section, but it preferably has a circumferential groove in the centre of its concave face, to receive the wired edges of the cover (B). The cover (B) of the tire is made of rubber and canvas in the well-known manner, being preferably thicker at that part adapted to form the tread than elsewhere. In the edges of the cover (B) are formed pockets in which binding wires (C) are loosely placed. The ends of the wires C O pass through openings in the said pockets and are drawn together to bind the edges of the cover into the groove in the rim (A) either by means of right

and left hand coupling nuts threaded direct onto the ends of the wires (C O) or by means of a right and left hand coupling screw (D) threaded into blocks (E E) adapted to slide in a groove in the rim, the said blocks being formed with slots to receive the headed ends of the wires (C O) shown in the figure. As a modification, the blocks (E E) may be formed in one piece and fixed to the rim by a screw or bolt in which case the right and left hand coupling nuts are placed in any convenient

position in the lengths of the wire (C O) preferably about six or eight inches from the double block (E). To allow the edges of the cover to stretch sufficiently to permit of their being placed in position in the rim, the canvas of the cover is cut away, as shown, in one or more places, and the cover is reinforced at this point or points by placing a short length of canvas tube over the air-tube. By this construction the cover of the tire is prevented from creeping on the rim and the air-tube is entirely confined within the cover so that all contact of the air-tube with the rim of the wheel and the consequent possibility of it chafing thereon is avoided. This tire was exhibited by the Pneumatic Tire Development Company at the National show.

##### MIDDLEMORE'S NEW SADDLE CLIP.

No. 5,663. T. Groves' "Improved clip or clamping socket for use on velocipedes or other purposes." March 23, 1892.—This invention relates to an improved clip for holding a cycle saddle or like article to a round or other support and it is specially applicable where two wires of a saddle frame are to be firmly held together and secured to a round support. A band of metal (A) is so formed and bent that three loops are produced; two external smaller loops to contain the rods (E1 E2) with an internal larger loop between to contain the arm (E) of the saddle pillar. A cross piece slipped into the larger loop carries a set screw (D) which is screwed up against the arm (E) and pulls the whole of the band to a state of tension. The band being somewhat flexible the loops firmly clip the rods (E1 E2) as well as the arm (E). The band (A) is preferably stamped out of one piece of metal with fork-like ends and the central part is bent to fit the top of the arm (E) while the fork ends are each folded round one of the smaller rods and passing under are fastened together. Each fork end thus joins to the other and double lower loops oppose an upper single central piece. The fork ends may be adapted to encircle curved rods instead of straight wires may be used instead of bands, and other modifications may be made.

##### A GERMAN BALL PNEUMATIC TIRE.

No. 21,787. R. Papperitz's "New or improved safety cellular pneumatic or cushion tire." Nov. 29, 1892.—Like other tires of this class, this one is designed to be capable of use after puncture and to be easily repairable. It consists of a series of rubber cells (z) of suitable form filled with air; a strong covering (l) binding and holding the cells (z) and also enclosing the rim outside the cells; and thirdly a rubber cover (g) which so far as it lies upon the rim is united to the covering (l) by a solution of rubber or otherwise. The cover (l) is turned back over the edges of the rubber cover

(g) and is fixed thereto, but otherwise the cover (g) lies loosely on the inside cover (l). The turning back of the cover (l) forms a pocket along each edge of the outer cover and in each of these edges is inserted a wire (v). The wires pass out of the edges at intervals and form loops which hook onto the pins (d) which are riveted on the back of the rim (f). As a filling between the cells (z) and the cover (l) one or more extra strips (11 12) are secured to the cover (l). The covering is finally lined with silk to reduce the friction between the cells and the walls of the cover. When one of the cells is punctured it naturally collapses and the others expand so that the gap is filled up, or by undoing the cover at the seat of the injury a new cell may be inserted.

##### Elected a Cyclists' Ticket.

The annual meeting of the Ravenswood Cycling Club was held Monday evening. The cyclists were victorious, inasmuch as every officer elected, save one, is a rider. The ticket elected was as follows: Grant Newell, president; W. H. Chambers, vice-president; A. Zipf, secretary; E. A. Kimball, F. D. P. Smeling, J. C. Shirra and J. R. Andrews, board of directors; J. R. Howard, captain. The annual report of the secretary showed a membership of ninety-five—fifty-seven gentlemen, thirty-four ladies and four honorary. K. F. Peterson, C. E. Salter and F. E. Spooner were elected delegates to the Associated Cycling Clubs.

#### CYCLING IN SAVANNAH.

##### The Recent Meet Had a Tendency to Boom Things.

To the cyclist Savannah has especial and attractive charms in her roads and streets. Of the streets Congress, Bull, Broughton and Liberty are asphalted, giving about four and a half miles; besides these, Jones, Gaston, Hall, Botton, Henry and Jefferson are Shelley, giving an additional five miles of good streets. Two shell roads lead from the city in different directions and afford the cyclists rides of about fifteen miles through roads of giant moss-embowered water oaks, and pines. It is on one of these roads, at the point it intersects an electric road, where the elegant track of the Savannah Wheelmen is situated, and it becomes easy of access to wheelmen, and those going in carriages or cars. The ride by wheel is one of about twenty-five minutes at a very modest pace, and a number of the boys make the distance in half that time.

Zimmerman and Wheeler are still in the city, and express themselves better pleased each day of their visit. They expect to shortly go to Brunswick for a while to visit friends, and will probably return to Savannah later in the month and do some training.

Isaac Baird, of Charleston, who took first place in all races in which he entered, will come to Savannah shortly to commence training regularly on the Crescent track. He will get in shape for the spring meets and will certainly be heard of later in the season. The Charleston papers class him "equal to Wheeler and almost Zimmie's equal."

Hugo Wenzel, one of Savannah's crack riders, left the city last Saturday on a fruit steamer for a trip to Central America. He will probably be away a month, and will surprise the natives with a full-fledged pneumatic-tired bicycle. On his return he will commence active training for the May races. It is quite probable the racing season will open at Savannah, with a two days' programme, early in May—during "May week" celebration, a week of jollification and gaiety, when the city is filled with strangers.

Senator Morgan left for New York on the Kansas City on the 25th, and his last request to his friends was to get him just one of those beautiful "toul" birds. It is rumored that one of his admirers will send him a young white buzzard as soon as the spring crop arrives. The last admonition the Senator had, as the ship left the dock, was, when the ship sank to save his life by taking a cake of soap and washing himself ashore.

##### GEORGIA CRACKER.

##### Ice Cycling at Sandusky.

SANDUSKY, O., March 8.—Sandusky wheelmen have been putting in their best licks at "ice cycling" the past month, and some very good time has been made—in fact, time that would astonish some of our inland cycling brethren. It is reported that one person rigged up a sail for his wheel and made railroad time. He said he went twenty miles in 36 minutes! The cut herewith illustrates the method of attaching a sail used by one cyclist, who claims he has no difficulty in tacking. Notwithstanding the danger of running into air holes, ice cycling has furnished great pleasure for many during the winter months. On the subject of ice cycling one of your esteemed contemporaries had this to say:

Sandusky (O.) cyclists are enjoying winter riding on Saginaw Bay. Runs are held on the ice, and recently two wheelmen rode eighteen miles in 1:13 on the bay.

If the gentleman in charge of the sanctum will look into his geography, he

will find that Sandusky is not on Saginaw Bay, unless there have been some very recent geographical changes. When we went to school Sandusky was on Sandusky Bay, and the last time we looked it up she was still there. Our cyclists are "hump ng" them-

selves preparing for the state meet to be held here July 3, 4 and 5. It is whispered that the programme will constitute races at the fair grounds in the morning, free excursions on the lake, and possibly a banquet at one of the islands in the afternoon. O. KAY.

##### Good Place for Bicycles.

Among the strangest peculiarities of Tangier, Morocco, and one that at once forces itself upon the newcomer, is the total absence of any kind of wheeled vehicle, says *Scribner's*. In the entire city (which is an example of all the others in the empire) there is not even a donkey cart, for the streets are much too narrow to admit of their use, and transportation of passengers and merchandise is affected upon the backs of donkeys, horses, mules and camels—according to the weight and distance. There are but few streets into which a loaded camel could enter and not more than three in which he could pass another loaded camel or horse. Some of the smaller streets are so narrow that even the panniers of a donkey would scrape upon either side, so that in the city itself the transportation devolves upon donkeys for the side streets, and upon horses and mules for the main thoroughfares.

##### Hot For a Fly With Duryea.

Charles E. Duryea, of Peoria, called at the REFEREE eastern office recently to show a half-dozen inventions he had conceived, worked out and patented in about the space of time that a West Shore limited takes to make the trip from Chicago to New York. One was a pocket camera, another the web pneumatic tire, and a third an improved flying machine, which was sufficient to show that the mind of every inventor does not run in one groove. The camera is 5x8 inches, and weighs, "all on," one pound. The flying machine weighed considerably more, and the pneumatic tire was a thing of beauty. The flying machine will be seen at the world's fair in the congress of things inanimate that fly. A wealthy Chicagoan will back Duryea's flyer against all other flyers. Many believe that Duryea will some day fly—possibly more successfully than all previous flyers, who went up but came down by natural or unnatural gravitation, too quickly—but Duryea will fly. If the invention of Duryea's can only be perfected in time for the world's fair we can "mount on high," sail over the city, take a seat on the crib in the lake at night, fly over the big fair buildings, chat a minute with beautiful Diana, peep through the buildings, escape Chi-

cago's wickedness and extortion, call on the way home on H. A. Lozier and H. Martin, stop a few minutes with Bassett and Colonel Pope in Boston, and arrive home in New York, calling on Libbie before entering port. By all means, Mr. Duryea, hurry up your flyer!

**Sixty Off Didn't Suit.**

Patiently the cycle dealer awaited the trade that came not on a day last week. But, lo! a customer cometh. He would look at only the best—'twere none too good.

"What is the price?" quoth he.  
 "One hundred and fifty dollars," said the dealer.

"And the discount, 40 per cent?" said the customer.

Nothing daunted, the dealer answered soberly, "It's 60 per cent."

But the customer never smiled. He twisted the wheel around, spinned the pedal, felt of the spokes, pressed the tires with his thumb nail, and said, soberly, "Strictly high grade?"

"Yes."  
 "And that's the best you can do?"

"Yes."  
 "Well," turning toward the door, "I am just looking around. Thinking of going into business; may call again—good-day."

The dealer managed to pull himself together and ask for the name and address. He was from Wichita, Kas., was going into the bicycle business, and sixty per cent off on one of the highest grade wheels was no surprise to him.

"Where are we at?" said the dealer.

**The National Wheelmen's Association.**

A formidable title that is a worthy offspring of a worthy sport.

If the plans, as laid out by its officers, are faithfully carried out, cyclers who visit the great world's fair will have better facilities at their command than any other class of sportsmen.

The handsome and commodious clubhouse which is built is a monument to the energy of Chicago cyclers. Heaven help the man who visits Chicago after June 1 without having made engagements for accommodations in advance. The cyler simply goes to Chicago, visits the cyclers' retreat and is given much better attention than the average person who goes to the best hotel in Chicago during the great fair. Lucky is the man who will not have to depend upon public conveyances in Chicago next summer. The traffic will be terrific, and walking or waiting will be the fate of most men. Moral: Take along your wheel.

L. D. TAYLOR, secretary,  
 No. 959 W. Madison street, Chicago.

**"Pop" Brewster Talks.**

An old timer thinks that Windle will not defeat Zimmerman this season. He says Windle has not the constitution to overcome one of Zimmerman's mighty finishing sprints, and that the Milbury flyer is a mite chicken-hearted. This sage also predicted that Zimmerman would by no means have the clean sweep he had in 1892. The sage was W. M. Brewster. Regarding the admission of colored men he said: "Yes, I voted against 'em, but the league voted for 'em and if they

want the negro, as they have declared, I will help the good cause along, and recommend black as well as white if they meet the requirements. Yes, your Chicago negroes are all right, but it is the southern brother—whom I doubt if the northern 'gemmen of color' would deign to recognize—who raised the disturbance. But that meeting was hot stuff," concluded the popular treasurer.

**SMALL CHICAGO NOTES.**

**Short Paragraphs, Personal Gossip, Club Affairs, Etc.**

Guy P. Wilson, prominent in cycling in Baltimore for many years, is in Chicago with the Francis Wilson opera company.

Great preparations are going on for the Englewood minstrels. It is said nearly all the seats are sold for each night's performance.

Preparations are being made to redecorate, clean and partially refurnish the home of the C. C. C. at Fifty-seventh street and Lake avenue.

The directors of the Chicago Cycling Club have evidently decided upon a strict rule regarding the payment of dues, inasmuch as several members have recently been expelled.

Chicago wheelmen seem to be of a migratory nature. They have forsaken Siegle & Cooper's restaurant—once known as the "rag shop"—and returned in a body to Winter's. Later—And now they're going back to Siegle & Cooper's.

A Holyoke, Mass., man claims to have a tricycle, constructed by himself, on which he and his wife will carry their two children, a tent and oil stove. On this machine the family will tour to the world's fair, starting early in May and camping out along the way.

The "old woman's gang" of the Illinois Cycling Club is arranging for a century run early in June. Messrs. True L. Sloan, W. A. Davis and C. R. Street have gone into training. Mr. Sloan made a century last season in something over twenty hours, and will try for a Century Road Club bar this season.

**A Cyclists' Dining Room.**

An informal meeting is to be held this afternoon at the Stover company's store, 287 Wabash avenue, for the purpose of discussing the desirability and feasibility of providing a cyclists' dining room. It is proposed to lease space on the tenth floor of the new Isabella building, on Van Buren street, fit up a handsome dining room, kitchen, and lounging or smoking room, and to charge members \$2.50 per week for table d'hôte dinners. Any other meals would be extra.

**Happy Wheelers, They.**

C. A. Emise, of Salt Lake City, chief consul of the Utah division, was asked by the REFEREE what efforts looking toward road improvement were being made in his neighborhood. His reply is as follows:

"Our subdivision is small at present and not in condition to push the road improvement department of the league, but we are devoting all our energies to the completion of a division of 100 mem-

DOES THE BUREAU PAY?

After the smoke of the late assembly meeting had passed away, it was discovered that a number of delegates had returned to their homes beaten, for the time being, but by no means inclined to pass from the gaze of the league's members. This seems to be true, particularly of the Massachusetts men. It will be remembered that Mr. Adams, of that state, moved the appointment of an investigating committee to look into the league's accounts. The idea was that no three men should be permitted to handle the thousands of dollars which pass into and out of the treasury, without some showing to the members of the purposes for which the money is or was expended. President Burdett vigorously opposed the motion. Mr. Perkins supported it, but inadvertently made use of the words "auditing committee." He was ruled out of order, appealed, was defeated, sat down and resolved to bring the matter up at some other time. We have always suspected that the special object of the motion was to ascertain definitely the condition of the roads improvement bureau, and this, it now seems, was the case. The following is taken from the Boston Globe's report of the meeting of the Massachusetts division last week:

Rather the most sensational feature of the meeting was a resolution presented by Mr. J. Fred Adams calling upon the executive committee of the L. A. W. to make an exact statement of the league's expenditures for maintaining the magazine Good Roads.

Mr. Adams referred to the futile efforts of himself and Chief Consul Perkins at the recent Philadelphia assembly meeting to get at the expenditures of the executive committee. President Burdett had stated that the magazine showed a profit to the L. A. W. of \$2,000, and further stated that the league had been offered \$2,500 for the magazine. [\$35,000 was the sum. No doubt a typographical error.]

Mr. Adams had since learned that several of the cycle dealers had been called upon to pay several thousand dollars of the money guaranteed by them at the time the magazine was started, and that a large sum had been given from the league's treasury, or a

TOTAL OF NEARLY \$10,000.

In view of these facts it was difficult for him to understand how the magazine had made a profit

for the L. A. W., and he presented the following resolution, which was seconded by Mr. A. W. Robinson and unanimously adopted:

"Resolved, that whereas, the reports as made at the meeting of the national assembly in Philadelphia in regard to the financial standing of the L. A. W. concerning the publication of Good Roads is misleading and not generally understood, the Massachusetts division, by its board of officers, respectfully requests the executive committee to make known at an early day, through the official organ, the exact financial condition and standing of the L. A. W. with reference to said publication from the time of its first issue to the time of the last national assembly, said executive committee being requested to state fully and in detail what, if any, sums had been contributed towards the publication of said Good Roads, and whether or not said paper is self-supporting."

In the main the Massachusetts men are right. But perhaps the executive committee is not entirely to blame. It has, perhaps, taken upon itself to assume greater responsibilities than most people would consider wise, but it has acted within his rights. The power of the executive committee under the constitution is unlimited. It can enter into contracts which bind the league for all time if it sees fit. It has already been shown that it can make such contracts as will prevent the league amending its constitution. The league is to blame for this, and yet, should some intrepid member offer amendments to abolish this state of affairs, he would doubtless be accused of casting aspersions on the integrity of the officers and the old story of "additions, subtractions and multiplications," would be gone over again.

Mr. Adams' statements in relation to the roads bureau are, so far as we are informed, absolutely true. It is certainly a fact that, in addition to the \$6,000 guaranteed by the league, the bureau has been "advanced" nearly \$4,000 from the league's treasury. It is certainly true that the gentlemen in the trade who generously guaranteed large amounts have been called upon for one-half of the amounts. We have been shown one of the letters. It is certainly a fact that the president gave a very glowing account of the affairs of the bureau; that he stated that it showed a profit of \$2,200 and that he had been offered \$25,000 for the franchise. The question is, were these statements strictly true? We already know that, attached to the offer was a proviso that the league should pay fifty cents as the subscription of each of the members. This was not made known until after the assembly had adjourned and the possibility of questioning had been passed; indeed, it was not until the appearance of the official organ of March 3 that the fact was stated as follows:

The statement made to the national assembly by President Burdett, that \$25,000 had been offered for the right to publish Good Roads, may have been unintentionally misleading. The offer, we understand, was a conditional one. It required a subscription of fifty cents per member to be paid by the league.

This, in the present state of the league's finances and rules, would be prohibitive.

Can it be that this publication was due to a demand on the part of the other members of the executive committee?

We are at a loss to understand the determined stand made by the president against an investigation of the finances. If Good Roads is in such a prosperous condition as was stated the report of an investigating committee could have reflected nothing but glory on the committee. If, on the other hand, the bureau is not a financial success, it would have been a far wiser course to have laid before the assembly the facts, with the committee's plans and expectations, than to create an impression which would lead the members to anticipate a still more successful showing, which cannot be realized next February.

League men who are fortunate enough to be delegates next year—others have nothing to say and will please remain

silent—will do well to note the progress of events. If someone does not offer an amendment aimed to restrict the powers of the executive committee, it will be surprising.

NOT ENTIRELY SELFISH.

It has been charged, and possibly at one time with a great deal of truth, that wheelmen were actuated in the road-improvement agitation by selfish motives only. Slowly it is being shown that this is not now entirely true, and although wheelmen were, at the outset, mindful only of their own interests, the league has for a long time been gathering to its standard men to whom the improvement of roads has a far greater significance than that formerly attached to the matter, and who, in reality, have little sympathy with the league or its objects other than this great movement. The fact was made plainly evident at Philadelphia. A man who remembers the meetings of a few years ago, could hardly fail to observe with surprise the smaller proportion of the boyish element and the large increase of the grey-haired veteran. Business men, anxious to find opportunities to turn their energies to account, have found in the L. A. W. the proper channel. Cycling is a secondary consideration to many of them. They find the league the institution of the country for the furtherance of their ideas, and for this reason they have become members. It is a good sign. It shows the universal recognition of wheeling as a useful institution; it shows that the league is recognized as the pioneer in the road movement, and the willingness of business men to award the credit due it as such, and it shows that the business world is convinced that the wheelman, when he demands good roads, is mindful of the interests of the whole community. He's not entirely selfish.

THAT WORLD'S FAIR TRACK.

At last negotiations have been closed and it is a settled thing that the world's fair races will be run on a track constructed on the grounds of the Chicago ball club. It will not be a board track as many had fondly hoped; at least, the committee has decided that burnt clay is the proper thing, and nothing short of failure to obtain this material will bring about a change. But as there seems to be no great certainty about procuring the coveted surface, it may be that boards will come out on top after all, especially as we have the signatures of two of the four committee men in charge of the matter attached to a petition for a board track.

Old-time wheelmen have yet, no doubt, some recollection of an institution once known as the Chicago Bicycle Track Association. They will recollect how they entered into a contract with the Chicago ball club, paid some fourteen or fifteen hundred dollars for laying a track and as much more for a couple of race-meetings and were obliged, finally, to leave the track in possession of the ball club—which, of course, had no use for it. The contract entered into for the world's fair track seems to be of the same nature. As we understand it, the ball club permits the league to build a track on its grounds and conduct the world's fair races there. For this the club, which assumes no responsibility whatever, takes one-third of the receipts, and when the fair is over, finds itself in possession of the track which will cost the league perhaps \$5,000 to build! The league, did we say? We were wrong. The league pays nothing. It is not to be expected that men who deem the word racing unworthy to appear among the league's objects, would agree to pay anything for the promotion of inter-

national contests. The league pays nothing, assumes nothing, guarantees nothing. The league goes to the manufacturers and dealers—the men who are such bugbears in the eyes of league politicians—and requests them to advance the money—some \$25,000 in all. If the races pay, the money will be returned with interest at six per cent. If they don't, well then, gentlemen, we are very sorry, but—and there's an end of it. The ball club makes money, and has a track presented to it, beyond a peradventure. It assumes no responsibility. The league takes ninety-four per cent of the profits, if there are any. It, also, assumes no responsibility. The guarantor takes six per cent on his investment—if he can get it. And he assumes all the responsibility.

A shrewd business man would probably regard this as a very agreeable arrangement—for the league and the ball club.

It is stated that President Burdett denies having announced a determination to exclude cycle press men from the racing board. In view of the re-appointment of Mr. Watts the statement is timely.

Dr. Egbert On the Bicycle.

Dr. Seneca Egbert, in his pamphlet entitled "The Bicycle in Its Relation to the Physician," gives many instances where cycling proved a remedy in cases of sickness. In conclusion he has this to say: "The wheel affords an agreeable means of recreation and relaxation to the busy physician, which he can take at a moment's notice, or even in the actual pursuit of his duties, and it gives him that active exercise in the open air, with only a minimum of fatigue, which too many of us need and too few of us get. The only practical objection that I know to many physicians employing the bicycle is that it is not available in rainy weather; but then, comparatively few of our days, from May to November, are of such a character. As to the exercise being dignified, I believe that that depends altogether on the man who rides. It is well known that many physicians in Washington and Buffalo, two cities noted for their fine pavements, use the bicycle constantly in their practice without detriment to either professional standing or dignity."

"For He's Going to Marry."

William F. Bode, a director in the C. C. C., and brother of E. C. Bode, of the Hill Cycle Manufacturing Company, is to be married April 5 to Miss Maud Tuttle at the bride's home, 21 Oakwoods avenue. After a trip of a week or two to Washington and the east, the young couple will be at home to their friends. A more popular and energetic young man cannot be found among the Chicago cycling clubs than W. F. Bode. He has worked faithfully for the Chicago club's interests and is a pillar in the club. The bride to be is a handsome south side society lady.

We also learn that A. S. Hill, manager of the Boston branch of the Coventry Machinists' Company, is soon to become a benedict.

To Ride to the World's Fair.

A number of Danbury, Conn., wheelmen have planned to ride to the world's fair. They will go to Chicago via New York, Albany, Rochester, Buffalo, Cleveland, Toledo, and then follow the old Indian trail into the Windy City. Coming back they will visit Montreal, Quebec and Toronto. Thence down to Portland, Boston, and home via New London, going in fifteen days and returning in twenty-two, remaining at the fair two weeks. The total expense will be \$150 to \$200.

Burdett's New Resolve.

The resolve of the president of the L. A. W., the ambitious little colonel, does credit to the gentleman who pronounced against the awfulness of the divisible, cash prize, and emphasized his remarks with a cruel blow on a plain Chicago deal table, the resounding whack of which was said to have startled the timid whitefish out at the crib. The gentleman who was to have been a congressman and consequently speaker of that republican house which Grover's friends have since asked to wait a little while, is sore at the cycling newspapers—no doubt especially so at the REFEREE, which always speaks of men and things as they are in the rough, and not what they might seem to be through befogged and sympathetic lenses. The rush of the colonel to the *Bulletin* scrimmage line is easily understood, for he was one of the active participants in giving my esteemed friends of *Bicycling World* a home-rule contract which they rightly fought to retain. It was the officials that the L. A. W. should have jumped on, not the *Bulletin*. The unsuccessful republican candidate for congressional and speakership honors has evidently, through some reason, changed his opinion of the *Bulletin* and its management, for the writer remembers having heard him hurl anathemas at the good old organ and its editors only as late as last July.

But to return to the ban placed on the fourth estate. That act of Burdett's should meet with the approval of all newspaper men who wish to be independent, and free to criticise the acts of office holders and the policy of those who drive the political carriage. The moment a newspaper man takes office of any kind that very moment the usefulness of his paper to the general public becomes impaired in a measure, and as the conservator of the interests of the people he loses caste, all because the love of official position clogs his independent action. If Harrison and Whitelaw Reid had been elected the New York *Tribune* would be looked upon as an administration organ, lacking in power to criticise because of the editor as being practically a member of the cab net. Newspaper men should rise above office-holding altogether, and cease being organs, be they of the barrel or mouth type.

It is time that the trade, too, was divorced from the racing interests, and the colonel should be commended instead of abused for his temerity in crying halt to those of the newspaper fraternity who forget the nature of their calling and what the public expects of them.

#### The Defunct Manhattans.

The glory of the cherry diamond has departed, after being dragged in the mud of indebtedness. The club was at one time supposed to be an amateur association, but has not been such in the strict sense of the word for ten years. In its last days it was a professional-breeding establishment. A year ago I called attention to the open transgression of amateur laws by the late M. A. C., and devoted considerable attention to it. I was charged with "attacking" a worthy institution and reputable body

of young men. Worthy, as regards amateurism, the club never was, and scarcely reputable, or the thousand and one members would not have allowed their managers to parade them shamefully before the world as men who professed to be gentlemen and could not or would not pay their just debts. The papers now charge that six hundred of those so-called amateurs and gentlemen are indebted to the club for dues, and the receiver brought suit against each one. Then he switched off to the governors, who, the daily press asserted, have so fixed their assets that the law can not reach them. This is the

give an exhibition here to start a fund to buy a little throne for Kaulani, who could set up a rival establishment to Libbie on Bedloe's Island. With usual American enterprize a farce comedy manager called on the royal girl and offered her a position as star in his company. The guardian of Miss Kaulani not only spurned the offer, but threatened to throw the showman down stairs.

\*\*\*

#### Very Sick, But Game.

The chances for the recovery of Lou Crondal on March 7 were about as sixty to one hundred, and as I ascended the stairway of his home in a suburb of Newark, I met a jolly priest descending. This looked serious, and the first glimpse Howard A. Smith and the writer caught of the erstwhile lively Lou impressed us with the idea that the frail-looking occupant of the bed was

What the Cycling Rip Van Winkle Saw Upon Awakening.

ending of the M. A. C. and its disgraceful load of debt. If it warns other clubs to steer clear of the rocks of extravagance and professionalism, the wreck of what was once supposed to be the largest amateur club in America will not have been in vain.

Some of the club's cycling members propose to start a purely cycling club, with Messrs. Money-penny and Betting at the head. The lesson should be sufficient for those young men.

\*\*\*

#### A Trick Rider in Clover.

"Professor" W. S. Maltby stands in with royalty. Last week he called on the Hawaiian princess, Kaulani, at her hotel and received a cordial welcome. Maltby gave an exhibition in the little Pacific islands when the princess celebrated a birthday, the princess who now wants the Hawaiian throne being present. It has been suggested that Maltby

pretty nearly the under dog in the fight with a violent throat disease. It was at Philadelphia that Crondal picked up the cold, and within two weeks of the show he was in bed, where, with little intermission, he has lain ever since. We commenced to "jolly" the sick man up a bit, and the old spirit of fun returned. The sick man spoke of the frequent visits of the preacher and his chances of life and death, and the probability of his being out with the boys once more. Altogether, I think Lou Crondal will live, but he is lighter than Howard A. Smith's cork handles just now.

\*\*\*

#### Jack Prince Defeats the Gee-Gees.

That noted cycling impressario, John Shillington Prince, continues to defeat the able-bodied livery steeds of the south and incidentally continues to gather in a goodly supply of shekels. Prince is undoubtedly (notwithstanding the

cruel joke recently played upon him) the greatest cycling revivalist of the day; he is easily the Fay Mills of the business. May his shadow never grow less. Jack writes as follows:

After you left Savannah, Whittaker, Zimmerman, Wheeler and myself took a sail on the Warsaw river and had a good day's fishing, Zimmerman catching some splendid shad weighing five pounds. Zimmerman sang his favorite song, "Oh, where is my boy to-night." This surprised us, for we did not know he was married! I gave a race against two horses here at Jacksonville yesterday, and drew only a fair crowd, as it was cold and blowing a gale; still it paid, financially.

Jack enclosed an account from a local paper which shows he must have had a soft thing with the gee-gees. One can imagine the back-pedaling Prince had to do. As an advertizing medium Prince is a howling success, and there was much truth in his statement, recently made, that he could get "such fine notices" in the papers. Prince would do more good than half a dozen green travelers, such as we meet at times. Prince is booming the Morgan & Wright tires and riding a Fowler wheel without pay.

\*\*\*

#### Remember, Circumstantial Evidence.

The newest scheme to avoid H. E. Raymond's detectives of professionalism by your festive amateur is to become a stockholder in the concern whose wheel he rides. The suggestion belongs to Chicago, and was made by E. C. Bode. Bode says several "prominent" amateurs have applied to various makers to take a share or so of stock in their concern, and quite a flourishing business is being done. The amateur status of A. H. Overman, Colonel Pope, H. A. Lozier and many others, if they take to the path, will have to be looked into. An eye on D. J. Post, Robert Garden, Horace Bell, George R. Bidwell and others, please.

#### PHCEBUS' CRITICISMS.

#### The Cycle Board of Trade—"Wonder" Johnson's Horse.

The Cycle Board of Trade of Chicago is a settled fact, and now we shall, no doubt, hear many blood-curdling remarks about trusts, combines, monopolies, etc. I, like other outsiders, know mighty little about the cyclists' board of trade, but I do know that the gentlemen who have subscribed to this most needed of boards are, without exception, honorable and prominent business men. I also know that there are many abuses that need correction along the row and I am and have always been in favor of a board of trade, providing, always, that it did not endeavor to arbitrarily control the business of the members. The popular notion that has so long swayed the minds of the masses—namely, that the profit in the cycle business is enormous—has caused too much unhealthy competition already, and a large majority of the unwary who have entered the business without a full understanding of the trade or of the difficulties to be encountered, have found to their sorrow that there are two sides to the profit question. Many have started in wildly with the idea that they would break the monopoly and build "just as good" machines, for a good deal less money, and so reap a rich harvest in a day. But, unfortunately for themselves and for the trade, they have each and everyone found that although a bicycle ought not to cost more than \$25 to build, it does cost a great deal more. Of course such an one feels very badly and tries the next season to raise his price, but the seed has been sown and not only he but all the trade must suffer.

Wheels have been stolen in Chicago, leases have been repudiated, dealers have

been swindled, slick curb-stone salesmen, who carried their office and sales-room under their hats, have cut and slashed prices, and all of these annoyances can be, in a measure at least, controlled by the board of trade. I do not know that the object of the association is to remedy these particular evils, but I presume the members have given them consideration, and until they prove that they are banded together for a worse purpose I must bid them God speed in what I consider a good and necessary work.

\* \* \*

I was in Washington the other day and saw among other interesting sights a detachment of United States infantry mounted on bicycles and arrayed in full panoply of war. I am informed that about twenty-five of these modern knights took part in the parade at the inaugural, and that they attracted much attention. The ones I saw certainly made a fine appearance, and the amount of advertising and moral effect that such an exhibition will render to the bicycle trade is beyond calculation.

\* \* \*

The modest "wonder" from the north assures us that he can beat Zimmerman and Windle, not on the path in competition, to be sure, but "against time," (I suppose, of course, when paced by a lively nag, and trained, managed and timed by he of the snowy locks) He is also going to stay away from England and scoop the prizes, while Windle, et al, are away. I wonder who he is going to scoop them from. If my memory serves me right, Johnson has never won a single race wherever first-class second-rate men competed. Lumsden, Munger, Davis, Ballard, Tyler, Taylor, Smith and a score of lesser lights, will not go to England. Mr. Eck's benign influence cannot help the "wonder" when watch-

ful and experienced eyes are on him, and he will have to ride and not talk if he does much scooping. Mr. Johnson may be a very fast bicycle rider, but he has not proved it—and it sounds better to do the talking afterward.

\* \* \*

Excuse me for making the remark, but, although I have much personal respect for Colonel Burdett, I think he is making a very foolish break, which reminds me of the action of an angry boy, who won't play because everybody won't do as he desires. "No newspaper men, or cycle tradesmen on the board." Where then, oh, Solon, are you going to get the brains to run the thing? It is not the trade nor the newspapers that have made a botch of it, Mr. President, but the rank favoritism that has placed incompetent men in nearly every department of league affairs. If, instead of approving society or trade favorites in responsible positions, you would name the Gormullys, Gardens, Van Sicklens and Prial (and these prominent names have been mentioned only because they are prominent, and not because they are not a thousand other shrewd, capable men in the trade), you would have some executive brain power to help you. What is the matter with J. O. Blake or Robert Garden? Think you that either of these men would allow trade prejudices to enter into their judgment of L. A. W. affairs? Why might not any old veteran like George Bidwell or Frank White make a chairman equal to all and sundry emergencies? Prial and Miles have both made splendid referees; does anyone believe that either would stoop to chicanery? Not much. Judge carefully, Solomon.

PHŒBUS.

The riders of South Manchester, Conn., are preparing to organize a club, and will give a race meet.

## HITS AND SLAPS.

### Chicago Sadly in Need of a Competent Trainer.

The racing men of Chicago have had a varied experience as regards trainers. Trainers are scarce in the world's fair city—that is, men who may be termed expert trainers in the cycling line. A man may be a splendid instructor in gymnastics, yet he will not know what is required of a cyclist. Eck and Leeming are good trainers, for they are both old racing men, and for probably ten years or more have devoted their time almost exclusively to putting men into condition. Everybody knows of their successes as trainers. When Eck and Leeming are left out of the question, Chicago has not an A1 man for training cyclists. There are numerous men who train horses, pugilists and athletes, but none for the wheelman. Some good man, who has had experience in training cyclists and who knows what should be done, will find Chicago a good place during this season.

This calls to mind the fact that trainers—or usually alleged trainers—are awfully "touchy," as it were. "You can't tell them anything, and if one trainer offers a suggestion to another, trouble is likely to happen along. I have heard old racing men, who have been on the path for five or six years—or more in some cases—try to tell a trainer what part of the body he should rub, or how he should do this or that, and in nine cases out of ten Mr. Trainer becomes touchy. An experienced racing man knows what is best for him and only needs a man to do the rubbing; novices must go through the mill.

Other than Eck and Leeming, I never saw a trainer in Chicago who took his man out to the track, saw that his machine was all right—saddle, pedals and

handles properly adjusted—instructed him how and when to ride; how much of a spurt to make, and when to make it; told him when to quit riding, etc. I never saw a trainer in Chicago who timed his man at all, much less knew what he ought to do in the way of improvement from day to day.

Eck and Leeming are the only two men who ever came to Chicago that ever took the trouble—or had the sense, I don't know which—to instruct a man as to the proper food, and the quality, he should eat. I am not referring to Eck and Leeming to "crack them up" (though I believe there is none better in this or any other country) but rather to show what others do not do. As I said before, there is room in Chicago for a good trainer, and Tom Eck or Harry Leeming, or both, would find it profitable to locate in the city.

\* \* \*

### As to Light Weight Wheels.

It has been a bitter pill for some makers, correspondents and riders to swallow—this light wheel business. They could not get to thinking that any but 35 or 40-pound machines would exist, yet we hear every day of wheels weighing from 26 or 27 to 30 or 32 pounds having endured a frightful amount of rough usage. Two years ago 40-pound wheels were light and there was no fear of their going to destruction. The people who then believed in 40-pounders do not take into consideration the fact that the weight of air tires has been reduced somewhere near four or five pounds, and this is where the reduced weight comes in—at least a goodly proportion of it. Improved materials and improved methods of construction have also aided in cutting down weight. Not a year has passed that the weights of bicycles have not been materially reduced, and still the machines stand up. Three

or four years ago safety roadsters weighed from 50 to 60 pounds, and they had no heavy pneumatic tires, either. In the last four years the weights have been reduced in the neighborhood of 50 per cent, and next season will likely see a further reduction. **HOTSPUR.**

### A Springfield Veteran.

No one, to gaze upon the portly form of the Andy McGarrett of '93, would deem it possible that eight years ago, in the days of able-bodied ordinaries he played tag with some of the fast men in America. But he did. Furthermore, he rode so well and so successfully as to bring upon him the wrath of the league and he was declared a pro., along with a lot of other fellows. Andy wasn't guilty, but that didn't matter. No racing board has had the pleasure of acting upon his application for reinstatement.

McGarrett has been connected with the Springfield club from its very early days. He has figured as an official timer for years, and was one of the American timers whom Hillier accused of timing with a sun-dial, or a Seth Thomas dollar and a quarter alarm clock. He has timed more records, probably, than any other man in America.

A few months ago McGarrett drifted into the bicycle business and has since travelled somewhat extensively for the Overman Wheel Company. McGarrett is one of the finest people in the cycle trade and is, in consequence, popular with his every acquaintance.

Last week his photograph reached us by mail. We didn't ask him for it, but presume he expects to see it in print; so here it is!

### THE TRAINER'S WHISTLE.

*Probably Brought Out By Leeming When in England.*

Just now some of our American contemporaries are very much exercised over the use of the whistle by Tom Eck in coaching some of the men he has been training in their races, and Eck is being spoken of as little short of a wonder. If the use of the whistle as a coaching instrument is new in America, it is as old as the hills with us, although it is more frequently heard in connection with professional racing than at amateur events. We fancy Harry Leeming, who has been heard of a good bit lately in America, could give Tom Eck and a good many other men a good bit of instruction in this matter, as we remember to have seen him use this method of coaching to excellent effect when he was handling Sanders Sellers in his championship year. The whistle as a means of communication between the rider and his trainer, or coach, is undoubtedly a very useful thing, and we see no harm in it *per se*, although it is, to a great extent, tabooed in racing "good society," the reason being that it has been adopted for nefarious purposes by bookmaking trainers as a means of communicating to their tools their instructions as to how the betting demanded they should ride. Of course, such a means of communication could not be used if it came to beat all general, as riders would be confused by the whistles of other men. When used, however, in the case of an individual rider it undoubtedly gives that rider an advantage not possessed by others, and that is doubtless another reason why it is not looked upon with favor in sporting circles. It is an exemplification of the old adage that "two heads are better than one"—in other words, it gives the rider the advantage of his trainer's head as well as his own, and thus places him

in a superior position to his fellows. There are two ways of using the whistle. In the first place, a careful trainer who thoroughly understands his man and can gauge his powers to a nicety, uses the whistle for the purpose of giving his charge instructions. In this case the rider relies absolutely upon his trainer's whistle; so far as his own headwork is concerned, he simply rides steadily along with the crowd, if a scratch race, or sets out at a steady pace in pursuit of the men in front, or to keep in front of those behind, if he is riding in a handicap, and waits until he hears his trainer's whistle before he makes his effort. If his trainer knows his man thoroughly he will, by this means, be able to bring him through successfully if he has it in him, and in the course of time educate him up to the exercise of judgment on his own account. Perhaps, however, the most valuable purpose for which the whistle can be brought into play is in the case of riders who are not novices, and have had sufficient experience to form their own judgment, and ride their races in their own way. In such cases as this the whistle is used for warning rather than instructive purposes; when a man is riding his hardest, as in a last lap tussle, it is a great save to his mental strain if he can free his mind from the anxiety of wondering what is going on behind him; in other words, how those competitors who are not in front are progressing. By the use of the whistle his coach is enabled to impart this information to him. So long as he is holding his own, and those behind are making no inroads upon his lead, so long does the trainer keep quiet, but immediately an opponent commences creeping up to his man away goes the whistle, and away goes the rider if he has it in him. As an instance, we remember a case in which Leeming and Sellers figured. Some years ago we

travelled from Harrogate to Stoke with these riders. We had with us a Caliope whistle—given us, by the way, by "Papa" Weston. Leeming saw it and borrowed it. In the scratch race, half way through the last lap, Sellers drew ahead and passed to the front, almost immediately Gaskell challenged and was creeping up to him, when Leeming blew the whistle and kept it going until his man was safe. In this case, all Sellers had to do was not to worry about the men behind, but to pile it all in, knowing so long as the whistle blew that he had to do his very utmost to outpace his rival. By way of showing how the use of the whistle may not always be crowned with perfect success, we may give another and rather laughable instance, which occurred within a short time of the episode above recorded—we believe the next day. We were at a professional race at Birmingham. Half way through the last lap a whistle blew, and one of the riders drew ahead and took a lead; immediately another whistle blew, which was evidently the signal for a dark horse, who quickened up and passed the other man. Now it so happened that this second whistle was identical in tone to the Caliope before mentioned which we carried, so, bent on trying an experiment, we started blowing that Caliope for all we were worth, and the rider who had responded to the second signal, evidently thought he was being closely pressed, for, with head down, he rode every inch of the way right up to the post, and finished quite 60 yards in front of the field, doubtless much to the disgust of his trainer, and to his own detriment in the next handicap. If our American cousins have only just heard of the whistle as a means of communication between a coach and his man, they have a lot to learn yet.—*Cyclist.*

THE CASH PRIZE MEN.

*Echoes of the Late Meeting in New York—No Plans Yet Given to the Press—President Says No Amateurs Have Applied.*

The listless air that pervaded the gathering of those gentlemen who are to place professional cycling on a high moral plane of respectability, when they met at the Fifth Avenue Hotel, New York, was in strong contrast to such gatherings of the L. A. W. conservators of pure amateurism. Failure, in large type, would suggest itself to those who form their opinions by appearances, and, in truth, there was a chary look about things at the famous Broadway hostelry. Those familiar to sight were Frank Egan, Proprietor Dondo, Inducer Troy, Manager Dayton, and Editor Richter of *Sporting Life*. The others were Pat Powers, C. H. Byrne and E. H. Talcott, all famous in New York professional base ball. Then Baltimore, Milwaukee, Buffalo, St. Louis and Washington were represented by those useful little commodities called proxies. The St. Louis representative—that evergreen German sport, Chris Von der Ahe—had to jump home on account of family troubles.

The usual base ball star chamber methods were resorted to, and Mr. Dayton lugged a heavy-weight roll labeled "constitution" into the inner chamber recesses.

The day was consumed in electing officers and delving into the constitution, and the obliging equerry-in-waiting, W. B. Troy, furnished the press representatives with the crumbs of news from the table of the cash prize league proprietors—which consisted of the names already telegraphed the REFEREE.

The next day the press was informed that President Byrne had generously consented to give the press the news—and, as dailies must fill space, a goodly number must have been on hand, as all gave the new comer in cycle racing a generous send-off. Especially so did two dailies, whose sporting editors are slated for official positions to help devour that ten per cent reserve fund.

Frank Egan looked remarkably chipper at the meeting, with a beautiful overcoat of sporty pattern, silk hat, large diamond, and everything in keeping with his berth of secretary-treasurer of the association that is to control the down-trodden professionals and soul-blighted amateurs.

There was no foundation for the report that the secretary-treasurer was approached by three green-goods men in succession on his arrival at the Central depot, as, of all men, Mr. Egan would not be taken for a countryman, even if he did come from Philadelphia with a residence in close proximity to a graveyard. Secretary Egan, however, told the story himself.

A minimum of \$1,000 has been fixed for each meeting, of from two to three days, and as much more as the powers that be will offer, of course. With a

stated six races a day, the cash boys will have to do plenty of work to start a reserve fund for the seven off racing months.

The average cyclist is in a fog as regards the identity of the men who are at the head of professionalism, so a sketch of them might do something towards enlightenment. Before commencing it might be stated that the base ball people don't claim to know anything about cycle racing, and it is not necessary that they should. They want the crowds and the money. President Byrne and the *Herald* reporter show charming ignorance of cycling by the following. Says the president: "There is no reason why the association should not prove a success. London and Paris have a pro-

long will it take to put base ball back into the confidence and estimation of the public?" It is such warnings as these that make the well-wishers of cycling pause before throwing up their hats and hurrahing for the men at whom that sapient paragraph was aimed.

Well, as to the personality of the cash prize promoters. The man who seems to have the say is C. H. Byrne of Brooklyn, who has been identified with the rise and fall of base ball in the New York district, and if he has any other occupation it is not generally known. He is regarded as a sleek organizer and tricky in ball management, hard to beat in ball politics. This is the president of the N. C. A. Frank Egan, the secretary, for the past half-score or more years, has been earning a living with his pen, an occasional flyer at Wall street and as clerk to a speculator. He is now a cycling editor—the only man of the association well known to cyclists.

Pat Powers, who is to be a sort of general manager, is well known to base ball people in New York. He has been offered the presidency of the eastern league of base ball clubs, the largest of the minor leagues. Powers was famous in polo leagues also, when that game raged, and said last week (according to

from \$1 to \$2. The new president, Mr. Garden, stated that the park commissioners had granted the necessary permit, as stated in last week's REFEREE, and that everything would be done in order to keep the course clear from the start to Fifty-fifth street, and that if necessary the whole police force would be concentrated between those points.

It was decided to start the race at 9 o'clock instead of 10:18, as heretofore, in order to escape the crowds. The usual complaint about transportation facilities to Pullman came up, and Messrs. Garden, Herrick and Fanning were named as a committee to make the necessary arrangements with the Illinois Central Railroad Company. A committee on rules was named as follows: C. E. Randall, Chicago C. C.; William Herrick, Lincoln C. C.; F. J. Fanning, Illinois C. C.; O. R. Barnett, Cook County Wheelmen; J. A. Erickson, Columbia Wheelmen. The next meeting will be held Tuesday at the Grand Pacific hotel.

#### RACE TALK IN BRIEF.

*Several Important Events to Take Place.—New Tracks Proposed.*

The Missouri division meet will be held at Sedalia July 2, 3 and 4.

E. C. Johnson, the Cleveland racing man, was in Chicago this week.

The Tonawanda (Pa.) B. C. has decided to give a tournament July 4.

St. Augustine's riders are overflowing with rivalry, and match races are all the go.

The Brooklyn Driving Club is to construct a bicycle track on its new grounds at Parkville.

The Ramblers, of Denver, are looking for suitable grounds upon which to construct a track.

J. B. Boulton, a resident and owner of much property in West Berlin, N. J., is building a track.

The Rockford (Ill.) C. C. has finally decided to give a meet this year, but has not fixed the date.

Now that the M. A. C. is a thing of the past, Peter Berlo is going to ride for the Press Cycle Club of Boston.

The Winona (Minn.) C. C. has decided to give a meet on Decoration day and will alter the track somewhat before that time.

Efforts are being made to hold a Buffalo-Rochester road race this year. Previous efforts in this direction have failed.

The wheelmen of Oakland, Cal., are talking of getting up a club relay race around the bay, for a distance of 100 miles, each club to enter ten men.

The Southern Wheelman will give a ten-mile handicap road race at Louisville on Decoration day. The race will be run on the Third avenue boulevard.

During the past season the Kings County Wheelmen members scored a total of 287 points, seventy-eight of which stand to the credit of C. M. Murphy.

The Springfield club has selected its committees. D. E. Miller remains general manager, of course; Dan Canary is chairman of the race committee, while Henry D. Taylor and assistants will look after the press.

The Forest Park (St. Louis) seventeen-and-a-half-mile road race will be held on Saturday, May 20, over the regular course. The handicap limit has been fixed at ten minutes and the race is open to all. Ten place and three time prizes will be given. The Chicago men are requested to participate and the St. Louis boys guarantee them a good time. Hard-

AN INCIDENT OF THE SAVANNAH RACES.

(From a "snap shot," by J. J. Ross.)

Zimmerman and Wheeler being introduced before the quarter mile exhibition race. Ross, Morgan, Polk, Wheeler and Zimmerman in the foreground.

fessional cycling association, and the races there draw from ten to fifteen thousand people. It will, of course, take us quite some time to get the public acquainted with our methods, but I am sure as soon as they do they will come to our meetings in large numbers. As yet we have had no application from any of the amateur cracks, but I suppose they are only holding back until we are permanently organized. We will give the public fair racing. Many of the members have already built tracks, consequently we shall begin racing as soon as the season opens." This is news, indeed. Can Mr. Byrne refer to the N. C. U.?

That the scheme should be given fair play and a trial no unprejudiced man will deny. Success to a large degree may not be attained in a year—"Rome was not built in a day," neither was the L. A. W.—but if the cash prize association is managed with intelligence and kept free from objectionable methods, it should succeed.

The *Evening World* said in an editorial paragraph this week: "One of the rules of the base ball game is that the pitcher is put back five feet; but how

W. B. Troy) that Joe Goodman was one of his paid umpires or referees, which, however, doesn't affect Joe's high amateur standing.

Then comes W. B. Troy, who is a sort of general organizer and equerry-in-waiting. So the N. C. A. cabinet is made up of the following:

Lord high chancellor and secretary of the treasury—Frank Egan, Philadelphia.

Secretary of state—C. H. Byrne, Brooklyn.

Secretary of the interior—Pat Powers, New York.

Equerry-in-waiting—Willis Buncombe, Troy, New York.

Aspirant's for office—Several newspaper men and money-making amateurs.

Now, let the band play!

#### OVER THE OLD COURSE.

*The Pullman Road Race Preserved—Entrance \$2.*

By a unanimous vote the Associated Cycling Clubs decided Thursday last to hold the Pullman road race over the old course, and to raise the entrance fee

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tyre and you are ready to start.

Showing the Tyre open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

HEAD OFFICE AND WORKS: Town Mead Works, Fulham, S. W.  
LONDON SHOW ROOMS: Coventry Machine Co., Ltd., 15 & 16 Holborn Viaduct, E. C.  
COVENTRY DEPOT: 21 Warwick Lane, Coventry.

AGENTS FOR SCOTLAND: New "Howe" Machine Company, Ltd., Glasgow.

ing won the time medal last year, beating Barrett several seconds.

And now Hyslop, of Canada is going to England. Pretty soon there will be more Americans competing in English championships than Britishers.

A St. Louis paper says "a quarter-mile cinder track is under course of construction at the base ball grounds, St. Louis, for the N. C. A., the 'cash prize league.'" Nice track that will be, particularly for record breaking!

The Milwaukee Wheelmen have again altered their programme for the summer races. First they were to hold monthly meets at National Park; then they set June 1 and 2 as the dates for an indoor tournament; finally they have decided upon May 26 and 27.

The Malden Cycle Club is to have a new home costing \$8,000. The house is to be built by a capitalist, the plans to be drawn according to the club's idea. It will be 65 feet long, 40 feet wide, have a dance hall 50x40 feet, and will have a front piazza ten feet wide.

It was doubtful some time ago whether Eddie McDuffie would be able to race this season, but he has announced positively that he will ride. Although his ankle is still lame, he expects to recover fully by the time racing begins. His brother, Peter, also expects to make a good showing.

"Swift" Holbein is the way some of the dailies have mixed up Montague's name, and they say he is to swim across the English channel, and walk twenty-four hours, and ride from Land's end to John o'Groats, and a few more things. It will keep M. A. H. busy this year if he does all the papers would have him do.

George Taylor thinks that George Banker and Taxis are the two men above all others who will come to the front this season. He also looks upon George Smith as a coming man, but thinks he can not get into shape for the championships. He thinks Zimmerman has not yet attained his zenith, and concluded the conversation by saying that he might do some riding himself this season.

When Harry C. Wheeler, Jimmy's friend, and Isaac Baird, the "Irish champion," as he is called, meet in their one, two and five-mile races at Savannah, there will be some pretty lively scratching. Baird, we judge, is a strong rider. Wheeler has never surprised anybody. But the latter having traveled with all the cracks for years, will likely outgeneral the Charleston man if he can't beat him outright.

#### THE VETERAN PITMAN.

*A Man Who Was the Boss Sprinter Years Ago, and is Still a Racer at Heart.*

The artist has depicted, as an accompaniment to this article, as true a representation of the physiognomy of W. R. Pitman as is possible to do without offending the sensitive nature of the subject. "Pit" is no longer a spring chicken. He was a full-fledged bicycle champion while some of us were too juvenile to walk, and, unlike many old-time riders, retains his interest in the sport to this day.

"Catch phrases, slang expressions and idioms each can claim at least one individual as its master and constant user," remarked a New York broker one day, as he hitched his chair near the big bay window in the reading room of the Preble so as to get a better view of the street. "Perhaps you observed that the man who just went out, in taking leave of a friend, remarked, 'so long, old man?' Now, I venture to say, that man has made that same remark over a thousand times, and will continue to do so a thou-

sand times more. It is like A. B. C. to him, so saturated has his vocabulary become with its use 'Ah, there,' 'not in it,' 'just so,' and so on to the end of slangdom, each has its chaperon, after the general public gets tired of its popularity and casts it aside, who protects it through thick and thin, and then it is that these concocted sentences appear to be the exclusive use of one person alone.

"To give you a broad illustration of this," the broker went on, lighting a fresh cigar and putting his feet on the rounds of an unoccupied chair, "take the expression, or whatever else you may call it, 'happy days.' While familiar and ancient, and more than likely derived from the day Noah run aground, its present use may be said to be the exclusive property of a young man I know in New York. This party is a senior partner in a large commission house, a well-known cyclist and smart all over, but he is all 'happy days.' He has just surrounded himself with this idiom. If he proposes a toast it is the same thing,

W. R. PITMAN.

always. If he pays a bill, it is 'happy days.' If he says good-bye or how do you do, it is preceded by his favorite expression. Naturally one would think this would become extremely monotonous to his friends, and I presume it would but for two reasons.

"First, he has a peculiar, droll way of jumping the first word out, giving a sonorous tone and long accent on the y part, making a long i-e of it. And in the second place, his business calls him away from the city on an average of every other month. I presume more people know Will by this expression than by his own name, and one would as soon think of receiving a call from the Prince of Wales without his baccarat chips as to receive our friend minus his saying. I, like, many others, first met him at a table d'hôte restaurant on Twenty-fifth street. There are about fifty tables in this place, and it is a great resort for the true New York Bohemian, for here, over a pint of claret and a reed bird, one becomes acquainted with his neighbor without the formality of an introduction—a characteristic and favorite feature of the Bohemian. Our 'Happus Dies' dines regularly here when in town, and when he enters the room every mother's son there sings out 'Happ-i-e days.' Strangers in there for the first time think they are dining with a job lot of good-looking 'gone wrongs,' but after they have been home and thought it over, it presents a certain fascinating flavor, and the next night they go round there to wait the arrival of our party and join in the chorus."

Need we remark that the person alluded to by the speaker was the veteran Pitman?

"Pit" commenced to race along in the seventies. There were no rich clubs to pay expenses then, but the veteran managed to get around considerably, and

won many a prize. No limit was set on values then; none was necessary! Pitman was invincible in his day, but about the year '82 he found youngsters becoming too speedy for him, and has since been content as a spectator. He is now the senior member of Pitman & Black, dealers in rugs and carpets, and is still often seen, and his "happy days" as often heard at events cyclistic.

#### Was He Guilty?

It may or it may not have been an admission of guilt on the part of a prominent racing man when he spoke these words the other day:

"I'll tell you how it is; we're going to be straight this year. We've got to."

He was not asked as to his guilt or innocence, but when questioned as to his likes or dislikes of the \$150 prize limit, he unbosomed himself:

"I don't kick so much on the \$150 limit business, for I'm not out for the 'stuff.' I've got a good job, which pays me pretty well; but I can't afford to chase around the country at my own expense, and if my club won't pay my expenses, then I guess I'll have to quit racing. I don't want to make anything, but I do think they ought to let us have expenses paid—that is, railroad fare and hotel bills. That's all I care for.

"Why, I've had a dozen chances to ride this year and receive my expenses. One man offered me a good weekly salary, and said I could keep my present position, but I refused. I don't believe a man could work it and not be found out; but I have no inclination to try. I'm going to live up to the rules to the letter, and then when any investigation goes on I'll be in a position to answer any question they may put to me.

"This is an easy year to get wheels to ride—everybody wants good men, and they are willing to pay for them, too. But they'll be found out, sure, and then their game will be up. No, sir; I'm going to be a real good, pure amateur this year."

#### Who Is Responsible For This?

Charlie Murphy called at the REFEREE office to deny that he ran into a carriage in Brooklyn which was occupied by ladies, and received a broken arm. Murphy says he collided with one of those sleeping Bedford avenue cars, which are the delight of the people who work in New York and sleep in Brooklyn. Charlie hopes that his injuries will permit him to train successfully for the Irvington-Milburn road race. The K. C. W. man, by the way, has written one more letter regarding those Baltimore prizes, which, like the letter—never came. No reply has been received to the letters written about them by Murphy to S. T. Clark of Baltimore. Murphy says he holds a receipt for his entrance fees and wants his pots.

#### What He Hopes to Do.

Frank Waller, the Californian, is preparing to floor all 24-hour riders this season. He will make an attempt on the record with pacemakers and says he will do 460 miles. The second he will attempt unpaced. Waller is living in bachelor quarters with Birdie Munger, Fred Dickinson and Harry Leeming, the trainer, who will train Waller this season.

#### The Row In Massachusetts.

There is something of a fight going on in Massachusetts. As has already been related in the REFEREE Worcester has received the official sanction of the racing board to hold a spring race meet, and now the officers of the division have decided to hold the annual meet at Boston. "From first to last," says the

Worcester Telegram, "the meeting was a drive against the Bay State club." Mr. Schervée, for the Worcester club, said that two meetings could not be held successfully on one day. "There is no question," he said, "that Worcester and the Bay State club have been slighted, not only in the matter of tournaments, but also in the matter of the selection of delegates. Through the official paper of the league the club has been repeatedly jumped upon. The arrangements for entertainment at last year's spring meet were made wholly by a committee from the board, and not by the club, yet the club has received the blame."

Mr. Knight spoke in the same line. "But," continues the Telegram, "the Bay State race meet of May 29 and 30 will go right ahead. The other meet, unless by a bare possibility a sanction is received, will be held May 31."

#### A Speedy British Rider.

Thomas Relph, formerly one of the most popular of the riders in the midland counties of England, has been reported, from time to time, as contem-

THOMAS RELPH.

plating a trial with American riders. He is at present engaged in a New England factory, and, should he be seen on the path, will probably pedal a Keating machine.

#### Jimmy Training at Savannah.

There will be another meet of bicyclists, under the auspices of the Savannah Wheelmen's Club, early in April, says the Savannah Press. The three principal riders will be Zimmerman, Wheeler and Baird. Zimmerman has decided not to go to Brunswick, but remain here for practice. He is charmed with Savannah and especially pleased with the track, which he regards as the finest he has ever practiced on. He and Wheeler are at the De Soto. Both are rapidly getting in good form, and those who have watched them closely say that Baird will not be in it with Wheeler in April.

#### Sanger's Sercombe-stances.

The name of Sanger, on this side, irresistably suggests circus performances; we trust there is nothing of the hippodrome business about the contemplated invasion by Walter Sanger, P. Sercombe & Co., of this championship-losing country later on. From what we hear there may be Sercombe-stances which will prevent the quondam challenger of Zimmerman from competing here. — Wheeler.

There is nothing to prevent Sanger from competing abroad, that is so far as his amateur status is concerned. He does not have to depend upon manufacturers for expenses, for his wealthy father is only too happy to send Walter to any point where he has a chance of gaining honors. He does not have to

THE REFEREE.

## MAJESTIC LIGHT ROADSTER

OF ALL HIGH GRADE WHEELS

THIS IS THE HIGHEST.

Of all wheels this is the easiest to sell, because  
everyone wants it.

NEW YORK.

depend upon Sercombe-stances! We might add, look out for Sang'r, ye foreigners.

#### Mr. Sturmy On Class B.

The following is an extract from a letter from Henry Sturmy to our New York representative: "As to the cause of professionals going wrong, human nature is human nature the world over, and if we had no laws or government in general life, it would be a case of the strongest ruling the roost. The same holds good in athletics, and it is only the regulation of matters by an independent body which keeps matters and men straight. So far as the movement for class B is concerned, I do not object to it altogether, for the simple reason that, as with the old promateurs, the eventful outcome will be that the whole class will be declared professionals, and there will be, through the intermediate party, a better means of arriving at who's who than without it."

#### Notes of Foreign Racers.

Lawrence Fletcher is now in Africa. Ernest Leitch is now managing the Humber London depot.

"Charlie, the Devil," is the nickname Terront, the French crack, enjoys.

Shorland was tendered a supper upon his leaving the Crypto company, by Mr. Boothroyd.

Shorland, it is said, will make an attempt on the Land's End to John o'Groats record.

A fifteen-year-old French boy named Ganiard will shortly try for the world's motorcycle records.

The Wheeler thinks Waller's "undaunted and determined courage" will be tested most thoroughly at the Cuca Cocco cup race.

The Irish Cyclist thinks that if pianos and bicycles were to be taxed in America, as in France, it would go rather hard with some. Yes, it might; but what if some of those pianos and bicycles had been "given away?"

#### Cash Prizes In Australia.

In view of the conflicting reports regarding the cash prize system in Australia, the following from the latest issue received of the Melbourne *Sporting Standard* is interesting:

Professional racing in New South Wales is making rapid progress. Almost every week there is one or more races to be run for, and there is now every indication of the "cash system" assuming the same position as it does in Melbourne. The amateur riders are complaining that their union does not make any effort to provide sufficient racing for its supporters. Owing to this dissatisfaction my confrere informs me that the leading racing club in Sydney, the Speedwells, threaten to secede from the amateur union and support the cash club.

#### 1893 FIXTURES.

##### APRIL.

26-27—Indoor meet of Milwaukee Wheelmen.

##### MAY.

30—*Pullman Road Race, Chicago.*

30—New Haven (Conn.) B. C.'s annual meet.

30—Massachusetts division meet.

30—Martin road race, Buffalo.

30—Irvington-Milburn road race.

30—Rome (N. Y.) Cyclers' meet.

30—"Southern Wheelman's" 10-mile road race, Louisville, Ky.

30—Winona (Minn.) C. C. race meet.

##### JUNE.

3—Press C. C. meet, Buffalo.

16-17—Century C. C. meet, Syracuse, N. Y.

17—English championships on Herne Hill track.

17—Alpha Wheel Club's 10-mile road race, South Norwalk, Conn.

24—Prince Wells' second annual 10-mile road race, Louisville.

27-28—Kentucky division meet, Harrodsburg.

##### JULY.

23-24—Missouri division meet, Sedalia.

4—Tonawanda (Pa.) B. C. meet.

4—Watertown (N. Y.) Cyclers' meet.

#### AUGUST. (WESTERN CIRCUIT.)

5-12—*Illinois Division, National L. A. W. and International meets, Chicago.*

14-15—Milwaukee Wheelmen meet.

16-17—Wisconsin division meet, Ripon.

19—Minneapolis C. C. meet.

22—Evansville C. C. meet.

24—Zitz-Zag C. C. meet, Indianapolis, Ind.

26—Cincinnati C. C. meet.

23-29—Columbus, (O.) Century C. C. meet.

30-31—Cleveland W. C. meet.

#### SEPTEMBER.

13-14—Springfield (Mass.) B. C.'s annual race meet, Hampden Park track.

26-27-28—Inter-state Fair Association meet, Trenton, N. J.

#### World's Champion Cyclists.

How often one reads a line or two similar to this:

Mr. Very Swift Pedaler, the world's champion bicyclist, is in town.

Every professional, or ex-professional, has undoubtedly traveled around on his past reputation—good or bad—and told people, or made them believe, that he was or is now the champion bicyclist of the world. We know all the old-timers have, at any rate. Prince has worked the racket down south all winter; we read a paragraph in the *Squodunk News*, or something of the kind, only a few days ago, wherein "Ralph Temple, ex-champion bicyclist," was in town.

Simply because a man wins a race, or even holds a seventy-two hour record, is no reason for his holding the title of champion, let alone world's champion. Zimmerman comes nearer to being the champion of the world than any other man who ever bestrode a wheel. He has defeated the top-notchers of America (Canada and the United States), the British Isles and Germany. If he had met the Frenchmen there would have been another Waterloo. He might be defeated once in a while—in fact has—but no one man has yet conquered as many as has the gentleman from Jersey. Inasmuch as Jimmy has defeated every man he ever met—and can do it again, too—we think he is the only one entitled to wear the championship crown.

#### Jack Greeted Him Warmly.

Jack Fecit, president of the Roxbury, (Mass.) Bicycle Club, Airtite tire traveler,

etc., is a very small man—in stature. He was walking down a Boston street, in company with Van Sicken recently, when the pair met a midget from some neighboring museum. Jack ran up to the man—the midget was a full-fledged man, notwithstanding size—or rather undersize—and grasping his hand, shook it earnestly, saying, "How do you do?"

The midget didn't know Jack and said so, but Jack excused his familiarity by saying, "I know you don't, and I don't know you; but I'm so darned glad to meet someone smaller than myself that I couldn't help speaking to him—no harm, I hope?"

#### Two Items of Interest.

The Milwaukee Wheelmen were incorporated on Monday by Fred J. Schroeder, E. A. Savage and T. E. Hutchins. The capital stock is \$12,000 and has all been taken. The incorporation is for the purpose of purchasing the Morwetz residence on Milwaukee street for a club house. The property has been secured and the first payment on the purchase has been made. Work will begin immediately.

Colonel Burdett has formed a partnership with two prominent New York lawyers, and will hereafter make that city his headquarters.

## INTERNATIONAL RACES.

### THE TRACK DECIDED UPON AND COMMITTEES NAMED.

*Enthusiastic Meeting of Representative Wheelmen Monday Night—Mr. Raymond Gives His Ideas—Work Commenced.*

Chicago and her wheelmen will have the honor and the responsibility of conducting the first international race meet ever held, and this in connection with the national L. A. W. and Illinois division meets. Inasmuch as the representative wheelmen of Chicago, together with the executive officers of the league, have the matter in charge, we can predict nothing but the greatest and most successful meet ever known in the history of cycling. The meet will last seven full days, and during that time the state, national and international championships will be decided in the presence of thousands of cyclists from all parts of the world. The races, runs, various entertainments and, in fact, the whole meet, will be conducted upon a magnificent scale, and in such a manner as to leave in the minds of the visiting wheelmen only the most pleasant and favorable opinions.

#### CHAIRMAN RAYMOND ARRIVES.

Henry E. Raymond, chairman of the racing board, arrived in town Sunday, and was the lion of the hour, as it were. At any rate he proved himself extremely popular and made many friends. Monday he installed "Twink" Erwin, the new racing board member, and incidentally, we suppose, informed him that a few Chicago men would bear watching. Then Mr. Raymond visited the ball park to see what kind of a track could be built, and in the evening he attended the meeting at the Great Northern to arrange for the international races. Tuesday he accompanied Mr. Van Sicken to the world's fair grounds, and then visited the Parkside track, which he said was a very pretty one.

He said Chicago was a great city. He thought New York and Brooklyn very great, but, judging from his remarks, he thought Chicago the greatest in the land. He marvelled at Chicago's enterprise and its greatness.

#### A REPRESENTATIVE MEETING.

The meeting Monday evening at the Great Northern was attended by thirty or more of the most prominent cycling men in Chicago, as well as some from outside, in response to an invitation issued by Mr. Gerould of the international committee. Among those present were the following: H. E. Raymond, chairman, and J. M. Erwin, of the racing board; T. F. Sheridan, vice-president of the league; F. W. Gerould, chief consul Illinois division and member of the international committee; W. C. Thorne, ex-member of the racing board; W. A. Skinkle, president of the Century Road Club, Cleveland; Walter Wardrop and J. D. Guinea, *Cycling Life*; N. H. Van Sicken, L. J. Berger and C. G. Sinsbaugh, *Bearings*; S. A. Miles and Charles P. Root, *REFEREE*; R. D. Garden, C. E. Randall, J. A. Erickson, W. H. Walsh, W. A. Fletcher, F. H. Gere, L. R. Fyfe, A. J. Marrett, A. W. Roth, J. M. Stimpson, C. A. Stervoss, William Herrick, F. E. Spooner, George K. Barrett, C. F. Stokes and F. J. Fanning.

#### WHAT THE TRACK WILL BE.

After a half-hour's conversation among those present, Mr. Sheridan called the meeting to order, and stated that the objects of the meeting were to appoint

committees and arrange all the plans for the international races to be held in Chicago in August. The temporary chairman was made permanent chairman, and L. J. Berger, was named as secretary. Mr. Sheridan called upon Chief Consul Gerould for a report from the international committee on the track question. Mr. Gerould stated that the committee had on that day (Monday) decided, after viewing the grounds, to construct a third of a mile track, about fifty feet wide on the home stretch, and from twenty to thirty feet wide on the back stretch, the surface to be of burnt clay and the turns well banked. The committee had also decided that the meet should take place from Aug. 7 to 12, inclusive, the international races to be held on the last two days.

#### MR. RAYMOND'S PLAN OF MANAGEMENT.

Mr. Gerould stated that Mr. Raymond had gone abroad in the interests of the international races, and had many ideas which he felt sure the chairman of the racing board desired to impart. Mr. Raymond stated that he thought everybody was familiar with what had transpired up to date. He had but little to tell. He started in by relating a couple of interesting stories which he gleaned during his trip abroad. After that he stated that without doubt the international meet would be the greatest ever known in the history of cycling. It was something beyond a local affair, although it was to the interest of the cyclists of Chicago to see that it was a success; of course what would be their interests would be the interests of all members of the league. Chicago was to take care of and entertain the league, and he felt satisfied that every Chicago man, whether a league member or not, would turn in and work hard to make the affair a success. He had in mind the appointment of several committees, among them one for general management of the races, which would consist of about nine members, a press committee, hotel committee and a committee on publicity and promotion. He thought if these committees were made up of Chicago men, with members of the international committee as ex-officio members, it would fix things about right.

#### THE COMMITTEE NAMED.

Mr. Gerould stated that the sub-executive committee of nine or ten members would probably appoint the committees on runs, receptions, programmes and other committees deemed necessary. Chairman Sheridan stated that nominations were in order for members of the sub-executive committee, and the following committee was finally selected: T. L. Sloan, C. E. Randall, J. O. Blake, R. D. Garden, William Herrick, F. W. Gerould, C. F. Stokes, A. J. Marrett and F. H. Gere, with Mr. Sheridan, vice-president of the league, as chairman.

The race and track committee was formed of Messrs. Gerould (chairman), Garden, Van Sicken and Erwin.

When it came to the naming of a committee on hotels and accommodations, Mr. Gerould placed in nomination Messrs. Randall, Leonard and Taylor, the two latter gentlemen being connected with the National Columbian United Wheelmen's Association.

#### AMPLE HOTEL ACCOMMODATIONS.

Mr. Leonard, having had considerable experience in arranging for the accommodation of wheelmen during the world's fair, was called upon by Mr. Gerould for some remarks. He stated that when he and his colleagues originated the idea of a wheelmen's club house for use during the world's fair, he took a trip east, visiting the most prominent cities and league members. He

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

## SINGER & CO.,

6 AND 8 BERKELEY STREET,  
AND 2 WARREN AVE.,  
BOSTON, MASS.

called upon Mr. Raymond, President Burdett, the chief consuls of many divisions, and some of the prominent manufacturers. He had been promised the support of the chief consuls, and in return he had agreed that his colleagues would do all in their power to accommodate the wheelmen when they arrived in Chicago any time after the first day of May. He showed a plan of several hotels, with the proprietors of which he had made arrangements for the accommodation of the overflow, if any. He had several others in mind with which he could, undoubtedly, make satisfactory arrangements. He anticipated no trouble in caring for the guests, no matter to what extent the number should be. The committee as named was elected unanimously.

## PRESS COMMITTEE OF CHICAGOANS.

When it came to the naming of the press committee, it was suggested that the members of the local press, cycling and daily, should all be included, and, also, the members of the cycling papers in all parts of the country. At this Mr. Raymond arose and stated that he thought it best not to go beyond Chicago for a press committee. He felt sure that the pressmen in the world's fair city were capable of taking care of anything that might come along. He wanted to make it a Chicago affair, and wanted the Chicago people to do the whole work and take all the credit. He said that if they had a New York man on the committee, reporters from the New York daily papers would roost in his office twenty-four hours each day and that he would be hounded to death. He wanted to see the committee take charge of the whole business, send out such notices as it deemed necessary to the papers or to syndicates, and let the news go about the country in that manner. He stated that he had sent abroad for the pictures of all the prominent racing men, whether they intended to compete in the international races or not. He expected those pictures daily. They would be forwarded to the press committee, and the committee could send out reproductions from them to the papers throughout the country, as well as a short sketch of the lives of the men. He also stated that as fast as any news should come to him, it would immediately be forwarded to the press committee, which would take care of it, seeing that no paper was treated with anything but fairness. The suggestion was thought good, and Messrs. M. A. Lane of the *Evening Post*; L. J. Berger, *Bearings*; S. A. Miles, *REFEREE*; J. M. Erwin, (*News-Record*); Walter Wardrop, *Cycling Life*; F. E. Spooner, and H. H. Wiley, *Sporting Review*, were named as the committee. The committee was empowered to add such names from among the sporting editors of the daily papers or other publications as it saw fit.

## OTHER COMMITTEES NOT NAMED.

The appointment of reception, tour, invitation and programme committees was left to the general committee. Mr. Gerould stated, in this connection, that he thought it wise to arrange a reception committee from among the members of the various clubs. It was his idea to have the south side clubs take care of the south side depots, the north side clubs those in that region, and the west side clubs those on the west side, the same scheme to work in regard to tours, runs, etc.

## PLAN OF THE TRACK.

A rough plan of the proposed track was shown by Mr. Raymond. The radius is 150 feet, the stretches 425 feet in length, the home stretch 50 feet wide and the back stretch 30 feet wide. Mr. Raymond stated that he thought this track would be as nearly desirable as

possible; that the interest of the spectators must be taken into consideration as well as that of the racing men. Inasmuch as this track was to be built on the best plan possible, he thought there would be no difficulty about speed-producing qualities.

## WESTERN CIRCUIT RACES.

The chairman of the racing board stated that he would give those present some official news without first sending it to the *Bulletin*. It was the western circuit dates, as agreed upon by the committee during the morning, as follows: Aug. 5 to 12, inclusive, Chicago; 14 and 15, Peoria; 17, Milwaukee; 18 and 19, Ripon, Wis. (Wisconsin division meet); 21, Minneapolis; 23, Evansville, Ind.; 24, Ziz-Zag Cycling Club, Indianapolis; 26, Cincinnati Century Cycling Club, Cincinnati; 28 and 29, Columbus, O.; 30 and 31, Cleveland, O., and then east. After the reading of this report and the transaction of some unimportant business, the meeting adjourned.

## CHANGE IN THE DATES.

Since Mr. Raymond announced the western circuit dates, the Peoria Bicycle Club sent word that it had decided not to hold a race meet this season, as it had previously intended, inasmuch as the undertaking was too great, in view of the many counter attractions which would be in existence. This necessitated a change in the schedule, and the dates now stand as follows: Aug. 5 to 12, Chicago; 14 and 15, Milwaukee; 16 and 17, Wisconsin state meet at Ripon; 19, Minneapolis; 22, Evansville 24, Indianapolis; 26, Cincinnati; 28 and 29, Columbus; 30 and 31, Cleveland.

Chairman Raymond left for home on Tuesday evening, after a visit to the world's fair and Parkside track.

## Publications Received.

The *REFEREE* acknowledges the receipt of the following publications:

E. C. Stearns & Co., Syracuse, N. Y.—Exquisitely designed and illustrated catalogue, with embossed cover, showing the Stearns racer, 30 pounds; model A, 27 pounds; B, 33 pounds; C, 37 pounds.

Hill Cycle Manufacturing Company, 142 West Washington street Chicago—Handsome catalogue in colors, showing model A, 36 pounds; B, 32 pounds; racer, 22 and 26 pounds.

Kenwood Manufacturing Company, 253 South Canal street, Chicago—Catalogue showing path racer, 28 pounds; road racer, 30 pounds; roadster, 40 pounds; ladies' special, 35 pounds; Kenwood pneumatic tire.

A. Featherstone & Co., Sixteenth and Clark streets, Chicago.—Handsome catalogue showing Road King and Road Queen (35 and 37 pounds, respectively) and parts. Also catalogue, showing the Princess, Royal Middy, Peer and Flying Jib.

Schoverling, Daly & Gales, 302 Broadway, New York.—Catalogue showing complete lines of Humber, Gales, and Crypto cycles, and Lucas' and Powell & Hammer's lanterns.

Lamplugh & Co., Birmingham, Eng.—Catalogue of saddles, valises, tool bags, luggage carriers, etc.

Central Bicycle Manufacturing Company, Indianapolis.—Catalogue of Central and Ben Hur wheels.

Albert A. Pope, Boston.—Pamphlet, "The Bicycle in Its Relation to the Physician," by Seneca Egbert, A. M., M. D., of Drexel Institute.

Centaur Cycle Company, Coventry.—Catalogue showing three weights of the King of Scorchers and the Queen of Scorchers.

Clute Bros., Cohoes, N. Y.—Catalogue showing a very complete line of wheels.

Granville Cycle Company, London.—Catalogue showing several styles of the Granville wheels, including front drivers and geared ordinaries.

T. W. Boyd & Son, Montreal.—Very complete catalogue of wheels, parts, sundries, etc. Shows Rudge as a leader and a line of cheap wheels.

## A Boston-to-Chicago Relay.

Boardman, of the New York Recorder, has been twice recently to Hartford and Boston making arrangements for the Boston to Chicago relay ride. Boardman, by the way, is making use of Latin these days in his cycling department, aspiring to be a competitor in learning with a Chicago editor.

## "GOOD ROADS" SUED.

A PRINTING FIRM CLAIMS IT CANNOT COLLECT ITS BILLS.

*Mr. Potter, Charged With Being Capricious and Irritable, Says His Printing Bills Were Extortionate.*

—Potter's Explanation.

For some reason or other, the Road Improvement Bureau has become involved in a dispute with a publishing firm for money said to be due for printing the magazine. It has also been hinted that *Good Roads* is not being so extensively circulated as is claimed. Messrs. Sherwood & Rogers, of 14 Vesey street, New York, the firm in question, were visited by a REFEREE representative. Mr. Rogers was seen, and the following conversation occurred:

"Is it true that you are suing *Good Roads*, the League of American Wheelmen and Isaac B. Potter for money due you for printing *Good Roads*?"

"Yes, our attorney has been instructed to do so, and if the suit has not already been commenced it will be."

"How many issues of *Good Roads* did you publish?"

"Some six."

"How much is due you, as per suit?"

"Some \$127, which we have been unable to collect from Mr. Potter."

"Did you print 35,000 copies or anywhere like that number?"

"No, we did not print the number you state, but many less."

"Will you give me the exact number you printed?"

"No, we will not, but will give the League of American Wheelmen the number if asked officially."

"What has been the trouble between Mr. Potter and your firm?"

"He has shown a desire to be critical and capricious in his conduct toward us, and very fault-finding, and we could not get him to accede to our demand for payment. He seemed to be of an irritable and queer disposition!"

Mr. Rogers further said that he felt kindly disposed toward President Burdett and the L. A. W., generally, but he seemed to "have it in" for Mr. Potter, and said he would press the firm's claims on that account. He also said he would prefer not to be quoted in the matter.

A REFEREE representative called on Mr. Potter and enquired about the suit. Mr. Potter commenced by saying that as far as the papers were concerned, it was "none of their business," but on being told that the printers' story had already been sent the REFEREE, Mr. Potter concluded to give his side of the case.

"They claim," commenced the editor of *Good Roads* "that we owe them \$127 balance, and I claim we don't, as their charges were extortionate, and, being the Holman standing as a watch dog between the L. A. W. treasury and extortion, I don't propose that the bill shall be paid. They charged over a hundred dollars for a colored page insert in one edition, an outrageous price. Then their work was poor in the extreme, and they had not the facilities for printing such a work as *Good Roads*. One of the partners came to my office and commenced to deliver a lecture, and threatened suit. I told him if he wanted to deliver a public lecture, that he had better hire a hall. They refused to turn over the headings and other electros of the book, and still hold some of them, which has inconvenienced us somewhat. I am willing to appoint a referee to decide the matter, but will not pay over

that claim and being a lawyer, don't think any court will compel us to."

"You are charged with being irritable and dogmatic in your demands, and a fit subject for Bloomingdale; what have you to say regarding that soft impeachment?"

"Did they say that?—and here the exposer of holey and muddy streets waxed warm—"I'm irritable if people try to impose on me or the League of American Wheelmen, and don't do the right thing. The firm that makes the complaint had no strings on me, so I changed the printers, for the better efficiency of the magazine, and they probably feel sore over it."

"Do you print the number of copies of *Good Roads*, as stated, according to the L. A. W. membership, and extra copies said to be mailed to others monthly?"

"Our books are open to inspection by the executive committee of the L. A. W., which has access to them on demand."

"Can you tell the REFEREE readers why a statement of receipts as well as that of expenditures was not given at the annual business convention at Philadelphia?"

"The good roads department is a separate institution, although run by, and in the interest of the L. A. W."

"Then why were the expenditures and not the receipts given in the L. A. W. treasurer's report?"

"As I said before, our books are open for inspection by the executive committee, and I see no good reason why a statement of receipts should be given. You can tell the REFEREE readers that the interests of the L. A. W. are protected, and all expenditures and receipts are known to the officers, the executive committee."

Mr. Potter is a hard worker, and is undoubtedly earning his salary, every dollar of it, but some members think he would be rendering the league even greater service were he to give the members a clear understanding of the financial condition of the bureau. It is a matter which has been kept entirely in the background.

## NEW YORK'S DRIVEWAY.

*A Drive Which Will Prove a Great Blessing to Gotham's Wheelman Is Now Assured.*

From a New York paper we learn that Governor Flower has signed Senator Plunkitt's bill providing for a driveway which embraces the plans of Mayor Gilroy.

The drive is to extend mostly along the west bank of the Harlem River from One Hundred and Fifty-fifth street to connect with Dykman street just south of Sherman Creek.

The plans provide for a road varying in width from 125 to 150 feet. There are two approaches provided to the southern end.

One is by an extension of Bradhurst avenue from One hundred and Fifty-fifth street through Manhattan Field and the Polo Grounds.

The other is from the top of the bluff at St. Nicholas place and One Hundred and Fifty-fifth street down the side hill to One Hundred and Sixty-fifth street.

There will be sidewalks twenty feet in width on each side of the driveway with rows of trees at the curb.

The northern end of the drive furnishes an outlet through Dykman street and Inwood avenue to the Hudson River.

The driveway is to be but two miles long. It connects a system of good drives fully twenty-five miles in length.

The estimated cost is \$1,500,000.

From the northern end of the proposed drive connections are made with such drives as the Western boulevard, Kingsbridge road, Fort Washington Ridge

road, Tenth avenue and Eleventh avenue.

Such a driveway, according to Mayor Gilroy, will do away with the danger of encroachment on the city parks by drivers of fast horses. It will provide a broad thoroughfare without intersection with other streets and thus free from danger. For the most of the distance the drive is under a high bluff, where no crossings could be built.

Another feature of the plan is its economy. The city already owns two-thirds of the land, and not more than one-seventh of the remainder will have to be acquired by condemnation proceedings. The land, too, in that locality is very cheap. The tall cliff will shade the drive in the afternoon, but will not prevent the morning sun from drying up the roadway.

Engineer Joseph O. B. Webster, who laid out the plan for the drive by direction of the department of public works, has followed the shoreline established by the United States authorities, and for the greater part of the way it will be six feet above high water mark. A sidewalk twenty feet wide will be built on the inside of the drive, and another five feet wide, with an iron railing, will be along the river front.

Mayor Gilroy says that the plans for the speedway are all ready and that bids could be advertised for just as soon as a certified copy of the bill was received.

The park department will begin work at once on the speedway.

\*\*\*

### Wide Tires For Everybody.

The world's fair authorities do not permit even carriages in the grounds unless they have wide tires on the wheels. The carriage-like buses which are used to transport visitors from one part of the grounds to the other have

three-inch iron shoes, or supplemental tires on their wheels. They are similar to those made by Casper Zimmerman of Sioux Falls, S. D., who has just been granted a patent on the tire illustrated

herewith. Zimmerman's tire is made four inches wide, or twice as wide as the ordinary wagon tire. On the inside of this tire, on each side of a median line thereof, is formed a bead, the two beads being annular parallel rings with a space between them equal to an ordinary tire. The supplementary tire is sprung over the tire on the wheel, and drawn closely together by nuts and bolts, which pass through the bent ends.

\*\*\*

### Mr. Potter Becomes Sarcastic.

"Arkell," Chicago, Ill.; "F. W.," Cohoes, N. Y.; "S. Sinclair," Middletown, N. Y.; "Ed.," Akron, Ohio; "Interested," Philadelphia, Pa.; "Mort," Sioux City, Iowa. These correspondents write complaining letters because our story from Cooper's famous novel of Indian adventure was abruptly stopped with the November number, and though promised "to be concluded next month," the finishing chapter has not yet appeared. It is true that we left poor Deerslayer tied to a tree, while the merciless Hurons were clipping his locks with their tomahawks and scalping knives from a distance of forty paces, more or less, and a humane ambition would have prompted us to complete the

story which relates his adventures in so interesting a way.

That this was not done is due to our wish to avoid contract complications between the L. A. W. and the "Wheelmen Company," a Massachusetts corporation, being the owners and publishers of the *Bicycling World*. A contract exists between this corporation and the L. A. W., by which the Boston corporation, in exchange for certain concessions on the part of the league, undertakes to—well, to make a long story short, the league was forbidden, by a letter from the Wheelmen Company, to publish any matters not relating strictly to the improvement of roads. Of course, we have carefully avoided any encroachments upon the ground to which the *Bicycling World* has directed itself with such unexampled brilliancy, and did not suppose that the innocent story of the Deerslayer would give offence; yet, to avoid all questions, we deem best to suspend the publication of the balance of that sketch.

Be of good courage, friends. *Good Roads* for 1893 will be brighter, more interesting and more successful than ever.

\*\*\*

### For Those Who Want Bad Roads.

The defenders of bad roads continue to be greatly disturbed for fear the riders of bicycles will enjoy some of the advantages of improved highways. They would display more sense if they would disregard the wheelmen altogether, and more intelligence if they would thank the wheelmen for arousing the agitation in favor of better roads, which will do more than any other single cause to make life in the country worth living. — *Buffalo Courier*.

\*\*\*

### Against Sprinkling Streets.

Thursday last a number of St. Louis

wheelmen called on Street Commissioner Murphy and presented to him a letter asking that St. Charles, Locust and Pine streets and Grand avenue be allowed to remain unsprinkled until 9 o'clock each morning and that sprinkling upon them cease after 5 o'clock p. m. The commissioner took the matter under advisement. He will first see what the residents along the streets in question have to say upon the subject, and if there is no objection from this source he will probably grant the petition of the wheelmen.

\*\*\*

### This is Only a Sample.

WEST UNION, Iowa, March 10. — Northwestern Iowa, owing to the rains of the last few days, is becoming a vast marsh and the roads are impassable. Teams that started out this morning returned, not being able to get out of town. Serious results are feared.

### Distance to Washington.

From St. Louis to Washington the distance is 894 miles; from Cincinnati to Washington, 1,533 miles; from Chicago to Washington 813 miles. This is via the bee line followed by the B. & O. railroad, the most picturesque as well as the most direct route from the Mississippi River to the Atlantic Seaboard. Through B. & O. trains, with Pullman equipment of Sleeping, Parlor and Buffet cars, run from St. Louis to Washington in 29 hours; from Cincinnati to Washington in 18 hours; from Chicago to Washington in 25 hours. Sleepers from all points run through to New York from the west without change. At Washington connection is made with the B. & O.'s matchless Royal Blue Line for Baltimore, Philadelphia and New York. These trains consist of the staunchest and finest Coaches, Parlor and Sleeping cars ever built by the Pullman company; are vestibuled from end to end, and are protected by Pullman's improved anti-telescoping device which makes every car as safe as it can be made by man's ingenuity and skill. All the cars are heated by steam and lighted by Pintsch gas. They are the fastest trains in the world, placing New York and Washington within five hours' reach. — 20-2.

# TRADE

*Writers on trade topics can always find a market for interesting and instructive matter at the REFEREE office. We shall be pleased to arrange with competent writers for regular contributions.*

## WHAT SALESMEN ARE SAYING.

*Some Frightful Discounts Reported to Have Been Given.*

If all the stories which have reached me lately are true, the cycle trade is in about as bad condition in the United States as it is abroad. It is astonishing how quickly salesmen can and do jump from one extreme to another. Last year every drummer on the road had sold the entire output. According to their stories the business was rosy in the extreme, but unfortunately, they exhausted all their red fire, and 1893 finds them—or a majority of them—with faces as long as fiddles and the ever-ready, expressive, but inelegant adjective, “rotten” as the stereotyped reply to every inquiry about the condition of business.

A good salesman, a man who has been with more than one first-class house, and who is now in a good position to know what his fellow knighs of the road are and are not doing, was in town long enough to let drop a few doleful remarks last week. He had been in the Kansas City and St. Louis regions, he said. “At one hotel,” said he, “I met no less than nine salesmen. I don’t know how long they had been there, but I do know that, when they left, their total sales amounted to three machines and these were a couple of Stearns wheels sold by Tuttle!

“It is an awful year for salesmen. For my own part, if I were not with a house which fully understands the business and realizes the condition of trade, I should expect, every day, to be called in and given my walking papers. Houses which are now in the business can’t understand why salesmen go to such towns as St. Louis and Kansas City, and come away without an order, and the poor salesman, in such cases has a rough time of it, I can assure you.”

Another visitor, connected with a large house, corroborated the speaker above quoted. I met him near the Wellington—now a popular place for cycle trade men—and in reply to the stock question, “How’s business?” received the reply—well, what did I tell you before?—“Rotten.” The gentleman, on having delivered this, as concise and expressive an answer as could be desired, proceeded to expatiate on the woes of salesmen.

“There were twelve of us at St.—”

“Nine, I heard,” I interjected.

“Well, p'raps 'twas nine. It seemed

like a hundred. Out of the nine, six were going west, and I want to predict that they won’t make their salt. The trade is loaded already. Here’s a sample of how business is being done. A man called on a house in Kansas City. ‘Well,’ says the buyer, ‘what can you do?’ Mr. man makes a big show of figuring—to get it down to the lowest notch, of course, and finally offered his machines, which list at \$150, for \$87.50! ‘Young man,’ says the buyer, ‘you are not in it.’ From all of which it is very evident that somebody is offering within a shade of fifty off!”

Now comes the question, how can they do it? The answer is simply this—they can’t. At least, they can’t and make any money. The business is either conducted on dishonest lines—that is, by offering an inferior wheel as “high grade,” or else the maker doesn’t realize how much his wheels are costing him.

“How do you account for the appalling falling off in trade?” I asked one of

new makers, the business will be in better condition a year hence.”

This price cutting is a bad thing for the business. There is nothing new about that remark, it is true, but no one seems to have digested it yet. In the first place, it is bad for the maker. The little maker doesn’t seem to realize that it falls heavier on his head than that of the big fellow who has been in business for years. But it does. There are makers whose wheels will sell through thick and thin, and whose reputation is such that Mr. Littlefellow cannot shake it. By offering a large discount he argues his goods of a cheaper grade, and in his anxiety to appear of some importance in the trade, strains himself to increase his output which he has the greatest of difficulty in disposing of, while, had he made half the number and finished them carefully, he might have secured better figures and have made more money in the long run. Thus the new manufacturer who handles his own output seems to be the principal loser by this price-cutting. He finds forced upon him all the ills of large discounts, inferior agents and long credits. The risks he runs are awful to contemplate. Next comes the jobber. Poor jobber! He is going slowly but surely. We have a few samples of him left. The jobber or middle-man has done much to ruin the business. I do not refer so directly to the man who handles bicycles only, as to the hardware man and others of that ilk, who

THE WAVERLY SCORCHER.

the traveling fraternity. “As a matter of fact,” he replied, “there is no falling off. On the contrary there will be a large increase in sales this year. There are various reasons for the black appearance of things. First of all, many agents were badly frightened last year. You will recollect that in the early part of the year, we had almost unprecedently wet weather which continued right through that part of the season in which the selling is generally done. This upset all calculations, especially as, in anticipation of big trade, many dealers loaded up heavily. They carried over a great many wheels which they have yet to dispose of. You will see, therefore, that in addition to this season’s output, in which, of course, there has been the usual increase, the trade must unload on the public a goodly share of last year’s product.

“I am not a believer in the stories we hear, that the trade is going to the devil at a gallop, for although there is, undoubtedly, great difficulty in selling at present, I am in hopes that, with the assistance of the early spring which is promised us the season will clean off all the old stock and that, unless the market becomes flooded with a lot of trash by

mix cycles with pots, kettles and pans, and are content with so minute a margin as to make necessary the use of a microscope to see it. There are a number of these houses. One of them once appealed to a large manufacturer for machines, offering to pay a fabulous sum in cash. The maker’s answer was, “No, gentlemen. Not if you paid me full list price for the wheels.” One house sells tens of thousands of dollars worth of machines every year at a price which would drive the man who makes cycle selling, alone, a business, into bankruptcy. Of course the machines are sold as high grade, while everybody—that is, everybody in the business—knows they are nothing of the sort.

For the purpose of steering clear of the Slough of Despond into which they find themselves being slowly drawn, a number of Chicago people have formed a dealer’s association. They hope thus to abolish price-cutting, “trade” deals and other abuses. It may work and it may not. It didn’t in Cleveland. It didn’t in Baltimore. Dealers on the north, west and south sides believe it will not in Chicago. “Why,” said a west-sider, “if your cycle row aris’ocracy try anything of that sort, the

little fellows on the outskirts will cut their business all to pieces. The man who has an old machine to trade knows that there are plenty of dealers outside of the row, some of whom will make almost any sort of a trade.” Then he went on to tell how the trading system is abused. “I know a man,” said he, “who owned an interest in a retail business. At the beginning of 1893 it was worth \$1,500. During the year the place disposed of \$18,000 worth of wheels, but at the end of it the interest was worth only \$875. Why? Trades. The man in charge took almost anything rather than allow a customer to go away. He allowed \$90 for second-hand machines which he sold again for fifty!” And, according to this man’s story, the same style of thing will be carried on in ’93.

TRAVELER.

## WESTERN WHEEL WORKS AFFAIRS.

*Reorganization of the Company Completed.—The Change to go Into Effect September 1.*

The reorganization of the Western Wheel Works, some details of which were given in the REFEREE a month ago, has been completed. Tom Coleman’s mission was successful, and if he succeeded in tearing himself away from the attractions of Paris and London, he sailed for home on Wednesday of this week with a contract, which binds the deal, in his pocket.

All contracts for ’93 have been made, however, and there will be no change whatever in the business until September 1. At that time the company will commence to do business under a new charter, capital stock \$1,000,000, with five stockholders only. Mr. Schoeinger, Sr., will retire from the business entirely, but will continue his interests in some other lines on the north side, which do not require a great deal of personal attention.

Louis Schoeinger will probably remain in Europe for another year. His physicians say that his health will then be as good as ever. He is at present in Switzerland. He will retain his interest in the business, and in June Lindsay Coleman will visit him to arrange some business matters for the season of ’94.

Mr. Coleman was in Chicago last week and reports that the enormous discounts offered by some houses have not affected the W. W. W. business east or west.

## AMERICAN INVENTORS BUSY.

*New Scheme for Combination Pedals—A Spiked Shoe for Wheels.*

Within the past week or two several patents have been granted on inventions pertaining to the bicycle. Charles F. Pease, well known in the cycle manufacturing business in Chicago, has been granted three patents, two of which relate to pedals, and the third to the steering-head lock. One invention relates to a method by which either rubbers or rat trap plates may be used on the same bolts. The plate (E) may be made of sheet metal, by a single stroke of the die, alternating notches (f) being stamped in order that the bolt may pass through and hold the plates to the pedal frame in the usual way. Mr. Pease’s other devise is a cap for covering the free or outside part of the pedal in order to make it dust-proof.

John G. Xander, of Reading, Pa., has just been granted patents on his new style frame, as now used in the Never-sink, which has been illustrated.

The Macintosh tire, as it is known, is the invention of William Golding, of Manchester, Eng. The patent reports are very complete, the specifications

## A HAPPY DEFINITION.

Referring to the pages of the recent Century Dictionary, we find the word bicycle defined as follows: "A very light, two-wheeled vehicle, propelled by the feet and steered by the hands, called the 'Tourist.' It is handsomely and expensively made by the GEO. R. BIDWELL CYCLE CO., 308-310 West Fifty-ninth Street, New York. This is the only bicycle we know of in this country, though we believe there are other spurious imitations."—*Cent. Dict., Vol. 1, P. 172.*

THIS IS A FACT,

AND SO IS THIS ABOUT

## RESILIENCY.

Have you ever thought exactly what resiliency means? It means literally the power possessed by a body of returning to its original position, when moved from that position by a second or foreign body. A good watch spring is perfectly resilient, and so is a pneumatic tire if it is *properly* made. Applied to a pneumatic tire resiliency *actually* means the possibility of riding upon *air*. The ideal tire would be a column of compressed air pinned to a steel felloe by a thought. The *next best* thing to this is the Bidwell Pneumatic with its

MYSTERIOUS CONSTRUCTIVE FABRIC TUBE.

THINK IT OVER—and write for the true secret of a Pneumatic Tire.

"AIR: its hard and soft side."

GEO. R. BIDWELL CYCLE CO.,

308-310 West Fifty-ninth Street, New York.

Factory: Colt's West Armory, Hartford, Conn.

Tire Factory: 49-51 W. 66th St.

covering several pages of printed matter, as well as seventeen illustrations.

Herbert Gregory of New York, brings out a spiked shoe for pneumatic tires. The shoe is probably two inches wide and long enough to cover the tire, being laced at the ends. This shoe is formed of two pieces of canvas cemented together. Before being put together, how-

ever, short thick spikes (about three-sixteenth of an inch long) are inserted through one layer of the canvas, each spike having a large shoulder or head so that it will not push through the other canvas strip which backs it. In the edges of the shoe are eyelet-holes for the lacing, which are tied together over the rim, thus securely holding the shoe in position.

#### CHICAGO TRADE BRIEFS.

*Traveling Men Still Continue to Call—Personal Mention.*

"Pop" Worden, of the Remington Arms Company, was in town during the week.

Harry Palmer, proprietor of the *Sporting Goods Dealer*, was in Chicago last week.

D. C. Stover, of the Stover Bicycle Manufacturing Company, was in Chicago last week.

The Hill Cycle Manufacturing Company has appointed Tom Thorne as Ravenswood agent.

W. E. McCune, of Boston, is in the city. He would like to place a Chicago agency for the McCune.

C. H. Parker, Goshen, Ind., is in Chicago. He will assist C. H. Plumb at the Ariel company's store for some time.

R. L. Coleman, of New York, was in Chicago last week on important business connected with the Western Wheel Works.

Charlie Sieg says he will stop taking orders for repair kits when the number has reached 150,000. He claims to have made 30,000 to date.

A monthly cycle paper heads its column giving an account of the Chicago dealers' combine thus: "Chicago Dealers Organize Against Themselves."

A slight error appears in the advertisement of the Western Wheel Works this week. The price of the Combination Junior, No. 2, should be \$50, not \$45.

E. L. Ferguson, manager of the Western Cycle Company, 254 Ogden avenue, has given up the agency for Triumph cycles, and will handle exclusively wheels made to his own order.

Pritchard Stewart, an old-time member of the Lincoln Cycling Club, for many years with Hibbard, Spencer, Bartlett & Co., sailed for Europe last week on a two months' trip for pleasure.

J. W. McGowin, manager of the Pittsburg Cycle Company, and Harry D. Squires, of the same company, were in Chicago last week on business connected with the purchase of the Chicago Bicycle Company's plant.

Small manufacturers around Chicago are reaping a harvest in the demand for specially constructed wheels. Nowadays a man wanting special features can give orders for such a wheel—and receive it a month later—from any one of half a dozen local makers.

James Josephi arrived in Chicago last week from Ohio, where he placed a number of agencies for Imperials and completed arrangements for—well, James is going to be married ere snow

flies, the young lady being one of Cleveland's fairest daughters.

The Columbian Bicycle Livery has had sixteen applications for stations in cycling centres of the city. Eight branch stations in all will be opened at first; more if the business prospers. The renting machines will all be Imperials, from ten to fifty at each station.

A. W. Moore, the hustling western agent for New Mails, and United States agent for Belsize and Irwells, is rarely at his office in the Masonic Temple. Reports of splendid sales on the road are given. He is now contemplating a trip through the western country to the Pacific coast.

George V. Clementi, formerly of the firm of Sieg & Clementi, has entered the cycle business again with C. W. Barr, under the firm name of Clementi & Barr. An office has been opened at 271 Wabash avenue, second floor, where bicycle suits will be handled on a large scale. Later on a line of bicycles will be handled.

Sometime in the future, when the decorators get through at the retail store of the Stover Manufacturing Company, something really fine in decoration is promised. E. H. Wilcox now has a full line of '93 model Phoenix safeties on hand and finds many people who are willing to discourse upon their beauties.

All previous reports regarding the purchase of the Chicago Bicycle Company's plant by the Pittsburg Cycle Company have been premature, as only negotiations have been in progress. Messrs. Squires and McGowin, of Pittsburg, have been in Chicago for a week past and after considering the matter carefully have, it is said, decided to drop the matter.

A. Kennedy Child was in the city last week in the interest of the Warwick company. He left for Milwaukee, St. Louis and Peoria, and may go on to the Pacific coast. Kennedy says the cash prize baby which he introduced to the world at Philadelphia was brought into this world with the mythical silver spoon in its mouth. It will score a decided success, he says.

#### GENERAL TRADE NOTES.

*Paragraphs About Trade Men, Wheels and Business.*

R. H. Franklin & Co., of Brooklyn, have largely increased their rim-making force of late.

The Batavia Pedal Company, of Batavia, N. Y., is making an A No. 1 pedal, and reports business good.

Stephen Golder, according to Harvey Du Cros, Jr., is expected in New York shortly, on New Howe business, of course.

Many fast racing men are going to use the Burris-Michelin tire this season. Johnson's example seems to have influenced some New York riders.

T. Gerry, representing Holmes & Co., Boston, spent the past week among local dealers. Mr. Gerry is showing the Chicago trade something in knit bloomer suits.

W. A. Lloyd & Co., of Birmingham, request us to announce the appointment of the Anglo-American company as American agent, in place of H. A. Smith & Co.

The *Looking Glass*, Savannah, Ga., prints a story about the probability of the establishment of a cycle factory there. Colonel Pope is mentioned in connection with it.

Joseph E. Geigan, the Baltimore dealer believes in the scriptural injunction that "you can not reap where you do not sow," and his half-page "ad" in the *Baltimore News* is proof of the fact. The New South, a name made famous by Henry W. Grady, of Atlanta,

Ga., is the name of Mr. Geigan's own wheel.

Kirk Brown reports the Dunlop tires in good—in fact, great demand. Sixteen hundred tires were shipped by the American Dunlop Tire Company last week, and the firm hopes to treble that quantity weekly from now on.

John H. O'Toole, one of the best long-distance riders in Ireland and the possessor of several records, is employed in the shipping department of A. M. Scheffey & Co., 92 Reade street, New York. This firm is shipping samples of its Wynnewood machines daily.

W. H. Kirkpatrick returns to New York this week, having put in two months among the eastern and northern trade for McKee & Harrington, who are very pleased with the work done by "Lyndhurst Kirk". The demand for the Lyndhurst, Mr. McKee informs us, has been quite satisfactory.

The Schverling, Daly & Gales New York catalogue is a thing of beauty, and contains everything in the way of sundries, and the well-known line of wheels the Broadway firm handles. Of course the get-up of the "cat" is the work of that distinguished literateur, Barney Whymer, editor of the *Announcer*.

The Pope Manufacturing Company's New York store is once more looking like business. Those who remember the old place will hardly recognize it since the contractor's tearing up and fixing. There is a large plate glass window, and fine outside decorations—but the same old Mason, Elliott by name, is there.

Mr. L'Hommiedieu, of the Columbia Rubber Company, New York, is authority for the statement that William Bowden will not visit America again in the interests of the Seddon tire. E. H. Seddon, he says will return shortly. G. H. and John Seddon and Frederick Jennings, sailed for England last Wednesday.

A. M. Scheffey & Co., 92 Reade street, New York, are shipping so many Wynnewoods these days that the factory has not been able to satisfy the demand. A. M. Scheffey is just now taking a few days' "rest" at the office, whilst J. Raymond Werner and another traveler are on the road visiting the jobbing trade.

"The bicycle trade is no longer the 'hurrah' sort of thing it was five years ago," said a man, ripe in experience, recently. "It has settled down to a solid business basis, the same as any other trade. I feel sure," he continued, "that some of the people who are offering fifty off on \$150 wheels don't realize what their expenses are, and that there will be many changes in the business before the year ends."

#### The Indiana Company's Waverly.

"Yes, sir," said Fred Patee recently, "we are offering a high-grade wheel at \$400. Isn't that so, George?" And George Hendee, who will handle the Indiana line in Springfield, nodded assent. The reader will be able to form an idea of the much talked of Waverly by a perusal of the following specifications, taken from the Indiana company's catalogue:

Frame, entirely of the highest grade seamless cold drawn steel tubing and perfectly fitted with drop forged steel connections, lap welded and brazed. Wheels, 28-inch, with Swedish steel rims, rolled by several processes, hollowed in center to prevent spoke nipples from interfering with tire. Chain, Humber steel block pattern, inch pitch and thoroughly tested. Spokes, fine drawn piano wire steel, retaining great tensile strength. Head, 10 1/2 inches between steering centers and fitted with steel ball races, secured by special process. Fork crown, made of best drop forged steel, and of design embodying great strength. Crank bracket of light design, drop forged steel, and fitted with hardened tool steel ball races, deep centered. Saddle post, hollow cold-drawn steel tubing of best grade. Hubs,

made of drop forged steel, with finely tapered flanges and containing deep ball races or bushings of tempered steel. Handle bar, cold-drawn steel tubing, curved gracefully from center, tapering gradually; dropped and fitted with best selected cork handles with metal tips. Brake, fitted with our improved spoon, thoroughly adjustable, of direct plunger pattern and having a neat steel spring, with lever of design in accordance with handle bar. Pedals, all steel, improved rat-trap pattern, with fine adjustable ball bearings, though rubber pedals will be furnished instead if requested when ordering. Sprockets, machine milled and perfectly accurate in pitch. Tires, para rubber, best grade pneumatic with improved deflating valve and easy method of repair; size, 1 7/8 inches. Bearings, dust proof, combining fine adjustments and fitted with best steel balls, gauged to thousandth part of inch. Saddle, of light, well proportioned design, with oil tempered steel springs and light leather. Perfectly arranged on endless screw, affording fine degree of adjustment. Lamp bracket, of sheet steel, hollow pattern and detachable. Cranks, drop forged tool steel; hollowed pattern; detachable by means of uniting keys; length of throw, 6 1/4 inches. Forks, cold-drawn steel tubing, primed and thoroughly brazed to crown and gracefully curved. Finish, the highest stage of perfection in nickeling, with handsomely polished enamel baked on at a temperature of 300 degrees. Tools, of first quality, put up in neat leather pouch.

That this will be a banner year for the company there is no doubt. The same old Patee, with the same pleasant style which made him so popular while with Rouse, Hazard & Co., greeted the writer and disclosed to him all the ins and outs of the immense factory. And it is immense as well as complete, for since the disastrous fire of last fall no effort has been spared in rebuilding to make the establishment a model one and equal to any in America.

Patee will doubtless make as successful a manager as he did a salesman. His desk was piled up with correspondence, which, he said, related chiefly to the Waverly.

The factory is running at its full capacity, so as to insure prompt deliveries as soon as old Sol favors us with a lasting smile.

#### Barrett Talks On Trade

George K. Barrett had much of an interesting nature to divulge to the REFEREE man Monday when he called. Barrett returned Saturday from an extensive trip in the east, where he disposed of a satisfactory number of Marble safeties. Owing to price cutting all along the line, sales of high grade wheels are small, he says. For instance, one dealer offered to take an agency, providing he could have 50, 10 and 5 per cent discount, which he said was offered him by traveling men. Contracts, he found, were made to be broken, and retail dealers realize that because they sign large contracts it is not required of them that every wheel should be taken.

"The average contract is easily broken," said Barrett. "There is hardly a contract taken that cannot be broken if the party wishes to do so. I did not, therefore, crowd my agents for large orders, but contented myself with small ones and the sure results to follow from the sale of good goods."

"Traveling men are selling every Tom, Dick and Harry, without regard to credit. For instance, in one place I found a man with three agencies, and report showed him not responsible for one cent. In Elmira, N. Y., I found the trade killed by price cutting amongst the dealers and the Columbia agency located in a coal office, the sample wheel being shown atop a huge bin of coal. All through the territory traversed I found agencies placed in all sorts of places, and with all sorts of people—doctors, dentists, in drug stores and even in saloons."

"The prospects are bright for a big retail trade everywhere, but prices will be smashed unmercifully. At Plymouth, Ind., where our factory is located, I

#### Mr. Perkins, of Rockaway.

In May of 1891 Robert Perkins took charge of the factory of the Rockaway

ROBERT PERKINS.

Manufacturing Company, where Liberty cycles are made. At that time the lessees, Wilson, Myers & Co., had before them the task of proving to a critical public the merits of the machine, but, with the aid of Mr. Perkins at the factory and Mr. Bretz at the office and on the road, the task has been successfully accomplished, and the force of men then at work has been increased from eighty to five times that number. Prior to Mr. Perkins' connection with the Rockaway factory he had a dozen years' experience in the cycle trade in London and Coventry. In November of 1891, he settled in America. Mr. Perkins is a clever man, mechanically and socially, and the success of the factory is due largely to his capable management.

#### Collins & Nuttall, New York.

The above names are well and favorably known to New York people, and to the eastern trade. The owners conducted an uptown retail store last season. Early this year the above gentlemen decided to open up in a large way as retailers and manufacturers of certain specialties outside their bicycle trade. Their new quarters occupy the top floor of a whole block on Twenty-eighth street and Seventh avenue. The front part of the building is divided into a large salesroom and cosy offices. The factory proper is divided into three portions. One contains the manufacturing and repair shops and the nickel-plating rooms, with huge baths and dynamos, all in a state of much activity. The rear of this section is occupied by large enameling ovens, which, at the time of our visit, were filled with work for outside repairers. The last section is used for burnishing and polishing, and several men were making the sparks fly. Messrs. Collins and Nuttall are making special wire dashboards for Brewster, of carriage fame, for exhibition sleighs for the world's fair, and manufacture many things not cyclicistic. The firm is reaching out for wholesale repairing, nickeling, and enameling, and carries Cleverlands and Falcons, for which it controls New York and Long Island.

#### The Trade in Newark, N. J.

Howard A. Smith & Co. are filling up their place with Excelsiors and sundries; the rim output of this concern is also large. Mr. Smith has had much trouble in getting goods through the New York custom house. The quality and quantity of interference in the way of carmine

tape grows more luxuriant as the months go by.

E. Alsdorf & Co. are doing a nice business in Warwicks, Liberties, Lyndhursts, Niagaras, Rochesters and Cleverlands, and have a wonderful stock on hand. This firm is also a heavy dealer in pianos and sewing machines. J. A. Dubois, the junior partner, is popular locally.

Eldridge & Co., the Columbia agents, are doing well; so is Coffin, the new Victor agent.

The Columbian Novelty Company reports business in saddles as fair. Bergel's saddles have received quite a boom, especially in the west, whence many orders have come recently. The Bergels are reliable and capable people.

Butler & Ward, who commenced by making saddle leathers, now make a very good saddle, and being wholesale saddlers and harness makers, cycle saddle making comes natural to them. Mr. Ward says that their progress has been somewhat interrupted by the lack of parts for the saddle.

William Fish, the old reliable saddle-maker, and in fact the pioneer in eastern saddle making, jogs along in his usual solid way out on Roseville avenue, and cannot keep pace at present with orders. The Fish saddle is well and favorably known.

There is still another saddle man in Newark by the popular name of Smith, but he has met with many obstacles and, like his namesake, Hoke, will lie low and trot in a winner later on.

The Acme Stand Company is now in new quarters and reports orders as coming in fast.

#### New York Trade Personal.

"Pop" Worden is on the road. Barney Whympers is at home again. Samuel Snell is in wicked New York. Frank Ray sold a car load of Ramblers since Feb. 1.

L. C. Boardman and wife are at Boston to see Colonel Pope.

The Ormonde company is doing well, says President Willis.

Sydney Bowman's Adelphi school opened with a flourish.

Mrs. W. E. Smith, of Dart wheel fame, is rapidly convalescing.

F. C. Atherton, of the Buffalo Tricycle Company, was here last week.

Alex Schwalbach has opened the Liberty school on Broadway near the park.

Frank White of the Bidwell tire company, is out of town—has been much of late.

Perrig, of the Columbia Rubber Company, is at Boston on important business.

The Anglo-American company is busy. Secretary Freidenstein will soon sail to Europe.

Frank Brock, formerly with Alsdorf, Newark, N. J., is now with Howard A. Smith & Co.

Jake Bretz is back again from an extended trip, busy and prosperous. Got a new baby.

H. L. Coe, of the A. O. Very company, Boston, is in New York selling Rich & Sager saddles.

A. M. Scheffey is delighted with the success of the Wynnewood bicycle his firm wholesales.

Mike Quinlan, of the Gendron Wheel Company, is under the weather. Cashier Getz, of same firm, first rate.

J. Raymond Wemer, of Scheffey & Co., is on the road selling Wynnewoods, and H. E. Clewell, of same firm, is south.

Elliott Burris, of Burris-Michelin tire fame, is expecting every day to hear that Johnson and Eck have broken a record.

One hundred and sixty-seven Premiers were on the supposed lost steamer

Naronic, White Star line. Johnson mourning.

Frank Egan was approached by several green-goods men on entering New York for the cash prize meeting. They took him for a countryman.

#### A Rapid Transit Proposal.

A heated discussion is now raging in New York over the rapid transit question. New York public carriers cannot handle the crowds during the morning and evening hours, and the cars resemble hog cars from Nebraska, so tightly packed are they. They talk of underground and more overhead facilities, and in the meantime the people suffer. Boynton and his bicycle railway hobbled up last week as follows:

The Boynton Bicycle Railway Company, of No. 32 Nassau street, sent a long communication to the commission last night for consideration at to-day's meeting. It asks that the "L" road be directed to use bicycle cars and so make a four track road out of the present structure without any altering or rebuilding. The company says it will furnish within six months, compartment cars with eighteen doors each, much lighter in weight than the present cars, and electric motors which will take express trains through to Harlem in five minutes.

The company would like a concession for Fourth avenue, on which it would build a four track elevated road, only sixteen feet wide, and guarantee a three-minute service between the post office and the Grand Central station.

The distance to Harlem from the Herald office is about six miles, and to the Grand Central about three miles.

#### The Little Nipper Lamp.

The Little Nipper lamp is the joint invention of Messrs. Davis and Salsbury, and is manufactured by the latter. The burner is screwed into the T-piece, the

wick resting in the pillar, the ends of which and the ends of the handle bar being plugged in order that an oil container may be obtained. The lamp

proper then sets over the burner and is held down by the two clamps which pass over the handle bar.

#### Kirkpatrick vs. Pope.

T. J. Kirkpatrick, ex-president of the L. A. W., has commenced suit in the United States circuit court against the Pope Manufacturing Company. Kirkpatrick is the inventor of the Kirkpatrick saddle, which the Pope company has used for many years, and he wants an accounting.

#### Boston Trade Notes.

Sidwell & Saben have started a factory at Waltham, where they will in future make their wheels. These have been called the S. & S., but they have decided to change the name to Waltham. Mr.

Sidwell makes the factory his business address so that the manufacturing is entirely under his personal supervision.

Dropping into the basement of P. J. Berlo's bicycle emporium, the writer found him working hard on a number of light wheels he is making to order.

Will McCune is on a trip through the west in the interest of the McCune Cycle Company.

#### Autd Lang Syne.

O. O. Davies, business manager of two or three New England weeklies, is evidently a lover of the ordinary. He writes the following to Bayliss & Thomas:

BAYLISS & THOMAS, Coventry, Eng.:—Dear Sirs:—I have in my possession and have been riding for the past fifteen years an ordinary Harvard Roadster bicycle of your make.

The machine must have been imported to this country about 1873, and was given as a prize in a tournament at Providence, R. I., when new.

I have ridden the machine myself over 25,000 miles, and it was second-hand when I bought it. Last Sunday I rode forty miles with a company of pneumatics, and enjoyed the trip as well as any.

The original bearings, tires, etc., are complete and in good order. Thinking these facts may be of interest to your firm, I take the liberty of writing on the subject. Respectfully yours,

O. O. DAVIES.

South Framingham, Mass.

#### Still Another Factory.

The Fenton Metallic Manufacturing Company, Jamestown, N. Y., which makes metallic furniture for banks, is about to place a wheel on the market. It will be known as the Fenton. The concern writes as follows: "We are about to place upon the market a high-grade bicycle, constructed in accordance with the best recognized lines and pattern. We are confident that, with our extensive experience in the manufacture of fine metallic goods, having purchased a complete line of the most improved and latest designed machinery for the manufacture of bicycles, employing only skilled mechanics thoroughly versed in cycle construction and using the best obtainable materials, the goods of our production are inferior to none."

#### The Columbus Light Roadster.

A good looking machine which weighs thirty pounds complete, is the Columbus light roadster, manufactured, we understand, by a concern of unquestioned reliability. The now famous Mannesman spiral tubing and the finest forgings are used in its construction. Its wheels are both 28 inches with tangent spokes of piano wire; tires, Morgan & Wright, New York Belting and Packing Company, or Greyhound; pedals, Columbus rat trap ball pedals; saddles, Bergel, Garford, Sercombe-Bolte, or Hart; gear, sixty, sixty-three or sixty-six, as desired; finish, heavy black enamel and nickel plated on copper; colored enamel furnished if desired.

#### For the World's Fair.

Two large frames of parts have been received by the Taylor Cycle Company from Wilson, Myers & Co., manufacturers of the Liberty. These frames are 31-2x4 feet. One contains a complete machine unfinished, the other finished. These are intended for the Liberty exhibit at the world's fair, and will remain on exhibition at the Taylor company's store for some time.

#### New Concern in California.

Articles of incorporation were filed with the county clerk at Los Angeles on March 2 by the Pacific Cycle Company, formed for the purpose of buying, selling, manufacturing and constructing bicycles, etc., with a capital stock of \$25,000, all of which has been actually subscribed. Its board of directors consists of F. E. Olds, J. Q. Tufts, E. B. Tufts, F. M. Lyon and D. C. McGarvin.

## OSMOND COMING SOON.

LEAVES EARLY IN APRIL FOR CHICAGO AND THE WORLD'S FAIR.

*Dr. Turner's Licensing Scheme Will Go Through—Leeming Amuses the Britishers—Trade Quiet, but Steady.*

LONDON, March 11.—The news of the week is that Osmond is leaving England early next month for the United States, whither he is proceeding in order to look after the interests of the Whitworth Works Cycle Company at the world's fair. He starts early, with the intention of becoming thoroughly acclimated, so that he may be able to do himself the utmost justice when the time comes for the fall race meetings, in which he hopes to encounter Zimmerman and all the American cracks, as well as those Britishers who will probably have found their way to the states by the time the autumn arrives.

## THAT LICENSING SCHEME.

The details of the licensing scheme—of which I was able to send particulars to the REFEREE a week before they were published in any of the papers on this side—are coming in for some severe criticism. But a great many men are in favor of the scheme as it stands, with very few alterations, and I have little doubt that it will be carried. The chief opposition will probably come from Birmingham and Manchester, but London, Bristol and Newcastle are almost unanimous in support of the scheme, and Dr. Turner, the originator of it, is very sanguine of its passing. When it is passed there will doubtless arise some little friction in carrying it out. In any case the establishment of a second class, coinciding with class B of the L. A. W., [Which was knocked out.—Ed.] seems almost a certainty, and I believe that some of those who are foremost in the attempt to re-establish pure amateurism on a sound basis will also be among the first to offer prizes for races confined to men to whom the union has declined licenses. It would certainly be well for American riders who have declared their intention of racing in England this year to apply at once to the N. C. U. officials, at 57 Basinghall street, E. C., for licenses, and to see whether they obtain them before setting out. It would scarcely be worth their while, or their employers', for them to go to the expense and trouble of a journey to England only to find themselves unable to obtain licenses, and so be debarred from taking part in the principal events of the year.

## HARRY LEEMING ON THIS SIDE.

A number of us have been highly amused to read of the admission to and expulsion from the League of American Wheelmen of Harry Leeming. Here Leeming has a reputation for being one of the cleverest trainers and biggest "knock-outs" on the face of the earth. But this, I believe, is not the first time he has posed as an amateur. He could probably tell a number of tales of the quiet little country meetings where he attended and won prizes in the same disguise. Leeming's reputation as a trainer is only equalled by the reputation which he holds for the strength of his language.

It is said that when he was training Gatehouse some seven years ago the latter used to leave him up at Cambridge, in order that Leeming might astonish the men in the university by the number and power of his oaths.

## TRADE QUIET, BUT STEADY.

From the Midlands I hear that trade is

quiet, but steady. Makers of parts and accessories are the busiest. The R. F. Hall Manufacturing Company is regularly working two shifts, and the Butler's Fittings Company is also very hard at it. The Dunlop tire people, who, since the beginning of the year, have been working right up till 10 o'clock at night, have now slackened off somewhat, having been at last able to get on terms with the vast number of orders which literally poured in upon them.

The Premier people, having thoroughly tested the helical tubing, patented last year by their managing director, William Hillman, have now decided to give the rest of the trade an opportunity of using it and benefitting in so doing. They are taking steps for the formation of a company to acquire and work the patents, and are desirous of finding nine other firms to subscribe £500 each towards a capital of £5,000.

## FEW FRONT DRIVERS BEING SOLD.

Nearly all the trade that is being done in cycles is in rear-driving safeties. I am told that in spite of all we have heard of front drivers during the winter very few machines of this pattern are being sold. For myself I must say that I have been riding a front driver all the winter and I feel very much inclined to keep it for the summer. I find that it has strengthened my legs very much, so that when I get on to a rear driver I find that I can go much faster than I ever did before; but the latter has not the same swing and give which belongs to the f. d., and for long distances is not nearly so comfortable. The trade in tandem safeties is distinctly looking up. Quite a number of makers are turning out machines of this type, the majority of them closely resembling the pattern which Humber & Co. have been building for the last two years.

## Is Your Club Going to the World's Fair?

If so, you should put yourselves in communication with the National Columbian United Wheelmen's Association. This association can provide them with suitable sleeping and eating accommodations at reasonable rates, besides furnishing storage accommodations for their wheels, and giving them the use of the finest bicycle club house in Chicago. The advantages of having a wheel while in Chicago are many, for long walks and tiresome waits in sun and rain will be the fate of the great majority of visitors. But the wheelman will be independent and can go and come at pleasure; besides he will have an opportunity of seeing more of this city, its fine boulevards and beautiful residences than he would if he depended on local conveyances, which, as a rule, would not take him through the most desirable portion of the city.

Wheelmen coming alone may have the same advantages. Bring your wheels whether you stay with the National Columbian United Wheelmen's Association or not, as you will need them in going to and coming from the fair, and you can use their storage room.

Address L. D. Taylor, 959 West Madison street, Chicago, Ill.

## With Fear and Trembling.

He was a traveler and when he reached Chicago was met by a REFEREE representative, who informed him (the traveler) that a letter awaited him at this office. That was on a Thursday.

"Well," he said, "I suppose the jig's up with me," for he feared it was a letter from his employers saying "Come home."

Monday he crawled into the REFEREE office, trembling and fearful of results.

But the letter only brought him cheer—it was all right. Why did he tremble?

## TRADE YOUR OLD WHEEL FOR A NEW

Columbia Relay, 29 pounds, or a Thistle 25 or 32 pounds.  
Century, 35 pounds, or Stearns, 20 to 38 pounds.  
Rambler, 28 to 37 pounds.

By making a deal now you can get a bigger price on your old wheel and get your new one in good time.

AVOID DELAY. SEND FOR CATALOGUE AND SECOND-HAND LIST.

## Great Bargains in Second-hand Wheels.

We want bicycle riders for our agents for the Thistle. Apply at once. Correspondence solicited.

CHICAGO

## SMALL CHICAGO NOTES.

## Short Paragraphs, Personal Gossip, Club Affairs, Etc.

The Cook County Wheelmen turned out twenty-six men for Evanston, Sunday last.

J. W. Hipwell has been elected treasurer of the Cook County Wheelmen, vice J. E. Crump, who has gone to Pennsylvania for the summer.

The Lincoln Cycling Club has not as yet decided where its summer club house will be built. A committee will look up a site in the lake region in Lake county.

W. A. Skinkle, president of the Century Road Club, was in Chicago early this week. He has decided to call a meeting of the club officials at an early date.

W. H. Hollister, the well-known Rockford cyclist, C. S. Thomas, Lake View Cycling Club and A. G. Bennett, Ravenswood Cycling Club, leave shortly for a month's pleasure trip in Colorado.

Three prominent members of the Cleveland Wheel Club—Charles Sebastian, James Marshall and Herrman Schleman—are now located in Chicago, and will join the Lincoln Cycling Club.

Gideon Hayes, of Boston, ex-secretary of the L. A. W., and one of the Bean city's most popular cyclists, is in the city on business. Hayes is a manufacturer on an extensive scale of popcorn novelties, and expects to open an office in the city.

The fate of the Oak Park Cycling Club will be decided Saturday, as the result of the mail vote will be known then. There will be a change in the name of the club at any rate. There is still backbone in the cycling element, and a cycling division will be formed.

At Royal League Hall, Ravenswood, this Friday evening, the Ravenswood Cycling Club gives a "Magazine Vivant," in which the club members will appear in interesting magazine illustrations in character costumes. This promises to be very interesting, the characters representing statuary, with various colored lights to enhance the effect. Among the people taking part will be Mrs. F. E. Spooner, Mrs. Will Cobb, Mrs. Harry B. Rennolds, Mrs. W. H. Chambers, Mrs. Grant Newell, Mrs. John C. Shirra, Mrs. Dr. Fredericks, Mrs. K. F. Peterson and Mrs. H. Oldam; Miss Jennie Howard, Miss Marie Matheson, Miss Alice McIver, Miss Lulu Raymer and Messrs. C. E. Salter, Harry Oldham, C. E. Thomas, Guy Malcolm, H. O. Buell, W. H. Chambers, C. E. Churchill, G. E. Burt and Gerald Chambers.

## Puritanical Ideas in the South.

Some of the older and more straight-laced ladies in Louisville are still greatly opposed to their own sex riding bicycles,

according to the *Post* of that place, and are using every means in their power to show to the young ladies who have braved the criticisms of the public by riding wheels that their actions are undignified and unwomanly. Last Monday afternoon a handsome young lady came spinning in Third street on her wheel looking the very picture of health and happiness. Her brown curls were playing about her forehead, and the bright glow on her cheeks showed that the invigorating exercise was having good effect. She stopped at Jeffries' store, and asked to put her wheel in the house until she could return from a short shopping tour down the street. She had hardly gone before a middle-aged woman rushed into the store.

"Where is the girl who stepped in here a few minutes ago?" she asked breathlessly.

When told that the young lady had left the store she looked disappointed and said:

"Oh, I must see her. I don't feel as though I can rest easy until I see that girl and warn her against riding these horrible things. She is so pretty, too, that it seems a shame that someone does not tell her of the mistake she is making."

After a pause she turned to several gentlemen who stood near, greatly amused at her remarks, and said:

"Well, will not one of you tell me her address? I must see and talk to that girl at any cost."

When told that neither her name nor address was known she took her departure with reluctance.

## Notes.

The Elliptic Cycling Club has been organized in Winona, Minn.

The Brooklyn B. C. has adopted plans for its proposed summer club house.

The Wicker Park Cycling Club will join the Associated Cycling Clubs at its next meeting.

Pneumatic sulkies have just reached France, and have captured every event in which they were used.

C. Ford Seeley will attempt a record ride from Hartford, Conn., to New York as soon as the roads are in shape.

The Pneumatic Tire Company of Dublin has hit upon a scheme by which 1892 Dunlop tires may, for the sum of \$5, be made into detachable tires.

London policemen are being mounted on wheels, 200 having been purchased last season. Rudge & Co. now have a large order for wheels for the "bobbies."

A bicycle club of eighteen members was organized at Anderson, S. C., last week. M. Baker was elected president, Dr. J. P. Anderson, vice-president; E. P. Welch, secretary and treasurer, and J. L. Brown, captain.

The Winona (Minn.) C. C. has elected the following officers: J. R. Marfield, president; J. D. Miller, vice-president; John I. Wilson, secretary and treasurer; E. K. Tarbell, H. J. Grabo, J. A. Wychgram, E. S. Gregory, F. C. Horton, S. L. Prentiss, directors.

# THE NEGRO QUESTION.

After long and careful investigation of the negro imbroglio we have decided that it will in no way affect the sale of our Arrow bicycles, if we put a black crank hanger on them. Don't misunderstand us, we do not want to put on a contrivance to hang all cranks of ebony hue, we merely refer to the finish of the hanger. We hope none of the anti-negro advocates will take exception to this. By the way, this same crank hanger is a feature which ought not to be passed by without a few moments' study. A careful observer will notice the narrow tread ( $6\frac{1}{2}$  inches), and the wide spread of balls; also that there is practically no leverage between the bearings and the cranks.

Our Catalogue tells all about it and other of our special features.

MICHIGAN ♦ WHEEL ♦ COMPANY,  
LANSING, MICHIGAN.

The Hudson County Wheelmen are about to organize a military cycling corps.

Women are not allowed to ride bicycles in public in the Argentine Republic, report says.

At last accounts Allen and Sachtleben, the around-the-world cyclists, were in Texas, journeying New Yorkward.

The Associated Cycling Clubs of Buffalo has petitioned the park commissioners for a fifteen-foot pathway in the park.

The Portland Wheel Club is the only league club in Oregon and possesses thirty of the fifty league members in that state.

Cycling of London has been told that there are 1,000 lady cyclists in San Francisco. Hardly, *Cycling*; that's a large number, you know.

It is likely that a hundred members of the Columbia Cycle Club of Hartford, Conn., will tour to Chicago this summer, and be there in time to take in the international races.

In August twenty or thirty members of the Genesee B. C. of Rochester will travel to Chicago in a sleeping car, which will be their home while attending the international races.

The Rochester Ramblers elected new officers recently as follows: President, W. P. O'Brien; vice-president, J. M. Kelly; recording secretary, C. H. Grashof; financial secretary, J. H. Bennett; treasurer, C. E. Van Houten; cap-

tain, C. W. Fertig; trustees, J. Wolf, W. Zimmerman, F. Rose, J. Nadig and F. Witter.

Club uniforms are still in vogue in some parts of the country, but they are becoming beautifully out of date and style.

The Porkop's Wheelmen, of Cincinnati, held their third annual banquet Saturday night at the Palace Hotel. M. A. High presided.

The bicycle end of the late Manhattan Athletic Club is to be reorganized, if possible, under the title of the Cherry Diamond Wheeling Club.

Augusta, Ga., has spent \$100,000 in paving its streets with asphalt, and there is talk of taxing bicycle riders \$3 each to help meet the expense.

Omaha has organized the Y. M. C. A. Cycling Club with the following officers: Captain, W. S. Sheldon; lieutenant, M. S. Coe; sergeant, D. H. Brochie. There are already over thirty members.

Lieutenant John H. Taylor, of the Grand Rapids Guard, Company B, is making preparations for the cycle corps this year in connection with the Michigan annual encampment of the state militia.

The Thirteen Cycle Club, organized Jan. 13, at 8:13 o'clock, has obtained its charter from the Thirteen Club of New York. The officers are: President, J. Rorn; vice-president, J. W. Hedden; secretary, F. G. Luchesi; treasurer, J. J. Clairmont; captain, F. E. Sylvester, M. D.

Wheelmen who have occasion to travel on trains will watch with interest the outcome of a suit brought against the New York Central road by Mulliken, of Baltimore. He shipped the wheel to Buffalo and paid the required charge thereon. The wheel was lost for a time,

but was finally returned, though in a damaged condition.

The annual run over the De Soto road, from St. Louis to De Soto, will be held June 4. As usual, a large number of Chicagoans will participate. The St. Louis County tour will be held April 2, and on May 7 the Pike County tour.

A St. Louis wheelman, Captain H. A. Canfield, of the Pastime Cycling Club, has just been awarded \$50 damages by a St. Louis jury. A reckless driver ran over Canfield and the driver's employer, a liveryman, is compelled to pay the costs and damages.

We are in receipt of some "snap shot" pictures taken by Jay J. Ro's at the Savannah tournament. One of them introduces Zimmerman and Whittaker's tally-ho, showing Whittaker driving a team of mules, seated alongside a negro, Zimmerman, Wheeler and the REFEREE representative being passengers on top of the load of lumber.

#### B. & O. Misrepresented.

The popular Baltimore & Ohio railroad people are busy denying the false report that the favorite road will not carry bicycles free to the world's fair, and write the REFEREE to say that the report is the work of a competing rival, and that they will, as usual, carry wheels free.

#### The First We've Heard of It.

For the world's fair, the cyclists will be on hand with a Boston-Chicago relay at the opening. It is proposed to start from Boston over the route of last year to New York, and then follow the path of the Chicago-New York ride. The message will be from Governor Russell of Massachusetts to Governor Altgeld of Illinois, with the acknowledgment of the United States postal service. The dis-

tance is 1,244 miles, and is expected to be done in 90 hours. The *Boston Post*, *New York Recorder*, *American Wheelman*, of Buffalo, and the REFEREE, of Chicago, will handle and control the ride.—*New York Recorder*.

#### Nearly 2,500 Club Members.

The clubs now members of the Associated Cycling Clubs of Chicago and the number of votes to which each is entitled, are as follows:

| Club.                       | Members. | Vote. |
|-----------------------------|----------|-------|
| Chicago Cycling Club.....   | 300      | 3     |
| Lincoln C. C.....           | 216      | 3     |
| Illinois C. C.....          | 300      | 3     |
| Oak Park C. C.....          | 193      | 2     |
| Englewood C. C.....         | 204      | 3     |
| Æolus C. C.....             | 178      | 2     |
| Lake View C. C.....         | 2        | 1     |
| Ravenswood C. C.....        | 102      | 2     |
| Sheridan C. C.....          | 69       | 1     |
| Cook County Wheelmen.....   | 200      | 4     |
| Columbia Wheelmen.....      | 162      | 2     |
| Minnette Cycling Corps..... | 347      | 3     |
|                             | 2,233    | 25    |

Each of the clubs has three delegates. At the last few meetings nearly ninety per cent of the delegates have been present.

#### Three Dramas to Be Given.

Thursday night, April 6, a dramatic entertainment, under the auspices of the Lake View C. C., Chicago, will be given at Lincoln Turner Hall, corner Sheffield avenue and Diversey street. The following one-act comedies will be presented by a first-class aggregation of talent secured from the membership of the Amateur Dramatic Stock Company of Chicago, managed by one of the principal members of this well-known organization: "Barbara," "My Lord in Livery" and "A Woman's Wont." These plays are all well known to the theatre-going public of Chicago, and it goes without saying that presented by such a talented

company of amateur players, the entertainment should be a success.

*Social Equality Neither Desirable Nor Possible.*

The Mobile Register says, regarding the debate and vote on the colored question, that "the incident teaches that wherever the whites express themselves, no matter what the locality, they naturally oppose social equality between the races, and, moreover, we believe that if the matter of association were left to the better class of negroes, they would agree with the whites that social equality is neither possible nor desirable.

*Taxing Springfield Cyclists.*

A feature of the summer campaign of the assessors this year will be to levy a tax upon bicycles, and as last year was their first experience in this line the experience gathered will greatly assist the members of the board and their assistants when they go forth in search of the valuables of the taxpayer this summer. Bicycles are included in the tax list under the general head of personal property, and are specially classified as vehicles. Last year only about four hundred owners of wheels contributed to the city treasury on account of their wheels, although it was estimated that there were at least a thousand wheels owned in the city at the time. This year it is figured that the number will be doubled and that the amount gathered in by Tax Collector Norton as a bicycle tax will be largely increased over that of last year.

The plan adopted by the assessors in taxing the wheels last year will be followed this year. This year's wheels will be taxed at nearly their full value, say from \$180 to \$150, last year's models at \$100 to \$110, and so on, the ancient makes of '91 and earlier times having a much lower valuation placed upon them, while the "bone-shakers" of pre-historic times are only valued at from \$10 to \$20. The wheelmen as a rule paid tax cheerfully last year, but some kicking is anticipated this year, as more wheels will be taxed.—Springfield Union.

## THE CASH PRIZE LEAGUE.

Possibly no institution ever launched started life with an absolutely perfect constitution. Time invariably develops weak points and the inability of the projectors to surmount unlooked for difficulties generally makes changes necessary. After reading the constitution of the National Cyclists' Association one is forced to admit that, on paper at least, the new-comer has started well. The document shows great care in preparation. It is constructed on business principles—likely as not resembling, in many points, the constitution of the base ball league. Everything about it states the objects clearly. A man takes a license to secure dollars. A man becomes a referee—for dollars; a handicapper—for dollars; a secretary or director—always for dollars. There is no beating about the bush, no misrepresentation. The N. C. A. in the language of the immortal Berlioz is "out for the stuff." It is a business venture. Business first, sport second, all the time. Theoretically, the document seems to be all right. Practice only can tell the tale and bring out such weak points as may be at present undiscovered.

It has been assumed by the N. C. A.'s critics that it could not govern racing for cash in such manner as to prevent fraud on the part of riders. Perhaps the critics are right, but the greatest care seems to have been exercised to guard against it. The association becomes sponsor for all of its members by guaranteeing all prize money, and having thus set at rest all doubts which might otherwise harass the racer's mind, proceeds to instruct him as to what he may and may not do.

First of all every man connected with the races, whether as competitor or official, must procure a license. Should a license be revoked the holder can take no further part in the association's affairs. "The governing board," says section 26, "may fix the period of disqualification, except in cases of proven crookedness, where permanent disqualification is mandatory." There appears

to be no chance for argument here. It is a case of once out, always out—for life. Penalties are provided for "ungentlemanly conduct on the track, for consorting with suspicious persons, for suspicious racing and generally for conduct prejudicial to the interests of cycling or of this association."

The vigilance of the association's watch dogs is not to be relaxed, even when business or racing hours are over. An official is provided to whose lot falls the onerous task of "keeping tab" on the boys when off duty. Just think for a moment what a lovely time such an officer would have among the gentlemen amateurs who comprise the L. A. W. racing men—the sights he would see; the stories he could tell! His would, indeed, be a life of joy!

Betting and gambling is strictly tabooed. A franchise-holder renders himself liable to expulsion should he allow open betting on the grounds or in any building owned or occupied by him. The same penalty is to be meted out to any man for "offering, agreeing, conspiring, or attempting to conspire with any racing men, track officials or others to lose any race," or for "being interested in any pool or wager thereon."

Clearly, the N. C. A. means to do all that is in man's power to do to insure square racing, and it must live up to its rules to have any chance, whatever, of winning its way into public favor. It has but one object in view. It has no other interests to divert its attention from the main issue. It will be ever on the alert for the betterment of professionalism in the eyes of the people. If such an association as this seems to be cannot present to the rider a strong enough government to keep racing free from trickery it will have been proven to the satisfaction of most people that the task is impossible of accomplishment.

The N. C. A. should be supported so long as it abides by the principles at present outlined, and none the less, either, because it is the avowed object of its promoters to make money. Give us good, clean government and we believe the professional league will prove a blessing, not only to the men it seeks to control, but to the cause of amateurism and professionalism alike.

## THE ROAD BUREAU FINANCES.

In our last issue there appeared particulars of a suit, for a comparatively trivial amount of money, against *Good Roads*. When seen by the REFEREE's representative Mr. Potter, while he courted investigation of the affairs of the bureau by the league's officers, seemed determined to give no definite information about finances. To a representative of the *Wheel* he subsequently gave some information. Here is a quotation from the interview:

"How did the expert figure a balance of \$2,028 in favor of *Good Roads*?"

"It's the excess of assets over liabilities."

"What do the assets consist of?"

"Bills collectable. At that time there was something like \$8,000 due us, and our indebtedness for paper, printing, etc., amounted to about \$6,000."

The paper then makes a showing of the finances of the bureau, from which we find the following to represent the state of affairs for thirteen months, to the end of 1892:

|                                      |             |
|--------------------------------------|-------------|
| Total receipts of bureau.....        | \$25,415.70 |
| Received from advertisers.....       | \$11,106.52 |
| Received from sales and sub.....     | 2,597.23    |
| Total earnings of 13 months.....     | 13,703.75   |
| Amounts paid by guarantors.....      | \$3,499.22  |
| Amount paid by L. A. W.....          | 8,212.73    |
| Total contributed.....               | 11,711.95   |
| Average earnings per month.....      | 1,054.13    |
| Average contributions per month..... | 900.91      |

The amount stated above as having been advanced by the league is largely in excess of the appropriation of \$6,000 granted by the national assembly of

1892. "The remainder was drawn," said Mr. Potter, "before *Good Roads* had established a bank account in this city. A portion of it has since been returned." Yet, as the treasurer's reports of 1892-'93 show, the road bureau has drawn considerably more than the amount stated by Mr. Potter—some \$4,000 in excess of the appropriation, we understand. This is not due to any discrepancy between the books of the bureau and the treasurer, but to the fact that some of it was drawn prior to and some later than the period included in Mr. Potter's statement.

Unless figures lie, we can not understand that Colonel Burdett presented to the national assembly as accurate a report as it was his duty to do. Clearly enough the figures show that the bureau can not show a balance in its favor. On the contrary, it owes the league and the guarantors more money by nearly ten thousand dollars than the stated balance in its favor amounts to, even though every outstanding account and other asset were available. The president informed the meeting that the money used by the bureau was not lost—was merely an investment of capital. Why, then, did he not include the amount when figuring the liabilities?

Now, accepting as correct Mr. Potter's estimate that the cost of publication is about \$2,400 and the amount of advertising about the same, it seems possible that, with shrewd management, the magazine may struggle along without calling on the league or guarantors for more money. And, again, it may not. Most men, with \$6,000 of pressing liabilities and \$8,000 of outstanding accounts, many of them hard to collect, would be mightily pleased if some one offered to add, say \$5,000 to his bank account. To go on without money, the bureau must virtually do business without capital—an undesirable, unsatisfactory process which must keep the management continually in trouble and which will reflect but small credit on the league.

If *Good Roads* costs \$2,400 per issue, the returns, based on the figures given by Mr. Potter for the first number, and allowing for the increase of advertising patronage from a dozen to twenty-eight pages, do not seem equal to the task of supporting it. In short, the bureau needs money. The officers may continue to hide the fact, but, with all due respect to Mr. Potter's managerial abilities, he can't do business on wind.

Finally, we can not understand the attitude of the executive committee, and of the president particularly. Why beat about the bush and create a false impression? Why not state, fairly and squarely to the members, that the highway improvement work—the noblest the league has ever undertaken—has cost so many thousands of dollars, and that it will take so many thousands more to carry on the work and place *Good Roads* on a paying basis? Was it because of an unwillingness to acknowledge that a greater amount of money had been spent than the assembly had sanctioned? The fact was bound to leak out sooner or later. The league doesn't expect its officers and committees to conduct its affairs without the expenditure of money. People do not, as a rule, establish a business, which requires so large an expenditure as *Good Roads*, on wind. If, at the end of eighteen months or so, with an investment of from twelve to fifteen thousand dollars, and with an expenditure of nearly double that amount, the magazine is found to be on a paying basis, it may be regarded as a fortunate investment. If it isn't it was surely the business of the assembly to say whether or not more money should be invested in the enterprise. Every member is,

doubtless, anxious to see the work for which the magazine was started carried on, and, if satisfied that the best possible results were being attained, would have voted gladly for a liberal appropriation. The course pursued by the executive committee does not seem to have been altogether wise, nor would it be great cause for surprise should other divisions express a desire to be supplied with more detailed information.

## MR. POST IS ANGRY.

Everyone, in New England at least, knows that the president of the league owes much to David Post, of Hartford. When Colonel Burdett was first mentioned for a vice-presidency, Post was the most active worker in his behalf. When it became certain that Mr. Dunn would resign it was Post who worked most faithfully to secure the presidency for the colonel. Whenever, since that time, an opportunity has occurred, Post has been a hard-working, persistent friend to the administration. We are not aware that he has asked for, or expected any recognition. But when, one day, prior to the late meeting, the colonel sent to him asking whether he would accept a place on the racing board, and David answered in the affirmative, he considered the thing settled. But it wasn't, for despite the invitation and the acceptance he was shelved and left severely out in the cold. Colonel Burdett's change of mind was probably due to the hue and cry against trade officials. But that doesn't prevent Post being as mad as a hornet, though he is holding his tongue about the matter and informing his friends that this will be his last year in league politics.

## A GENERAL LAMP LAW NEEDED.

A few years ago—in what might be called the early days of cycling—various legislative bodies saw fit, for the protection of the general public, to pass laws providing that cycles should carry light at night, and in practically every portion of the world, where cycling exists to any great extent, at any rate, such laws are in force. It was argued, and rightly so, that cycles, being shod with rubber, could not be heard when approaching a person crossing the road. In a great many ways a lamp is a nuisance, but on the whole it is quite desirable—not for the safety of the pedestrian alone, but the rider as well.

But when these lamp laws or ordinances were passed the safety of the bicycle rider was not taken into consideration; it was thought, likely, that he could take care of himself. What protection from danger has a rider of a bicycle? He may be riding along leisurely, on the right side of the road, with lamp lighted, yet he is not sure that a team will not approach from the rear and run him down. He might be riding on a narrow dirt road; a horse might approach from the front, yet he would not hear the pound of the horses' feet on the soft ground, and the driver would not, of course—at least they never do—turn out. The rider must run into the ditch to save himself.

Inasmuch as cyclists are entitled to the use of the road, and are supposed to have the same protection guaranteed them as the owners of other vehicles, would it be in any sense an injustice to the owners of vehicles if a general lamp law were passed and enforced? Such an ordinance was passed by the South Park (Chicago) commissioners some years ago, but, except so far as it relates to cycles and cabs, it has never been enforced. Carriages and "all vehicles usually carrying lamps" are supposed to carry lights at night, but they don't. Abroad this question has been agitated, and the re-

sult is that the following act will undoubtedly be passed, as it has reached the second reading and will come up for passage next month:

Whereas, by section eighty-five of the Local Government Act, 1888, and by section fifty-eight of the Local Government (Scotland) Act, 1889, every person riding a bicycle or similar machine is bound to carry attached to such bicycle or machine a lighted lamp during the period between one hour after sunset and one hour before sunrise, and it is expedient to extend this obligation to the case of other vehicles: Be it therefore enacted, etc.—

1. This act may be cited as the "Lights on Carriages Act, 1893.

2. (1) During the period between one hour after sunset and one hour before sunrise every person driving or being in charge of any carriage on any highway shall carry, attached to the carriage, a lamp or lantern, which shall be so constructed and placed as to exhibit a light in the direction in which he is proceeding, and so lighted and kept lighted as to afford adequate means of signaling the approach or position of the carriage. (2) The driver or person in charge of any carriage who fails to comply with the provisions of this section shall be liable, on summary conviction, to a penalty not exceeding forty shillings, unless the owner of the carriage has made default in providing a suitable lamp or lantern and means of lighting it, in which case the owner shall be liable, on summary conviction, to the like penalty.

3. In this act the term "carriage" includes cab, omnibus, tramcar, cart, wagon, and any other similar vehicle.

4. This act does not extend to Ireland.

Wheelmen have long since ceased complaining about carrying lamps and have not even asked that the ordinances be enforced as regards other vehicles when they are included in these ordinances. City councils and town and village boards should be asked to amend their ordinances so as to compel all vehicles to carry lamps. Wheelmen should be protected as well as other citizens.

#### MR. PERKINS, OF MASSACHUSETTS

It may or may not be true that George A. Perkins, chief consul of the largest division of the league, will be a candidate for the presidency. It is very early in the game to indulge in predictions. A number of men may be heard of in the two years which intervene between now and election day. But it may not be out of place to remark that the writers who have summarily disposed of Mr. Perkins and assured the cycling world of the opposition of this, that and the other section, may find themselves very wide of the mark when the time comes. Mr. Perkins is an old league politician. The worst that can be urged against him in connection with his career as such is that he has displayed remarkable aptitude in figuring on the losing side. In debate he is aggressive but invariably good natured. Come what may, he is invariably happy. He is frequently at "outs" with the administration and may be regarded as a reformer—a leader of the opposition as it were. Perkins is undoubtedly an able man, a hard worker and an ornament to the league. His popularity in his own division is at high-water mark. In New York he has staunch and influential friends, a remark which also applies to states further south. We have already remarked that it is too early for prediction. But let not the unwary be led to believe that Mr. Perkins is a man to be easily disposed of, by any means.

#### A FORCIBLE PROTEST.

In another column will be found an extract from the *Sporting Life* concerning the attitude of the western cycling press toward the *Bulletin*. This is by no means the only expression of approval received, however. Mr. White, secretary-treasurer of the Illinois division, expresses his opinion briefly but forcibly in the following letter:

CHICAGO, March 15.—Editor REFEREE:—Your editorial of the national assembly in the issue of

March 10 is certainly very timely and should not fail to show certain people that they have greatly erred, not only in their treatment of the editor of the REFEREE, but also in their sweeping charge of selfishness against the western cycling press in general.

I think those who know, can appreciate the motives that have actuated you during the past two months in your treatment of current matters of interest in the league, and I not only protest against the very summary way in which you were disposed of in Philadelphia, but also think the recent jubilant attitude of the Bicycling World entirely uncalled for.

The assembly has come and gone, the Bicycling World has been defended, and we have voted to protect all the privileges to which it is entitled under the present contract, and the time has now come when we should settle down for an era of peace and hard work. Yours truly,

BURTON F. WHITE,  
Secretary-treasurer.

#### PLEASE BE EXPLICIT.

We have offered this advice to contemporaries before, but, wise in their own conceit, they continue to hide their true meaning. Here is an item from the *Bearings*:

There are sniffling people who have querulously said that Mr. Potter is overburdened with salary. There is one cycling editor who has, according to the admission of his New York representative, refused to publish anything creditable to Mr. Potter, and who seems, for some inscrutable reason, to favor a policy of misrepresentation toward that gentleman.

Names, please. There are a score or more cycling editors outside of New York on whom this item reflects. The one, whoever he may be, should stand revealed, for though we have met men by whom the policy mentioned is constantly practiced, we have never known one to admit it to "his New York representative" or any one else.

Mr. Erwin has been attacked by a contemporary because, in a recent issue of his paper, he misquoted the editors of two Chicago cycling journals. The editor of the REFEREE did not say, at the Leland Hotel meeting, or at any other time, that he believed the *Bulletin* should be discontinued, nor are those his sentiments. Quite the contrary. On account of our desire to have the addresses published, Mr. Erwin concluded, in common with others, that we were opposed to a continuance of the *Bulletin*. We desire to say, once for all, that there may be no further mistake, that we should regard the discontinuance of the *Bulletin* as one of the greatest misfortunes the league could sustain.

WITH Campbell, a non-league member, refusing to return prizes won in league championships, and Munger daring the league to expel him for signing Leeming's application for membership—both threatening to "have the law on 'em,"—there seems to be some chance of a little work for the no doubt ornamental but by no means overworked rights and privileges committee.

In his recent explanation of the racing board's inability to convict the Milwaukee suspects, Mr. Raymond omitted, no doubt unintentionally, to state what had been done in the cases of the men charged with having accepted expenses from a Chicago club. We have no doubt someone, somehow, managed to clear them, but who and how?

If Tom Roe's ride is to be honestly made let it be honestly announced also. Everyone knows, of course, that the rider represents the Union company. Why, then, print fairy tales about \$5,000 purses? They gull people for a time, are exploded in the end and leave a dark brown taste in the mouths of the public.

WE respectfully suggest to some of the argumentative owners of tire patents the advisability of hiring a hall for the pur-

pose of a discussion similar to that once held in London. Enough wind has been wasted to fill all the tires that can be sold this season.

WHILE Mr. Raymond was in Chicago we learned that Mr. Gideon, of Philadelphia, would positively accept the position offered him on the racing board. Gideon has been there before, however, and is unlikely to remain long unless rules are enforced.

THERE they go again. "A western cycle paper makes a very savage attack on President Burdett." Which paper, please, Mr. Hennessy? We, the "western cycle papers," are several. We are also distinct—very. Be explicit, please.

THE proposed race between Wilmington and Philadelphia riders has fallen through. Chicago riders who recollect the unreasonable terms demanded by Wilmington once before, don't wonder at it.

RUMOR has it that while in America Osmond will roll his own cigarettes. We offer this as an important item of racing news.

#### A FRAGMENT FROM THE LEGEND OF TOMEC.

Then Tomec the mighty boaster,  
He the marvelous record breaker,  
He the faker and the schemer,  
Brought a wheel to Yoneyonson;  
Made of steel, it was, and rubber,  
By the big chief of the Yengees,  
Black it was in wheels and frame work,  
But the ri us were red and shiny;  
And he said to Yoneyonson,  
Said the Only, he the Grey Haired,  
"With this wheel we'll try for records  
On the track at sunny Nashville,  
Mounted on it, you can bet yer  
Life we soon will higher knock 'em  
Than a kite. Chiefs Zim and Windle  
Won't be in it with us after."  
Then the Litelyone hefted  
With both hands the red rimmed racer,  
Thumbed its tires and spun its pedals,  
As he'd oft seen warriors test them.  
"By the Great Numatic, Tomec,  
She's a daisy, but I fear me  
Will not prove as fast as if she  
Had an elliptical sprocket."  
"Wah; My son your words are foolish,  
Foolish as an amateur's,  
Got I this wheel from Fredpate,  
He the Big Chief of the Salzemen;  
He says that the goose egg sprocket  
Is no good, and far more speedy,  
Will you prove upon this round one,  
And in proof his words are wise ones,  
Sends this belt of long green wampum."

"Now, indeed," said Yon the Scorchier,  
"Are my eyes more fully opened,  
And I see that Oldevore's  
'Lipect sprocket is not in it  
With this round one of the Salzemen;  
Get a move on you, T. W.,  
Get some triplets and pacemakers,  
And we'll take the trail for Nashville."  
"I long for the scalp of Windle,  
And for more of this green wampum;  
Hustle now among the warriors,  
And spare not the long green wampum:  
Strike Edbalard, strike Bilrodesay,  
They will gladly go 'long with us,  
And will make pace all for glory,  
(And some belts of this green wampum."

Forth then to the south hied Tomec,  
Took along the Yoneyonson,  
Bilrodes and Hansomedi,  
Peoriabert and many triplets;  
And along with them in secret,  
Went Great Medicine Alatkis,  
With his blanket full of wampum,  
Full of oil to grease his men with.  
And the braves and mighty warriors,  
The swift riders of the southland,  
Anxious all for fame and records,  
(And for belts of long green wampum,  
Gathered them unto the Grey Haired;  
Learned to skim like fleet-winged swallows,  
'Round the track on red-rimmed racers,  
And on steel steeds triple seated.  
And the Great, the Only Tomec,  
Boasted thus among the warriors:

"You who doubted Yoni's records,  
You who say we are but fakirs,  
Stand back and give us room according  
To our strength and closely watch us,  
And we'll show you in a twinkling,  
Easy 'tis for US to break 'em."  
And the warriors, braves and chieftains,  
Watched with bated breath and trembling,

Watched with awe the only Tomec,  
As he worked the combination.  
Watched Great Medicine Alatkis,  
Working spells and incantations,  
Watched to see the records tumble,  
As the Grey Haired 'loudly boasted.  
And the Yoni, Bil, and Edi,  
And the swift chiefs of the southland,  
Rode around the track like lightning,  
To break the mile, the half, the quarter;  
While Alatkis, the Great Medicine,  
Called unto the God Numatic,

"Go-on-Yon;" "Yer-gotter-go."  
But in spite of many trials,  
Spite of mystic invocations,  
Something ailed the combination,  
And the records failed to tumble;  
'Till at last with mein dejected,  
Ceased they at the call of Tomec,  
And with all his boastings fruitless,  
Stole he with them back to northland.  
Then the warriors and the old men,  
The Little Bear, the Wheel, the Refre,  
All the braves of north and southland,  
Jeered at them with scornful laughter,  
Pointed fingers of scorn at them,  
Called them fakirs, squaws, papooses,  
Said the couldn't keep a kite up.  
And Chief Raymond should jump on them.  
And the Sachem did jump on them,  
Jumped both hard and very often,  
But the wily record triers,  
Hid their wampum in their blankets,  
And swore by the God Numatic,  
They were only out for glory,  
Only out for fame and glory,  
And their squaws paid all expenses.

This, the story of their trials,  
And the troubles they had after,  
How Yoneyonson didn't get there,  
Why Bilrodes don't own that half mile,  
How Edbalard lost the quarter,  
Why he now lives in far Portland,  
Why Bilrodes now serves the Monarch,  
Yon and Ec the Syrausian.

HABZEN.

#### Mourns for the A. O. O.

We are positively sorry for the man who wrote these lines to the editor of the *Cleveland Press*: "An old bicycle rider, having tired of riding that plaything called a safety would like to see the good old 'ordinary' called out again. Don't you remember, boys, you who rode the old 'ordinary,' the good old exciting times we had on that high wheel? How we would ride through the country high above the old hedge and rail fence! What if we did take a tumble occasionally! That was only fun. Come, boys, let us revive the good old wheel again and have those good times over again. Riding a 'safety' is nothing but child's play. One hour on the old wheel is worth more than a day on the wheel that every boy and girl can ride. Come boys, all you who can get a high wheel, and have a day with us in the country. Long live the grand old ordinary."

#### Bicycle Police Corps.

Colonel Deitsch has by no means given up his idea of mounting suburban officers on bicycles. The success that the bicycle arm of the service in the French and German armies has met with, as well as its proven adaptability wherever tried in the militia of this and other states, convinces the colonel that the silent iron steeds would be a valuable adjunct to police work. The bicycle needs no feed or stable, can be relied upon to stand instead of running away, and has many advantages over the horse, and these the superintendent is urging before the commissioners. Each officer's bicycle might be provided with a large basket, and in case of the arrest of a "helpless drunk" he could be put in this and trundled off to the police station, so saving a wear and tear on patrol wagons.—*Cincinnati Times and Star*.

The Susquehanna Wheel Club has just been organized at Harrisburg, Pa., and elected the following officers: President, W. A. Weidner; secretary, W. J. Wetmore; treasurer, H. T. Eisenberg. Between thirty-five and forty members were present and a great deal of interest was taken in the organization.

## PHCEBUS' INTERESTING CHAT.

*Space Writers' Hard Times—Fine Wheels  
This Year—That Lunch Room.*

The space writer's life is not, strictly speaking, a joyous one, for he has so many columns to fill and a lot of readers to interest in order to earn his weekly stipend, whether he has anything to write about or not. Just at present in my own case it is most decidedly a case of *not*. I understand that this is nobody's fault but my own; nevertheless I wish that the powers that be would do something which could be used as a handle for grinding out copy. One sometimes yearns for the days of "Oil Can Tommy" cycling journalism, when it was the proper caper to refer to the doings in Squeedunk and to mention the chief cyclist in that historic town as having taken his machine to Yon Yonson, the popular repairer, to have a new spoke put in. Alas, however, in these *fin de siècle* days one has to load, or pretend to load, himself up with a lot of news and opinions respecting various cycling political bodies, or to dish up a lot of literary hash for the Browning constituency that get their mental pabulum from the cycling press.

This seems to be the season that lies between hay and grass—everyone has laid his plans for the year, everyone is ready for business, but business is not ready for anybody. The cycle salesman stands bowing and smiling before an empty salesroom with a gnawing pain at his heart and a cross manager in the office. The cycling drummer is hurrying home, called in by his house because he cannot make sales in territory where, if cycles were selling at two bits each, the dealers would not buy an air pump. The factories may be working nights "to catch up," but the drummers, the dealers and the general public don't believe

it and don't care a continental anyway, for it is a dead sure thing that there is a very elegant plenty of air-shod steeds to fill all and sundry calls and orders.

\*\*

I strolled down the row a day or two ago and gave the boys a chance to practice on me as a prospective customer, and I wish to remark, and my language is plain, that I have never seen so many fine bicycles in my life as are now on exhibition on Wabash avenue. There has never been a season in my recollection when there were so few fads and monstrosities, and such a large number of thoroughly mechanical and scientifically constructed machines on the market. The tire question has also been well considered and with one or two exceptions all of the better makers will fit their goods with these imported articles at the customer's option. There is also a marked tendency to hold to prices, and I think that the key-note of this lies in the fact that bicycles cost more to construct than ever before, and that the customer is getting his value dollar for dollar.

\*\*

The new board of trade seems to be already making itself felt and it is possible that a more healthy condition of things may obtain before the season is over. I haven't heard of any big deals in either bicycles or tires this week, and I really cannot understand what the matter can be. Perhaps it is because about all of the traveling men in the United States are at present domiciled in Chicago, which is a notoriously bad place for bicycle deals, or because everybody is over-stocked with both wheels and tires. Between you and me the last is the most reasonable reason.

\*\*

I am mightily interested in the success

of the lunch club. In my humble opinion it is one of the best and most practicable schemes that has been sprung in a month of Sundays. To have a place in the centre of cycledom devoted to the gastronomic peculiarities of bicyclists, and a comfortable lounging room, where trade and cycling generalities can be discussed without the annoyance of strangers' presence, is a consummation devoutly to be wished, and I trust that the scheme will not miscarry. I am told that a circular will be issued at once calling all interested to a general meeting at which ways and means will be discussed, and it is to be hoped that everybody will take an hour off and attend.

PHCEBUS.

## Try Again, Tommy.

The English, after much sneering at the elliptical sprocket, are beginning to experiment with it. Such, at least, is the opinion of an American exchange, whose editor appears to be ignorant of the fact that English cycle manufacturers have forgotten more than their brethren across the Atlantic ever knew about the great almighty elliptical sprocket wheel.—British Sport.

Perhaps so, but it remained for an American to discover that a mile could be made in 1:56 3-5 with a wheel fitted with "the great almighty elliptical sprocket wheel."

British Sport credits the REFEREE with a picture of a "Parisian 'lady' cyclist," quoting the word lady. We would thank you to know, Tommy, that the picture was redrawn from one which appeared in the *Cycle Record* and the same title as appeared in the British paper was given it. It was also credited.

New officials of the Toronto B. C.: Secretary, S. J. Shulte; statistical secretary, W. Frazer; captain, James H. Sinclair; racing board, A. F. Webster, J. F. Lawson, O. W. Hurndall, C. F. Laverder and F. J. Whatmough.

## COMMENTATOR CONVINCED.

*A Writer With Courage Enough to Acknowledge a Mistake.*

The REFEREE is not often guilty of tooting its horn. We have been so grossly misrepresented by the *Bulletin* lately, however, that we feel a hankering to be heard a little in our own behalf. We feel justified in presenting to our readers the following extract from an article which appeared in the last issue of the *Sporting Life*, over the signature of The Commentator:

"Little Rollo scarcely thought that while he was enjoying himself making faccs at the bear and shying stones at the tiger that both these animals would break loose at once, but they did. Mr. Miles is a modest man and a fair fighter, but he isn't any angel—that position is copyrighted by editors further east than Chicago. Mr. Miles sought to do what he and his readers thought was his duty, and as a result of making this attempt he so displeased little Rollo, who, while he stuck pins in the bear with one hand, poked up the tiger with the remaining one. The result was that little Rollo will spend days in the hospital learning wisdom and healing his wounds. In the long time I have been in bicycling I do not believe I have ever read more truth, or seen it conveyed in better language, than the following from the leader in the last issue of the REFEREE:

"We have about come to the conclusion that any man connected with the cycle press who imagines the rest of the cycling world will, under any circumstances, deem it possible for him to perform an unselfish action, is akin to an idiot. We have tried it and know whereof we speak. Nevertheless we deem it fair to ourselves and to other cycling journals to state that the man who at the recent assembly meeting accused all the papers (except the *Bulletin*) of making fun and belittling the league had either very little regard for the truth or a very limited acquaintance with the institution he sought to rebuke.

"Every cycling paper controlled by men of aver-

# MEN WILLINGLY BELIEVE

At the same time it does not signify that a certain Cycle is best because its maker, or the agent selling it, says so, yet he may be honest in his belief that it is best. When a Cycle has been on the market many years and has given satisfaction during the entire period it has been sold, when it has become so well known that its merits are talked about in nearly every country in the world, when it has been awarded 25 medals for excellency of workmanship from almost as many countries, it surely is iligible to enter the class-styled "Best."

## *The Rudge is such a Wheel*

and is the result of 22 years' practical experience in Cycle construction. A glance at the illustrations in our Catalogue and a perusal of the specifications will enable customers to see that Rudge Cycles are fully "up to date." To meet the demand for these world-famous machines in the U. S. a Rudge American branch factory has been established in Peoria, under our own supervision. Complete machines are now being turned out in America from finished bearings, forgings, etc., direct from the parent Rudge factory. Write for Catalogue and terms. Agents wanted in all unoccupied territory.

age common sense is a friend of the league. Every one of them realizes that on the league depends, to a very large extent at least, the future of cycling. League or no league, cycling will go on forever, but it is only by organization that the good work now and heretofore carried on can be accomplished.

"But the cycling press is not, by reason of its friendship, made blind to the necessities and shortcomings of the league. The press is in a better position than nine-tenths of the men in power to judge what the members desire. No constitution, no president, no executive committee, no chief consul, no racing board, no official organ is perfect, and if the cycle press can discover in any of these a flaw which can be remedied, what is its duty? To stand idly by? To flatter the administration and find nothing but cause for praise in its actions? No. Rather, we think, does the press show its friendship and its desire to improve and perpetuate the league by pointing out such errors as may be found.

"Following this Mr. Miles presents his case in so dignified, logical and convincing a manner that no unprejudiced reader can accuse him of having been actuated by any other than honorable motives in what he sought to accomplish in the recent convention. I am free to confess that prior to reading the open letter of Mr. Van Sicklen in the *Bearings* and Mr. Miles' able editorial in the *Referee*, that my sympathies were with the official organ. I doubted the motives of those who demanded a change in the way the league conducted its organ, but I no longer do so. I would be less a man than I believe I am were I to hesitate to accept the fair, dispassionate and logical statements Messrs. Van Sicklen and Miles have laid before the public. I see that I had in a measure misjudged those whose motives I questioned, because I knew not what they were. Had the *Bi. World* been content to have celebrated its victory in as straightforward and manly a fashion as my western contemporaries took their defeat, all would have been well; but when little Rollo stirred up the animals with his jibes and jeers, he made the

mistake of his good, sweet little life, and the result no man can tell. To Messrs. Van Sicklen and Miles my congratulations are most heartily given for the manner they have lifted a cycling discussion above the level of school girls and little boys, and made it partake of the dignity of a debate among men. We have needed such an elevation for many a long day."

### *Publications Received.*

The REFEREE acknowledges the receipt of the following publications:

Albert A. Pope, Boston, Memorial to Congress on the subject of a road department at Washington.

Whitworth Works Cycle Company, Birmingham, catalogue—Shows No 1 Whitworth, full roadster, 40 pounds; No. 2, light roadster, 37 pounds; No. 3, road-racer, 29 pounds; No. 4, track racer, 25 pounds; No. 5, ladies' wheel, 33 pounds; No. 8, special track racer, 20 to 22 pounds.

A. O. Very Cycle Company, 245 Columbus avenue, Boston, catalogue—Shows full assortment of the Warwick and Liberty lines; also Royal Limited, Central, Envoy, Unique, Fleetwing, Ben Hur and Reindeer.

Premier Cycle Company, New York, catalogue—Shows Premier roadster, 32 pounds, all on; road racer, 27 pounds; racer 18 1/2 pounds; ladies', 30 pounds.

Luburg Manufacturing Company, Philadelphia, catalogue—Shows the Sprinter in two styles, and a line of cheaper grades.

### *Wheelmen as Revolutionists.*

Jack Atkinson, one of the leading cyclists of Hawaii, writes W. S. Maltby that bicycles played an important part in the revolution. Some of the leading riders resolved themselves into a messenger corps and kept the provisional government fully posted as to the movements of the royalists. Mr. Atkinson is a sort of adopted brother of the young princess, who was recently at Washington looking for a first or second-class throne. Miss Princess Kaiulani is a pure amateur.

### DEATH OF GEORGE E. LLOYD.

*One of Chicago's Oldest Wheelmen Passes Away.*

George E. Lloyd, a member at one time and another of various Chicago cycling organizations, died at Lake Geneva, Wis., on March 16. About seven months ago he was taken ill and

GEORGE E. LLOYD.

grew rapidly worse. He was removed to a sanitarium at Lake Geneva, where, for a long time, it was impossible to say whether he would recover. His son-in-law, Frank Fanning, stated to the writer on March 13 that he was somewhat better and would possibly recover. Three days later he died.

Mr. Lloyd's history, if properly presented, would prove an interesting one. In his younger days he joined the army, and, we have heard it said, was one of the prisoners confined in o'd Libby. He was an extremely clever mechanic. About fifteen years ago he started business for himself with \$400 and a lathe as capital. He was plucky—every one who

knew him knows that—persistent and an excellent salesman. These characteristics accounted for his success. He leaves a business estimated to be worth \$100,000.

Lloyd first rode a bicycle in 1882, and became infatuated with the sport. Not content with riding himself, he insisted on all his friends giving it a trial, and thus became the means of inducing many to ride. He was fond of sport of every description. But his enthusiasm carried him away. No one could pass him on the road except he could prove himself a better man. He would don the gloves with all comers. He perhaps overdid it, and it is supposed that by this means a naturally rugged constitution was undermined.

Lloyd was not a popular man, but those who knew him well know that there were excellent traits in his character. He was peculiar, beyond question, but generous as any man to those whom he included among his friends. He leaves a wife and four children, two by his first wife who died some seven or eight years ago. His business is in the care of E. C. Williams, also a cyclist, who has been associated with him for over ten years.

The body will be interred in New York, where nearly all of Mr. Lloyd's relatives have been buried.

### *Elected Officers.*

The following officers have been elected by the Windsor (Ont.) Wheelmen: Honorary president, William McGregor, M. P.; president, A. D. Bowlby; first vice-president, A. Botsford; second vice-president, A. W. Reid; secretary and treasurer, F. S. Sharpe; captain, W. H. Tebman; first lieutenant, J. A. C. Carpenter; second lieutenant, A. Banwell; official handicapper, C. W. Bristol.

## AUSTRALIAN CYCLING.

## INTERESTING CHAT FROM TWO REFEREE CORRESPONDENTS.

*A Question as to the Ruling Body—Club Premiership—Good Long-Distance Work—Not Equal to Americans.*

The summer is pretty well over with us and we have had an extraordinarily cool one, consequently first-rate for wheeling. Sydney is considerably hotter than Melbourne. When over there last month you could not ride a mile without your collar becoming as limp as a dead eel, and just as uncomfortable to have round the neck. In Melbourne, however, it's not like that, so cycling is seasonable all the year round.

## RULING THE SPORT.

There is nothing settled yet as to whether the Melbourne Bicycle Club or the veteran Racing Cyclists' Association shall rule absolutely. I rather fancy that after all the racing association will win the day, and if it does the credit must be laid at the door of Schwalbach, an enthusiast in cycling and a genuine hard worker. Somehow or other he makes enemies—as leading men always will—but for all that no man in Victoria has put so much of his soul into wheeling and his designs have always been honest. At one time he sat on the committee of the Melbourne club and lent valuable aid in forming big Austral programmes, but one night his ideas were objected to by some other members, and soon after he chucked up the club and joined the racing club, and ever since then he has put forward the racing club in preference to the M. B. C., and with such determined persistence that it looks now as though he must win and get the sole control of the sport into the hands of the racing association. It affords another instance of the fact that determination of purpose must win in the long run. Schwalbach's idea now is to expand his "jockey club" by admitting all cyclists, the sport to be governed by a racing board, and road riding to be watched over by a touring branch of nine members each, and then a special committee of seven is to control the whole concern, which will include the Cyclists' Club House. Nearly all the clubs have sworn their allegiance to him in preference to the Melbourne club, because they are jealous of the premier position the M. B. C. holds. So it looks as though Schwalbach would win a great battle if the work doesn't kill him beforehand.

## THE CLUB PREMIERSHIP.

Of the ten clubs which were in the first contest for the premiership, only two were left in for the first round—the Fitzroy and Southern District clubs. On Jan. 28 these clubs met, and the two teams, six men a side, raced over the road 26 1-4 miles, and finished up a draw, each side scoring 39. Last Saturday the twelve men met again to run off the draw, and for the second time a draw was made, with 39 each side. This is regarded as most extraordinary, and shows that the teams are splendidly matched. The scoring is done by points, first man in counting 12, second 11, and so on down to the last man, who gets 1. In the first match the Southern Districts' time was two minutes ahead of the Fitzroy total, and in the second match the S. D. were nine minutes ahead. They will have to run it off again. All the members of the team are wild, because its real hard graft, twenty-six and a

fourth miles of rough road for a simple medal worth about £5!

The men are demons for road work. Campion and James are the cracks. The former holds the record for this route, twenty-six and a quarter miles of up and down hills and along the level, in 1 hr. 34 1-2 min., and James' time is twenty seconds slower. Both men finish up quite fresh. They are each under eleven stone in weight, and between twenty and thirty years old.

## OLDEST ESTABLISHED BICYCLE FIRM.

Singer & Co. have the title. They have always had the choicest pickings of the trade. The agency was first taken up by H. C. Bagot in the seventies, and for a long time he held the field. But at last the Coventry Machinists' Company sent out Herbert Stewart Bale to run its show, and then the time payment business started, and the boys in the street, when they saw any one on a bicycle, sang out, "alf a crown a week," and selling bicycles got to be a sick game. Bale tried hard for popularity, and spent lots of money in advertising and holding race meetings on his own account, and

has good ideas and knows how to express them, while Farroll is a magnificently proportioned man, over six feet five, weighs seventeen stone, and used a short time back to ride a 64-inch all nickel-plated ordinary, and a monster on wheels he was you can imagine. Formerly he was a jeweler at Hamilton, 250 miles from Melbourne, and every year the Melbourne club at Christmas time, under Captain George Burston, used to tour to Farroll's district, where he was known as "king of the west." Farroll would often meet the party away out on the burning hot plains, and just when they were miles and miles from any public house, he would spring out from behind the rocks and lead the way to some icy spring, in which would be several long bottles of cool beer. How the perspiring boys fell on his neck and wept for joy it is needless to repeat here.

## A BIG RACE MEETING.

Australians have a national holiday just like your fourth of July. Our day is Jan. 26, and on that day the Australian Natives' Association gave a good

An inventor claims a patent on a new pneumatic wheel, the tires of which are inflated with gas, making the affair extremely light, therefore advantageous in speeding over sand, etc. The rider himself is dressed in a rubber suit, which may be inflated. Should an accident occur and the rider be upset, the wheel, owing to its lightness, is carried off in the air.

altogether did the thing so fine and large he was looked upon as a little prince. At his sports meetings he was starter, committee and judge, and once when something special in his business happened, he invited a crowd of his friends round, and when the champagne glasses had been filled by every one, Herbert Stewart sung out in his peculiar twang, "Gentlemen, when you've drank this health, do as I do." The toast was gulped and Bale dashed his glass on the floor, and forty other glasses were instantly hurled down and smashed into smithereens. The Singer and the Coventry, or, in other words, Bagot and Bale (Bags and Bales, as they were called) were yellow spectacles when they passed each other, and things for a long time were awfully nasty. However, Bale's place knows him no more now, either the money or the business not being flourishing enough. To return to Singer & Co. They have just moved into a large four-storied place, and are selling, it seems, lots of Models de Luxe, their leading line for Melbourne. S. A. Bucknall and Walter Farroll manage the place. Both are good sorts. The former loves a chat on the sport, and

programme of bicycle races on the exhibition building oval. There were numberless shows both inside and outside the building, and an immense attendance of 40,000 people. The reason so many attended was probably because the A. N. A. people issued one-shilling art union tickets, admitting to the ground and giving a chance in £1,200 prizes, including a trip round the world or £600. The sea of faces round the bicycle track was a memorable one, the whole circle was packed tier behind tier and cheered the riders enthusiastically both during the afternoon and in the evening, when the grounds were lighted by electricity and the full moon. About £100 in cash prizes was given away over the bicycle races. G. A. Bishop won the chief prize, £20 for the A. N. A. wheel race, distance two miles. On the same day at the Caledonian sports on the East Melbourne cricket ground, S. Turner won £20 for first prize in the Caledonian wheel race.

## REGARDING CASH PRIZES.

We call all racing men here cyclists—the terms amateur or professional are gradually and properly becoming obsolete, because it is found there is no need

for such terms in cycling. Our racing men won't tolerate being dubbed professionals (although they all take cash) because every one of them can prove that they cannot and do not make their living by racing. It is a great blessing that we are not troubled with the makers' amateur, for there are no makers. That is the only way men can become professionalised here, and if the game is tried on the Ki-bosh will soon be put on it. AN IDLE BOY.

\* \* \*

## From Another Source.

Since I wrote you of the state of cash amateurism here, the system has progressed to a great extent. This season has seen its adoption in N. S. W. and the old trophy system is almost dead. As a consequence we have better and purer racing. In New Zealand it has been introduced and there is a great battle there. At a cash cycle meeting held there in December, two of our best men, Scharp and McComb, went over to compete, but did not meet with much success. They had to race a few days after landing from a week's sea voyage and their poor form is likened unto Zimmerman when he went to England. However, they brought two championships back with them.

## NOT EQUAL TO AMERICANS.

As a class I do not think that our racing men are equal to the Americans or the English. We have no shining lights amongst them, and there are about a dozen who are nearly equal. In Tom Bust's time he was head and shoulders above anyone else, and there's no doubt if he were on the track at present and in his old form he would still maintain that position. When there are so many nearly equal it is generally found that they are a moderate lot. But the reason is easily shown when we have no good tracks and a dearth of scratch races. I have no doubt that if our men had the same advantages as the Americans have in the shape of fast tracks, inducers, etc., they would more than hold their own against you. We beat you in rowing, boxing and cricket, and if such men as Scharpe, McCombe, Turner, Davis, etc., of this country were in America for a couple of years, Zimmerman, Tyler & Co. would have to go under. Our men have indomitable pluck and are as expert in head work as is possible. Tom Bust, if he had only visited your shores when he intended to, would have startled you and cyclists who have seen Osmond and the English cracks' riding; over that, he would have beaten anyone in the world. But it is not easy to bear this out. He is in ill health and attributes it to a strain he received when riding a severe race against Davis, the South Australian champion. Tom is a picture as regards build and is splendidly proportioned. The best track we have is a five lap asphalt one. The two miles on the track has been run in 5 min. 15 sec. from scratch in competition. Scharpe is a fine handicap man and possesses fine judgment. McCombe, who rode third in the last Austral, is the Victorian champion and these two are little superior to Lewis, Turner, Kellows and Herman. Davis, of Adelaide, is a great rider and is thought to be superior to any in Australia. On the road we have some fine men as the following clippings will show.

## CLUB COMPETITION.

We have a system here of club competition. There are ten clubs in the competition and these race each other once a month throughout the season and the club men obtaining the most number of points are awarded premiership medals. This is the first season of their

introduction and have been a great success. The only two unbeaten clubs in the competition have twice raced for the premiership and have tied both times. This is somewhat remarkable when it is considered that there are six men on each side, and the first man in counts twelve points, second eleven, and so on. The distance is 26 1-2 miles on a very hilly road, and the fastest time has been 1 hr. 34 1-2 min. What do you think of it? Our four best road riders are G. C. Broadbent, H. B. James, J. J. Cumpion and G. W. Chrisp, with T. D. Scott a fine long distance man.

GOOD LONG DISTANCE RIDE.

The following account of a performance made by Scott, about a month ago, is taken from the *Sportsman*:

One of the most meritorious long-distance rides ever accomplished by an Australian was executed last week by T. D. Scott, of the Normandy Bicycle Club. This rider has been well known as a good road rider and an enthusiastic tourist, and the fact that he has ridden from Adelaide to Melbourne—a distance of 589 miles—in 115 hr., 59 min. classes him amongst the very best of our many fine road riders. Many cyclists have previously ridden across, but have availed themselves of the train through part of the country, which was considered unridable—a distance of about fifty miles. So, in addition to holding the record, he can claim to having been the first man who has ever ridden from the one capital to the other. The most remarkable part of the performance is that Scott rode a pneumatic racing machine of the Raleigh make, weighing only 27 pounds and which was geared to sixty-four inches. However, Mr. Scott is of very light weight, being only 9 st. 8 lb., but the merits of the machine must be of a very high order. This rider previously held the twenty-four-hours' record, but in the last twenty-four hours of this ride he beat his previous best, and rode from near Coleraine to Melbourne—a distance of 230 miles—in that time, which is a fine achievement, considering that it was at the latter end of his journey.

Don't you think it is very fair?

ANOTHER GOOD RIDE.

The following is an account of a ride of H. B. James, ridden about six weeks ago.

H. B. James, of the Southern District Cycling Club, who has been competing at the race meeting in Adelaide, broke the 100-mile road record of South Australia on Thursday last on a Singer Modele de Luxe machine. The route chosen was from Mount Gambier to M'Donnel Bay and back, and thence to Farracoorte. The distance was ridden in 6 hr. 26 min., and the actual riding time was 6 hr. 9 min. This is a very good performance and one which does credit to the young rider. On the previous Saturday he fell while racing and severely injured his knee, which makes the performance all the more meritorious. The Australian record for the distance is held by G. R. Broadbent in 6 hr. 4 1-3 min., done on the western district roads, which are said to be superior to any roads in Australia. There is no doubt but that James would be able to lower his own record in the western district, and also make an invasion on Broadbent's, and he can be credited with having come nearer to the champion's time than any other cyclist has previously done. Broadbent is firmly of the opinion that he can still lower his own record, but until it is likely to be taken from him, will not endeavor to reduce it.

We have no cycling paper here, but I think that one would pay well. In my next letter I will give you something about the trade, and will follow up some of my remarks with reference to the cash business. **SEX.**

The Monarch Company's Agents.

The Monarch company's travelers have placed agencies with some excellent houses, among them the following: The H. H. Kiffe Company, New York city; W. W. Stall, Boston; Speedwell Cycle Company, Baltimore; C. W. Dalsen Cycle Company, Philadelphia; George H. Hilsendegen, Detroit; C. J. Conolly, Rochester, N. Y.; M. Doll, Buffalo; Haradon & Son, Springfield, Mass.; Prince Wells, Louisville, Ky.; Charles Hanauer & Brother, Cincinnati, O.; J. S. Elliott & Co., Springfield, O.; Fred T. Merrill, Portland, Ore.; Hedley Salmon, Denver, Colo.; Cleveland Cycle Depot, Cleveland, O.; Benjamin & Andrews, Syracuse, N. Y.; A. L. Yardly, Columbus, O.; Dayton

Cycle Company, Dayton, O.; Francis Chenoweth Hardware Company; Birmingham, Ala.; Albany Hardware & Iron Company, Albany, N. Y.; Hutchinson & Phillips, Sioux City, Ia.; H. T. BURKE'S CYCLE CHAT.

PERTINENT PARS ABOUT PROMINENT PEOPLE AND PASSING EVENTS.

*What Ails the League?—Two "Gentlemen" of Illinois—The Leeming Incident Recalled—Faith in the N. C. Association.*

There is something vitally wrong with the League of American Wheelmen. A few figures will prove the truth of this statement.

The L. A. W. at present has a membership of less than 35,000, and yet if a cyclist were to join now he would receive a membership card bearing a number certainly not below 47,000. This proves that since the L. A. W. was organized a few years ago over 10,000 members have severed their connection with the league. And now the startling statement is made that the average continuance of a mem-

and influence may well be respected by business man and politician, for it will truly be a power in the land.

All hail to him who shall discover the "open sesame" to the good will and interest of that five-sixths element.

TWO ILLINOIS "GENTLEMEN."

The *Bearings* has made a serious charge against two Illinois men, delegates to the recent National assembly at Philadelphia. I have been expecting to see an explanation demanded by a few of our strong-minded writers, who know when the public is entitled to an explanation. I have waited in vain.

If two delegates to any convention do not use the proxies they possess according to the instructions of those whom the proxies represent, they should be branded as dishonest, as defaulters of public trust and friendship. Nothing excuses them and nothing excuses the paper which would shield them. The paper that does so stands in the same relation to the proxy juggler as the receiver of stolen goods does to the thief.

If the paper has evidence to prove that the two Illinois "gentlemen" misused the authority placed in their hands it is the duty of Editor Berger to publicly brand them. He owes this to the Illinois division, to the L. A. W., to the whole world of wheelmen.

What is the Illinois division going to do about this matter? Will it sit idly by and see a paper, whether in the right or wrong, make charges against two of its members without doing something to prove that either the paper has maliciously or unconsciously made a mistake or purge from its ranks the two "gentlemen" who are not fit company for men who have at least a remote idea of what constitutes the qualities of an honest man.

Will Editor Berger or the Illinois division follow the straight but narrow path, or will "influence" show that it is as rampant in L. A. W. circles as it is in politics?

It looks now as if the two "gentlemen" have no cause for fear. Perhaps this is not their first offense. Hence their complacency.

THE DIALECT WRITER.

The dialect writer is not by any means a novelty. He has puzzled the readers of the gamit of periodicals from the *Century Magazine* to the sickly little weekly paper that considers the "dialect" story to be a sure sign of greatness.

Thus far the dialect writer has not paid much attention to cycling. He is, however, cropping out, and very soon we may expect to see as much gibberish in the cycling papers as in those sheets that make a specialty of the idiotic stuff that is classified under the general head of "dialect stories."

How pleasant it must be to wade through such stuff as this:

"My dere," replide Ebenezer, "doent say as I am a fathur of a famili. I am onli won by proksi. I have sene hevlier men than me on a bisikel, and I fansi a bisikel wud doo mi livver gud."

"Doo your livver gud," showed Missis Ebenezer, "yeu tote to drink less wiski!"

"Well, mi dere," gose on Ebenezer, a-line most owfull, "the dokkter says as how I nede moar eksersise, and he says I have to get a bisikel!"

This is the sort of reading that Obadiah of English *Sport and Play* thinks the public is fond of reading, not because it is funny, for it isn't, but because it is "dialect," and is not intelligible to the average man.

The sure proof of the existence of humor in a dialect story is to translate it into good English. If it is still funny, that dialect story is all right and there is some excuse for publishing it. If, on the contrary, it is weak and inane, you may depend that the budding dialect writer scribbles in jargon because he is

Salesman, to Donkey.—"Git up!"

Donkey, to Salesman.—"Not a git until I have a whack at that feed basket."

Concord Bicycle Company; Concord, N. H.; J. M. Ballard, Eau Claire, Wis.; H. D. McCulloch & Company, Stevens Point, Wis.; Jesse R. Sharp, Chippewa Falls, Wis.

Distance to Washington.

From St. Louis to Washington the distance is 894 miles; from Cincinnati to Washington, 553 miles; from Chicago to Washington 813 miles. This is via the bee line followed by the B. & O. railroad, the most picturesque as well as the most direct route from the Mississippi River to the Atlantic Seaboard. Through B. & O. trains, with Pullman equipment of Sleeping, Parlor and Buffet cars, run from St. Louis to Washington in 29 hours; from Cincinnati to Washington in 18 hours; from Chicago to Washington in 25 hours. Sleepers from all points run through to New York from the west without change. At Washington connection is made with the B. & O.'s matchless Royal Blue Line for Baltimore, Philadelphia and New York. These trains consist of the staunchest and finest Coaches, Parlor and Sleeping cars ever built by the Pullman company; are vestibuled from end to end, and are protected by Pullman's improved anti-telescoping device which makes every car as safe as it can be made by man's ingenuity and skill. All the cars are heated by steam and lighted by Pintsch gas. They are the fastest trains in the world, placing New York and Washington within five hours reach.—20-2.

bership in the L. A. W. is only nineteen months.

The L. A. W. has had the entire United States to itself since the introduction of the bicycle into this country. At this period in its career its membership comprised less than one-sixth of all the wheelmen in this country, and the average continuance of a membership is only nineteen months. This proves conclusively that the L. A. W. is not sought by thousands of wheelmen, is found by some and found wanting by many.

It cannot be said that the dues are heavy. Nothing more is expected of a wheelman after once he enters than that he pays his dues each year. Something is lacking, then. What is it?

When the league finds out what is necessary to awaken the interest of those who have not joined and of those who do join only to drop by the wayside, at that very moment the L. A. W. will stand a good chance of securing a large proportion of the five-sixths of cyclists not now in its ranks. Then, indeed, will it be an organization whose importance

not capable of doing good work in plain, every-day, but good-enough-for-most people English.

Let the dialect writer come, but let him beware if he isn't equipped with something besides the ability to twist the English language into all sorts of contortions and ear-splitting combinations.

#### GIVE THE AMATEUR A CHANCE.

There is much good reason for the scoring which the poor amateur is continually called upon to face, but some of the reasons given to prove that the amateur is one in name only are as ridiculous as the statement recently made by a league official that "a pure amateur would race as willingly for a medal as he would for a house and lot." Not so with the amateurs I have met and do meet every day. Most of them have more sense than that league official seems to think the track-rider possesses.

What sane man would argue that because a cycle racer intends to compete for the Saltonstall trophy at the international races in Chicago he proves himself to be a professional at heart? That's just what a writer in an eastern paper recently declared, and he seemed to think that there could be no answer to his statement. That writer puts a very low estimate on the worth of a man's services.

Just imagine a man with healthy mind and body training for weeks and months for no other purpose than to win a trophy which is worth \$1,000, because that amount was spent on it, but which, as an article of merchandis, is not worth half that sum. If he does not win it he has nothing to show for his time and trouble. If he wins he has a prize which is beautiful, something to be proud of and of considerable intrinsic value, but for which no man would waste many weeks of his time to win for the gold there is in it.

There is plenty of material for the man who does not, or will not, believe that there are no amateurs. Why, then, should he give specious reasons why a man is not an amateur when his very argument proves nothing for or against a rider? The only thing it does prove is that he doesn't know what he is talking about.

Give the amateur a chance. He needs it.

#### WHICH ARE THEY.

It is clear to all but the members of the L. A. W. membership committee that Munger and Barrett are either little boys or unscrupulous men.

At this writing the membership committee has not given out its decision, and Walter Masterson very tritely says that "the only action, it seems, that the membership committee can take, will be to vote unanimously for the expulsion of the two members."

I doubt very much that the membership committee will do as Mr. Masterson says, "vote unanimously for the expulsion of the two members." The committee, very unfortunately for the L. A. W., is not entirely composed of men who, in judicial matters, weigh only the evidence. They too often take a peep into their hearts, and this, aided by the grain of prejudice which every man bears for or against every other man, induces them to make decisions which coming from women could be condoned, but from a body of judges, never.

If Barrett and Munger are too young to understand league rules, they are too young to be league members. If they are unscrupulous they are not fit to be league members.

If they are the first, age will improve them; if the latter, nothing but a whitewash brush would make them present-

able, and whitewash, you know, rubs off very easily.

#### THE GRUMBLING OF OLD WOMEN.

The professional cycling league is of considerably more importance than its traducers are willing to acknowledge. This is amply proven by the malicious-malicious is the only word applicable in this case—manner in which some cycle writers are endeavoring to belittle its work, and at the same time showing how much they don't know about the subject they are handling.

In the last issue of the *American Cyclist*, X. C. C. bellows in this way: "The question is, would not cash-prize racing on the large scale proposed by those who are engineering the new scheme develop wholesale roguery, dirty work, and the prominence of racing men of questionable character to the extent of lowering the standard of cycle racing at large in the public's estimation?"

He hath a pretty wit, hath X. C. C. He also hath a prejudiced mind. He shows this in the lines quoted.

There is a possibility that the new pro-

#### ROE PREPARING FOR THE RIDE.

*Details Arranged for His New York-San Francisco Trip.*

Tom Roe has completed all arrangements for his ride from New York to San Francisco, starting from the city hall, New York, at 10 o'clock, May 14, and finishing in the court of the Palace hotel at Frisco. The ride will be made under the auspices of the New York Recorder, which will have a correspondent travel the entire distance by rail. Roe will use on this trip a Union P. D. Q., weighing thirty-two pounds and fitted with the Airtite-Dunlop tires. He expects to cover the distance (3334 miles) inside of sixty-five days, the record now standing at eighty-six, made by Nelson H. Bondt in 1891.

That there may be no doubt as to the "squareness" of this trip, Roe requests all cycling papers, dailies, bicycle clubs and riders along the line to keep a very close watch on his movements. Besides this, he will be officially checked by representatives of at least six daily papers, and by postal cards he will dis-

secure wheels. They simply have "got to ride," and so express themselves. After all, a long winter is conducive to great activity in the spring. After the long rest the cycling enthusiast returns to his wheel with a zest entirely unknown in warmer climates, where riding is possible the year round. The person who rides all winter is foolish, for when spring comes he misses the accustomed enthusiasm at the opening of the season, and it's "odds on" that he gives up cycling, tired of the pastime ere the following autumn.

The best racing men appreciate that to do their best they must have enthusiasm. By renouncing the wheel for a time, each and every one, be he road or track racer or only a common ordinary rider, resumes his favorite pastime with renewed vigor and a zest he never thought possible again.

#### Will Have a Fine Exhibit.

According to our advices the Whitworth Works Cycle Company will have a very complete exhibition of its wheels at the world's fair in charge of F. J. Osmond, who will arrive in Chicago within the next twenty days. The Whitworth has undoubtedly had a remarkable success abroad, as well as in Canada. The concern has not this year seen fit to dabble in front drivers, but confines itself to safeties, which consist of makes in no less than six styles. The No. 8 is a track racer on which many English records have been made by Messrs. Osmond, Adams, Fowler and Schofield. It is a specially built wheel, neat in design and weighs from twenty to twenty-two pounds. The regular track racer is known as No. 4, weighs twenty-five pounds, and is of practically the same design as the special racer. The ladies' wheel, of which a cut is shown in this issue in addition to Nos. 3 and 8, is a straight-framed wheel, fitted with gear case and Dunlop tires. It weighs thirty-three pounds and is considered abroad one of the leading wheels. The No. 3 is a road racer weighing from twenty-seven to twenty-nine pounds. No. 2 is a light roadster weighing thirty-seven pounds when fitted with brake and mud guards, and No. 1 is a full roadster weighing forty pounds.

#### Notes.

Allen and Sachtleben, the around-the-world cyclists, are still in the Lone Star state.

The Des Moines Y. M. C. A. Cyclers have changed the name of their organization to the Des Moines Cyclers.

The California division meet has been awarded to Stockton, and as a result the Alameda people are protesting vigorously.

According to a Cheyenne paper, the wheelmen of that place now use their machines instead of horses on which to hunt deer and antelope.

Sam Montgomery, of Toledo, O., has invented an aerial bicycle, he claims, but will not tell how it is to be worked until he secures a patent on the machine.

The Magnolia C. C., of Houston, Tex., has elected the following officers: President, J. A. Patterson; captain, H. D. Spore; secretary, Jerome Swinford.

A Detroit jury has just awarded Edwin Corwin \$50 damages in a suit brought against Frank Werneken. Last fall while riding on Twenty-fourth street near Michigan avenue on a bicycle Corwin collided with Werneken's buggy. Corwin claimed that Werneken sheered off and ran his buggy into the bicycle. Werneken declared that he was driving straight along but that Corwin was not looking and ran into his horse, which shied, knocking the rider down and running the buggy into the machine.

#### THE ELLIPTICAL SPROCKET.

First 'Arry.—"That's 'im as won the 'ill climbing competition on Saturday."

Second do.—"What, 'im a talkin' to the kid? 'e do'n't look strong."

First 'Arry.—"Ain't 'e! why, look 'ow 'e's twisted 'is cog-wheel!"

—Wheeler.

fessional league will become the rottenest, lowest, most despicable and sport-lowering organization that has ever existed. That's the possibility. Now for the probability. It's a cash prize to a league button that it will be a great success financially, that it will do much to raise the standard of cycling in America, and that it will so increase the interest in cycling that wheelmen and makers will rise up and call it blessed. Possibilities and probabilities often have nothing in common.

If X. C. C. and a few others like him would devote more time to writing on subjects with which they are familiar, they would be of greater value to the papers in which they now air their ignorance and prejudice.

Strange, isn't it, how some people mistake grumbling for criticism and theories for conditions. BURKE.

The Toledo Cycling Club has elected the following new trustees: Frank C. Chapman, George B. Colton, James T. Smith, Latimer Thompson, M. C. Himes, O. W. Jones and J. S. Raymond.

tribute all along the line to anyone taking enough interest to fill them out. The route will be through the following cities: Albany, Utica, Syracuse, Rochester, Buffalo, Erie, Cleveland, Toledo, Chicago, Clinton, Cedar Rapids, Des Moines, Council Bluffs, Omaha, Kearney, Cheyenne, Ogden, Salt Lake, Sacramento to San Francisco—following the lines of railroad as closely as possible. Roe is now in training at Highlandville, Mass., and expects to be in condition by May 14.

#### Winter Riding and Its Drawbacks.

"I am not going to ride this season—tired of it; can't afford it any way," said a rider who was a prominent figure along the north shore last season. His chum, who was also an active and constant rider, had come to the same conclusion. All this was when the snow was deep on the ground. Now that the beautiful has taken its departure and the club mates are venturing out over muddy roads, to return with the glow of health on their faces, the two gentlemen are "scratching gravel" to raise funds to

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tyre and you are ready to start.

Showing the Tyre open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

## OCTOBER.

2—Capital City Wheelmen meet, Sacramento, Cal.

## PULLMAN HANDICAPPER NAMED.

The A. C. C. Selects S. A. Miles Again—Time Prizes Limited to \$400.

Considerable important work was accomplished by the Associated Cycling Clubs at the meeting held at the Grand Pacific hotel Tuesday evening. There were twenty delegates present and much enthusiasm was manifested by all. The committee appointed to prepare rules for the race made its report, and with the exception of the increase in the entrance fee and the time of starting, the rules were the same as those of last year. The entries will close on May 13, and the time limit, as usual, will be twelve minutes. The limit man will start as near 9 o'clock as is practicable. The rules also provide that the numbers shall be placed upon each upper arm or shoulder.

The chairman reported that no arrangements for a special train had been made with the Illinois Central Railroad Company because of the absence of General

Passenger Agent Hanson, but considerable information was picked up on his visit to the railroad company's office, and he thought that there would be little trouble in arranging for the trains as heretofore.

A committee consisting of Messrs. Stimpson, Roth and Root was appointed to nominate officers for the race—five judges and assistants, five timers, referee, and starter.

In this connection it was stated that the handicapper should be elected by delegates, as has been the case previously. Mr. Tuttle placed in nomination S. A. Miles, who has been handicapper for the past three years, and Mr. Gunn placed in nomination J. M. Erwin, member of the racing board. Mr. Erwin was present, and through Mr. Stimpson declined to accept the position if tendered him. The secretary was instructed to cast the ballot of the association for Mr. Miles, and he was declared elected.

Mr. Stimpson moved that the handicapper be allowed a fee of fifteen cents for each man handicapped. Considerable discussion resulted, Mr. Herrick contending that the handicapper should donate his services as others do in connection with the Pullman race. A vote on the subject stood eleven to nine for the proposition.

A motion was made and carried that the three time prizes be limited in value to \$400.

It is not improbable that a portion of the course will be changed. It is designed by the Pullman club people to have two grand stands erected at the finish farther east than the point of finish last year, and convenient to the club house and training quarters of the Pullman Athletic Club. This, of course, will make the course several hundred yards longer. Inasmuch as South Park avenue is now improved between Fifty-fifth and Sixty-first street, it was thought advisable to run the race over that straightway portion, rather than through the park, because of the crowds that will be present on Decoration day. The matter of changing the course was left to the discretion of the committee on rules. The Plzen Cycling Club was admitted to membership.

## \* \* \*

## Zimmerman's Movements Outlined.

Joseph McDermott last week outlined the movements of Zimmerman for the next two months. He will (as advised by the REFEREE) train at Savannah for the next three months, which should put him into very fair shape. It will make his work six weeks altogether. On April 22 he will sail from New York on the New York for England and on landing will proceed to Bordeaux and take part in the proposed tournament there. He will put on the fine edge of his conditioning on the Bordeaux track, which is said to be a good one. While there he will probably run over to Brussels and scoop a carpet or two from the Belgians at their tournament. Afterwards he will go to Herne Hill and grapple with Johnie Bull once more. These are, briefly, Zimmerman's movements for the next two months. His decision to wander to Bordeaux was possibly occasioned by the fact that his going to Savannah has caused other racing lights to move that way also. By going to Bordeaux in April or early May he will escape that uncertainty, English weather in May, as in Bordeaux the weather is delightful at that time of year. It is more than prob-

able that Wheeler will travel with Zimmerman, and failing Wheeler, Wells, the Toronto crack, who is engaged in law copying in Joseph McDermott's Freehold office.

## \* \* \*

## The Pride of Charleston.

J. W. Baird, the Charleston, S. C., crack racer, was in New York Friday, and in response to a query as to his alleged match with Harry Wheeler, said, in his rich County Carlow brogue: "I knew nothing of the match until the day before I left home. Somebody has been making a match for me without my knowledge or consent. I'm not afraid of Wheeler, and will probably meet him in the open events at Savannah during the next tournament." Baird's looks indicate that he is in tip-top condition, his winter training south having been very beneficial. Charleston, he says, is very much excited over racing, and the trade promises to be large.

## \* \* \*

## Is Training Sanger.

Charles R. Culver, who, for the past two years has been physical director of the Springfield (Mass.) Bicycle Club, has accepted the responsible position of trainer to W. C. Sanger this season, and has him now in active training for his European trip. Culver has been successful with the men he has handled on the path. Last season, under his training, H. C. Tyler defeated both Windle and Zimmerman, and broke the mile

CHARLES R. CULVER.

record, which stood until a month later, when it was lowered by Windle.

In addition to having Sanger, Culver will have charge of the Telegram Cycling Club's team, which is now composed of eleven very promising riders. After training at Milwaukee until about April 15, the party, consisting of Sanger, Sercombe and Culver, will go to Springfield, Mass., and will put in about three weeks on the Hampden Park track previous to their departure for England to participate in the championship races.

## \* \* \*

## Another Southern Track.

At the request of J. L. Johnson, who has been for the past two weeks agitating in the interest of a bicycle race track to be built in Charleston, a number of persons, consisting of some of the leading business men, thronged the club room of the Charleston Wheelmen's Club last night. They were all clear-headed men, and had taken stock in the bicycle track, that without a doubt is a good financial investment, besides being a class of sports that will enliven things in our city and attract visitors from all parts of this country at times when races are held. The object of this meet-

ing was to put matters in correct shape so as to go to work without delay, and to prepare the books for the official signature of those taking stock.

The chairman stated that the first thing would be to procure a charter. The stock sold showed up an amount of \$4,125. It was then decided to apply for a charter with a capital stock of \$5,000. That amount can be very easily raised.

A committee was elected on incorporation, consisting of J. D. Cappelmann, W. J. Baird, L. W. Bicaise, M. C. Smith and J. L. Johnson.

In regard to selecting a name for the club considerable discussion took place, but it was finally agreed upon to call it the Charleston Wheelmen's Track Association.

The meeting adjourned to be called again as soon as the committee gets a chance. That may take about one week.—Charleston News and Courier;

## \* \* \*

## The New Herne Hill Surface.

According to the Ulster Cycling News, the new surface for the Herne Hill track will be pitch-pine battens, about an inch and a half wide, and a quarter of an inch apart—to allow for expansion and contraction—will be bolted together and placed across the track. The bolts which secure the battens pass at intervals through cork washers. The track will be laid in sections, which can be taken up with little difficulty when required. The wood to be used has gone through a thorough process of seasoning, and the most severe tests applied to discover its suitability. Portions have been indiscriminately selected, and soaked several days in water, after which it has been dried in a temperature reaching 180 degrees. The measurements before and after these tests have not varied, consequently the variation of our climate should not appreciably affect it. It is claimed that the slight spaces between the batten will, without curtailing the speed of the track, supply a "biting" surface to the tires, and also obviate suction. It will be always kept thoroughly washed and free from grease, so that side-slip will be unknown.

## \* \* \*

## Will Bear Watching.

We hear it stated that a prominent Philadelphia racing man is to receive a salary of \$1,800 for riding a certain New England-made wheel during the season of 1893. It would hardly be fair to mention the name of the wheel or the racing man, inasmuch as there are no facts to substantiate the charges. But murder will out, and ere long the racing board may be able to learn a thing or two about this little deal.

## \* \* \*

## The World's Fair Track.

Much discussion has taken place since the meeting of the international race committee over its decision to build, on the grounds of the Chicago Ball Club and for the international races, a track composed of dirt, with a brick dust surface. There is a doubt whether brick dust can be secured. Mr. Gerould, who has the matter in charge, thinks there will be no trouble. As a matter of fact, however, Mr. Gerould does not know this to be so (he admitted as much), but he says the brick-yards are overflowing with material. In this connection it might be well to quote a prominent wheelman and architect on the subject of the world's fair track. He said: "If they go to work now to build a track, while the frost is in the ground, the whole thing will prove a failure; and if they wait until the frost gets out of the ground, it will be impossible to build a track and have it in first-class shape by the time the men will want it for train-

# PRESS CLIPPINGS.

## What Authorities Say of the SWIFT.

FROM "WHEELING," JAN. 25.

The Coventry Machinists' Co., Limited, Coventry.—One of the giants of the present or any other show whose exhibit is well worthy of its great reputation. No less than 46 machines are shown, which, taken out of the vast transept, would well-nigh form a show in themselves. Practically speaking, the Cheylesmore people have fixed on an open diamond of regular and pleasing design for their safeties, and have made slight alterations to suit various tastes. This, of course simplifies matters considerably in the workshop, and as this type is in favour at present, it is a judicious business move also. The principal deviation from last year's pattern, however, is the abandonment of the oval bottom back stays in favor of 3-4 in. round tubes—a decided improvement, we think. The Swift racer is now a fine, handsome machine, sitting well and looking a considerable advance over last year's design; plated butted direct spokes, and the world-famed Coventry Machinists' finish makes it beautiful looking mount, and good as it is beautiful. The Model A roadster is little different from the racer in appearance, being, of course, heavier all round, but possessing the same fine appearance. We venture to prophesy there will be no more popular machine on the road in '98 than this one. Of course, the company's dust-proof bottom bracket is still fitted, and of its class there is none better and very few indeed so good. As might be expected when such good results were obtained from it last season, the Coventry Machinists have extensively fitted the long link roller chain to roadsters, the Humber pattern being rightly put on racers. Model E is the light roadster, and no one can complain of its weight at 28 lbs. all on, and provision is made to have brake and mud guards fitted if required, thus bringing up the weight to about 31 lbs. The Swift ladies' safety is a handsome machine, the chief characteristics of the ordinary pattern being carried into it; 1 1/4 in. main tube is used to connect the fore and aft portions of the frame,

and handles are curved upward and in a rational manner for a lady. The front driver is on usual lines, and is undoubtedly one of the prettiest in the Palace. 1898 Runlows and Crypto gear is the combination used. In tricycles quite a delightful show of Marlboro Clubs can be seen, no less than fourteen being exhibited. There are few radical alterations in design beyond larger diameter, round tubes being used extensively, improving the general appearance of the machines. A totally new design of the Olympia pattern, however, has been added, and admirably treated it is sure to add more patterns to the famous Marlboro Club.

FROM "THE CYCLIST," JAN. 25.

Coventry Machinists' Co., Limited, Coventry, certainly occupy pride of place with the central exhibit in the Hall. They have one of the largest displays, too, most tastefully arranged with evergreens, &c. First and foremost is the Juvenile "Marlboro" tricycle, a strong little article for dotlets of tender years; then on the inner line of the exhibit we find ourselves with the "Marlboro" light roadster tricycle. This has the well-known pattern of frame of last year, slightly improved in detail, with the new Clincher tyre and band brake on the driving gear, a very strong looking machine. Another light roadster of still lighter build, and a so a three-wheeler, comes next, the next machine showing the latest pattern for the year in "Marlboro" tricycles, with a diamond frame and light duplex cross tubes, a strong axle bridge, and fitted with Dunlop detachable tyres. Then the ladies' "Marlboro," with curved frame, simplified in construction, followed by a specimen of the Marlboro" road-racing tricycle, which has the well-known Marlboro frame, strengthened at the seat socket, and fitted with gear case. A cushion-tyred "Marlboro" No. 1 completes the exhibit of tricycles on this side, and then we find ourselves with two specimens of the geared ordinary as built by the firm, the first with cushion

tyres and Shorland saddle, the second with pneumatic tyres and a vertically adjustable seat-pillar and both with Crypto gear—neat, compact little machines, nicely balanced and well built. The next five machines show the new Model D safety, this being the cheaper pattern of the firm. These are fitted with various forms of tyres, and in general design are fully up to date, having open straight-tube diamond frames, barrel crank brackets, and ball heads. The next four are Model A machines, lighter built, first-class mounts in every respect, in which we are pleased to note the saddle rod carried forward of the seat pillar as well as back, so as to allow ample room for adjustment. The "Swift" Model E, likewise an up-to-date mount, with neat steering lock, and with high finish, comes next, and then we are introduced to another Model E, built as a light roadster or road racer. Rounding the end of the stand, and commencing the outer line of machines we find three "Swift" racers beautifully designed machines, built specially to suit respective purchasers as to height of frame, and on as fine and good lines as the greatest speedist could desire. Two more Model E's, and then we find ourselves with three Model C safeties, these with 28 in. and 30 in. wheels, front wheel brakes, mudguards, &c, neat, good looking mounts on up-to-date lines. The "Swift" ladies' safety, next shown, is a little gem for ladies of short stature, with 24 in. wheels, well supported curved front tube gear case, and wire dress-guard, Dunlop detachable tyres, and handles brought up. A cushion-tyred ladies' "Swift" with straight front tube follows, and then two more samples of the "Swift" geared front driver on the same lines as before. The next four machines introduce us again to the "Marlboro" tricycle in several patterns, and the last two are distinctly interesting, as showing the new pattern in tandem tricycles which the firm are now making, the "Marlboro" tandem for '98 having single central driving and duplex steering, on the principle of the Olympia and Crypto types. These machines, as usual, are beautifully finished and finely fitted, and as fine and well designed mounts as one could well desire.

*"Imitation is the Sincerest Flattery."*

# HUMBER

IF the Humber is good enough for everybody to copy, it is good enough for us to stand by without the changing, as indulged in by other manufacturers. This admission on the part of the manufacturers, not only puts the **HUMBER** in the front but is an acknowledgment that the Humber is the best machine now before the public.

• ROVER •

I have in stock a considerable quantity of the latest patterns of the well-known ROVER.

I also control Cook County for the sale of the **STEARNS**.

Write for catalogue and prices. Liberal discounts to the trade and rider.

**HORACE BELL, AGENT,**  
285 WABASH AVE., CHICAGO.

ing purposes." We again express the opinion that boards would be the most desirable for the world's fair track, inasmuch as the track could be put down more easily and more quickly than could one built of clay with the brick dust surface. The grounds were surveyed last week, and it is the intention to begin work almost immediately.

\* \* \*

#### A Clever New England Racing Man.

There are not many better known New England racing men than modest Harry Arnold of New Britain, Conn. He is speedy, too, and while with Windle last fall at Springfield rode practice miles pretty close to record. He is a bosom friend of Windle's, and spends a good deal of his spare time at Milbury. He is well off as regards this world's goods, and leads a bachelor life in his own building at New Britain.

Arnold was born Oct 17, 1866, and is

HARRY ARNOLD.

consequently twenty-seven years old. He stands 5 feet 8 1-2 inches high, and, in condition, weighs 150 pounds. For three successive years he won the Connecticut division championships, and in 1891 out of the twenty-one races in which he rode he secured nineteen prizes. That fall he paced Windle the second quarter of his famous 2:15 mile. In 1892 he rode in twenty-five races and captured eleven firsts. At Hartford, July 5, he broke the world's quarter-mile competition record, doing the distance in 32 sec. At Springfield, Mass., last fall Arnold again paced Windle when the Milbury man broke the half-mile, mile and five-mile records. He has a record of 2:26 4-5 for the mile, made in a handicap event at Rockville. It is Harry Arnold that makes the wheel called the Windle, and not Willie Windle, as a contemporary stated recently.

\* \* \*

#### Wants Only One Day.

When the international race committee made out its schedule for the western circuit, it gave Milwaukee two days, Aug. 14 and 15, Monday and Tuesday. Since that time the racing board of the Milwaukee Wheelmen, through its chairman, Mr. Schroeder, has decided that one day is sufficient for it, and has consequently written Mr. Raymond to this effect. It does not follow that this will change the circuit in any way. It merely drops one day and allows the men to have a little rest, which they will undoubtedly need after a week's hard riding in Chicago.

\* \* \*

#### Munger and Barrett Expelled.

The wrath of the league has fallen upon Munger and Barrett for having proposed Leeming's name for membership in the L. A. W., and the report of the membership committee, through the chairman, George C. Pennell, is that the two men be expelled from the league. The expulsion of these two prominent riders will have little effect so far as

racing is concerned. It does not prevent them from competing in any events except division championships. Mr. Raymond stated while in Chicago that the national championships would undoubtedly be thrown open to all Americans, and that if Munger and Barrett were expelled they could only be kept out of division championships. Munger has threatened mandamus proceedings and injunctions and several other horrible things for the league if he should be expelled, while Barrett says nothing. He did say, however, that he didn't think the matter of enough importance to offer any apology.

\* \* \*

#### Facts About Terront

In view of the recent remarkable performances of Charles Terront, it may interest Americans to know that he has been a wheelman for nearly twenty years, and was a member of the team brought to the United States by Harry Etherington, afterward proprietor of *Wheeling*, in 1878. The fact was brought to our recollection by an unknown correspondent, who says:

"Terront raced in the first six-day cycle race held in this country. On the last day, when Cann, Harrison and Rolinson, his competitors, were so saddle-sore and weary and stiff that mounting was a most painful operation, Terront would skip lightly from his tent and do the flying-pedal mount with ease. He it was who taught the pedal-mount in this country."

The team, which consisted of Terront, Cann, Keen and another—we have forgotten who—traveled as far west as Chicago, where they raced in the old Exposition Building. Terront's brother, Jules, was an excellent rider also, in his day, but never the equal of Charles. The latter's recent ride of 419 miles without a dismount shows, first, the wonderful powers of the man, and second, the vast improvement in wheels and tires. Prior to this ride 236 miles stood as record, the next to that being 216.

\* \* \*

#### Spooner Didn't Say So.

Spooner, the American twenty-four hour rider, who is coming over for the Cuca Cup, has been comparing Shorland's performance with his own, and feels sure that, under equally good circumstances, he could have done as well. — Irish Cyclist.

Our bespectacled Hibernian friend has evidently been reading between the lines or on the ends. Spooner has not made such a boast; on the contrary, he says he knows he could not beat Shorland. A friend of Spooner's made some such claim in a letter to the *Evening Post*—but Spooner had nothing to do with it. "Ar Jay's" specks evidently need adjusting or focusing.

\* \* \*

#### Who are They?

The N. C. A. gives it out that about 130 men have made application for licenses to ride under its rules, and it is hinted that Draper and Kelly, the tandem team, have about decided to go in for the cash pots. It would seem likely that if a hundred or more racing men had decided to link their fortunes with the cash prize people, their names would be made known, so that others would be induced to turn professionals. Again we ask Mr. Egan to give us the names.

\* \* \*

#### General Race Notes.

Henry Andrae has been made to figure as a candidate for English championship honors, and all because he thinks there is too much kicking and too little profit in a handicapper's position.

Harry Nye, of Richmond, Ind., is accused by Mr. Raymond of competing on July 4 with one H. Feters for a \$20 cash prize. He says he does not know Feters and did not ride after May of last year.

He was entered in a road race but was too sick to leave the house.

Sandusky will have the Ohio division meet this year. The dates are July 2, 3 and 4.

The Des Moines cyclers are arranging a road race for Decoration day, and are endeavoring to lease the track in the "Zoo."

The Milwaukee Wheelmen will give an indoor tournament at the Exposition building, Saturday, June 3, afternoon and evening.

The Portland (Ore.) Wheel Club is arranging a series of races to take place in May. E. W. Ballard, of the Chicago C. C., has consented to compete.

There is a project on foot to have the annual Waukesha road race take place this year on the 4th of July, instead of the 30th of the month, as heretofore.

April 10 is the date set for the Twelfth Regiment games at New York. Maltby will give exhibition riding, and a two-mile handicap is on the programme.

The Riverside Wheelmen will give ten races this season, but through the uncertain lease of life of the Manhattan grounds, cannot make certain the place of the meets.

The twenty-five-mile road race of the Boston Associated Cycling Clubs will be held June 24. The Press Club, of Boston, will enter the "star" performer in the person of E. A. McDuffee.

F. J. Schroeder, chairman of the racing board of the Milwaukee Wheelmen, has received a letter from Gus Steele, of Chicago, stating that he will ride under that club's colors this season.

May 16 is the date set for the first races of the N. C. A., and W. B. Troy is authority for the statement that Prince, Rowe, Knapp, Berlo, Crocker and Roe will be in the field.

And now we hear that "Thomas A. Wilson, of Flatbush, one of the crack bicyclists of King's county," New York, is contemplating a trial at the Cuca cup race. You have our sympathy, Thomas.

The old war horse, A. B. ("Quilly") Rich has ordered a Campbell racer, fitted with Burris-Michelin tires, and will begin training at once. He will probably go to Savannah for the April meet.

Paul Grosch will ride a Lyndhurst fitted with Burris-Michelin tires, and Charlie Murphy will also use the French thing in wind instruments. But Murphy's mount is undecided. He is "waiting to hear from somebody."

Willie Windle is said to have joined Harry Arnold in the manufacture of the Windle, but it is doubtful, as the report is current that he will ride a Humber, and the additional fact that the Humber people are advertising the fact makes the New Britain proposition look out of place.

The *Sporting Life* recently published a humorous letter from Whittaker in which the latter talked of a race for unheard-of stakes and unheard-of conditions. The Milwaukee *Daily News* swallows it whole and prints it under the heading, "Professional methods exposed."

Toledo wheelmen have completed a deal with the Exposition Company, whereby the latter will build a \$2,000 track in the building. The track will be three laps to the mile and will be built of brick dust, burnt clay or cement, as the committee thinks best. The first meet is to be held in July.

Harry Cornish, who is to be manager of the Chicago Athletic Association, trained George M. Hendee and other "amateurs" of the Columbia team in 85-6, and was quite a sprinter himself. Cornish is an expert with the gloves and a very excellent manager of athletes, so

that Chicago will take kindly to the ex-Bostonian.

The Hartford Wheel Club has just opened its new gymnasium with an exhibition by local experts, the boxing being under the watchful eye of that noted master of the art Tom Faby of the H. W. C. The flourishing Hartford club has also appointed a committee of five to look after the Charter Oak Park tournament, Sept. 4 and 5.

Harry Cornish, the newly elected professor of athletics at the Chicago Athletic Club, was a pupil and graduate of Dr. Sargent, of Harvard, and made his first efforts as trainer in bringing up George Hendee to his excellent form in 1886. Cornish at one time was a racing cyclist on the Springfield Roadster cycle team. No more scientific trainer exists in the United States.

President Richmond, of the Savannah Wheelmen's Track Association, writes that the April 9 meet will be followed by a large one May week—a regular holiday week south. A party will go from New York to the May meet, and if a sufficient number can be guaranteed, special rates and accommodations can be had from the Savannah Line Steamship Company, which will pay special attention to cyclists going south from this on.

The Minneapolis Cycle Track Association has issued \$10,000 worth of stock, and members of the association have already subscribed for a fifth of it. The Business Men's Union committee, appointed to arrange the summer sport carnival, has been asked to set apart \$7,000 for trophies for the races, and the association will see that the track is built and equipped on time. It is probable that the grounds of the Normania club will be used.

Among the many events which will engage the attention of wheelmen during the coming season, none is more prominent than the Waukesha-Milwaukee road race, which, contrary to reports circulated in some of the cycling papers, will take place as usual. Last year it was an overwhelming success, and it is the intention this year to make even greater preparations and hang up a prize list that will attract the best road-racing talent in the country.

George F. Taylor, like a good many others, believes there is more fun and money in being an amateur bicycle racer than in plugging decayed molars, and will for-ake dentistry for the saddle this season at least, and commences getting off some of the superfluous this week. Taylor will, undoubtedly, ride a Brookes racer, imported by George Drysdale, of School street, Boston, as George is said not to stand very pat with that prominent inducer of blue rims, Asa Windle.

#### Now He's Going Back.

Jacques Adutt, the young gentleman who occasioned some newspaper talk by purchasing several bicycles in Chicago and shipping them abroad, and who was arrested on a charge of forgery preferred by the Austrian government, will be sent back to that country. United States Commissioner Hoyne found that he was properly detained and ordered the United States marshal to keep him in custody until the records of the case could be laid before the secretary of state and extradition papers made out for his transfer to the proper authorities.

#### Papa Ned Oliver.

A line from Cleveland announces that Miss Edwin Oliver appeared there at 6 a. m. on March 20. The young lady is said to weigh nine pounds and is doing splendidly, as is Mrs. Oliver. The ever-happy Ned is happier than ever,

# WHITWORTH CYCLES . . . .

. . . . U. S. A. 1893.

## HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

# SINGER & CO.,

6 AND 8 BERKELEY STREET,  
AND 2 WARREN AVE.,  
BOSTON, MASS

Among the callers at the REFEREE office, 21 Park Row, New York, recently, were: W. F. Murphy, Brooklyn; W. S. Maltby; Paul Grosch, Passaic, N. J.; E. H. Seddon and Frederick Jennings, Manchester; Joseph McDermott, Freehold, N. J.; Howard A. Smith, Newark; Samuel Snell, Toledo; Arthur Collins, Collins & Nuttal, New York; C. J. Kilpatrick, A. G. Getz and M. Quinlan, Gendron Wheel Company, New York; H. L. Saltonstall and Charles Brown, Elizabeth; W. Martin, New York; C. Bridges, Savannah; E. C. Bode, Chicago; Tom Roe; C. A. Schwalbach, Brooklyn; Henry Crowther; M. Davies, Raleigh Cycle Company; W. B. Troy and James C. Dayton, *Sporting Life*; A. T. Merrick; S. G. Whittaker, Boston; W. H. Kirkpatrick, McKee & Harrington; John Fecit, Boston; E. C. Lent, Greenwich, Conn.; W. D. Snider, agent, Patterson, N. J.; A. B. Rich and C. M. Murphy, Brooklyn; C. A. Person, New York; S. T. Clark, Baltimore; Roland Hennessy, New York; Mrs. M. F. Peck, Excelsior Cycling Club, New York.

#### The L. A. W. Should Follow Suit.

At the recent meeting of horsemen in New York, the question of records and performances against the watch was dealt with as follows:

Performances against time must be conducted in accordance with the following rules and regulations:

They must be made at a regular meeting of a society in membership with the National Trotting Association or American Trotting Association; said performances to be conducted by the regularly appointed judges and timers for the day, strictly in accordance with the rules of said National or American Trotting Association adopted by the member.

No animal shall be permitted to start against time pending a heat or trial by another animal, nor until the result of such heat or trial shall have been duly announced.

Time shall be taken by three timers engaged in the stand during the performance.

There shall be three judges in the stand during such performances, who shall not act as official timers.

There is no doubt that time trials have been much abused by cyclists as well as horsemen, and records have been made that would not stand the closest scrutiny. The L. A. W. might frame such rules as the above and not allow trainers and a few prominent somebodies to make records at any time of the day or night as the weather conditions permitted. The doubt cast on American records by the English press was pardonable, as the circumstances under which they were made and the manufacturing interests so large, that not only English people, but even our home people, looked upon these performances as tinged with doubt. And in that respect even English times have at times been looked upon with suspicion, notwithstanding "Pam" Coleman, Kew watches and all the other paraphernalia of the official clocker. The time will come when trials against time will have to be made at regular meetings and in sight of more than twelve people.

#### K. C. W. Annual Election.

Last Thursday night the Kings County Wheelmen's annual election of officers was held at the club house, 1255 Bedford avenue, Brooklyn. There was no opposition for any of the offices excepting

that of first lieutenant. The following ticket was elected: President, Willard C. Nellis; vice-president, J. Forster; recording secretary, Samuel J. Graham; treasurer, Charles McLaran; assistant treasurer, W. F. Wilson; corresponding secretary, J. Hayward; captain, R. Walter Steves. The total mileage record for the year was 45,890 miles. The following large mileage records were reported: W. A. Thompson, 3,505; F. Hawley, 3,475; O. R. Gurnee, 3,155; H. Boerum, 3,054; C. W. Young, 2,387; W. L. Wells, 2,330; W. Bonner, 2,089; Grant Kenney, 2,005. Medals were presented to the members with the highest records. The retiring captain's report showed that the club had a very successful year upon both the track and road. The following shows the points won by members during the year: C. M. Murphy, 78; F. Hawley, 34; D. McLean, 21; U. S. Paige, 19; H. C. Shimer, 16; R. W. Steves, 14; F. E. Doup, 10; C. W. Young, 10; F. G. McDonald, 7; S. J. Graham, 7; O. Stephens, Jr., 6; H. S. Blakeman, 5; M. H. Phillips, 4; H. Boerum, 4; H. Peters, 1; W. H. Wells, 1.

#### Union County vs. K. C. W.

The Kings County Wheelmen have taken a high moral stand regarding newspaper challenges by the club, and publicly rebuke the Malden (Mass.) club for daring to shy its castor at the K. C. W. through the vulgar medium of the public press. But the consistency of their morality in this respect is upset by the mean little roast they give that thoroughbred sportsman, Henry L. Saltenstall, of Elizabeth, who believes that Union County, of which Elizabeth and her club are the prominent features, can pick up a team that can "do" the boasted K. C. W. men. Of course it is rank heresy to mention such a thing to Barney Whympy or Durant McLean, but Union County may yet demonstrate that she can lower the proud colors of the crowd across the North River, and their high motives as to their ability are likely to be found scattered around the precincts of Milburn or some other good course. Then the K. C. W. men are excessively arrogant and "bossy" when the terms of a race are mentioned. They insist that the member of an opposition team shall be of a certain age, his mustache the right color, and his forehead classical looking—from a racing point of view—and they may yet insist that the opposing team shall be of the opposite sex. Altogether the K. C. W. are most unreasonable, and their fall from racing power is not far distant.

#### Mr Perkins and the Presidency.

The presidential possibilities of the L. A. W. for '94 are being discussed east with remarkable vigor. Among the names "mentioned prominently" (and which may be "dished" by those lively and dark gentlemen Messrs. Proxy and Caucus) are Gerould of Chicago, Perkins of Boston and Luscomb of New York. It is well to remark *en passant* that the two favorites are men whose states led in the anti-slavery movement. I wrote Chief Consul Perkins of Massachusetts recently, and an extract from his reply shows how he stands for the black man. He writes: "I find my name is being mentioned for the office of president, and I am being pushed by our Massachusetts friends. I think we fully agree on the negro question, and I

am surprised at the stand of Luscomb and some other of our friends. I see that the *Wheel* is for Gerould, who is a most excellent gentleman, and I understand is of our opinion on this question. However, I believe in fighting right on the line, I assure you."

#### The Irvington-Milburn Race.

The Irvington-Milburn race is now commencing to loom up in New York and Brooklyn racing circles, and the New Jersey cracks are getting ready. Small crowds of pure ones can be seen paying visits to tire and bicycle manufacturers, and of course their chances to win—before the handicapper is heard from—are excellent. Barney Whympy has quit smoking, on orders from his captain, and reported a frightful attack of indigestion as the consequence. W. F. Murphy is acting as adviser to Brooklyn racing men, and Saltenstall is looking for advice from a professional for Union County. The race this year will be something immense, and the man who wins it will have to hustle pretty hard.

#### A Bomb Coming.

Henry Crowther was in New York last week and said we might expect a small-sized sensation in L. A. W. management and matters shortly—just as soon as "Ned" Hodges gets into a bit of fighting trim. Look out, also, for a bit of a squall from the *Good Roads* storm centre, which is thick about Massachusetts and near Boston.

#### A World's Fair Scheme.

The Diamond Machine Company has adopted for use in its exhibit at the world's fair an illuminated sign, which will be of fine stained glass and wholly new in method of construction, for, in place of the unstable mounting of lead with the unsightly iron crossbars heretofore used, the glass is set in a durable cement between copper; the latter is "whole" as the spaces filled by the glass are cut out. Desirable and artistic effects are thus gained by the very varying lines or "masses" of copper never before attained under the old method. This new patented way of setting stained glass is owned by the Metallic Setting Company, of Providence.—*Providence Journal*.

#### Will Admit Caucasians Only.

The Californians evidently intend to pay no attention to the action of the national assembly in regard to the color question, as it is called, inasmuch as they have changed a section of their constitution so it will read as follows:

All Caucasians complying with the requirements of the constitution and by-laws of the League of American Wheelmen may become members of the division.

The enemies of the negro and the Chinaman were not given local option. We cannot see how the Californian division can take upon itself the right to amend a constitution so that it will not be in harmony with that of the league.

#### This Is the Way It Goes.

Monday, Chicago, sunshine, clean streets. Says one manager: "Well, —, how many sales?" Nine; best business of the year." "So? Well, we did well—seven or eight, I think."

Tuesday, Chicago, snow. Says manager: "Sold anything?" "Not a thing." "Same here."

But they are confident of big things shortly.

L. L. Wickersham, late a leading dealer at Princeton, Del., has taken his decree at the Chicago Medical College and has established at Ladd.

#### A SHREWD ADVERTISER.

*A Country Boy Who is Now an Adept at Catching the Public's Eye.*

In a recent issue of the *Journalist* there appeared a portrait of George H. Powell, chief of the advertising department of the Overman Wheel Company. The same paper describes Mr. Powell as "a Vermont boy, a printer by trade. At the age of twenty-two he migrated to Boston with his wife, and tried to make both ends meet on \$8 a week. Mr. Powell made the discovery that Boston is a hard place for a country printer with a wife to get along in. But he was not discouraged, and with an unusual display of bull-dog grit, succeeded in mastering his trade, afterward filling positions of foreman and superintendent in Boston, Providence and other cities, including the printing department of Grosvenor & Richards, of Bell Capsic Plaster fame. Later, he devoted much time to the art of advertising, and more than once Boston papers would have been glad to have secured his services in designing and putting into type effective advertisements.

"In 1887 he went to Peabody, Mass., where he managed the *Press* office until 1890, securing a small interest in the concern in 1889. During his management he doubled the advertising receipts and made the office pay 40 per cent on

GEO. H. POWELL.

the capital invested. He knew how to solicit advertising as well as how to design and place it. He also secured a practically defunct magazine, and without a single subscriber, he induced many of the leading advertisers of the country to buy space, and made his scheme pay handsomely from the start. As a *placer* of advertising Mr. Powell would now regard this as a reprehensible proceeding—a change of heart that admirably illustrates the difference between Tweedledum and Tweedledee. He was at this time known as the best printer in Essex County, which includes Salem, Lynn and other cities. He studied hard, worked fifteen hours a day; though not an 'artist,' he designed type faces, borders and ornaments for type foundries, and never missed an opportunity to perfect himself in his profession. In 1890 he won the first prize in the advertising contest in *Printers' Ink*, and this got his name before large advertisers, with the result that he received several flattering offers from large firms, but finally decided to accept the position of advertising manager for the Overman Wheel Company.

"The second day he was in this position he designed the now celebrated Victor border, which is to-day copied all over the world, and two type foundries in this country are casting imitations of it."

### THE EFFECTS OF TRAINING.

The Beginning.

A Month Later.

In Condition.

—Le Grant.

Fred Patee, on account of removal from the state, has tendered his resignation as a member of the executive and finance committee of the Illinois division and his resignation has been accepted. Charles P. Watson, of Peoria, has been appointed as his successor.

A convention has been called for Saturday night, at Los Angeles, for the purpose of forming the South California division. The officers elected will serve until fall, when the regular election will be held. A lantern parade and a banquet will also be held on that day.

England claims, we believe, to be the leader as regards improvements relating to bicycles. How about this, then: "England granted 2,400 applications for cycling patents last year, while the United States patent office reports show that 4,000 patents for improvements in bicycles were granted in 1892."

The Troy (N. Y.) B C has elected the following officers: President, R. D. Cook; vice-president, M. Thiessen; recording secretary, W. C. Simmons; financial secretary, G. W. Daley; corresponding secretary, G. W. Cornwell; treasurer, J. R. Mulliken; captain, E. S. Homer

trustees, T. W. Hislop, G. A. Ruth, W. L. Speck, Z. Mead, Jr., and F. S. Snyder.

The Royal Cycle Works, at Marshall, Mich., have for the last two or three weeks been working twelve and a half hours a day in order to catch up on orders.

Charles Pasche, of Davenport, will retire from the cycle trade to accept a high position in one of the leading banks of Davenport. A new firm of young men well known on both sides of the river will take his business.

A new bicycle factory has been started at Piqua, Ohio, by Messrs. D. M. Wyatt and C. F. Schnauffer. It will be known as the Piqua Cycle Works and a high grade wheel will be turned out. They claim to have something entirely new in the shape of a pneumatic tire and several other desirable features. They already have the material on hand and in a few weeks will have out sample wheels.

Writers on trade topics can always find a market for interesting and instructive matter at the REFEREE office. We shall be pleased to arrange with competent writers for regular contributions.

#### TRADE IN ROCHESTER.

Dealers Report Business Far Ahead of Last Year.

ROCHESTER, March 19. — Predictions made during the winter that the bicycle trade in '93 would lose a large percentage of the enthusiasm of prospective purchasers, which so auspiciously manifested itself in '92, seems to have encountered a reversal of affairs infinitely gratifying to the local agents, at least, and, perhaps, the trade generally. To the REFEREE's local representative many dealers talked of the trade prospects for this year in an apprehensive manner, basing their fears on the fact that the world's fair in Chicago would attract hundreds of young men, and thus attracted thither much expense would be involved. "Then," as one dealer said, "the young man would discover that with his income of moderate proportions he could not get a bicycle without temporarily embarrassing himself. He can not get a wheel unless he deposits a third of the value. He prefers to wait another year, and there you are losing customer after customer." Only for a time, it might be inferred, the trade would ultimately come in the way of the dealers. Happily, however, and consoling also, is it to know that business this year has been so brisk as to turn the heads of the false prophets to shame.

Genial weather, dry pavements and light machines, showing more improvements and symmetrical lines are too great a temptation for all men, young and old, and not excluding those who have their minds and purses bent on Chicago. It is a temptation irresistible, and in consequence the dealers have been doing quite a thriving business.

Robert Thoms is as happy as the proverbial clam over the large number of sales already made. "We will have nearly everything our way this year with the Victor," said he. So far this season, which is early here, three machines have been sold by me, while a year ago up to the same time the sales were a third less. Victor pneumatics are farther in the van than any other pneumatic in the country. It is as much better than any other pneumatic as is the Victor cushion ahead of any other cushion. With us the old saying, a good beginning makes a bad ending, is interpreted to mean a good beginning, constant prosperity and a good ending."

F. L. Hughes, the Columbia agent, was talkative and interesting. He said: "Sales have been surprisingly good thus far. Most of the lookers for wheels are the riders that have something to trade, and usually securing better bargains by being early birds. One man is kept busy explaining the great gain in power of the elliptical sprocket wheel over the round. It has caused a furore in wheeling circles, and I think the Columbia and Hartford companies have struck it rich. The prospect

for a big season was never better, and I'll tell you why. Last season the people were fearful of the pneumatic, and deferred purchasing until this year in order to look into the merits of the inflated tire. Now the cry is exclusively for pneumatics, everybody contemplating buying feeling perfectly assured of the value and comfort of the balloons. Lady lookers are numerous this year, and no doubt there will be a perceptible increase in the number of feminine riders."

C. J. Conolly: "Business is out of sight." Being asked to interpret this remark in plain English, Mr. Conolly replied that the business with him up to the present time was a fourth greater than for the same time a year ago, "and what is more encouraging," said he, "is the outlook that this lively pace will not be relaxed at any time during the year. Humbers, Ramblers, Buffalos, Niagaras, Stearns and many others are holding their own against any of the machines in the market."

President W. W. Kenfield of the Rochester Cycle Works is as much

ford way, and the extensive, well-lighted shops, built of corrugated iron, lined with timber, are all on the same level, covering a very large area. For the past year or two this remarkable rural factory has been turning out from 250 to 300 machines per week, without advertising the fact to the cycling world at large. Its orders have been executed for the trade. Between 100 and 200 workmen are employed. The stock of parts in the store rooms, including tires, is very extensive. Two sixteen-horse-power gas engines drive the machinery throughout the factory. I was taken through the buildings and saw the machinery and plant for enamelling and stoving, polishing and plating. The works manager is A. J. Buckingham, late of the Great Western Cycle Company, Bordesley, Birmingham, who is assisted by Mr. Goodwin, late of the Southern Cycle Company. Mr. Buckingham is a brother of F. S. Buckingham, the ex-racing man and present manager of the Elswick Works. The St. Andrews company is now preparing to place on the market its own machines, and is securing agents throughout the country. The A. J. Buckingham safety is a full roadster weighing 40 pounds, listed with Dunlop tires at \$123. In its light roadster form (No. 2) it weighs 33 pounds and is listed at the same sum. As a racer it weighs 24 pounds and is listed at \$133. A very

ATHERTON'S SPOKE HEADER.

elated, apparently, as any manufacturer could wish to be. The factory's output has long since been disposed of, and to most responsible and enterprising business men. Mr. Kenfield stated emphatically that this season would surpass any of its predecessors, meaning that the sales would be greater. The company is enjoying a big local retail trade.

Bettys & Smith, manufacturers of the Humming Bird, say they will have no trouble to dispose of their entire product in this city, and as a side line they anticipate lively sales with the Union, Fowler and the Lovell Diamond.

From information elicited from the different dealers, light wheels are in the greatest demand. Riders are keeping shy of "lumber wagons," as is the term applied to heavy wheels.

#### TRADE TALK FROM ABROAD.

An Unknown but Large Factory — Brisk Trade in Front Drivers.

LONDON, March 11. — One day last week I paid a visit to Romford, about twelve miles northeast of London, to visit the St. Andrews Cycle Company. I knew nothing about the firm. Had I found a small shed containing two men and a boy I should have felt no surprise. After tramping half a mile along a country road I reached the works, which proved to be the largest in England, south of Coventry. Ground is cheap out Rom-

ford way, and the extensive, well-lighted shops, built of corrugated iron, lined with timber, are all on the same level, covering a very large area. For the past year or two this remarkable rural factory has been turning out from 250 to 300 machines per week, without advertising the fact to the cycling world at large. Its orders have been executed for the trade. Between 100 and 200 workmen are employed. The stock of parts in the store rooms, including tires, is very extensive. Two sixteen-horse-power gas engines drive the machinery throughout the factory. I was taken through the buildings and saw the machinery and plant for enamelling and stoving, polishing and plating. The works manager is A. J. Buckingham, late of the Great Western Cycle Company, Bordesley, Birmingham, who is assisted by Mr. Goodwin, late of the Southern Cycle Company. Mr. Buckingham is a brother of F. S. Buckingham, the ex-racing man and present manager of the Elswick Works. The St. Andrews company is now preparing to place on the market its own machines, and is securing agents throughout the country. The A. J. Buckingham safety is a full roadster weighing 40 pounds, listed with Dunlop tires at \$123. In its light roadster form (No. 2) it weighs 33 pounds and is listed at the same sum. As a racer it weighs 24 pounds and is listed at \$133. A very

neat ladies' safety, bearing the same name, has a curved frame of double tubes, connected by struts, and with a gear case and guards weighs 37 pounds. The A. J. Buckingham front driver safety has Crypto gear, and with Boothroyd tires weighs 36 pounds and is listed at \$138. The second grade safeties are called the Hornchurch, and a tricycle is also made. These machines are well made and well finished, but the prices I have quoted are ridiculously high, regarded from the purchaser's point of view. The explanation, however, is that a liberal profit is allowed to the middleman or agent, who in his turn allows a substantial discount to the rider. This policy may prove a successful one, although it appears to me foolish to issue a price list containing misleading figures likely to frighten customers from a good article.

H. T. Arnott, the well known and energetic captain of the Bath Road Club, who about a year ago launched himself into the cycle business under the style of Arnott & Co., has now changed both his premises in Newgate street and the title of his firm. The shop in Newgate street has become the London depot of the St. George's Engineering Company, and when I called recently I was shown the latest light roadster New Rapid safety at 27 1-2 pounds, and a racer scaling at 23 pounds. The New Rapid people will not

touch the f. d. this year. But to return to Arnott. I found him installed in King Edward street, close to Christ's hospital, where, as the Union Manufacturing Company (which sounds quite Yankee, doesn't it?), he has an attractive depot, full of mounts designed to meet the prevailing public taste. The Union 38-inch f. d. safety, with Crypto gear, is a neat little mount, 34 pounds being its weight as a roadster, and 28 pounds as a road racer. Its back wheel is only 20 inches, and is fitted with a mud protector to the bearings. Mr. Arnott also controls at least two other cycle depots—one at Streatham and another is the east of London.

Jelley & Co., of Wandsworth, who were amongst the very earliest in the field to make and advertise both geared ordinaries and f. d. safeties, are just now doing a brisk business with their neat little front driver. "Horseskin" Norris on the vaaduct, who is now an agent for ever so many makes, finds it difficult to keep a specimen in his shop, so rapidly do the mounts go off.

There is now no doubt that the Crypto f. d. safety will figure prominently on the path during this season. Mr. Boothroyd has been riding for months a tiny specimen with a 30-inch front wheel, hardly distinguishable from a safety at night. Made as a racer this machine will weigh 23 pounds and expose the rider to little more windage than that encountered on a rear driver. Of course a special gear is used, with ball bearings to all frictional parts, especially suited to the low wheel employed, and possessing a new feature—the capability of being used on roadsters as a two-sp ed gear. By altering the position of one of the gear wheels it is possible to change the gear to one some inches higher or lower, as the case may be. Of course, the change would not be affected when traveling, but at the close of the summer or the commencement of spring.

Improvements continue to be made by the progressive front driver firms. I have just placed an order for a new machine, which I had no intention of doing until the other day, when I happened to try the very latest sample turned out by the Crypto firm for a fellow club man. It was a 28-inch f. d. with a 22-inch back wheel, one inch rake to the fork, center of saddle 13 1-2 inches behind the axle, and most comfortably arranged handles, dropped and brought back at the ends, with full roadster tires, and its complete equipment for the road, lamp, bell, pump, etc. This mount weighs 32 pounds. I have tried various f. d. safeties at different times, and preferred to cling to my geared ordinary, but the running of this machine caused me to alter my mind at once. In has got my order, and by Easter I hope to be carrying my head eight inches lower in the world.

The Premier rear drivers made of the new helical tube are now met with on the road. I shall be surprised if there is not quite a little boom with them shortly. There is a powerful attraction about a stout looking machine, rigid as a rock, large in its parts, fitted with broad mudguards to both wheels—in short, possessing all the comforts of a full roadster — while only scaling, when loaded up with lamp, bell and valise, a shade over 32 pound. Such is the helical tube Premier.

The Rudge Cycle Company has the satisfaction of knowing that the first prize taken on French soil by a pneumatic tired sulky in a trotting race was secured at Neuilly-Levallois last week, with the aid of a Rudge.

The cycle show in Manchester does not appear to have brought any novelty to light. The exhibit was a small one,

most of the exhibitors being agents, exhibiting well known makes, or small local makers.

In my last letter I referred to the comparatively new but most promising cycle firm of A. Fearnhead & Co., Little James street, Holborn. At the last Stanley show the firm exhibited among other things its tire—then known as Turner's Climax, but now called the Fearnhead. From the following description which I have just obtained, a good idea may be formed of its present features. The roadster tire will fit 1 3-4 inch '92 pattern Dunlop rims, or 1 3-4 inch cushion rims. It consists of a composite inner tube cemented to the rim in the usual form, like a Boothroyd, with an outer cover carrying two endless wires in its edges, which cover protects the tube from the road. The wires, although gripping the tire, do not touch the rim. In the event of a puncture it is only necessary to deflate the tire, just outside the outer cover, patch in the ordinary way, and without waiting for the solution to dry, replace the cover and re-inflate. The racing tire consists of a canvas bag with two wires running in the interior of same, a pure rubber tube and an ordinary rubber cover solutioned on. When the tire is inflated it becomes clinched upon the rim, for, not being able to expand at its outer circumference owing to the wire, it expands along its inner or bottom circumference and firmly clinches to the rim. The cover also makes a good protector for existing racing tires when used on the road. One of the best tire protectors and anti-slippers on the market—the Trigwell—is attached to the tire by a similar method.

STANLEY.

CHICAGO TRADE BRIEFS.

Movement of Traveling Men—General Local Trade Talk.

F. N. Smith, of the Garford Manufacturing Company, is in the city.

Horace Bell, 285 Wabash avenue, has secured the agency for Cook County for the now popular Stearns.

William Perrett left Chicago last week with a "book full of orders" (so he says) for saddles and Quinton Scorchers.

R. O. (Dick) Forrest has entered the employ of the Century Cycle Manufacturing Company as salesman in the Chicago store.

Robert Slusser started for the south last week in the interest of the Century Cycle Manufacturing Company. His first stop was at Memphis, Tenn.

The Thorsen & Cassady Company has secured the agency for the state of Illinois for Relay cycles, made by the Relay Manufacturing Company, Reading, Pa.

Frank Smith, manager of the Sunol Cycle Company, is in the west recuperating his health. Mr. Bishop, of the McIntosh-Huntington Company, is now filling Mr. Smith's place at the factory.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

The Century Cycle Manufacturing Company has added Quinton Scorchers to its line. Arrows, New Howes and Quintons will all be pushed by this concern, the former being of the company's own manufacture.

George T. Brodnax, of Deupree & Brodnax, Memphis, Tenn., was in Chicago last week arranging for agencies with Chicago manufacturers and jobbers. T. J. Deupree, of the above firm, is now located permanently in Chicago. Mr. Brodnax is conducting the

entire business this year, which he prophesies will be large.

Dan Caswell, formerly with Wright & Ditson, Boston, will assume charge this week of the retail store of A. Featherstone & Co., 282 Wabash avenue. Mr. Caswell has had an extensive experience in the bicycle business.

A local traveling man returned from the road recently with weird tales of inflated sales. One man bragged of an order for twenty-five wheels, but when the l. t. m. reached the town he solicited an agency from the same agent. Yes, he would take it on the same terms as he got the —, the consignment of one machine, to order twenty-five if he could sell them, or as many less as he liked.

C. H. Sterner returned last week from a trip in Iowa in the interest of the Thorsen & Cassady Company. He reports excellent business, chimes in with all regarding price cutting, and says the field is greatly over worked. Mr. Sterner has severed his connection with the above concern to take charge of his cycle business at 597 West Madison street. Warwicks, Remingtons, Fliers and Western Wheel Works goods will be handled.

An eloquent tribute to price cutting was given by Harry Hanford, of the McIntosh-Huntington Company, last

and Chicago, notably Buffalo and Cleveland.

C. E. Wilson has secured the agency for the Niagara wheels at Troy, N. Y. Mr. Wilson is a successful agent and will, no doubt, do well for the Niagara.

A Chicago house received a letter from an agent who says he can get a discount of 32 1-2 per cent on an order of two wheels. Similar stories are heard every day.

John B. Narick & Co., Manchester, N. H., agents for the Victor, Keating, Eagle and others, are doing a large business in fitting sulkies with pneumatic tired wheels.

Reports from Ottumwa, Ia., say the trade in cycles this spring has been and will continue good, one firm, Pallister Brothers, having disposed of all its first shipments.

The Ohio Cycle Company, with a capital stock of \$10,000, was incorporated last week by A. W. Gump, H. A. McGinnis, Frank L. Smith, W. S. Allen and Alfred N. Binkerd.

Winona, Minn., is one of the liveliest cities in the northwest in the cycle trade. Gregory & Co. are the leaders, handling Columbias, Victors and Unions. Le Mar & Roberts and the Winona Cycle Company are other prominent dealers. The long time payment

THE VINCENT, MODEL A

Saturday. Hanford was in Chicago on his way to Cleveland. "Yes, I am going back," said he, "going home to talk to the firm. Prices are being cut so unmercifully a man has got to get down on his marrow bones to sell goods, and these prices must be met nowadays or 'your name is mud.' Of course, you know, our wheel is better than these cut-price wheels, but the trade won't see it that way."

GENERAL TRADE NOTES.

Paragraphs About Trade Men, Wheels and Business.

P. A. Stubblebein has opened a new cycle store at Ilion, N. Y.

A small bicycle factory has been opened on Center street, Doylestown, Pa., by J. C. Hensall.

George Coffin, who gained something of a reputation on the path last season, is now in the cycle business in Newark, N. J.

A scheme is on foot to start a bicycle factory at Appleton, Wis. The names of those interested have been withheld from the public for the present.

Elyria, Ohio, business men are making an effort to secure the Sunol works. A company is being organized and subscriptions taken with that end in view.

Look out for Jake Bretz! He is now en route west and will not take a course as straight as the crow flies. He will call at various villages between New York

system is the only drawback to a most profitable business in that quarter.

Maltby, the trick rider, has been engaged by the American Ormonde Cycle Company to run its riding school at One hundred and Twenty-fourth street and Seventh avenue, New York.

Under the title of the Peoria Bicycle Works, W. O. Wood and F. B. Lucas have opened a repair shop at 608 Main street, Peoria. Mr. Wood had charge of the repair shop of Kirkwood, Miller & Co.

The recent thaws and heavy rains in Michigan, which produced a small sized flood in Grand Rapids, stopped all work with the Grand Rapids Cycle Company for several days. No damage other than the loss of time was caused, however.

Owners of old wheels which need retiring are informed that the New York Belting & Packing Company has on hand a few '92 Protection Strip tires, and also some cushions and solids of various sizes. These are being sold at reduced prices.

The Buckeye Cycle Company of Columbus, O., has been experiencing a lively demand from agents for its lines—March, McCune, Telegram, Dauntless, Crawford, Queen City, Buckeye and Ben Hur—and reports that the season will be an unprecedented one, providing, however, that the factories make prompt deliveries. The Buckeye company makes shipments from Cincinnati, Baltimore, Chicago, Davenport and At-

lanta. Mr. Emmerson is the ruling spirit in this house, and has as manager Mr. Sea.

H. L. Howell of the Badger Cycle Company, Oregon, Wis., was in Chicago this week. Mr. Howell says his company will manufacture about 150 Badger safeties this season, and in addition handle the James, B. and A., and South Road for Oregon and vicinity. The St. Nicholas line of cheap wheels will also be handled.

The E. Lent Sons, of Greenwich, Conn., are making a safety called the Old Pat, with a 34-inch driving wheel and 32 front. This is, according to C. E. Lent, an experiment in wheel building, and the local riders like it. It is possible that a stock company will be formed to manufacture in a large way. The firm manufactures several other things, including sulky wheels.

A paragraph in a Dallas, Tex., paper says: "Ott & Trieller, 281 Elm street, started last January with four hands to manufacture bicycles out of the rough work received from the north. Mr. Trieller says: 'Our prospects are bright, encouraging the belief that we can rapidly enlarge our business. Making the bicycle here represents a paying return. It is too early to make an estimate of wages.'"

The Red Star Manufacturing Company wishes to call attention to its advertisement this week in regard to imitations of its Red Star Solid Illuminant. It has applied for patents not only in this country but also in Great Britain, France and Germany, and says it intends to prosecute every case brought to its notice of an infringement on its rights, whether it be a manufacturer or simply a dealer selling an imitation.

L. W. Conkling, who is on the road for the Coventry Machinists' Company, reports a good trip. He has recently placed agencies with the following: Baker & Watson, Terre Haute; Hay & Willets, Indianapolis; Kratz Brothers, Evansville; Joe W. Bell, Fort Wayne; Hub Cycle Company, Richmond; Schulenburg Cycle Company, Detroit, Mich.; Lear & Thurber, Columbus, O.; D. Olin-ton Herly, Dayton, O.

The buildings for the Snell Cycle Fitting Company, Toledo, are about completed. The company will have one of the finest plants for the manufacture of parts, lamps, etc., in the world. As our readers are aware, Mr. Snell is now located in Toledo, and is giving the new enterprise his personal attention. The REFEREE will be able to give its readers more information concerning this company in the course of a month.

Ivel Cycles in America.

Ivel cycles need little introduction, as Dan Albone's wares are well and favorably known—even to Americans, although Dan's famous "brat basket" has not made much headway on these shores. Biggleswade has been made famous as the home of the Ivel, and the remarkable road performances by amateurs of more or less note, have made the machine much sought after. The Ivel Cycle Company, limited, which is now pushing the construction of the wheel, is a solid concern and doing full justice to the name and fame of Ivel.

The American business has not been of large proportions, and the original importers, R. H. Dana Company, 15 Whitehall street, New York, this year gave the agency to a New York firm whose past experience with the business had been confined to reports that there were "millions in it." As is generally the case, they failed to sell their goods as fast as they expected. Lack of ex-

## SUCH IS FAME.

When Stanley found himself lost in the jungles of darkest Africa he was somewhat astonished to learn that the natives were acquainted with two English words; *only two*—and this proves what it is to have a reputation. One word was *bicycle* and the other was *Tourist*—"Tourist Bicycle."

Another enlightened tribe, still further in the interior, showed its progress toward civilization by being able to articulate "Bidwell Tire," "Restrictive fabric." And one inebriate old black king even used one every morning for the novel purpose of reducing his head to the proper size after a night's debauch. *You know it contracts upon the rim when inflated.*

perience and the right people to handle it, caused them to turn the agency over to the original importers.

But in the hands of the R. H. Dana Company, whose secretary, James H. Opp, is filled with that kind of energy that wins, the business is progressing so well that 600 out of the 1,000 imported are sold already. There can be no delay in shipment, as the wheels are now all here, and parts in abundance came with the wheels, so that agents who handle them can replace any part on short notice. The ladies' Ivel is a pretty wheel with plenty of room between saddle post and handle bars, and the handles are placed in a correct position. The R. H. Dana Company wants agents west, and will treat responsible people liberally. The Ivel will be shod with Bidwell tires, but any preferred tire can be put on. R. H. Dana is now in Europe visiting the large manufacturing factories.

*Hunt's New Racing Saddle.*

The cut herewith shows a new racing saddle put upon the market by the Hunt Manufacturing Company, Westboro, Mass., which furnishes the following details:

It is adjusted with the forward end down and high in the back. It may be adjusted so that the forward end will be higher and the back lower; it is the only racing saddle that can be so adjusted. The adjustment for the seat post is of forged steel with no chance to get away. There is no possibility of the saddle turning on the post, and it is fitted for any size post from 9-16 to 7-8, and is of very light weight, being made 12 and 15 ounces, respectively. The base of this saddle is made from sheet steel, rolled es-

pecially for this purpose, as by practical test very little of the stock already manufactured is strong enough. It is fitted with either the regular leather top or with the special non-stretchable top manufactured by this company. Very few samples of this saddle have been put out on account of the delay in securing the special stock required, but considering the limited amount of soliciting this saddle has had it has taken remarkably well and generous orders have been placed for it; one order from one dealer being for 1,000 with the special top. The leading racing men who have seen it pronounce it the ideal racing saddle for the season of '93. Orders are now being filled promptly.

*The Atherton Spoke Header.*

After several years of experience with spoke heading machines, F. C. Atherton, of the Buffalo Tricycle Company, has invented a machine which he thinks contains more desirable features than anything of the kind yet produced. The parts are made of tool steel, and are all adjustable. The machine has a capacity of 10,000 per day and a boy can run it. The dies can be arranged to head any sized spoke desired, and a set screw and lock nut changes it either way the thousandth part of an inch in a moment. There are several new features connected with this machine. The plunger comes against the header so it can be adjusted so as to make any style of head desired

without altering the dies. The dies are small and can be readily replaced when worn out, or replaced with different dies for larger and smaller wires. The entire machine is automatic in its workings, and the only thing necessary is to place the spokes in proper position and they are headed and thrown out, and the machine is ready for another.

*The Vincent Company's Wheels.*

The Vincent Cycle Manufacturing Company, Buffalo, writes that it has a thousand machines this season, and is now working night and day trying to catch up with orders. The Vincent model A has 28-inch wheels, 43-inch wheel base, music wire spokes, dust-proof bearings, 9-inch steering head, barrel shaped bottom bracket, 6 1-2 inch cranks, and rims finished with orange

Q, block No. 3, where we propose to exhibit rifles, both military and sporting, shot guns, double Derringers and all arms at present manufactured by this company, as well as samples of all military rifles of Remington make furnished or used by foreign governments."

The English houses will be located in the west side of the gallery, or in the British section. The Coventry Machinists Company, will be located in section G, No. 71, between posts 19 and 21. The Raleigh company is in the same section, No. 70; Humber & Co., No. 72; Premier Cycle Company, No. 87 and Sparkbrook Manufacturing Company, No. 88.

*James Company Moves Again.*

The James Cycle Importing Company is about to move to new and more com-

THE WHITWORTH LINE.

ROAD RACER.

LADIES'.

SPECIAL TRACK RACER.

when specially ordered. The company is also making a 25-pound road racer, the details of which are similar to those of the model A, and a 32-pound road machine, fitted with mud guards and brake, as well as a 30-pound ladies' wheel.

*At the World's Fair.*

The Remington Arms Company, Ilion, N. Y., writes as follows: "Acknowledging receipt of your letter asking us particulars regarding the world's fair exhibition, we have been assigned space in the Department of Transportation known as section F gallery; post No. 2, frontage isles, and 14x16, in which we propose to exhibit bicycles, parts, etc. In our arms department we have been assigned space in the department of manufacturers in group No. 113, class No. 714, location in

modious quarters at 250 and 252 Wabash avenue. George T. Robie, proprietor of the Excelsior Supply Company, has purchased an interest in the James concern and will devote more or less of his time to pushing that wheel. There are now in the neighborhood of 300 James wheels between Liverpool and Chicago, or in Chicago. Last Saturday no less than a dozen wheels were delivered to city purchasers.

*Advertiser vs. Publisher.*

According to a story which reached us recently there is a prospect of some little amusement for advertisers and publishers over a suit between the American Dunlop Tire Company and the *Sporting Life*. It is said that a representative of the latter secured a contract, with the understanding that the advertisement was to occupy two inches at the bottom

of a reading matter column in center of page. The Philadelphia people not only refused to accept the contract, but, so the story goes, roasted the tire company into the bargain. Now the American Dunlop Company proposes to compel the *Sporting Life* to publish the "ad," feeling annoyed over the unsolicited "reading notice." Harvey Du Cros, Jr., corroborated the rumor. Manager Dayton of the *Life* says "go ahead," so that a case of interest is likely to result.

*A Neat Stand.*

The McIntosh-Huntington Company, Cleveland, has just put on the market a neat stand. It is finished in gold bronze

or nickel. According to the makers "it will take any size of tire, and has a firm grip on the wheel, and will hold it as firmly as any stand now on the market, and at the same time it is not necessary for the stand to be screwed down to the floor, nor is it possible for it to be over-balanced." The stand lists at \$1 and \$1.25 for bronze and nickel finish, respectively.

*Where is the Discrepancy.*

A correspondent writes the REFEREE as follows: "There is a discrepancy here. One manufacturer employs forty men and expects to turn out 1,200 high grade wheels this season—at least that is what he says. Another firm, which has on an average 200 workmen the year through, says it will make 4,000 bicycles. Another concern, employing at present 135 men, places its output at 1,800 machines, and a concern turning out medium grade machines employing 960 workmen will turn out 30,000 wheels. The first concern averages thirty machines a man, all of the best grade. The last mentioned concern, whose men are well drilled and far more familiar with their work through long employment, has about the same average of cheap and medium grades. The second concern, which turns out the highest grade wheel made, averages only twenty wheels to the man."

*Activity of Westboro.*

The old Westboro factory, over which the late Purvis Bruce used to mourn and rejoice in turn, is once more on terra firma. The company writes: "Every appearance indicates an extension of our plant will be a necessity next season, in order to take care of the contract work which will be offered us. You will be glad to know that contracts we have on hand for delivery this season have necessitated enlargements of our plant, the placing of new automatic machinery in our general machine room, and a bad attack of hustle throughout our entire corps. Portions of our plant will be run double time for the next five months.

*A Satisfactory Settlement.*

It will be seen by the following that the suit recently instituted by the Garford Manufacturing Company against J. A. Hunt & Co. has been settled out of court. Thus both parties showed excellent judgment in avoiding the expense and ill-feeling incidental to tiresome litigation:

WESTBOROUGH, MASS., March 18.—To whom it may concern: The patent suits recently pending between the Garford Manufacturing Company and ourselves have been settled, and all differences heretofore existing have been amicably adjusted. Under the terms of the settlement we have taken out a license from the Garford Manufacturing Company to manufacture under their patents, and are now in a better position than ever

# SEDDON ADJUSTABLE ADJUSTABLE TYRES

NO SLIPPING—————NO CREEPING.

EASILY REPAIRED.

★ *PERFECT IN EVERY WAY.* ★

Can be Exposed to Heat of Sun Without Danger.

Western and Southern agents will know what this means. Last year the agents of the old tyre explained all defects by saying, exposure to sun had caused the old pattern to explode.

The Seddon Stands All Climates.

There has been published lately as having been made an enormous deal in Tyre Patents, but the following

## EXTRAORDINARY

✈ AND ✈

## EXTENSIVE DEAL

Is unknown in the history of cycling. Seddon's Pneumatic Tyre Patents for United States and Canada have been purchased, and in future will be worked by the AMERICAN SEDDON'S TYRE COMPANY, with a capital of

to fill orders for a special line of saddles, guaranteeing at the same time protection to our customers, as we consider such arrangement to be of benefit to both our customers and ourselves by doing away with all expense of litigation. By this method our customers can feel assured of the protection necessary for our class of goods.

The Garford Manufacturing Company has been granted a license to manufacture under some of our patents.  
J. A. HUNT & Co.

RECENT ENGLISH INVENTIONS.

New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Jan. 18, 1893, give notice in the prescribed form of such opposition.]

THE NEW RAPID RIM.

No. 17,963. C. A. E. T. Palmer's "Improvements in the construction of hollow rims for the wheels of velocipedes and similar vehicles." Oct. 8, 1892.—According to this invention a hollow rim is constructed by taking a strip of steel (A) and bending the edges thereof back on itself and then up at the right angles. The strip is then rolled or drawn into a crescent section to form the shell of the rim, the edges (a a) forming widely projecting flanges below the edges of the rim. Another strip of metal (B) which is either entirely flat or has a concave curve in its centre as illustrated, is placed round the strip (A) so as to rest on the flanges (a a). The two parts are then brazed or hard soldered together, forming a hollow rim. One or other of the strips (A and B) may be thickened to receive the heads of the spokes. Several modifications of the principle are described and illustrated.

All persons interested in opposing the grant of a patent on any one of the undermentioned applications, may at any time within two months from Jan. 25, 1893, give notice in the prescribed form of such opposition.

A DETACHABLE PEDAL CLIP.

No. 13,761. R. W. Retford's "Improvements in pedal clips." July 23, 1892. The pedal clip consists of two plates of metal (A and A1) both of a T-shape and each carrying on its cross arm blocks (B) of leather or other suitable material. The plate (A) is the foundation plate adapted to be fixed to the boot and the plate (A1) is adjustable. The plates are adapted to be fixed to and adjusted with respect to each other by means of a bolt (c) passing through a hole in the plate (A) and through a slot (a1) in the adjustable plate, so the distance apart of the blocks (B B) carried by the plates may be varied to adapt them to fit either between the bars of a pedal or on either side of one of the said bars. In the end of the foundation plate (A) is formed an oval or rectangular hole (a), which is adapted to engage with a T-headed stud or screw adapted to be fixed to the waist of the boot in such a position that the plate (A) can only be released from the said stud or screw by turning the plate (A) at right angles to the boot. To the cross-bar of one of the plates (A or A1) preferably to the latter or to the block (B), carried by it is fixed a strap (D) adapted to pass over the toe of the boot to complete the attachment to the clip to the boot. These clips were on view at the national show.

THE ALUMINIUM SAFETY.

No. 986. T. L. Vincent's "Improvements in velocipedes." Jan. 18, 1892.—The improvements have for their object to enable greater lightness to be obtained and greater strength. Brazing is

dispensed with, the various parts of the frame being united by nuts, a more easy construction resulting therefrom, and repairs can be effected with greater rapidity. Further, this mode of construction enables aluminium to be applied to the manufacture of velocipedes, the lightness of which metal is well known. The invention is also applicable to cycles constructed of iron and steel. The frame of the machine, as will be seen on referring to the illustration, is constructed first of

tubes (a) supporting the axle of the rear wheel (b). The tubes (a) are provided at their front ends with conical parts, which are placed in the interior of the parts (c) which parts (c) are internally screw threaded to receive the screw plug terminated by the head (e). The pillar (f) carries the saddle and passes into a tube (g) on which is placed a piece (h) terminated at its upper end by a screw plug (i), the pressure of which exerted on the end of the tube (g) insures the rigidity of the frame by holding the piece (h) down. The backbones (k k) connect the back of the frame to the head, the conical ends of the backbones being connected to the piece (l)—and those which correspond to it—by the nuts (m). The handle-bar is connected to the stem (o) by a conical screw and nut (o2), and this is similarly connected to a tube passing through the head (n) by a screw and nut (o1). The chain wheels are composed of a body of aluminium, upon which is fixed a toothed ring of steel or other suitable material. A modified method of constructing the joints is set forth and other parts of the machine described in detail. A machine built in accordance with this specification was exhibited by Mons Vincent at the Stanley show, where it attracted considerable attention.

A GERMAN CUSHION TIRE.

No. 22,138. M. Ulitzsch and E. Kretzschmar's "Improved hollow India rubber tire for velocipedes." This invention is intended to improve cushion tires by manufacturing them of such a cross sectional form as will economize the material and increase the elasticity and durability of the same. The accompanying drawing shows the tire (a) in position on a metal rim (c and b) shows the usual annular hole. It is claimed that by this construction the hole (b) may be made larger than would be practicable with round tires of the usual kind and the elasticity thereby increased.

It is claimed that by this construction the hole (b) may be made larger than would be practicable with round tires of the usual kind and the elasticity thereby increased.

Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Anghinbaugh, patent attorney, Washington, D. C.:

- 492,887, bicycle whistle; Fred J. Hall, Wallingford, Conn.; filed July 16, 1892.
- 492,958, ball-bearing; William B. Douglas, Phoenix, R. I.; filed April 30, 1892.
- 492,959, velocipede; William H. Fauber, Chicago, assignor of one-half to Henry W. Norton, Wellington, Ill.; filed July 18, 1892.
- 492,988, velocipede; Charles F. Pease, Chicago, Ill., assignor to the Ames & Frost Company, same place; filed Oct. 22, 1892.
- 492,989, pedal; Charles F. Pease, Chicago, Ill., assignor to the Ames & Frost Company, same place; filed Oct. 22, 1892.
- 492,990, velocipede pedal; Charles F. Pease, Chicago, Ill., assignor to the Ames & Frost Company, same place; filed Oct. 22, 1892.
- 493,042, bell; Albert A. Page and William E. Sparks, New Haven, Conn., assignors to Sargent & Co., same place; filed June 20, 1892.
- 493,160, rubber tire; William Golding, Manchester, Eng., assignor to Charles Macintosh & Co., Ltd., same place; filed Oct. 6, 1891. Patented in England Dec. 8, 1890.
- 493,201, cycle; John C. Xander, Reading, Pa., assignor of one-half to James C. Reber, same place; filed Sept. 14, 1892.
- 493,410, wheel for vehicles; Marcus R. Wolcott, Rockford, Ill.; filed Dec. 19, 1892.
- 493,488, pneumatic tire, Charles E. Duryea, Springfield, Mass.; filed Sept. 5, 1892.
- 493,505, tricycle, Louis Kurtz, New York, N. Y.; filed July 2, 1892.
- 493,554, pneumatic tire, Charles M. Lungren, Bayonne, N. J.; filed June 9, 1892.
- Trade-marks 22,661, bicycles; the Kenyon Bicycle Manufacturing Company, Des Moines, Iowa; filed Jan. 7, 1893. Essential feature the word "Pacemaker."

A "Catcher" for 1894.

A. Tillinghast, the tire inventor, is in the city. Mr. Tillinghast is paying off a hurried visit to the prominent tradesmen. He informs the REFEREE that the patent office has just notified him that his applications for patents on the "hose-pipe" style of tire have been allowed and that he will prosecute infringers of his rights immediately upon receipt of papers. Mr. Tillinghast says that he has a "catcher" for '94 and will be very distinctly "in it" then. The new tire, he says, and mode of repair is simplicity itself. The factory is now very busy and barely able to hold good on orders.

# ROADS OF HOOSIERDOM.

CHIEF CONSUL HAY ON THE HIGHWAYS OF INDIANA.

Many Good Gravel Roads Now Existing  
—Wheelmen as Educators—Asphalt  
in Indianapolis—Ohio Men  
Quietly at Work.

INDIANAPOLIS, Ind., March 19.—Indiana has made some efforts toward better roads, but I am sorry to say the wheelmen have not been specially active in the movement. One reason is that the greater portion of central Indiana is fairly well supplied with passable gravel roads. If our roads were all bad (and I am informed that some states have no gravel roads) there would be a greater interest. In cities like Evansville, Indianapolis, Terre Haute, Fort Wayne, and many others in the state, many brick and asphalt streets are being put down, and one good street in a town brings many more.

While the wheelmen undoubtedly do something, I am of the opinion that it is a matter of financial interest to the business men and property holders where the streets are put down. Good roads must come; ditto good streets, but I think that one would see these improvements even if there were no wheelmen.

THOMAS HAY.

The people demand them, and it is only a question of expense in our city. The principal factors in good streets are the paving companies, which are working up the interest. About four years ago the first asphalt was laid here. Now we have miles of asphalt and brick, and the people are hungry for it. Wheelmen are doing a good work in their good roads movement, but the actual results must come from the property holders, for they pay for it.

At the road congress here last winter, held by the Commercial club of this city, our Indiana Good Roads Association was formed, but its labors before our general assembly accomplished little, as it (the assembly) was afraid it might pass a law that would burden the poor farmer. The late lamented (?) Schrader bill 215 is a sample of the ability of the men elected to represent the people, and in this Indiana does not stand alone. All state legislatures have their bright lights; good roads will come as natural growth of the country. Wheelmen can point out their advantages, but wheelmen can not build them.

Farmers are slow to see their own interests, and again farmers do not read good road literature. The same road law for even the whole of Indiana will not be sufficient to secure good roads because of the abundance of material in

the central parts and its scarcity in the southern and northern parts. I hope to see a national, state and county system, for all are interested, and it must have the united support or the cost will be great, and it will take years to complete. Cities will build good roads, but the farmer will drag through mud hub deep for the rest of his life before he will submit to a tax for road improvement, "so them bicycle fellers can ride."

THOMAS HAY.

Mr. Hay is a young and energetic officer. He was born in 1868. He is also engaged in the bicycle business, which he entered about four years ago. He then managed the retail department of the Indiana Bicycle Company. A year later, with his present partner, Mr. Willits, he purchased this business and added a number of wheels to the line. The firm has since prospered and is favorably known to nearly all trade men. Mr. Hay is serving his second term as a director of the Zig Zag C. C. Under his administration the membership of the Indiana division has increased 100 per cent. For a time Hay aspired to be a racer, but finding he had not the proper material in him to make a successful "pure"—as we have them now—he withdrew, and has since been content to win shekels by sales which the racing board cannot question.

\*\*\*

Quietly at Work in Ohio.

Ohio men are at work quietly, but systematically, on road matters. The wheelmen have concluded, perhaps wisely, that success in the end is more to be desired than glory for the wheelmen at the outset and ultimate failure. Hence, if we hear little of what Ohio wheelmen are doing it is because they consider it wise to "saw wood and say nothin'" for the present. The logs are falling just the same.

A road bill is being worked through the Ohio legislature. The methods are, first, to get a good lobbyist—one who has the privileges of the floor. Next, to reconcile the various committees who are always present to look after legislation which affects their interests. Then to frame the bill, section by section, so that it will secure the end and not have opposition in its passage. Next, to have it referred to a favorable committee. Lastly, to have it presented by a member who has aroused no antagonism on the floor.

From this programme the reader can judge of the great amount of work it is necessary to go through in order to accomplish the desired end.

Pennsylvania's Official Organ.

NEW YORK, March 23.—The Pennsylvania division has appointed *Cycling*, of Philadelphia, its official state organ.

It is reported that Abe Powell has been appointed official handicapper.

Should Read His Own Paper.

It has long been the proud boast of the editor of a contemporary that he does not read his exchanges. It now seems that he does not even read his own paper carefully. He has for a long time past been carrying an advertisement for a nickel-plating firm, which was asounded this week by receiving the following: "Gentlemen: Inclosed please find an inquiry for some work to be done. We would like to know when you are going to commence to advertise as promised." The firm is thinking deeply over the matter.

This incident reminds us of another which occurred some years ago, when the writer was connected with another journal. "Say, ———," said the proprietor one day, "here's an item of news for you. No one else will have it this week." And then he proceeded with his story. The writer heard him out and then, turning to a paper three weeks old, pointed out the item. Mr. Proprietor came to the conclusion that as a reporter he was a failure, and declared that he would read his own paper thereafter.

## THE OFFICIAL ORGAN.

On Monday information was given to the press to the effect that the Wheelman Company had thrown up its contract, and that the league was, from that moment until some other arrangement is made, without an official organ. At this writing only fragmentary information as to the true condition of affairs has been received. All that is known to a certainty is that Vice-President Sheridan has received from the Wheelman Company a letter containing the following:

We deem it proper to notify you that hereafter the paper will not be mailed by us to the members of the league until it can be sent in accordance with the terms of our contract. The paper will be printed as usual and will be placed at your disposal.

We are left entirely in the dark as to the cause of this extraordinary action. The contract has never been made public and is enshrouded in mystery, so that no one, except those in the secret, are able to state in what manner the league has failed to live up to it. We doubt whether anyone knows. Over a year ago a clause was placed in the by-laws providing that twenty-five cents of the dues should be set aside as the subscription price of *Good Roads* and the *Bulletin*. It has been suggested that the Wheelman Company may be after one-half of that sum. But it is all guesswork.

On one point every man interested, with whom we have spoken, is agreed. They regard the action of the Wheelman Company as an abrogation of the contract and declare with one voice that it should not be renewed.

The executive committee of the league is to meet in a few days, and may seize the opportunity to rid the league of its bargain. The question then arises. What is to be done about an official organ? The people who have been so free with their charges of "jealousy" and "selfishness" will no doubt be surprised to find how unanimously the big cycling journals will fail to apply for the job. But that doesn't mean that a bulletin cannot be made self-sustaining. The REFEREE has long believed that the league should publish its own paper. We have been told that the attempt was made before and proved a failure, which is true enough. But

why? The business at that time was in its infancy. The league could offer the advertiser nothing in the line of circulation for his outlay. And finally, the paper was run by people of extravagant ideas and poor business methods. Things have changed. The business of to-day as compared with the time when the league published its own paper is as Chicago or New York to a country hamlet. The league's membership is ten times greater. We know what a suitable paper can be published for, and have confidence in the ability of a number of men already engaged by the cycle press to make the business end of it a success. Facts and figures could be laid before the executive committee to prove this. There are difficulties to be encountered, however, which would need prompt, energetic action to overcome. Before the league can publish its own paper and send it through the mails as second class matter its constitution must be altered so as to provide that every member must subscribe to the paper. The amount now paid would remain the same, of course, the change being a mere technicality to legalize the publication. An alteration of the constitution requires thirty days' notice. If this plan is to be acted upon it must be done at once. The renewal season is close at hand. It would be necessary for renewals to be made on a special blank which should state distinctly that fifty cents was for dues and fifty for the subscription to the *Bulletin*. Before proceeding the executive committee should ascertain beyond question whether the plan it decides upon is legal. There should be no further juggling with Uncle Sam and his postal laws.

It has been suggested that *Good Roads* might be made the official organ. There are the best of reasons for opposing this proposition, which, however, may be gone into later. We believe there is little reason to anticipate any such movement.

LATER.—Since the above was placed in type we have received telegraphic information to the effect that the trouble has been patched up. Before commenting further, however, we await the next issue of the *Bulletin*.

## AGAIN THE ROADS BUREAU.

When we took the side of the gentlemen who demand a showing of the condition of the road bureau's finances we fully expected the abuse and misrepresentation which has fallen to our lot. Hence we are not disappointed. But that will not prevent our following up the agitation and aiding, so far as lies in our power the attempt to lay bare the facts before league members. By this means we expect to bring about certain reforms which will be beneficial to the magazine and to the league. The question we have to consider is, is *Good Roads* being run on the most advantageous lines possible. We are led to believe that the editor himself does not believe so—that he sees no advantage in giving away 35,000 copies per month to league members, half of whom never open them. The most persistent advocate of the system, we understand, is the president, and what advantage he sees in it he has not made known. To anyone else it looks like a case of carrying coals to Newcastle.

If, instead of wheelmen, who are already convinced, the papers were sent to governors, congressmen, representatives, mayors, aldermen, road supervisors, county commissioners and engineers, there can be no question that the benefits accruing would be increased tenfold. If some members of the league desire to receive the magazine, why not let them pay for it. How can the

league, which receives twenty-five cents per annum per member, send out to each a work which costs fifty cents per annum? Twenty-five thousand copies, distributed judiciously among the classes we have named, must inevitably bear fruit.

As for the farmer, it may be well to send him a copy once in a while—at Christmas, for example, when he will be rigged out in his best Sunday suit and feel like reading something pretty, but the way to reach him most effectively, is by means of the cross-roads newspaper, to which he contributes a cord of wood or a bushel of potatoes per year in payment of subscription. Some time ago Mr. Potter had an agreement with one of the newspaper press associations under which he supplied them with a page per month of road matter. It may be still carried on—we don't know. This matter was supplied by means of "patent insides" to hundreds of papers and tens of thousands of country readers. There was only one fault to be found with it—it wasn't illustrated.

This matter reached tens of thousands of dwellers in the rural districts and cost nothing; *Good Roads* reaches 35,000 wheelmen and a few other reformers and costs \$1,400 per month. Who will hesitate to state which was the better investment.

But one class of men requires a better class of literature than another. The engineer and the legislator require more technical information than the farmer, and it is to them that *Good Roads* should appeal. We shall miss our guess if the change above outlined is not adopted in the near future. The men at the helm are bound to realize, shortly, the fallacy of the present system. Under different circumstances the present serious loss might be changed to a modest gain.

In an article written by our New York representative and printed in this paper two weeks ago, it appeared that certain questions had been asked a firm which formerly published *Good Roads* which elicited the information that less than the 35,000 copies claimed had been printed. It has since transpired that the issues referred to were the first six, and that the membership of the league was much smaller then than now, so that a great many less than 35,000 copies were needed to go round. The explanation is entirely satisfactory. If there is any question about every league member having received the magazine we shall doubtless hear of it in due course. It is worthy of remark that the information concerning the suit against the bureau was given our representative by the gentleman who conducts the *Sporting Times* cycling department, who, instead of publishing the news, now devotes half a column of space to abusing the the REFEREE for having done so.

## OUR TRADE WITH ENGLAND.

We hear rumors of the failure to meet their liabilities of another large American firm of importers.

So says the *Cyclist* of March 15, since which time, however, no such catastrophe as is indicated in the paragraph has been reported to us. The English trade is in a highly nervous condition, and watches keenly for signs of failure in the American market. While it would be too much to expect that there will be no complications during the season, there is really no need of this serious alarm. It is dollars to gooseberries that the failures in America will not equal those in England this year. Those houses which have looked well to their fences—in other words, those which have looked into the standing of their American agents—have no cause for fear. Others have themselves to blame.

Even now a word of warning may be in time.

A month or two ago we ventured to point out a few of the causes which have led so many English houses into misfortune, and thereby called down upon our heads the wrath of a couple of hypercritical importers. For the purpose of showing how near we were to the truth we here reproduce from the *Wheeler* a portion of an interview with Stephen Golder, a man who has had more experience with American houses than any other English traveler:

I know of one or two English representatives that have taken good orders from reliable houses, and I know of others that have returned without taking a single order—this they have told me, and I know it to be true. Yet I read in the papers a few weeks later that so and so had returned with large orders, etc. It must be the sea voyage home, I think, that makes a man exaggerate. The great trouble is they do not stay long enough in the country to look round thoroughly. Arrive one day, stay at New York, rush off to Chicago or elsewhere, close with the first firm they get an offer of a large order from, looking them up in commercial agencies invariably (often very misleading) and then catch the first boat back, and feel satisfied that they are real hustlers. Later on they do not think so. To do a successful and safe trade in the States a man wants to stay a time, study the people, their requirements, visit their Philadelphia show, their race meets, their club houses, and travel the country through. Then he will have some idea of the vastness of the territory he often allots to one man.

Had Mr. Golder studied our article on this question during his entire voyage, he could hardly have repeated more faithfully the contents thereof. There is safe business to be done in America, but by men of ability, capital and experience only.

## BARRETT AND MUNGER.

Pens and ink, tissue-exhausting efforts on the part of high and low salaried writers of sporting fiction for the daily papers, have contributed to these men, in a few days, more advertising than five thousand dollars could have purchased. And why? Because something happened to them which is liable to happen to members of any organization for a multitude of reasons. They have been bounced from the league for having signed their names to an application for membership from a professional. The writers have not considered the gravity of the offense, and in truth it isn't worth much consideration. The men did a foolish trick which ten thousand other members of the league would have done. What worries people seems to be what effect the expulsion will have on the amateur status of the riders. None whatever, of course. If a man is expelled from a club whose members must all be amateurs, does it make him a professional? No more than it makes him a woman or a Hottentot. Barrett and Munger have yet a chance to be heard. They don't appear to have been accorded that privilege by their judges, by the way. They can appeal to the rights and privileges committee, and by means of careful conduct of their case, defer action for months and place themselves among the most talked-about men in the league. Meanwhile they can not compete in division championships. That is the extent of the penalty unless they take the, to them, insignificant matter of disgrace into account.

## WHEELMEN AND ELECTION.

The wheelmen of Chicago have missed it again. So have those of many other cities. We refer to the opportunity to make their power felt at election times. What is the wheelman's hobby? Good roads. Is it a selfish one? By no means. It has been clearly demonstrated that good roads and prosperity are synonymous. Then, by voting for the good roads the wheelman votes for the good of the entire community. What objection, then,

could have been urged against concerted action at this time? None that we have discovered, and yet the wheelmen and the clubs sit idly by, contented to indulge in all sorts of harmless but nonsensical games, and pay no attention to the golden opportunity presented to better their surroundings and to place themselves on record in favor of one of the greatest blessings the country could ask. There are a few exceptions—notably Philadelphia, St. Louis and Baltimore. What are the associated clubs of New York and Chicago doing? Are they so fully occupied with theatre parties and road races as to find no time for ought else? If so, it is hardly creditable to them. Be boys as long as you can, at proper times, by all means, but there are occasions when it is desirable for wheelmen, as well as other people, to be men.

#### THE CONDITION OF TRADE.

From one of the oldest and largest manufacturers in America, one whose voice is a power in the land, comes the assertion, "Our business so far this year has exceeded that of any season since we entered the trade," and this, too, to a person engaged in the business and not for the purpose of self laudation or for publication. How now, ye croakers? Where are the men who say business is going to the bad?

This expression of confidence does not stand alone. From other sources reports equally encouraging have been received. The opinion gains ground daily that as soon as a little spring weather reaches us there will be a rush of business, a clearance of the stock left on hand last year by reason of the unusually rainy season, and a consequent loosening of the agents' and dealers' purse-strings, at present so tightly tied.

Much of the success of coming years depends on '93. Another season like that of '92 would cause a set-back from which the trade would take a long time to recuperate. But a repetition is improbable. The output of American factories will not, we believe, equal that of '92. Most decidedly there will not be the marked increase of former years. Many makers were badly frightened last season, and in consequence were not in the usual hurry to prepare machines for this year's market. As a result, one maker tells us that his output will be reduced from 3,000 to 2,200 machines; another from 4,000 to 3,000. The number of machines ordered from foreign houses has also seen a large reduction, so that, taken all in all, it seems probable that the season will prove satisfactory.

#### PAY YOUR ENTRY FEES.

The lax methods of accepting entries and collecting entry fees heretofore in vogue has at last led up to rather serious complications, which seem to merit the attention of the racing board. Two racing men have asked a race-promoting club for prizes won by them. Their entries were made by their respective clubs, but the fees have not been paid, and, although the men are willing to pay their individual indebtedness, the club declines to part with the prizes until the full amount due from the clubs they represent has been paid. Perhaps the race promoter is justified in its action; from one point of view it is, from another it is not. Everyone connected with the transaction has transgressed the rules. The men who made the entries had no right to send them without fees. The club had no right to accept them. Having allowed the riders to compete, the club now proposes to use the prizes won as a lever to collect the money due. It is a highly discreditable, unamateur proceeding throughout, and little sympathy

is due any one connected with it. We respectfully suggest to the gentlemen in authority the passage of such an arbitrary rule in this connection as will force settlement upon those persons whose sense of "amateurism" is so insignificant as to render them blind to moral obligations.

#### WORLD'S FAIR CYCLING.

We have been told that cycling and all other sports have been "laid tenderly away" by world's fair officials. The reason given is that the recognition of one sport would necessitate the recognition of all. This may be true, but still, if we remember rightly, the projectors were not slow to ask wheelmen and wheel clubs to contribute funds at the outset. Perhaps they didn't do much; nor do they ask much in return. All that has been asked is official recognition—no prizes, no money, no anything that is costly. Doubtless the world's fair people are well qualified to conduct their own business, but we can hardly think the expectations of wheelmen, based on the promises made in the early days of the management's existence have been fulfilled.

#### ANOTHER CHANGE OF OPINION.

Mr. Miles of the REFEREE was right, we were wrong; the proposed amendment, "hereinafter provided for," was not the snake it appeared. After careful consideration and study of the by-laws, we cheerfully recall all that passed.

So says the *American Athlete*, from which we quoted an opposite opinion two weeks ago. After a bit we hope to convince even the unbelieving members of the assembly that the proposed amendment was not based on "selfish motives," as charged.

#### THE OPINIONS OF OTHERS.

When a man has got over his novitiate, and has been able to ride passably well in any one season, mounts his machine, after having, perhaps, not been across it for four or five months, he always feels as if he could go as well as ever he did, and, especially if the road be good, he is tempted to dash away at his old rate of speed, and here it is that so many make a mistake. During the period of inactivity the muscles, which have been gradually brought to a state of perfection for cycling exercise, have relaxed to their normal condition, and the lung capacity, which has been, when in full practice, increased, has also returned to its normal condition. The result of rapid pedalling on the first ride of the season is to run the rider out and thoroughly exhaust him in the first two miles or thereabouts, and we have known cases where men have been thoroughly disgusted therewith, and have been tempted to throw cycling up on the supposition that some change had taken place in them in the winter, which made it unsuitable for them. The fact of the matter is that cycling exercise, like any other exercise which has been discontinued for a time, requires to be gradually and not suddenly entered upon. In preparing for a season's riding, it is the greatest mistake in the world to attempt speed before the muscles have been strengthened and got into proper condition by use. However much, when a man is in fair condition, a powerful sprint up a hill or over a level mile will tend to improve his pace and riding powers, it is just the wrong thing to indulge in in the early part of the season; the first few rides should be undertaken at a pace well within the powers of the rider. If he has been accustomed, in the height of the previous season, to travel at an average speed of 12 miles per hour, he will find an eight mile pace ample on his first rides the following season. In taking these early practice spins, the essential point is to

get the leg muscles into play for steady, sustained action, and to increase the muscular action of the heart and lungs likewise at a steady and regular pace. If the rider finds the pace he has set for himself to start with tends either to blow him or to cause him distress in the legs, he should moderate the speed to one which gives less distress. He should aim throughout his earlier rides to go steadily from start to finish, keeping practically the same pace up hill as upon the level, progressing throughout the journey at one regular steady rate of speed. The rapidity with which this rate of progression can be increased will depend entirely upon the frequency and length of the rides the cyclist is enabled to indulge in, as well, of course, as upon his own individual powers.—*Cyclist*.

#### A Chance For Voting Cyclists.

The legislature has submitted to the electors of the state a proposition to amend the constitution relative to public roads. The amendment will empower the legislature to make laws providing for a county system by which the principal roads shall be placed under the control of county commissioners and maintained at the county's charge. The election, or at least the vote on this question will take place in the early part of April, and as we are going to send instructions to wheelmen all over the state, we have good grounds for hoping to have the amendment pass. At our last board of officers meeting we appropriated \$150 for the purpose of aiding the improvement of highways, and now we are in a position to spend some of this money judiciously.

JOS. M. BRESLER.  
Chief Consul, Michigan.

#### Recognized by Everybody.

It is unquestionable that cycling is day by day and month by month taking more hold on the great mass of non-riders. They all get the fever; they talk about it, read about it, see it and have it impressed upon them by daily associations in a manner that would a year ago have seemed incredible, and they plan to raise the price of a bicycle until they join the merry march of progress on pneumatic tired wheels. The newspapers, the comic weeklies, the stage, and even the pulpit—in all of them the bicycle is receiving constant recognition, not only as a pastime and healthful recreation, but as an invention based on theory and a practical means of locomotion. Then, too, light machines and pneumatic tires are infusing new interest in old-timers.—*Marysville (Cal) Appeal*.

#### A Texas Man's Idea.

Bicycle manufacturers might, to their own great advantage, extensively advertise the fact that a woman cannot successfully ride a wheel and wear the awful hoop-skirt. And then after satisfying the demand for wheels that would undoubtedly spring up, the smart dealer could set his wits to work and build a wheel for the accommodation of the ladies who insist on wearing a hoop-skirt. By placing the two wheels about a yard apart, making the handle-bars a foot or two longer, advancing the seat and fixing the pedals in the centre of the chain this might be done and the lady bicyclist retain her wheel and still be in fashion. But aside from this, the number of ladies who ride wheels in Houston has increased wonderfully and is steadily growing. So it will be safe to say that the crinoline has a poor show with part of Houston's womankind.—*Houston Post*.

The *Zig Zag Cycler* is the name of an Indianapolis eight-page bi-weekly.

#### PHCEBUS' COMMENTS.

##### The Cyclists' Lunch Club—Business Picking Up.

A contributor to *Cycle Life* sees fit in a recent article to sneer at and in a manner vilify the idea of a lunch club to be conducted exclusively for the benefit of bicyclists and their friends. He tells an exaggerated and disgusting story, the events of which he claims to have taken place at a "push" dinner, where or at what period deponent sayeth not, but on the strength of his fairy tale endeavors to throw cold water on a very reasonable and worthy scheme, having for its objects the better acquaintance, the production of a better feeling among bicycle riders, and the economizing of time and money for a class of salesmen who are in no case under-worked or over-paid. It may have been, and probably was the fact, that much levity and boisterousness was indulged in at public tables by certain members of the "push" when the organization was a power in the land; but the "push" is a dead issue, and with it died the desire for loud garments and loud conduct. The "push" has been ridiculed out of existence, and it would be well to let it be unwept and unhonored.

I am surprised that any writer should let his desire to appear smart and *fin de siècle* carry away his sense of common decency and justice. The cyclists' lunch club, as I understand the matter, is a proposed organization which will gather unto itself the best class of riders, dealers and salesmen, and will be in every sense a gentlemen's club. It will be conducted on strictly business principles, and should it be in a financial way a success, all the gain that can be derived will be used for the benefit of the members. Although it will be in a manner a free and easy club, no rude or ungentelemanly conduct will be allowed, and the management will be placed in the hands of responsible and respectable men, who will see that the rules are carried into effect. For one, I am satisfied that the idea is a good one, and I shall do all that I can to help it on. It seems to me that a man with the ability the Idler possesses might use his brains and pen to better advantage than in covertly decrying a public necessity and a worthy object.

\*\*\*

There is a much better feeling among business houses along the "row" since the establishment of the board of trade. A sort of visiting fraternity has taken the place of the strict seclusion of past years, and everybody is beginning to discover that his neighbors are not half bad fellows when they are known. I am most creditably informed that prices are being held and that great care is being exercised in the matter of discounts and credits on country sales. In other words, instead of cutting one another's throats, the dealers along the row are living up to that very selfish but very profitable maxim, "Do unto others as you would be done by."

\*\*\*

The rain it raineth every day, and consequently city trade is at a standstill, and a general air of pessimism is prevalent. But it is to be hoped that we are not going to have a repetition of the disagreeable—not to say cursed—weather of a year ago. Once in a while, a disconsolate but enthusiastic cyclist may be seen mud-plugging, but I notice that none of the scorching brigade have commenced to train, and that very few of them have applied for their '93 mounts. Bicycling days are still afar off, and we

are wearily waiting for the time to come when the sun will shine once more.

PHCEBUS.

[The last paragraph was written while the gentleman had the "blues." The sun he shineth every day for four days now.—ED.]

*Modest Jay Craig.*

A Denver man has written the following letter: "If any bicycle company will present to me a fine bicycle, capable of enduring the rough tracks of mountains and the inclemencies of weather, I will start from Denver in sixty days on the wheel; will go to the world's fair; thence to Cincinnati; will there build a bicycle boat and proceed to New Orleans by water; will touch at every town on the Mississippi and ride the bicycle; after arriving at New Orleans, will proceed on the wheel to New York, and from there start on a long trip to finish the distance. I will write my experiences for the daily press, being a newspaper correspondent. Will any company accept my proposition? Very truly,  
JAY CRAIG."

*Merely an Experiment.*

"I got tired of riding home in crowded cars, so I bought a bicycle."

"So you are going to ride home on that, hereafter?"

"Well, I don't know. I got it only yesterday and last night I rode home in an ambulance."—Record.

*Officers Elected.*

The Cadillac Wheel Club, of Detroit, which was formed by those who left the Detroit Wheelmen, has elected officers to serve for sixty days as follows: President, Joseph M. Bresler; secretary, W. T. Watson; treasurer, E. A. Bresler; directors, H. M. Keeler, E. B. Nall, Dr. F. W. Owen, Leon Coquard and A. M. Jones.

A TRAMP THROUGH SOUTHLAND.

*The Winter Resort of the Cyclist—Boomed By Zimmerman and Wheeler.*

To one who is accustomed to connect with the word winter an unlimited quantity of snow and ice, with the thermometer dodging around from thirty above to thirty below, it is almost impossible to believe that he is really living when "down south" during the months between September and April. It was my good fortune to be sent south last September, and I remained there until a few days before Christmas, when I jumped from the glorious climate of Georgia to meet with an awfully chilly reception in Wisconsin.

The southern states have a peculiar charm to a person from the north. Everything is so different—and I can heartily endorse the world-wide reputation of the southern people for hospitality.

It would take a more skilled writer than I can ever hope to be to do justice to all that is to be seen; it would fill volumes. I can only say to my brother cyclists, take your holidays in the winter and come south. You will never regret it, but only wonder why you did not think of it before. But be sure you bring your wheel, and if you have a camera, don't leave it behind or you will do as the mules do—kick.

Tennessee, Alabama, Florida, Georgia and South Carolina all have their own individual interesting features, which I hope some day to be able to give in more minute detail than space will permit at present. From personal choice Georgia is the state of the south. With such cities as Atlanta, Savannah, Brunswick, Macon, Columbus and many others not quite as large as those mentioned, the magnificent climate, grand scenery and splendid hotels, it offers to

the tourist opportunities for a vacation such as he never conceived possible.

Cycling has increased during the past six months at a surprising rate all through the entire south. The recent race meet at Savannah, when the splendid new cement track of the Savannah Wheelmen's Association was opened, has done much to bring to the front the greatest sport of all. The appearance there of Zimmerman and Wheeler may not be forgotten in this connection, as they have certainly done a great deal of good. Everybody is anxious to become a Zimmerman and a "champeen of de earth." Savannah wheelmen are to be congratulated on their enterprise in giving to the south one of the finest tracks in this country, and the success of the two days' meet last month is only a merited reward. It is to be hoped that their second meet, on April 8, will prove a repetition of the first. Zimmerman and Wheeler are at present comfortably quartered there and are getting in some good work preparing for contests during the coming summer. They will both ride at the meet in April.

Much has been said about Savannah, and I can not refrain from adding my little say. It is the prettiest city I ever saw. Not as big as Buffalo, Rochester, Cleveland or Detroit, perhaps, but it has a charm and quaintness all its own, and the man or woman who can visit Savannah and say that it is not an ideal city, has not an eye for the beautiful. Bonaventure Cemetery and the Hermitage are two of the grandest pieces of nature's work that man ever beheld. What with its tall, stately oak trees, heavily fringed with tropical moss, cedar clumps, japonica bushes and flowers, among which are the many magnificent monuments and headstones, Bonaventure is solemnly grand beyond description, and one can hardly repress the desire that

when he dies he may be laid to rest there among all this natural grandeur.

The Hermitage is the house and grounds that were, during the war and before, the home of an old plantation owner and his family. Here can be seen the coach house, overseer's cottage and the many old slave huts; the roofs of the latter have sadly decayed, and daylight peeps through without any difficulty whatever. Here also is an avenue of many hundred feet in length, on each side of which are some of the tallest and most magnificent oak trees, all covered with great long festoons of moss. It is truly grand, and when one feels the balmy southern air, perfumed by many beautiful flowers, he can not help asking himself, "Is it possible that only about thirty-six hours' journey from here the people are wading through deep snow with their collars turned up high—Ugh!" And a cold chill plays along his spinal column. SPECK.

*Coming to Chicago.*

"Bob" Lloyd, we hear, is doing famously in Chicago, says *British Sport*. Golder came across him recently, and, from all accounts, "Bob" is what one might term a "bit of a dook." He has almost given up cycling, and devotes himself to shooting and business. He has an office in one of the newly-erected exhibition buildings, which are the loftiest and most extensive buildings of their kind ever put up. Sid Keeling, Worth, and the three Ruddins, all Anfielders, talk of visiting the Chicago exposition, when, of course they will look up their old clubmate.

*Bicycles Not Allowed.*

The managers of the Chesapeake and Ohio Canal have issued an order that bicycles will not be permitted on the towpath this year.

**ROUSE-DURYEA CYCLE CO., 89 G STREET, PEORIA, ILL.**

### WORLD'S FAIR ARRANGEMENTS.

*The Illinois Division Will Establish a Bureau of Information.—The Hotel Committee's Advice.*

*To Members League of American Wheelmen:—*

The Illinois division, believing it can be of service to members of the league who may visit Chicago this summer to attend the Columbian Exposition, have decided to establish during the period the fair will be open (May 1 to Nov. 1) a bureau of service and information for the use of league members and their families. An office has been rented in the new Hartford building, corner of Dearborn and Madison streets, room 54, and a branch office will be opened in the National Columbian United Wheelmen's club house near the world's fair grounds. No charge will be made for the services offered and all league members will be welcome. The services offered are as follows:

A list of hotels and boarding houses will be kept, with location, description and rates.

By registering your name and residence and hotel or boarding house while in Chicago, telegrams and mail matter can be promptly forwarded and your address furnished to all inquiring.

If requested, we will receipt for messages, or assist in their speedy delivery by means of the register.

A postoffice will be established so that mail can be addressed in care of the division.

Telegraph, telephone, messenger, livery, cab, express and baggage service can be arranged for and legitimate rates secured.

Before leaving for Chicago the member desiring to avail himself or herself of these services should leave orders for mail and telegrams to be forwarded in

care of the division, and if he desires to draw any money through the division should instruct his bank to forward the amount that it may be placed to his credit. Checks and drafts will not be cashed unless parties are properly identified.

On arriving in the city, by going to headquarters every assistance possible will be rendered members. Yours fraternally,

F. W. GEROULD, Chief Consul,  
B. F. WHITE, Sec'y-Treas.

### SECURE YOUR ROOMS.

The hotel committee of the coming international meeting has promulgated the following notice, to which the careful attention of all wheelmen is invited:

TO THE LEAGUE OF AMERICAN WHEELMEN.—Your committee in assuming the great responsibility placed upon them, realize that their task is exceedingly arduous. Never in the history of the league has any league committee had to plan to secure accommodations for so large a number as will attend the meet and international races during the time of the world's fair. We come together at a time when the enormous crowds tend to make hotel accommodations at reasonable prices difficult to secure. There is but one way to secure accommodations at reasonable prices, and that is to secure them at once, without delay. Your committee wishes to urge the importance of this upon every league member. There will be no trouble to secure good accommodations for those who hand in their names not later than May 1.

The national hotel committee has made arrangements with several of the largest and best hotels within two to four blocks of the fair grounds, for the use of members during the meet; other accommodations will be secured if the

demand warrants. All of these buildings are first-class stone and brick structures with the best of conveniences throughout. All rooms are equally well furnished and prices range from \$2 to \$3.50 per day per person, according to location of room and hotel (European plan). Payment for rooms is required in advance by all hotels. To secure rooms and insure that they will be held for you, a deposit of \$5 is required as evidence of good faith. Your committee will guarantee to secure rooms for those mailing to William A. Leonard, Jr., secretary hotel committee, \$5 before the first day of next May. Remittances should be by Chicago, Boston or New York draft, postoffice or express money order. Receipts will be promptly mailed for such deposits, and deposit money receipts are transferable to others, or money will be refunded upon proper notification to hotel committee, should the holder be unable to attend the meet.

We will do the best we can for those sending for rooms later than May 1, but in this case wheelmen must take their own chances on what can be secured. State the rate you wish to pay, and we will do the best we can to accommodate you. Also state if with a party, and if you will bring your wheel. We have arranged to furnish good, comfortable rooms in the best location to the league member who looks out for his interests ahead.

All correspondence should be directed to William A. Leonard, Jr., secretary Hotel Committee, 908 West Adams street, Chicago. C. E. RANDALL, L. D. TAYLOR, W. A. LEONARD, JR., L. A. W. Hotel Committee.

### Threaten Southern Secession.

H. D. Spore, of Houston, Tex., pro-

prietor of "the largest exclusive bicycle house of the south," according to his card, was in Chicago last Monday. Mr. Spore says that circulars have been sent out by interested parties arranging to form the Southern league, recently referred to in the cycling journals. He says that the new cycle paper of Atlanta and the *Southern Wheelman* are backing up the project. Regarding the L. A. W., Mr. Spore says the southern cyclists are heartily tired of it and take absolutely no interest in its doings, and that when the clubs want to get a sanction is the only time any interest is shown. He says the negro question can remain as it is and that the Southern league will settle the "nigger" once for all. Mr. Spore's opinions on these subjects, however, must not be accepted as those of the entire south. We have already seen the leader of the anti-negro movement appeal to his constituents to remain loyal to the league, so that we cannot quite see how the *Southern Wheelman* can be implicated in any project hostile to the league.

How Johnson rode a mile in 1m. 50s.—The drawing is after Raven Hill; the dog is after Johnson. —Bicycling News.

Oakland, Cal., has a new organization in the Pathfinder C. C., whose officers are: Robert McCard, president; Thomas Flannigan, captain.

## THE L. A. W. BULLETIN.

AN UNDERSTANDING SAID TO HAVE BEEN REACHED.

To be Mailed as Usual—Postal Authorities Said to Have Pronounced it Legal—Secretary Bassett Issues an Address to Members.

[Special telegram to the REFEREE.]

BOSTON, March 29.—A most interesting transaction has occurred between the L. A. W. executive committee and the Wheelman Company, the entire outcome of which is known only to men whose lips are sealed. They care not to and will not say anything about the matter one way or another.

This week the league members of Boston and vicinity received their *Bulletins*, marked "Sample copy," early in the week, while those living outside this state did not get their papers until late in the week. Then came the news that the *Bulletin* had abrogated its contract with the league.

This report, according to Mr. Fourdrinier, is false, yet he admits that President Burdett and he had a confab Monday. It is understood that the entire matter rests upon the true interpretation of the reading of the contract between the league and publishers.

The members of the executive committee have been notified by the Wheelman Company, publishers of the *Bicycling World*, that no more copies of the *World* will be sent to league members, and that last week's issue of the paper is addressed and ready to mail, but is at the disposal of the committee.

In order to obtain a statement of the true condition of things, your correspondent called on Editor Fourdrinier to see what he had to say. Said he: "There is no truth in the report. The *Bicycling World* and L. A. W. *Bulletin* is being sent out to league members the same as ever, and as provided for in our contract with the league." Beyond that Mr. Fourdrinier politely but firmly refused to say a word. Upon application to Mr. Bassett he courteously furnished your correspondent with the appended matter which will this week grace the head of the official column in the *Bulletin*."

"Despite all reports to the contrary, the *Bicycling World* and L. A. W. *Bulletin* is still the official organ of the L. A. W., and will be sent in the future, as in the past, to every league member. The Wheelman Company will carry out its contract to the letter.

"There are those who would be only too glad to deprive league members of their weekly paper, and there is little doubt that it would be taken away if it were possible for these enemies of the league to accomplish their purpose.

"Fearing that perhaps they were not complying with the strict letter of the law, the Wheelman Company held the papers two days last week, and called a conference with the president. We are now in possession of rulings and opinions that show beyond a doubt that the Wheelman Company is transgressing no law of the land, and the paper will go forth as in the past.

"We think we may be permitted to remark that the stopping of the *Bulletin* would be a death blow to the league. It would take away our means of communicating with the members and involve an expense to divisions in the prosecution of their work that cannot be thought of.

"The *Bulletin* is our own paper. Every member of the league should bear this in mind and do all in his power to aid and

encourage it. It has many active and pronounced enemies, who are ever ready to tell the paper just what it should and should not do, but up to the present time the Wheelman Company has been able to get along without advice. Say that it is not up to the standard of other weeklies, should it be expected that the league can do all its work, pay all the expenses of its officers and committees, furnish a monthly magazine, and on top of this put forth a newspaper worth \$2? Remember that we get but fifty cents per capita. In the weakness of the *Bulletin* (if we grant it is weak) should be found the strength of the other papers.

"Let the league furnish as good a paper as some of those that are issued in the cause of cycling, and no other paper could live. Is it not strange that this fact is not better appreciated? The members can have a better paper if they are willing to pay for it.

"The time is ripe for league members to attest their loyalty and their interest in the cause. The executive committee is abundantly able to conduct the affairs of the league and they do not need quite the quantity of advice that is being thrown at them by space-writers for the

## TRADE DULL ABROAD.

AGENTS MUST RID THEMSELVES OF OLD STOCK BEFORE ORDERING.

A Rumored American Failure Causes Loss of Confidence—Lacaille with the Crypto People—Saunders and Bown Part.

LONDON, March 18.—A spell of fine weather, almost summer-like in its warmth and brightness, has given quite an impetus to both pastime and trade. Cyclists have been out on the roads in large numbers and in all directions, and the agents have been quite busy. At present, however, this has not had a very great effect on the makers, for truth to tell, many of the agents are so full up with last year's stock that it will yet be some time before they require to obtain fresh supplies.

The rumor of an American failure\*, whereby the Centaur Cycle Company is said to have incurred a heavy loss, has by no means tended to increase the

for machines bearing a first-class name and reputation, together with distinctive features of their own. A few days later I tackled Frank Bowden, the managing director of the Raleigh Cycle Company, on the same subject. His opinion is that there is plenty of business to be done in America by firms which, with works of their own in the states, turn out a high grade wheel and while keeping their expenses down to a moderate sum are yet business-like, energetic and smart, with a knack of making the best of every opportunity which offers itself.

A few weeks ago we were all startled by the news that Shorland had left the Crypto Cycle Company in order to join the staff of the Humber firm, and since then discussion has been rife as to whether the Crypto company would take into its employ someone else to ride and preserve the fame of the Crypto machines, and, if so, who that someone would be. At the beginning of the present week it leaked out that Donald Lacaille, of Glasgow, the holder of all the Scottish long-distance records, who had only quite recently taken a situation under the New Howe Company, was in London, and a day or two later came the news that he had been definitely engaged by the Crypto people and that he was removing to town. It will now be interesting to watch and see how he fares before the N. C. U. licensing committee, for there now seems very little doubt that the licensing scheme will be passed at next week's council meeting and come into action on May 1. During this week both the Birmingham and Leicestershire centres, both of which it was anticipated would oppose the scheme, have decided to support it. The former was a most unexpected victory, as the district covered by the Birmingham centre includes not only that city, but also Wolverhampton and Coventry, where necessarily trade influences are very strong.

It will come as a surprise to many who know Thomas Saunders to learn that he and William Bown, with whom he has been connected for fifteen years, are parting company. Mr. Saunders had so long represented Mr. Bown both in England and America that their interests had come to be looked on as identical. At present Mr. Saunders has not decided where to pitch his tent anew, but under whosever colors he sails in the future, he is always sure of a hearty welcome throughout the length and breadth of the trade.

\* We have heard of no such failure.—Ed.

## A Journey of Varied Interest.

The tourist, via the Baltimore & Ohio Railroad, "The Picturesque Route," from Chicago to Baltimore, Philadelphia and New York, via Washington, is regaled with views of most varied and beautiful scenery. From the windows of the comfortable day coaches and luxurious Pullman cars the traveler is enchanted with a panorama of plains, valleys, hills, mountains and streams. Now you are flying past a hamlet on the mountain side. Again you find yourself rolling into one of the midland cities, or past the historic scenes in the Potomac Valley, and if you are at all imaginative the roar of distant battles along the Potomac and in the Shenandoah Valley may be heard above the noise of the flying car wheels, or you can recall the daring raid of John Brown at Harper's Ferry, within a stone's throw of your train.

It is worth your while to awake at night, as the train speeds along near Fostoria, in northern Ohio. Flames of natural gas shoot heavenward, alternately lighting up a humble home, revealing a bit of picturesque landscape, or breaking the gloom of forests. To see these ever-burning lights is indeed a new experience, and at night the weird scene alone is worth a trip over the Baltimore & Ohio, which affords to the traveler so many unique and fascinating pictures which go to make up the glories of our own American scenery. The journey over the Alleghenies carries with it the impression that here, in our own land, we have a glorious heritage for the inspiration of the poet and the artist.—Davenport (Ia.) Church Bells.—22-2

THE ARRIVAL OF SPRING.

press. The secretary does not often preach sermons, but he is impelled to do so at this time by the peculiar condition of affairs.

"The multiplication of cycling papers and cycling departments has brought down upon us a horde of writers eager for news and for notoriety.

"The inevitable result is, that our officers are being maligned, and base motives are imputed where none exist. It is an emergency in which the membership should not be slow to attest its loyalty to, and its faith in, our officers and institutions. The secretary is in a position to know that many an official is at the present time, to say the least, uncomfortable under the flood of unjust criticism, and it must be apparent that the league will not be able to command the best of service so long as this state of things obtains.

"Let us be actuated by that spirit of fraternity which will impel us to stand always with and for the league, and against the enemies, be they within or without its portals. In conclusion, we beg to say that now is the time to renew.

"ABBOT BASSETT,  
"Secretary."

confidence of the manufacturers, and many of them are inclined to view the outlook very seriously. The opinion of Stephen Golder expressed at the Philadelphia banquet, that England must in future look to some other country than America to receive its exports of cycles, has been freely quoted on this side. As a rule people are not inclined to place any great weight on after dinner utterances, but in this case there have been not a few who, remembering the old proverb—in vino veritas—have given the matter considerable attention and thought. Bearing this in mind, I the other day sought the opinion of C. Vernon Pugh, the managing partner of the Whitworth Works Cycle Company, one of the youngest, but at the same time one of the most business-like go-ahead houses in the trade. He told me quite frankly that he thought the trade, with America in second grade and inferior pattern machines, which has been carried on for several years by some English firms, is as good as finished, but he believes that there will always—or at least for some time to come—be an opening and in fact a demand in the states

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

\* \* \*

*Baird and Wheeler.*

The Charlestown cyclist who recently contributed to the REFEREE an article on Isaac Baird, the southern crack, which was highly eulogistic as to his racing ability, calls a writer in the *Sporting Life* to account for the statement that H. C. Wheeler "fit" could make a "monkey" of the transplanted Irish rider who has caused Charleston to become inflected with cranium inflation

over the ability of the young man from County Carlow. "Mount Holly" is correct, however, when he disdains to believe that Wheeler can make a monkey of Baird. Wheeler is little better than able to hold his own with the sturdy little Irish chap, if he can do even that. Baird is a good one and will bear watching. To beat him Wheeler will have to show a better turn of speed than he ever has. But to talk of Johnson running away from Wheeler at the first Savannah tournament, and to compare Wheeler and Johnson shows Mount Holly's utter ignorance of racing and racing men. A two-legged mule could

spect his limbs will care to spin his wheel where steeple and hurdle chases, foot ball and lacrosse players shoot their balls with careless abandon to the certain destruction of any cyclist who courts fate in that direction. Then the speedy ones will hardly care to do fast sprints with a lot of novices whose steering and general track deportment is not A 1 at Lloyd's, copper bottom. The scheme will be welcomed by the young men who cannot afford the expensive luxury of a club of the Manhattan sort, and who don't care to be mixed up with receivers, etc., but to the crack who does care for and respect life and limb, the place will be a sort of Fire Island pest hospital. Trainer Jim Robinson is capable and the grounds beautiful, but some sort of quarantine will have to be adopted in order to catch men of racing renown.

\* \* \*

*Trouble In Baltimore.*

They are having a "monkey and parrot" time in Baltimore over the question as to who shall get the date and meet in the international circuit. The claimants are the Associated Cycling Clubs and the old time and popular

A. W. FRIEZE, MILWAUKEE.

have beaten either Zimmerman or Wheeler in a mile race that day, neither being in the least condition to travel. Johnson is a big, clumsy amateur, and Wheeler or any other clever novice will make rings around him. The south with a little inducing oil will "produce" some good men and Baird of Ireland is a good starter, but the amateur writers must not create a prejudice against them by such foolish outbreaks as that of Mount Holly. A party will leave New York for the Savannah tournament, which will occur the first week in May.

\* \* \*

*Robinson's Training Grounds.*

The popular trainer, James Robinson, better known as "Jim" Robinson, is determined to get his back salary from the defunct M. A. C. somehow, and the somehow is his proposition to turn the superb Manhattan field into a public training ground, where anybody who wants to become a champion can exercise his legs and arms for so much per exercise. Unless certain hours of the day are devoted to cyclists the scheme will be a failure, as no rider who re-

fellow's pocketbook. The Associated Cycling Clubs worked earnestly to place the track within the range of possibility, and considerable stock was subscribed for, but the mass of wheelmen seem to prefer to let it drop, when it comes to putting up the ducats. If any of the local clubs desire to hold a tournament, it will be at the expense of \$200 a day for the half-mile track at the driving park, and the club must erect its own grand stand. There is a nice sum of money awaiting some capitalist who will build a cycle track, with decent accommodations for the public, and lease it for a fair price. Until such a whole-souled individual materializes there are small prospects of successful tournaments in Buffalo.

\* \* \*

*Another Cement Track.*

The organization of the Charleston (S. C.) Wheelmen's Track Association was completed last Wednesday night, and the following officers were elected: President, J. S. Johnson; vice-president, J. H. Lacoste; secretary, Dr. Whaley; treasurer, B. F. Evans.

The track will be started immediately and will be finished in time for the races the association contemplates holding during the month of May. It will be a quarter-mile oblong, well banked on the curves, and as it is being laid at this season, when the weather is apt to be neither cold nor hot enough to injure the cement while in the moist state, the surface will be smoother than even that of the famous track at Savannah. The grand stand will be large and commodious. Under this stand will be numerous dressing rooms, attractively fitted up for the exclusive use of the racing men.

The construction of this track marks the beginning of a new epoch in the lives of the young men of this quaint old city, and the promoters of the movement deserve great credit for the manner in which the organization was effected.

\* \* \*

*Good Words For Osmond.*

Edwin W. Cox, the well known Midland athletic and cycling writer, writes the REFEREE eastern office as follows: "The Easter meetings are upon us, and I think we shall have a big racing season here. You have heard that Osmond is coming over, doubtless, and if he keeps well and means to race first and something else afterwards, I have sufficient faith in his ability to recover some of the prestige he threw away last summer. He's a very nice chap, indeed, and if he settles down properly will be a big favorite in America. Some of the critics have banged away most mercilessly, and it is small wonder he wants to turn his back on people who blow hot one moment and cold the next. He has little to thank the English press for—an idol one day, an 'outsider' the next. If you drop across him, I'll bet any money he captivates you straight away."

\* \* \*

*All About Zim.*

Hurrah for Savannah! Jimmy and Wheeler will hereafter ride under the colors of the Savannah Wheelmen, and will train here for the great meet across the "pond." Zim went to Brunswick, but decided that the Savannah girls were the prettiest, and has returned. It is said that there is a certain queen of the crinoline who has so much influence over him that she has induced him to turn out a beard. Fact! Jack Prince is still willing to sign with some good firm to smash Zim's record. Poor Zim, he needs all of our sympathy before the memorable event, as it will be necessary to tender them when Jack asks wildly, "Where am I at?" Zim and Harry don't like the \$150 limit; it's too high.

\* \* \*

*Buffalo's Track Scheme Fails.*

The spasm which convulses Buffalo every spring with yearnings for a cycle track has come and gone. Knowing ones predicted that this year the plans would go through with a rush, but there is the same old story to tell—lots of enthusiasm as long as you don't touch a

# WHITWORTH CYCLES

... U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

BOSTON, MASS

They prefer penny-ante and quarter limit until they sell some of their teams, railroad cars, pianos and cottages. Here is the latest on Zim. I was riding on the shell road recently when we (?) passed him.

"Who is that?" my companion, an innocent little sixteen-year-old miss, asked. "Why, that," I said, "is Mr. Zimmerman."

"Is he the son of the big rider?" she innocently inquired.

Ye gods and little fishes! To be mistaken for your own father! NIBS.

\* \* \*

*Frederic de Civry Dead.*

The French cycling public mourns the death of Frederic de Civry, who was at one time the champion of France, and who in '83 won the fifty-mile world's championship in England. He was born in Paris thirty-two years ago, and died March 15. In early youth he went to London, where he became interested in cycling, and at the age of seventeen was a remarkable tourist. In the spring of 1880 he went back to France and became interested in racing, his first contest being a decided victory. In

distance is fifty miles and the Corfu course will probably be selected. The trophy will be of special design, and valued at \$150. The Ramblers hold last year's trophy and the city championship, having defeated the Press team. It will be a hot contest this year, as the feeling between those two clubs runs high, when it comes to a race, and the other clubs will put in good material.

\* \* \*

*The Kentucky Division Programme.*

The Harrodsburg Cycle Club, which has charge of the Kentucky division meet, June 27-28, at Harrodsburg, has made out the following programme:

FIRST DAY—Half-mile novice, Kentucky riders; one mile, open; one mile, division championship; quarter-mile, for Kentucky riders; two-mile handicap, open; Kenton Club championship; half-mile, open to married men who have not trained; Blue Grass championship.

SECOND DAY—Three-mile, Louisville C. C. championship; half-mile, open; one-mile handicap open; one mile, three-minute class, Kentucky riders; one mile, invitation; half-mile, division championship; half-mile invitation, for riders weighing 200 pounds, more or less, those weighing less to be handicapped to weigh 200 pounds.

\* \* \*

*Changed the Date.*

The Milwaukee Wheelmen have decided to hold the annual Waukesha-Milwaukee road race on the 4th of July. The start will be made from Waukesha at 9 a. m., and the distance covered will be sixteen and a half miles, the same as last year. A circular announcing the event and asking the merchants of the city to donate prizes has already been sent out.

\* \* \*

*Sanger in Good Shape.*

Sanger is making excellent progress in his training under the direction of Charles R. Culver. He's right down to hard work and expects to leave for Springfield about the 15th of April. Milwaukee people say that Zimmerman and the pedal-pushers at Herne Hill will have to hustle to hold him down. Time alone will solve the problem.

\* \* \*

*Waller Will Not Go.*

Waller has concluded not to go to England. He has had built for him two Arrows and two Planets for road and track work and will train under Leeming. It is doubtful whether Spooner will go abroad.

\* \* \*

*So They Say.*

Sanger's papa foots the bills,  
Tho' some rude folks declare  
That Sanger junior is a "pro,"  
Which Walt says isn't fair.  
He still wheels his merry wheel,  
And rides his trusty wheel,  
For Sercombe-Bolte's president  
Has "fixed" the little deal. R. H.

\* \* \*

*MISCELLANEOUS RACE TALK.*

*Little Paragraphs About Prominent Riders—Future Meets.*

Dixon, Cal., is to have a meet shortly. Taxis has again joined the A. C. S. N. Prizes for the Martin road race will be announced April 10.

A new track is contemplated by cyclists of Wilmington, N. C.

A two days' meet will be held at Janesville, Wis., in September.

The annual meet of the Maryland division will be held at Crisfield June 17.

The Colorado division meet will be held July 4, but the place has not been selected.

The racing team of the Lakeside C. C. of Cleveland will consist of French, Brown, L. C. and E. C. Johnson.

The Auner (Ala.) Cycle Racing Club has been organized, with the following officers: G. Willington Auner, of Halifax, Nova Scotia, president; L. B. Auner, manager; Louis L. Kosminski, secretary

and agent. The club will race for cash prizes during the summer.

Four of the Quaker City Wheelmen, of Philadelphia, are to try for the 24-hour record during the summer.

The annual ten-mile road race of the Warren Athletic Club will be held at Wilmington, Del., Decoration day.

Saturday, June 3, afternoon and evening, the Milwaukee Wheelmen give a tournament in the Exposition building.

A. M. Patitz, of the Milwaukee Wheelmen, is mentioned as the successor of Henry P. Andrae, handicapper eighth district.

After Johnson's rest of four weeks at Hot Springs, he will proceed, with Eck, to Savannah, Ga., and will train on the new cement track.

The South Bend C. C. is making arrangements to hold a tournament immediately after the one to be held at Fort Wayne the latter part of July.

F. N. Herman, the fast little Connecticut man, is thinking of visiting Germany this season. If he does he will likely take a crack at the German records.

Jack Prince has not lost faith in himself, to a certainty. In a recent letter he says he "can go twenty miles in 50 minutes to a certainty, with good pace-makers."

The Mercury Cycling Club of Milwaukee desires to share the labor and glory of running the fall meet with the Milwaukee Wheelmen, but the latter think they will be able to handle it alone.

The riders of Fall River, Taunton and New Bedford, Mass., are looking cross-eyed at one another, and as those in each town think they are the cracks, a tripartite road race is among the possibilities.

Philadelphians expect much of Howard Wunder, of the Columbia Cyclers, who made a most creditable showing last season. He is now training and hopes to show up prominently during the season.

Regarding the Pullman road race the Milwaukee Journal says "the fact that Sanger will not ride in the race is a source of great relief to the Chicago riders." How generous is Sanger to stay away! How glad the Chicago boys will be when they hear this!

Minneapolis is having a time over the site for its proposed track. Objections have been found to Lake Harriet, Columbia Heights, Minnehaha and the Normania rink, so the committee is still investigating. About a quarter of the necessary \$4,000 has been subscribed.

If they can't give prizes of a value exceeding \$150 for races, they can for parades, etc. The Bay State B. C. of Worcester intends to give a \$375 piano to the league club having the largest representation in the parade May 29, and a \$375 organ for the club making the best appearance.

A young man named Willis, who lives at Springfield, Mass., thinks he can defeat E. A. Nelson in a half-mile race and has issued a challenge. The conditions are that the race is to be held not later than April 29 at Springfield, each man to put up \$25 for the purchase of a trophy. The funny part of it is Willis wants Nelson to give him fifteen yards' start.

Now we are to have Japs as contestants in bicycle races. Chinamen and negroes have been barred, and we anxiously await the result when Kanegoro Nagaye (that's Japanese) starts in the Waukesha-Milwaukee road race July 4. A Milwaukee paper prints the following: "Kanegoro Nagaye, chief designer for Frank Hall, is developing into quite a bicycle rider. He is training at the Exposition building under the direction of Mr. Hall, and the latter claims that the

young Jap will make it very interesting for the best of the racers in the Waukesha road race.

An Atlanta, Ga., paper tells of a race between a wheelman and a horse which took place on an asphalted street. "It was a full-tilt race," the paper said, but did not give the result. It was all right for the horseman, but the poor cyclist was blamed in this way: "Of course, all this is very nice for the horseman and the wheelman, but a very dangerous practice. The wheelman especially should be condemned."

*Notes.*

The Women's Wheel and Athletic Club, of Buffalo, has been incorporated.

Miss Kittie Klipfel has been elected captain of the Women's Wheel Club of Buffalo.

Messrs. Allen and Sachtleben, the round-the-world tourists, are now journeying towards St. Louis.

Steve Hook has been elected captain and Morton Smith secretary and treasurer of the Capital Cycle Club, Atlanta, Ga.

A. Duncan, Jr., has been elected president of the Crescent Cycle Club of Rochester to succeed J. A. Braman, resigned.

The new officers of the Quincy, Ill., Rambler Cycling Club are Thomas Burrows, president; Walter Sahland, captain; E. A. Henderson, secretary.

The Lexington (Ky.) Wheel Club's new officers are as follows: President, F. V. Bartlett; vice-president, George K. Boulden; secretary, E. J. Richards; treasurer, John Warren; captain, Thomas B. Dewhurst.

The Harlem Wheelmen will soon give up their present home at Fifth avenue and One Hundred and Thirty-third street and lease a building on West One Hundred and Twenty-fourth street, opposite Mount Morris Park.

The South Bend (Ind.) Cycling Club elected the following officers for the ensuing year: President, Lester F. Ryer; vice-president, Walter Deffenbaugh; secretary, John M. Singler; treasurer, Harry Hill; captain, Samuel L. Frye.

A Buffalo paper says: "C. F. Alward, a well-known road-rider for the Press C. C., has the honor of making the first century of 1893." Wrong; several Lincoln club men made a century within twelve hours after the new year was born.

The Baltimore Associated Cycling Clubs, which includes every club but the Maryland, has elected the following officers: W. W. Search, president; Albert Mott, vice-president; John T. Brooks, treasurer, and John A. Graham, secretary.

The South Omaha Wheel Club was organized last week and the following were elected officers: President, H. M. Christie; vice-president, G. W. Griffith; secretary and treasury, W. E. Cathers; captain, John E. Jones. The club starts with twenty charter members.

According to a Waltham, Mass., paper, the bicycle fever has already made its influence felt among the watch factoryites thus early in the season, and there will be a much larger number of riders, both male and female, among the hands than was ever before known.

The Scranton (Pa.) Bicycle Club elected officers as follows: President, Robert J. Williams; vice-president, Eugene Heeley; secretary, C. A. Godfrey; treasurer, E. C. Dean; captain, W. S. Freeman; additional members of the board of directors, J. G. Sherwood and N. E. Arnold.

1881-82 he was the champion of France (for the bicycle), and during the three succeeding years was tricycle champion. His greatest victory was the fifty-mile world's championship race at Leicester, Eng., when he defeated all the great English racing men. Out of 331 races he won 299 prizes, 211 being firsts. He retired from the path in 1887, and soon showed that he was not alone a great sportsman, but a good business man. He was the first to start a cycling magazine in France. Of late years de Civry devoted considerable time to training, and was known as the king among French trainers. To him many a French champion owes his success.

\* \* \*

*Johnson's Future Plans.*

John S. Johnson is now located at the Park Hotel, Hot Springs, and is accompanied by Tom Eck. The latter writes that Johnson is feeling well and should ride faster than he did last season, as he is larger and stronger. The pair will probably go to Savannah instead of Nashville, because of the running meeting at the latter place. Johnson is now talking of taking hot baths and drinking hot water. Eck says in regard to the value of the baths: "No wonder Knapp was strong when he went to Omaha that time." He evidently believes in baths. He adds that Johnson's Independence record can stand all the searching that can be made for the next twenty years.

\* \* \*

*Buffalo's Championship Race.*

The second annual road race for the Rose brothers trophy will be run this year on Saturday, Aug. 19. This race is open to teams of six from all Buffalo clubs, and will decide their supremacy of the road for the season of 1893. The

Writers on trade topics can always find a market for interesting and instructive matter at the REFEREE office. We shall be pleased to arrange with competent writers for regular contributions.

#### THE PRICE OF BICYCLES.

##### An Argument to Prove That There Can Be Little Reduction.

From time to time one encounters the man who is absolutely sure that bicycle manufacturers are simply robbing the public by means of extortionate prices. The old sewing-machine argument has been worn threadbare, and yet, somehow, the makers make no reduction. To the many columns already written on this subject the *Wheeler* contributes the following:

There is a large number of people who seem to think that the price of cycles is inordinately high, and who do not hesitate to predict that ere long the figure must be reduced to what they are pleased to consider its proper level. Time does not bring wisdom to these good folks, who seem quite incapable of reading what may be termed the writing on the wall. Instead of cycles being reduced in price, the reverse is really the case, and though the sum asked for a high class machine has steadily increased, that increase has been but slight, and we do not think that the price will go much higher than at present, neither do we anticipate any drop. The reason of this is not far to seek. In many instances firms have set out with the endeavor to cut prices to the very lowest possible, but time has brought them wisdom, and they have speedily found that their prices must be raised if they are to continue in the trade. And so far as this militating against purchasers, we seem to see that they really benefit, although paying a slightly advanced figure. The cutting of prices can really benefit nobody. A good machine is always worth its money, and we believe that as a class our English cycle makers are quite as honest in their dealings with customers as men in any other trade, and more honest than many. There is a large number of trades which distinctly invite fraud, but the cycle business is not of these. It is a trade in which risks of all sorts abound. The most prominent of these are bound up in the words Weather and Fashion. A bad season will cause a slackness in the demand for new wheels, and so makers are left with considerable stock on hand, especially if they have made preparations to meet an anticipated demand; and then there is the added risk that the fashion may change and make the whole of the stock practically valueless. A trade that has to stand against such risks as these must necessitate a somewhat higher price being placed upon its goods than a trade where risks are small, and this is one of the very bases of the theory of economics. Only those who are thoroughly conversant with the time, trouble, care and expense needed to turn out a high class machine, can form any idea of the real value of such a mount. Competition causes makers to quote the lowest possible prices, and they often find that to execute an order and obtain a percentage of profit to which they are entitled, they must cut matters down to the very lowest possible degree, and thus it is easy to imagine that very often the machines—and accordingly the purchasers—suffer. It may appear strange, but there is often more profit made out of the cheap machines than out of those of first quality, and that is why we never advise purchasers to place cheapness as the highest consideration in the value of a machine. We know only too well that cheap machines are not likely to give that satisfaction that purchasers always expect. The finish is poor, the work too often hurried, even scamped, and the material used can not be of the best. Repairs are only too frequently needed, and after the cost of these has been added to the original price of the machine, it is frequently found that the price of a really good machine is only approximated, while the machine is only a repaired and cheap one after all. Added to this, there is an indefinable advantage in the feeling that one has a mount which is good as steel and skill can make it; and this knowledge is not possessed by

the owner alone, for a first-class machine has quality written all over it, in a way so plainly that it is apparent even to the most uninitiated. Besides this, a good cycle will wear longer, look better, and fetch a better price second-hand than a so-called cheap mount, which in too many cases is discovered to be an expensive investment in the end. No, we do not think that there is much likelihood of the price of a cycle being reduced; or, at least, not until the cycle trade becomes a less risky undertaking, and until the cost of good material, with skilled labor, has been lowered, to say nothing of the care used in finishing the machine, and the experience necessary before a really satisfactory and high class machine can be turned out at all. We would not advise any one who has the very least idea of going in for cycling to wait until some substantial reduction has been made in the price of a cycle.

#### GENERAL TRADE NOTES.

##### Paragraphs About Trade Men, Wheels and Business.

H. A. Lozier and family are at San Diego, Cal.

Cleavelands will be handled in Milford, Mass., by Walter L. Tougas.

A letter from Coventry says that the home trade is exceedingly slow.

Tom Coleman, of R. L. Coleman & Co., was a recent visitor in Coventry.

The *Cyclist* says helical tubing is earning golden opportunities on all sides.

According to a British paper, Steve Golder is connected with the New York Times.

The Kalamazoo Cycle Company has one of the best equipped repair shops in the country.

The American Bicycle Company, Kansas City, is handling the Premier line this season.

P. A. Stubbelbein has opened a new store at Ilion, N. Y., and will handle the Remington.

E. D. Legg, of Syracuse, has added the Niagara to his already extensive list of machines.

Erie (Pa.) capitalists have subscribed \$65,000 to the capital stock of a proposed bicycle factory.

The Shamp saddle is gradually finding its way into the hands of some of the best dealers and riders in America.

Beconnois, the Frenchman who made a record of 116 miles in 6 hours (beating Patchat a quarter of a mile) rode a Rudge g. o.

Osmer G. Clough and E. A. Hand have entered the bicycle business at Lowell, Mass., and will handle Cleavelands.

The Utica (N. Y.) Cycle Company has been incorporated by J. H. Rudd, W. C. Rinland and F. L. Fay. The capital stock is \$5,000.

Frank C. Weston, inventor of the cyclometer bearing his name, has been elected a member of the city government of Bangor, Me.

Lockard is a good name far a lock maker. Lockard & Oswald, of Bloomsburg, Pa., are selling many of their neat little locks for bicycle and other purposes.

The Shaw Cycle Company, Baltimore, announces that it guarantees the Hustler as long as it is in use, so far as any defects in material or construction are concerned.

W. L. Fish, the veteran saddle maker, of Roseville, N. J. writes the REFEREE that his new "Combine" saddle, with the rear spring combination, is being taken up quickly by the trade, and that

his present facilities are taxed to the utmost to supply the demand.

The Standard Cap Company, 156 Greene street, New York, has just put out a splendid line of sweaters, which, for quality and price, should find ready purchasers.

At the recent fair held at the Mechanics' Pavillion, San Francisco, the first premium (a silver medal) for the best bicycle exhibit was awarded to Thomas H. B. Varney.

The Frieze Boat & Cycle Company, Milwaukee, was incorporated last week. The capital stock is \$10,000, and the officers are as follows: A. W. Frieze, president; Lee Peck, vice-president; Horace Hobbs, secretary.

Whittier & Pollard's new store at Lynn, Mass., was opened on the 15th with a complete stock of Columbus, Lovel Diamonds, Unions, Eagles and Hartfords, as well as cheaper wheels and sundries. The firm also has a store in Salem.

O. W. Temple and Walter Measure, of the Union Cycle Manufacturing Company, were in New York last week for a good purpose. An order for 100 Union P. D. Q.'s went back to Boston in Mr. Measure's pocket, and Porter & Gilmore, 1773 Broadway, made the plunge.

The Reitzner-Prichard Cycle Company, Milwaukee, in addition to handling the James, will build the Reitzner pneumatic, a 36-pound machine at \$135, and the Mercury Flyer, to weigh 27 pounds and sell at \$150. A 20-pound racer will also be made and will sell for \$160.

When H. G. Kennedy returned to his home in Denver, after a visit east, he began making arrangements to build wheels, having bought machinery, tubing, forgings and parts. Several wheels have already been built, in fact, and reports say they have given excellent satisfaction.

Cleveland wants the 1894 cycle show, and a local paper goes on to tell how it can be secured, adding that it "would prove a paying undertaking." Would it? Seeing that the Philadelphians had to "go down into their pockets" for \$300 or so to make up a deficit, we doubt it mightily.

The Preston-Davis Tire and Valve Company, Fulham, S. W., England, is anxious to make some arrangement to place its tire upon the American market, and is prepared to offer the patent right for a reasonable amount. The tire has a splendid reputation in England and on the continent.

A Featherstone was in New York last week, and stated that he had all he could do to fill orders for this year's Road King. He further said that the Chicago hotel scheme would be a big success, and if any more accommodations were needed he would fit up some cots in his factory.

The John P. Lovell Arms Company, Boston, wishes to announce that, owing to the recent fire, its catalogues have been greatly delayed, as some of the plates were destroyed. It is hurrying them forward as rapidly as possible, and expects to have all agents, as well as every one else, supplied in the course of the next week.

The Vincent Cycle Company, Buffalo, has just been incorporated, with a capital stock of \$25,000. The officers are, B. C. Vincent, president and general manager; G. W. Smith, vice-president; P. A. Balcom, secretary and treasurer. W. B. Young, formerly of Chicago, but later with the *American Wheelman*, is now on the road for the concern. Young enjoys a good reputation as a cycle

salesman, and should do well in his new capacity.

Owing to the Ganse failure the Reform Cycle Company is without an agent in this country. The wheel wherever sold has earned a good reputation and the manufacturers are ready to make satisfactory terms to a responsible house.

The New York Belting and Packing Company writes us that the additions to its immense plant have been completed, all its new machinery mounted and the great factory is now running day and night. The company is now able to promptly execute orders for the Burris-Michelin and Whippet tires.

The George Worthington Company, Cleveland, has issued an extensive catalogue, which shows the Ariel geared ordinary; Ariel, models D, C and ladies'; the Fowler; A and B; Rochester, scorcher and roadster; Clipper; ladies' Clipper; the Worthington Diamond, models B and C, at \$115, and the ladies' Worthington at \$100. The Worthington, Jr., Ben Hur, Forest City and various other lines are included.

#### CHICAGO TRADE IN BRIEF.

##### Movement of Traveling Men—General Local Trade Talk.

The Ashland Cycle Company has secured the Chicago agency for helical tube Premiers, W. P. Case, the Premier company's representative, having taken its sample order for 100 machines last week. The line embraces the following patterns and weights: Full roadster, with brake and guards, 32 pounds; road racer, 27 pounds; with light tires, 25 pounds; racer, 19 pounds; ladies', with brake, guards and chain case, 29 1-2 pounds; with light tires, 27 pounds. The Premier company makes a weldless tube machine for men, weighing 38 pounds, selling for \$115.

Thomas F. Rockwell has just returned from a six weeks' trip in Iowa for the Stokes Manufacturing Company. He says that all the time he was there it was a game of hide and seek between a score of them for the trade, such as it was. Among the many he met whom he recalls were R. H. Gardner, Harber Bros., Bloomington; H. S. Thurber, representing Robert Thompson, Muscatine, Ia., agent for Rouse, Hazard & Co.; J. Jay Ross, of Ames & Frost; Mr. Larned, of Woodrugh & Hanchett, Chicago; P. O. Rudy, of the Eclipse Bicycle Company; Mr. Matlock, of the Simmons Hardware Company, St. Louis; Mr. Edmonds, of Des Moines, representing the Keating; C. H. Sterner, Thorsen & Cassidy; L. J. Ollier, Nebraska Cycle Company, Lincoln, Neb.; and representatives of A. G. Spalding & Bros.; Kingman & Co., Peoria; Abbott & Sons, Marshalltown, Iowa; Luthy & Co., Peoria, and several other firms.

It is known to but few that are on the inside, that the Charles F. Stokes Manufacturing Company and Sterling Cycle Works amalgamated some time ago. The factory on Carroll avenue and stores at 293 Wabash avenue, West Madison street, Milwaukee and Denver, are all run under the same management as the Stokes Manufacturing Company. Mr. Stokes held the larger part of stock in both and thought best to combine them. The Sterling is a very taking wheel, Herrick says, and he substantiates his story by showing increases in orders all along the line, among them an increase of order from Harwood & Sons, of Bloomington, from a sample wheel to five, then to ten, later to fifty-five, and last week to an even hundred. Reuben Wood & Sons have increased orders from twenty-five to 100 machines, and from one city last week six distinct orders

*Thorsen & Cassady's 1893 Line.*

Probably no concern of the same age has had a more successful career than the Thorsen & Cassady Company, Chicago. Thorsen & Cassady began busi-

J. B. THORSEN.

ness at the present location about a couple of years ago, and from the start made a grand success. Last year they

WARWICK DIAMOND.

handled the Singer line, but this year they are pushing the Warwicks and the Western Wheel Works' line of medium

H. J. CASSADY.

grades. In fact the company handles the Western Wheel Works' goods for the entire northwest.

WARWICK LADIES'.

In the Warwick the Thorsen & Cassady Company has an excellent line, which comprises four wheels, models A and B and the Priscilla and Pilgrim. Model A is a 30-pound machine, with 28 inch wheels and Warwick pneu-

matics. Model B is practically the same as model A, but fitted with brake, clothes protector and foot rests.

The Priscilla (see cut) is a 34-pound ladies' wheel, having 26-inch rear and 28-inch front wheels, with Warwick tires and complete dress and chain guards. The frame has the appearance of being extremely staunch, inasmuch as it is well braced.

The Pilgrim is a 40-pound roadster, practically like the 1892 model. All the wheels list at \$150.

*Philadelphia Trade Doings.*

A. G. Spalding & Bros. with the Victor and Credenda are still doing good business at their old stand, Eleventh and Chestnut streets.

The J. B. Rich Cycle Company, 1702 and 1704 West Broad street, reports that Triumphs are at the top of the heap and look forward to large sales.

The new firm of Hill & Gilbert, both well known to the cycling fraternity of Philadelphia, is making a large bid for business with the Premier cycles.

H. D. Simmons, of the Park Avenue Wheelmen, has again changed his base of operations, being now employed by the Common Sense Bicycle Manufacturing Company as traveler.

The Bretz & Curtis Manufacturing Company, 17 South Forty-first street, importer of the Quinton Scorch and manufacturers of the Solid Comfort saddles, is exceedingly busy.

The Common Sense Bicycle Manufacturing Company, 1219 Callowhill street, is making a specialty of ball-bearing sulky wheels, and at the same time pushing its wooden-wheel bicycle.

The Central Cycle Company, North Broad street, has received a large shipment of Cleavelands, and reports trade booming, having already made numerous sales. It is also acting as up-town agent for the Warwick.

J. T. Skerrett, traveling salesman for the Bretz & Curtis Manufacturing Company, started Wednesday for a trip through the state with the Warwick, and expects from the numerous enquiries received by the concern to place a large number of agencies.

The Penn Bicycle Company, 1343 Arch street, is well stocked with all kinds of wheels. It acts as general retail agent for the Quinton Scorch and Warwicks which are moving rapidly. The last few days of fine weather increased sales to a large extent.

J. T. Bailey & Co. report large sales of the Raleigh and Relay. Evidently the "Jersey skeeter's" name will still continue to push the sale of the mount made famous by him. They have also made alterations in the departments of the store, bringing the bicycles from the second to the first floor, which will be a matter of convenience to both themselves and customers.

*Suit Over a Tire.*

An exhibition of the Dobbins-McKinney non-puncturable pneumatic tire will not occur to-night at Hearsay's as announced, because an injunction has been filed against the patentees, which will prevent the sale or exhibition of the tire until the suit is decided in court. L. E. Richey and S. B. Eccles, two business men of Franklin, bought one-half interest in the patent for \$90, and since then they say an attempt has been made to ignore them as share-holders. McKinney and Dobbins say that after the tire was patented Eccles and Richey decided that the tire was not going to be the success promised, and then the money was paid back to them. They afterward desired that the old contract be acknowledged, which the new company refused to do. The company now consists of

Tom Taggart, B. P. Brown, T. J. Coyle, R. B. Jennings, Richard McKinney and Douglass Dobbins, and has a capital stock of \$1,000. The suit will be tried at the April term of the Johnson County Circuit Court.—Indianapolis News.

*Simple, Neat and Cheap.*

The Columbia Machine Works, 11 to 17 South Jefferson street, Chicago, has brought out one of the most convenient pumps that is now on the market. Manager Stewart has greatly improved the pump recently and now feels that he has it about right. It is called the Chicago. The toe rest is of heavy steel wire and movable, so that the pump may be placed at any angle. The rod is of steel and the handle is solid brass. About two feet of half-inch hose, with union connection, is furnished with each pump. The pump is well made, has a check valve and is handsomely nickel plated. There is no doubt that many will be sold this season.

*Warman & Hazlewood Busy.*

Since Warman & Hazlewood opened an office in Chicago their American trade has grown wonderfully, and at the present time all hands are kept busy filling orders for Coventry Cross cycles. A large number of these machines was sold last season and all made good record

for reliability. The wheels for 1893 differ in some respects from those of last season, but not materially so. The ladies' wheel is of the straight frame double tube pattern and is thoroughly braced, yet there is ample room between the tubes to allow the dress to drop well

down. The geared ordinary made by Warman & Hazlewood was described in these columns some time ago and herewith a cut is shown. The wheel has a very graceful appearance and on it the rider obtains exactly the same position as he would on the g. o. o.

*Windy, but Newsy.*

At a late meeting of the Dunlop tire people, the chairman, speaking for the directors, said that "they had been asked very often if there was truth in the statement that they had sold their American patents for £100,000. He wanted to tell them that they had no intention of selling their foreign patents to any one. If the people in America

had any valuable patents, they might be disposed to buy them; but they had no intention of selling them anything, nor were they prepared to admit that anybody in America could work their patents as well as they could themselves. At the last meeting he was able to tell them that thirteen companies were working under their license, and since that date the companies under their licenses were greatly increased. Most of the people who were under license to them showed a friendly spirit, but there were some little exceptions, and among them he noticed some very amusing advertisements. He read an advertisement in which one company stated that its long experience enabled it to tell the world that if you rode on a Dunlop tire you would break your neck. This particular firm that spoke of its long experience was just about nine months old. A baby of nine months old was at the teething stage, which was a period of great peevishness. It would be many a long day before that baby reached the age of discretion, and they also knew that many babies never did that. If the statement of the Methuselah of the tire trade was correct, this company occupied the unfortunate position of being responsible for the necks of about 150,000 young men and women in the cycle world."

*Creditors Will Get Little.*

PEORIA, March 27.—The recent failure of Kirkwood, Miller & Co., has been the means of completely gutting the retail bicycle business of Peoria this spring. The assignee has put out a large number of high grade pneumatic tired machines at from \$60 to \$90. These wheels are fitted with '93 pattern Morgan & Wright tires, and at the prices they have been offered have been selling like "hot cakes." This, however, only affects the high grade market, as Kirkwood, Miller & Co. had no medium grade wheels in stock whatever. The assignee is now closing out everything, and inside of thirty days nothing will be left of Kirkwood, Miller & Co., except a few pages of history.

Nothing has been heard regarding Bonnick & Co., of Coventry, or their intention of catering to the American trade again. It is believed, however, that they will come to this country sometime during the summer and establish an agency and make preparations for the season of 1894. The Telephone wheels gave very good satisfaction wherever sold, and Bonnick & Co. will have no trouble in securing a good American representative.

The recent decision of the county court here regarding the goods on consignment at Kirkwood, Miller & Co.'s store cuts the assets of that concern about \$20,000. The court ruled that a large number of farming implements and carriages were on consignment, and turned them over to the parties who manufactured them. This, together with the heavy expense incurred in disposing of the goods, will cut down the assets to a very low notch. It is a question whether the house will pay over 15 cents on the dollar.

*Business Will be Trebled.*

The Hilliard Cyclometer is getting better known every year, and it did not surprise a REFEREE representative the other day when calling on Messrs. Hilliard & Wiese at Philadelphia to find the entrance to their office blocked with boxes addressed to bicycle firms at all points of the compass, said boxes containing Hilliard cyclometers. After much study and experimenting Mr. Hilliard has brought his cyclometer to what he thinks is perfection as a

|---------------------------|-----------------------------------------|---------------------------------|-----------------------------------|---------------------------------------------------|

And Jobbers Generally Throughout the United States.

corder of miles traveled. Last year's sales, the firm thinks, will be trebled this year. Mr. Hilliard will go south, and on his return Mr. Wiese will journey towards the setting sun. Mr. Wiese socially is somewhat of a lion in Philadelphia, and his comic songs formed one of the features of the A. C. C. concerts there recently. Comedian Shelly introduced him as "the greatest comic singer of America, bar none," an endorsement the papers fully sustained the following day. Mr. Wiese, however, on the road pays more attention to selling cyclometers than singing, but he will always be welcome in any club, no doubt, when his talents become better known.

#### New York Trade News.

George Pope, president of the Hartford Cycle Company, made a flying visit to the metropolis, Saturday.

The Smith Wheel Manufacturing Company of New York and Washington is meeting with success with the sale of Darts.

Lester Hickok, the Pope story teller and traveler, was in New York Saturday, accompanied by J. B. VanVliet, of Scranton, Pa.

Elliott Mason is now enjoying the compliments of visitors over the thorough renovation of old 14 Warren street. The sale of the Columbia is excellent.

The opening of the Ormonde bicycle school at One Hundred and Twenty-fourth street last Wednesday, under the management of W. S. Malby, was attended by a large crowd.

The Premier Cycle Company was not inconvenienced much by the loss of its 160 wheels which went down in the ill-fated Narouic. The order was duplicated promptly.

New York trade took a wonderful leap last week, everybody being busy. L. B. Whympier was too busy to talk about his club and paper, which is a sure sign trade is very brisk.

The Bidwell company is very busy with its tire and Tourist trade, and the staff of clerks at its handsome quarters on Fifty-eighth street is working early and late. J. W. Lawrence, of this house, is becoming noted for the very excellent little book advertisements on Bidwell tire and Tourist wheel, besides the tasty trade journal advertisements he gets up from week to week.

President Jarvis Brown, of the Anglo-American company, informs the REFEREE that Secretary Freidenstein has arrived safely at the Colonade, Birmingham, and will not be back for two months. By this time he will be consigned to the tender mercies of Messrs. Sanders, Smith, Bown, Loudon, *et al*, who, however, know how to look after strangers. In the meantime the Anglo-American company is rushed with orders, and its own projectile tubing is now ready for the market.

#### Makes the Fenton Light Roadster.

The Fenton light roadster is being put on the market by the Fenton Metallic Company, of Jamestown, N. Y., and Peirce & Eddy will handle it locally. Already, Superintendent Hood, of the bicycle department, has a number of wheels under way. Mr. Hood has been in the bicycle manufacturing business almost since wheels were first used. He has a neatly designed wheel, weighing 34 pounds. Only the best of material will be used. All over the United States the Fenton Metallic Company is known as the manufacturer of the very best work in its line that is produced and in engaging in the bicycle manufacturing business, in addition to its other departments, it has a prestige that will place

the Fenton light roadster at once in popular favor and confidence.

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. F. Aughinbaugh, patent attorney, Washington, D. C.:

493,650, bicycle tire; Edgar F. Ryder, Providence, R. I., assignor, by direct and mesne assignments, to the Atlantic Manufacturing Company, same place; filed Sept. 10, 1891.

493,675, pneumatic tire; Edward Barrett, New York City, assignor to himself and George R. Bidwell, same place; filed Jan. 25, 1892.

494,003, pneumatic tire; Foster H. Irons, Toledo, O.; filed May 28, 1892.

491,076, cycle hub; Albert Perkins, Chicopee, Mass., assignor to A. G. Spalding & Bros., New York City, and the Lamb Knitting Machine Manufacturing Company, Chicopee Falls, Mass.; filed Sept. 5, 1892.

494,038, valve for pneumatic tires; Ashel M. Shurtleff, Boston, Mass.; assignor to Codman & Shurtleff, same place; filed Sept. 16, 1892.

Trade marks.—22,697, bicycles; Joseph E. Geigan, Baltimore, Md.; filed Feb. 21, 1893; essential feature the words "New South."

#### On the Michelin Tires.

French riders are, naturally enough, in love with the Burris-Michelin tire. It is ridden by the most famous men in France, and on it they have accomplished, among others, the following performances:

Charles Terront, in the Paris-Brest race, rode 750 miles in 71 hrs., 37 min., finishing eight hours in advance of the second man.

Corre, in the Basle-Strasbourg race, made a record of 13 hrs., 10 min., for 300 kilometres, beating all competitors by two hours.

In the Lyon-Publican race, 326 miles, the first, third, fourth, fifth and seventh men rode on the Michelin tire. In the Paris-Nantes race, 620 miles, the first five men were on the Michelin tire. In the competition were the best riders of France.

On July 26, 1892, Jules Dubois rode 230 miles 936 yards in twelve hours. Again, on Sept. 17, 1892, he rode fifty miles in 2 hrs., 11 min., 10 sec.; 100 kilometres in 1 hr., 20 min., 34 sec.

#### Jordan & Sanders' New Store.

This Friday evening Jordan & Sanders will open their new store at 1331 Washington avenue, St. Louis, with a reception to their friends and patrons. The new place is larger (30x85 feet) and in a better location, the ground floor being used for a salesroom, while the second will be the riding school. This has been handsomely fitted up and has all modern improvements. The firm handles the Swift, Union, Stearns and Quinton Scorchers.

#### The A. B. C. Stand.

The Acme Bicycle Carriage Company, or the A. B. C. Company, as the Newark house is better known, is meeting with success with its A. B. C. stand, and Rufus Chandler, the general manager of the concern, has shown wonderful energy in placing this neat, useful and moderate-priced article in nearly all the principal stores in New York and Brooklyn, as well as with the leading jobbers of the country. The company is now making the stands for sulkies and other rubber-tired vehicles, and has just completed a handsome lot of oak stands to match the oak fittings of the Schwabach company's new Brooklyn store. The stand lists at \$1.50; \$12 per dozen, \$120 per gross.

#### Saunders and Bown Separate.

Thomas Saunders has parted company with William Bown, with whom he has been associated for nearly fifteen years. No definite information has yet reached

us as to his intentions, but it would not be particularly surprising should he eventually settle in Chicago. It has been reported that negotiations looking to that end were in progress some months ago. Snell, Harrington, Saunders! Who next?

#### The James on Cycle Row.

The James Cycle Importing Company, which recently moved into the Caxton building, has now taken up quarters at 250 and 252 Wabash avenue, and is therefore on cycle row. The quarters in the Caxton building were found to be too small. The new place is on the fifth floor and is large and well arranged. The new catalogue has just been issued. It illustrates the four models, as well as parts, and besides this contains some interesting information regarding light wheels, a table of races won on the James and a number of good testimonials.

#### RECENT ENGLISH INVENTIONS.

##### New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Feb. 1, 1893, give notice in the prescribed form of such opposition.]

##### THE MACBETH GEAR.

No. 1,747. J. A. Score, A. R. Macbeth, R. Stevens Phillips and P. S. Taverner's "Improved driving gear for velocipedes." Jan. 29, 1892.—This gear is adapted for speeding up geared ordinaries and the improvements relate principally to the arrangement of the bearings of the driving wheel. Figure 4, is a sectional view of the gear and figure 5, an end view with the plate (g1) removed; a is the axle of the driving wheel and b is the hub, the latter is large enough to allow of the axle passing through it eccentrically. The ends of the hub are provided with ball races (c, c1) corresponding to similar ball races formed on the plates (d and k) which are attached to the ends of the front fork. The plate (d) is also provided with a second ball race (e) eccentric from the first; this is for carrying the axle (a) which is

provided with a screw-thread (a1) on which works the adjusting cone (e1) secured by the usual lock-nut (f). The other end of the axle is carried by a bearing consisting of a large ball race on the plate (k) and a corresponding ball race (j) formed in the mouth of the cap (g1, g2), which cap forms part of or is secured to the end of the axle (a). The cone (e1) serves to adjust the four rows of balls at the same time. A ring of external teeth (h, h) is formed on the end of a portion of the hub projecting through the plate (k). The interior of the cap (g1) is provided with corresponding internal teeth (g) and the two sets of teeth gear together as shown more plainly in figure 5. There being necessarily more teeth (g) on the axle wheel (g1), one revolution of the axle causes the wheel (h) and with it the hub and driving-wheel of the machine to make more than one revolution on its centre in proportion to the respective numbers of teeth. The points to which the fork ends are made fast are in rear of the vertical plane passing through the axis of the axle.

##### THE HALL BRAKE.

No. 5,290. A. Clement's "Improvements in and relating to brakes for velocipedes." March, 7, 1892.—This invention relates to an improved brake for the wheels of cycles, and it consists of a pair of square or polysided blocks mounted in a frame in such a manner that when they are

brought into contact with the tire of the wheel the tire is not forced bodily down into the rim but is rather squeezed laterally, thereby avoiding the possibility of cutting the tire on the edges of the rim. The brake may be operated by a hand lever or any other suitable device. The illustration may be taken as showing it applied to the ordinary front wheel plunger. The brake rod (A) is carried in one or more suitable guides so that it has direct action on the wheel. On the end of this rod is formed or fixed a double-forked frame (B) in which are mounted a pair of blocks (C, C) which are preferably square. These blocks are mounted on axle-pins (b, b) so that they are free to rotate or rock in the double fork frame (B) and so adapt themselves to the shape of the tire (X) on which they bear at the sides, the two adjacent bases of the blocks forming a V-shaped brake-block capable of adapting itself to the shape of the tire, whether it be solid-cushion or pneumatic. The frame (B) may be any other convenient or desired shape than that shown, so long as it is adapted to carry the two blocks in such a manner that they will act or operate in the manner illustrated. This brake has been adopted by the St. George's Engineering Company for its New Rapid safeties this year.

THE "ATLAS" FRONT DRIVING GEAR.

No. 18,226. E. Barnes and J. Garrison's "Improvements in parts of velocipedes." Oct. 13, 1892.—This invention relates to the gear of velocipedes or to the pinion wheels of the same. The illustration represents an internal speed gear for geared ordinaries with the pinion of the said gear having ball teeth or revolving spheres located within its rim or within boxed recesses formed within the rim and with the contact part of each ball-tooth projecting above the rim. The larger gear wheel is the driving wheel, and it is connected with the crank axle; it is supported by brackets carried by the fork or framing of the machine and has, instead of internal teeth, sunken sockets on its inside edge with which the ball teeth engage, so that, on the driving gear wheel rotating, motion is communicated through a rolling surface to the driven pinion which is secured to the hub; a is the driving gear wheel, having socket recesses (a2) sunk within the inside periphery and with which the ball teeth (b) of the driven pinion (b1) engage. The ball teeth (b) work within angular sockets (b2) formed by side pieces secured to each other if necessary by set pins. The sockets may be made adjustable and the socket teeth (a2) may be provided with hardened cups to resist wear. Various detail modifications are described and other adaptations of the invention set out and illustrated.

One of the ball pinions was handed about in a mysterious manner at the National show but the detail construction of the gear was not disclosed, though one or two machines were shown fitted with it. Two gears are fitted to each machine one on each side as in the Coventry Eagle gear, the principle of which it resembles; the pinions being secured to the ends of the hub or axle and the cranks to the driving gear wheels.

#### Trade Items.

Morgan & Wright state that they now have enough orders to keep their factory moving all summer, night and day, as it is now working. Riders all over the country are friendly to the tire and the demand thus created is enormous. The prizes are causing a large amount of interest, letters enclosing entries being quite numerous.

T. P. Scott, of the Scott Cycle Company, Eighth and Plum streets, Cincinnati, was in Chicago this week on business. His company is handling the James, Coventry Cross, Rudge, Buckingham & Adams and Buffalo.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

Clementi & Barr, Chicago, are sending out small samples of cloth used in their bicycle suits. They show four styles of goods, which, when made up, range in prices from \$5.25 to \$8.

## SUCH IS FAME.

When Stanley found himself lost in the jungles of darkest Africa he was somewhat astonished to learn that the natives were acquainted with two English words; *only two*—and this proves what it is to have a reputation. One word was *bicycle* and the other was *Tourist*—"Tourist Bicycle."

Another enlightened tribe, still further in the interior, showed its progress toward civilization by being able to articulate "Bidwell Tire," "Restrictive fabric." And one inebriate old black king even used one every morning for the novel purpose of reducing his head to the proper size after a night's debauch. *You know it contracts upon the rim when inflated.*

## AT THE SEAT OF WAR.

BOSTON IS FURNISHING AN ABUNDANCE OF FIGHTING MATERIAL.

*The Boston vs. Worcester Imbroglia—Mr. Miller's Position—A Few Words with Candidate Perkins*

BOSTON, March 28.—If President Burdett could have foreseen the coming events, perhaps he would have appointed David J. Post to a position on the national racing board in place of L. A. Miller, of that great race-promoting city of Meriden, Conn. That Mr. Post would have acted in a fair and impartial manner no one who knows him has the slightest doubt, and the league would undoubtedly have been saved a tempest in a teapot, which is now raging between this division and one member of the racing board.

Mr. Miller, the New England representative on that powerful racing board, has recently fallen considerably in the estimation of the members of this division, who have every reason to feel that one of his recent actions is most unfair to the leading division in the great League of American Wheelmen.

To those familiar with the doings in this state there is hardly any need of

## RECALLING THE GREAT FIGHT

that has been made by the Bay State Bicycle Club, of Worcester, to obtain the spring meet of the division. But the Worcester men were by no form the only organization which desires the shakels that could be turned into their coffers by the holding of the meet. Several Boston organizations also wanted the meet, and so heated did the contest become that it was thought advisable to organize an associated cycling club. This was done, no less than fifteen of the leading organizations in the state becoming members. Once organized it immediately applied to the division racing board for the sanction of that board to hold the meet. The division board immediately granted the same and sent its request for a sanction from the national racing board to Mr. Miller.

## THE TROUBLE BEGAN TO BREW.

The Bay State club received a sanction for its race meet a month or so ago, but it would not have been granted had the chairman of the division racing board made any objection. Worcester, however, was not satisfied with its sanction, for finding it could not get the division meet held at Worcester it immediately filed a protest against the Boston meet being sanctioned.

Now what does Mr. Miller do? Does he inform the A. C. C. that a protest has been filed? No, he doesn't. He simply notified Secretary Robinson, of the A. C. C., who is also chairman of the division racing board, that he could not sanction the Boston meet, as it conflicted with the Worcester tournament, and the idea of sanctioning meets was to prevent conflicting dates. So Mr. Miller places the division and the A. C. C. second to a club of small membership which is not a member of the league, although the club claims it is.

## CHIEF CONSUL PERKINS

and Chairman Robinson immediately journeyed to Brooklyn, and there saw Chairman Raymond of the racing board. They reviewed the case from beginning to end, and showed conclusively where a great injustice had been done the division. Mr. Raymond, fully appreciating the position, promised to do all in his power to secure a sanction for them,

and the next day Mr. Miller, upon being interviewed by Mr. Robinson, withdrew his letter of a few days earlier.

The claim that Mr. Miller could not sanction the meet, as it was his duty to prevent the conflicting of dates, seems most inconsistent with the previous rulings of the board. It has ever been the custom of the board never to withhold sanction on a national holiday, and as both meets are to be held on Decoration day, the consistency of the excuse given can readily be seen. Then again, this action places a division second to a small club, which has no call whatever for the favor of the league.

## THE BAY STATE CLUB CLAIMS

that the only reason the meet was taken from this city was because the Press Cycling Club of Boston wanted it to enrich its treasury. Why does the Worcester club want to hold the meet if not for the same purpose? But in all fairness and equity to the Press club it should be stated that it is only one of fifteen clubs that desire the meet held in Boston, and that it did not go off in a corner and cry-baby when it discovered that it could not hold the spring meet.

Now it is claimed that the Bay State club is a league organization, but according to Hoyle, or rather Secretary Bassett, its name is not carried on the books of the division. Its predecessor, however, was a league organization, for he it known that the present club bearing the name of the Bay State club is not the club which has heretofore held the meet. Immediately following the holding of the last tournament considerable

DISSENTION AROSE AMONG THE MEMBERS of this club, which resulted in its being disbanded. Then the present club was organized.

While Mr. Miller may be the best meaning person in the world, it is quite evident that, in this case at least, he has not acted for the best interest of the Massachusetts division. If his action is to be taken as a criterion of the future position of the racing board on such matters, it practically means that a non-league club has the call ahead of the division, and that club membership in the league counts for naught.

Said a prominent local politician: "I think it advisable to hold a special meeting of the state board of officers, if for no other reason than the filing of a protest against Mr. Miller being longer retained on the racing board."

But the withholding of the sanction means far more to the members of this section than the mere holding or dropping of a race tournament. It also means the construction or non-construction of

## THE THREE-LAP TRACK AT WALTHAM,

for without this sanction the builders of the track will refuse to have another stroke of work done there. So you can readily see how the most peculiar and unprecedented action of Mr. Miller serves the division. But sanction will soon be awarded the Boston meet, and the division races will be held at Waltham, despite the protest of the Bay State Bicycle Club and the action of Miller of Meriden.

## THERE'S MUSIC IN THE AIR.

If you want to see some great fun during the next twelve months, just keep your eye on Massachusetts, and especially Boston. The Rumor Bureau, so called by Chief Consul Luscomb of New York, promises some most interesting news ere the close of the riding season, and, to be truthful, things are beginning to look more interesting than ever. Chief Consul George A. Perkins, who gives every indication of remaining

in the political field until the last gun is fired and spiked, has not much to say. I saw him the other day and asked him what he thought of the last national assembly. "I think it one of the most intelligent and deliberative assemblies that has ever been held by the league," he answered. Continuing he said: "It carefully considered every question that came up before it, and transacted considerable business, of which you know."

"As for the present political outlook, I know no more than you do. I have been exceedingly busy for the past few weeks, and have only just arrived from New York, where I had the pleasure of seeing Chairman Raymond of the racing board. Oh, yes; my interview was decidedly satisfactory."

"No, I don't care to criticize any member of the national assembly or any man who may be spoken of for president. I possess the highest admiration for Mr. Gerould, who is spoken of as a presidential candidate, as I know him to be an honest, conscientious and earnest worker for the good of the cause. As for myself, I don't care to talk."

Even Mr. Perkins' most bitter opponent will admit that he has proven himself to be one of the hardest workers that this state has given the national body, and it has furnished many. His record as chief consul of the largest division in the league stands unparalleled, and he deserves no small meed of praise for his work in the cause he loves so well.

## Notes of Interest.

The York (Me.) County Wheelmen at their annual meeting elected officers as follows: President, A. S. Bradford; vice-president, W. H. Bryant; secretary and treasurer, R. D. Littlefield; captain, W. W. Tarbox.

Samuel Fisher & Co., Birmingham, write that much of the machinery used by the English Projectile Tube Company in the making of seamless steel tubes used by the American and British war departments, is furnished by them.

The West End Association B. C., of Toronto, has elected the following new officials: President, R. J. Colville; captain, D. Lochrie; recording secretary, D. I. Barnett; treasurer, G. Essery; statistical secretary, W. H. Mankle.

At Detroit last Friday Charles Suffek pleaded guilty to the larceny of a bicycle, owned by David May, on Feb. 14, and was remanded for sentence. On arraignment day he pleaded guilty to the larceny of another bicycle. He's good for a nice long term.

A notable event in the history of the Ravenswoods was the banquet tendered by the newly-elected officials to the members on Wednesday evening of last week. Over seventy were present. The tables, arranged in the form of a hollow square, were burdened with cut flowers, while festoons of roses and smilax hung from the centre of the pretty hall of the club house. A sumptuous repast was disposed of.

The Hydrant Hose Company of Lockport has organized a bicycle club and now proposes to build a tricycle on which to carry the hose reel. The machine will weigh about 250 pounds, will be pneumatic tired, and can be propelled at a rapid rate by three men, who will occupy saddles over the wheels. The main body of the volunteer company will dash ahead on wheels, leading the way for the tricycle, which will make as good time as any team of horses. The proposed innovation has created a good deal of interest in firemen's circles, and Lockport is congratulating itself that it will be the first city to adopt the bicycle and tricycle to fire department uses.—Batavia (N. Y.) News.

## VALUE OF GOOD ROADS.

COLONEL POPE'S EXHIBIT OF SECTIONS OF VARIOUS ROADS.

*The First Government Appropriation for Road Improvement—Natural Highways of Colorado—Work in Maryland—In the South.*

Great reforms start, as a rule, from small beginnings. It is only after years of struggling that some of them gain the public ear, and then acquire sufficient impetus to insure their ultimate adoption.

The value of good roads has, in a way, been known and appreciated from the earliest historical times—"the memory of man runneth not to the contrary"—yet highway improvement in America has but recently come to the front as a question which deeply concerns our national prosperity, and therefore demands immediate and careful consideration.

There never was an era which equalled the present one in the development and rapid growth of both national and international trade, and in direct proportion to this growth has the value of good roads increased.

## THE OLD NATIONAL PIKE.

It will be remembered that during President Jefferson's administration congress passed a bill for the construction of a national road from Maryland to Ohio, and it is of interest to note that this bill marks the first appearance of the question of making internal improvements at the expense of the federal government, a doctrine which divided the parties for more than twenty years.

This and similar measures in states and counties represent some of the early struggles for proper highways. The marked progress which this reform has made in the past year may be traced to the influence of the literature distributed so freely throughout the entire country. In other words, it has been a campaign of education.

## THE ENTERING WEDGE.

Following closely upon this literary activity, and made possible by it, comes the appropriation of \$10,000, which was passed as a part of the agricultural bill on the 3d of March, to enable the secretary of agriculture to make inquiries in regard to the systems of road management throughout the United States; to make investigations in regard to the best method of road making, to prepare publications on this subject suitable for distribution, and to enable him to assist the agricultural colleges and experimental stations in "disseminating information on this subject." This is the entering wedge which will open the way for the speedy development of highway improvement, and is, therefore, the most valuable achievement of the present agitation.

## COLONEL POPE'S EXHIBIT.

Colonel Albert A. Pope has been persistent in his endeavors to educate the public to the importance of this reform, which he rightly places in the very forefront of the great questions of the day.

Following up this educational policy he is having built a cross-section of macadam and telford roads to be exhibited in the large front windows of the Pope Manufacturing Company's office building at 221 Columbus avenue, Boston. This work is being done under the immediate supervision of William E. McChintoch, C. E., instructor in road-making at Harvard college, and a member of the Massachusetts Highway Commission, and it will, therefore, be cor-

15-25 WHITEHALL ST., - NEW YORK.

*Ivel Scorchers, Weight 30 lbs., Price \$160.00,*

A Light Machine of exceptional merit; it has been thoroughly tested and proved to be remarkably fast, and although so light, perfectly rigid and reliable.

rect in every detail. As it will be viewed by many hundreds of people, daily, it will be an effectual object lesson.

HOW IT IS BUILT.

The section is enclosed in a heavy plate-glass case, which gives a clear view of the construction from foundation to surface. As one looks into the window the portion to the right shows the Telford road, with its side drain filled in with broken stone and the various strata above; while the portion to the left illustrates the macadam style, built in this case on a sandy foundation and finished with a layer of finely crushed stones. The writer, in looking at this cross-section of road, was reminded of a saying of the artist, Thomas Nast, who in his lecture on characters, asserted that "cartoons reach a class that is seldom influenced by printed matter." The man who takes one good look at this cross-section may be able to give points to those who have read much more than he has.

CARE OF ROADS.

Next to the construction of roads comes their care and repair, and in this connection we would call attention to the fact that the question of the advisability of regulating the width of tires has, within a few days, been brought to the consideration of the Massachusetts legislature. Measures should be adopted in all the states requiring heavy draft carts to be equipped with wider tires, and so constructed that the front wheels would track outside the rear wheels, as such an arrangement would make each wagon act as a road roller—a road preserver rather than a road destroyer. This is no new idea, but one which should be kept before the minds of the reformers.

THAT WORLD'S FAIR EXHIBIT.

W. G. Buchanan, chief of the department of agriculture, deserves great credit for and should be supported in his latest move to secure a road exhibit at the world's fair. His idea is to have a roadway 50 feet and 1,000 feet long, constructed in sections beginning with the genesis of road making, having a wagon stuck in the mud at the first section as an illustration of the average road in the country during a large part of the year, and then in sections of 100 feet or less, the different methods of road construction common to our country, ending with sections showing methods in use abroad. Each section would show a cross section under glass, illustrating drainage and manner of construction. The department would enter each section as an exhibit in the name of the builder. The material used in this way can pass under the eye of the judges and thus be entitled to an award. This arrangement would offer an exceedingly good competition in road construction.

\*\*\*

AN OHIO COMMISSION.

Governor Mac Wants a Wheelman to Help Revise the Laws.

Governor McKinley is said to be searching for a good, active wheelman, as the riders of bicycles euphoniously designate themselves, for appointment on the commission to revise the road laws of the state. The fact that a man rides a bicycle, or that he manufactures the popular vehicle, ought not to disqualify him from such service. But there is a certain prejudice against the movement in behalf of better roads growing out of the assertion that the whole movement is in the interest of bicycles. There is no better way to hurt a proposed measure than to brand it as class legislation. To talk of good roads as being for the benefit of bicycles, as

something not shared to a far greater extent by all vehicles, is absurd. It is like a starving colony of rats refusing to gnaw a hole into a rich granary because the opening would also admit a few mice. Good roads are needed, not that bicycling may flourish, but that the traffic of the country may not be taxed by the disadvantage of mudholes and by the embargo of impassable highways at certain seasons. When the public convenience is served by the establishment of an efficient road system it is quite possible that the wheelmen will be happy, but their joy will be only incidental to the greater felicity of the general public. There will be constant surprise that the good day was not ushered in much sooner.

Many portions of the state of Ohio have the material at hand for building excellent roads, but the capacity to put it to use has been of slow growth, and, as has already been said, the road laws of the state are nearly a century behind the times.

The road commission has a large field before it. It has to formulate a plan for the building and continued repair of roads, and for providing the money to pay the cost. The problems are not easy to solve. They should be submitted to wise and careful men and no objection to the action of the commission should be based on the fact that its members were or were not interested in bicycles, provided they were otherwise competent men for the service.—Cincinnati Tribune.

\*\*\*

ROADS OF THE SOUTH.

Money Already Foolishly Spent Would Have Improved Them Greatly.

The Fair Observer, a small paper published in connection with a recent fair at New Berne, N. C., by Wm. T. Hill, L. A. W. 46,806, contained a lecture to the good people of the neighborhood on the road question. From it we quote the following:

I think it was Macaulay who observed that its roads were an index to a nation's civilization. If his statement be a truth, North Carolina has just cause to hang her head in shame, for the condition of our roads would indicate that we are in a state of barbarism. The roads of a country are its arteries, and when full of mud they are just as sure the sign of an unpromising, unprogressive and dull-natured people as are the veins of our bodies, when they contain poison, indicative of an impoverished system. And as a sensible person takes medicines for eradicating a poison from his system, does a sensible nation take the proper steps for cleansing its highways of mud and filth. It is manifest that the present system of building and preserving country roads is far from successful; is a flat, miserable failure. One of the prime causes of bad roads is lack of interest shown by the very people who more than all others need good roads, the farmers. Another is the idea entertained by persons whose positions in the political and commercial world would indicate more breadth of thought, the legislators and merchants, who think that to run the road system of the country on a sensible business plan would be too expensive. The farmer should turn his attention away from sub-treasury schemes to a subject that concerns him more vitally—good roads. They would realize more profit from a system of good roads than from the realization of their wildest political dreams. If the money that has been thrown away in the absurd attempt to make the Neuse and Trent rivers rivals of the Mississippi had, instead, been expended on our stagnant country roads, a trip of ten miles in the country would not be a day's journey, nor would an apology to the stranger within our gates be necessary. Widespread interest all over the country is being manifested on this important subject, and it is to be hoped that the Old North State will not prove a laggard in the crusade against bad roads.

\*\*\*

Where Good Roads Abound.

We have little to long for in the way of roads in Colorado. Nature has done all that we could ask. Our prairie roads are of a sandy soil. They pack well and are always in good condition. Occasional stretches of clay on the more traveled roads are graded, and during

### PATENTED HUB

*The Liberty*

As shown in accompanying illustration is now being used for the second season. It will be observed that while the spokes run tangentially they are nevertheless straight from head to nipples, avoiding the bending at right angles and necessary weakening of the spokes at the point where they enter the hub flange, as in wheels of other makes, for which the claim of "high grade" is made. It may be stated also that the flanges, and that part of the hub between the flanges, are of one piece, and not brazed, screwed, bolted or pinned together as in many wheels now being offered for sale. Each tooth on the flange receives two spokes running and pulling in opposite directions.

WILSON, MYERS & CO., MAKERS OF LIBERTY CYCLES, 55 LIBERTY ST., N. Y.

TAYLOR CYCLE CO., 270-272 WABASH AVE., CHICAGO, Selling Agents West of Pennsylvania.

the past year some graveling has been done on these places, thus making our prairie roads as nearly perfect as possible. In the mountains the roads are better, if anything, than on the prairies, and afford coasting to satisfy the most ardent enthusiast. The city of Denver is paved with asphalt throughout the business portion, and more of this ideal pavement will be laid during this and the years to follow. I can recall but three club runs during the past twelve months that have been postponed on account of the weather.

The wheelmen of Colorado are blessed with good roads and weather at least a portion of every month in the year, and, after four weeks in the snow, slush, rain and mud of Chicago, Philadelphia and New York, the writer hailed with delight the bright, warm sunshine of God's country as he came in sight of the grand old snow-clad Rockies last Sunday afternoon, and breathed a silent prayer of thanks that he is permitted to live in this glorious land of sunshine, health and happiness.

In '94 we hope and expect to be permitted to share for a time our good things with all our fellow wheelmen. All cannot come and remain here—to such we extend our sympathy—but all may come and revel for a time in the beauties of the Silver State, queen of the forty-four.

CHARLES A. HACKNEY,  
Chief Consul.

**In Chief Consul Mott's Territory.**

Albert Mott, of Baltimore, who holds the position of chief consul of his division, and chairman of the league's transportation committee, has been one of the hardest workers in the road cause. He writes us briefly, as follows:

The wheelmen are now working on the road question entirely through the state league formed as an offshoot from the national league, organized at Chicago. The chairman of our highway committee is a member of the above organization. He is B. Howard Hayman, Fireman's building, this city. County organizations are now being formed, and we are on the hayseed tack exclusively. That method is the most successful with us.

The Metropolitan Association of Cycling Clubs will hold its annual century run from Newark to Philadelphia some time in June. The start will be made from the Continental hotel, Newark, and will be over the regular course. The association is also arranging for a wheelmen's trip to the world's fair.

The Octon sprocket has appeared. It is not a new idea, a similar contrivance, as well as a diamond sprocket, having been made previously. C. H. Parker, of the Ariel company, is the inventor, has applied for a patent and believes he has a valuable invention which will require no more power to operate with a 74 gear than is required with 54 and a round sprocket. Parker's idea is a cross between an octagon and an ellipse, a "squat" octagon, or an eight-sided ellipse. Take your choice.

## The Purity of Amateurs.

Walter J. Masterson always was a strong Windle admirer, and if Willie were covered with a nice black enamel—the popular trade tint—Walter would still swear the enamel was white, resembling that purity for which his protégé is noted. If Masterson were shown the ledger of a popular manufacturer on which is recorded the liberal amounts paid to riders of certain hued rims, and for certain records, Walter would still believe the famous Milbury wool-scouring mill proprietor as white as the purest white sheep's covering that has passed through the purifying process of Milbury's woolen factory. But when it comes to Sanger, blackness of Egyptian character clouds the amateur horizon, and the wool of the Milwaukeean is tinged with a color made famous by a character in that spectacular production, the "Black Crook."

Windle has always been noted for records in the dying months of the cycling year—a time when the wool-scouring and dying business should be good; but, as Harry Arnold innocently remarked to the writer at New Britain some time ago, "Willie has come to the conclusion that there is more money in racing than in the wool-scouring business." That was possibly an unguarded admission. But the conversation was not of a private nature, and when speaking to a newspaper representative a conversation should never be private.

To be sure there is an incident in Willie Windle's life that has cast a decided gloom and sorrow over it. The writer sympathizes with the Milbury lad in all sincerity, and believes that in the past he has been somewhat handicapped. A desire to cut loose from the mill may have caused Arnold to make that statement.

But as to Windle's amateur purity. It is no whiter or blacker than that of Sanger, Zimmerman, Berlo, Taxis or any other of the white ones. To be sure Pete Berlo may not make as much in a single season as Windle, Sanger or Zimmerman, yet he is held up to public scorn as the "black crook" of the business. When the Wheeler refers to Sanger's doubtful amateur standing, the paper should cast a glance at home and question Osmond, Holbein, Shorland and a dozen others whom everybody knows are in the pay of makers in England. This singling out of any individual should stop. Were the writer as sure of salvation as he is that the men mentioned (and others not named) are professionals and ride as amateurs, he would feel like shuffling off this mortal coil before the world's fair started.

Circumstantial evidence, indeed! If circumstantial evidence could damn the amateur standing of American amateurs (and English, too, for that matter) there would not be enough starters to make a race on Raymond's \$8,000 track at Chicago. The L. A. W. cannot afford and will not banish our leading amateurs, but Pete Berlo or Bliss or some boy down south may be suspended now and then as an example, for it would never do to let that \$8,000 track go unoccupied!

Says Masterson in the *Sporting Times*: "The assumption that Sanger's actions

would stand investigation is caused through the wide advertising that this rider has received, which has invariably been in a trade connection. We reiterate that before going abroad the Milwaukee racer will be put through an examination by the racing board in order to secure his credentials to the National Cyclists Union, that will possibly develop whatever connection that he has ever had with the trade." According to this, all our best amateurs are no better than professionals, for all Taxis included, are in the pay of manufacturers. Of course Sanger is interested in and connected with the trade; so are all the others. Zimmerman is a stockholder in the Raleigh company. As to accepting remuneration from any person having a pecuniary interest in the sport, that would hit the L. A. W., which made the rule. The L. A. W. is interested to the

and it may not be good policy for the league organ to take sides in a controversy of this character, but Mr. Crowther, as "Ariel," evidently believes that it is. Poor "Ariel" has an unhappy faculty of getting mixed up in rows, and if he were ever free from one in Philadelphia or Pennsylvania league politics, the fact cannot be remembered—neither is it recorded by Philadelphia cyclists. Mr. Crowther was defended when a seemingly unwarranted attack was made on him by *Sporting Life*, and a letter from Philadelphia intimated that I would be sorry for "tied up" to the man I defended. My reply to that letter was to the effect that I "tied up" to no man, and time would prove it. As between Boston and Worcester I have no choice, but believe for the possible better financial position of the Massachusetts division Boston would prove the more valuable for the spring meet. Having no axe to grind, however, Worcester for its enterprise of the past must be given a fair show, and this, it would seem, the Bay City club boys are not going to get—if "Ariel's" prophesy of the ultimate action of the racing board

W. would be served better if meddling newspaper men were not office holders, and Mr. Burdett should see to it that their days as office holders be numbered. Let the L. A. W. rank and file fight out the differences without biased newspaper interference, and let the papers fulfil their mission as arbiters of justice and not be prosecuting attorneys. The REFEREE can afford to treat the Massachusetts squabbles from the high moral platform of independence, and in this respect only cannot the organ of the L. A. W. do likewise?

\* \*

## Dolph Will Race Again.

Asa Dolph! How many of the cracks of the present day know Asa Dolph? Not many, but they will if Asa Dolph persists in his present determination to train and join the cash prize league. Dolph was really the first sensational American amateur, and his performances against the watch at New London in 1885 somewhat frightened "Sandy" Sellers, who invaded our shores with Howell about that time. Asa was an amateur then and Harry D. Corey (then manager for Stoddard, Lovering & Co., Boston), was his inducer. Sellers had to beat world's record and do 2:37 at Charter Oak Park, Hartford, to defeat Dolph. Then America wondered at both men's speed. Dolph is a neat rider, a thorough gentleman and makes a splendid appearance on the track. He would be a credit to any amateur or professional league. Dolph dropped out of sight for several years, but the writer ran across him in California three years ago and again last year when he found him making "mint juleps" and "manhattans" in a swell cafe. Dolph is now in Philadelphia.

\* \*

## Egan's Salary Fixed.

The cash prize league magnates came together at the Astor House, New York, last Friday, the down-town location being more convenient for newspaper reporters. Those present were Frank Egan, Francis Richter, C. H. Byrne, Pat Powers and F. S. Elliott. The daily papers said next morning that letters were read from Australia, China, Japan, India and France, from wheelmen who must have cash if there is any to be had. The names of the writers, however, were kept in the deep recesses of the secretary's pocket for fear the L. A. W. would tamper with them. There was no mention made of letters from America, but it is presumed that the home talent who would struggle for Egan's "dust" was overlooked. The *Sun* says: "Many applications for the positions of general manager, official referee, and official handicapper were considered, but no action taken. The board determined that each association should appoint its own judges, timers, scorers and minor officials."

"A proposition to assume control of road racing was declined by the association for the reason that the Century Road Club of America has jurisdiction over that branch."

"A formal application from a Boston syndicate for membership in the association was favorably considered, but no definite action taken."

"Applications from outside cities for permission to hold professional race meets were read, and it is probable favorable action will be taken, in which event the applicants will be licensed and the association riders be permitted to race on their tracks."

"The compensation of Secretary and Treasurer Egan was placed at \$2,500. The work on the track at Eastern Park goes forward rapidly. Mr. Byrne will have a large locker room and good storage quarters for wheels. Many appli-

extent of \$8,000 in Chicago, and expects, according to Chairman Raymond, to make \$30,000 out of the Chicago meet.

Circumstantial evidence wanted, eh? I could, in that case, cause the suspension of nearly every amateur in America if the racing board is in earnest—but is it? It would, as Frank Egan says, "go out hunting ducks with a brass band," make a lot of noise and then conclude the amateurs not guilty. It cannot afford to suspend the men, and the writer is not going to turn informer when he sincerely believes in the sincerity of the stuffed rules of the L. A. W. and the persons who make them and fail to operate them. The amateurs can continue to ask his advice and confide their amateur law-breaking secrets and he will assist them all he can—to get out of hypocrisy and into the cash prize league, where they belong!

\* \*

## That Division Spring Meet.

There is a row of large proportions brewing in the Massachusetts division over the award of the division spring meet, and as usual Henry Crowther is head over ears in the puddle. It may

goes. Worcester made a fatal mistake last year by its miserable hospitality to the clubs and the press, and the writer, with others, remembers the events one of the worst meetings of the year in that respect. But now the club has generously announced that it will spend \$1,000 in the way of entertainment, and, if its generosity isn't a little late, this year's meeting will be a success in every particular providing the weather holds out. The clamor of the Boston press should not influence the awarding of the division meet, and here the pernicious example of newspaper men holding office comes in. John C. Kerrison, of the *Herald*, is president of the Press Cycling Club, and wanted to be something higher recently in league affairs. C. J. Howard, of the *Globe*, is treasurer of the Massachusetts division, and a close friend of division politicians and wire pullers. Still, Mr. Howard is an old newspaper man and his fairness has never been questioned—although in important local matters it is always well to "stand in" with Charlie Howard. Crowther and Howard have been having it hot and heavy of late in their respective organs. As a matter of fact the L. A.

## BURKE'S LATEST IDEAS.

EVENTS OF THE DAY DISCUSSED BY  
A FREE LANCE.*Amateurs Making Contracts—A Gilbertian Combination—An Amateur Who is an Amateur—Disinterested Zeal.*

Here is what a writer in a New York daily has to say of the racing situation: "The league officials recognize the fact that the reluctance of the national assembly to pass the class rule (meaning class B) at its meeting at Philadelphia, leaves the condition unchanged from last year."

That's the whole thing in a nutshell. After all the debates of the racing board, after a wide discussion of the question by press and league members, after it had been clearly demonstrated that a class B or its equivalent was absolutely needed if pure sport were wanted in cycling—after all these things—more's the shame to the racing board, to the national assembly, to the whole League of American Wheelmen—it can be truthfully said that "the condition is unchanged from last year."

Every member of the league is perfectly certain that contracts have been made and are being made by a large number of racing-men with prominent manufacturers. As in past years, one of the principal charges on this year's books of some of our well-known makers will read in this way:

To salary of special traveling man.....\$300.00.

We all know what and who these "special" traveling men are. The racing board knows who they are. And yet what can or will be done? Because, forsooth, the racing board is too tenderhearted to disqualify, or because it does not want to weaken the ranks of the L. A. W. nothing, beyond an occasional virtuous spurt, will be done to show that there is the slightest difference between an amateur of the purest motives and most sportsmanlike character and the men whom everyone knows to be "special" traveling men.

Does not the present situation prove, beyond all manner of doubt, that there was and is need for a class B? Does it not show that sentiment one side and prejudice and pigheadedness on the other induced the national assembly to cast aside what every thinking man now recognizes as being desirable, yes, absolutely necessary, for the good of American cycle racing?

And yet one who is close to the racing board can calmly state, and with all truth, that the condition is "unchanged from last year."

Bah! No wonder that a professional league sees money in the game!

*The Milwaukee Combination.*

That Sanger-Sercombe-Bolte combination is one that would delight the heart of a librettist of the Gilbertian school. Mr. Sanger—that is, Walter's father—is president of the Sercombe-Bolte company. Mr. Sanger, that is the son of Mr. Sanger, who is the president of the Sercombe-Bolte company, is accused of receiving his expense and a possible moiety over, from a Milwaukee firm bearing the familiar name of the Sercombe-Bolte company. If these charges were true, Mr. Sanger, the aforesaid son, vehemently denies that he does not pay his own expenses, but does not deny that Papa Sanger, the aforesaid president of the Sercombe-Bolte company, pays them for him.

How can Sanger and his friends reconcile his pure amateurism with the fol-

lowing paragraph which has been going the rounds of the papers:

"P. H. Sercombe and Walter Sanger will leave Milwaukee in a few days for Springfield, Mass., where they will do a month's training preparatory to their English tour."

Is Walter so fond of riding that he would go to Springfield or any other place, spend weeks in training, and pay his own expenses? Would P. H. Sercombe spend his valuable time at Springfield training a young man in whom he is supposed to take only a fatherly interest? Not difficult to answer, eh? [Sercombe does not go as a trainer—Culver is the trainer—he is going to ride and is getting fit. Ed.]

The whole matter resolves itself to this: In Sanger, senior's dealings with Sanger, junior, is he president of the Sercombe-Bolte company or is he simply Sanger, junior's father? In receiving his expenses from his father, does Sanger, junior, become an employee of the Sercombe-Bolte company, or is he still only the son of Sanger, senior?

A glance at the Sercombe-Bolte company's books would answer the question.

*What Will They Do?*

Barrett and Munger are probably not very much frightened at their recent expulsion by the L. A. W. They are being assured by their friends and a number of newspapers that Chairman Raymond of the racing board has declared that the Chicago riders cannot be kept out of the international races. This must be pleasant news to those who have faith in the L. A. W. as a legislative body.

Barrett and Munger have been expelled. This is just what was expected by those who were not prejudiced in either direction and is a vindication of the league. Of course through some sort of quibbling Munger and Barrett may be able to hang on to the skirts of the L. A. W. for a short time, but they would not gain friends by such tactics. Their cases have been judicially passed upon, they have been found guilty and expulsion was the only course left for the committee to pursue. The Chicago riders would do well to retire gracefully. Theirs are not hopeless cases. They can reopen them before the next national assembly and fate may be kinder to them the next time. Just at present it is not to their interest to antagonize those who in the future might be willing to condone offences of the past.

It is to be hoped that the two men will not become the victims of their friends. If they are sensible, they will wait for the next national assembly, or else join the new professional league—that is, if Mr. Egan and his association want them.

Do they?

*Disinterested Zeal.*

It is sometimes pleasant to turn from those who engage in a sport simply for "what there is in it" to a man who, for pure love of a pastime, engages in it and gives up his time for the furtherance of its interests. Such a man is Henry L. Saltonstall.

The Elizabeth A. C. Wheelmen and the entire league should feel proud of having in its ranks a man who, prominent in business and social circles, still finds time to devote to a sport in which he takes the interest of a participant and patron at the same time. Mr. Saltonstall is one of the few men of this country who have given their time and money to advancing the status of a sport, and giving his time and money in the work, as a sportsman, pure and simple, without motives other than those actuated by enthusiasm.

The Saltonstall cup is one of the hand-somest prizes that has ever been offered

in cycling or any other sport. It is peculiarly fitting that such a magnificent trophy should be donated by an American for an international event during the progress of our great world's fair. It is generosity, patriotism, fraternity—all combined, and is a most graceful tribute to the cycle world on the part of Mr. Saltonstall.

Proud will be the man who will win the Saltonstall trophy; and proud should American cyclists be of a man who is at once enough of a sportsman and enthusiast to go deep down into his pocket, solely for the good of the sport.

*Circulation vs. the Reading Notice.*

A glance at the advertising columns of the New York Sunday papers, reveals some interesting facts. Not the least interesting of these is that the *Recorder* carries more cycle advertising than any other New York paper. This is pretty good proof that L. C. Boardman is a great hustler, even though he may not possess the requisites that make a great writer.

Mr. Boardman is singularly fortunate in being connected with a newspaper that is young, progressive, and not over-particular about how it gets its business. It looks at results, not the means used. It is one of the few New York dailies that will print reading notices without the semblance of a disguise. Thus it is that Boardman can promise more than can the men connected with the advertising departments of other New York papers. While it is a question in my mind whether cyclers ever read the cycle department of the *Recorder*, a glance at the advertising columns of that paper is sufficient proof that many advertisers will accept reading notices in lieu of circulation.

Cycle advertising in New York has grown to such magnitude that it forms a very considerable portion of the receipts of many papers. All the dailies put forth special efforts to secure the patronage of cycle houses. But all of them do not offer cyclist advertisers any more privileges than they do champagne or dry-goods houses. I know that the *Sun* absolutely refuses to print reading notices of cycle firms, and on that account is shut out from much business. It is, however, sure of a good portion of New York's cycle advertising, for it prints the latest and most authentic cycle news, and knowing advertisers are quite satisfied with that. But if it's a question of no reading notice no advertising, it will be no advertising with the *Sun* and other papers.

Question: Does the trade prefer reading notices to circulation? BURKE.

A FRENCH WHEELWOMAN'S COSTUME.

*To Prevent Cycle Thefts.*

Mr. Bruck, of the Ohio legislature, has introduced a bill to prevent cycle thefts. It supplements section 6,854 by providing that whoever wrongfully takes one of these machines shall be fined not more than \$100 or imprisoned not more than sixty days, or both. A penalty is also provided for defacing a wheel.

cations for the privilege of using the track have already been received. Regarding the relations of the association and manufacturers, Mr. Byrne said there was no connection whatever. He added that there was nothing to prevent a rider using any wheel he pleased, and if the racer desired to advertise a certain make he was at perfect liberty to do so. There was nothing in the rules to prevent a rider accepting from a manufacturer the payment of his expenses from one race track to another, if the manufacturer desired to so advertise his wheel. The riders will, of course, furnish their own wheels, the association providing nothing but the track, prizes and regulations."

It is well to know that the terrible maker is not going to control the cash prize league, and that a professional can accept his expense money from his boss, and use any wheel he chooses. Of course it is understood that riders must use their own wheels; that point, too, is a useful one. Now that Secretary-Treasurer Egan gets \$2,500 for guarding the morals of the down-trodden "pro," the L. A. W. should go the N. C. A. one better and raise H. E. Raymond's bit to \$3,000, and to this end James Sullivan, of the *Sporting Times* will, in his notes next week, move that this be done. The writer seconds the motion before it is made, as the L. A. W. cannot afford to allow the N. C. A. to set the pace in salaries, as the Brooklyn man will work just as hard as the Philadelphian amateur. By the way, what is Egan, an amateur or professional? He is a member of the L. A. W. [Our correspondent falls into the common error of supposing that Chairman Raymond receives a salary of \$1,500. He does not. The sum of \$1,500 has been appropriated for clerk hire and other expenses. Mr. Raymond's position is purely honorary.—ED.] MORGAN.

*Was Once a Champion.*

One of the most prominent figures in cycling life in Milwaukee is A. W. Friese, president of the Friese Boat and Cycle Company, whose likeness is reproduced in this issue. Mr. Friese is one of the oldest riders in the Cream City. As far back as 1882 he was one of the crack road and track riders of Wisconsin, and at the L. A. W. meet held in Chicago during that year won the two-mile championship. He was one of the charter members of the Milwaukee Wheelmen, organized some ten years ago. Notwithstanding his great love for cycling, he has found time to develop a liking for various other sports and is prominently identified with the Milwaukee Rifle Club, the Caw Caw Club, the South Side Gun Club and a boat club. Last year he was secretary of the Milwaukee Base Ball Association. In the various sports of cycling, boating, tennis, rifle and trap shooting, no person during the past ten years has been more prominent; and it is safe to say the several sports have no truer friend. Mr. Friese is widely known all over the west as one of the crack rifle shots of the country. This year he is actively training, and will show up in good form at all the race meets in the west. His place of business is at 410 Milwaukee street, where he carries an extensive line of bicycles, the Eagle Altair being his leader.

The Niagara C. C., of Buffalo is a new club with temporary officers as follows: President, G. W. Herminan; vice-president, J. E. Still; secretary and treasury, A. H. Haupt; captain, A. E. Cavanaugh. The members of the club propose to offer their services as messengers, and on special details, to the Sixty-fifth Regiment, of which all are either members or ex-members.

S. A. MILES, Editor.  
CHAS. P. ROOT, Associate Editor.  
R. M. JAFFRAY, Business Manager.

## CONTRIBUTORS ALWAYS WANTED.

We are always ready to pay for live, entertaining contributions. If you have anything to offer, send it along. We want correspondents in cities where the REFEREE is not already represented.

## CHANGES IN THE "REFEREE."

On May 5 the REFEREE will celebrate its fifth birthday. There has long been a demand for a reduction in the size of the paper, and, realizing that it has become too bulky to be conveniently folded in its present form, we have decided on a reduction in its size to 10x13 inches—about the same as the other cycling journals. We have reason to believe that this arrangement will meet with general approval. There will be no curtailment of the matter presented to readers. On the contrary, we have recently arranged for a better supply of matter than heretofore. Another change will be the raising of the price of the paper from two to three dollars per annum, which will go into effect at the same time. We feel justified, in consideration of the large increase of news and other matter presented at this time, in asking a subscription price in keeping with journals devoted to other sports and trades.

We take this opportunity to state that arrangements have been made to fully and properly cover all the more important events of the coming summer. Readers of the REFEREE may rely implicitly on receiving the latest and best information on all subjects connected with cycling.

## ABBOT BASSETTISM.

Abbot Bassett, secretary of the League of American Wheelmen, has been guilty of an indiscretion which, if the league were mindful of its own interests, would bring his official career to as speedy a close as is possible under the rules of the organization. In our last issue we published a letter which, according to our advices, was to appear in the official department of the *Bulletin*. It was shown to the first vice-president of the league, who at once made an attempt to prevent its publication. This was on Thursday, and his telegrams were evidently too late to take effect, for the *Bulletin* is before us, containing the letter. It is an outrage and an imposition. It contains matter which was not authorized by the

executive committee, does not, we are assured, represent the views of the committee, and if not absolutely untruthful is so misleading as to have the same effect as a downright lie.

It is the outcome, of course, of the Wheelman Company's recent decision not to mail the paper "until it could be done in accordance with the terms of the contract." Now that further information has been received, this action stands revealed as a case of clear, unadulterated bluff, which, having failed, has been as quietly withdrawn as circumstances and the press would permit. The company is endeavoring to exact some concession from the league. Knowing that the renewal season was at hand and that this, of all times, would be the worst for the league to be without the *Bulletin*, it seized this opportunity and attempted to enforce its demands. The result was ignominious defeat, and now, to cover its action, the adjustment of a possible breach of postal law is brought into play as an explanation of the delay.

The policy of the Wheelman Company toward some of the other papers has been one of misrepresentation. Aided by the great circulation which the league membership gives, it has made persistent efforts to belittle those who, a few months ago, were pleased to consider themselves among its friends.

Abbot Bassett has seen fit to take sides with the company and to publish in the official department an article not only defaming it, but casting serious reflections on its contemporaries. He presumes to speak for the executive committee and thereby makes the gentlemen who compose it appear to stand on the side of the Wheelman Company and misrepresentation. He endeavors to create the impression that the termination of the contract with the Wheelman Company means the death of the *Bulletin*, which, he says, would be a "death blow to the league." In other words, if the present publishers were to throw up the contract the league must go out of business! He tries to create the impression that, out of fifty cents per member the league publishes two papers, and that to this fact the weakness of the *Bulletin* is due. Everyone who understands the facts knows better—knows that not one cent of the fifty is used in publishing the *Bulletin*, and knows that the paper is conducted as a speculation, purely and simply, by the Wheelman Company. "The *Bulletin* is our own paper," says Mr. Bassett. "Every member should aid it." What he should have said is that the *Bulletin* is a name only, loaned to a corporation for the purposes of gain. He should have called upon the membership to aid that corporation, not the *Bulletin*. There is much more of the same sort, all leading to the same end.

Let us commend to Messrs. Burdett, Sheridan and Brown the secretary's estimate of them: "The executive committee is abundantly able to conduct the affairs of the league." Let us hope so, and that its ability will be demonstrated in an unmistakable expression of opinion on the subject of the secretary's letter.

## ASKING FOR MORE.

Two weeks ago we ventured in all humility to request the secretary of the N. C. A. to give us the names of the men who, it was rumored, had applied to that organization for licenses. "The Commentator," having adjusted his spectacles and cleared his throat for action, wants to know why we dare to ask an officer of an association to make public the private concerns of his office. We humbly ask for pardon. Like many other misguided persons we were under the impression that the N. C. A. was desirous of as great publicity as possible—

in short expected to depend on the public for its livelihood, and would therefore be glad to secure all possible advertising through the medium of the press. We are obliged to Mr. Editor-Secretary-Commentator Egan for such information as we have been able to secure, second-hand, from *Sporting Life* and trust that, this once, he will forgive our Oliver Twist-like propensity of asking for more.

## A BICYCLE TARIFF NEEDED.

Through the columns of the Chicago Record Thomas G. Sherman, of New York, has been writing letters to President Cleveland on the tariff question. His latest contains the following paragraph:

All metals, except iron and steel, in the form of pigs, ingots and bars, should be admitted either free or under extremely low rates of duty. No revenue worthy of mention can be collected from these things at any high rate of duty, and it is doubtful whether enough would be collected under any rate to pay for the trouble of collection. But a large revenue can be collected from iron and steel, in pigs, ingots and bars. If the manufacturers of finished articles would unite to support a measure including free pig iron and steel ingots I should heartily favor it. But they will not, and as a duty of 15 or 20 per cent upon these things will bring a large revenue, it is probable that this is the best which can be done. All ores and scrap metal, of course, should be free of duty.

Inasmuch as no mention is made in the article of bicycles, or other articles manufactured of metal, we take it that they are to be included in the above. The English makers and the importers would, undoubtedly, like to see the duty cut down to 15 or 20 per cent, while we suppose the home manufacturers would prefer to have the tariff remain as it is. It will be admitted that the importers have had no easy thing of it. If they had only to pay 45 per cent duty on the invoiced value of their goods some manufacturers would have fared much better, but when the appraisers raise the value, and occasionally add a fine, the duty is raised considerably beyond 45 per cent *ad valorem*.

Although not in keeping with the present tariff law, appraisers have been basing the value of bicycles on the English list price. For instance: A wheel is listed at £28 in England, or \$135 in United States money; 50 per cent is taken off, leaving \$64.13. On this amount 45 per cent duty is charged. This is when the wheel is fitted with tires, pedals and saddle. If the wheel arrives minus these articles the value of the said articles (generally about \$25) is deducted from the price of the wheel. Under this plan importers are paying more than under the other. In one or two cases, where this plan was tried, appeals were taken and the result was a victory for the importer, inasmuch as the law says the amount of duty shall be 45 per cent *ad valorem*. Appraisers have a faculty for construing the law in any manner that best suits their purposes.

The present tariff law is, to say the least, greatly at fault, particularly that part under which bicycles are classed. There has been no direct tariff legislation relating to bicycles alone, and for this reason the appraisers are permitted to switch things around at will. That the tariff law should be more explicit all will admit; there is too much red tape business about it under the present state of affairs. As long as the duty is based on the invoiced price of the goods, there will be trouble. It is not at all likely that manufacturers would invoice the goods at a less figure than the actual selling price, just for the sake of keeping down the duty; yet the appraisers do not know that they will not or do not, and are compelled to fix the value in order to levy duty. If the duty were based on the retail price of the machine

(and it must be admitted that this would be a difficult matter to arrange), it would be far better than the present system. At present the importer is compelled to make affidavit that he will sell his wheels at the same price to all comers; but he doesn't. He could not be expected to give the same rate to a man buying a dozen wheels as to the one taking 500 or 1,000 machines. If the duty were based on the retail price, it would do away with this trouble. If the importer wanted to keep down his duty he would have to keep down his retail price. This he would not do. The cost to manufacture high grade wheels is not the same with all makers; the retail price (as a rule) is the same. Under the present law the man who spends the most in building machines must pay the most duty, for he must, naturally, ask more for his goods. This should not be, and basing the duty on the retail price, in this country, would do away with any unfairness.

## PROFESSIONAL PACE MAKERS.

Jack Prince, the cycling revivalist, has caused such a stir down south that the racing board deems it advisable to issue a special warning to amateurs who may transgress the law by making pace for him. Isn't it a little ridiculous to suspend a man because, for the love of sport, he makes pace for another for the purpose of assisting him to accomplish a meritorious performance? Of course, so long as the law stands, it must be enforced, but its existence does not seem to us necessary. In any case, that portion of the rule which prevents an amateur accepting pace-making from a professional is absurd. That service seems to be particularly fitted to a professional. If we are to continue on this line, why not bar professional trainers? In nearly every other game in which we indulge the services of professional servants are accepted without question. Why not in cycling?

On one thing, at least, President Burdett is to be congratulated, viz.: His selection of men for the committee on improvement of highways. Mr. Potter, of course, remains chairman, and in Messrs. Choate and Harris, of Minnesota and Kansas, respectively, has as assistants two of the league's most painstaking members.

## Does Clever Tricks.

Henri French, a continental trick rider, arrived in New York last week to fill engagements in this country. He is a Frenchman by birth and weighs only 120 pounds. His greatest (and, in fact, new) specialty is riding on one wheel with stilts two feet long fitted to the cranks. He has seen Kaufmann many times of late and says he is training twice daily to show himself at his best on his arrival in America. He saw Barber perform in New York and thinks Kaufmann is the better all round trick rider. Henri is a high salaried man and will not work for less than \$175 a week in theatres. He tells the REFEREE that he will give a free show for the clubs shortly, in New York, and arrangements are now being looked into to have him perform in the Ormonde uptown school.

## Weddings Ahead.

Announcements are out of the coming marriage of James Josephi, long well known in trade circles, to Miss Harriett Rose Holly, of Cleveland. The ceremony takes place on April 12 at the Woodland Avenue Presbyterian Church. The lady is a well-known and popular rider, a member of the Cleveland Lady Cyclists. On the same day D. H. Lewis, of Buffalo, becomes a benedict.

Bicycling News doesn't seem to understand the idea of class racing, as a recent editorial proves. Says the writer in the paper alluded to:

Class racing is little understood in England. In America, where the tracks are of great width, open handicaps are in most cases run off in one heat, so that an entry which affords the crowd an afternoon's sport here provides something inside three minutes' racing in America. Under these circumstances it becomes very necessary to find further items for the programmes, and the class race system is adopted. A rider passes through various grades, such as the three-minute class, the 2:30 class, according to the times of his performances and the programme of race meetings is eked out with a "mile scratch race for 2:40 men," and another for a higher or lower class.

The class race here is not adopted as a "fill in" to a programme, though handicaps are sometimes, as stated, run in one heat when the entry and track permits it. There can be no difficulty in "sizing up" men, for the moment they beat the time of the class they compete in they must take their chances in the next and faster class. That is the secret of the success of trotting races. The continued watching and shifting of the horse from one class to another is watched with interest by the public and the horse breeder. Tracks, their size and shape, have nothing whatever to do with the success of class racing, for, once a man breaks the time of a class he must go higher. The system is much easier and less liable to trickery, as a man must show his true form whether he likes it or not.

\*\*

#### That Fake Busst.

It devolved upon the REFEREE to pronounce a young man—traveling around these United States under the name of Tom Busst—a fake Busst, a busted imposter, and we have good and substantial reasons for so doing—none other than reliable information that Tom Busst was sick in bed in Australia. The dead beat, who has "worked" the country from New York to Chicago and back again by using the clever Australian's name, may be a distant relative of Tom Busst, but not a creditable one. The fellow "worked" Van Sicklen (so he said in Rochester) for a pass from Chicago to Buffalo, and begged and borrowed enough money in that place to get to Rochester, after working Griffiths, of the Buffalo News for a write up on his alleged victories and travels. He paid the American Wheelman a visit, tried to borrow, but they were "on to" him. In Rochester he begged money and got that good sportsman, R. A. Punnett, to take him to his house. He said he had had nothing to eat for two days, and wanted to get to New York. It is a shame such a fellow is allowed to abuse the name and reputation of Tom Busst, and defraud cyclists through his "tales of woe" up and down the land. I just missed him at Rochester and Buffalo. A picture of the real Tom Busst proves the fake Busst a rank fraud.

\*\*

#### A Popular Editor's Win.

He has often played with the all-Wales champion foot ball team, against those of England, Scotland, Ireland and all comers. He always played hardest against Ireland, although it is a note-

worthy fact that a strong attachment exists between the boys of the principality (as Wales is called) and the wearers of the green across St. George's channel and the Irish sea. But the greatest win he ever made, which his many friends think will prove the most blessed, is that of a fair daughter of Ireland—Miss Etta Meany, whom the popular Dai Lewis, editor of the American Wheelman, will lead to the altar in Buffalo, April 12. Dai Lewis is as popular as any editor in cycling journalism; everybody speaks well of the young hustler, and what everybody says must be so. We semi-rounders will miss him, for his closest

cago. He is a born hustler and pretty level-headed; a man you can trust and who will stand by a friend to the last. Miss Meany is a pleasant little brunette, and was until last week a public school teacher. Mr. and Mrs. Lewis will spend a few days on a wedding trip, and then, for the present, the happy pair will live with the bride's mother and sister, but in May will occupy their own home, which is now in the hands of the furnishers. The wedding will be a quiet one; only four people will be present. "Pop" Warren is to be best man.

\*\*

#### A Word on Misrepresentation.

"When an advertising agent or a salesman tries to get business on the strength of 'roasting' other papers and other wheels, there is a screw loose somewhere." Thus spoke a man in Buffalo to a REFEREE representative recently,

#### A PREDICTION.

friends believe that he will be a model husband, enjoy the society of his wife and go home at 6 o'clock—and no more midnight adieus. Some will wear crape and mourn him as dead, but the others must grin and bear it. There is no doubt that Dai Lewis is excellent company—even if he does at all times evince a desire to make it known that his paper is without a peer and getting greater weekly. He landed in Buffalo, nearly stranded, financially, six years ago, and worked for a small salary, until he entered the cycling trade. Later he joined the REFEREE staff, which he left to start the American Wheelman, which he now owns. Three times in the past he has packed up his trunk to return to St. David's country, but something occurred to alter his determination, and to-day you could not pull him out of Buffalo with a team. He believes in his paper and in the city of Buffalo—even if it is smaller than New York and Chi-

ago. He is a born hustler and pretty level-headed; a man you can trust and who will stand by a friend to the last. Miss Meany is a pleasant little brunette, and was until last week a public school teacher. Mr. and Mrs. Lewis will spend a few days on a wedding trip, and then, for the present, the happy pair will live with the bride's mother and sister, but in May will occupy their own home, which is now in the hands of the furnishers. The wedding will be a quiet one; only four people will be present. "Pop" Warren is to be best man.

This might be overlooked, because, probably, the article is not worth as much as that of the man that has been traduced; but there is no use "roasting" along with the cutting. People will have more respect for the man who will treat an opponent at least with silence, or faint praise, than for a man who descends to abuse and misrepresentation in order to do business.

\*\*

#### They Yearn for Springfield.

What racing memories the name of Howard P. Merrill brings to the mind of the days of the ordinary. Any performance on the Springfield track without Howard Merrill's attendance was not complete. He wore glasses and always a broad, expansive smile, which was attended by a merry twinkle of the eye. He was always selected for some official position at the tournament, and once when filling the position of referee he fell into a tub of lemonade and was rescued by the writer. He got restless, however, because Springfield went back on Ducker, or wouldn't put on electric cars to his house, or something, and he fled to far-away Los Angeles, and from the land of flowers and the Los Angeles Herald he wrote to friends occasionally. He began to yearn for New England again, and once more appeared like the bright morning sun in Springfield. A few months before the election some New Hampshire capitalist thought Cleveland was too popular in the Granite state, so they sent for Merrill and "put up the stuff" to start what proved to be a bright little morning daily, with a bright little editor. Cleveland got there; capitalists on wrong side and money scarce, so the paper consolidated with the paper that was on the right side, the Nashua Telegraph.

Once more Howard yearned for Springfield and Hampden Park, and last week he wrote that he is holding down the position of day editor to his first love, the Springfield Union. With Turner on the Republican and Merrill on the Union, Springfield will have plenty of cycling news, as both are well posted and accomplished cycling scribes.

"Chickens come home to roost," they say; so with Hendee and Merrill. It only now requires Ducker's presence at Springfield to have all the old chicks there.

\*\*

#### Wants to Be an Amateur.

The report that the old time French professional, Charles Terront, had applied for a certificate of lilly-white purity to a French amateur governing body recalls an incident of two weeks ago. William Martin, the long-distance champion professional rider, called to solve a matter which had troubled him greatly. He wanted to know which was the better thing for him to do, to apply to the L. A. W. for admission to the amateur ranks, or to Frank Egan for a ticket for cash prize membership! After the writer's pulse had climbed down from 160 to its normal beat, and he had duly sized William's thoughtful face, to be sure that he meant business, he read him the clauses in amateur rules defining amateurism and professionalism, and reminded him that he never had been anything but a professional, and that his chance of gaining Chairman Raymond's pearl of great price, was about as slim as Bob Ingersoll's chances of heaven. I kindly but firmly advised him to write to his "papa" Egan instant!

Indianapolis papers contain notice of dissolution of partnership between E. V. Minor and F. E. Hunter. We understand the firm has gone out of business entirely.

## COMMENTS BY PHŒBUS.

*Bad Weather Predicted for April—Chicago's Dirty Streets.*

Foster, the weather prophet—bad cess to him for a murtherin blatherskite—predicts cold and wet weather during the whole month of April, and we can only console ourselves with the assurance that nine hundred and ninety-nine times out of the thousand the weather prophet's predictions are verified in a directly opposite manner. Therefore we can reasonably hope for a warm and pleasant April. The gods send that it may be so, as for the last week, barring the wind and dust, the weather has been bearable at least, and the "row" has profited thereby. Reports of retail sales are common, and would-be buyers are thick as bees in a clover field. In a week or two the season will be fairly opened, and it is to be hoped that it will be a better one than last.

\*\*\*

The streets of Chicago are in a most terrible condition; not that this is anything new or strange, but it is not right that a great metropolis should allow its highways to become a wilderness of torn-up pavements, heaps of garbage and ash barrels, a sea of mud and corruption, or a desert of sand and filthy dust. Nor is it right that the same highways should be given over to the tender mercies of street-car corporations and transportation companies. It is as much as one's life is worth to drive in a light vehicle or to ride a bicycle on any of the main streets of the bloomin' burg, for if one did not bury himself in some unmarked mudhole he would be certain to be run down and macerated by a jugermantha in the shape of a cable car or brewer's wagon. What is the objection to the Chicago bicycle contingent getting up a little memorial, so

to speak, and presenting the same to the next mayor? There might not be much boodle in it for him, but the names thereon and the number thereof might put a flea in his ear. I do not believe there is a politician in Chicago who appreciates the voting power of the cyclists. I do not have much to do with politics, nor do I advise any one else to; nevertheless, we have a mighty weapon in our hands with which to right wrongs, and it should be used. "De gang," with all its "influence," could not poll as many votes nor carry an election as could the bicyclists of this city if they would forget party and vote for principle and for what they want. Enough money finds its way into the pockets of boodle aldermen every year to make good streets a fact in Chicago. What is the matter with playing our hand just once for what it is worth? This little scheme was worked in Philadelphia not long ago, and the result was highly satisfactory. There are other things besides streets that need mending in Chicago, and a good, clean bicycle vote might do much towards healing a lot of obtrusive sores on the cuticle of city government. The case is worth the effort anyway; let's try it.

\*\*\*

A great many old-timers will hear with regret that F. G. Lillibridge of saddle fame is seriously ill in El Paso, Tex. He caught a severe cold during the last meet in Rockford, Ill., and has never recovered. Not so many years ago he was one of the best known cyclists in America, and has always been a hail fellow. His invention of the hammock saddle did much for cycling, and his energy and personal influence had a very strong effect on the sport for several years, especially in Illinois. I understand that he is about to return to his home in Rockford, and I trust he will succeed in throwing off his enemy. Bicycling can not afford to lose such men as he.

PHŒBUS.

## SOUTHERNERS TAKE TO WHEELS.

*Zimmie's Presence Has Stirred Up the Inhabitants.*

"Down by the sea," on the east side of Georgia, is situated the pretty little town of Brunswick, near the state line of Florida, and a more delightful place to spend a few weeks of rest and quietness, to say nothing of genuine enjoyment and the thorough hospitality of the citizens, it would be hard to find. The cyclers will find here as grand a stretch of shell road as his heart could desire. It circles the city on the north and east sides, and leads through some charming scenery. As you ride along the roadway stretches out ahead of you, like a silver band upon the earth; is as smooth as an asphalt pavement, while it is not so monotonous, and it is here in the month of March with the warm bright sunshine about you, whilst you think with a shiver of the blizzard raging up north, that you feel that "life is worth living."

It was here that "Zimmie, the champion" and J. J. Ross landed on the afternoon of March 10. Their arrival was the turning point of cycling life in Brunswick, for since then the ambition of every inhabitant of either sex, old and young, has been to be a cyclist. They do not all aspire to be as fast as Arthur A., nor to be a "step fiend" like Ross, who rides down nearly all the steps he has to descend, and gives as an excuse that "it is too much bother to walk." But they have taken hold of cycling with a vim that would be a credit to a great many larger cities; and, what is more, dealers and riders pull together, and therefore avoid the clash and ill feeling so noticeable in many other places. It is far better so, and tends to increase the growth of the grandest of all sports, while in the other instance it

only results in decreasing it, and is the cause of all the price-cutting and dissatisfaction amongst the trade.

Brunswick has already a sturdy little club of fifty active members, which now promises to assume such proportions that it will be a credit to the city and state. Road riding and racing will be encouraged, and every effort will be made to give Brunswick a position in the cycling world, of which it will be proud.

If anyone doubts the hospitality of the people, just let him get within fifty yards of Zimmerman or Ross and they will soon have that doubt dispelled. They cannot say enough about the kindness and courtesies extended to them by everybody.

Much credit is due Frank H. Dunn for the hard work and enthusiastic devotion he has given to cycling, and for the general good feeling which prevails amongst the riders and the trade; also for the active interest he has taken in the L. A. W., for which he has secured nearly all of the twenty odd members residing in his city. Frank takes good care that every visiting cyclist has a pleasant time and carries away recollections of his visit that will bring him back to the "city by the sea."

True all through the south is good, and is increasing wonderfully, but it is to be regretted that there are some unscrupulous dealers and "sidewalk" agents who persist in cutting prices, not only hurting their own trade, but also that of the legitimate dealer. If a trade organization of a national character were formed to prevent by a heavy fine the cutting of prices, a most valuable step would be taken to place the bicycle business on a footing with all other legitimate and ordinary trades and callings.

### MISUSE OF DECORATION DAY.

*The Observance of Holidays a Matter of Custom.*

EDITOR REFEREE: With all due respect to W. L. Ross, of Boston, the writer thinks that his article in the *Bicycling World* of March 24 partakes of the selfish nature. Patriotism and sentimentalism are widely separated, and, while the American public is, without a doubt, full of the former, the latter is not pre-eminent. Because some weep, or burn their fingers, is there any reason why all should do the same?

Custom has much to do with the observance of public feasts and holidays, but do we find all following in the same line? This would be a very peculiar world if all men's feelings and thoughts were cast in the same mould. There are enough people in this world, and I presume enough in Boston to participate in the different affairs that may take place on any day observed as a holiday. And what are holidays for? Are they commemorable for the reason that *all* should devote the day to the one object assigned? It is certainly a blessing that we as a people are given these oases in the desert of 365 days in the year, that we may be relieved for a period of a few hours from the hum-drum of every day life, and participate in a freedom from dull care and business.

Why should the ceremonies connected with the observance of the reverence due to the nation's heroes be restricted by a bicycle meet, base ball game, horse race, or any other sport that is participated in by the un-patriotic young and old American? We are certainly living in an age of peculiar methods, ways and means, and those of the holier-than-thou kind must be careful how they air their grievances. The old saying of "all work and no play, makes Jack a dull boy,"

can in a certain sense be applied in this case, as it would certainly be as hard work for many to attend some of the observances of Memorial day as it would to do manual labor. What is more enjoyable to the average bicycle rider or enthusiast than a run in the county on his wheel on a bright, sunshiny May day, or to attend a well regulated race meet? Does it reflect upon his patriotism to do so? "Mawkish" sentiment is an attribute that is best left alone, and there is no absolute reason or justice in saying that any man who does not strictly observe a Memorial day is lacking in reverence to his country's heroes. The effects of restrictive principles are too well known to be commented on in this article. Let me close in the words of the illustrious Pope and say—

Know well thyself, presume not God to scan.  
The noblest study of mankind is man.

WARD.

### A Journey of Varied Interest.

The tourist, via the Baltimore & Ohio Railroad, "The Picturesque Route," from Chicago to Baltimore, Philadelphia and New York, via Washington, is regaled with views of most varied and beautiful scenery. From the windows of the comfortable day coaches and luxurious Pullman cars the traveler is enchanted with a panorama of plains, valleys, hills, mountains and streams. Now you are flying past a hamlet on the mountainside. Again you find yourself rolling into one of the midland cities, or past the historic scenes in the Potomac Valley, and if you are at all imaginative the roar of distant battles along the Potomac and in the Shenandoah Valley may be heard above the noise of the flying car wheels, or you can recall the daring raid of John Brown at Harper's Ferry, within a stone's throw of your train.

It is worth your while to awake at night, as the train speeds along near Potosi, in northern Ohio. Flames of natural gas shoot heavenward, alternately lighting up a humble home, revealing a bit of picturesque landscape, or breaking the gloom of forests. To see these ever-burning lights is indeed a new experience, and at night the weird scene alone is worth a trip over the Baltimore & Ohio, which affords to the traveler so many unique and fascinating pictures which go to make up the glories of our own American scenery. The journey over the Alleghenies carries with it the impression that here, in our own land, we have a glorious heritage for the inspiration of the poet and the artist.—Davenport (Ia.) Church Bells.—22-2

### BASSETT EXCEEDED HIS AUTHORITY.

*The League of American Wheelmen Secretary Criticized.*

The letter which Secretary Bassett published in last week's *Bulletin* has caused considerable talk as to his authority to voice the supposed sentiment of the league and the questionable propriety of his speaking at the same time for the Wheelmen Company, which constitutes the anti-league end of the publishing contract.

It is charged by many that Abbott had no business to borrow the injured air of the Wheelmen Company, making it that of the league and branding the enemies of *Bi. World* as enemies of the league.

Vice-President Sheridan telegraphed Bassett not to publish it, but his message failed to intercept the article. Bassett rejoices that the *Bi. World* and *League of American Wheelmen Bulletin* still remains the official organ in spite of those who have sought its destruction. He is striking straight at Chicago wheel papers when he says, "There are those who would be only too glad to deprive league members of their weekly paper, and there is no doubt that it would be taken away if it were possible for these enemies of the league to accomplish their purpose."

It is rather a strong statement to assert that somebody itches to deprive members of their paper or that the enemies of *Bi. World* are enemies of the league. The province of the league secretary is held not to extend to the point of giving advice of the broad kind that Mr. Bassett volunteers, and surely not to the extent of adopting the cause of the Wheelmen Company, especially since that concern is supposed to have attempted to "bluff" the league into handing over something

like \$4,000 to pay an unwritten postage bill.

The question is whether the executive committee of the league has at any time granted Bassett the authority to reflect its sentiments in print without a previous sanction, and whether he is at any time more than the paid servant of the league's membership.—Chicago Record.

### Will It Come to This?

That the coming season will find the light-weight wheel in general use for road riding, is evidenced by an inspection of the contents of any cycle store. Wheels which were once denominated "birds," but are now spoken of as "ice wagons," are traded in for lighter wheels; the old wheel is then given a shave, a hair-cut and a shine, and shipped to the coal regions to delight the heart of some tyro in cycling. "Off with the old, on with the new." Next year, perhaps, the "16-pounder (all off), with wind-shield attachment," etc., will usurp the place of the present favorite, and so on *ad infinitum*, until one may live to see the day when, unless he is astride the "six-pound aluminium scorcher, with half-inch pneumatic tires, geared to 106, he "won't be in it."

### A Self's Club.

Buffalo is a pretty swift place for a city of its size, and about the swiftest lot of people in it are the Ramblers. The Ramblers are Bohemians, and about the time an orderly resident of the nation's metropolis is in bed, they are seated in "Billy's" or the Silver Dollar, sampling back and sandwiches and discussing cycling. About the leaders in the pastime are Warren, Lewis, Young, Klipfel and Gibson, and their usual hour for retiring is midnight.

Dunkirk, N. Y. has a new club, the Lake City Wheelmen.

The cyclists of Denver held a large lantern parade Monday night.

Charles Hoyt has been elected captain of the Lakeside C. C. of Cleveland.

The wheelmen of Topeka, Kas., are about to organize a military corps.

The New York Tourist Wheelmen will have on April 12 a circus party—the first on record.

F. C. Fuhrman, a prominent Buffalonian, has joined the *American Wheelman* staff.

The White Plains Wheelmen is the name of a recently organized club in New York State.

Secretary-Treasurer Gbaster, of the Ohio division, has just mailed some 4,000 application and renewal blanks.

The Monte Claire C. C., of Chicago, was incorporated Friday last by William F. Kemper, Nick Wictor, John N. Welter and Henry Hender.

Thomas Burns, of Binghamton, N. Y., has wagered \$500 that he can ride from that place to Chicago in eight days. The attempt will be made in June.

The officers of the new Idlewild Wheel Club of Cleveland are as follows: President, Herman Jacoby; vice-president, I. L. Barry; secretary, K. C. Frey; treasurer, M. J. Greene.

The Dayton (O.) Bicycle Club will repeat its successful minstrel entertainment at the Grand Opera House April 28, for the benefit of the Deaconess and St. Elizabeth's hospitals.

After considerable debate pro and con, the question, "are Sunday runs for the best interest of the club," has been decided in the affirmative by the Rambling Wheel Club of Bridgeport, Conn.

The Y. M. C. A. Bicycle Club of Peoria has elected officers as follows: President, Godfrey G. Luthy; vice-president, Howard Fisher; secretary and treasurer, John Kirkpatrick; captain, Robert Schofield.

General Passenger Agent Scull, of the B. & O., always a friend of wheelmen, has suggested that league members be granted a single fare for the round trip in connection with the world's fair tournament. He is not sanguine, however, of its adoption.

At the annual meeting of the Stratford (Can.) Bicycle Club, the following officers were elected: Honorary president, Mayor Monteith; president, O. E. Nasmith; vice-president, Mark Wade; secretary-treasurer, J. H. Kenner; captain, C. J. Wade.

Dr. C. Z. Bahl, of the Quaker City Wheelmen, Philadelphia, starts from his home within a week for one of the longest bicycle trips ever taken on American soil. Dr. Bahl will ride across the continent to San Francisco, thence south to Mexico and across the southern states to the Atlantic coast and north to New York, about 10,000 miles.

The Press C. C. at Buffalo elected the following ticket on Tuesday evening of last week: President, J. R. O'Brien; vice-president, H. P. Werner; treasurer, J. F. Linneman, Sr.; recording secretary, W. D. Fowler; financial secretary, C. F. Bensing; corresponding secretary, W. A. Grimmell; captain, W. H. Lampman; board of governors, J. G. Nussbaumer;

L. M. Wechter, W. Talmage, C. F. Brooks and J. E. Smith.

F. E. Spooner, having given up his European trip, now proposes to start from San Francisco May 14, the same day Roe leaves New York, and ride eastward across the continent. It will probably be a race between the two men for the coast to coast record.

The Castle Point Cyclers of Hoboken, N. J., held their annual meeting on Monday night and elected the following officers: President, Charles J. Jeanueret; vice-president, F. Trautwein; treasurer, H. L. Bates; financial secretary, H. Lahman; recording secretary, W. J. Curtis; captain, E. Lange.

Congressman Tom L. Johnson of Cleveland is a member of the Johnstown (Pa.) Cycle Club. How nice the portly Tom will look on a club run with this, the club's uniform: Blue suit with military braid, black stockings, russet leather shoes, russet leather belt, helmet cap of light color, and regulation League of American Wheelmen shirt, with the club emblem worked on it.

Beginning with this week, *Cycling of Philadelphia* will be mailed regularly to each member of the Pennsylvania division, this lively journal having been selected by the division board of officers as the best medium through which it could be kept in touch with the members of the division. Editor Dimon is to be congratulated, as it has been mainly through his efforts that *Cycling* has attained its position as the leading cycling paper published in Philadelphia.

Three American cyclists have already made a tour of the world on wheels, and Russia comes forward with one of her riders, imitating the example which we have given them. M. G. Morton, one of the most prominent of Russian riders, intends to leave St. Petersburg and ride through the north of Russia and Siberia to the seaport of Wladowostok, thence by boat to San Francisco. From there he will ride to the world's fair, and thence to New York, cross the Atlantic and continue his tour through Europe.

The New Orleans Bicycle Club and the Louisiana Cycling Club have ceased to exist. The Pelican Cycling Club has taken their place. On one side the older members wanted the younger material to strengthen them, and there was nothing else to do but consolidate. The new club starts out with a membership of 100, and will take possession of all property belonging to both clubs. With its handsome club house, with its fine tennis alleys, bath rooms, lockers, billiard rooms, etc., there should be a number of new members added to the club. Preparations will be made for a series of races to take place in the summer, with prospects of a big meeting.

#### Cyclist Caught the Thief.

It remained for a Denver cyclist to catch a thief who was getting away from a justice of the peace. The judge was on a farm horse; the thief had a horse and buggy. It was a long chase and ended in Denver. The

thief was getting away, when the justice called upon a wheelman named Pyncheon to catch him. Before a quarter of a mile had been covered the thief was caught, and soon after turned over to the proper authorities to reap the reward of his misconduct.

#### WHAT IS AN AMATEUR?

##### A Legal Opinion On That Often Mooted Question.

Considerable discussion has recently been raised as to what constitutes an amateur wheelman and entitles one to membership in the L. A. W., and Frank H. Kerrigan upon request has kindly submitted the following opinion:

It is not necessary to be a bicycle rider to be eligible to membership of the L. A. W. On page 8 of the constitution of the L. A. W. the amateur rules are as follows: "An amateur is one who has not engaged in \*\*\* cycling \*\*\* for money, \* \* \* or knowingly competed with a professional for a prize, etc."

The rule, by setting forth who is not an amateur, inferentially admits every one not embraced within the statement of those who can not become members; for example, John Doe has not engaged in cycling for money or knowingly competed with a professional for a prize. He is not in violation of any of the conditions of stated rule and therefore entitled to membership.

Again, from the purposes of the league as set forth on the front page of the L. A. W. constitution, it does not seem as though the league is intended exclusively for riders.

And finally, our lexicographers leave the matter in no unsettled state. Worcester: "Amateur—one versed in or lover of any particular pursuit, art or science, but not engaged in it professionally."

The Imperial Dictionary: "Amateur—one who has a taste for a pursuit," etc.

Murray's New English Dictionary on Historical Principle: "One who loves or is fond of, one who has a taste for a thing, etc." Example given: "I am no amateur of these melons, meaning, I am no lover of these melons."

Chalmers' Astronomical Dictionary, page 40, the following example is found: "He is an amateur of philosophy, meaning that he is a lover of the science."

In the light of these definitions by our well recognized authorities, I understand an amateur wheelman to be any person who desires to see cycling flourish, and has the welfare of the sport at heart. Of course applicants to membership must be of good moral character and of eighteen years, as required by section 1, article 3, of national constitution.—*California Turf*.

#### SMALL CHICAGO NOTES.

##### A Lincoln Man's Long Trip—Miscellaneous Club Notes.

T. E. Rees has resigned as secretary-treasurer of the Englewood Cycling Club.

The annual meeting of the Farragut Cycling Club occurs next week, when officers for '93 will be elected.

George Webb, the Aurora cycle dealer, was in town last week. He says the roads around Aurora are dried up, a little rough, but will be good riding in a week.

The proprietor of the Riverside hotel assured the Lincoln club men who took dinner there Sunday that, though prices might be raised during the world's fair, the cyclists' rate of fifty cents for dinner would remain.

The Morgan & Wright Cycling Club held its annual meeting last Saturday. Fifty members are enrolled. The club was organized last November and the following officers hold over: President, F. W. Morgan; secretary, C. B. Van Dyke; treasurer, John Herkenhoff; captain, J. E. Hammond.

Gustave Sues, of the Lincoln club, left this week for a six-months' trip abroad. He goes to Naples, whence, two weeks

from next Wednesday, he departs on a 1,200 mile trip awheel through Italy, Switzerland and Germany to Frankfurt-on-Main, where he will visit his parents, and returning will wheel through France and England.

The Illinois C. C. of Chicago is in need of a good trainer. Applications for the position should be sent to Secretary C. L. Steen, 1008 Washington boulevard.

#### Opened with Easter.

Easter Sunday, in Chicago, at least, was the formal opening of the riding season. During the six days previous Old Sol's rays had beamed on the earth's surface for full sixty hours, and as a result the roads became comparatively dry. Riders were out in force Sunday. With many it was their first ride of the season, while others had been riding some during the week. The Illinois club run to the world's fair grounds was attended by a large number, twenty odd of the Cook County Wheelmen visited Pullman, and nine of the C. C. C. scorches were prowling about. The wind—which at times and in certain places was a small-sized hurricane—likely kept many from venturing very far. The boulevards were crowded with vehicles and a goodly portion were bicycles.

#### Must Become Accustomed to It.

The bicycle is bound to revolutionize our customs and habits in many ways. It is no use to find fault with it, for it is a source of great convenience and pleasure and men will have it, so it is wise to adapt our ways to it as speedily as possible. And one custom that people must habituate themselves to is the observance of extra care in crossing streets. The wheel goes quietly but with tremendous rapidity at times. Now, if a lady starts across the street and suddenly changes her mind and starts back again, she runs a chance of coming in contact with a wheel, and she is to blame for not keeping her eyes open. At the same time wheels should not be propelled faster than a trotting horse on our crowded streets.—*St. Augustine (Fla.) News*.

#### This is Rather Funny.

Says Mark Beaubien, the *Sporting Life's* Chicago correspondent, referring to the Barrett-Munger affair:

"It reminds one, in the manner of its *caractere de dupe* and precipitate 'tumbling to,' of the menagerie of years ago, when a little boy, whose pa's farm joined ours, went to the show and fed the elephant green walnuts.

"The great pachyderm took them in with some hay and chewed awhile before the walnut flavor soaked into his sense of taste, and then he decorated the tent with half-masticated stuff and blew the little boy through a red band wagon. The league mastodon got a taste of Leeming and is now engaged in making things warm for George K. and 'Birdie.'"

#### St. Louis County Tour.

ST. LOUIS, April 3.—The county tour yesterday was a pronounced success and especially so in point of attendance, 180 wheelmen reaching Ballwin in time for dinner. Hanford, of Chicago, attracted much attention by riding out on a Crypto geared ordinary, the first one seen here. The weather was good, roads smooth and not dusty, in fact all conditions helped to make this ride the finest ever taken through St. Louis County. On the return home a stop was made at Bartold's, eight miles from St. Louis, for refreshments. During the stop speeches were made by Chief Consul Robert Holm and Albert C. Davis, chairman of the Wheelmen's Political Association.

## 1893 FIXTURES.

## APRIL.

26-27—Indoor meet of Milwaukee Wheelmen.

## MAY.

7—Pike county tour at Louisiana, Mo.

8—Fifty-mile road race at Clarkville, Mo.

9-10—Savannah Wheelmen's Track Association's races, Savannah, Ga.

30—Pullman Road Race, Chicago.

30—New Haven (Conn.) B. C.'s annual meet.

30—Massachusetts division meet, Worcester.

30—Martin road race, Buffalo.

30—Irvington-Milburn road race.

30—Rome (N. Y.) Cyclers' meet.

30—"Southern Wheelman's" 10-mile road race, Louisville, Ky.

30—Winona (Minn.) C. C. race meet.

30—Cleveland (O.) Wheel Club's second annual road race.

30—Alameda B. C. meet, San Francisco.

30—Warner A. C. ten-mile road race, Wilmington, Del.

## JUNE.

3—Press C. C. meet, Buffalo.

3—Buffalo. (New York circuit.)

3—Milwaukee Wheelmen's meet, Exposition building, Milwaukee.

4—Inter state De Soto run.

16-17—Syracuse. (New York circuit.)

17—English championships on Herne Hill track.

17—Alpha Wheel Club's 10-mile road race, South Norwalk, Conn.

24—Prince Wells' second annual 10-mile road race, Louisville.

27-28—Kentucky division meet, Harrodsburg.

## JULY.

23-24—Missouri division meet, Sedalia.

24—Ohio division meet, Sandusky.

3-4—Columbia C. C. meet, Hartford, Conn.

4—Colorado division meet.

4—Milwaukee-Wackesha road race.

4—Tonawanda (Pa.) B. C. meet.

4—Watertown (N. Y.) Cyclers' meet.

4—Fourth annual Poorman road race, at Cincinnati.

4—Second annual road race, Erie (Pa.) Wanderers B. C.

4—California division meet.

4—Missouri division meet, Sedalia.

4-5—Seventh annual meet Kansas division at Fort Scott. Address Henry E. Harris.

4-5—Rockford, (Ill.) C. C. meet.

21-22—Coca Cocoa cup race, Herne Hill, London.

25-26—Indiana division meet, Fort Wayne.

## AUGUST. (WESTERN CIRCUIT.)

5-12—Illinois Division, National E. A. W. and International Wheelmen's, Chicago.

14-15—Milwaukee Wheelmen's meet.

16-17—Wisconsin division meet, Ripon.

19—Minneapolis C. C. meet.

19—Inter Club road race, Buffalo.

22—Evanston C. C. meet.

24—Ziz Zag C. C. meet, Indianapolis, Ind.

26—Cincinnati C. C. meet.

24-25—Columbus (O.) Century C. C. meet.

30-31—Cleveland W. C. meet.

## SEPTEMBER.

9—Garden City Cyclers' meet, San Jose, Cal.

13-14—Springfield (Mass.) B. C.'s annual race meet, Hampden Park track.

26-27-28—Inter-state Fair Association meet, Trenton, N. J.

## OCTOBER.

2—Capital City Wheelmen meet, Sacramento, Cal.

5—Annual St. Louis county fair tour.

\* \* \*

## WORLD'S FAIR ARRANGEMENTS.

## The Committees in Charge of the International Tournament Are Busy.

The track committee consulted a firm of contractors which estimates the cost of the track at \$7,500. The idea of surfacing it with burnt clay has been abandoned, and a composition peculiar to the Joliet district has been substituted. The contract will probably be awarded to Dolose & Shepard.

The race committee is in receipt of information to the effect that all countries which have amateur organizations, except Belgium and Germany, have named their delegates to the International Cyclists' Association. The two excep-

tions promised, on March 15, to take action at once. A complete book of rules, with a list of the delegates, will be out shortly.

England has requested that the international championships be run as late as possible, as she will pick her team from the results of her spring meets, and fears they will not have time to get into condition, if in America only a week previous to holding of meet. These events will therefore be run on Friday and Saturday, Aug. 11 and 12.

Mr. Sturmyer from the *Cyclist* has offered the emblematic shield to be awarded for the team race in the international series. It is to be similar to the Elcho shield, which is the trophy competed for by the crack shots of the world. He will get out designs for it at once if accepted.

\* \* \*

## THE PULLMAN COURSE.

*The Old Sand Hill Taken Away—Little Change, However.*

Up to the present time there has been little change in the Pullman course, and that which has been made will likely improve it. After leaving Stony Island

avenue the old course is followed to the sand hill. Here, instead of going through the little clump of trees as heretofore, the riders will be compelled to ride over that portion of the road used by the electric railway, which is now graded through the sand hill and to the north and east to some extent, as shown in the map herewith. At present no rails or ties have been laid, and until this work is done no macadamizing will be done. It has been promised that by May 30 the road will be completed, so that there will be a macadamized roadway from the sand hill into Pullman. Sunday last the hill was ridden with as much ease as could be done before the three feet of earth was removed, so that if the improvement is not finished it will not interfere with the race in the least; in fact it will continue the "struggle at the sand hill."

\* \* \*

## BUFFALO'S CYCLE TRACK.

*Good Chances Now for Its Being Built.—That Buffalo-Chicago Race.*

BUFFALO, April 4.—The movement to secure a cycling track for Buffalo has received a fresh impetus, and a public meeting will be held at the Ramblers' club rooms, on Friday evening of this week to further the boom. Some of the

knowing ones who have been predicting failure, and noticeably a four-leaved local cycling sheet, whose editor started the paper this spring for the purpose of having an "official" city organ for the clubs, may have to take water for their remarks as to the feasibility of the plan. The editor in question showed tremendous enthusiasm for the project until asked to subscribe stock, and then gravely shook his head and commenced to pooh-hoo the whole affair, because he could not run it. The plan to be submitted at the coming meeting is the one already outlined, the issuing of 2,000 shares of stock at \$5 per share. As there are 12,000 wheelmen in this city it will require but one-sixth of them at one share each to make the project a success, and as all the daily papers are heartily in sympathy with the movement, there is no reason to doubt its success.

## THE BUFFALO-CHICAGO TEAM RACE.

The plan for a road race between the Chicago and Buffalo cyclists meets with general approbation here, and the scorers are getting into shape for the event. Rochester would like to take a hand in it, according to report, but the appeals of that sleepy village on the Genesee, will, in all probability, receive but little consideration from Buffalo after the way in which they crawled out of racing last fall, after their bluffs were called by the Queen City riders. The Buffalo riders will agree on any reasonable course, and will have twenty-five men ready whenever Chicago sees fit to produce her champions.

[The Chicago men have not been challenged as yet, and until they are there cannot be a race. Make your challenge, Buffalo, naming conditions, etc.—Ed.]

\* \* \*

## Chairman Raymond's Warning.

Fearing that the southern wheelmen may be misled through ignorance of the racing rules, and thereby be made professionals, Mr. Raymond has issued the following warning:

It is evident to this board that if extraordinary care is not exercised, a very great number of southern wheelmen will become professionals. A company has been formed to promote professional and amateur cycle races throughout the south. It is not the purpose of this declaration to injure the financial prospects of said firm, but our duty is clear before us to warn amateur wheelmen to be careful, to surround themselves with every League of American Wheelmen safeguard before competing at any meet thus promoted. It is not probable that sanctions will be awarded to any meet running mixed programmes, made up of professional and amateur events. The subject is now under advisement. As a protection to racing men we urge them to ask to see the sanction for any such meet.

Again, Mr. J. S. Prince is making professionals of amateurs by securing their services as pace-makers. We have declared one man a professional for this offense and more will follow the investigation now pending. We are informed that Mr. Prince has made statements to these men that have led them to believe that they violated no rule by pacing him. We state now, and we hope the chief consuls of the southern states will give publicity to this fact, that an amateur cannot race with or make pace for any professional. It makes no difference whether said amateur is a member of the League of American Wheelmen or not.

\* \* \*

## Another Savannah Meet.

SAVANNAH, Ga., April 3.—The Savannah Wheelmen have decided to hold another meet May 9 and 10—during "May week," an annual jollification week hereabouts. The last three days of May will be given up to seeing bicycle races at Cumberland Island by the Brunswick (Ga.) people. The races will be on the beach, which has an excellent surface. Would races on a beach be called track or road races, and would they be subject to L. A. W. rules is a question that has bothered quite a few of the local wheelmen. Will the REFEREE please answer for the benefit of our riders? [It would be best to have Mr.

Raymond's decision on the case.—Ed.]

The local riders are training and are determined that they will not always be at the end of the races. Zimmerman and Wheeler go to the track morning and afternoon, and are getting into shape rapidly for the races April 8. The following programme of races will be run: One-mile, novice; mile, open; half-mile, boys'; mile, handicap; two-mile, Savannah riders; quarter-mile, open; mile, 2:45 class; mile, lap; half-mile, handicap; egg race; three-mile, handicap.

Percy Sugden has gone to Charleston to prepare for laying out the track of the wheelmen's association of that city. Mr. French, the builder of the Savannah track, is also in that city to prepare estimates, etc. The Charleston track will probably be a reproduction of that here. Jacksonville and Macon are also talking of tracks. If they construct them there will be an admirable circuit formed, and the best in the bicycling line can always be obtained for this section.

Montgomery, Ala., has taken on new life, and wheels are being sold daily. A club has been organized and will soon construct a half-mile clay track.

\* \* \*

## That Philadelphia-Wilmington Race.

There is still much ink being wasted over the proposed road race between Wilmington and Philadelphia riders, the efforts of C. A. Dimon, editor of *Cycling* and captain of the South End Wheelmen, and R. L. Kain, cycling editor of the *Philadelphia Record*, to bring teams together having so far proved fruitless. It appears that Wilmington wants a rough course, while Philadelphia seems to prefer a smooth one. The latest proposition is to have three races—one over a course selected by the Wilmingtonians, one over a course with which the Philadelphians are familiar, the third to be neutral. The Myers-town-Reading and the Irvington-Milburn courses are talked of, but the matter is still hanging fire. In the meantime both teams are training, and if they ever come together there'll be lots of fun.

\* \* \*

## At Savannah Saturday.

The second Savannah meet occurs on Saturday of this week. Zimmie will be there, also Wheeler, Rich and Baird, and possibly Johnson. The programme has been arranged as follows: One-mile novice; one-mile, open; half-mile, boys under fourteen years; one-mile handicap, open; two-miles, open to Savannah riders only; quarter-mile, best two in three heats; one-mile, 2:45 class; one-mile lap race, open; half-mile handicap, open; egg race.

\* \* \*

## Offer Special Prizes.

The Worcester club will leave nothing undone to capture the attendance of the most famous racing men at its spring meet. It has already as good as secured Johnson's promise to be present. This was a good move, as from a card point of view Johnson is ahead of any person other than Zimmerman this year, owing to his great riding last fall and this winter's work on skates. He is a well advertised man—the public knows him. The prizes of Worcester will, it is said, charm the heart of the most rabid pot hunter, and as an additional sensational attraction it is said the club will offer a special prize of \$50 to any rider (Windle included) who will defeat Johnson in a scratch race. Worcester is getting on in the tournament business!

\* \* \*

## A Road-Racing Association.

The talk about a road race between representative riders of Philadelphia and

## The Referee's Fifth Birthday.

On May 5 we shall celebrate our Fifth Anniversary by a change in the size of the paper.

In its new form it will be 10 x 13 inches.

This change is made on the suggestion of readers who find the present shape somewhat unwieldy, especially for folding for the pocket.

The paper will be three columns wide instead of four, but no reduction will be made in the size of type. It will be easy to read, as heretofore.

### Subscription Price:

You can save one dollar by subscribing now. After May 1st the price will be as follows:

|             |       |        |                |       |        |
|-------------|-------|--------|----------------|-------|--------|
| One year,   | - - - | \$3.00 | Three months,  | - - - | \$1.00 |
| Six months, | - - - | 1.75   | Single copies, | - - - | 10     |

During the coming World's Fair season the REFEREE will be found teeming with news for tradesmen and riders. It is worth your while to subscribe before the price goes up.

Arrangements have been made with a number of the best writers not only at home, but in England and Australia.

We propose to supply the reader with the best matter obtainable for his money.

EMPIRE CYCLE WORKS

WOLVERHAMPTON.

Wilmington has borne fruit, in some measure, at least. A road-racing association has been formed which is composed of five of the speediest road riders in Philadelphia, and they are preparing to make it warm for any team with which they may get on a race. This quintette is composed of W. W. Taxis, John Draper and Herbert Bilyeu, of the Park Avenue Wheelmen; Frank Marriott, of the South End Wheelmen, and Archie Gracey, of the Columbia Cyclers. They are all good twenty-five-mile men, and it is the consensus of opinion that they could more than hold their own against the Wilmington team

#### May Lose Their Track.

Regret is expressed that the wheelmen interested in the Tioga Athletic Association, Philadelphia, have been very lukewarm. With the track it has and the amount of money that was spent upon it last season it seems strange that the number of cycling men who joined have overlooked the fact that their dues were needed as well as those of other members to keep the ball a-rolling. It would certainly be a bad state of affairs to find a large city like Philadelphia without a suitable track or place for the numerous race meets that are held during the summer months.

#### A Meet at Fort Wayne.

The Fort Wayne (Ind.) C. C. has issued a circular, a portion of which reads as follows: "For the first time in its history a race meet will be held in the city of Fort Wayne. This will be the state meet of the Indiana division, to be run under the auspices of the Fort Wayne Cycling Club July 25 and 26. Coming as it does—just before the national meet at Chicago—a large attendance of the best racing men in the country is assured. Whatever energy, pluck, perseverance and business methods can do to make this meet a success, will be done."

#### A Site Secured.

The Minneapolis Cycle Track Association has finally secured a site for the track to be used this summer. This was not accomplished until after a half-hundred pieces of ground had been looked at. Negotiations have been about completed for four blocks of land forming a square bounded by Kenwood avenue, Colfax avenue and Aldrich avenue. Most of the property is owned by Thomas Lowry, who has agreed to the use of it, and as soon as matters are closed up the work of building the track will commence.

#### Janesville's Programme.

During the Rock County (Wis.) fair the Janesville Wheelmen will hold a two days' meet, Sept. 14 and 15, Thursday and Friday, the programme for which has been arranged as follows:

FIRST DAY.—One mile handicap; one mile handicap, for county riders only, best two in three heats; quarter-mile open.

SECOND DAY.—Five mile handicap; two mile handicap; one mile handicap, for Wisconsin riders only.

#### Waltham's New Track.

Work has already been commenced on the new three-lap track, on South street, Waltham, Mass., and work will be pushed so that it may be completed in time for the races on Decoration day. The turns will be banked seven feet, and the straight's will have enough slope to permit of good drainage.

#### Toledo's Track Scheme.

F. H. Chapman, on behalf of the Toledo cyclists, has sent out a circular re-

garding the proposed track the Toledo Exposition Company will build if a certain number of shares of stock are subscribed for. The track is to be four laps to the mile, twenty feet wide and with a good surface. Season tickets are to be \$5 each, and this admits the holder to the grounds at all times except when some entertainment other than cycling is being given.

#### Johnson at Worcester.

John S. Johnson will undoubtedly make his first appearance on an eastern track at Worcester, Mass., May 30, and will leave Hot Springs for Savannah next week. He hopes to meet Windle and all the eastern cracks, to get a little accustomed to their style and speed before the Chicago tournament. Johnson's manager, Eck, prefers Worcester, as the track will be the kind on which Johnson did most of his work

#### Chicago Race Chat.

The Chicago Racing Wheelmen have secured an old and experienced trainer for a year. Training quarters will be secured.

Gus Steele is progressing finely in his training down in Indiana. He takes daily spins on a half-mile, smooth loam track on a breeding farm about twelve miles from Hammond, the same farm on which James J. Corbett will train for his fight with Mitchell.

W. A. Rhodes is uncertain as to whether he will ride in the Pullman race. He fears another bad luck spell. He will, however, train and ride in the fifty-mile road race over the Clarks ville course on May 8, and may compete at St. Louis May 20 in the Forest Park road race.

#### General Race Items.

The Evansville (Ind.) club has decided to give no tournament this season.

A twelve-mile handicap road race is to be given this summer by B. V. Covert, a Lockport, N. Y., dealer.

The Spencer (Mass.) Bicycle Club is making arrangements for a meet to be held at Myrick Park, June 17.

The Cohoes (N. Y.) Wheelmen will have a field day in June, when several bicycle races will be on the card.

The South End Wheelmen, of Philadelphia, have a meet scheduled for June 24. Aug. 26 the Quaker City Club gives a meet.

The cyclists of Lynn, Mass., have the racing fever again and are arranging to have the old Glenmere track put in proper shape.

The race meet which it was proposed to hold at Hartford by the Rovers and the New Haven club on July 4, has practically been abandoned.

At the annual games of Cornell and Pennsylvania Universities, to be held at Philadelphia, a two-mile bicycle race will be included in the events.

A. B. Rich and his Campbell racer will be seen at Savannah shortly; so will Charlie Murphy, who goes there as an inducer with the Burris-Michelin tire.

The twelve-hour bicycle race at the industrial fair, Denver, ended on Wednesday night of last week, and the medals were distributed. The total distances achieved were as follows: Brazee, 198 miles, 12 laps; James, 184 miles, 8 laps; Pippin, 194 miles, 2 laps; Pyncheon, 143 miles, 6 laps.

Reports to the REFEREE say that A. A. Zimmerman and H. C. Wheeler are training at Savannah in easy fashion. Several young women, whom George W. Hines, of the Savannah News, declares wear crinolines, are daily spectators, and he speaks of Champion Zimmerman's arm going "to waist," whatever that means.

## NEW CANADIAN RULES.

THEY ARE ALMOST IDENTICAL WITH THOSE OF THE L. A. W.

*Makers' Amateurs Barred—Prize Limit Fixed at \$150—Duty to be Refunded—A Good Roads Plank—Meet at Sarnia.*

TORONTO, C. n., April 1.—The annual meet of the Canadian Wheelmen's Association was held yesterday morning in the parlors of the Athenæum Club in this city. In all there were 1,100 votes represented, either in person or by proxies. The report of the secretary-treasurer showed that the membership of the association had increased in the last year from 500 to 1,505, and that while two clubs had withdrawn from membership, twenty had joined. The report also showed that there was a balance on hand of \$299.55. The president's report advocated a more energetic system for securing new members to the association and the increase in the annual dues to \$1 for each member.

#### TO RETURN DUTY.

The report of a special committee on customs was read by the chairman, T. Arthur Beament, who explained that the committee had arranged with the customs department for the return of all duty paid upon wheels brought into the dominion. As the rule now stands, a wheelman entering Canada from the United States must pay a duty on his machine, but he will receive in return a receipt giving the name and number of the bicycle and the amount of money paid. On leaving Canada the customs officer gives a certificate to the wheelman certifying that a wheel of a certain make and number has left Canada on a certain day. The wheelman then mails the customs department at Ottawa the receipt, and certificate, and the amount paid by him will be remitted. A request will be made to the L. A. W. to have some such an arrangement as this made with the United States authorities.

The report of the transportation committee showed that arrangements had been made with all railroads for the carrying of wheels to and from Chicago on the same conditions as those in force in Canada.

#### OFFICERS ELECTED.

The election of officers resulted as follows: President, W. A. Hunter, Wanderers B. C.; vice-president, A. T. Lane, Montreal B. C. There was only one opponent to Mr. Hunter, T. A. Beament of Ottawa, while Mr. Lane had no opposition whatever. The balance of the morning session was occupied in framing a number of amendments to the constitution. The insertion of a clause making it one of the rules of the association to secure road improvements was one.

#### NEW BOARD MEETS.

The new board of officers, which consists of the president, vice-president and the chief consuls and representatives of the various districts, met in the afternoon, with President Hunter in the chair. By acclamation H. B. Donly was re-elected secretary-treasurer, and was also appointed editor of the *Canadian Wheelman*, the official organ of the C. W. A. This is Mr. Donly's eleventh term in the position to which he has just been elected. Heretofore the racing board has consisted of the chief consuls of the various districts, but now the board consists of only five members, as follows: R. A. Robertson, Hamilton,

chairman; J. P. Langley, F. J. Brimer, T. A. Beament, W. B. Clark.

#### VALUE OF PRIZES LIMITED.

The powers granted the board are absolute, and it now has control over all matters pertaining to race meets, championships, amateur status of riders, and racing generally. The revision of the constitution and racing rules makes the definition of amateur practically the same as that of the L. A. W. The board changed the rules so that no prize valued at more than \$150 shall be offered or awarded. The board has the same power as the racing board of the league, whereby it may have the power to suspend on circumstantial evidence, as is the case in the United States. Any cyclist who has been expelled shall have a right to appeal to the annual meeting and shall be reinstated only by a vote of such meeting and upon the showing of an error on the part of the racing board. An amateur can only receive railroad fare and entrance fees from the club he represents. Makers' amateurs are barred.

The following addition to the track rules was referred to the racing board: "For the purpose of classification the racing board shall keep a register of all winning competitors at race meetings held in Canada on tracks that have been accepted by them as complying with their regulations as to the measurement, and the officials of the race meetings held on such track shall send certified copies of winners and times immediately upon the close of such meetings to the chairman of the board, who shall cause the classification of Canadian riders to be published from time to time in the official organ."

The question of Canada's part in the international championships and the Canadian representative for same was referred to the racing board with power to act.

#### ANNUAL C. W. A. MEET.

There was only one bid for the C. W. A. annual meet, which will be held July 1. This was from the Sarnia B. C., which, by letter, offered the association ten per cent of the receipts, but a representative of the club raised the amount to twenty-five per cent. Thereupon the association awarded the meet to Sarnia. The racing board was instructed to compile a list of names of men, from which will be chosen the official starters and timers to act during the year.

#### FOUR BIG MEETS.

It was reported that four race meets would be held on the Queen's birthday, at Ottawa, Woodstock, St. Thomas and St. Catharines, also that the Sarnia Wheelmen are improving their track, and by July 1 it will be in the best possible shape. If the Port Huron wheelmen succeed in getting the Michigan division meet for July 3 and 4 it will make three days of continuous racing in that immediate vicinity.

#### Visiting Old Landmarks.

Apocryphal of the coming Paul Revere ride, a number of the members of the Massachusetts Bicycle Club visited the old North Church a few days since and examined the old high-backed pews and the different objects of interest, prominent among which was the old vinegar Bible, so called because in the parable of the vineyard the publisher, in error, printed the word vinegar instead of vineyard. The entire party ascended to the belfry, where the lanterns were hung out on the night before the memorable battles of Lexington and Concord. Copps' Hill burial ground was then visited, and the quaint old tombstones were special objects of interest.

Manufacturers. Agents. Riders. \_\_\_\_\_

Ten Reasons Why You Should Have Your 1893 Wheels Fitted With the

# DUNLOP DETACHABLE TIRE

1. There are but two parts—the Cover and the Air Tube—Simplicity itself.
2. No Solution, Cement, Canvas or Lacing is used in attaching it to the Rim.
3. No clumsy mechanical devices disfigure your machine—the tire sits smoothly into the rim which shows nothing on its surface but the valve.
4. It can be instantly detached and replaced Anywhere, Any Time, by Anybody, using nothing but the fingers.
5. It can be Permanently Repaired in less than two minutes and your machine ridden at once.
6. It cannot creep—Expansive and Tractive Forces wedge it more securely into place.
7. It is the lightest and most resilient, while the rims are absolutely Rigid without the support of spokes.
8. It cannot burst.—The tire is held in place by a strength equal to withstanding a ton.
9. It is perfectly interchangeable.—Rough covers can be substituted by the rider for smooth, and Racing tires fitted to the same rims in place of Road.
10. It is made in America, of the finest materials and in the most careful manner.

160 FIFTH AVENUE, NEW YORK.

# SHOW IN NEW YORK.

THE PRESS CLUB MAY EXHIBIT  
WHEELS AT ITS FAIR.

Notes On Various Topics — Concerning  
Cycle Advertising — A Surfeit of  
International Meets—Bassett  
and the Bulletin.

New York ha-n't had a cycle show for many months. The last one, which was held at Madison Square Garden during the progress of a professional cycle race, was far from successful. In fact, so mean were the quarters given to the show, so little was the interest and enthusiasm shown by exhibitors, and so poorly was it patronized by the public, that every one said, "That settles New York as a cycle show town." But it didn't settle New York.

The great fair of the New York Press Club is to be held in a new building that can not be surpassed for exhibition purposes. It is a new edifice and its interior is grander and better adapted in every way for fairs than the Madison Square Garden. And yet not one man in a thousand in New York knows even of its existence. It is called the Grand Central Palace, and is situated on Lexington avenue near the Grand Central depot. Some of the cycling members of the Press Club thought this would be a grand opportunity for the cycle trade to show the New York public just what it is doing. A committee has been formed to look after this branch of the fair. The Grand Central palace is of such great dimensions and so splendidly conceived that there is plenty of space for a show that would be a credit to the fair and profitable to exhibitors.

Too late in the season, you say? Not at all. Of course the maker has placed about all his output for the year with his agents, but this exhibit is not intended for the dealers. It is for the great public that makes cycle manufacturing possible. It is for the man or woman who buys a machine to ride and not to sell again. It is estimated, and it's a conservative estimate, too, that ten thousand people will visit the fair every day. The fair will run a month. A bit of figuring will show the amount of advertising a cycle exhibitor would receive.

More about this later.

## CONCERNING CYCLE ADVERTISING.

Years ago an advertisement was a simple statement of facts. There were no embellishments, no prettiness of expression, no novelty, nothing to attract the eye of those who were not directly interested in what was offered for sale. Times have changed and with them advertising methods have undergone a metamorphosis. The existence of at least a dozen papers devoted to advertising and advertisers alone is sufficient proof that the writing of an advertisement has become an art, and not simply the work of the man who keeps the books or runs errands to fill in time.

Cycle advertisers have kept up with the procession and this year has been especially productive of some handsome designs that show versatility of conception and brilliancy of execution. Some of our best newspaper artists have aided the cycle advertisement writer in his work, and the results in many cases are a symposium of light and shade and clearly and cleverly written sentences that attract the eye and carry conviction to the heart of the reader.

One of the prettiest advertisements of the season that has caught my eye is the page advertisement of the Overman

Wheel Company in the Easter number of Frank Leslie's weekly. Three-quarters of the back page of that bright paper is taken up by a wash drawing, splendidly executed, showing a wheelman and wheelwoman resting by the roadside with their pneumatic-tired wheels beside them. Both man and woman represent the best type of cyclist. Across the top of the drawing are the words, prominent but attractive, "Victors Make the Pace." The remainder of the page is devoted to a few well-written lines on the merits of the Victor. Taken altogether, it is one of the most artistic advertisements of the year and reflects credit on the advertising man who conceived it and on the Overman Wheel Company.

Verily, advertising is an art and not a trade.

## CONCERNING INTERNATIONAL MEETS.

Does it not look as if we were going to have a surfeit of international meets this year.

From August 5 to August 31 we shall have nine international meetings divided amongst the following cities: Chicago, Milwaukee, Ripon, Minneapolis, Evansville, Indianapolis, Cincinnati, Columbus and Cleveland,\* to say nothing of the meet being arranged by the M. A. C. C., of New York. Four of these meets last one day each, four of them last two days and one lasts seven days. Isn't that putting a lot of gas into an untried balloon?

I am glad to see that some clubs that had applied for international meet dates were sensible enough to withdraw their applications when they saw that such a course was advisable. Although it would seem that the wheelmen of Peoria, on account of their city already being so closely connected with cycle meets, would stand a better chance of making a success of an international meet than some of the cities in the present circuit, they are to be commended for not attempting what they are not confident could be made a success of.

Where is the great east in this international circuit? Has the east given up cycling altogether? Of course, we still have Springfield and Hartford and other races, but up to this writing we have not been honored with a single "international" meet, though the Metropolitan Association of Cycling Clubs has applied for a date. Is it possible that New York, or Philadelphia, or Boston or any of our large eastern cities has not sufficient enterprise to at least attempt to hold international races? Ripon, Evansville and Columbus are all very nice cities, but surely they are no larger, or more important, nor do they contain more cyclists than a dozen eastern cities which could be named. Truly, Bishop Berkeley must have had cycling in mind when he wrote that much-quoted line; "Westward the course of empire takes its way."

That line was written one hundred and fifty years ago. How true it is now as applied to cycling. Prophetic Bishop Berkeley!

\*Cleveland has since given up its dates. —Ed.

## TIMES HAVE CHANGED.

For years it has been the custom of boards of trade of enterprising cities to offer manufacturing firms various inducements to settle in their town. Free grants of land, exemption from taxation, the raising of stock subscriptions, and many other inducements were held out to large firms by boards of trade that wished to have concerns with capital or large employment lists settled in their cities. These offers were but the natural outcome of careful figuring by shrewd minds. A large manufacturing firm, employing hundreds and sometimes

thousands of men, and with immense capital and progressive men at its head, is a help to any young town or city. It means the spending of much money among its population, besides giving it a more important standing among the manufacturing cities of our land.

It is only within the last few years that such inducements have been held forth to cycle manufacturers. This is not so surprising when it is considered that a few years ago there were very few American firms that employed more than a hundred men, and their output was oftentimes ridiculously small as compared with the business done by our large firms nowadays. With the increase in popularity of wheeling in America and the consequent increase in the cycle manufacturing, the pioneer firms became richer, they employed more men, doubled, trebled and quadrupled their output, and became of so much importance that their addition to the manufacturing industries of a town was hailed with delight by its business men. Exemptions and gifts of lands and the rest of it were soon forthcoming until cycle manufacturers could make as good terms with the board of trade as could men in any other line of business.

All this is brought to mind by the recent action of the industrial committee of the Erie, Pa., board of trade, which took upon itself the task of raising \$100,000 for the starting of a bicycle manufactory. And, by the way, how many new cycles owe their existence to the help of just such circumstances as are responsible for this Erie cycle manufactory? And yet the pessimist will say that the poor man stands no chance in this world!

## SEEN THROUGH THE MIST.

If the *Bi World* is not allowed to go through the post-office as second-class matter, the L. A. W. stands liable to pay twenty-five cents a year for every paper sent to the league members. It is the L. A. W., then, and not the Wheelman Company that should fear the interference of the postal authorities.

Just how the L. A. W. could afford to pay a twenty-five cent subscription out of each one dollar renewal is a question in league economics that the L. A. W. officials would have to answer. At present there is not sufficient money in the L. A. W. treasury to pay the Wheelman Company for a year's subscription for each member of the league. It would seem that the only way to raise this money would be to assess each division a proportionate amount of the total sum needed. I'll wager there would be great gnashing of teeth if such an assessment were to be made.

If the *Bi World* could not pass through the mails as second-class matter, and if the L. A. W. fulfill the terms of its contract, the league would have to pay near to between \$11,000 and \$12,000 to the Wheelman Company. Even twenty-five cents a year would not recompense the publishers of the *Bi World* for the paper if it cannot mail it as second-class matter. But is the paper worth twenty-five cents to the L. A. W. members? If a vote were taken I think it would show a big majority against paying out \$12,000 in cold cash for something which a greater part of the league does not care for and would not have at any price.

This official organ question seems to be a puzzle for both sides. The Wheelman Company is put to an immense yearly expense in mailing the paper to the entire league, and notwithstanding the tearful message of Secretary Bassett, the league may at any time be called upon to pay a large sum of money for what could be done just as well for one-tenth the amount if expended on a cir-

cular. If a man wants to read the official news of the league he would read the L. A. W. *Bulletin* or a circular with equal avidity. If he wants to read live cycling news he will subscribe for any one of a half-dozen cycle papers, not one of which is published in Boston.

What an immense amount of good could be done with \$12,000! But perhaps the league officials do not believe with Emerson that "A creative economy is the fuel of magnificence." BURKE.

## Kaufman's Visit Delayed.

Mr. Punnett, of Rochester, writes as follows:

ROCHESTER, N. Y., March 27.—Editor REFEREE: Mr. N. E. Kaufman writes me that owing to engagements he will be unable to visit America in April as he planned, but will come later, date not yet set.

He suggests the idea of having in Chicago during the fair championships (world's) on the various machines, viz., ordinary, safety, star, unicycle, etc., etc. By that means every rider in the world would have a chance to show his specialties if not able to go in the all around contest. As for a deposit, Mr. Kaufman has left the money with me for the last year, and I can assure you it would be an easy matter to arrange a match if anyone would show the least inclination towards such.

R. A. PUNNETT.

We take it that Kaufman's idea is to arrange a separate match for each machine, a proposition which seems fair enough. At ordinary, safety and unicycle riding he should be able to find competitors. We suggest to Mr. Punnett the advisability of placing the deposit in the hands of some disinterested person and issuing a challenge in accordance with his letter from Kaufman.

## Military Cycling Progressing.

In the armies of Europe the use of the wheel increases, as the military administrations during the last few years have recognized the practical uses of the bicycle in the messenger service. Even armies of the smaller states now follow the example set by the larger countries. The *Radfahrend Bund* states that Belgium will establish a new school for the training of soldier cyclists. Bulgaria will, after having had a little experience with military cycling, greatly increase the number of wheels in the next manoeuvre, and will supply every regiment with a detachment of cyclists. In a short time, the paper states, we may expect to find not a single European state without cycling militia. Russian officers stationed in Siberia are now using the wheel on the ice fields for the want of good roads.

## The Social Feature Killed It.

As a cycling organization the veteran wheeling body, the Buffalo Bicycle Club, is numbered with past issues. When invited to become a member of the Associated Cycling Clubs, the secretary of the Buffalos sent a reply to the effect that the club is now compelled to admit that it is no longer a cycling body, and must decline the invitation to coalesce. The splendid club house on College street is no longer the rendezvous of cycling dignitaries, and the admission of non-cyclists has changed the complexion of the club into a social one, more's the pity.

## The Rambler's Century Run.

Great preparations are being made by the Buffalo Ramblers for their souvenir century run, which will take place on Sunday, June 25, over the Dunkirk course, Buffalo to Dunkirk and return. Invitations have been extended to all local wheelmen and wheelwomen to participate, and there is every indication of a general acceptance.

Captain Young and his committee will issue a list this week, and a record of those who join the run will be kept posted in the club rooms.

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

GOOD ROAD LITERATURE

PUBLICATIONS DEVOTED TO THE DISCUSSION OF IMPROVEMENT.

*The Progress of the Road Movement in Various Directions as Detailed by Chief Consuls—Work in the South.*

It would be difficult to find any work which covers the subject of road construction and maintenance in such a fashion as to be considered the authority par excellence, leading all other publications both in technical treatment and historical details.

While the amount of this literature is somewhat extended, that portion of it which appears in book form, and in English, would not be a burden to any gentleman's library.

The magazine and newspaper articles are very numerous, many of them of value, and some of them available for present reading.

It will be remembered that in 1891 there was issued by the bureau of statistics, department of state, a compilation of the special reports from the consuls of the United States on the streets and highways in their several districts; a book of some 600 pages. These reports were made by request of, and in response to a circular letter from the secretary of state, and are of particular interest on account of coming from so many different sources and from all parts of the world. A careful review of this work gives one an exceedingly comprehensive view of the different styles of roads in use at present, and a good deal of information bearing on the road construction of earlier times. It could not, of course, be expected that such literature would go very deeply into the mathematical and technical side of this question, but it is nevertheless most excellent reading and forms a good foundation for wider study.

If the edition has not already been exhausted copies of these circular reports can be obtained by addressing the secretary of state, and if they have all been distributed, another edition should be issued without delay, and senators and representatives should see to it that their constituents are supplied.

The life and work of Telford, as treated in Smiles' Lives of the Engineers, can be studied with a great deal of profit. These books are published in London by John Murray (1874) and, though difficult to find in the public libraries, can easily be secured through any book dealer. There is a point well emphasized in this work, a phase of road construction which seems to have escaped or never attracted the attention of the country road builder. It is the fact that the broken fragments of stone used, for example, in the macadam construction, coalesce and become a solid mass. To such an extent does this solidification take place, that roads of this kind were successfully built across marshlands with no other foundation than the crushed stone. Gravel will not do this, but on the contrary, remains loose until practically ground to powder.

For the general reader the Prize Essays, as reprinted from *Engineering Record*, New York, and *A Move for Better Roads*, also a collection of prize essays, and published by H. C. Baird & Co., Philadelphia, recommend themselves as being both able in treatment and comparatively brief.

The revised edition of the Municipal and Sanitary Engineer's Hand Book, by H. Percy Boulnois, gives the results of practical experience and is a valuable

book of reference. Though published in England it can readily be obtained in this country through E. & F. N. Spon, 12 Courtland street, New York.

One of the best of the recent contributions to our road literature, is a Treatise on Highway Construction, by Austin T. Byrne, C. E., New York; John Wiley & Sons, 1892.

For some treatment of the legal side of this question, one can be referred to the Law of Roads and Streets, by Byron K. and William F. Elliott, Indianapolis; the Brown, Merrill Co., 1890, and also to the Laws Relating to Roads and Ditches, Bridges and Water Courses, etc., Florien Giaque; Robert Clark & Co., 1886.

These are a few of the important books noticed in a catalogue of road literature recently compiled under the direction of Colonel Pope, who published it for free distribution among the libraries of the United States.

\*\*\*

ACTIVITY IN VIRGINIA.

*Chief Consul Steel Writes Interestingly About Roads in the Old Dominion.*

RICHMOND, Va., March 30.—While as a division we have done no organized work in behalf of good roads, individually the wheelmen throughout the state have been keeping the subject before the public. At their instigation a number of the leading papers have brought the matter up, and have printed editorials favoring reform. The Radford Wheelmen have been and are actively working for good roads in the south-western portion of the state, and the Lexington club write me that they distribute road literature regularly among the road supervisors and progressive men in their section. Our legislature does not meet until next December, so at present there is nothing to be done toward getting our road laws improved.

As in many other sections, under present statutes the road tax is worked out, or is supposed to be, by each man furnishing so many days' labor on the public roads of his county during the year, and I am sure that, far from being improved, the roads are worsted by the process, as is evidenced by the fact that owing to the length of the cold spell this winter the roads around here were not "worked" and so have been better than for years.

There is no doubt that the road question will receive extensive consideration at the hands of our next legislature, and I think it likely that a bill will be passed providing for a better system than is now in vogue. There is practically no opposition here to the movement for better roads. Every one admits that we need them badly enough, and our present system is a poor one. The only question is the best way to effect an improvement.

As far as I can learn the farmers throughout the state are heartily in favor of reform. The editor of the *Southern Planter*, J. T. Jackson, of Richmond, is an enthusiast on the subject. He, probably more than any other man, has been active for the cause in our state. He has delivered addresses before farmers' institutes in a number of places, and is constantly keeping the matter before the agricultural element through the columns of his journal.

The "Tuckahoe Farmers' Club," composed of the most progressive and well-to-do farmers of Henrico County, have had the subject of better roads under discussion at several of their meetings, and as they are influential men we look to them for material assistance during the next session of the legislature. At the last meeting of the State Board of Agriculture, held at Richmond, in Janu-

ary, the road question was extensively discussed. The committee on roads made quite a full report on recommendation of this committee; it was agreed to request the governor to call a "state convention of the people for the full consideration of the subject." It was also recommended that "a thorough organization of the state be undertaken by the convention, and that representatives from each county and from the engineering department of each institute of learning in the state be earnestly solicited to send delegates."

As yet the governor has taken no action upon this request. Should such a convention be called, the wheelmen will be heard from and I will inform the REFEREE of any progress made.

I am encouraged by the apparent active interest of so many of our prominent men in the work, and while, as yet, in many portions of the "old dominion" we are still plodding through sand and wading through the mud, our people are awakening to the need of better roads, and that is the first step towards reform.

FRANK R. STEEL,  
Chief Consul.

\*\*\*

No Progress in Louisiana.

NEW ORLEANS, La., March 25.—The road movement in this state, I am sorry to say, is not a movement at all; in fact our roads are in such a condition that it seems an almost hopeless task to ever make them what they should be without an expensive outlay that would scare a commission almost to death by the mere mention of the figures. Too little attention has been paid to this, the index to the country's prosperity; and although we are surrounded with excellent gravel hills, which would make as fine roads as anywhere in the country, as I have previously stated, we have all we can do to keep the streets in the principal cities in a passable condition. Still the good time is coming. It can not be long before this glaring lack of diplomacy must be remedied. The wheelmen as a body are too weak to count for anything, but by enlisting the real estate people with them we can bring same to a focus, which should soon bring us to a speedy realization of our cherished hopes.

There is no doubt in the world that Louisiana with good roads could in a short space of time increase her wealth to a considerable extent, as we have the finest lands, accompanied by the natural advantages of excellent climate. There is no reason why emigration from the overcrowded districts should not find its way into Louisiana. It is quite useless for me to dwell upon the advantages of good roads. It has been placed before the public by men who were far more able to cope with the question than myself. I repeat, however, that the state of Louisiana has not aroused herself from the state of lethargy on the road question, and from the present outlook we can not expect much for a couple of years to come.

W. C. GRIVOT,  
Chief Consul.

\*\*\*

A Line From W. Va.

WHEELING, W. Va., March 19, 1893.—We are circulating such literature as our means and Mr. Potter, of New York, will permit, and have succeeded in interesting one of our local newspapers sufficiently to publish a series of articles on "Good Roads." We have made ourselves known by circulating Colonel Pope's petition, and have rendered good services, through personal influence of our local consuls with members of the legislature in their respective counties, toward the passage of the Edwards road bill. Mr. Edwards informs us that

the bill will not be reached this season.

JASON C. STAMP,  
Chief Consul.

\*\*\*

Waiting Until They Grow.

SAVANNAH, Ga., March 20.—There is no organized movement on foot looking toward the betterment of our county roads in Georgia, nor is there likely to be until we are able to organize as a division. This was about to be done, having over 100 members, when the amendment was adopted requiring 200 for a division, but I am in hopes before the summer is gone that we will have the requisite number.

SAMUEL M. WHITESIDE,  
Chief Consul.

\*\*\*

Work In the South.

SAVANNAH, Ga., April 3.—Road building has engaged the attention of the county commissioners of Montgomery County, Ala. During the past eighteen months they have commenced in the good work by building about twelve miles of "chirt" roads at an average cost of \$4,000 per mile. Chirt is a rock that lies next to iron ore in the iron district around Birmingham, and makes a better road than gravel. It withstands the hardest travel.

\*\*\*

The officers of the Iowa division are preparing matter for a state edition of *Good Roads*.

Publications Received.

The REFEREE acknowledges the receipt of the following catalogues:

Pittsburg Cycle Company, Pittsburg, Pa.—Consists of 110 pages and cover and is very complete. Shows complete lines of the Sunol, Tourist, Eclipse, Columbus, Raleigh, Humber, Premier, Crypto, Pittsburg, and many cheaper grades; all the principal tires and sundries.

Singer & Co., Boston—Shows the complete Singer line, including the Special Modele de Luxe in five styles, lady's, roadster, light roadster, racer, and tri-cycle. Also a neat pamphlet on "Practical instructions for the adjustment and proper keeping of the Singer cycles."

American Ormonde Cycle Company, New York—Shows the Ormonde road-racer, 26 pounds; model D, 35 pounds; model C, 41 pounds; lady's Ormonde, 38 pounds, and the Ormonde front driver, weight to order.

F. H. Henning Cycle Company, Peoria.—Shows the Telephone line complete, Arrow, Swift, Warwick, Credenda, Lovell, Royal and the Western Wheel Works line of medium grades. C. Lohmann, 36 Aldersgate street, London—Complete list of lamps, saddles, bells, wrenches, oilers, carriers' bags, parts, etc.

Perry & Co., Birmingham, Eng.—Complete lists of chains and parts of bicycles.

Sercombe-Bolte Manufacturing Company, Milwaukee—Shows the S. & B. ball testing machine, Telegram light roadster, Lightning Messenger racer, Sanger racer, lady's Telegram, Chainless Telegram (front driver), Telegram pneumatic tire, pumps, parts of bicycles, sundries, etc.

Hulbert Bros. & Co., 26 West Twenty-third street, New York—Shows Majestic light roadster and parts: King and Queen of Scorchers; also sundries.

Rouse-Duryea Cycle Company, Peoria—Shows Sylph model D, 30 pounds; B, spring frame, 48 pounds; A, spring frame, 46 pounds.

Rouse, Hazard & Co., Peoria—Shows complete lines of the Rambler, Rudge, Sylph, Overland, Victor and the Western Wheel Works' makes.

Will Not Consolidate.

There has been some talk of club consolidation between the Wanderers and Columbia Bicycle Club of Buffalo, and a special committee from each organization was appointed for a conference. The committee agreed to a nicety that the two clubs should amalgamate under the name of the Bison City Wheelmen, and take up quarters in the rooms on High street near Jefferson, until a downtown location could be secured. The Wanderers, however, kicked over the traces and refused to move, and as the Columbia refused to change its location, the whole plan will probably drop through.

Writers on trade topics can always find a market for interesting and instructive matter at the REFEREE office. We shall be pleased to arrange with competent writers for regular contributions.

#### A TRIP THROUGH MICHIGAN.

*The Trade Men Expect a Good Season—Who They Are and What They Handle.*

The bicycle trade through Michigan promises to eclipse that of any previous year, both in the number of wheels sold and the variety of makes. The number of agents has nearly doubled since last year, several large hardware and carriage houses having taken hold of the bicycle business, which goes to show that the good people of Michigan recognize the wheel as an article of considerable importance and utility. At Detroit no less than thirty-two parties are now handling wheels, which is probably record for any one city in America.

The most prominent dealers are Huber & Metzger, T. B. Rayl & Co., Easy Wagon Gear Company, Overman Wheel Company, George Hilsendegen, Detroit Cycle Company, Hodgeson & Howard, Anderson Manufacturing Company, and the Schulenburg Cycle Company.

The streets of Detroit are being improved rapidly. Miles and miles of asphalt and brick pavement have been laid during the last two years, and a ride down Woodward and Jefferson avenues (almost ten miles of asphalt at an uninterrupted stretch) is ranked as one of the finest bicycle rides in America.

Grand Rapids is not very far behind in cycling, though it can not claim the advantages its sister city has. The trade is taken care of by the pioneer firm, Perkins & Richmond, which makes Imperials and Ramblers its leaders, but also handles a number of other makes.

Hadley & Barclay, another large firm, handles Victors and Kenwoods, and a new firm, Dunbar & Co., makes the Columbia its leader. They came recently from Springfield, Mass., where they were in the bicycle business, and will undoubtedly find Grand Rapids a large field to work in.

The next best city for wheels is Bay City. The many natural advantages it possesses has made the trade look for a large and prosperous season. The Bay City Cycle Company, A. L. Baker, William Taylor and Foss & McCoy have the trade in hand, and almost every wheel made is represented by them.

At Saginaw W. L. Marr and Fisher Brothers sell wheels, the former making the Raleigh and the latter the Rambler his leader.

Port Huron is and has always been an Imperial town, very few other makes except Columbias, ever being seen on the streets there. The bicycle business is in good hands there, and a good many candidates for wheels are being made happy this spring.

At Kalamazoo trade is a little "chopped up." The Kalamazoo Cycle Company, besides manufacturing its well-known parcel carrier, handles wheels very extensively. A new concern, the

R. F. Bicycle Agency, will start in business in the near future. Horace Prentice, F. P. Forde and others all have agencies for a number of wheels.

At Coldwater F. Nettleton has things a great deal his own way, and has the reputation of being a hustler. Mr. Nettleton is one of the old-time riders, and has facilities for taking care of all the trade within fifty miles of Coldwater.

At Battle Creek the Hall-Jones Cycle Company is the principal dealer.

Muskegon has four dealers, Jacob Jesson, the Muskegon Hardware Company, Horace Brown and Adolph Arnst. Jesson handles Columbias; Muskegon Hardware Company, Imperials; Brown, Monarchs, and Arnst a line of cheap wheels.

At Lansing H. B. Morgan does a large business, being immensely popular with the riding fraternity. Fred Eilenburg and W. F. Crotty are dealers also, and between the three of them Lansing is being well supplied with wheels.

Owosso is going to be very much "in line" this year. The Owosso S. M. & O. Company and the Owosso Cycle Company have the trade in hand and are hustling to supply the town with Unions, Imperials, Lovells and Credendas.

At Adrian C. C. Van Dorn is the most prominent dealer, making the Imperial and Hartford his leaders. This gentleman has already disposed of twenty-six high grade wheels this season, and is very much pleased with the outlook for 1893.

At Hillsdale George F. Gardner takes care of the trade, and while it has not been very rushing yet, he is confident of doing a satisfactory business as soon as the weather settles down. MAC.

#### THE SOUTHERN BOOM.

*Trade in Atlanta, Ga., Has Grown Wonderfully—Facts About the City.*

ATLANTA, Ga., March 31.—As cycling is on such a boom in the south, it is only proper that the cycling world at large should know something of Atlanta, the Gate City of the south. The capital city of the Empire State of the south, Atlanta is the largest and most prosperous city of this great section. Because of her almost phenomenal growth since the war, when General Sherman laid the city in ashes, and because of the enterprise and industry of her people, Atlanta is frequently called the "Chicago of the

south." Everyone who visits us agrees that she deserves that title.

The population is about one hundred thousand. About fifteen hundred of this number ride bicycles, and the number of riders is rapidly increasing. Eight months ago there was only one dealer here and his sale didn't average over two wheels per month. He handled them as a side line and did not seem to care whether he sold any wheels or not. At that time there were not over fifty or sixty riders here. A large hardware house began selling wheels about six or seven months ago, and since that time cycling has been on a constant boom. We now have seven dealers, one of whose sales have averaged about fifteen wheels per week since the first of January. All the others appear to be doing well, with possibly one exception. Nearly every high-grade wheel in the market is now represented here, as well as a number of medium grades.

The fact that Peachtree street, our leading residence street, which is said to rival the famous Euclid avenue, Cleveland, in beauty, has been paved with asphalt, has had much to do with the growth of the cycle trade.

The riding season here is practically twelve months in the year, though January is rather cold and March winds are sometimes biting—still one can ride

the Foote & Davis Printing Company and edited by J. H. Johnson, Jr. It is to be issued every two weeks at present. It is said that the paper has already begun preparations to have a twenty-mile road race.

Dan Canary, the trick rider, is here in the int-rest of the Overman Wheel Company. He is to give an exhibition next week.

J. J. Ross, Imperial boomer, is also here, with a view to establishing a branch house for the Ames & Frost Company, of Chicago. WINTIRE.

#### BUFFALO'S KING SALESMAN.

*Hi Martin Talks of By-Gone Days—Advice to a Green Salesman.*

H. C. Martin of Buffalo is an observant man. He flatters himself on his judgment of men. Bicycles he always was a good judge of, and discounts ditto. But Martin was once fooled in his estimate of man, and C. F. Stokes was the man who fooled him. On a recent Sunday morning the conversation turned on Stokes, and Martin related the following: "I was fooled in Charlie Stokes, and I'll tell you about it. Stokes is a mass of contradiction to men who know him. If you see him doing business with strangers, or, indeed, people who have known him in trade for years but not socially, he is calm, cold and formal and very curt in his replies and questions, but to those whom he knows well he is an entirely different person; he is jollity and warmth itself.

"In the days when H. A. Lozier, Stokes and Thomas were together in the sewing machine business in Cleveland, I was traveling for a sewing machine supply house, and called on the firm at Cleveland for nearly two years before they would give me an order, but eventually I sold them nearly all they bought, and to this day Lozier has a lot of my stuff which he is either keeping as a souvenir of our pleasant relationship or because he "got stuck" on it. This, he says, he did, and blames Thomas, who ordered it.

"Well, sir, I called right along, and Stokes would solemnly ask for prices, jot them down in a book and say, equally as solemnly, 'We don't wish anything to-day; call again.' I got to reverence the man, and fully made up my mind that he was either superintendent of a Sunday-school or a deacon, and his manner fully justified my belief. But I don't think so now. I looked upon Charlie Stokes as a model citizen, and I would as soon think of asking Cleveland for his job as of asking Stokes to 'take something.' I inwardly felt that he was both a great and good man, and the pleasant relation since established is the outcome of those days. He often said he admired my nerve in tackling him for an order for nearly two years."

The above talk was occasioned by some remarks as to the abilities of salesmen and a story Martin told about a green traveler who tried to sell him some wheels this year. The man was from New York, and he was not posted, not even as to the construction of the wheel he was selling. Taking him quietly aside, Martin said:

"Young man, I was once a traveler myself, and I want to be your friend. I would advise you. Will you listen to advice?"

The would-be traveler thought he could.

"Well, then," said Martin, "take my well-meant advice. Buy a ticket and take the first train for home; get thoroughly posted as to the business you would shine in. Study the matter well, and call on me the next time you are in

very well during those months. Our climate is delightful and it never gets as hot her in summer as it does in New York or Chicago. Some of your readers may think this strange, but it is true."

At present there are only two cycle clubs here, viz., the Capitol Cycle Club and the Nancy Hanks Bicycle Club. The first named is the larger and more influential club, having about seventy-five members. The latter has about twenty members. Both are prosperous and growing. A. S. Hook is captain of the C. C. C., and his men think there is no better captain anywhere. His able assistants are Charles Elyea and Sol Bloodworth. Joe Vaughn is captain of the N. H. B. C. and is popular with his men.

Ned Chalfant, ex-captain of the C. C. C., and Joe Vaughn each made a century run last Sunday, and though they both went over the same course, there has been considerable dispute about the riding time of each, which was in the neighborhood of nine hours. As a result of this dispute each man has posted \$100 a side for a 100-mile race, to take place within the next three weeks. The run will be made from this city to Grantville, on the A. & W. P. R. R., and return. It is thought that the race will be a very close one, as both men are good riders and each is determined to win.

Wheeling, a new Richmond in the field of cycle papers, made its first appearance last week. It is published by

# WHITWORTH CYCLES

• • • • U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

## SINGER & CO.,

6 AND 8 BERKELEY STREET,  
AND 2 WARREN AVE.,  
BOSTON, MASS

town. I tell you this in a friendly spirit of advice. Others may not; they might laugh at your ignorance, and you will save time and expense for both your friends and yourself by following my suggestion."

The young man went home.

Martin is kind-hearted, a practical buyer and seller, and it is getting to be recognized that to do business with H. C. Martin & Co., Buffalo, you must know your business thoroughly.

Last week the writer followed Mr. Martin on a tour of his two stores or store and warehouse, and on going into the cellar he found the place stocked to the ceiling with cushion tired wheels, and expressed surprise and remarked, "Are these last year's left over?"

"Not by a jug-full," he returned. "I bought them for cash last week at the right figure, and will sell them all inside sixty days."

"What! Sell that lot of cushions when everybody is asking for pneumatics?"

"There you are wrong, my boy. I jobbed fifty of them last week. They are good wheels, well known, and we can sell them easily."

It is getting to be known in Buffalo that Martin could sell not only solid tired, but probably iron tired wheels also. He is a king of salesmen. That sharp, decisive manner and shrewd face is only the covering of a genial and kindly nature, and to see him at his best is to see him surrounded by his family in his elegant Buffalo home. May the shade of Hi Martin never grow less!

#### THE PHILADELPHIA TRADE.

*A Round of the Stores Finds Them All to Be Fairly Busy.*

The Central Cycle Company handles the Cleveland and Warwick.

Charles Smith handles the great American Ramblers exclusively.

John Green is selling Libertys in Arch street, and "Johnnie" likes 'em, of course.

Philadelphia was recently visited by a REFEREE man who found the summer cars were still running on Market street.

The J. B. Rich Cycle Company is doing nicely with the Triumph and Phoenix, and will close out its clothing department.

J. R. Weld, Jr., George H. Bolton and cute Herbert Bilyeu were busy to the thirty-second degree at Spalding's, selling Victors and Crandas.

John T. Bailey & Co. were busy, and the man with the sonorous voice, J. S. Kuen, and W. J. Green were busy selling Relays and Raleighs—two good R's.

The U. S. Cycle Company makes a medium-price wheel called the Senator, and the output this year will be about 500. Mr. Hill, the manager, was sick and C. M. Johnson, in charge, so reported.

H. B. Hart is just as busy as he was twelve years ago, when the writer met him first. Hart is full of nervous energy and "get there," and the result is seen in his present extensive business on Arch street.

Frank M. Dampman, the old-time road crack, is selling Rouse, Hazard & Co.'s line and a clever-looking hickory wheel called the Penn. Abe Powell is associated with Dampman. The concern's name is the Globe Steam Heating Company.

Wall & Boyer are busy, and the report that this firm had dissolved partnership was denied by Mr. Wall, who was about starting on a trip to Pittsburg. The orders for the Wall & Boyer carrier this year have been large. Singers are the wheels this firm pushes, and their repair department is under Mr. Boyer's care.

Harry Gibson is on the road for Wall & Boyer, and the clever Mrs. Boyer handles the cash and books.

The Common Sense Bicycle Company, over whose destinies that ever courteous David Pettit and C. F. Cope preside, reports sales as fairly good, and its Common Sense hickory wheel is now being handled largely by carriage dealers. This company is making many sulky wheels.

The Bretz & Curtis Manufacturing Company reports good work from its winning drummer, "Billy" Perrett. Mr. Curtis was confined to his home with sickness, which he charged to New York's climate instead of Philadelphia. Mr. Dailey, the secretary, is always well and quite energetic.

#### CHICAGO TRADE IN BRIEF.

*Movements of Traveling Men.—General Local Trade Talk.*

M. A. Meader, of the Ariel Cycle Company, was in Chicago this week.

P. W. Dasey has opened a branch store of the Quadrant Cycle Company, at Elkhart, Ind.

Mr. Gorham, manager of the Royal Cycle Company, is in the city on world's fair exhibit business.

George H. Simons, manager of the bicycle department of Kingman & Co., Peoria, was in the city on Tuesday.

A. E. Dewey, at one time a cycle dealer in Cleveland, has come to Chicago to live and will enter the cycle business.

Seven machines for the world's fair exhibit have been received by the Quadrant Cycle Company. One is a tricycle.

"John," the Ariel company's dummy rider, has recently been bedecked with several gold medals, probably given for his long distance record rides.

A Kansas dealer visited a local factory, and, on seeing an elliptical sprocket wheel, asked why it was not made round, and intimated that was an imperfect part.

On the front of the Humber store is a large sign with these words: "Eighteen car loads of bicycles. Humpers and Rovers. Will I sell them? Come in and see."

The Thorsen & Cassidy Company has been appointed the sole Chicago distributor of the Telegram pneumatic tire by the Sercombe-Bolte Manufacturing Company.

James Josephi has returned after several weeks of travel. He will make one more trip and will then have charge of the Ames & Frost Company's exhibit at the fair.

A riding school has been opened by the Pope Manufacturing Company on the fourth floor of 302 Wabash avenue. This is 30x120 feet and is presided over by Robert Brooks.

C. V. Dasey, 3108 Prairie avenue, is showing his first machine, the Daisy Scorchers, the frame of which is his own patent. He has a strong frame and has received several orders.

A. J. Nicolet returned to Chicago on Tuesday and left for Grand Rapids on Wednesday. He says he will be on the road another month and then will come to Chicago permanently.

Manager Caswell, of A. Featherstone & Co.'s retail store, reports business good, and says the outlook is very flattering. He says, also, that Road Kings and Queens are much sought for.

Warman & Hazlewood have at last caught the thief who had about once a week broken into their storerooms. Although the Pinkerton agency had been engaged to watch the place it fell to the lot of one of Mr. Warman's employees

to catch the thief, who is now held for trial.

F. H. Tuttle returned from St. Louis this week. He says Jordan & Sanders have a far finer store than any in Chicago. This firm has disposed of eight Stearns safeties thus far this spring.

The Eagle Cycle Manufacturing Company, of Torrington, Conn., has secured space at the world's fair. But two or three wheels will be shown. The company will give away 250,000 souvenirs.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

Two handsome geared ordinaries, and one of the prettiest ladies' wheel seen along cycle row have been received by the Coventry Machinists' Company direct from the National cycle show exhibit.

Although the Hill company has three clerks at work mailing catalogues they will be unable to finish before Friday. The number which takes the Fowler wheel will not be published, therefore, until next week.

The Hill Cycle Manufacturing Company had a Moffat safety stolen from its office boy last week. It offers to give this wheel to the man recovering it, providing the thief is convicted, and will also give a new Fowler to every man who recovers a stolen Fowler and convicts the thief. The Moffat stolen was No. 579.

"Denver in '94," says every traveling man returning from a western trip. The Denverites are in deadly earnest and infuse every visitor with a goodly dose of their fire. Says Murphy, of the Keating Company: "Denver is the liveliest city on cycling subjects I ever struck, and is destined to be the cycling centre of the United States."

W. A. Fletcher & Co. have opened their day storage department, and an attendant in charge is now busy cleaning and oiling wheels and inflating tires. During this year, above all others, a day storage place will prove of great benefit to Chicagoans, who, on account of crowded cars, will be compelled to use wheels to a great extent.

W. W. Kenfield, of the Rochester Cycle Manufacturing Company, was in Chicago Friday and left that night for Detroit, Cleveland and home. He reported a splendid New England business, but says the west has been drummed to death. Mr. Kenfield says he will be honest—he has not sold his entire output, but he thinks he will have no trouble in doing so.

The C. H. Schub Cycle House has secured the basement in the northwest corner of Wabash avenue and Congress street, opposite the Auditorium, and in a few days it will be fitted out in grand style. Mr. Schub intends doing a wholesale and retail business. He is the sole importer of the Cataract, a high grade wheel, and will job the Chicago, a medium-priced wheel, and the Queen Bess of the same grade.

#### GENERAL TRADE NOTES.

There are twenty-five cycle houses in Detroit.

A. U. Betts & Co., Toledo, have a large staff at work filling orders for their goods.

W. W. Stall, Boston, has imported a disc wheel, which is in his store window and attracts much attention.

Paul Angois, according to the latest Raleigh Cycle Company bulletin, is once more on the water, headed for this side,

a position he was supposed to be in three months ago.

Winans, Pratt & Co., of Kalamazoo, manufacturers of buggies and carriages, are going into the bicycle trade.

The recent lamp and bell ordinance passed by the Philadelphia city council, has caused a lively sale the past few weeks in those accessories.

In the immense works of Starley Brothers there is what is known as the girls' shop, which is said to be as neat and tidy as the proverbial New England kitchen.

The Detroit Lead Works are manufacturing some of the finest enamels that are to be had. The company is an old established concern and possesses a reputation second to none.

Harry Chapman has secured the position of superintendent for the Peerless Manufacturing Company of Cleveland, and will assume his duties Monday. We congratulate both parties.

George Hilsendegen, 310 Woodward avenue, Detroit, is doing a rushing business. His sales so far, outside of the city, amount to over four hundred wheels. The city trade is also very large.

W. M. Perrett booked large orders for Solid Comfort saddles in Buffalo Monday and Tuesday. Among the buyers were the Buffalo Tricycle Company, Schack, Martin and the Queen City Bicycle Company.

The new retail house of Dorntge & Penseyres, on Huron street, is now thoroughly fitted up with a full line of athletic goods, which they will handle in connection with the Niagara and Eclipse cycles.

Thomas Sanders, who has just parted company with William Bown, with whom he has associated for fifteen years, has identified himself with T. Parker (successor to Samuel Snell & Sons), Toledo works, Birmingham.

The Philadelphia Cycle Company has been appointed sole Philadelphia agent for the Fowler, manufactured by the Hill Cycle Company, of Chicago. Donlevy & Co. have obtained the agency of the Kenwood Manufacturing Company.

McKee & Harrington are building a full-nickel racer for Paul Grosch of the Passaic A. C. It will be a beauty the rims being finished in natural wood. Its weight will be eighteen pounds, and it will be fitted with Burris-Michelin tires.

According to a Kalamazoo paper, the business of the Kalamazoo Cycle Company has increased so much that now three stores are occupied by the concern. Two stores are used for the salesroom, and the third for the machine shop.

Detroit is rapidly becoming a distributing centre for Indiana and Michigan, thanks to such houses as the Schulenburg Cycle Company, Hilsendegen, Anderson Manufacturing Company, Huber & Metzger, and the Overland Wheel Company.

Manager Mead, of the Schulenburg Cycle Company, Detroit, reports a lively business in both the wholesale and retail departments. The company handles the King of Scorchers, Swift, Triumph, Relay, Reading and New Howe, and covers Michigan, Indiana and part of Ohio.

The Hart Cycle Company's scheme of tendering a sociable to the different cycling clubs of Philadelphia, reserving a night for each club, is a good one, and is meeting with the success and commendation it deserves. The large riding school is used for cycling and dancing, wheels, music and light refreshments being on hand all evening, and every-

**AGENTS:** Anglo-American Iron and Metal  
Co., 213 Pearl street. New York.

body seems to be unanimous in the opinion that the projector of the scheme had a "long head."

The Bingham Hardware Company, Cleveland, reports a tremendous trade in the Yost wheel, the Falcon. Repeat orders have commenced to pour in and the factory at Toledo is working at its utmost capacity to deliver goods promptly.

The following Chicago houses have placed orders for suits, etc., with Clementi & Barr: Ames & Frost, C. H. Sieg Manufacturing Company, Horton, Gilmore, McWilliams & Co., Mason & Mason, Taylor Cycle Company, and G. & J Manufacturing Company.

W. G. Schack has recently improved his salesrooms at 875 Main street, by remodeling his office in the rear and adding a counting room. He is an enterprising dealer and carries a large and varied line of wheels, and will command a large share of Buffalo's retail trade.

F. W. Coulson has placed the Monarch business for California in the hands of the old reliable firm of Osborn & Alexander, of San Francisco. On Tuesday L. M. Richardson visited Milwaukee and allotted that city and other portions of Wisconsin to the Milwaukee Buggy Company.

The Gibson & Prentiss Cycle Company, maker of the Bison, has added an assembly room of good proportions to the rear of its Washington street factory and has its output well under way. There is little doubt that it could sell twice as many Bisons as it will be able to turn out.

The Union Cycle Manufacturing Company has moved its main office to Highlandville, Mass., so that the factory and office will be together. The Boston store will remain in charge of John Mc-

Dowell, who will have charge of the New England trade.

W. S. Campbell is the latest racing man who has ordered Burris-Michelin tires fitted to his racer. Campbell will ride a machine made by the Campbell Cycle Company, as will also A. B. Rich. It is said that Michelin gave Terront a thousand dollars for his victory on the Burris-Michelin tire.

We have received from the Gormully & Jeffery Manufacturing Company a world's fair souvenir in the shape of a bronzed medal paper weight. It is extremely handsome and was designed as a compliment to Rambler agents. They will be sent to others, however, postpaid for fifty cents apiece.

William M. Breckenridge, formerly of Milwaukee, visited Chicago last week as a representative of W. R. Burkhard, whose retail store at Minneapolis he will hereafter manage. The store is at 628 First avenue, south. The Stearns and Raleigh agencies have been secured and the Arrow probably will be.

The John B. Varick Company, Manchester, N. H., writes that business in that city and vicinity is exceedingly good, and that it has 300 new riders in its riding school, fifty of them being ladies. The company is the state agent for the Majestic and Keating and the Buffalo Tricycle Company's line.

At the works of the Buffalo Tricycle Company it is the same story—lots to do and good prospects for an unprecedented year. The marked favor shown by the public for Envoys, Fleetwings and Uniques, the well-known lines constructed by this company, continues to tax the capacity of the works.

The Clinton Cycle Works, maker of the Globe; East Side Cycle Works, maker of the Banner; George N. Pierce & Co.; the Queen City Cycle Company,

maker of the new high grade, the Erie; in fact, all, are rejoicing in big business and all the orders they can handle.

The Hackney Bicycle Company, Cleveland, has sold almost its entire output, which will be about 700 machines. The company is a strong one, its machinery of the very latest pattern, and each department is presided over by a skilled foreman, and consequently the Hackney is one of the best wheels made.

The Wissakickon Wheelmen of Philadelphia recently introduced a novel and instructive feature, a tire-repairing contest. There were several competitors, the idea being to show in how little time it was possible to repair a "busted" tire with only those tools which a rider usually carries on the road. Report says the G. & J. tire had a walkover.

The Eclipse Bicycle Company writes that it is having a large demand for its new lady's wheel. It is a single tube frame of graceful lines, strongly braced, and weighs 36 pounds; has a handle bar well placed, so that the rider can sit straight; it runs easily, has a comfortable saddle, and a dress-guard of heavy silk lacing covering completely wheel and chain.

The Royal Cycle Company of Marshall, Mich., is shipping wheels as fast as they can be made. The Boston agents, Bigelow & Douse, first ordered one hundred of the Royal light roadsters, but have increased it to three hundred. In the same city the A. O. Very Cycle Company handles the Royal Limited. All the agents of the Royal report a lively demand for this handsome and well-built machine.

A leading feature in the retail trade last week was the opening of the new store of George F. Lutz & Son, at 571 Main street. W. A. Lutz, of this house, was formerly associated in business with

M. F. Dirnberger. He is now in business with his father and the new house will assume a leading position, as it carries a first-class line of goods and has a fine location on Cycle Row. They are agents for the Rambler, Fowler, Derby, Central and the McIntosh-Huntington line of medium grades. W. D. Banker has been engaged as retail salesman.

On Cycle Row Sweet & Johannot, H. C. Martin & Co., the Liberty Cycle Company, Bison Cycle Company, George F. Lutz & Son, Queen City Cycle Company and Burnside & Dorntge, are all within a stone's throw of each other, and there will be some tall hustling in that vicinity in a few weeks. The down-town houses are two in number, the Fairbanks Company which is the new Columbia agent, and Salem G. LeValley, who handles the Humber, McCune and Lovell. When the asphalt is completed on Main street the retail stores will all be within about ten minutes' riding distance of each other on a straight stretch of road.

The American Dunlop Tire Company is busy, a force of 178 being now employed in New York at its factory and office. While a REFEREE man was visiting the Du Cros brothers last week three telegrams were handed Alfred du Cros, ordering tires to be sent immediately. The Dunlop Cycling Club, just started by the employees and officers of the company, is flourishing. The Dunlop company now has four men on the road, including the ex-Quaker, Kirk Brown, and Alfred du Cros. The latter has just returned from England, where he had a very pleasant visit and reunion with his family. A story is going the rounds that Harvey du Cros, Sr., was "tipped" by cable about the Sedden deal in America, and bought largely, letting go in time to clear several thousand pounds.

## SUCH IS FAME.

When Stanley found himself lost in the jungles of darkest Africa he was somewhat astonished to learn that the natives were acquainted with two English words; *only two*—and this proves what it is to have a reputation. One word was *bicycle* and the other was *Tourist*—"Tourist Bicycle."

Another enlightened tribe, still further in the interior, showed its progress toward civilization by being able to articulate "Bidwell Tire," "Restrictive fabric." And one inebriate old black king even used one every morning for the novel purpose of reducing his head to the proper size after a night's debauch. *You know it contracts upon the rim when inflated.*

#### TRADE LIVELY IN BUFFALO.

*Dry Roads and Sunshine Bringing Out Purchasers—Manufacturers Busy.*

BUFFALO, April 3.—A few days of pleasant, springlike weather during the past week, put a new aspect on the trade in this city, and the retail dealers began to smile. Asphalted streets dry rapidly and the cyclist that can resist the temptation to skim over their smooth surfaces with the first advent of spring, is the exception. Sales were plentiful during Friday and Saturday, but there are murmurings of discontent already heard on all sides because of heavy price-cutting. Buffalo needs a trade protective association and needs it badly.

#### A Neat Little Oil Cup.

The Stokes Manufacturing Company is using a very neat and convenient oil cup, no part of which can be lost. It is made so that the top turns round, but can not be taken off. The top is turned around until the hole therein is opposite

a similar hole just beneath the cover. The spout of the oil can be placed through the two holes when oiling the machine.

W. W. Stilwell.

The bicycle department manager of the old established firm of Peck & Snyder, Nassau street, New York, is popular, and there are not many cyclist in New York and Brooklyn who do not know him. He is also known to all classes of athletes and the theatrical profession—especially song and dance ladies who buy their wigs and cl. gs at Peck & Synder's. He is possessed of that suave and interestingly homelike manner

that interests even if you do not want to buy clogs, wigs, skates, or bicycles, and he will certainly try and convince you that his line of wheels, including Raleighs, Nassaus and Road Kings, is the best. As a scorcher on the road, however, Stilwell is not known, but he

is possessed of a remarkable heavy-weight turn of speed (he weighs over 200 pounds) and is now taking some training on a rowing-machine to reduce his weight for a match with Colonel James Sullivan, the accomplished editor of the *Sporting Times*, whose specialty is the Rambler's column of his paper.

#### Brisk Trading in Boston.

BOSTON, April 3.—Trade is opening up briskly here, and prospects are good for a remarkable season throughout New England. J. J. Fecit has just returned from a successful trip throughout New Jersey in the interest of the Union Cycle Company. He says he has all the Jersey mosquitos riding the Union P. D. Q.

Biglow & Douse, the well known hardware concern on Franklin street, are handling the Sunol. They have the entire New England agency, and devote a good deal of space to their wheel department. They are so well pleased with

their success since adding cycles, that they tripled their order for wheels, and are building a large repair shop.

The Union Cycle Manufacturing Company has two very attractive windows. In one is Tom Roe's transcontinental bicycle, together with a photograph of modest Tom; in the other is a Union bicycle that came in contact with a Boston electric car. The wheel is slightly twisted, but all there, and on it is a large card on which Tom Roe displayed his talent to this effect: "See that hump? Machine all right; man dead! Funeral Saturday."

#### Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

- 494,190, ball bearing; Pierre Dansereau, Montreal, Can.; filed Dec. 13, 1892.
- 494,333, sunshade for bicycles or other vehicles. George H. Hill, Reading, Mass.; filed July 19, 1892.
- 594,334, tire tightener; William D. Mils, Salem, Ill.; filed Nov. 17, 1892.
- 494,403, bicycle saddle; Frank D. Cable, Toledo, O., assignor to the Yost Manufacturing Company, same place; filed Aug. 9, 1892.
- 494,507, tire tightener; James W. Cuthbertson, Bothwell, assignor by direct and mesne assignments, to Allen J. Green, Essex, Can.; filed June 17, 1892.

#### TRADE MARKS.

22,710, bicycles and other velocipedes and parts thereof; E. C. Stearns & Co., Syracuse, N. Y.: filed Feb. 13, 1893. Essential feature the word "Stearns."

22,711, velocipedes and bicycles; Monarch Cycle Company, Chicago, Ill.; filed Feb. 13, 1893. Essential feature the representation of a lion's head.

#### New Keating Agencies.

J. M. Murphy, of the Keating Wheel Company, Holyoke, Mass., was in Chicago Monday and Tuesday. Mr. Murphy placed a large number of wheels in California, 300 in all. Among the prin-

cipal agencies placed were the following: Banks & Duggan, Denver, Col.; Evans, at Salt Lake City; Hainley & King, Los Angeles, Cal.; Braley & Co., Pasadena, Cal.; S. B. Church & Co., San Jose, Cal.; Webb Safe and Lock Company, Portland, Ore.; Evans Brothers, Miles City, Mont.; Morehouse, Bismark, N. Dak. Mr. Murphy left Chicago for home.

#### The 1893 Ivel Cycles.

The R. H. Dana Company, 15 to 25 Whitehall street, New York, is handling the complete line this season. The line consists of the full roadster, 39 pounds; scorcher, 30 pounds; racer (which is illustrated in this issue), 23 pounds; and the ladies' wheel, 35 pounds. The Ivels are built with 28-inch wheels, and direct spokes and are fitted with Bidwell tires, Brooks, Fish or Garford saddle.

## RECENT ENGLISH INVENTIONS.

## New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Feb. 8, 1893, give notice in the prescribed form of such opposition.]

## GEARED ORDINARY PARTS AND TIRES.

**No. 2,368.** C. Mundy's "Improvements in bicycles and other vehicles." Feb. 8, 1892.—This invention relates to a front driving safety and consists in providing a two-speed gear, an anti-vibrating back fork and an improved saddle and tire. The driving is effected by a double back gear similar in principle to those of Eadie, Perry and others, but the dust-proof case carrying the gear is so constructed that when desired it may revolve with the crank axle and driving wheel, locking the two together and causing them to revolve at the same speed, the driving wheel then running at level or ungeared speed like the driving wheel of an ordinary bicycle. For this purpose a spring lever bolt is used, or a bolt may be made to pass down the inner side of the front fork into a recess in the gear case and the bolt is actuated against the power of the spring by a lever on the handle bar for the purpose of releasing the gear case, the spring acting on the bolt to keep the said case stationary. The speed may be changed while the machine is in motion. The same gear may be applied to chain-driven rear drivers and other forms of cycles and vehicles. Returning to the front driver; one side of the hub of the driving wheel, that opposite to the gear, is constructed to suit the application of a band brake. The said brake is actuated by a rod connected to the lever already mentioned as being used for bolting and unbolting the gear case, the lever being so arranged that an upward pull of the lever applies the brake without interfering with the gear, and a downward thrust of the lever unbolts the gear without disturbing the brake. The backbone is provided at the junction of the back fork with a spring joint by which the rider is not only intended to be freed from shocks arising from the back wheel but is also enabled to vary his position by throwing his weight back to depress the backbone when riding down hill, thus securing safety, or by throwing his weight forward to raise the backbone when riding up hill and thus enable him to exert greater driving power. A stop is provided to check the action of the hinge when desired.

Referring to the tire the special points are, that it may be opened or entirely removed from the rim in a very short time when deflated and that it is constructed without a separate air tube. The rim (R) is constructed with a central outward curve at r on each side of which there is an inward turn and again on each side of these the edges of the rim are turned outward to prevent it cutting the tire. The rim joins with the tire and forms a part of the air space; a covering (S) is put over the spoke holes to prevent the air escaping through them. The outer covering (T) is lined with tape folded transversely or of other material and is rendered impervious by a lining of rubber or the like. The outer edges of the tire are so constructed that a cane, cord or metal tube may be placed, or compressed air may be admitted in between the folds of the lining to produce a bead or bulge (t) at the edges of the tire by means of which it may be secured to the rim and complete the air space. To attain this the edges of the tire are placed in the inward curves of the rim and a suitably curved ring (U) is pressed firmly into the position shown; the rings (U) may be made solid, jointed or in separate parts, and capable of being expanded or compressed. The idea may be carried out in several different ways as described in the specification. When it is desired to make the tire more elastic and less liable to lift mud from the ground and to give a greater depth of air with greater resistance to side pressure, the lining of the tire is constructed with one or more webbings stretched across inside the tire from one side to the other to prevent it expanding sideways when it is being depressed. The webbings may allow the air to pass freely through them or they may be impervious, thus dividing the tire into two or more separate compartments, each of which may be filled with air at different pressures. Instead of webbings separate air tubes may be used when desired. The saddle is constructed on the same general principle as the tire, the covering being secured to the frame in the same way that the tire is secured to the rim, the saddle cover is held in the middle so that it shall maintain its shape while under pressure.

## A SCOTCH PNEUMATIC TIRE.

**No. 20,549.** S. Smith, T. D. Glen and W. Fur-

vis' "Improvements in and relating to pneumatic tires and the method of fastening the same to the rims of wheels." Nov. 14, 1892.—The air tube (a), outer cover (c) and lining (b) are of the usual construction. The rim (d) is made with two beaded edges (h h1) into one of which (h1) one side of the covering (b c) is inserted. A cord or equivalent (f) may be inserted in a fold of the canvas (b) and be extended right round the tire, the ends being passed through the beading and the canvas and hooked together, as shown at g; this prevents creeping.

The beading (h1) holds the right hand side of the cover (b c) firmly in place and so that it cannot be easily moved. At the opposite side a wire or equivalent (e) is passed through a fold in the canvas and extends right round the tire, the ends being joined by a nipple or otherwise. The rim is made with a central channel (o) for the reception of the heads of the spokes (e1). In fitting the tire to the rim the side of the cover at f is first inserted into the inside of the beading (h1) and the cord or equivalent stretched taut and secured. Then the inner tube (a) is fitted on the rim and the cover brought down over it. The wired side (e) of the cover is next sprung into place over the beading (h). The wired side of the cover can be easily taken off for repairing the air tube. When securing the wired side (e) of the cover in place the strip of metal (n1) is turned round so as to hold it in place at one part while the other parts are being forced into position. Several modifications are described, but in all one side of the cover is firmly fixed in position and the other is removable for repairs.

All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from Feb. 15, 1893, give notice in the prescribed form of such opposition.

## A FRENCH TIRE.

**No. 10,610.** H. P. A. Villave's "Improvements in pneumatic tires for cycles and the like." June 3, 1892.—This tire is fitted to a special rim (D) which may be either hollow as shown, or solid. The outer circumference of the rim is channel-shape in cross section with a flat bottom and inwardly projecting flanges from the top edges of the sides of the channel. The flexible outer cover (A) is strengthened by canvas backing (T) extending from edge to edge, and is formed with hardened rubber ribs (C, C1) at its edges corresponding to the sides of the rim. The flexible rubber air tube (B) is formed in one piece with a hardened rubber base (B1) which rests on the flat bottom of the rim and, when the air tube is inflated, holds the outer cover firmly in position by wedging its thickened edges into the recesses in the sides of the rim. In a modification the rubber base (B1) is replaced by a leather or other suitable ring held in position by a steel band tightened on it by means of screws passing through brackets on the under side of the rim and the air tube rests on the steel band. A valve is described in the same specification. It has a spindle with an enlarged outer end sliding in the reduced outer end of a chamber. A small air passage is formed down the spindle and opens into the chamber through a small hole. This hole is covered by a flexible rubber tube surrounding the spindle and extending to its enlarged end. The outer end of the spindle is provided with a screw cap. When inflating the tire the rubber tube prevents the escape of air between the valve spindle and the outer end of the chamber.

**No. 4,905.** G. H. E. Cooke and T. Cooke's "Improvements in means of securing pneumatic tires in the rims of wheels." March 12, 189.—This invention has the usual object of rendering a pneumatic tire easy of opening for repairing purposes; and consists in making the outer cover with a sheath at each edge suitable for receiving wires by which it is attached to the rim. Hitherto the use of ended wires for the purpose has been accompanied by a gap in the cover for fastening or unfastening the join in the wires, but in this tire the wires are carried to a length more than sufficient to make a circle of the sides of the required ring for holding the cover in position on the rim. The wires (b) after leaving the sheaths in the outer cover (a) extend some distance beyond the places where they leave the sheaths, one extremity of each wire overlapping the other. The extremities of the wires are turned at right angles to form the hooks (c) and these hooks are

accompanied by a gap in the cover for fastening or unfastening the join in the wires, but in this tire the wires are carried to a length more than sufficient to make a circle of the sides of the required ring for holding the cover in position on the rim. The wires (b) after leaving the sheaths in the outer cover (a) extend some distance beyond the places where they leave the sheaths, one extremity of each wire overlapping the other. The extremities of the wires are turned at right angles to form the hooks (c) and these hooks are

**Sunol**

**A LADY'S WHEEL.**

The "Sunol" might almost be said to have been designed for ladies. It's so light, so strong, so graceful. The men's "Sunol" with all its gracefulness is stronger than any of the clumsier makes, the ladies' is nearly as strong as the men's, but lighter, of course. The "Sunol" leads—it's the modern wheel. Let us therefore send you a catalogue.

passed through holes made in the rim in positions to correspond with that to which the extremity of the wire can be readily drawn, while the enclosed air tube (not shown in the illustration) is deflated, without any special instrument. The holes in the rim will be noticed close to the letters c, c. The object in making one end of the wire overlap the other is as follows: If it is desired to remove the outer cover in order to expose the air tube the latter is first deflated and then the hooks (c) are pushed back through the holes in the rim so as to free the wires at the ends. These free ends will approach or can be made to approach one another, and the circumference of the edges of the outer cover will be increased correspondingly and will allow room to get at the air tube. The ends of the wires being turned up at a right angle prevents their disappearing into the sheaths. To replace the tire, the air tube is placed on the rim in its deflated condition and the portions of the wires which project outside the sheath, are laid hold of and drawn out until they project and overlap as at first; the two ends are then passed into the holes in the rim and the tire inflated when it will be held firmly in position. The wires may come out of the sheath at the same point as shown or they may overlap each other in the sheath before coming out. For greater security nuts are screwed upon each extremity of the wire protruding through the rim.

A NEW METHOD OF ATTACHING PNEUMATIC TIRES.

No. 248. W. Samuel and A. Twyford's "Improvements in rims and tires for the wheels of velocipedes. Jan. 5, 1893. —The outer cover is provided with ropes or rods (c) of any suitable metal or material forming thickened edges. The rim is formed with a recess on each side, the interior of the recesses being a good deal larger than the edges (c) of the cover, but the openings to the recesses are not much larger than the said edges. To fix the tire to the rim, before the air tubes (not shown in the illustration) is inflated the edges (c) are inserted in the recesses and similar ropes or rods (b) are also inserted in the recesses so as to act as wedges. When the air tube is inflated the edges (c) of the outer cover will have a tendency to draw out of the recesses, but will be prevented from doing so by the ropes or rods (b). To open the tire the air tube is deflated, one of the ropes or rods (b) is removed and the corresponding side of the outer cover opened.

All persons interested in opposing the grant of a patent on any one of the unmentioned applications, may at any time within two months from Feb. 22, 1895, give notice in the prescribed form of such opposition.

A COVENTRY PEDAL.

No. 3,889. T. Groves' Improved pedal for cycles." Feb. 29, '92.—This invention consists in constructing the pedal so that it can be used as either a rat-trap or rubber pedal, either by using different plates and bars or by adding india rubber parts to the metal plates. The pedal has the usual spindle (E) and end plates (A A1) provided with ball races. But instead of fitting the ends of the bars (F F1) into the ends of the plates (A A1) the usual construction is reversed, the ends of the plates (A A1) are provided with shoulders and the extremities are turned parallel and provided with a screw thread. The ends of the bars (F F1) are provided with suitable holes, and are fitted over the extremities (a a) and up against the shoulders on the plates (A A1) and are secured in position by nuts (D D1). The blocks or pads of india

## \$1.50 AMERICAN WATCH

We commenced on Jan. 1st, '93. In our New England factory, to make newly patented AMERICAN LEVER WATCH, which we not only GUARANTEE to keep PERFECT TIME but to give satisfaction in every respect. We will refund money without question to any dissatisfied purchaser. We are making an average of a WATCH EVERY MINUTE—1440 per day—422,000 for this World's Fair year. Our trade mark is on every dial and a guarantee with every watch. **IT IS MADE ON HONOR!** DESCRIPTION.—The movement is AMERICAN PATENT LEVER; Lantern Pinion; Patent Escapement and Regulator; Patent Pinion (or stem) Wind and Set, requiring no key; 5 turns winds for 24 hours; Patent DUST-PROOF case, heavily Plated with GOLD Substitute, guaranteed to wear a year; Weight of watch 4 1/2 oz.; Cut exactly represents 1c. Every watch tested and regulated before leaving our hands and will NOT VARY 1 MINUTE IN 30 DAYS. Price postpaid, \$1.50 each; 3 for \$4.00; 12 for \$15.00 by express. Mention paper and we will include a handsome GOLD PLATED CURB CHAIN with Columbus Medal Charm. **AGENTS AND STORE-KEEPERS** send us once for sample and terms. Catalogue of 1,000 necessary articles free. We refer to any prominent Jeweler or New York firm. Do not order C. O. D., a useless expense as we warrant every watch. **ROBT. H. INGERSOLL & BROS.,** 65 Cortlandt St., N. Y. CITY.

D1) the rat-trap plates may be substituted for the cases (G G) holding the rubber blocks or pads.  
WATKINS' CYCLOMETER.

No. 6,639. A. A. Watkins' "Improved cyclo-meter and counting apparatus." April 6, 1892.—This invention consists of a circular revolving dial plate (A) having teeth on its edge as shown at

the lower part of the illustration, which represents the rim (B) as being broken away for the purpose of disclosing the works. The plate (A) is driven by a pawl or catch or other device (E) engaging in the teeth of the dial wheel (A) and driving it by a cam or eccentric or any similar mechanism. On the dial rests a hand or pointer (C) revolving concentrically and carried round with the dial, but free to move on it independently. An arm (D) from the pointer or a continuation of the pointer on the opposite side of the centre reaches to and coincides with the teeth of the dial and is made at that part of a width equal to a certain number of teeth, in the case illustrated, of a width equal to five teeth. This space is cut into four teeth and they are actuated by the same pawl (E) which drives the dial, and are driven in the same manner. When the teeth on the arm (D) are not engaged in the pawl (E), the dial (A) carries the pointer (C) round with it. But when the teeth on the arm (D) comes into engagement with the pawl (E), the pawl comes in contact with the edges (F) of a tooth on the arm (D) and pushes it a distance (f g), which is equal to the difference of the pitch of the teeth on the arm D to the pitch of one of the teeth on the dial, and it then pushes the dial together with the arm (D) to the end of its stroke (e). The stroke is repeated, and in like manner the pawl engages in all the four teeth on the arm (D), and at the last stroke brings the edge (h) of the arm (D) coincident with the next tooth (j) of the dial. The pointer (C) will now have moved to m, thus recording a revolution of the dial. The arm and pointer will then be carried round with the dial till the teeth of D engage again with the pawl and cause the pointer (C) to record another revolution. Over the revolving dial (A) a second fixed dial or rim (B) is placed. This rim is divided into as many divisions as the dial (A) has teeth, and it will be readily understood that the pointer (C) moves a distance equal to one of these divisions at each stroke of the pawl, thus registering units of the strokes. If the dial has 100 teeth a revolution would register 100 movements of the pawl, and the pointer passing a division on the dial (A) once at each revolution would indicate the number of hundreds of strokes the pawl made. For bicycles the pawl is driven by one of the wheels, and the instrument is so arranged that the pointer (C) carried by the dial (A) revolves once in the number of revolutions of the bicycle wheel necessary to cover a mile.

A NEW TIRE COVER.  
No. 7,187. P. Ockenden's "Improvement in shields for protecting the rubber tires of cycles and the like from injury." April 14, '92.—This

invention aims at thoroughly protecting the tire without materially decreasing its elasticity, and consists in using overlapping shields (A A) instead of a cover consisting of one continuous piece. The scales are preferably made of vulcanized rubber lined with canvas cut on the cross, and are attached to the rim (B) by piercing holes one in each end of the scales and passing the holes or eyelets over studs (c c), secured to the rim (B). If a single row of studs be used, as shown in the drawing, the free ends are bent over to one side and the scales are put on so that the end last put on prevents the disengagement of the first end. Two rows of studs may be used with their ends bent slightly towards the central line, and one end of each scale goes over each stud. The scales are fitted on while the tire is more or less deflated, and it is pumped up afterwards, thus fixing the scales securely in position. Two other methods of attaching the scales are described.

## Structural Simplicity . . .

### Where Simplicity is a Virtue.

Examine all the pneumatic tires on the market to-day, and you will find the Columbia tire to be the simplest and strongest. Simplest because it is one endless tube, with complete inner tube united to outer cover, and strongest because each part supports the other and only the very best materials are used in its manufacture. It has the guarantee of a million-dollar capital behind it, and is put out as the best possible tire in the judgment of a company which has always been known as the leader in all that is best in bicycle manufacture.

Resiliency, speed, freedom from liability to puncture and ease of repair, are the qualifications of a perfect pneumatic tire. These the Columbia tire possesses in the highest degree.

GENTLEMEN:—The Light Roadsters with Telegram (quick repair) Pneumatic Tires have taken the town by storm. We are having a thousand inquiries a day for circulars, and it looks as though we were not going to sell anything but Telegram wheels this season. Express at once advance circulars and send us catalogues at the earliest possible moment.

Very truly yours,

THE BUCKEYE CYCLE CO.

Reading Flyer, Reading Road Racer, Reading Racer,  
Ladies' Reading and Junior Flyer.

The very best line of medium grade wheels ever  
offered---all the latest improvements.

Yours truly,

W. H. WILHELM & CO.

# Success

is the best argument that can be used in favor of a man or a machine. If the man is filling the bill in his position everyone can see his success. And with a machine—inanimate though it seems to be—there is a chance to prove its character by its ability to meet every legitimate demand of its rider. No amount of newspaper talk can give a good reputation to a badly constructed cycle, at least such a reputation is very short lived. The demand for a successful machine increases steadily in each community where it has proven its right to be called a success. Thus if a prospective buyer desires to have the greatest possible delight out of cycling, he can only obtain it by procuring the very choicest high-grade machine on the market. If he buys a heavy wheel he is sure to feel keenly his disappointment before he has even taken the stretch out of his chain. And if he buys a light one which proves itself weak in any part, he is then grievously displeased.

What then shall he do? The first fact which is now commonly admitted among experienced riders is this: The machine must be under 28 lbs. for road use. No rider ever doubts this fact after he has *ONCE EXPERIENCED* the charm of riding a really light mount. The next necessity is rigidity. A frame that will stand up on rough roads—bearings that run smoothly—proportion that pleases the eye—and the best quality everywhere.

We believe that

## The James

will continue to lead in all these points, and we knew that every purchaser is satisfied with his mount, and we intend to hold our position. Our Catalogue is published and mailed free upon application. We receive many compliments from our friends in praise of the work, and everyone who has read it tells of their pleasure in its perusal.

## MORGAN & WRIGHT PATENT PNEUMATIC TIRES

Are fully described in a very interesting catalogue which is now being sent broadcast throughout the land. You have not read one? That's your fault! You can have one for the asking. SEND FOR ONE. Between the covers are chapters descriptive of India rubber which alone is worth the little trouble of sending for the book. A chapter of facts will interest you. Then there are complete descriptions of all designs of the Morgan & Wright Tires, half tone illustrations of methods of repair, a chapter on fabrics from the finest of which the Morgan & Wright Tire is made; another instructive chapter on the care of Pneumatic Tires, a list never equaled, of meritorious performances of last season on road and path by riders of Morgan & Wright Tires.

That which will interest the riders is the list of

### PRIZES FOR 1893.

For greatest mileage made on one set Morgan & Wright Tires during 1893. Rider to make his own repairs. 1st prize, cost value, \$100.00. 2d prize, overcoat, \$45.00. 3d prize, 1 set M. & W. tires.

For most meritorious single ride. Distance, weather and character of roads to count: 1st prize, cost value, \$50.00. 2d prize, cost value, \$25.00. 3d prize, 1 set M. & W. tires.

For fastest mile made in competition: Prize, cost value, \$50.00.

For best time made in road race; distance 10 mile: Prize, cost value, \$25.00.

Best time made in road race; distance, 25 miles: Prize, cost value, \$25.00.

These prizes will be competed for under the rules of the L. A. W., and prizes to be such as will be acceptable to the Racing Board. All trials for prizes must be made with Morgan & Wright Tires. Contests closes December 25, 1893, and prizes will be awarded as soon thereafter as the judges may decide.

The Judges, N. H. Van Sicklen, L. J. Berger and C. P. Root.

When ordering your '93 mount be sure it is fitted with genuine Morgan & Wright Tires, all of which have the firm name in raised letters molded on the casing. Look for this in buying a Morgan & Wright Pneumatic. Don't buy an imitation; rest assured that the skill and experience which have brought the Morgan & Wright Tires to their present perfection will be exercised in keeping them ahead of mere copyists.

If you enter the above contests, send your address, age, weight, name and weight of wheel. We will enter those names and ever take a kindly interest in the rider's welfare.

## MORGAN & WRIGHT,

331-339 W. LAKE STREET, - CHICAGO, ILL.

## The Referee's Fifth Birthday.

On May 5 we shall celebrate our Fifth Anniversary by a change in the size of the paper.

In its new form it will be 10 x 13 inches.

This change is made on the suggestion of readers who find the present shape somewhat unwieldy, especially for folding for the pocket.

The paper will be three columns wide instead of four, but no reduction will be made in the size of type. It will be easy to read, as heretofore.

### Subscription Price:

You can save one dollar by subscribing now. After May 1st the price will be as follows:

|             |       |        |                |       |        |
|-------------|-------|--------|----------------|-------|--------|
| One year,   | - - - | \$3.00 | Three months,  | - - - | \$1.00 |
| Six months, | - - - | 1.75   | Single copies, | - - - | 10     |

During the coming World's Fair season the REFEREE will be found teeming with news for tradesmen and riders. It is worth your while to subscribe before the price goes up.

Arrangements have been made with a number of the best writers not only at home, but in England and Australia.

We propose to supply the reader with the best matter obtainable for his money.

## POOR JOURNALISM.

Some people, possibly, are able to conduct newspapers profitably on the "stand and deliver" principle, but in the opinion of honorable newspaper men it is a degrading policy, only to be tolerated by persons who would not hesitate to resort to blackmail. Happily there are few journals connected with cycling which have ever been known to stoop to such methods. Possibly the editors and proprietors of *Sporting Life* do not realize that their course of late has led people to form opinions which are far from complimentary, and are thus unwittingly doing themselves an injustice. Some time since these gentlemen, unfortunately for all parties concerned, had a misunderstanding with a large western concern which resulted in the withdrawal of the latter's advertising. There are two sides to every story. Having heard only one, we have no opinion as to the merits of the case. Ever since the occurrence, however, the paper has persistently "roasted" the company, and one of its correspondents, who, if we are correctly informed, was formerly one of the company's agents, has contributed largely to the vituperation which has found its way into print. The matter has not been instructive; it has not been legitimate criticism; it has possessed no sign of impartiality. This, we maintain, is not creditable journalism, and, though we, who are somewhat familiar with the subject, do not believe for an instant that the withdrawal of advertising patronage is responsible, that, and that alone, will be the interpretation placed upon it by the masses.

By all means let cycling journalism maintain its cleanliness and impartiality. "Tell the truth and shame the devil." Put the advertiser in the place of his satanic majesty, and if he won't patronize you, on account of some small difference of opinion, don't let it warp your judgment. Shame him if you can.

## CYCLE THEFTS.

A mother's plea has often saved the neck of a dangerous criminal, when that individual doubtless should have been sent to the penitentiary. A similar case, happening in Chicago, comes to our notice. Last week a member of the Chicago Cycling Club, Theodore W. Smith, had a wheel stolen. The thief

took it to a Wabash avenue store and left it for sale. A salesman, knowing Smith to have lost a wheel, immediately notified him of the one offered for sale, and when the owner saw it the machine was identified. Salesman Rockwell knew the thief and his family and Smith was told the name. He probably would have prosecuted the thief but for the mother's plea. As it was he relented and the young man is now at large. Later it was learned that this same young man is supposed to have stolen two or three wheels last year, yet escaped punishment. A member of the Cook County Wheelmen lost his wheel last season, but recovered it and the thief was caught. Because his father was in the employ of a large and influential dry goods house, whose proprietor had influence, the young man was never indicted. And now it turns out that he, too, had stolen other wheels, yet goes unpunished. It was the duty of both Mr. Smith and Mr. Rockwell to prosecute the young man who stole the former's wheel, regardless of the entreaties of the mother. An example should have been made of the young law-breaker. This, it seems to us, should be a part of the work of the Illinois division or the Associated Cycling Clubs. Cycle thefts must be broken up, but if a mother's tears are to interfere each time a wheel will not be safe at any place. Cycle thieves will abound this year and we suggest that the officials of the division, various clubs, and the cycle board of trade meet to form some plan to guard against such unlawful practice.

## CANADIAN CUSTOMS.

It was reported, at a recent meeting of the Canadian Wheelmen Association, that arrangements had been completed with the customs authorities whereby a wheelmen, going into Canada from the United States, could secure the return of duty imposed on his machine. He pays the duty, takes a receipt which indicates his name, number and make of wheel, etc., and, on leaving the country, takes an acknowledgment from the officer at the point of departure. The receipt and acknowledgment he mails to the customs department at Ottawa, and in due course the amount paid is refunded. This thoughtful move on the part of the hospitable Canadians should find ready response on this side of the line. This summer, hundreds of Canadian wheelmen will visit the United States. It would be an immense boon to them were there in operation in this country, a rule similar to their own. The gentlemen at the head of the L. A. W. are the proper persons to move in the matter, and, as there is little time to spare, doubtless they will move speedily.

## FREAKY INVENTIONS.

If one-tenth part of the inventions which go through the patent office were applied to the actual construction of bicycles, the machine of to-day would indeed be fearfully and wonderfully made. One-third of the patents, perhaps, are described to wheelmen through the columns of the REFEREE. These are, as a rule, the more practical looking, though others are shown, from time to time, on account of their novelty, which would be absolutely useless for practical purposes. The remainder are inventions on which no practical man would waste a thought. They represent an outlay in time, labor, material and patent-office fees of enough money to make half the makers in America wealthy. It will be found, as a rule, that the producers of meritorious inventions are men who have had more or less experience in the actual construction of bicycles. If there were any

means of reaching the other class and showing them in advance the utter impracticability of most of their ideas, a vast amount of money and disappointment might be saved them. The trouble with them is that they are so afraid that some one else may appropriate their ideas that they dare not submit them to a person qualified to advise before commencing work on what usually proves an unqualified failure.

## CHICAGO'S TRACK PUZZLE.

Chicago's track puzzle seems likely to become a track muddle. We have been assured from time to time that everything would be ready in good season, but a month has elapsed since Mr. Raymond's visit, and we are still in ignorance as to the date of commencement, to say nothing of the completion of the track. This, in view of the importance of the events to be conducted, is very unsatisfactory. It seems extremely improbable that, rush the work as they may from this time forward, the committee will complete it in time for any training prior to the opening. While the searches for burnt clay and Joliet mixtures have been going on, a track constructed of wood could have been laid. The racers could have been at work upon it long before the composition track will have been commenced. No reply whatever is offered to the many arguments in favor of boards. It will be a pleasant matter indeed if Osmond, for example, arrives, and in due course returns to England without having met the American riders, and with the very plausible excuse that he was provided with no track on which to train.

"Taking one consideration with another," the state of things is not a happy one.

## CLASSIFYING RACERS.

Some months ago a suggestion was made to the chairman of the racing board, which contemplated a more accurate classification of racing men than is now possible. Class races have heretofore been conducted loosely. Not one handicapper in six keeps a complete record, even of the most prominent men. As a result we had, last season, an unseemly dispute caused entirely by the ignorance of the handicapper as to a competitor's performances. The handicapper was not entirely to blame; the system is faulty. The records should be kept in the office of the chairman. The papers should be followed up and race promoters required—as they are now, though the rule is not enforced—to immediately notify the chairman of the results of all races and the times. The chairman should forward to each handicapper a weekly bulletin of changes. Thus all would be properly informed. This system would necessitate the hiring of an assistant. One-half of the fees received by handicappers for classifying would prove an adequate sum for this purpose. The handicapper would find it worth while to sacrifice that amount, for he would be relieved of a vast amount of hunting over files, blanks and programmes.

## THE \$150 LIMIT.

It is a good thing, though the racers, trainers and inducers do not think so. Of course they don't. With them the value of the prize is second only to the matter of salary and expenses. But it is a step in the direction of the preservation of amateurism. It is a step in the direction of placing all race promoters on the same footing. Heretofore the meeting which could afford to offer only moderate prizes could not hope to secure crack riders. Those gentlemen all flocked,

like a lot of sand flies, around the brightest light. Relieved of this disadvantage, the smaller meeting will have a better chance. The racing men will find greater temptations to spread. Therefore the limit is a good thing.

## THERE WERE THREE MEN.

Let us suppose a case.

A country school teacher. Another school teacher. A meeting, in presence of the boys. Exchange of words. Bad language. Blows. Fight. Nobody licked but both retire badly demoralized. Still vowing vengeance.

Result: Boys do likewise. General demoralization.

Another case.

A journalist. Another journalist. Both "alleged" perhaps. Still another journalist. A difference of opinion all around. Bad temper. Nasty names. Odious comparisons. Disgraceful personalities. A downright rough and tumble. A hunting of dictionaries for abusive adjectives.

Result: Loss of dignity, influence, manhood, reputation.

Who does it fit?

## WHAT WILL WATTS SAY?

The captain of a southern club sends us a communication which leaves no possible doubt as to the intentions of himself and friends in case the colored brother remains, after the next league meeting, eligible to league membership. He claims to have eighty-three league members ready to go on strike and form a southern league, to which the Ethiopian shall be forever a stranger. Thus it appears that the wrath of the southerners is not appeased, and that at the next meeting of the assembly the battle will rage with greater fury than ever. And who shall say, in view of the substantial gains of the past year, that the southerners will not carry their point?

## NEW YORK'S SHOW.

It seems to be a settled thing that the Press Club of New York will hold an exhibit of cycles in connection with its fair, provided, always, the makers are willing. It is doubtful whether the expectations of the promoters will be realized. Makers have already decided that one show is sufficient, but that if two are held, one should be in the east, the other west. The Philadelphia show covered the former, the world's fair show will look after the latter. It is too late in the season for a show to be of any practical value, and it would therefore seem wise not to expect too much of the coming New York event. If New York wants a show, why not wait until the proper time comes.

## From Our Dutch Poet.

The following bit of rhyme, written by Emile Pickhardt, of Irvington, Mass., hasn't much to do with cycling, except that it announces the arrival of spring, thus gladdening the heart of maker and rider, but it's good:

Now der leedle shoots vas shootin',  
Und der bees vas busy been,  
Und der hoot-owl vas a hootin',  
Und der greens vas gittin green.  
Now der happy toad vas hoppin',  
Und der peepers dey vas peep,  
Und der rain drops vas a droppin',  
So der veepin willows veep.

Now der turkey gobbler's gobblin',  
Und der cookoo he does coo,  
Und der bob-o-link vas bobblin',  
Und der blue bells gittin' blue;  
While dot mooley cow vas moolin',  
Der ink slinger he do sling,  
Und der April fool vas foolin',  
I dinks me dot vas shpring—  
Don't it?

Worcester Wins the Fight.

The recent comment in the REFEREE on the Boston-Worcester fight for the spring division meet has aroused much talk. Worcester sleeps with the REFEREE under its pillow, while Boston is disturbed as the light of facts breaks in on their attempt to "do" Worcester out of the spring meet. I wish to do the fair thing by the competitors for the cash prize plum that is liable to fall to the victors, and facts regarding the case are all I will present.

There is a growing belief in the Massachusetts division, outside the Boston district, that Boston wants to and has in the past "hogged" the politics and political plums of the division, and wishes to perpetuate the idea that Boston is the soul and center not only of Massachusetts, but of league affairs, and few if any crums fall to the outsiders. Let's examine the facts of the recent controversy.

Worcester won, in defiance of the alleged interview presented in the Boston papers Sunday, April 2, in which President Burdett was quoted as saying that if Boston was not given sanction to hold the spring meet Miller's head would roll into the official basket. Miller read this, immediately gave Worcester the sanction, and his head has not as yet tumbled. Miller as a member of the racing board has New England for his district, and is not amenable to President Burdett. His word is and should be final, and he is to be congratulated on his exhibition of backbone and nerve, the threats of Burdett and the Boston newspaper men notwithstanding. The Boston people sent Perkins and Robinson to Brooklyn on a secret errand to try and get the fair-and-square-to-the-yard H. E. Raymond to pull official wires on Miller. I'm told on good authority that Mr. Raymond told them he could not dictate to a member of his board, but could advise, and that only. President Burdett, so President Knight of the Bay State Bicycle Club stated last week, denied the threatening language attributed to him. He said that he was misquoted, and that if any head rolled off it would be one near Boston.

Now that Worcester has won, Boston is frantic and has appealed to the national executive committee to over-rule Miller's sanction and decision, which will open the flood-gates to no end of squabbles in the future if the executive committee listens to the malcontents.

The attitudes of the division officers towards Worcester is shown by these facts. The division officials last year voted \$450 to Springfield (a non-league club) towards the entertainment fund, but utterly refused Worcester, an old league club, one cent. They voted money to the annual jamboree at Martha's Vineyard, and \$600 to themselves for the meeting at Waltham May 30. What does this mean if it does not mean rank favoritism and antagonism to Worcester? If you will scan the list of delegates to the Philadelphia convention you will find twenty-one credited from Boston, and only ten from the rest of Massachusetts. The money and political influence of the Massachusetts division is centered in Boston, and the rest

of the state should, at the next election, rise up in its might and crush this state of things.

All through the controversy the Worcester men have acted the part of gentlemen. Boston has blustered and threatened, backed by the *Herald* and *Globe*. They complain of the Worcester hospitality when they refused to extend that hospitality to the visitors; but they took charge of the public ball at which fifty cents a head was charged, and ran in debt seven dollars, which the Bay State club paid.

The Worcester club further charges that Secretary Bassett has refused to renew its membership as a league club on the plea that the club had disbanded. President Knight and his fellow club

dramatic department to Dan Saunder's sporting office quarters, and if Charlie doe-n't dictate, he and Dan are pretty chummy, and good fellows at that. I'm in Boston, young man of the *Globe*, and have not been asleep, but collecting facts, and still believe "meddlesome newspaper men" should have no part or parcel in league politics or division rows. You should look higher and broader.

My only wish is to see the matter settled amicably. Worcester first applied for sanction, and should be allowed the fruits of its enterprise.

\*\*

#### Long Distance Abuses.

There should be but one opinion as to such competitions as those indulged in by Terront and Cor'e in Paris recently, and such as those in which Spooner and Waller participated last summer, and that is that such performances are highly injurious to the health of the persons who court notoriety, especially so regard-

was the result. A New York daily very properly had this to say:

With the approach of the cycling season of 1893, various clubs and cycling associations are planning to promote twelve and twenty-four-hour races. Last year F. Waller, of California, and F. E. Spooner, of Chicago, tried to establish twenty-four-hour records. Waller rode 363 miles, and Spooner 375 miles inside of the allotted time, and, elated over their rides, they have now determined to go abroad this season and compete in the twenty-four-hour Cuca cup race in July.

There is a vast difference of opinion among the American cycling clubs about the advisability of fostering contests of this character. At the completion of Spooner's ride he was described as being lifted from his wheel so exhausted that he was unable to stand, his face was pale, his lips blue, and his eyes glassy.

In England, where these long-distance rides are quite popular, similar scenes are recorded, which has served to incline the race-promoting clubs of the country to the belief that no races to exceed twelve hours should be promoted, as the condition of the record breakers at the end of their feats is sufficient assurance that such contests must be injurious.

On these long-distance races the competitor is rarely off his wheel for thirty minutes altogether and throughout the entire ride artificial means are resorted to to keep him awake and vigorous.

The question is often asked if abuse by such unfair testing of the human machinery leaves any permanent bad results. In my own case it has not, and I am, according to an insurance doctor, "sound as a dollar." But then constitutions are not all alike, and it will behoove any untried and untrained man at long-distance work to pause and examine himself before going into useless and abominable abuse. This same physician, however, would recommend only a fifteen-year policy, while I wanted a twenty-year one. He argued that while he was satisfied that his subject was sound at the present time he took into consideration, as a prudent officer and servant, that the human machinery had been subjected to immense strain, and while running smoothly now was liable at a critical moment to break down. Some part, such as the lungs or heart, might be slightly affected, but not enough to even the experienced eye of the human body engineer to discover at the present. His caution was very likely due to the frank and thorough statement as to his subject's past course of life.

The N. C. A., noting the morbid interest in the long-distance races, proposes to give twenty-four-hour and night and day races. But to amateurs and not professional sport-providers this little sermon is preached. Heed it, and frown down physical outrages on cycling.

\*\*

#### "Consistency, Thou Art," etc.

It was a case of "Whose ox is gored" with Henry Crowther. Last summer he nearly went into hysterics when the Boston people were to give a meeting on the same day the Associated Cycle Clubs of Philadelphia, 400 miles away, proposed having one. He wrote to Mr. Miller, of Meriden, asking him to refuse sanction to the Boston meet. Now Henry is in Boston, and he can see no reason why Boston, less than fifty miles away, should not give a race meet on the same day as Worcester. Oh, Henry, you are a jewel, but as to the consistency—that's another story.

\*\*

#### John S. Johnson's Future.

There is no doubt that John S. Johnson's skating victories the past winter have done much to impress the cycling and sporting public that he was equal to 1:56 3-5 for the flying mile. This is how the *Wheeler* looks at it:

John S. Johnson, the Yankee racing crack, is a flyer on skates as well as on wheels. A vast amount of irony was expended on Johnson's behalf when the figures he claimed to have made for the mile were announced over here, and doubts cast upon the performance from every side. Notwithstanding adverse criticism, how-

J. J. ROSS, THE "IMPERIAL" SOUTHERN TRAVELER.

members, including the energetic Scher-ver, deny this and say the Worcester club never disbanded! It voted to disband, and the next meeting voted to reconsider. Secretary Bassett, in reply to a query of the REFEREE, said: "They did disband. I got a notice to that effect. I am ready to do business with them when they are ready."

The *Globe* of Boston said recently:

"Wake up, Senator Morgan! Where have you been sleeping for the last two years? John C. Kerrison has not been president of the Press Cycling Club for three months. Mr. C. S. Howard, too, has not written a line of bicycle news for the Boston *Globe* for two years. Come on to Boston and make the acquaintance of the 'meddling newspaper men' who are writing bicycle news for the daily press.

No; quite true, young man of the *Globe*. John C. has not been president for some time, but John pulls a pretty oar in the club and practically made the club what it is. I did not say Charlie Howard did cycling for the *Globe*, but that he was of the staff. It is only four doors around the corner from the

ing amateurs. It is a question if they do not injure rather than commend cycling. The lower class of sport-loving people like to see two men batter each other into an unrecognizable state. All who remember the old Madison Square Garden and Chicago Exposition walking contests cannot forget the morbid excitement and commiseration those poor devils who wandered half dead around the tan-bark and sawdust created. Here the tough class was prominent. I have had considerable experience with long-distance racing and have condemned any contest of over twelve hours' duration ever since I made a night and day pilgrimage around a western track, and was six months getting over it. Although blessed with a naturally vigorous constitution and being thoroughly trained, having only two weeks previous gone through a six-day race of eight hours a day, the strain of that night and day race left its imprint mentally as well as physically, and a state of utter collapse for days

MENTION THE REFEREE.

COVENTRY, ENGLAND.

ever, Johnson's times seem to have weathered pretty well, and his recent skating feats against such a champion as Donoghue undoubtedly is, show that the sulky-paced record holder is one of the best all-round athletes in the world. If Johnson never did another good performance he has already earned laurels enough to gain him the esteem of every true sportsman, and whether his stated time for the mile be correct or not, we should very much like to see this champion of wheels and steels over in this country.

Johnson will, in the near future, do other performances that will both startle and surprise his critics. Johnson is a western rider and has not met with too much fair play at the hands of people who have never seen him perform.

\* \* \*

#### *Racing Men's Modesty.*

The lack of eloquence and extreme modesty of most noted racing men while speech making, reminds me of an incident at the Cathcart banquet, following the London international tournament at Alexandria Place. Willie Illston was the hero of that meeting, and at the banquet was seated beside the late W. C. McCandish, then one of the editors of *Wheeling*. When a toast to Illston was proposed, the clever little Birmingham boy arose solemnly and said these few words: "I am, of course, pleased with my wins, and did my best; so did my opponents, who rode splendidly. I wish we could all win." With that he sat down, while applause of a deafening nature greeted his short but charitable speech. The writer thought the words were put in the Illston mouth by McCandish, who was a great admirer of "Billy" Illston.

\* \* \*

#### *Lewis' Charitable Institution.*

Charles E. Persons sent a bill for \$5 to Dai Lewis, of the *American Wheelman*, for that quarter-column write-up of the Savannah trip. This goes to show that Persons' writing, like his saddles,

comes high. Lewis wrote back and asked him if he was joking, as he had not instructed him to send in anything, and that he was not in the habit of paying \$20 a column to artists of the pen. Persons answered that it would have been worth that much to the *Bearings*, and that if Lewis did not care to remit he could give it to some charitable institution. Lewis wrote back: "All right; I'll give it to the *American Wheelman*."

#### *Thinks the Law Unjust.*

Burley B. Ayers is indignant over the report that the Canadian authorities are requiring a cash deposit of fifty per cent on the value of a wheel before entering Canada. He says this is unjust to American tourists, and will have the effect of keeping them out of Canada. Mr. Ayers says the Canadian hotel keepers, together with the Canadian Wheelmen's Association, should enter a protest and fight the matter in every possible way. He says that there are but few wheelmen starting out on a tour who have \$75 in their pockets that they can afford to leave behind. He has always known this to be the letter of the law, but as it was never lived up to, it ought it never would be.

#### *Two News Items.*

The Rover Wheel Club, of Cleveland, O., is a new organization, with the following officers: President, Charles Payne; vice-president, George Taylor; secretary and treasurer, Norville Lewis; road captain, Varney Barnes.

The Milwaukee Wheelmen have on hand a project that should receive the hearty co operation of all the bicycle riders in that city—a mammoth run to the world's fair. Captain Roth is working it up, and it will, no doubt, prove a grand success. The run will be made about the middle of May.

#### MR. BASSETT IS BUSY.

#### *And Therefore Has No Time to Reply to Criticisms.*

BOSTON, April 10.—After reading the editorials regarding the position assumed by Secretary Abbot Bassett, published in the western cycling papers of last week, I strolled down to that most holy of holy sanctums at 12 Pearl street. Although early in the morning, Secretary Bassett and his host of pretty female clerks were busy as bees, for, be it known, this is the renewal season. In conspicuous places were hung placards bearing in bold, cold type these words: "This is my busy day," "Short calls, please." Then I knew for a certainty that I could get nothing out of the genial secretary. But nothing venture, nothing have, so walking into the inner chamber I confronted Mr. Bassett and asked:

"Have you seen the Chicago papers yet?"

"No, sir," was the reply.

"Then you have not read the REFEREE's editorial?"

"No, sir," again was answered.

"Shall I read it to you?"

"No, sir; I haven't got time to listen to anything."

"Shall I tell you what they say?" was asked.

Again came the doleful, "No, sir."

"Have you anything at all to say on the matter?"

"No, sir; renewals are coming in fast and furious," answered Secretary Bassett.

Several "no, sirs" were again fired at the correspondent's head.

At the Oliver street establishment Mr. Crowther was working night and main on his exchanges and the "passing hour." He was asked what he thought of the editorials in question. For a moment he was thunderstruck at the ques-

tion, and then he leaned back in his chair and made these remarks:

"My opinion is that it is darned rot. Mr. Bassett is editor of the *L. A. W. Bulletin* and as such has a perfect right to publish any editorial he may see fit. He has not said anything detrimental to the league's interests; what he said is in the interest of the league, and is in defense of some of its officers, who have been very severely criticised by some of those cycling papers. Mr. Bassett is the most popular man in the league to-day, and between Mr. Bassett and the malcontents he (Mr. Bassett) holds a mighty full hand. Men with grievances to air and axes to grind want to let Mr. Bassett severely alone."

Mr. Fourdrinier was not at home, so did not get an opportunity of saying anything.

#### *Wheeling in Holland.*

In La Hays, Holland, several ladies have established a cycling club under the suitable motto, "*Honi soit qui mal y pense*." The membership numbers about a dozen, and they go their own way, regardless of public opinion.

It is twenty-five years since H. Burgers, of Deucuter, manufactured the first wheel in Holland, consisting of wood and iron. He has several workmen now in his shop who have been all this time in connection with the firm.

The young trick rider, Deumer Cramer, who is only ten years of age, intends to go to Dresden and take part in the trick-riding championship of Europe. It is indeed a very astonishing endeavor for such a young boy, but it is a fact that he possesses merit seldom found in one so young.

The Stokes company has presented the Lincoln club with a Sterling to be raffled.

## Overland Roadster NO. 1.

## The Increasing Demand FOR OUR HIGH-GRADE MEDIUM-PRICED Overlands

IS EVIDENCE OF THEIR MERIT.

THE OVERLAND LIGHT ROADSTER NO. 1, weight 35 lbs. stripped, met with favor among dealers and wheelmen from its first introduction. It is in great demand and is giving satisfaction, while the demand for the other four patterns is nearly as good.

Overlands range in price from \$90 to \$125 and are the greatest money-makers for dealers and agents on the market.

We guarantee the Overlands to be the best that our 13 years' experience in the business can produce. Desirable agents wanted for the above named cycles in all unoccupied territory, also for RUDGE and SYLPH CYCLES, all of which are our own manufacture and distinctly leaders, as well as having special features not found in other makes. We are largest western jobbers of Western Wheel Works' Cycles, on which we guarantee bottom prices and prompt shipments. Write for terms to dealers and agents. Catalogue Free.

Rouse, Hazard & Co.,

89 G Street, - - - PEORIA, ILL.

## It is Worth Your While to Investigate. SYLPH CYCLES

Are highest grade, built for use, fully guaranteed, finest workmanship, best material and most correct design and proportion. Our 30-pound rigid frame is built for the Scorchers. Our Diamond Spring Frame is the ideal carriage for everybody. It is the business man's best friend. Medium weight, staunch, strong and easy riding. It has no equal. Our Ladies' Spring Frame simply excels. No lady should ride a rigid frame. Save health and strength. Everybody admits that our Cycles

### AROUND THE WORLD.

*The Trip of Allen and Sachtleben as Described by Themselves to a St. Louis Reporter.*

The story of Messrs. Allen and Sachtleben, who are now, figuratively, on the home stretch of their around-the-world tour, is an interesting one. The feat is not altogether new, having been accomplished by Tom Stevens, alone, on an ordinary, but the adventures they passed through and the countries they visited will furnish subjects for anecdotes and newspaper articles for many months.

On June 23, says the *Post Dispatch*, they set sail for Liverpool, at which place they purchased English wheels. They went via Chester, Hardin, North Wales, Isle of Angely to Holyhead. At this point they crossed the Irish channel to Dublin. From Dublin they went through the northern part of Ireland by the way of the Giant's Causeway and countless interesting points, to Belfast; from thence over the Irish channel again to Ayr, the home of the immortal Burns, and from thence to Glasgow, from which they went by Loch Lomond, the Trossacks and other prominent places in history to Edinburgh. From the capital city they went through the south of Scotland to the lake region via Carlyle, and from there to York. The trip to London was made from this point via Sheffield, Stratford-on-Avon (the home of Shakespeare), Oxford and Windsor, a total distance of 1,500 miles having up to this time been made on their wheels.

It was at London that the idea of cycling around the world was conceived and determined upon. They left the smoke and din of London Sept. 15, 1890, and went to New Haven via Brighton and crossed the English channel to Dieppe in France, and from thence via

Rouen to Paris, where they were most royally dined and feted by the Club des Cyclistes de Paris, and when they left Paris, after a long stop, they were accompanied out eighty-five miles by a large number of the wheelmen of the French capital. At Chartres they were met by another strong club and handsomely entertained. From Chartres they went via Louis, Paieturs, Angonleme to Bordeaux and from this point they had intended to go through Spain, but the prevalence of cholera there prevented them. They went east via the lesser Alps and Marseilles and the river route along the coast of the Mediterranean and Toulon, Nice, Monte Carlo to Genoa, in Italy. Thence the brave and persevering American wheelmen pursued their course to Milan and eastward via Verona to Venice, from which place they came back to Bologna. All the Italian journey had been through a mountainous region and progress was slow, but to the students the route afforded much of great interest. From Bologna the route to Rome was by the way of Florence. At Rome, in which place they spent quite a while, they were most royally entertained by the Roman cyclists.

Through the fragrant orange groves they went on to Naples and by Foggia to Brindise, the southern extremity of the peninsula, where they took an India vessel to Corfu and thence across the Adriatic to Patros, in Greece. In Athens they spent nearly three months, and from Athens they proceeded to Constantinople. There they made all preparation for their trip through Asia Minor, which arrangements they perfected April 3, 1891. They went into Asia Minor via Ismea, Angora, Cæsarea, Sevis, Kara, Hissar and Erzeroum to Bayezidi, thence to the home of the bey of that province. Here the Americans were dined and banqueted and shown

every possible favor by his excellency, the bey providing them with letters of introduction to all the various under governors, chiefs, etc. On July 2 they had reached Mount Ararat, and were 5,000 feet above the level of the sea and slept in the camp of the Kurds, to whom the letters of the bey had made them known, as well as had similar and more extended letters and introductions from the grand visier himself.

On July 3 they slept 12,000 feet above the sea, and starting at 4 a. m. on July 4, they reached the summit at 2:20 p. m., and waving the American colors fired a salute. At this point, as at all of interest, they brought their faithful camera into use, and caught many of the beautiful and inspiring scenes. They were welcomed back to Bayezidi by the bey, who started them on their way to Persia, which they reached via Chi and Tabriz. At the Persian capital, Teheran, applications were made for passes through Asiatic Russia, the passes through China having been secured at London through Minister Lincoln.

Through all the Turkish and Persian trip they were the subject of much unfavorable comment from the superstitious natives, who often stoned them; but they had prepared for speed, and made the most of their preparations. From Teheran they went via Meshad to Askabad, the capital of Transcaspia and the home of the famous General Kourpotkine, who entertained them very nicely. From thence they went via Merv and Bokhara to Samakand, the center of ancient Asiatic civilization. From this point they went on to Toshkent, where the winter of 1891-'92 was spent. On May 7, 1892, the trip was resumed by the way of Chinkent and Vernoe to Kuldja, the first town on the Chinese border. Here the tourist spent seven weeks preparing themselves with

a rapidly acquired knowledge of the Chinese language.

In Turkey and Persia the natives had termed their wheels the devil's carts, and in China the natives showed no love for the "foreign horse." From Kuldja to Pekin they traveled 3,316 miles, in which they passed Urumtze, Gutchen, Barkul to Hamri, the beginning of the desert of Gobi, through which they crossed, to the great Chinese wall, to Soojew, and thence via Kanjew to Signafoo and Tayu Unpoo to Pekin, a total distance of 9,633 miles. They had ridden on their wheels since leaving Constantinople. They were met by all the foreign ministers in Pekin and royally entertained.

From Pekin they went to Tientsin, the home of the great prime minister, Li Hung Chang, whose especial guests they were. They visited all the coast points and went over into and through a part of Japan via Nagasaki, Kobe, Yokohama to Tokio, the capital. From thence they sailed to San Francisco via Vancouvers. From San Francisco the start was made back to New York via Los Angeles, Yuma, Tucson and Phoenix. Texas was reached at El Paso; from El Paso the route was along the Texas & Pacific Railway to Fort Worth, thence to Dallas and from thence to Sherman. From Sherman they wheeled their way into Kansas, stopping at Topeka and Fort Scott, and from thence they took the most direct route to Jefferson City. They then pursued the Missouri River route, arriving at Kirkwood last night.

### Looking for Trouble.

Barrett is mischievous. He wants to take Osmond, as soon as that worthy arrives, on a club run down to Hammond, Blue Island and Pullman. Golder's experience is not entirely forgotten.

## BURKE'S POT-POURRI.

TOPICS ANCIENT AND MODERN DISCUSSED BY A FREE-THINKER.

*Which Will Flourish?—A Possible Evolution of the Cash Prize Limit—Alleged American Long-Distance Riders.*

Everybody recognizes the value of advertising, and the man and firm which get the most of it consider themselves the most fortunate. It now looks as if the National Cyclists' Association events were going to get much more free advertising than those of the league. The association which gets the more advertising will be the more successful.

The international and world's fair races of the L. A. W. will, of course, receive much attention, because in themselves they are of great importance. But the other large meets stand a good chance of being lost in the shuffle of the great pack of racing affairs which is to be dealt out to the public by the two associations.

It is natural for the National Cyclists' Association to receive much attention at the hands of the press. At its head are men who for years have been prominent in sporting circles. The base ball men have always been liberal advertisers, and, aside from this, they have been at the head of a sport that of itself always interests readers. If, then, much of the old prestige is to be revived in the new professional league, as I believe it is, it is evident that the professional meets will be well advertised outside of what appears in the advertising columns.

One thing that has occasioned worry to L. A. W. managers is whether the N. C. A. will steer clear of those dates now marked down for amateur meets. It would be a serious matter if two meets were to be held on the same day in the same city, or in close proximity to each other. It seems to me that the N. C. A. managers have been too long catering to the public, and are too business-like to have any clash of dates. Such a thing might prove a bad financial policy for both sides.

Let the music begin. We are all anxious to have the band strike up. But it's ten to one that there'll not be half the discord that a lot of croakers are looking for.

Competition is business. Wrangling is what you make it.

\*\*

*What Will the Harvest Be?*

After commenting upon the fact that there is considerable dissatisfaction because the value of L. A. W. prizes is limited to \$150, a writer in the New York Sun says:

Some tournament managers believe that this rule will put a stop to the custom of offering pianos and like articles, as it is thought that they can place any value upon their prizes.

In other words, dear Sun man, you think that the value of prizes is no more limited now than it was before the \$150 rule was passed? What a compliment that is to the brains of the racing board!

There is not the slightest doubt that the limitation of prizes in any sport decreases the interest in that sport among a certain class of contestants, but there is good reason to believe that this is the class of people that it is well to discourage. If a man cannot afford to race for a \$150 prize he cannot afford to race as an amateur. To be sure, if he should race for a piano or a Queen Anne cottage he would not be any more a profes-

sional, as long as those prizes come within the amateur rule.

The L. A. W. thought that pianos and building lots and other little knick-knacks were altogether too valuable for the cycle racer, and reduced the maximum of prize values to \$150. This was good news to the rank and file of cyclists but was far from pleasing to the "stars." But according to the Sun these men have no further cause for complaint. All the race managers have to do is to buy a \$1,000 piano and put it down in the \$150 prize list and then give the tip to the racers. In this way they will come within the amateur law and at the same time attract the crack racing men.

So it seems that the prize question has not yet been practically solved. In the abstract it is all right and it suits the racing man very nicely. But how does the racing board feel?

\*\*

*Cuca Cup Entries That Have Not Entered.*

What a lot of gabblers there are in the cycle world! For weeks the cycle papers have been publishing paragraphs containing this startling information:

Charley Skortjer, the popular and well-known racing man of Rydersville, is now in training for the great Cuca Cup race, and will soon sail for England. Mr. Skortjer will undoubtedly make the Englishmen do some great riding to beat him, for he rides the Bing-Bang wheel and we all know that is a great long-distance machine.

You see they draw on their imaginations and taffy some maker at the same time. In this way at least fifty riders have been listed for the Cuca Cup race.

Of course, some of the men that were mentioned did not even know what the Cuca Cup was, but the use of their names helped to fill space, and to some cycle writers that is all important. No thought is given to the reader, who is supposed to wade through columns of dry rot with the enthusiasm of a boy when he first reads "Robinson Crusoe." But they don't wade!

I have been hunting for a man who really intends to enter for the Cuca cup, but thus far not a name has been materialized. Most of the riders that have been mentioned in this connection have never had the slightest intention of going to England, while the remainder, for various causes, have decided to remain in America. And from the list of meets included in the international circuit and the regular meets, it would seem that they would have plenty of chance to distinguish themselves at home.

Thus it is that a race in which America would have, so the praters said, at least fifty entries, will probably not have one man representing America. And Charley Skorchner, *et al*, exist only in the imaginations of those who have a greater regard for space-filling ability than for accuracy.

And again, what a lot of gabblers there are in the cycle world!

\*\*

*"What is Everybody's Business, Etc."*

In the last issue of *Sporting Life*, Rugby criticised a certain maker because he has not supported *Good Roads* in the way that he (Rugby) thinks he should.

One of the cardinal benefits of citizenship lies in the fact that any man may do what he pleases with that which belongs to him, so long as he does nothing detrimental to the interests of individual or state. Therefore, why should Rugby or any other writer dictate to a maker how he shall or shall not spend that which belongs to him?

*Good Roads* has done and is doing much good, and I am heart and soul with it in its work. It has been well

treated by the cycle trade, and Editor Potter can not say that his efforts have not been appreciated. Several firms have been specially generous in their support of *Good Roads*.

These are at perfect liberty to donate one-half their incomes if they so wish. That doesn't make it incumbent upon any other firm to pay one cent.

Rugby and a few other writers foolishly think that their mission on earth is to direct the business policy of firms in which they have only the interest of an outsider. They will, however, find that the average business man knows more about his business than they do. The firm in question (Rugby mentions no names and I shall not) probably thinks it can use its capital to better advantage than giving it to *Good Roads*, no matter how worthy a publication it may be.

I wonder if Rugby has ever been in business for himself. Probably not. This is just the sort of man who talks the most about other people's affairs.

"Every fool will be meddling."

\*\*

*Something About Prices.*

There has been a great deal of discussion in the cycle papers regarding the price of bicycles. Some have contended that the price now charged for a good wheel is preposterously high, and others (of course, the makers coincide with these people) that the prices are not higher than are consistent with good workmanship. There the case stands.

The maximum price for a first-class wheel with pneumatic tires is \$150; and in view of the fact that most of the prominent houses charge that price for the best product of their factories, it is difficult to see how another concern, especially if not widely known, could get more for a wheel. And yet, one concern is advertising its machine at \$180.

At the present time one can buy a wheel from \$85 up to \$180, to say nothing of good second-hand wheels at very low prices that are constantly being offered. This being the case, it would seem a hard task to dispose of a wheel at \$180. I suppose, however, that there is always a number of people who want certain goods because they are high-priced and beyond the means of the general public. No doubt the concern knows its own business perfectly well and relies upon the weakness of a certain portion of our population for its patronage.

So you see that no price is apparently too high for a wheel. There are prices to suit all men in all conditions of life, even to the man who can afford to pay only \$2.60 down and the balance when his widow collects his life insurance.

BURKE.

*Here and There.*

Chairman Mott of the transportation committee of the league is arranging a plan to assist in the recovery of stolen wheels. The object is to furnish baggage agents throughout the country with a descriptive list of stolen wheels, and baggage agents will be requested to examine every wheel put upon the cars. If a stolen wheel is thus recovered, the reward for its recovery will go to the baggage agent.

The Overman rubber-working girls are making splendid progress with their Victoria Club at Chicopee Falls. They now take d'elarte exercises—with blinds carefully drawn. C. C. Morgan, the handsome young superintendent of the Overman Wheel Company, aspires to become president of the Victorias, but some of the girls don't want a man around, while others are pushing Morgan's claims to the office.

## RACERS AND DEALERS.

*Zimmerman and Other Celebrities in the Cycle Trade in Jersey—Asbury Park's Races.*

ASBURY PARK, April 10.—The Asbury Park wheelmen are making preparations for the coming season's races, which from present indications promise to be more interesting than those last year. The first meet will take place on Decoration day, on the new track of the Asbury Park Athletic Association, bordering Deal Lake. There will be six events as follows: Mile safety novice; mile handicap; third-mile novice, A. P. W.; two-mile handicap; mile, open; one-mile championship. In the last event Harry B. Martin, the crack rider of the Asbury Park Wheelmen, who holds the championship medal which he won last year, will have a formidable opponent in the person of Fred Frick, a fast young rider from Red Bank. The races are likely to attract a big attendance.

G. Carleton Brown, one of the vice-presidents of the L. A. W., who takes an active interest in the Asbury Park Wheelmen, has offered one of the dates of the international meets in the east this year to the above named club. The date selected will probably be Sept. 18. At this time of the year Asbury Park contains a large population, principally city visitors.

ZIMMERMAN'S CYCLE STORE.

Arthur A. Zimmerman, whose home is at Manasquan, only six miles below here, has opened a bicycle repository here, and is handling the Victor, Crenda and Raleigh wheels. With Zimmerman is associated William Burtis, who manages the business while the champion is winning prizes and glory on the bicycle path. The firm has disposed of a number of machines. A sales depot has been opened in Trenton, where Wells, the fast Canadian rider who has been studying law in the office of Joseph McDermott, Zimmerman's brother-in-law is in charge.

Zimmerman's advent in the bicycle business in Asbury Park has proved a boon to cycling, and it is likely that the champion will do much to enhance this popular sport along this section of the New Jersey coast.

A bicycle track will soon be built at Red Bank, where there is a big club, plenty of push and capital.

*Doings in Buffalo.*

The Buffalo Cycle Works, in its new factory at Kensington station, is working night and day, to keep up with the heavy demand H. C. Martin & Co., who have contracted for the entire output of Buffalo cycles, are making on them. Hi Martin's representatives have every reason to feel proud of their success in securing big orders, and over 1,000 Buffalos have already been sold. Martin has leased a large store on Chippewa street for a place of storage, and will keep it during the season for a reserve supply house. Over \$16,000 worth of wheels are now there ready for shipment.

The wholesale and manufacturing trade is heavily rushed just now, but the majority of Buffalo's cycle manufacturers—and they number eleven—have their output so well under way that little delay, if any, will be experienced by their customers in having wheels in season. The Buffalo Wheel Company, maker of the Niagara line, reports a heavy increase over last season's trade, and although the company's factory was twice heavily damaged by fire last fall and winter, it stands ready to fill all orders. The Niagara line for '93 is exceptionally fine, and the concern's new and popular representative, Andrew Cahill, is flooding the home office with orders.

## SENATORS ARE WILLING

THEY HAVE SHOWN A DISPOSITION  
TO AID ROAD IMPROVEMENT.

*Massachusetts to Have a Permanent  
Highway Commission—Street Su-  
perintendents to Be Elected  
—Other Road Matters.*

In April last a resolution was passed by the United States senate directing the committee on agriculture and forestry to investigate the condition of the agricultural interests of the United States, and, if found depressed, to ascertain the causes and enquire into the proper remedy.

Not many years ago the western farmers were burning corn on the cob as a fuel, and that, too, at a time when the poor of our large cities were suffering for want of food. The apparently paradoxical condition of affairs was easily explained—the cost of transportation was so high that the farmer could not get enough for his produce to pay him for the trouble of hauling it to the nearest shipping point.

Macaulay tells us that in England 150 years ago it was no uncommon thing for the fruits of the earth to rot in one place when a score of miles away the people were suffering from a scarcity of the very food which was spoiling and almost within reach, but the roads were so wretched that transportation was out of the question.

At the twelfth annual session of the National Farmers' Congress, held at Lincoln, Neb., in November, 1892, it was ascertained, on what appeared to be good authority, that economical road improvement throughout the country would save \$270,000,000 per year in the transportation of farm products alone.

If, then, the condition of the roads has so marked an influence on our agricultural prosperity—if, in point of fact, as in the instances cited, the agricultural product can be made of no value by impassable roads, what subject can more properly demand the attention of the committee on agriculture and forestry?

Following out this general idea, Senator Hoar on April 4 brought the matter to the attention of the United States senate by asking for unanimous consent to present a paper in the nature of a petition, though addressed to him as a letter. The letter was one he had just received from Colonel Albert A. Pope of Boston, and in it were clearly presented some facts which showed the great loss to our international and interstate commerce arising from the deplorable condition of our highways. Colonel Pope urged the advisability of appointing a sub-committee, and suggested that said committee be instructed to make an extended tour throughout the country for the purpose of investigating and reporting upon the subject of wagon roads in relation to the agricultural interests of the country. The senate ordered the letter to be printed as a document and referred to the committee on agriculture and forestry.

This action of the United States senate shows a spirit of willingness to do anything within reason to further the work for highway improvement. If the sub-committee carries out a broad and scientific plan, the report on highways, coming from such a source, will be of great value, both in estimating the expense of improvements and the value of such improvements to the various regions of our country.

PERMANENT HIGHWAY COMMISSION.

There has been a bill submitted to the

Massachusetts state legislature for the appointing of a permanent highway commission for the commonwealth, said bill having been referred to the committee on roads and bridges. While there is some diversity of opinion as to whether it would be better to have a commission or a state engineer, yet it is to be hoped that the former will be adopted, as a committee, of three members for example, would give more impartial service than would be the case with an individual official, save only in exceptional cases. Then again, if the states try successfully the plan of a permanent commission, it is not improbable that a national commission might be the outgrowth.

### SUPERINTENDENT OF STREETS.

There is also a chance of the Massachusetts legislature passing a measure which would make the superintendent of streets an elective office and not one for appointment, as it is at present. If carried through, it is believed that such an action will prove a great mistake, as the man who holds such a position should be one noted for his ability to fulfil the duties of street supervisor rather than a politician who can swing the needed number of votes.

Whatever advance is made in the so-

especially the western part, is a difficult and expensive undertaking. Most of our roads have to be built through forests where the trees stand "as thick as

W. A. VAN EPPS.

the hair on the back of a dog" (I do not refer to the Mexican breed of canines). The difficulty in constructing a road through the woods is sometimes partly overcome by tunneling through the trees instead of cutting them down.

The petitions which were sent out by

### A LABOR OF LOVE.

TATTERSALL.—Wot yer doin' now, Wraggesy?

WRAGGES.—Gettin' names to a petition.

TATTERSALL.—What for?

WRAGGES.—For de legislatur' ter pass a bill fur road improvement.

—Puck.

lution of this great question it should be done free from politics or at least should never be made a party issue.

KUKLOS.

### TUNNELED THROUGH THE TREES.

*One of the Difficulties of Road Building  
in Washington—Good Work Going on,  
Nevertheless.*

OLYMPIA, Wasington, March 23.—As this division has been but recently organized, very little opportunity has been offered for the division to promote or agitate the movement for improvement and construction of roads.

The legislature, which has just adjourned, has passed several new laws which will materially assist each county and road district in constructing and maintaining roads. One new feature is the levy of a property tax, which is known as the "segregated road fund." Several other measures of more or less importance are included in the bill, which, it is claimed, is a great improvement over the old laws. I have not had an opportunity to study the new laws and cannot more fully discuss them.

The construction of roads in this state,

Colonel Albert A. Pope were circulated throughout the state, and the signatures of our most prominent and influential citizens, including that of Governor Ferry and all of the state officials, were obtained.

The leading newspapers throughout the state are devoting a great many articles to the subject, and the people in general are beginning to realize the important bearing which good roads will have towards the development and prosperity of the "evergreen state."

W. A. VAN EPPS,  
Chief Consul.

### Made But Little Impression.

WILMINGTON, Del., April 6.—Our state is small, and the number of wheelmen even smaller, so that we have been able to make but little impression in getting better roads. The streets of Wilmington are being very much improved, and in the state the cause has made some progress. It is attracting some attention and exciting discussion. Spasmodic attempts are made from time to time to better the present condition, and the legislature is now considering a bill to

compel tramps and jail birds to break stone, etc., for the roads.

To sum up, we are making some progress, and it is exceedingly likely that the forward movement will have more life infused in it every year.

S. W. MERRIHEW,  
Chief Consul.

### Commenced Fifteen Years Ago.

MUSCATINE, Ia., April 7.—There is little to communicate in regard to the roads movement in Iowa further than the fact that there is an Iowa Roads Improvement Association with a full and active list of officers and quite a large membership. It has been thought best by this association not to recognize the wheelmen as a body, although quite a number of wheelmen are members.

At present the committee, of which I am chairman, is bending its energies towards getting matter for the Iowa edition of *Good Roads*, which we expect to publish in the near future. It is our intention to do some work during the legislative campaign this fall, and in the next legislature, but plans for this work are not matured.

It may not be generally known that there was an association formed in Iowa looking toward the improvement of highways some fifteen years ago, but beyond a convention and the issuance of some printed matter nothing was done.

THOMAS F. COOKE.

### Roads on the Coast.

SAN FRANCISCO, March 4.—Referring to yours of the 16th, regarding road movement in this state, I have been awaiting the adjournment of our legislature, in order to know "where we are at." There was a law passed two years ago, of which I had a lot printed, intending to send them to each member of the boards of supervisors in all the counties of the state, and have also asked Potter the cost of the little pamphlet entitled "Improvement of Highways," with the intention of sending these out with the others to help those who desire to really improve the roads of their district. With the meeting of the present legislature we had to stop. One senate and two assembly bills were introduced, which if passed would have set matters back to their old status. We have been dancing attendance upon committees at their sweet will, and have interested many good friends in the matter of good roads during the time. Now we are waiting to get the full text of the senate bill, which was finally passed with amendments, the scope of which I do not yet know, but shall shortly, and will then write you again.

GEO. H. STRONG,  
Chief Consul.

Thousands of dollars are now being expended for street improvements in this city, but to the regret of wheelmen the majority of that sum will go into Belgium instead of asphalt. However, Belgium blocks are preferable to the tire-shaking cobblestones.—Louisville Post.

### More Talk of Secession.

SAVANNAH, Ga., April 2.—A meeting of southern wheelmen will be held at Cumberland Island Beach, near Brunswick, on May 29, 30 and 31. The question of the withdrawal of southern wheelmen from the League of American Wheelmen and the formation of a southern association will then come up. The talk of withdrawal is owing to the league's action in admitting negroes to membership.

See our announcement on another page.

## *G. & J. Pneumatic Tires are Cheap*

Because they wear longer—cost less to keep in  
repair—cause less trouble—are better  
than any other, and

“Are not Experimental.”

## The Most Expensive Pneumatic Tire Made

When you want to buy it, is the “G. & J. Pneumatic.” It costs more than any other, only a little more in most cases, much more than “cheap priced” cheap tires—but always more. Experimental tire makers all gauge their prices to that of the “G. & J.” They *must* sell their tires a little cheaper to sell them at all.

We will sell “G. & J.” Pneumatics to any manufacturer. Should he refuse to furnish them on your order (few makers do), just ask him. “whether he isn’t obliged to pay just a poor few dollars more for them” than for the cheap “just as good” tires which he is trying to unload on you. “That’s the secret.”

### G. & J. PNEUMATICS

*cost more* than any other because they are *worth more*. That is why they command the price. The rubber used in them is the very best; no cheap, colored stock used. The *best* only is good enough in tires.

You pay “High-Grade” prices and are entitled to everything “High-Grade,” especially Pneumatics.

MENTION THE REFEREE.

## TRADE IN YORK STATE.

## WHAT A REFEREE MAN SAW ON A RECENT ROUND OF BIG CITIES.

*Buffalo Teeming with Makers and Dealers  
New Houses in the Business—  
As a Rule All Hands Seem  
Prosperous.*

Albany looks about the same as it did ten years ago. The state capitol building, which has cost the taxpayers twelve millions already, is still in the same unfinished state, and the streets of cobbles are as uninviting as ever. This, however, is characteristic of the lower part of town streets. The upper part is now asphalted.

The clubs which have been fighting each other have combined and will occupy one large club house.

The principal agents are E. W. Vine, who handles Cleavelands, Credendas, Victors, Humbers, Tourists, Imperials, Rochesters, Sunols and McCunes; Edward Paddock, handling Kenwoods, Western Wheel Works, Road King, Phoenix, Nassau, King of Scorchers and general sporting goods; R. H. Roguc, Columbias, Hartfords and Hickorys.

The Bradley Chainless Safety Bicycle Company is nearly ready for business, and is well satisfied with the wheel. It will exhibit at the world's fair.

## SYRACUSE.

The Stearns people are very busy, and a stroll through the works with R. W. Wills, of the Kings County Wheelmen, who occupies a position with the company, was full of interest. A year ago the writer saw the Stearns the firm was then experimenting with. The development since is as surprising as it must be gratifying. Every wheel is tested over a corduroy road in a large hall where logs four inches in diameter are laid one yard apart the entire length. It is a rough but thorough test. F. A. Garrett and E. C. Stearns hope to fill all orders promptly from this on.

The Syracuse Cycle Company, which at present occupies part of the large Stearns factory, started in too late to do very much this year and will job wheels exclusively for the present and build a factory next fall. The officers are E. C. Stearns, president; J. C. Bowe, vice-president and secretary, and H. S. Mashin, treasurer. The latter gentleman says the Syracuse Cycle Company will turn out a large number of wheels next year.

Keuben Wood's Sons are strictly in it as a retail and jobbing house, and carry a tremendous stock of wheels. Charles Wood and G. W. Houk pointed with pride to a long line of wheels.

Spalding & Co. are doing well with Columbias; so are Benjamin & Andres, with Stearns and Singers. Olmstead is making good progress with Victors and Credendas, and the Cycle Trade Association of Syracuse is a success.

## JANESVILLE.

I. A. Weston, who is alone as a maker of safety wheels, was found at his residence suffering from a cold, and an added misfortune is the fact of his wife's mishap last fall. She is still confined to the house with a fractured limb. The Weston factory is, however, turning out a large number of wheels, and next year will be ready with a high-grade safety wheel. Weston has paid his entire attention to medium grades in the past.

## ROCHESTER.

Rich & Sager are busier than bees these days. The business of this firm has grown in a remarkable manner, and

the staple quality of their goods is becoming better known as time rolls by.

The Rochester Cycle Company has never experienced such a boom as this year, and their output will be largely increased. The Rochester is very distinct in some of its features—especially in bearings and frame. Everywhere the wheel is spoken of in the highest terms by people conversant with wheel building. Mr. Kenfield has just returned from an extended eastern and western trip, while another traveler is out in central New York.

Bettys & Smith are building a light-weight wheel to order, and doing a general repair business.

R. A. Punnett, the costume outfitter, is busy making bicycle suits, and is incidentally ready to back Trick Rider Kaufman against the world for any amount. Mr. Punnett had just entertained that fake Busst, who is palming himself off as Tom Busst, of Australia.

## BATAVIA.

The Batavia Pedal Company, successor to Hammond & Cooley, capitalized at \$5,000, is making a very neat pedal, and will in a short time occupy a larger factory. Mr. Hammond is a crack road rider and rides a light-weight wheel he built for himself. Mr. Hammond is waiting for a medal which is due him for riding in the Chicago to New York relay, and wants to know if it "died in the die." The officers of the Batavia Pedal Company are: C. H. Caldwell, president; Dr. J. W. Le Sur, vice-president, J. A. Le Sur, treasurer, L. W. Hammond, secretary, and Thomas H. Cooley, superintendent.

## BUFFALO.

Buffalo, according to the editor of the *American Wheelman*, is the centre of American cycling trade, and in truth the place bids fair to become a wonderful manufacturing centre when the cheap power of Niagara Falls can be utilized. The Buffalo Wheel Company suffered somewhat this winter through a fire, which threatened to burn the entire building it occupies. J. C. Dunham, the general manager, spoke of the rapid growth and excellent prospects of the company. The Niagara light roadster is meeting with good success this year; so is that pretty little ladies' wheel, the Maid of the Mist. Superintendent John Nevill, late of Featherstone's and of Coventry and Wolverhampton, knows his business as a wheel builder and handler of workmen, and is pushing things well at the works. The book-keeper says that Cahill is drawing his salary regularly and selling lots of wheels on the road.

The Niagara Machine Company is working an extra force, turning out pedals and balls. M. Parker was away, but W. H. Crosby, the treasurer, was ready to give information about the trade, etc.

Down the belt line from the Niagara Machine Company is the Buffalo Cycle Works, over whose destinies ex-league politician, referee, cycle dealer, and home trainer maker, W. S. Bull, presides. Who doesn't know "Billy" Bull? The works are roomy and the wheel he turns out—the Buffalo Light Roadster—is too well known to need special mention. H. C. Martin & Co. have made it, especially in the east, a standard article in wheels. Mr. Bull is a warm admirer of George R. Bidwell, and spoke feelingly of the hard times the old league officials had fighting for road rights and legislation for the pure. Bull says that it was Bidwell and not another who originated the famous Liberty bill for New York state.

The Buffalo Tricycle Works are situated in a lovely residence portion of

Buffalo. C. H. Furnell looks well; so does the happy F. O. Atherton, who stated that the output of 5,000 wheels will not be enough to go around.

George N. Pierce & Co., makers of the Queen City, are satisfied with the outlook, and report a healthy demand for their wheels, which forms a very small part of their business.

Penseyres & Haberer, on Clinton street, occupy the top floor of a building, and their space is too limited for the amount of business they are doing. They make the Globe, which is taking well locally, being a neat Humber frame, light-weight wheel. Their output will be small, about 200, but next year they expect to do better. A large repair force is kept busy.

Shamp is more than satisfied with the way his saddle is taking, and he is somewhat driven to supply orders, but with additional facilities he will in a few days be ready to meet all demands.

Pratt & Letchworth, out at Black Rock, are making a boys' cheap wheel for jobbing purposes, with 24, 26 and 28-inch wheels, called the Duco, and are now ready with samples. Their supply will be limited. This firm is the largest manufacturing concern in Buffalo. The bicycle business is an experiment, and with their facilities should succeed.

Among the dealers H. C. Martin & Co. easily lead, and it is wonderful to note how rapidly this firm has come to the front. Martin and his assistant, Thomas, are marvels of energy, with keen perceptions and obliging methods. C. W. Casper, who was employed in Indianapolis for some time, is now on the road for Martin & Co., and his employers speaks kindly of him.

The Gibson & Prentice Cycle Company is making the Bison, and is pushed to the utmost through its limited facilities for supply. Mr. Gibson is a live young man, thoroughly capable, and will some day be at the head of a large concern.

Dorntge & Penseyres are making a leader of the Niagara, and Charlie Dorntge's local popularity is doing the firm good.

The Bison Cycle Company is handling the Bison, New Howe, Temple Scorchers and Majestic, and reports good business. It exhibits a light-weight Bison.

The Liberty Cycle Company, with J. F. Broadbent and F. W. Hess in charge, is pushing Liberties.

Doll & Co., with J. F. Doll in charge, are handling Monarchs and a cheap line.

W. G. Schack has a good line, consisting of Quinton Scorchers, Dauntless, Overstone, James, Smalley, Imperial, New Mail, Excelsior and Hartford. M. Schack is employed in a bank, and the young man in charge doesn't seem to be possessed of a wonderful amount of vitality or intelligence about his business.

G. N. Bowen, one of the few pioneer Buffalo agents, is proprietor of a large repair shop on Main street, and looks about the same as he did ten years ago. He will cater exclusively to dealers' repairing and leave the retail business alone.

The Vincent Cycle Company, which has been passing through re-organization, announces that a change of management is possible. W. B. Young, ex-newspaper man and inducer, is connected with this concern. The capital of the new concern will, it is said, be \$25,000, and Messrs. Balcom and Smith will be at the head.

Salem G. Le Valley, sporting goods dealer, is selling Premiers, McCunes, Lovells and Humbers—surely a good four to draw to.

The Queen City Cycle Company, with

the pleasant J. H. Isham and co-partners in charge, is doing well with the Columbia, Hartford, Hickory and Dauntless wheels as popular makes. Mr. Isham, as the pioneer dealer of Buffalo, wears well, and has the confidence of Buffalo riders.

Walbridge & Co. are selling Columbias and jobbing other makes.

Billy Banker is with a new concern and is busy getting a new Main street store in order.

I. W. Ostrander, 879 Main street, handles the Clipper, Ariel, Rochester, Worthington and Gendron.

George F. Lutz & Son control the Rambler, Fowler, Derby, Coventry Crs., Central and Ben Hur.

The East Side Cycle Company, on Madison street, makes the Banner, a 26 and 32 pound wheel, and does repair work.

Sweet & Johannot, Main street, are Victor agents, and control the Raleigh in Buffalo.

## JAMESTOWN.

On the Erie & Western is situated Jamestown, through which runs a river whose banks are lined with factories—principally furniture. There, however, is the Fenton Metallic Manufacturing Company, whose business in the past has been confined to metallic office fixtures, etc. A bicycle department under the management of Albert Gilbert, the secretary and treasurer of the company, has been added. A. H. Hood, well known in the east, being superintendent. The concern is making a clever looking wheel on Humber lines, with the very best of parts. It will do credit to the company when the facts are known. The facilities for manufacturing and the splendidly equipped factory should enable the concern to turn out wheels of quality and in quantities. A fire last October interfered with progress, and this will make the output this year limited; but Secretary Gilbert assures the REFEREE that next season will find them fully prepared to do business on a large scale.

## Won a Wife in a Race.

The marriage on Monday last of Fred Brown, of the Cook County Wheelmen, to Miss Gertrude Norton, of Cleveland, was the result of the former winning a bicycle race two years ago. The *Chicago Herald* of Wednesday last told a very interesting story of the romantic courtship and secret marriage of the young people. Brown has alternated his place of abode between Chicago, Elkhart and Cleveland. Two years ago he was working for a bicycle concern in the last named place. There was a meet there and Brown was cock of the walk among the racing men. Miss Norton was an interested spectator and in a certain ten-mile race shehadjicked Freddy, as he is known among his club mates, as the winner. She admired his "manly form," white cap and a gold medal he wore. During the sprint she was almost carried away with excitement. Brown won by a length and Miss Gertrude's prediction was fulfilled. Then they met at a reception that night; then a case of much letter writing. Brown returned to Chicago and is now with the Graham Cycle Company. The marriage took place at the home of his sister, 830 West Adams street.

The witnesses to the Brown-Norton wedding were Frederick Brown's aunt, Belle Lathrop, Adams street, near Western avenue, and William Savage, a contractor who boarded with Miss Lothrop's mother. As a sequel to Miss Norton's marriage without her parents knowledge or consent, the witnesses themselves suddenly culminated their engagement by asking the minister to tie for them a nuptial knot and this time the young bride and groom became witnesses.

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unlap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

HEAD OFFICE AND WORKS: Town Mead Works, Fulham, S. W.

LONDON SHOW ROOMS: Coventry Machine Co., Ltd., 15 & 16 Holborn Viaduct, E. C.

COVENTRY DEPOT: 21 Warwick Lane, Coventry.

## SOME OF THE POSSIBILITIES OF FUTURE TRICK RIDING.

United States,

England,

France,

Germany,

Bicycle Riders all over the world are fast learning how good our Specialties are.

WE HAVE DISTANCED ALL COMPETITORS WITH

THE RED STAR SOLID ILLUMINANT,

(PATENT APPLIED FOR.)

For Bicycle Lamps.

A Solid Compound that Melts while the Lamp is burning and Hardens when the Light is extinguished.

Nothing to Compare with it has ever been made.

The advantages of this compound over the many burning oils in the market are so many that to mention them all would take too long, so we will only mention the most important:

It stays where it belongs—in the lamp.

Your lamp is always clean.

As it cannot leak or spill, it saves clothes and tire, as nothing softens rubber quicker than oil; the oil dripping from the lamp will do more to ruin a tire than anything else it comes in contact with.

The Light cannot Shake Out.

It has no odor; does not smoke and cannot explode.

It is the best thing made for bicycle lamps, and the cycle riders all over the country endorse it as the only thing to use if you wish to avoid the many petty annoyances a lamp has hitherto caused you.

PUT UP IN ENAMELED CANS.

PRICE, - - 50 Cents.

The Red Star Chain Lubricant.

This is not a grease but a compound made up in compact form of the best materials for the chain and sprocket wheel.

It is a perfect lubricator that will not GUM.

As it is not of a sticky nature like most of the goods on the market for the chain, it will not attract and retain the dirt and dust.

It is put up in stick form, very handy and convenient, and can be carried in the tool bag if desired.

PRICE, - - 25 Cents.

The Red Star Lubricating Oil.

A red thin oil made especially for ball bearings.

Any manufacturer of wheels will tell you that ball bearing machines need VERY LITTLE

OIL and that the BEST is the cheapest in the end.

The use of a heavy or animal oil on a machine retards the ease which the ball bearings is meant to give it by causing the little steel balls to stick together instead of revolving.

Most of the complaints, that after a little while a machine begins to run hard, are from this cause, and oil of an inferior quality is worse for a machine than no oil at all.

Two or three drops of our oil on the parts to be lubricated will run a cycle a hundred miles.

Put up in a convenient little can with oiler attachment.

PRICE, - - 25 Cents.

Our terms to the trade are very liberal. As we employ but few salesmen the dealers get the benefit of commissions we would have to pay, by dealing with us direct.

Send for discounts and get a stock of our goods before the season opens.

THE RED STAR MANUFACTURING CO.,

58 FRONT STREET,

P. O. BOX 1092.

NEW YORK.

F. W. ROBINSON, 14 Holborn Viaduct, London, Sole Agent for England.

EUGENE HERMET, 147 Avenue Malakoff, Paris, Sole Agent for France,

FRANZ SANDER, Hamburg, Germany, Sole Agent for Germany, Belgium, Norway and Sweden.

## 1893 FIXTURES.

## MAY.

- 7—Pike county tour at Louisiana, Mo.  
8—Fifty-mile road race at Clarkville, Mo.  
9-10—Savannah Wheelmen's Track Association's races, Savannah, Ga.  
30—*Pullman Road Race, Chicago.*  
30—New Haven (Conn.) B. C.'s annual meet.  
30—Massachusetts division meet, Worcester  
30—Martin road race, Buffalo.  
30—Irvington-Milburn road race.  
30—Rome (N. Y.) Cyclers' meet.  
30—"Southern Wheelman's" 10-mile road race, Louisville, Ky.  
30—Winona (Minn.) C. C. race meet.  
30—Cleveland (O.) Wheel Club's second annual road race.  
30—Alameda B. C. meet, San Francisco.  
30—Hanauer's annual road race, at Cincinnati.  
30—Warner A. C. ten-mile road race, Wilmington, Del.

## JUNE.

- 3—Press C. C. meet, Buffalo.  
3—Buffalo. (New York circuit.)  
4—Inter state De Soto run.  
16-17—Syracuse. (New York circuit.)  
17—English championships on Herne Hill track.  
17—Alpha Wheel Club's 10-mile road race, South Norwalk, Conn.  
24—Prince Wells' second annual 10-mile road race, Louisville.

4—Tonawanda (Pa.) B. C. meet.  
4—Watertown (N. Y.) Cyclers' meet.  
4—Fourth annual Poorman road race, at Cincinnati.  
4—Second annual road race, Erie (Pa.) Wanderers B. C.  
4—California division meet.  
4—Missouri division meet, Sedalia.  
4-5—Seventh annual meet Kansas division at Fort Scott. Address Henry E. Harris.  
4-5—Rockford, (Ill.) C. C. meet.  
21-22—Cuca Cocoa cup race, Herne Hill, London.  
25-26—Indiana division meet, Fort Wayne.

## AUGUST. (WESTERN CIRCUIT.)

- 5-12—*Illinois Division, National L. A. W. and International meets, Chicago.*  
14-15—Milwaukee Wheelmen's meet.  
16-17—Wisconsin division meet, Ripon.  
19—Minneapolis C. C. meet.  
19—Inter club road race, Buffalo  
22—Evansville C. C. meet.  
24—Ziz-Zag C. C. meet, Indianapolis, Ind.  
26—Cincinnati C. C. meet.  
28-29—Columbus (O.) Century C. C. meet.  
30-31—Cleveland W. C. C. meet.

## SEPTEMBER.

- 9—Garden City Cyclers' meet, San Jose, Cal.  
13-14—Springfield (Mass.) B. C.'s annual race meet, Hampden Park track.  
26-27-28—Inter-state Fair Association meet, Trenton, N. J.

## OCTOBER.

- 2—Capital City Wheelmen meet, Sacramento, Cal.  
5—Annual St. Louis county fall tour.

\* \* \*

## THE CASH PRIZE LEAGUE.

P. F. Powers Made General Agent, and W. B. Troy is Manager.

The cash prize league officials continue to meet, but little progress has been made so far.

The governing board met at the Astor House, New York, last week, those present being President Byrne, Secretary Egan, P. T. Powers and F. S. Elliott of Washington. As a condition of issuing permits to run professional race meets on tracks not in the association, it was decided that prizes of the minimum value of \$50 per race must be offered,

and that the amount of such prizes must be deposited with the secretary of the association thirty days prior to such races; otherwise the license will be cancelled. This step was taken for the purpose of protecting the association, which guarantees all prizes. The minimum fee for licenses of that character will be \$25. Representatives of the association will have direct supervision of all races in which licensed riders compete.

P. T. Powers was appointed general agent of the association, and clothed with authority to communicate with outside cities. Willis B. Troy was made general manager, the duties of his office requiring his presence at all race meetings, over which he will exercise general supervision.

Boston's application for membership was favorably acted upon, and Cincinnati's request for a like privilege was taken under consideration.

Mr. Powers said that the New York Association has not yet decided on a ground. He was negotiating for Manhattan Field or the polo grounds, but has been so busy with the eastern league affairs as to be unable to bring matters to a crisis. He thinks the question will be settled now in a few days. The indications are that Manhattan Field will be chosen.

\* \* \*

## PHILADELPHIA RACE MATTERS.

Much Activity Shown—Several Proposed Meets.

PHILADELPHIA, April 8.—With the continued good weather and bright, sunny days comes the talk of race meets, and ere long Tioga track will be in great demand by the local aspirants for racing honors. Even now an occasional sweater-laden would-be star may be seen endeavoring to get rid of his superfluous adipose tissue, and another month will see the embryo Zimmerman and Windle faces assume that lantern-jawed aspect which indicates that they (the Z's and W's, not the faces) are "in shape."

The race meet committees of the various clubs are hard at work perfecting arrangements and securing dates, and if vernal activity is indicative of summer success, our clubs will be ahead of the game as a result.

The "Quakers" will be the first on deck this year, May 20 being the date announced for their meet—rather early but with good weather the well-known hustling abilities of their meet committees will land them on the right side of the ledger.

The South End Wheelmen have secured June 24 for their meet, which will be held at Tioga (at which track, of course all the large meets will be held).

"Pennsy" hopes to repeat her success of last year, and although no date has been secured her committee is hard at work.

Park Avenue and the indefatigable "Bunny" (than whom there is no more able manager in this city) have been at work for many a day. "Bunny" sees a long way ahead, and that the P. A. W.'s will be the star event of the season goes without saying.

The Associated Cycling Clubs is en-

deavoring to secure a date in the International Circuit, and if push and energy go for anything, this hustling organization will be near the top.

The Century's experience last year rather disheartened it and it is content to rest on its oars, for this season at least.

Some of the other clubs talk of having race meets, but as yet their plans have not assumed definite shape.

Taken all in all, Philadelphia's racing season promises to exceed in brilliancy and financial success that of last year, when hardly a week passed that there was not some race meet or road race to keep up interest in the sport.

## THE WILMINGTON-SOUTH END ROAD RACE.

At last, after much talk and more ink-slinging, the course for the proposed road race between the South End Wheelmen and the Wilmington Wheel Club has been decided on. The start will be from Wilmington, through Chester, finishing at Derby, a distance of twenty-five miles. The first two-thirds of the course ranges from "rotten" to fair; the last third is excellent. The event will come off early in May, and fast time is looked for, as the course is, generally speaking, level.

## NOTES.

Wash Seeds, the Wilmington road racer, will appear on the track again this season.

V. J. Kelly and John Draper are to go south to train as a tandem team. They will enter all the early meets.

W. D. Osgood, the famous ex-Cornell half-back (now a member of the University of Pennsylvania foot ball team) is an all-round athlete. He is not only one of the best amateur wrestlers of his weight, but last week won the two-mile bicycle handicap at the U. of Pa. spring sports from the 100-yard mark. He has been placed on scratch in the next race.

\* \* \*

## BUFFALO RACING MATTERS.

Two Tracks in View—Martin Will Run His Own Road Race.

BUFFALO, April 10.—The meeting of the Bicycle Track Association, called for last Friday evening at the Ramblers' club room, was fairly well attended, about fifty being present. Discussions as to the availability of purchasable sites were numerous and wordy, but the most feasible plan seemed to be the lease of one of the present outing grounds of the city, and as about \$3,000 worth of stock has been subscribed, there is something substantial to begin with. A committee of five, consisting of W. D. Banker, John Van Kelsor, F. E. Klipfel, R. F. Kelsey and F. C. Fox, was appointed to confer with the Young Men's Christian Association, with a view to putting a third-mile track at its outing park. This is the most eligible site in the city, being at the intersection of the Bidwell and Chapin Park way, and the present third-mile path could easily be transformed into a splendid cycle track, and spacious grand stands holding 4,000 people can be erected.

## A BOARD TRACK SCHEME.

Now that the track fever has its inning again, there is another scheme on foot to construct a quarter-mile board track at Olympic Park ball grounds. President James Franklin, of the Buffalo Base Ball Club, who is also interested in the National Cyclists' Association, says that if the cyclists will hold their meets there he will erect such a track. The Press C. C. also has a committee looking up grounds for a track and with the wide interest thus awakened there ought to be no doubt of a successful outcome of at least one of the projects.

## THE MARTIN ROAD RACE.

H. C. Martin has taken the manage-

ment of his second annual twenty-five-mile Decoration day road race out of the hands of the Associated Cycling Clubs, and will handle it himself, assisted by a committee of three, consisting of D. H. Lewis, editor of the *American Wheelman*; A. G. Batchelder, of the *Courier* and G. W. Schooley, of the *Evening News*. This step was necessary, as the Associated Cycling Clubs was not devoting the attention to it it should and which the near approach of the race demanded. Entry blanks were issued Saturday and are being sent broadcast. The entrance fee will be as last year, \$1. The prize list will be a big one and will be completed this week.

## THEY MAY NOT HOLD THE MEET.

Although sanction for a state circuit meet on June 3 has been secured, it is by no means certain that the Press C. C., which is the only L. A. W. club in the city, will hold it, as last year's experience with the division meet was anything but a glorious success. The club found itself about \$1,500 short of meeting expenses and is in no hurry to have the dose repeated. People will not attend races where no accommodations are given them, and the driving park is wholly unfitted for the holding of cycle meets. Though the club did everything in its power, the grasping autocrats of the Driving Park Association refuse to expend a cent to popularize their race track. If ever a city was cursed with an avaricious corporation, utterly oblivious of the people's wishes, Buffalo is the fated one, for a more stubborn, narrow-minded, less public-spirited body never owned a track than the one in question, and the sooner the cyclists cease dealing with it the better.

\* \* \*

## MISCELLANEOUS RACE TALK.

Little Paragraphs About Prominent Riders—Future Meets.

Johnson and Eck left Hot Springs for Savannah on Monday last.

The annual twelve-mile road race of the North Side C. C., of Milwaukee, will occur some time on July.

A copper-plated Rambler will be the first prize in Prince Wells' annual road race at Louisville, Ky.

The Michigan division, at its meeting Wednesday night, decided to give Detroit the annual meet.

Entry blanks are out for the *Southern Wheelman's* ten-mile road race, which occurs on Decoration day.

A report from Toledo says that the promoters of the track scheme have secured enough subscriptions to make the track a certainty.

Entries for the Pullman should be sent to F. E. Spooner, secretary of the Associated Cycling Clubs, care *Sporting Gazette*, 170 Madison street. The blanks will be out this week.

It is the intention of the Chicago Racing Wheelmen to limit the membership to fifty. As soon as the membership has reached thirty-five the initiation fee will be increased to either \$20 or \$25. The dues have already been raised to \$3.50 per month.

Chicago wheelmen are guessing as to the probable winners of the time prizes in the Pullman road race, and seem disposed to place the men in this order: Bliss, Githens, Davis, Barrett, Munger, Rhodes, Theodore Smith, Ehler and Van Sicklen are all good men and will give the three first named youths a very tight rub.

The Milwaukee Wheelmen have decided not to give an indoor tournament at the Exposition building June 3, as announced some time ago. The place has been leased from June 1 to Sept. 30

Now able to Execute Promptly Orders for  
**OUR WHIPPET**

(PATENT APPLIED FOR.)

*Made with an Endless or Continuous Air Chamber,*

That there may be avoided the coming season troubles which were so frequently experienced by cyclists last season who rode on *butted end* air chambers.

The Outer Cover

is made with four laced pockets, each ten inches in length, formed with flaps folding over the laces, to prevent rim-cement working through the lace holes, damaging the air chamber and protecting the laces from the rim-cement, contact with which always stiffens them and renders them unfit for use after repairing a puncture.

Our Road Whippet is as light as any tire of equal strength of the class which is cemented in the rim. We guarantee it will not burst on the road under the rider.

for a concert hall and the track has been removed. The financial loss of the last tournament makes the club rather slow to tackle it again.

The Central City Cycling Club, of Montgomery, Ala., has received a proposition from the West End & Riverside Electric line for a track at Riverside Park. It is proposed to build a quarter-mile track within the present mile track at the park. The stretch at the proposed track will parallel the other. This will make the present judges' stand fall between the two home stretches.

The Atalanta Wheelmen, of Newark, N. J., will hold a 100-mile road race on or about July 1. The A. W. is the largest cycling club in the state, and this together with the big list of prizes already secured is bound to make a success of the event. Start and finish in Newark, N. J.; ride to Princeton same route as followed by the M. A. of C. C. century run. Entry blanks will be out shortly, and may be obtained from Carl Von Lengerke, 8 Murray street, New York.

\* \* \*

#### Munger and Waller in Training.

INDIANAPOLIS, Ind., April 11.—The first club run of the Zig Zags took place Easter Sunday, the weather and roads being all that could be desired. Thirty-seven names, including those of Waller and Munger were on the register at the Grand hotel, Greenfield, for dinner. The following Sunday Noblesville was on the board, but the attendance was slight, owing to threatening weather.

Frank Waller and Birdie Munger went into active training under Harry Leeming's direction on the 1st of April. As soon as they are ready for track work, the one-mile track at the state fair grounds, which was greatly admired by some Chicagoans last fall, and on which O. J. Davis rode a standing quarter in competition in 32 1-2 sec., will be at their disposal from 11 a. m. to 1 p. m., and after 4 p. m., daily. It is reported on good authority that Van Sicklen, and perhaps one or two others, will also come here to train under Leeming.

Waller says he will first establish a 24-hour record without pacemakers; then will go for the record with the aid of pacers. Four hundred and thirty miles is the notch he is confident of reaching.

\* \* \*

#### Will Scatter on the Fourth.

It is more than likely that Chicago will be deserted by her racing men on the 4th of July. A number have already expressed their intention of going to the Ohio division meet at Sandusky; some will go to Rockford; others will participate in the Waukesha-Milwaukee road race, and the remainder will ride in the twenty-five-mile road race of the Illinois C. C., if it is held.

Sandusky means to have a grand meet and as the cyclists of that place are good entertainers and have a reputation to sustain, they have not been idle. Already the citizens of the city have subscribed \$4,000. Elegant souvenir programmes will be gotten out at a cost of \$500. A banquet will be tendered the visitors and everything done to make their welcome an ovation. Fred Patee, Deve Post, W. C. Anderson and R. C. Lennie, have agreed to be present as officials.

\* \* \*

#### New Racing Rules.

It is generally understood that the racing board will present to the cycling world its new racing rules this week, probably through the medium of the *Bulletin*. It is understood that the classification table will be done away with entirely, and a man's record for a given distance only will stand against

him. It is more than probable that hereafter race promoters will be compelled to forward to the chairman of the board the complete result of each race, in order that a record may be made which will aid the handicappers in classifying and placing the men in other events.

A strict rule will probably be adopted regarding entry fees, in order to do away with such troubles as arose during the last season. Competitors in handicap events will likely be compelled to start from the inside and not allowed to start from the top of the high banking some tracks have, and thus get a tremendous start. In fact this rule has been adopted.

\* \* \*

#### Will Go to St. Louis.

A number of Chicago Cycling Club racing men will likely go to St. Louis to participate in the Forest Park road race, June 20. Bliss and Githens have said they will go and it is more than likely that Barrett will want to make a try for the time medal, which he failed to secure last season. It is the intention to organize a large party to go down, take in the race on Saturday and enjoy a ride over Missouri hills on Sunday. The St. Louisians are royal entertainers and a good time will be had by the visitors. If those desiring to go will send their names to Charles P. Root, care REFEREE, a special rate will be secured for the round trip. This does not mean C. C. C. men only—the St. Louis people will be pleased to see all the other clubs represented as well.

\* \* \*

#### Nashville Race Items.

NASHVILLE, Tenn., April 7. — The wheelmen in Nashville are "courting" the sprinkling contractors of the city. They want a dry path on the side of the street.

W. F. Anderson, the supposed southern champion, will ride with an 80-inch elliptical gear this season. He is in slow training for the coming tournaments.

J. H. Gardner has moved to Syracuse, N. Y., which he will make his home.

W. F. Anderson, who claims he was the just winner of the Prince Wells road race last year, says he will beat every man in Louisville this year or never ride again.

\* \* \*

#### Eastern International Dates.

Chairman Raymond has announced the following dates for the balance of the international circuit:

- Sept. 2—Birmingham, Conn., Crescent Cycle Club.
- " 4-5—Hartford, Conn., Hartford Wheel Club.
- " 7—Lynn, Mass., Lynn Cycling Association.
- " 9—Boston, Associated Cycling Clubs.
- " 12-13—Springfield, Mass., Springfield B. C.
- " 16—New York, Metropolitan Association of Cycling Clubs.
- " 18—New Jersey (place not named).
- " 20-21—Baltimore, Maryland B. C.
- " 23—Philadelphia, Associated Cycling Clubs.
- " 30—Brooklyn, Kings County Wheelmen.

#### Zimmerman is in Form.

At Savannah, on the 8th, Zimmerman won the mile open, the mile handicap, the quarter handicap, and was second in the half-mile handicap from scratch. He is also said to have beaten the half-mile competition record. Wheeler was second in several events.

The death of J. E. Powers, the Boston medal maker, was a great surprise to all who knew the energetic young man. A splendid business career had opened before Powers, who was very young when he started in for himself. He contracted a cold at Philadelphia which led to his death; but the post-mortem examination was attended with remarkable results. A live lizard five inches long was taken from his stomach.

#### RECENT ENGLISH INVENTIONS.

##### New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from March 1, 1893, give notice in the prescribed form of such opposition.]

##### THE TORRILHON AIR-TUBE.

No. 5,545. J. B. Torrillon's "Improvement in pneumatic tires." March 21, 1892.—This invention aims at preventing the escape of the air from a pneumatic tire in case the air chamber be accidentally punctured, and it consists in applying on the inner surface of the air chamber a series of flap valves composed of strips of rubber,

rubber coated fabric or other flexible material overlapping each other like the scales of a fish and cemented by one edge to the inner surface of the air chamber, so as to yield to any sharp object which may puncture the tire, and so as to be closed over the puncture by the internal air pressure when the object which caused the puncture is withdrawn, and thus prevents the deflation of the tire. The illustration is taken from the drawings filed with the provisional specifications, and shows the action of the valve or flap when the tire is punctured by a nail; a are the valve strips or flaps disposed within the air chamber (b) of the tire, the successive strips overlapping each other and being attached along one edge for about one-third of their breadth, by means of cement or otherwise. Other forms of flaps than that here illustrated are described, for example, they may be arranged longitudinally instead of transversely to the tire, and may be formed of doubled strips of flattened tubes. According to another arrangement, but two strips are used, arranged longitudinally and cemented by their opposite edges to the interior of the air tube, and their free edges overlap on the tread. Or a single strip cemented along both its edges may be used, the width of the strip being equal to or greater than the circumferential development of the air chamber.

##### THE AIR WHEEL.

No. 7,663. J. C. Hall's "Pneumatic wheels for cycles, cabs and other vehicles." April 23, 1892.—A circular air-proof chamber (A) has the walls (E) constructed of layers of india rubber and non-expansive textile fabric, leather or other suitable material (such layers being either separate from each other or amalgamated together). The chamber is arranged around a centre part (B) of any suitable material, so that the said chamber when filled with compressed air or gas constitutes a ring or the like, which, after arranging a suitable axle (C) through the same, or flanges at each side thereof, constitutes a wheel for purpose of locomotion such as a cycle wheel. The axle (C) may be fitted with ball or other bearings, and has flanges (D) of which one or both may be fixed thereto or be screwed or otherwise secured thereon. F F are bolts which secure the flanges together and between which the centre part (B) may be held. The air chamber may be provided with transverse tubular holes beyond the edges of the flanges (D D). In this case metal rings are arranged at each side of the wheel, and are held together by bolts or stays, thus making the wheel any desired thickness at the point where the rings are placed. The air-chamber (A) may be secured to the centre part (B) or the flanges (D D) in any convenient manner; for example, the bolts (F F) may be dispensed with, the lower part of the centre part (B) increased and smaller and more rigid flanges used. Or the flanges may be arranged close together where they leave the axle, and then take an outward course so that the two combined form a hollow, trough-like cavity for the reception of the air chamber (A) which may be inserted within the cavity or between the flange, either by the removal of one of the latter or by arranging the walls of the air chamber (A) separately from each other and wiring on the outer wall like the outer cover of a pneumatic tire. In either case inflation causes the centre part to be stretched tightly, and so holds firmly in its place.

##### AUTOMATIC TIRES.

No. 22,966. S. Lee's "Improvements in or relating to pneumatic tires." Dec. 13, 1892.—These tires are composed of an air tube of pure rubber, with the addition of canvas if desired, and containing cover. The tread portion of the cover is preferably made of canvas or rubber and canvas, and provided with wires or other

non stretchable devices at the edges. The other portion of the cover may be of canvas with similar edges, and the two portions are preferably so arranged as to meet or overlap, though they need not do so if a non-stretchable air tube be used; and the air tube may be provided with ribs to fill up any space between the portions of the covers, to strengthen the air tube, to secure either

of the covers, or to make or assist in making a close joint between them. The tire is secured to the rim either by inflation alone or by other additional means, such as solutioning the second portion of the cover to the rim. The tread portion may have rubber added to the canvas, or a leather band as a protection against puncture and side slip. One part of the cover may be provided with hooks to engage with the other portion, and the cover may be made in one piece instead of two. Flaps or bands may be secured to the tire to prevent its leaving the rim in case of deflation. The figure illustrates a form of tire in which the cover is made in one piece. The cover is formed of canvas (B) with a strip of rubber on the tread and with wires (C) in the edges, the whole being secured to the rim (E). The cover is of such a width and the wires (C C) of such a length that it overlaps and forms a double thickness on the tread. According to another arrangement one edge of the cover has no wire and is placed in the rim and secured thereto; the cover is then wound round the air tube, the other edge with its wire being carried so far round as to be gripped between the air tube and the outer fold of the cover. In the case of contiguous pairs of wires the inner ones may be altered to a mere thickening of the edges of the cover.

#### READY FOR A STRIKE.

##### Eighty-three League Members Ready to Leave Unless Negroes are Excluded.

NASHVILLE, Tenn., April 5.—EDITOR REFEREE:—In your issue of March 31, I notice an article in regard to Mr. H. D. Spore and the southern league question. I am fully satisfied Mr. Spoke has the right object in view. Although I cannot say that there will be a southern league this year, there will most assuredly be an insertion of the word "white" in a league clause next year or there will be no L. A. W. in the south. So far as a temporary leader is concerned (I suppose you refer to Mr. Watts) he will have no effect whatever if he desires to remain with the L. A. W. if the word white is not inserted. I have in my possession a list of eighty-three members of my division who have agreed to leave their membership at my disposal, to either support the L. A. W. or any organization I may see fit.

I shall support the L. A. W., as I have heretofore, until that organization shall have one more chance to draw the color line; if it is not then drawn, I shall redouble my efforts to crush the L. A. W. and its interests in the south; or in other words, organize a southern league. I would kindly mention that I not only speak for myself but for a number of others.

I can safely say there will be either a white L. A. W. or a blank southern membership. Very truly yours,

W. I. ANDERSON,  
Captain, Capital City Cycle Club.

#### SMALL CHICAGO NOTES.

The house committee of the Chicagoos is at work on its raffle.

Percy M. Harris, a former Chicagoan is now a New York stock broker.

The Elgin-Aurora course is reported to be in the best possible condition.

The cleaning and decorating of the Chicago C. C.'s house is finished. It is needless to say that the place looks like new.

A number of the Columbia Wheelmen visited the fair grounds Sunday and the C. C. W. run was to Glen Ellyn. Eighteen of the Lincoln men went to Maywood, while a party of the Chicagoos went to Ohio and rode from Hamilton to Cincinnati.

## CHICAGO FACTORIES HUMMI G.

Many Working Nights to Keep Up With the Demand.

Things bicyclic are aboomin' in Chicago, and indications are that 1893 will be the banner year with all; in fact the business up to date is greater with some firms than that of the whole of 1892. Prospects have all along been good and the recent fine weather has helped business along wonderfully. There is not a factory in Chicago which can possibly turn out more wheels than can be—or have been, in many cases—sold, if all reports be true. Many, on the other hand, will not be able to supply the demand.

A visit to the factories showed an unusual amount of activity. The bright, warm sunshine seems to have awakened the trade from a drowsiness that was of such a character at one time as to cause alarm, occasioned no doubt by the absence of purchasers. There are no claims this season of great outputs and sales; the statements of makers are conservative, and there is every reason for believing that they will be left with no stock to carry over.

## KENWOOD MANUFACTURING COMPANY.

At the Kenwood factory 125 men are employed and every one is on the jump. The first floor, devoted to the shipping department, was well piled up with crates of wheels, ready to go out, while other shipments were being prepared. The Kenwood company now occupies the entire buildings at 253 and 255 Canal street, and then it has none too much room. The company expects to make from 2,000 to 2,500 wheels this season, and the only fear is that it will not be able to turn out enough.

## DERBY CYCLE COMPANY.

Superintendent Pease has his hands full at the Derby factory, 162 Canal street, in order to keep agents supplied with wheels. He stated that the factory was late in beginning work this season because he had much new machinery to put in, but that now the ten dozen men were hustling out machines. The company is putting in a new engine, which will be in working order shortly. About 1,800 wheels will be turned out this year, but next season the plant will occupy the whole of the building it is now in or will have a new one of its own.

## HILL CYCLE MANUFACTURING COMPANY.

E. C. Bode piloted the REFEREE man through the factory where Fowlers are made, and showed him just how each part is made and of what material. The Hill people have been working night and day to get out wheels with which to fill orders. Early orders have been filled and now there are 500 Fowlers ready to go to expectant customers. Up to this time the company has been kept busy making special order wheels, and now the regular stock is going out. The Hill factory is complete. The parts exhibited—and they were taken from the benches or lathes where they were being worked—show the Fowler to be made of the best material and finished and assembled in a most careful manner. Although busy, Messrs. Fowler, Bode and Abbott

took time to chat and smile (not "smile") over the good trade prospects.

## MORGAN &amp; WRIGHT.

"We are rushed to death," said F. W. Morgan, of Morgan & Wright. "We have been trying to build up a stock of tires for use this summer, when it becomes so hot we shall have to close down occasionally, but, my gracious! They keep us cleaned out at all times." Mr. Morgan talked of the good trade prospects, some new patents he is expecting shortly, and particularly of his 1893 racing tire. He has, he said, found the right fabric, which is made from the finest and most carefully combed cotton to be found. "Ah, but that's the finest fabric you ever saw," he said. "We have a dozen big fellows riding the new tires on the road to test them, but they have been unable to harm them in the least."

## FULTON MACHINE WORKS.

This concern does not expect to turn out over a couple of hundred Thistles this season, for it was late in starting and in getting machinery in place. Nevertheless, a good force of men was at work, and the wheels, as fast as they can be assembled, are being sent to Mason & Mason, who take the entire output. At present the nickeling and enameling is being done outside, but next year the concern will have plants for this work and will also have much larger quarters. The Fulton company has just given up its general machine work, and will henceforth devote its entire time to making bicycles. Within the last month or so it has added much fine machinery and more will be placed for next season's work.

## RETAIL SALES VERY LARGE.

Chicago Stores Doing a Tremendous Business This Spring.

The Chicago retail houses—and the jobbers as well—are all breaking record these days. This spring's trade was never equalled and the season is early yet, too. How long it will last, no one will predict, but probably as long as the weather is fine. Manager Garden, of the Pope company, says that up to date this is his banner year, while Saturday last was the biggest day in the history of the Chicago branch. There seems to be a healthy demand for Columbias, particularly model 30 and the elliptical sprocket. The Pope company has also had many inquiries for cheaper grade and second-hand wheels.

## THE PHOENIX IS SELLING.

Under the management of E. H. Wilcox, the Stover company's store and goods are rapidly becoming known to cyclists, and as a result the Phoenix is going at a good rate. Mr. Wilcox states that the ladies' wheel and the Scorcher are in good demand, while there are numerous inquiries for racing wheels. The Stover line is mostly fitted with G. & J. tires, and Mr. Wilcox says they are giving splendid satisfaction. The wheels are, however, fitted any make of tire desired.

## HUMBERS AND ROVERS GOING.

Horace Bell, agent (for Montgomery, Ward & Co.), in other words "the Hummer store," says trade is brisk. It ought to be with him, for he is giving from 10 to 40 per cent discount on shop-worn and second-hand wheels, and many find rare bargains here. There is a good demand for the Stearns, which is handled

by Mr. Bell. The store is packed full of wheels, but Mr. Bell says he is making a hole in them.

## AT FEATHERSTONE'S.

"I tell you we are selling wheels nowadays," said Manager Caswell of the retail store of A. Featherstone & Co., "and the Road Queens go as fast as we can get them in. The Queen, with its 26-inch wheels, is a very desirable mount and is put up in the best manner. A good trade is also being done with the rest of the royal family, Road King, Prince, Princess, Duke, Duchess, etc., and Messrs. Caswell and Gould are kept busy."

## COVENTRY MACHINISTS' COMPANY.

Mr. Marrett has a good line to show to his customers when they come in. The Swift line has recently been strengthened by the addition of four wheels which were on exhibition at the National show—two front drivers, a tricycle and a pretty machine for the ladies. The ladies' machine is artistically enameled in green and attracts much attention. The Swift front driver has one good feature, an upright saddle post, with a brace rod connected with the head. These machines are extremely neat in appearance and it will be a wonder if both are not soon seen on the streets. Mr. Marrett is much pleased with trade up to date and looks for a splendid year's business.

## THE RUDGE AND KENWOOD.

At the store of the F. L. Douglas Cycle Company Manager Riggs has been kept busy the last week or so showing Kenwoods and Ridges, for which, he says, there has been a good demand. Mr. Riggs has just returned from an extensive trip in the interest of the Kenwood company, and says he "sold a wheel or two." For the balance of the season he will be at the Douglas store and looks for a lively trade in Kenwoods and the American-made Rudge.

## THE QUADRANT COMPANY.

The Quadrant company reports a good trade and says it is now prepared to deliver wheels as fast as ordered. The first large consignment arrived last week, and as fifty wheels are promised for each week, the company is safe in booking large orders.

## THE CENTURY'S NEW MANAGER.

R. M. Slusser is now manager of the Chicago store of the Century Cycle Manufacturing Company, of Indianapolis. J. M. Lyon, formerly manager, will devote his entire time to the management of the factory. Mr. Slusser returned last week from a successful business trip in the south and to his old home. There are rumors connected with that trip of a fair partner, who will soon come to Chicago to share Slusser's good fortune. For a young concern the Century company has done a good business and is making many friends.

## THE JAMES COMPANY.

Mr. Bridger thinks his new quarters—250 Wabash avenue—will be of great benefit to his concern so far as the retail trade is concerned. It has been a long spring with this young house, and as fast as wheels could be taken from the custom house they have been shipped to the anxious customers.

## SHORT ON PSYCHOS AND THE REX.

It is reported that the Taylor Cycle Company is sold away ahead on Psycho and Rex safeties. The Psycho ladies' wheel is a very popular one and sells rapidly. It is one of the finest ladies' wheels in Chicago.

## THE AEOLUS AGENCY.

The Aeolus Cycle Importing Company (K. F. Peterson and C. E. Salter) is doing a surprising business in its aerial quar-

ters on the seventh floor of the Garden City block. Aeolus safeties were very popular last season, and sell readily at the price at which they are offered. Fifteen machines were sold to one club lately, and several other large lots have been taken.

## A NEW CONCERN.

A new concern has been formed to handle the South Road and Buckingham & Adams wheels, and headquarters have been established in the Caxton building, where Mr. Smith is in charge. The James company handled these wheels last season, but this year will devote its entire time to the James. The new company has many orders on hand for the B. & A. South road, and should do well, inasmuch as it has the agency for the whole United States.

## STERLINGS AND UNIONS.

It requires a large force at the Stokes company's store to handle the business in Sterlings and Unions and sundries. Both wheels are enjoying a splendid trade and the factories are kept busy supplying the store. The clothing and sundry business of the Stokes company has grown to such an extent that it is of immense proportions.

## SECOND-HAND WHEELS.

There appears to be a general demand for good second-hand wheels, and some high prices have been realized. Ladies' wheels cannot be bought except at a high figure, and even then they are gobbled up quickly. The indications are that the number of lady riders will be greatly increased this year.

## CINCINNATI IS BACKWARD.

Dealers Tell Why No Factories Have Been Established There—Some Suggestions.

A number of Cincinnati bicycle dealers talked to a representative of the Cincinnati Commercial Gazette recently on the subject of cycle factories.

Andrew Hanauer was one of the speakers, and is quoted as follows:

"The manufacture of wheels is rapidly becoming a large industry in the United States, and it is somewhat remarkable that a bicycle factory has not been started in Cincinnati. There is no place in the United States where wheels could be made more cheaply or better, and there is no center from which they could be better distributed over the entire country."

"We have carried out experiments in construction with the idea of manufacture in view. Before the end of the season, I think, there is likely to be a factory started here. That the use of cycles will become more general, I have no doubt, and the only question in regard to organizing factories is involved in the tariff. Whether, if the tariff is taken off, we shall be able to compete with the English wheel is very much in doubt. There are some very large factories in the United States, chiefly east, and it is a very considerable industry in Chicago. But the English are the great wheel makers. At an exposition of wheels in London recently there were one thousand manufacturers represented."

"There is probably no city on the continent so well fixed in every way, as Cincinnati. She has everything almost that you can name in the way of raw material. It is not only that her central position on the continent makes her a central market for all raw material, but there are so many of the staple raw materials for which it is the best market on the continent. However, there is one thing needed in Cincinnati. The city has not provided the industries with room and facilities. No concern leaves here wh

It is Not the Loudest Voice  
That Always Proclaims the Truth.

---

It is the wee small voice of conscience  
That ever roars louder than a flood,  
And *will* be recognized because it speaks the *truth*.

First we would ask you to believe that we are honest, and  
then give heed to our *small voice*.

The Tourist is as good as any other bicycle, because it is  
made upon exactly the same principle and by the same hands  
that make the finest fire-arms—that is, it is just as carefully  
guaged in all its parts, and just as highly finished as \$175  
gun. Modesty forbids our claiming the Tourist to be the  
best. We leave that for our friends to say, but we believe it  
to be just as good as any other.

proprietors do not know that this is probably the best manufacturing and trade center on the continent. I am certain there is none better.

"Speculative capital has no doubt seen how the manufactures of the city have been increasing in number, but it hasn't erected factories because the old is built on, and there is no new ground furnished with such shipping facilities as would make factory building a safe investment. Mill Creek Bottom is the only territory I know of traversed by railway lines, and where switches and receiving sheds could be provided. But factories can't be built there until it is filled up."

Mr. Poorman spoke in a similar strain. "In a word," said he, "Cincinnati has provided neither terminal facilities to amount to anything nor room for them, nor for the factories, machine plants, shops and warehouses, of which they are essential accessories."

"Fill up the valley of Mill Creek and turn the canal into it, lay it with terminal tracks, and then stand by and witness the industrial transfiguration of it. It would soon be an industrial city of itself."

The *Gazette*, it appears, is engaged in an attempt to arouse the authorities to the necessity of the improvements spoken of.

#### GENERAL TRADE NOTES.

##### Interesting Paragraphs About the Trade in all Sections.

A. G. Spalding & Bros.' warehouse in Chicago, was destroyed by fire last week.

The Hunt Manufacturing Company is the successor to J. A. Hunt & Co., the Westboro, Mass., saddle makers.

Henry J. Schmitz, a well-known salesman of Milwaukee, has connected himself with the Roth-Kasten Cycle Company.

Lindsay Bros., of Milwaukee, have opened a house in Minneapolis, and will stock it with Toledo Bicycle Company's wheels.

The Premier Cycle Company, New York, is desirous of obtaining copies of "Wrinkles for Riders," published by that concern last season.

The works of the Bloomington Manufacturing Company, Bloomington, Ill., manufacturers of the Eli bicycle, were destroyed by fire last week.

The Sercombe-Bolte Manufacturing Company is building for A. C. Morrison a Telegram light roadster which is to have all the bright parts gold-plated.

J. B. Haviland, of Fisher, Grosvenor & Co., Marshalltown, Ia., agents for the Dauntless and Derby, is one of the liveliest salesmen in the bicycle trade in the northwest.

P. H. Sercombe, the genial manager of the Sercombe-Bolte Manufacturing Company, who, by the way, tips the scales at 190 pounds, is having built in the factory an 18 1-2-pound racer, for his own use.

E. D. Loane, Jr., of A. G. Spalding & Bros., has recently closed a deal with the Raymond Bicycle Company by which it acquires control of the English and American rights on Loane's invention for tire inflation.

P. Angois, of the Raleigh Cycle Company, who has been looked for so long, did not arrive on the Servia last week, as reported. Manager Macdonald now expects either Mr. Angois or Mr. Woodhead to arrive shortly.

A. J. Nicolet, who has been traveling for the Grand Rapids Cycle Company, will hereafter manage the business of W. C. Payne, of Evansville. Mr. Payne is much improved in health and expects to be about in a few days.

H. E. Laurie, erstwhile racing man, 195 pounds, called on us last week, fatter and happier than ever. He has

closed a successful trip for Mr. Warman and now joins the Schub Cycle House, whose new store is at Wabash avenue and Congress streets.

The Toledo Bicycle Company expects to provide itself with larger and more satisfactory quarters next year, the shops at present being a little scattered. Mr. Meilink was in Chicago last week, having returned from the west with a satisfactory report.

Lindsay Bros., of Milwaukee, will handle the following wheels in their Minneapolis branch: Dauntless, Lindsay Scorchers, Road King and Queen, Duke, Duchess, Prince, Princess, Royal Middy, Western Wheel Works' wheels and a full line of sundries.

The Union Transfer Company, of Council Bluffs, Ia., has gone into the bicycle trade, and C. F. Meilink, who was in Chicago last Friday, secured the new concern as agent for the Toledo Bicycle Company's wheels. Mr. Meilink is manager for the Toledo Bicycle Company.

The Elmore Manufacturing Company, Elmore, O., is meeting with considerable success in disposing of its wheels. Its output this year will not be a very large one, but for '94 every foot of room in the premises will be utilized and its output doubled. The wheels list at \$100. The Messrs. Becker are well-known residents of Elmore. J. W. Becker, the manager, was formerly manager of the Buffalo Cycle Works.

W. S. Thorne, Jr., treasurer of the Red Star Manufacturing Company, returned from Europe recently, and as a result of his trip the house is shipping goods, particularly the solid illuminant, by nearly every steamer. The company is represented in England, France and Germany by houses whose addresses will be found in the Red Star advertisement. The solid illuminant is clean, effective and always ready for use. It undoubtedly possesses many advantages.

#### CHICAGO TRADE IN BRIEF.

##### Movements of Traveling Men.—General Local Trade Talk.

L. M. DeVore, of Freeport, was in Chicago last week.

A. A. Taylor spent Sunday and Monday last in Buffalo on business.

C. F. Meilink, of the Toledo Bicycle Company, was in Chicago last week.

The Columbian Bicycle Livery expects to have wheels for hire April 15 and to begin active business May 1.

R. C. Lennie was in Chicago last week and has returned to Ohio, where he will be for about two weeks longer, when his work on the road for this season will end.

A. C. Banker left this week, Tuesday, for a trip in Michigan and Ohio. He reports an increasing demand for the Palmer tire, and says that the company is behind in orders.

J. P. Walters, of the Taylor Cycle Company, returned last week from a five months' trip in the south, during which time he had his headquarters in New Orleans. He reports an excellent business.

Mr. Gorham, of the Royal Cycle Works, while in Chicago last week, purchased a large lot of machinery for his factory, which is to be greatly enlarged to keep pace with the ever increasing business of the concern.

#### Quaker City Trade Items.

H. Uhler, of the "Quakers," the recently-appointed Philadelphia agent for the George R. Bidwell Company, has met with great success with the Tourist.

"Doc" Dalsen is reported to be doing the largest cycle business up-town. He handles the Derby, Excelsior and Monarch.

William Trafford, of Twelfth and Oxford streets, has secured the agency for Peck & Snyder's Nassau. It is one of the medium-priced machines.

John A. Wells, who handled the Rambler tire at the tire repairing "exhibition" and who finished first, seems to have the "bulge" on the other exhibitors who want it distinctly understood that it was not a "contest," but an "exhibition." Johnny says he agrees with them—it didn't approach the dignity of a contest.

Judging by the Atlantas to be seen on the road, Wanamaker's bicycle department must be doing a rushing business.

R. P. Gormully, of Chicago, was in town last week.

George Curtis, of the Bretz & Curtis Manufacturing Company, who has been seriously ill, is around again.

E. K. Tryon & Co., who handle the Lovell Diamond, Eclipse and Eagle wheels, are kept busy supplying buyers. They report that this season's business will break the record, so far as they are concerned.

For the stronghold of republicanism, the Cleveland is meeting with phenomenal success and the Central Cycle Company say that it is supplying all the hide-bound democratic cyclists in the city.

#### A New Squawker.

The Chicago Cycle Horn is the title given to a neat, well finished squawker just brought out by Hermann Metzger, 1222 Seminary Place. It is much smaller than anything of the kind heretofore placed on the market, yet has a very clear and distinct tone. The horn lists at \$1 and is sold only to the trade. It has a neat clamp and when fastened to the handle-bar seems to take up little room.

#### Bisonic Bicycle Brevities.

BUFFALO, April 11.—Trade has opened up in the Queen City with an unprecedented demand for wheels of all grades, and the retailers and jobbers are pushed to their utmost in trying to keep up with orders. While a heavy spring trade was looked for by the most sanguine, nothing like the demand that is now being made was anticipated, and Buffalo tradesmen have nothing to complain of except a tendency to slash prices, and each dealer accuses the other of being the guilty one.

The latest house to open a retail department in Buffalo is the George R. Bidwell Cycle Company, which has rented salesrooms on Washington street a few doors above Eagle, with Thomas Henderson in charge. Mr. Henderson had charge of the Bidwell tire repair branch here last summer, and is well acquainted and very popular, as well as an authority on pneumatic tires. The house will carry the Bidwell lines and push the tire to the front.

H. C. Martin & Co.'s Main street store was ornamented on Monday with a handsome new sign bearing the name of the house in prominent but artistic fashion. Trade is especially heavy in both the retail and jobbing department with this firm, and about \$35,000 of stock is kept constantly on hand to supply orders.

Sweet & Johannot report a big business in Victors, the Flyer being the favorite. Sales are also good with the Raleigh and Remington.

W. G. Schack has good demands for Imperials, Excelsiors and New Mails, and is making a number of Schack specials for local flyers.

There is considerable rivalry among

the dealers as to who will get the most business from the local racing men, and as Buffalo has some rapid men, local makers are vying with the agents of wheels made elsewhere for the honor of furnishing the mounts for this season. The Bison, Globe, Niagara and Buffalo, however, seem to have the call so far.

#### Lamplugh & Co.'s Saddles.

We are able, in this week's issue, to give illustrations of the above firm's leading '98 saddles. They claim two improvements: 1. The provision of rubber discs underneath each side of the seat, with the result that the points of bearing of the rider's body—the tuberosity of the ischia—is cushioned on a yielding surface, preventing numbness and cramp to the rider in long rides; 2. The improvement is a pneumatic buffer in the rear or cantle end of a saddle. The first illustration shows the top leather raised so that the pneumatic cantle can be seen. The

next cut shows the under side of the saddle with the cover laced underneath, and which can readily be unlaced if a repair is required. Another is the scorcher saddle with cone clip, the weight of

which is 1 pound, 12 ounces. The last cut is of the ladies' combination saddle, fitted with patent interchangeable springs, weight 1 pound, 14 ounces. Lamplugh & Co. have a world-wide reputation for saddle making, and at present are securing satisfactory results upon the introduction of their goods into this country. Thomas Sanders is the representative for the firm, his address being Imperial Hotel, New York.

#### Notes.

J. C. Paterson, of the Century Cycle Manufacturing Company, returned from a business trip last week.

Up to Feb. 22, of the present year, Second street hill in Colorado Springs, Col., had never been climbed by a bicycle. This hill is very steep and long, abounding in bad ruts near the top. On the evening of Feb. 22, however, B. W. Cole, of the Rovers, succeeded in climbing this mountainous highway on a Victor model B, round sprocket, geared to 54.

# WHITWORTH CYCLES

... U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

## BOSTON VS. WORCESTER

THE WAR STIRRED UP BY MR. MILLER  
GOES MERRILY ON.*Alleged Threat by President Burdett—A  
Misstatement Corrected—Lynn Will  
Once More Welcome Rac-  
ing Men.*

BOSTON, Mass., April 10.—The sanction controversy between L. A. Miller of the national racing board and the Massachusetts division, L. A. W., continues to excite the attention, and perhaps disgust, of the membership of this division. Since writing my last, President Burdett was in the city, and is said to have made the statement that unless Mr. Miller reconsidered his action and awarded sanction to the Waltham meet he would lose his official head. This threat, however, seemed to have no effect whatever upon Mr. Miller, for this week he wrote Chairman Robinson of the division racing board that he would not reconsider his previous action. This again left the Waltham tournament without a sanction, and things commenced to assume a more bluish tint so far as the A. C. C. of Boston and vicinity was concerned. But in the heavens from the direction of Worcester there shone one of those lurid crimson sunsets which Francis Wilson tells about, as if the Worcester men had fired the funeral pyre of the Boston tournament.

## A COUNCIL OF WAR HELD.

Immediately upon the receipt of this same communication a council of war was called to consider the ways and means of checkmating Mr. Miller. The division racing board, with the assistance of Chief Consul Perkins and President Charles L. Burdett, met in secret conclave and were in session until almost the midnight hour. That a wordy war was opened goes without saying. As a result of this contest, if such it may be called, two long and voluminous protests against the action of Mr. Miller were drawn up and signed by all those present save Colonel Burdett. One of these was forwarded to Chairman Raymond to be presented for the consideration of the entire national racing board, and the other was sent to the executive committee of the league. Thus was the matter brought to the attention of the two most powerful and influential committees in the national body.

In addition to this, however, the division racing board applied to Mr. Miller for sanction to hold championship events at Waltham on Decoration day. This sanction was granted without the slightest hesitation. The question now is, does Mr. Miller in granting the second sanction invalidate the excuse presented by him for his previous action. He certainly does grant a sanction for a conflicting date with Worcester, and is at least inconsistent if nothing more. But, by the way, this is not the only case where Mr. Miller displays the inconsistency of his previous action. Both Waltham and Lynn have received sanction to hold race meets on June 17, and those places are much nearer each other than are Boston and Worcester.

## MILLER STILL ON DECK.

Mr. Miller, despite President Burdett's alleged threat, continues to enjoy his official career, but how much longer he will be privileged to draw the reins over such race-promoting centers as Hartford and Springfield, and other large cities of the New England states, remains to be seen. "Those whom the gods would de-

stroy they first make mad," and it is an open question as to whether Mr. Miller or the division racing board will be destroyed. They are both mad and the merry war between them will be continued until the bitter end.

While the sanction has been received to hold championship events it will not be used unless sanction for the open meet is granted, which the division racing board thinks unlikely.

## TWO BOSTONIAN QUILL-DRIVERS.

In reading the matter from the pen of my most venerable, sarcastical and ever brilliant colleague, "Senator" Morgan I came across his article referring to this self same matter. In it, I think, he does a great injustice to two of the warmest friends he has in this city. He refers to the pernicious example of newspaper men holding office, and rather scores John C. Kerrison, of the *Herald*, and C. S. Howard of the *Globe*. That he knows but very little of the matter is shown in his statement that John C. Kerrison is president of the Press Cycling Club, and that Charles S. Howard, cycling editor of the *Globe*, is a close friend of division politicians and wire pullers. Whatever Mr. Kerrison did to bring the meet to Boston he did when president of the Press Cycling Club, after being so instructed by a vote of his organization. But he has not been president of that organization for several months and his connection with the spring meet now comes through his being a delegate to the Associated Cycling Clubs.

Mr. Howard has not been cycling editor of the *Globe* for almost two years, and the cycling matter published in that paper comes not from his pen but from that of his successor, a man who has nothing to gain by writing one-sided stories. But to be just to both Boston papers it must be admitted that they have acted a great deal fairer to both sides in this matter than have the publications of Worcester. But, perhaps now Mr., or rather "Senator," Morgan is in town, fresh from a trip of investigation to Worcester, he is in a much better position to write intelligently upon the matter than he was two weeks ago.

## WORCESTER'S EVENTS AND PRIZES.

Worcester is making a great effort to place its coming spring meet second to none in the country. It promises to receive the visitors with open arms and to entertain them as it never entertained before, advertising to spend thousands of dollars for their pleasure alone. The prize list, as will be seen from the appended, is one which will attract the attention of racing men the country over, and one the like of which has not been presented at a spring meet for years past. The committees having the tournament in charge propose to make it a grand success. The following is the programme for the two days' racing meet here:

May 20—Novice race, mile, gold and silver medals; three-mile race, camera, scarf pin, racing saddle; half-mile open, diamond stud, clock, racing pedals; mile open, bicycle, diamond ring, easy chair; mile club championship, gold and silver medals; mile, open to Massachusetts and Connecticut riders only, gold stop watch, sideboard, field glass; mile handicap, open, bicycle, silver tea-service, etching; mile, Worcester county championship, gold medal, opera glasses, silver cup; mile tandem, open, two traveling bags filled, umbrella.

May 30—Mile race, 2:40 class, roll top desk, silver water pitcher, engraving; half-mile, open to boys under 15, gold and silver medals; half-mile handicap, gold watch, silver watch, piano lamp; one-mile, open to Massachusetts and Connecticut riders only, diamond stud, magazine rifle, silver shaving mug; two mile handicap, bicycle, diamond ring, oak table; half-mile tandem, two dress suit cases, two meerscham pipes; two-mile relay team race, a Taber organ, with a safety bicycle for the leader at the end of the first, second and third laps; mile open, bicycle, diamond stud, diamond sleeve buttons; consolation

race, revolver, fishing pole, bicycle lamp, pneumatic pump.

The cash value of the prizes is estimated at \$3,000.

LYNN TO SHINE AGAIN.

It would seem as though the days of Lynn and Glenmere Park were to be again revived. Charlie Adams, he who came from Springfield, has secured a three-years' lease of that famous track and will organize a stock company to hold and manage the same. The track will be placed in the best condition possible, and several tournaments will be held there during the season. The first meet of any importance to be held there will be held June 17, and this will be followed by meets about a month apart. It is the intention of the management to secure, if possible, a date in the international circuit following directly after the Boston tournament on Sept. 7.

*World's Fair Accommodations.*

Believing that many wheelmen will bring their wheels to the world's fair if proper accommodations are furnished them, the National Columbian United Wheelmen's Association has constructed one of the finest club houses in the United States, at a cost of \$35,000, for the exclusive use of wheelmen. The membership fee to this club is \$5.25, and entitles the holder to all the privileges of the club house proper, without further expense to him. Besides he is assured of a sleeping place at reasonable rates when he visits Chicago. Meals can be had at the club cafe, which is run on the European plan, under the management of two of Chicago's best known wheelmen. The wheel storage is an important feature of this enterprise, as it will enable cyclers to bring their wheels and give them an opportunity of seeing more of Chicago than they could without them. Any cyclers stopping at

down-town hotels or with friends in distant parts of the city will find this feature of the club house well worth the membership fee, as it enables him to come and go from the fair on his wheel, thus avoiding the great crowds. The club house will be the center of all cycling news during 1893, and the headquarters of various state divisions of the L. A. W. Those who have not joined this association should do so at once. Application blanks may be had of the secretary, L. D. Taylor, 959 West Madison street, Chicago, Ill.

*Notes.*

Rumor has it that the Sunol factory is to be removed from Chicago to Elyria, O.

The New York Journal has offered a bicycle to the most popular wheelman, to be decided by vote.

Mr. Willits, of the firm of Hay & Willits, Indianapolis, has been seriously ill, but expects to be about again shortly.

Colonel Pope has sent to the promoters of the Minneapolis track, without solicitation, a check for \$100 to help defray expenses.

Ed Pettus, who represented a Brooklyn club on the path seven or eight years ago, is still an enthusiast rider, and a member of the Kings County Wheelmen.

The REFEREE and all latest cycling papers, periodicals and hand-books from all parts of the world, received regularly and for sale. Send for list. FLETCHER & Co., 43 E. Van Buren St., Chicago.—Adv.

April 30 has been set as the day on which the Recorder's relay ride from Boston to Chicago will start. This will be followed on May 14 by the starting of Tom Roe's ride from New York to San Francisco, under the same auspices.

*J. K. Starley & Co.'s New "Popular  
Rover" in Great Demand—A False  
Report—How the Licensing  
Scheme Went Through.*

LONDON, March 31.—For just a month we have been enjoying the finest of fine weather, and this, together with the approach of the easter holidays, has allowed the agents to clear out some of the stocks they held from last year and made some of the manufacturers quite busy. One of the firms doing as well as any one is that of J. K. Starley & Co., limited, who are trying a somewhat novel experiment which seems likely to prove a success.

They are turning out a really good machine, well designed and neatly finished, which they are listing at the moderate price of £15 net. The price is, in fact, so low that they are only able to allow agents the comparatively small discount of 20 per cent. At first the agents who are accustomed to receive in some cases such large discounts as 50 per cent were inclined to grumble, but the public, finding out how good a machine the "Popular Rover" is at the price, has set up quite a large demand for it, and the consequence is that agents are finding in increased business some compensation for the lesser discount.

A FALSE REPORT.

It a recent letter I said something of the Centaur Cycle Company being affected by the failure of one of their American agents, but I am now told on the very best authority—that of Mr.

Mushing himself—that there is not the slightest ground for the rumor which had been circulating for some time past throughout the length and breadth of the trade.

A new limited company is being floated to acquire the rights of J. S. Smith's new detachable tire, of which I had occasion to speak highly some few weeks ago, and there is some talk of a company being formed to work the Rath tire, another good tire now on the market.

THE LICENSING SCHEME.

The licensing scheme, for amateurs racing under N. C. U. rules, has become law. It was a hard fight, but after a debate lasting over four hours the council of the National Cyclists' Union decided, by a vote of 69 to 23, to adopt the scheme. The attendance at the meeting at which the measure was discussed was larger and more representative than at any yet held in the whole history of the N. C. U. Men were present from all over the country, and the utmost attention was given to the speakers. Dr. Turner, on whom fell the brunt of the battle, in introducing the scheme spoke for three-quarters of an hour without apparently tiring either himself or his hearers, and this in spite of the fact that he had been working hard in his professional duties—so hard, in fact, that he had not been to bed the previous night, and that he only just managed to get to the meeting after fasting some seven hours. The debate was a very spirited one, and as a whole was conducted with temperateness and quietness. The firebrands on either side were Lacy Hillier and P. L. Renouf, both of whom waxed somewhat warm without any great effect; but one of the most interesting episodes was a neat duel between Robert Todd and T. W. Grace, chairman of the Manchesters, both lawyers to the very

finger-tips. Some amount of interest was aroused by Dr. Turner's quotation of the fact that certain manufacturers are in the habit of paying their "amateurs" at the rate of £3 for a first prize, £2 for a second, and £1 for a third, with something extra for records, a quotation which he supplemented later on by saying that recently the tariff had been lowered, and that the present rate was £2 for a first, £1 for a second, and 10s. for a third. After the motion embodying the principal had been carried out, the meeting settled down to discussing the details with singular unanimity, and when the proposition for adopting the complete scheme was put, only a single hand was held up against it. On and after May 1, therefore, all amateurs (with the exception of novices) desiring to race under N. C. U. rules, must obtain a license to do so. In the event of foreign riders their credentials will have to be signed by some important and well-known man who will hold himself responsible for them. The remaining business transacted at the meeting, although of considerable domestic interest, was of no importance from an international point of view. The whole of the chief officers of the Union were re-elected for the ensuing year, and all the old members of the general committee who were put up were re-appointed. The rejected candidates were H. H. Griffin, the late official handicapper and self-styled "statistician"; P. L. Renouf, an employe of Humber & Co., and F. Percy Low, the manager of *Wheeling*. The last named only failed by one vote, and I feel convinced that his non-election has lost the N. C. U. the aid of a thoroughly practical and clear-headed man.

Baltimore claims 12,500 riders, which, however, is probably an exaggeration,

SHORT KICKS.

*English vs. American Club Runs—An Insane Device.*

As a rule, club runs in this country do not amount to much nowadays. In the early part of the season a few enthusiasts gather at the club house, and, after sitting around for an hour or so, start out on a run (?) which may possibly amount to ten or twelve miles in extent. Usually it ends with a scorch, and the new member and invited guest are permitted to get home as best they can. How different abroad, if I am not mistaken. We hear of this or that club starting out in the morning and remaining out all day, taking the noonday meal at some well-known inn. We hear often that a large party of the such-and-such club was at some one of these inns; again, that a number of some particular club are out for a two or three days' tour through some riding district. In Chicago, Pullman or Evanston or some other place from ten to fifteen miles away is visited by five or six of the members of the Chicago, Lincoln or Illinois clubs. How different in the days of the ordinary, solid tires, and bad roads! Then nothing was thought of a run to Waukegan (forty miles away), or Fox Lake (fifty-six miles), or some place about equal distance from Chicago. In the days of better roads, pneumatic tires, twenty-four to thirty-four-pound wheels with high gears, the wheelmen cannot enthuse enough to even make a respectable quarter century. Surely club runs are on the downward grade.

\*\*\*

A man in England is advertising some sort of fan-dangled thing by which a rider may steer his machine by means of chains which are attached to the handlebars and a belt about his waist. In other words, he is enabled to ride hands off.

ILLINOIS CYCLE WORKS, 665-669 Carroll Ave., Chicago.

Now think of it, having chains running from either handle to your side and attached to a belt. What a nice mess one would make of himself if he used such a contraption. In the first place the use of any sort of belt should be discouraged. It is positively harmful; the body needs as much freedom as it can possibly have. The man who invented that scheme, I'll wager, was an accident insurance agent.

\*\*\*

Much has been written about the proposed New York-Chicago relay ride, but details are scarce. Who is to have charge of the Chicago end of the affair, is what more than one would like to know.

\*\*\*

The *Wheeler*, published in the borough of Bolton, in England, has recently been quoting our own General Miles' remarks on the practicability of the bicycle. Incidentally it gave a fraction of the great Indian fighter's speech delivered at the Auditorium on May 31, 1892. The paper wasn't quite a year behind, but "near it, very near it."

This brings to mind the fact that this same paper, the *Wheeler*, is given to inserting in its columns each week, a number of pick-up-and-fill-in cuts. I do not fear contradiction when I say that at least one or two cuts have appeared weekly for the past six weeks. They are evidently used for filling up at the bottom of the columns, and for setting off to better advantages the pages. But they're getting to be "chestnuts" now and I should think subscribers would want something new. I do not think any other cycling paper ever used a cut twice unless some particular occasion demanded it. At any rate, they don't do things that way over here. If *Wheeler* would send to some of the American papers it might borrow some old cuts, which would at least appear new in the borough of Bolton.

HOTSPUR.

### GOOD SHORT STORIES.

#### *Dangers of the Pullman Race as Described by a Competitor.*

About this time of the year it is the custom of the Chicago men to talk of the Pullman race of the previous season; the accident that befell this one, or the trouble that one had in getting from the starting place to Pullman. In this connection Cy Davis told a good story to a number of club mates during the week. Davis was a likely candidate for time honors and was with Winship, the first time winner, until Sixty-third street was reached. Alongside of South Park avenue at this point is a deep ditch, which is always well filled with foul and dirty water, the equal, in fact, of the water in the Chicago river. By some manner Davis was thrown into this ditch and when he dragged himself out he didn't know himself. He wore regulation bloomer trousers, stockings and a clean, white sweater—up to the time of going into the ditch. After he got out of the ditch, he said, he weighed a ton. When he reached Pullman the wet clothes went into a satchel and then home. Davis had no use for the clothes from that time until after the racing season. He looked for his sweater and found it, as he had left it, in the satchel; but upon taking it out he found that the article of apparel had shrunk to about these dimensions: Length, 11 1-2 inches; sleeves, 7 inches; chest, 23 inches. The trousers and stockings crumbled upon being touched, while the cholera germs, which had been confined in the grip so long were dead.

\*\*\*

#### *Converted the Egyptian.*

The Egyptians, Turks, Javanese, and a few other of the foreigners who are in Chicago in connection with the world's fair, have by this time almost ceased to

wonder at the bicycle. Sunday last hundreds of wheelmen were riding in and about Midway Plaisance, where most of these people are located, and they paid little attention to the wheels. A REFEREE man came across a bright looking young Egyptian who was trying to sell a dollar's worth of silver (or \$2 in his country, he said) for two United States dollars; but he didn't sell. The man from the Nile was asked if he would like to ride on one of the machines which stood near. The swarthy young man shrugged his shoulders and said a good English no. He said he had a donkey and intimated that it was good enough for him—better, in fact, than the bicycle.

"But this," said the REFEREE man, pointing to the machine, "is faster than your donkey and don't have to eat."

"How far we go—how many mile—in day?" asked the foreign gentleman.

"Oh, hundred, easy."

"Oh," and an ear-to-ear grin.

"Yes, and sometimes 400, from sunset to sunset," was ventured.

"Oh," prolonged.

"Me like donkey best," continued the African.

Then the REFEREE man put the bicycle (a twenty-four-pounder) over his shoulder and walked across a plank, which was placed over a little ditch, to show how the wheelman could cross a ditch on a board. He remarked, incidentally, that that couldn't be done with the donkey and the Egyptian admitted it. Then he was convinced of the practicability of the bicycle and said if he made much money this summer he would take a wheel home with him.

\*\*\*

#### *How Cahill Learned to Sell Wheels.*

Harvey Du Cros, Jr., of the American Dunlop Tire Company, was a close friend of A. J. Cahill when that gentle-

man was connected with the *Freeman's Journal* of Dublin, and tells a story which illustrates Cahill's first experience as a cycle salesman. Cahill's wheel had been in a smashup and was in many pieces. A repair man, however, managed to stick the parts together, and with the aid of several thick coats of enamel made quite a respectable looking wheel of it. Then Cahill wanted to sell the machine. An English gas engine manufacturer wanted Cahill to buy one of his engines, but the latter didn't enthuse worth a cent. Then Du Cros got in his work. He called the Englishman aside, gave him a hint in a whisper that Cahill had a beautiful, nearly new bicycle which he wanted to dispose of; that he (the Englishman) would get it for almost a song, and that Cahill would be so pleased that the gas engine would surely be ordered. The wheel was where everybody could see it, and pretty soon the engine man proposed buying it. Cahill wouldn't part with it; he wanted to keep it as a memento of the many happy hours he had enjoyed astride it (and here he winked the other eye). But the Englishman got the wheel, and Cahill didn't take the engine. It is even hinted that this little episode is responsible for Cahill's permanent visit to the land of the free.

#### *In the West.*

San Francisco will have a five-lap cement track. It will be thirty feet wide on the stretches and twenty-seven feet on the turns. The turns will be banked eight feet.

A number of leading wheelmen of Denver recently arranged a parade for the purpose of showing people of the city their voting strength. The scheme seems to have been a success, and will be followed up in other sections, no doubt.

## The Ki-Yi, or Dog Exterminator.

A few drops of diluted Aqua Am-  
monia from the nozzle of our Ki-  
Yi will teach the bicycle chasing  
dog a lesson he will not likely soon  
forget. It works like magic. As  
a rider puts it, "You could hear  
him howl ten squares." What  
tourist has not wished for one of  
these? The most successful thing  
of the kind ever invented. Ask  
your dealers for them, or sent by  
mail, packed in a neat box, with  
full instructions.

PRICE EACH, 50 CENTS.

Send for CATALOGUE of NEW GOODS,  
Manufactured by  
**A. U. BETTS & CO.,**  
TOLEDO, OHIO.

## STANDARD BICYCLE OILER.

GUARANTEED NOT TO LEAK.

This oiler is far superior to any now in use among bicyclists. The act  
of pressing protruding wire plunger against object to be oiled, releases  
one drop of oil at a time. Handsomely nickel-plated and is guaranteed  
to be free from waste, coagulation and leakage.  
Sample sent on receipt of 25 cents.

FOR SALE BY ALL DEALERS.

## PITTSBURG SAFETY BICYCLE STAND.

*Simplest, Cheapest, Newest, Best, for  
Holding Bicycle in Salesroom, Club  
Room or Dwelling House.*

SINCE Safety Bicycles were invented (and more so since they have become almost universally used), there has been a constant inquiry and demand by dealers for a Safety Stand that will hold a bicycle erect without being easily upset, which has been the tendency of all bicycle stands previously put on the market. This has all been overcome in the PITTSBURG SAFETY STAND. It is simple, light, ornamental, and easily adjusted to any size wheel; does not have to be screwed to the floor; do not have to remove it from the wheel when lifting around salesroom or dwelling. It is unexcelled for club house purposes, as each man can have his own name on stand, put in wheel-house, run his wheel in, adjust it in an instant, and go away satisfied his wheel will not be damaged by being knocked over. For sale by all leading bicycle dealers. Price, \$1.00 each. Liberal discount to the trade.

JAMES W. GROVE, - PITTSBURG, PA.,

SOLE  
AGENT  
U. S. A.

## PATENTS

Procured in the United States and Foreign Countries. Trade-marks, designs, label, and copyrights. Send description with model, photograph or sketch, and I will let you know whether you can obtain a patent. All information free.

## WORK FOR US

a few days, and you will be startled at the unex-  
pected success that will reward your efforts. We  
positively have the best business to offer an agent  
that can be found on the face of this earth.  
\$45.00 profit on \$75.00 worth of business is  
being easily and honorably made by and paid to  
hundreds of men, women, boys, and girls in our  
employ. You can make money faster at work for  
us than you have any idea of. The business is so  
easy to learn, and instructions so simple and plain,  
that all succeed from the start. Those who take  
hold of the business reap the advantage that  
arises from the sound reputation of one of the  
oldest, most successful, and largest publishing  
houses in America. Secure for yourself the profits  
that the business so readily and handsomely yields.  
All beginners succeed grandly, and more than  
realize their greatest expectations. Those who  
try it find exactly as we tell them. There is plenty  
of room for a few more workers, and we urge  
them to begin at once. If you are already em-  
ployed, but have a few spare moments, and wish  
to use them to advantage, then write us at once  
(for this is your grand opportunity), and receive  
full particulars by return mail. Address,

The Referee Publishing Company

#### PRINCIPAL OFFICE:

Rooms 500-500, CAXTON BUILDING, 328-334 DEARBORN STREET, CHICAGO.

Telephone Number—4798.

Registered Cable Address—"REFEREE, CHICAGO."

#### TO ADVERTISERS:

Copy for advertisements must reach us not later than Monday to secure insertion in the current week's issue.

#### SUBSCRIPTION, \$2 PER ANNUM

S. A. MILES, - - - - - Editor.  
CHAS. P. ROOT, - - - - - Associate Editor.  
R. M. JAFFRAY, - - - - - Business Manager.

#### COPY EARLY, PLEASE!

Owing to the fact that next week's issue of the REFEREE must be off the press earlier than usual, in order to give us ample time in which to make the proposed change in the size of the paper the following week, advertisers and correspondents are requested to have their copy in this office at as early a date as possible. Correspondence must positively be in hand on Tuesday, April 25.

#### POTTER'S COMMENDABLE EFFORT.

When the REFEREE stated that the mailing of *Good Roads* to 35,000 league members every month was a waste of money, the ever-ready assailant was, of course, up in arms. If any man is qualified to judge of this matter Mr. Potter ought to be the man. For the benefit of the ninety and nine readers who allow the magazine to go to waste regularly each month, we give Mr. Potter's opinion as expressed in the March issue:

"The number sent to league members during the present month will be about 35,000. These members are all convinced of the need of better roads and every copy of *Good Roads* sent to a league member is wasted, unless used by that member to extend the work."

So positive is the editor on this point that he italicises the entire sentence. But he is powerless to prevent the waste and has hit upon an ingenious scheme to lessen it and place the paper where it will do good. He pleads with the member to authorize him to transfer his paper to someone on whom it may have a desirable effect. The idea is a good one but hardly far reaching enough. It must be brought more prominently to the notice of the members. The bulletin and cycling press generally might be used to advantage, but even then direct application to a majority of the members will be found necessary.

Mr. Potter's effort, in the absence of any attempt on the part of others to prevent waste, is most commendable.

#### HOW DOES ILLINOIS STAND?

Doubtless the action of the Associated Cycling Clubs of Chicago in barring colored men from competition in the Pullman race, will occasion considerable comment. The Illinois delegates to the national assembly voted for the negro, regardless of their personal opinions, because they believed it to be the will of the division. But the A. C. C. of C., certainly composed of representative men, decides, with but two dissenting

voices, that "no negroes need apply." It is rumored that a delegate will move to reconsider on the ground that a number of members did not vote. This would give us a better idea of whether Illinois still regards the colored gentleman "a man and a brother," or whether the southerners have gained another ally.

#### CONDITION OF TRADE.

For the purpose of verifying a prediction made a year or so ago, the *Cyclist* grabs, with avidity, at such items as have appeared in American papers and are calculated to show that the trade in this country is in as bad a plight as it has been reported, from time to time, in England. This is by no means the case. It is true that salesmen recently found difficulty in placing desirable agencies. This was due to the fact that a great many houses had goods left over from last year and that most makers sent men on the road so very early that nearly every agent had loaded up much before the usual time. At that period, too, retail trade was at a standstill. We were between hay and grass—waiting for the snow to disappear and spring weather to set in. Since then we have been favored with a few days of fine weather. Result? That one of the largest houses in the trade did the largest day's business in its history, and others followed suit—a state of affairs which, if it occurs at all, doesn't usually come along until late in May. Similar reports come from all directions and the makers who, in the fall, because anxious and decided to reduce their outputs are, in many cases, sorry for having done so. The market for English wheels is not "pretty well played out." Give us good machines—no refuse which cannot be sold at home—and the market will be found ready enough. There, *Cyclist*, please copy that.

#### PURE AMATEURS.

It does not follow that, because cash prizes are offered in Australia that is the only incentive to men to ride. An extraordinary state of affairs has just developed. An inter-club road race was contested over twenty-six miles of rough road and resulted in a tie. Another race was run with the same result! Then the bank, with which the prize money was deposited, failed. But the racers, as eager as ever, went at it again and decided the knotty question. That's pure amateurism, despite the fact that these men ride, year after year, for the coin of the realm.

Bravo Australia.

#### COLONEL BURDETT'S DENIALS.

Colonel Burdett denies that there was any condition whatever attached to that \$25,000 offer for *Good Roads*, except that the purchaser was to have the use of the league's membership list. The fifty cents per member story must therefore be untrue, despite the fact that it appeared in the official organ. The colonel also denies that he threatened to remove Mr. Miller in case the latter refused to change his decision in the Worcester-Boston imbroglio. Having commented somewhat freely on the first of these matters, we gladly state the other side of the case. It will shortly be in order for the league to establish a standing committee for the correction of untruthful rumors.

#### TRADE NOTICES.

A word as to trade "puffs." When an advertiser desires attention called to his wares or to his advertisement through the medium of the reading column, he is, perhaps, justified in asking the journal to so favor him, and, possibly, in expecting that his request will not be

ignored, provided it does not come too often. But he has no right to expect the editor to prostitute his columns by appearing as an indorser of whatever praise and palaver he—the advertiser—may see fit to write. A man of fame as a racer, for example, decides to ride a certain make of wheel. The maker in a great many instances deluges the cycling press with notices of the racing man's decision and incidentally commends his excellent judgment in having selected the best, the fastest, etc., etc., all of which the editor is expected to present to his readers as his own opinion. Some of them do it and some don't. Those who do have a very poor opinion of the intelligence of readers or an awfully strong appreciation of the advertisers' patronage. Those who don't are well aware that notices of this description fall like water on a duck's back, that readers, in short, are well aware that in nine cases out of ten something stronger than the merit of the wheel is necessary to secure the distinguished rider's services.

#### SANGER'S CHANCES.

While commenting on Sanger's ability to defeat the English cracks—and Zimmerman, too—the Milwaukee papers continually refer to the defeat of Zimmerman by Sanger at Sarnia, or the way the Cream City man captured a race from Tyler at Chicago last fall. We admit Sanger's greatness as a racing man, but we cannot see why the cases referred to should have any bearing on the case. At Sarnia Sanger had a handicap over Zimmerman and at Chicago Sanger was riding against a man who had had almost no training for full three weeks. Such comparisons, at least, are odious. But we grant that Sanger will defeat the best foreigner they can trot out, and even Zimmerman will have to look to his laurels. Sanger has never, until this season, had any training; he never knew anything about track work, he simply rode for all there was in him. If he has had good training, is careful, and gets in a few early races to learn a trick or two, as it were, he will keep the best of them guessing as they never guessed before.

#### WHY THIS REQUEST?

It seems a queer request, that of the National Cyclists' Union of England, that the international championships be run on as late a day as possible, for fear that the English racing men who may compete may not be in condition. Ere the international races are held the English racing season is practically at an end. The foreign racing men are to-day in about as good condition as they are at any time during the season. In the middle of June the English championships are held, and at that time the foreigners are supposed to be in the pink of condition. August is certainly as good as any month in the year for holding races in this country, at least from the weather standpoint.

#### GOTHAM JUSTICE.

A Gothamite's sense of justice must be something on the queer order if the following is any criterion:

A bicyclist who ran down a pedestrian in a city street yesterday was arrested and fined, not so much for the running down, but for his impertinence when the pedestrian arose and remonstrated with him for not ringing his bell. The punishment was eminently proper. Bicyclists have rights which the public are always ready to acknowledge; but these rights are not above those of the people on foot, and do not abrogate city ordinances.

This is really the first case of prosecution for impertinence that has come to our notice. We doubt if the rider was even to blame for running down the pedestrian, but we will grant that he

was. If he was, perhaps he should have been punished for reckless riding. But to punish him for being impertinent is another proposition. He was or was not guilty of reckless riding, and on this alone should or should not have been fined. Great laws they have down in Ward McAllister's burg!

The two or three people who have for some inscrutable reason tried to make it appear that Sanger is not entitled to ride as an amateur must feel disappointed. The Milwaukee man has received the necessary certificate of health and good moral behavior from the racing board, and goes east at once to finish his training preparatory to his English trip. Good judges of racing say that if Sanger is beaten it will be from lack of experience. It is hoped that this will not be the case, and that those fits of boyish temper, which have characterized so many of his races at home, may not be displayed for the edification of the Britishers. Be a good boy, Wallie!

THE REFEREE has been favored with a copy of the Louisiana (Mo.) Press, which contained this editorial:

That worm-eaten and superannuated old chestnut, the annual tour of the St. Louis wheelmen over the Pike County roads, to take place Sunday, May 7, is again being aired in the St. Louis papers. If that outfit of half-naked Sabbath-breakers knew just what the Louisiana people thought of them they surely wouldn't have the immaculate gall to come back here again. Of all the nuisances that ever afflicted a patient and long-suffering people, that annual bicycle tour is the worst.

The editor of that paper is evidently a relic of by-gone days, who regards wheelmen with the same disfavor as did the hoodlum of old.

OSMOND, in a letter to this office, said he would sail on the 12th and come direct to Chicago. Other advices from the other side are to the effect that he is far from the man that he once was and seemingly in poor health. Under the circumstances, and in view also of the fact that there is no track at present available on which to train, it is hardly to be expected that he will do much this summer.

It remains for the wheelmen of Minneapolis to recognize the value of boards for a track surface, and we shall soon know just how good a track boards will make. We hazard the prediction that the Minneapolis, three-lap board track will require less attention, last longer and be in better shape at all times than our \$7,000 world's fair track, composed of Joliet mixture of some sort.

THE Chicago Cycling Club is a league club. One of the requirements of the league is that all members of its clubs must be league members. It will be interesting to know how the expulsion of Barrett and Munger from the league will effect their membership in the Chicago, or the latter's membership in the L. A. W.

#### Bell-less and Brainless.

A New York cyclist has been fined for neglecting to tinkle his bell and running over an unwary pedestrian. There is no law compelling cyclists to ring their bells, but the court holds that they are bound to do it just the same.—Boston Herald.

And the courts are quite right, too. In New York recently a cad of a cyclist knocked down a street commissioner, who was accompanied by a lady. When reprimanding the aforesaid cad he was insulted and dared to consult the law, which he promptly did by calling an officer. The brainless youth was mulcted to the extent of \$5 and costs.

Governing Body.

By the last advices from you, I see that the vital subject of prizes is forcing itself on the wheelmen of America in right earnest. How quickly the spark was fanned into a flame; and quicker even will the flame spread, for no laws of amateur unions can cope with the desire of all ordinary, sensible wheelmen to receive money for their prizes instead of articles. For years I sailed under the flag of that cognomen—amateurism—because I was born and bred and fed on amateur sop, but now as years have gone on and experience is ripening, I fully understand that the terms "amateur" and "professional" should never have been included in the category of cycling-word lore. If you want to lay the sport afresh on new and sound foundations you must first of all delete these two terms, and call all racing men simply cyclists.

With us, few, if any men can make cycling a profession to get a living out of it, because there are scarcely any manufacturers here, most of the machines being imported, so we can and have dropped the terms and are not troubled from a maker's advertising point of view. With your people it must be different. Still, for all that, I fail to see why Americans need consider the maker's question. If all racing men met on one common ground as cyclists, the maker's employee question would soon find its own level in the top class on the racing path, simply because their object is to win, and if ordinary racing men, who race from a pleasure point of view and not a business one, cannot compete with manufacturer's men because their time for training is limited, depend upon it sport promoters will soon learn to cater to them as second grade men, as well as for the trade flyers. Cash prizes are not wrong. They have not interfered with the standing of Victorian riders one iota. The papers here never refer to the riders as professionals and consequently the public is satisfied. One thing is certain, if you want cash prizes to be the only ones given in America, you must endeavor to get the press and the people to bury both so-called amateurism and professionalism in one grave and let the rising generations that are to come trample on it forever. Riders then will only have one conscience and one color at the mast head.

## A GOOD MAN GOING ABROAD.

Mr. G. W. Burston, president of the Melbourne Bicycle Club, left Melbourne last week and took the China boat to Japan, where he will do some touring on the wheel prior to visiting the greatest show on earth. Burston has been a vice-president of the Harrowgate camp, visited England from Australia two years in succession and attended the canvas festival, and he means to be at the camp of 1893. Burston was accorded a club dinner before he left here and at the proposal of his health he was shouldered amidst a burst of enthusiasm and carried round the room.

## THAT BUSST-ED IMPOSTER.

Melbourne wheelmen have been very much amused at the report that Tom Busst had been interviewed in Chicago. Tom is still in Melbourne. If the gentle-

man who imagines and wants other people to believe he is Busst is with you now, kindly ask him if he knows Frank Mills, formerly of Wangaratta, Victoria, Busst would be glad to see a snap shot presentment of the expression of his imposter's face when the question is put.

## THESE ARE PURE AMATEURS.

Road riding has been actively carried on during the past few months, chiefly owing to a series of 26 1-4-mile races which have been held between ten of the leading clubs in Melbourne for the title of premiers. The final contest was decided on Saturday last, when the Southern District and Fitzroy clubs met to run off. Twice before these clubs had met and made draws; the teams were six a side and each team scored 39 points on both occasions. In this last match the men rode like demons over the rough road, the whole dozen finishing up the 26 1-4 miles well together—the last man home only being eleven minutes behind the first. The Southern District team proved the victors and they are justly proud of it, for the work of winning it was no light task, seeing they had ridden seven contests over the route. The reward is chiefly honor, the prizes being a gold medal each. Unfortunately the money for the prize medals is deposited

vest. There was a good stiff wind blowing, but the men rode with determination. At the finish of tenth mile Arthur Turner burst away and gained that record, viz : 27 min. 31 sec. By this time there were only five left in, Turner, Scharp, Beeson, Herman and Charleston. The last named is only a stripling, but he rode with such spirit and with an easy, clean action that stamps him as a rough gem that constant racing will polish into a scratch mark man. When 58 minutes had gone and it wanted two minutes to the end of the hour,

## THE EXCITEMENT WAS INTENSE.

The men seemed electrified and bolted helter skelter over the asphalt. Charleston led, but his was a shooting bolt, as Scharp flew after him and streaked past, followed by Beeson. The pistol might bang at any moment; the leaders were in a desperate sprint; who could last longest, Turner or Scharp! The public yelled, the bell clanged all the time. Scharp leads—no, Turner! Yes, Scharp falters! Turner, Turner, Turner! was shouted from all parts, as the plucky young Austral winner of 1891 romped past Scharp, and with bent head and clenched teeth whizzed along until the pistol suddenly banged as he reached 21 miles 341 yards in one hour. This is

## HIS SELF-INFLATING PNEUMATIC.

He showed his friend his new self-inflating tire in its natural state; then he proposed showing how it worked—and the result.

in a bank that failed recently, so it looks as though the riders would get nothing but honor for their ride. This is less than the Grecians or Romans would have got for a similar contest; still our men are satisfied with fame, and yet the National Cyclists' Union would call these rider professionals. I tell you it's a farce.

## AN EXCITING RACE.

The Victorian Racing Cyclists' Association held a race meeting on the Exhibition asphalt oval track on Feb. 25. The afternoon in the early part was melting hot, consequently the gentle public did not attend largely, and so this association of riders loses some £19 over this, its first venture. The meeting was preceded by a procession of riders in their racing togs through the streets. In some quarters this was looked upon as very bad taste and ungentlemanly, and many racing men would not lend themselves to such a show. The last event of the afternoon was a race for the one-hour bicycle record of Australia, and it was a really fine contest. The starters were T. E. Adams, H. B. James, G. R. Broadbent, R. Holtz, D. Charleston, L. Herman, A. Turner, L. B. Scharp, and H. Beeson. One pace-maker at a time was allowed on the track, and he wore a red distinguishing

record for Australia.

## THE DU CROS FAMILY DUPLICATED.

Arthur Turner is one of four brothers, who are all fairly good at racing. They admire each other on the track, and the father adores the quartette and is as proud as Lucifer when any of them win. He waves his arms and umbrella and looks like jumping on his silk hat for joy, but that does not do, for the duty alone is 10 shillings on one of these head adornments, and times are bad in Victoria just now. The brothers run a bicycle shop as Turner & Turner, and seem to do a snug trade.

## NEW ORGANIZATION PROBABLE.

This week there is to be a conference between three members of the Melbourne Bicycle Club, Messrs. Muirhead Lambton and Gollan, and a similar number from the Victoria Racing Cyclists' Association, Messrs. Schwaebisch, Gannett and Scott, to endeavor to form a governing association to rule cycling. For the past few months the two bodies above mentioned have been working tooth and nail against each other to gain sole control, but now they find it's no go and one must 'chuck it.' The V. R. C. A., or 'Jockeys' Association,' as it is facetiously known, has been cornered clean by the M. B. C., because the latter

copyrighted the M. B. C. color regulations, and so, although the V. R. C. A. has nearly all the riders affiliated it can not register any racing colors. I hope next mail to advise that a new league has been formed. Alic Muirhead is the leading man in the M. B. C., and his motives are purely independent and for progress and staunch foundations.

## BUT THEY WON'T GO.

I notice the paragraph in your paper of January regarding Eck, Johnson and others coming to Australia. All here will give them a hearty greeting, and if any one of them win the Austral wheel race with its £200, he will be only too welcome to it.

As to the *Sporting Standard* or the Melbourne Bicycle Club helping to find the stuff to pay their way here, it is "all in my eye." In the first place the paper is not built that way, and as regards the club, its rules say expenses must not be paid to competitors. If your boys come, their own dollars must bring them, and all the golden sovereigns they win are their own. November is Austral time, and there is plenty of racing in December and January as well.

MR. SPARKS.

## An Absent-Minded Wheelman.

The Salt Lake City *Tribune* tells this story:

A California cyclist met with quite an adventure recently on account of his absent-mindedness. He rode to business on his wheel, and on his way down town worked out a few business problems. Before he reached the office he passed a livery stable, into which he rode, dismounted and told one of the hostlers to remove the harness, give the steed a good dinner of grain and rub him down carefully. The Irish stableman stared at the man, but the fit of abstractedness still clouded his memory, and the hostler pushed the wheel into a stall. When the absent-minded young business man, a few hours later, missed his machine and went to the stable, where he did remember having been, he found that his instructions had been carried out to the letter. The saddle had been removed, the wheel overhauled and oiled, and the tool-bag filled with oats. The hostler would not allow him to take his machine until the customary stable charges had been paid—the moral of which is that by the use of the bicycle, and retaining the use of the mental faculty, a great deal of money can be saved by the business man by the use of the wheel.

## Recent Publications Received.

The REFEREE acknowledges the receipt of the following publications:

- Charles P. Tucker, Hudson Cycle Club, Hudson, Mass., neat little pamphlet entitled "My Log Book," being a diary of a bicycle tour through the New England states.
- Remington Arms Company, 313 Broadway, New York, catalogue.—Shows the Remington full roadster, 44 pounds, all on; light roadster, 32 pounds; woman's safety, 42 pounds, all on; racer, 22 pounds, and sundries.
- Charles Hanauer & Bros., Cincinnati, catalogue.—Shows complete line of the Victor, King and Queen of Scorchers, Sunol, Monarch, Liberty, Triumph, Eagle, Holiday-Temple Scorchers, Relay, Road King and Road Queen, Credenda and cheaper grades.
- Reuben Wood's Sons, Syracuse, N. Y., catalogue.—Shows complete line of Liberty, Eclipse, Falcon and Queen City.
- George E. Lloyd & Co., Chicago, catalogue.—Shows the complete Cleveland, Victor and Credenda lines.
- Metropolitan Cycle Company, Reading, Pa., catalogue.—Shows the Neversink No. 1, 40 pounds; No. 2, 33 pounds; ladies', 33 pounds; Stormer, 37 pounds.
- Kalamazoo Cycle Company, Kalamazoo, Mich., catalogue of parcel and luggage carriers, parcel holders, etc.
- J. Hoyle, Chicago, catalogue showing the Excelsior in four styles.

## CYCLING IN THE SOUTH.

*A Race Track Project—Light Wheels in Demand—Riding Season Opened.*

ATLANTA, Ga., April 2.—The riding season here has opened with a boom. Every man who had a wheel last season has gotten it out and most of those who rode last season are either trying to sell their old wheels or trade them for new ones. Nearly every old rider wants a new wheel and they, together with new buyers, are making a grand rush for the '93 models. It is almost impossible to sell a '92 model machine and all on account of weight. The light weight fever has struck us and has carried everything before it. It is the first consideration with all buyers and the only one with manv. Thirty-pound wheels are more generally used here than those of any other weight, though twenty-eight-pounders are also very popular, and one can see a large number of wheels weighing only twenty-four pounds.

Riding up a few of the hills around Atlanta is calculated to make a man buy the lightest wheel, consistent with reason. Occasionally we see a good rider mounted on a forty-pound wheel, and he says it is light enough, but generally he has an axe to grind in the shape of his old wheel to sell. So far there has been very little trouble with these light wheels, though some of the best makes of wheels seem to be weak in the front forks, as some of them have been bent. However, this will doubtless be remedied as soon as the manufacturers find it out. Some croakers are predicting all kinds of disasters for those riding light wheels, but until some of these disasters materialize it is useless to try to sell wheels weighing over thirty-two or thirty-three pounds. One firm here had a large stock of last year's models, weight from forty to fifty

pounds, shipped it. It has not sold half a dozen wheels and complains of bad business. The sooner they learn that an "up to date" wheel is the only one that can be sold here, the better for them. One man had a large number of so-called tired wheels shipped him last year on consignment and the maker thinks it strange that he has not sold them, doubtless thinking this is a wild country, where anything would sell. A trip through the south would do some manufacturers good, both in business and health.

Dealers here generally should learn to keep in stock the different parts of wheels. Riders are much annoyed at having to wait from one to three weeks for any little part they may break or lose. Several sales have been lost by the agent of a certain popular wheel solely on this account.

There is considerable talk here about building a track. The Capital Cycle Club will hold a meeting next Monday night and discuss the matter. The members will, probably, either form a track association or endeavor to get the base ball people to build a track on their grounds. That a track would prove profitable there can be no doubt. With the exception of the Fairburn road race there have been no races among local men for several years. At the carnival here last fall the races of Jack Prince, J. S. Johnson, and W. A. Rhodes attracted many people and widespread interest was manifested. Atlanta has some fast men, notably, R. L. Cooney, E. P. Chalfant, Charles Elyea, Steve Hook, John Vaughn, H. J. Piggott and others. Some of these riders will, very likely, enter the May races at Savannah, and if they do they will be heard from. Ed Durant, who used to race in the days of the old high wheels, and who held all the state championships during those

days, has again bought him a wheel and will make it warm for his competitors. WINTIRE.

## Prosperity is Noted.

The *Advertisers' Review*, a bright new bi-monthly paper devoted to the business of advertising, prints a picture of Colonel Pope, and has this to say of the popular manufacturer.

The unusually successful advertising enterprise of Colonel Albert A. Pope, of Columbia bicycle fame, of Boston, whose portrait appears in this issue, will be one of the land-mark phases in advertising for some time to come. The critics of the present and the business historians of the future will find little reason to give Colonel Pope "Hail Columbia!"

The paper also contains this paragraph relative to the bicycle:

A prosperous tide appears to have befallen the bicycle manufacturers as well as the bicycle and "out-door" papers. The users of the bicycle seem never to have been more zealous devotees than they are in 1893. The wheel will certainly keep on turning.

## World's Fair Cycle Checking.

Edward B. Parker and H. G. Hamilton have opened what they term the Wooster Cycle Checking Station, at 292 Fifty-fifth street, a few blocks from the fair grounds. They have room for 1,000 wheels, dressing rooms, etc., and will have competent attendants in charge. The proprietors think wheelmen will find it difficult to get near the grounds with wheels, owing to crowded streets, and believe their place will be of great benefit.

## The "Bulletin's" Latest Bomb.

The latest bombshell thrown at the cycling public by the official organ is the reduction of its annual subscription from \$1 to 50 cents and the offering of premiums to those securing a certain number of subscriptions. This is probably done to secure a *bona fide* circulation, which shall be independent of the

subscription received through its being the league organ. It is generally understood that outside the circulation gained by its official connection with the league its circulation does not cut a very great figure. Be that as it may, it is an undisputed fact that great surprises are to be sprung by the occupant of the official sanctum on Oliver street, Boston.

## Milwaukee Wheelmen's New Club House.

On the 1st of May the Milwaukee Wheelmen will move into their new club house, which is illustrated in this issue, and the day-dream of the members will, at least in part, be realized. For years back the club house question came up with its usual regularity at every annual meeting, until it was regarded as something of a fixture; but this year the long-thought-of project found the club in excellent financial condition, and the members and their friends ready to put their shoulder to the wheel and push. As a result the Milwaukee Wheelmen's Company was formed and incorporated, with a capital stock of \$12,000 and with the following officers: E. A. Savage, president; F. J. Schroeder, vice-president; T. E. Hutchings, secretary and treasurer. About half the stock has been subscribed, principally among members. The club house has a very advantageous location on Milwaukee street, on the east side. All the rooms are large and admirably suited for club purposes. Both the out and inside of the house will be greatly improved. A new bay window will be added, and when completed it will be very much "in it."

The Susquehanna Wheelmen, is the name of a new organization at Harrisburg, Pa. The officers are as follows: President, W. A. Weidner; secretary, W. J. Wetmore; treasurer, H. T. Eisenberg; captain, Francis Cruess.

### A FAMOUS OLD CLUB.

*The Newton (Mass.) B. C. and Its Eventful History.*

The Newton (Mass.) Bicycle Club, which held its annual election and dinner in Boston last week, is one of the most prominent of the old day clubs in existence. According to the Boston *Post* this club, though not very active in cycling circles, has had a continuous existence for eleven years, and has probably eaten more dinners than any cycling club in the world. Every meeting is a feed, and they meet every month. The club was organized in 1882. Charles L. Clark was the L. A. W. consul for Newton, and seeing the need of a local club, called a meeting at Knights of Honor Hall in West Newton for April 1. The following were the charter members: Charles L. Clark, Freelon Morris, William W. Stall, George F. Williams, F. H. Whiton, Edward P. Burnham and F. W. Walker. The officers for the first year were: President, J. O. Elms, Jr.; secretary and treasurer, F. H. Whiton; captain, H. G. Pratt; first lieutenant, R. W. Bush; second lieutenant, Phil L. Aubin.

On the race track it has won brilliant honors. A. D. Claffin, son of ex-Governor Claffin, was the first man in America to cut the two-mile record below six minutes. He made 5:58 in Boston in 1883. W. W. Stall held the mile record for the open air for about two years. He made so many astonishing performances on the road, track and hill in the early days that he was called the "long-legged wonder." E. P. Burnham, the present captain, stood in the front rank of racing men for many years. He was one of the celebrated Columbia team that beat all comers in 1886. No rider in America made a better showing against the English riders in 1884-5 and 6 than Mr. Burnham. Harry Corey, who

made records by the score and climbed all the high hills in and around Boston, was a member of the club. Among the other noted racing men were H. M. Saben, C. F. Hayden, G. F. Crosby and J. W. Byers.

For several years the club conducted on the Fourth of July an Antique and Horrible parade in Newton. But the boys are growing old. Their cycling days are over, but they cycle still, and four times a year they gather around the festive board.

The present officers of the club are: President, Abbot Bassett; vice-president, T. S. Wilson; secretary, H. C. Nickerson; treasurer, A. A. Glines; captain, E. P. Burnham; lieutenant, A. P. Benson.

### There's a Lot in This.

The man who carries a repairing outfit is bound to go through the world rejoicing and unpunctured. The man who does not carry a repairing outfit has a burst or a cut on every ride. In speaking of the man, you see, I am combining him with his machine, but still the metaphor of the sentence will be apparent. It seems a kind of fate that no need for the repairing outfit should come to the man prepared, but to the man who is unprepared a kind providence has provided the man who is prepared, as I am sure many riders will bear me out; and yet there is a disadvantage in being prepared, because being prepared you are found of valuable assistance to that man who wanders through the land unprepared.—*Wheeler.*

### No "Social Feature" for Them.

A new bicycle club has been organized at Toledo, O., which will be devoted exclusively to cycling. There will be no "social feature," as it is termed, and the new organization will join the league immediately. A road race for Decoration day is on the list of coming events,

### NEWARK-PHILADELPHIA CENTURY.

*The Annual Event May Not be Held—Philadelphia News.*

PHILADELPHIA, April 15.—Will there be a Newark-Philadelphia century run in 1893? From present indications I should say "No." But notwithstanding the apparent apathy among club captains in general regarding this time-honored event, there are many inquiries about it, and the mere fact that it is being discussed warrants us in believing that if a few energetic wheelmen, either in this city or at the other end of the route, should take hold, it would not be many days ere a century run would be assured. It was only last week that I met Captain Conkling of the Elizabeth (N. J.) Wheelmen, and he asserted that if the riders in the vicinity of Newark could be given any assurance that the Philadelphians would co-operate with them, they would organize at once and manage the run themselves.

A "century" in these pneumatic days is not what it was during the days of the solid. As one facetious fellow remarked recently in discussing the run: "What's the use of spending an 'X' for the privilege of staying awake all night and swallowing a bucketful of dust the next day?" The demand for a century run comes mainly from those who have never made one, and there are enough of these in this city alone to make the run so large as to be unwieldy—if they could be induced to go. There's the rub.

The Century Wheelmen have always taken a prominent part in former century runs, and for the last three years have had a "cinch" on the "rag" offered as a prize to the club bringing in the greatest number. The fact of its being such an "easy thing" for them is the cause of their lack of interest, and they

seem willing to give some one else a chance. It is to be hoped that an attempt will be made to organize a run for this year, as former centuries have given a big boom to cycling in this city.

### AN APRIL FOOL JOKE.

The *Wheel* was taken in on "Kain," who writes the Philadelphia letter, April 1, in great shape. Some joker in the Century Wheelmen sent out a lot of postal cards stating that the Saturday night "feeds," which had been discontinued about March 1, would be in order again, commencing Saturday, April 1. Kain got a postal, but couldn't attend. He did the next best thing—wrote a couple of stickfuls in his letter to the *Wheel* about the enterprise, etc., of the Centurions, and gave a detailed account of the supper (which never took place). Needless to say that "Dick was not the only one—oh, dear, no!" for about two score assembled at the club house and kicked themselves home again.

### SMALL NOTES.

Twenty-two applications were acted on at the last monthly meeting of the Century Wheelmen.

The South End's ball at St. George's Hall was a brilliant affair.

Century's minstrel show is booked for April 27, 28 and 29.

The Century's active membership is approaching the 300 mark.

### Secure Sleeping Apartments at the World's Fair.

Rooms can be secured at the National Columbian Wheelmen's Association club house and hotel. Prices \$1 per day and upwards. Address, L. D. Taylor, secretary, 959 West Madison street, Chicago.

The Boston Woven Hose & Rubber Company has bought out the business of the Pneumaticum Mender Company.

## MISSOURI'S ROAD WORK

THE DIVISION, THOUGH SMALL, HAS BEEN VERY ACTIVE.

*A Road Bill Finally Passed By the Legislature How the Passage Was Brought About — Work In Illinois.*

MEXICO, Mo., April 15.—In the early history of the Missouri division, L. A. W., the name of W. M. Brewster is quite conspicuous, and the records show that in 1890 the said Brewster was instructed by the board of officers of the Missouri division "to get all the information possible regarding road improvement associations, with a view to organizing such an association in Missouri." And the records show further, "Mr.

ment, and has always been a strong factor in the movement for better roads. Much of the present interest in the improvement of the roads and existing road laws is due to its constant and earnest co-operation in the work.

In 1891 Governor Francis in his message to the legislature called attention to the need of legislation on this subject, and was at all times during his administration a friend to the movement for better roads.

It was during the year 1890 that the efforts of Chief Consul Holm and others induced the state board of agriculture to take up the work of road improvement, and since then this board has been very active in the work. Levi Chubbuck was at that time, and is now, secretary of the board of agriculture, and has been a very active agent in the distributing of road improvement matter through the bulletin of the board, and in the organization of farmers' institutes throughout

with the aid of the machine manufacturers, and was of great benefit to the delegates, as the trials of the different machines showed what could be done with improved and modern road making machines.

A street in Chillicothe was excavated, graded, and after the rock had been crushed and placed on the road bed in a proper manner it was rolled with a steam roller and the job completed in good shape. Country roads were graded up and the use of various machines fully explained, and thus much good for the cause was accomplished. There was a large and representative attendance at this convention from all parts of the state, and it was the opinion of those in charge of the movement, that the people were getting closer together in their ideas of how to best improve the roads and what steps were necessary to enact legislation to assist in the work of reform.

A bill providing for county option in the issue of bonds for the aiding of road building, the collection of all poll taxes in cash, a general road fund to be placed at the disposal of a competent county road supervisor, who was to let the road work out on contract, and other desirable changes in the present law, was introduced in the legislature and after considerable discussion was finally passed and approved by the governor, but not until it had been so amended as to lessen the advantages it was intended to give.

The Missouri division of the L. A. W., never very large or flush with a bank account, has not been able to do what it would like to do in the good cause; still it has done what it could to advance the work. It was represented by its highway committee at both the state conventions, and the present committee has endeavored to work hand in hand with the State Board of Agriculture and Mr. Potter in the work in this state.

"All Roads Lead to the World's Fair."—Chicago Record. But they are mighty poor roads.

Brewster will report the result to the board." So it would seem that in the birth of the road improvement in Missouri Mr. Brewster was in some way mixed up, although the records fail to show that he reported the results of his investigations. The records are probably not complete, for Brewster always reports.

Robert Holm, the indefatigable worker for all movements that tend to improve cycling or benefit cyclers, was at this time, as he is now, the chief consul of the Missouri division, and the records show that the road question was not slighted by him. H. C. Penn, of Columbia, was chairman, and H. G. Wolzendorf, of St. Louis, and T. H. McNeil, of Kansas City, were fellow workers on the highway improvement committee at that time. Their idea was to work the newspapers and to obtain their assistance in publishing road improvement matter. The press of the state was quick to see the greatness of the move-

the state, at which the road question was always placed before the people. John L. Erwin of Fulton, Mo., has also been active in preaching "the gospel of good roads" throughout the state. He understands the question fully and has devoted a good deal of time to the work.

In January, 1891, the Missouri State Road Improvement Association was formed under the auspices of the State Board of Agriculture at Springfield. John L. Erwin was chosen president and Levi Chubbuck secretary. At this convention the discussion started the people to thinking over the road question in a manner that indicated that they intended to devise ways and means to improve the road system of the state.

In the fall of 1892 the State Board of Agriculture issued a call for a road convention at Chillicothe, and requested county courts and all organized bodies to send delegates thereto. An exhibit of road machinery and rock crushers in operation was planned and carried out

In January, 1893, the second annual meeting of the State Road Improvement Association was held at Sedalia, and, as at Chillicothe, all organized bodies in the state were invited to send delegates. The attendance was larger than at the first convention and the gathering was honored with the attendance of Governor Stone, the house and senate committees on roads and highways, many county officials and prominent men from all parts of the state. It was clearly seen at the commencement of this convention that the delegates had not come there for the purpose of hearing essays on road building or the necessities of improved roads, but were there to make recommendations to the state legislature then in session in regard to a revision of the road laws of the state. The convention adopted a set of resolutions and appointed a committee to present them to the legislature and to assist in drafting a bill that would embody the ideas of the convention on the desired changes.

During the year past the committee has sent out circular letters to all of the bankers in the state outside of the cities of St. Louis, Kansas City and St. Joseph asking for information in regard to the effect of bad roads in their locality and what remedies they could suggest for the betterment of the roads and as to what was in their opinion the best way to increase the money available for road work. The letters met with general reply, and show that the financial interests of the state are heartily in favor of road improvement, and would not object to some additional taxation if better results could be assured.

A list of the road officers of the state, some 3,500 names and post offices, was compiled by Mr. Gillette of Mt. Vernon, who is a member of the state committee, and a copy taken for Mr. Potter's use and for the use of the state committee. This will enable road improvement literature to be sent to men who will be interested in it, and benefits are sure to

## Why so few G. & J. Pneumatics Puncture.

Any Pneumatic Tire will puncture—some easier than others. It would lose its resiliency and speed if made so as to successfully resist puncture.

It is a noticeable fact that

## Few G. & J. Pneumatic Tires Puncture.

The reason is plain.

### ITS OUTER COVER

entirely envelopes the inner air tube, forming a cushion between the rim and air tube—thereby protecting the air tube from contact with the spokes. Injury through contact with the spokes causes many a puncture and “burst.”

### ITS INNER AIR TUBE

is made of the very best quality of rubber obtainable, and is moulded a little larger than the inside of the outer case, hence is not “stretched” when inflated, for when the rubber is stretched a small puncture becomes a large one. The air tube of the “G. & J.” is simply pressed against the outer case and compressed, and is consequently *puncture proof*, as regards small punctures.

### ITS CORRUGATED SURFACE

is the chief puncture preventative, inasmuch as it presents a thicker, better wearing surface without impairing its resiliency. When you thicken the tread of a smooth tire you destroy its resiliency. The corrugated tire retains the advantages of the thick tread without its disadvantages. The corrugations *prevent “suction”* on the road surface—that makes the tire run easy—makes it speedy. The corrugations *prevent side slipping*, so dangerous to rider and injurious to machine.

And that's why

## So few G. & J. Pneumatics Puncture.

Any dealer will order them on *any* wheel.

Any repairer can fit them to *any* machine.

## Gormully & Jeffery Mfg. Co.,

CHICAGO. BOSTON. WASHINGTON.

NEW YORK. COVENTRY, ENG.

MENTION THE REFEREE.

follow. The state committee also aided Col. Pope in obtaining signatures to his road petition to a considerable extent, M. J. Gilbert of St. Louis being most active in this work.

The results of the agitation and education are more apparent in the neighborhood of Kansas City than in any other part of the state.

Many miles of improved roads have been built in Jackson County; Pettis County has started the work; and other counties are planning to greatly improve their roads this coming summer.

It is merely a question of finances in Missouri. Every one admits the needs of better roads and the benefits that

providing for the improvement of roads. Ex-Secretary Rusk and General Schofield, the head of the War Department, assured us that they were in favor of good roads. The present secretary of war is also in sympathy with the movement for improved highways.

"Our macadam pavement is not fit for good roads, as it succumbs too easily to the action of the elements and general wear and tear. It is high time that this 'working out' the road tax, should be done away with."

Forestry Commissioner A. S. Hamilton stated that he had been interested for many years in the subject of road improvement, and had watched with sorrow the opposition of those who should do the most—farmers. He commended the wheelmen for doing the most good toward the establishment of good roads, and remarked that under favorable conditions the country was more pleasant to ride in than the city, but with the roads in their present bad condition no wheelman could enjoy himself. "Some of us will die of old age," said Mr. Hamilton, "before we get good roads, but we can at least get good paths."

Chairman Lowe thought that with so many wheelmen in the city, mighty influence could be brought to bear upon the authorities for the betterment of roads in the city and country. He suggested that protection of bicyclists is a thing that should be secured, and also a thing that should be presented.

About 200 names are on the membership roster of the new association. The first thing to be done is to improve the paths in the city and to build a path around it. The membership fee is only \$1.

#### WORK IN ILLINOIS.

*Chief Consul Gerould Hopes to Soon Have a Good Roads Bill Passed.*

"We are doing the best we can," said Chief Consul Gerould, of the Illinois division, to a Chicago Journal reporter, "to secure something from the present legislature at Springfield. When I was down there a short time ago I believed that a bill providing for local option in the matter of road-making would pass the house, but from present appearances it seems hardly possible that such a measure will ever see the light. We have done the best we can to get such a measure through the house and senate and up to the governor, for the latter is very favorably inclined toward our cause. In two of his messages he has suggested measures in favor of good roads, but apparently neither the house nor senate looks at the matter as being of sufficient importance to waste any time upon. The time may come when these men will recognize that this question is one of great interest, not only to wheelmen, but also to the general farming population. The boys who run their bicycles over the country roads are really very little put out by their poor condition. It is, in fact, the farmers who must make constant use of them in hauling their products to market who suffer most from the deplorable condition of the highways in this and other western states. It makes a difference of fully 40 per cent in the loads that can be hauled, especially during the spring and fall, whether the roads are in good or in poor shape, yet it is very hard work to convince a farmer that there is anything in it for him to have the roads improved. For many years he has traveled through the same ruts and for months at a time his best teams have only been able to haul half a load to the nearest town, yet when he is asked to stand a tax of a few dollars in order to

construct a first-class roadway past his farm, he will complain of such extravagance, and probably at the next election vote against the man who made such an absurd proposition."

#### EASTERN DEPARTMENT.

##### *Explains and Complains.*

In a letter from Mr. Crowther I find the following:

I don't see what you meant by your criticism, in regard to what we said about the Worcester meet, in your last issue. You are entirely wrong. If you will read over what I did say you will find that I did not in any way insinuate that the Bay State Club had not a perfect right to run their meet whenever and wherever they saw fit, only Boston claims precisely the same privilege. I trust as you have placed me in a false position you will correct it. I don't usually pay any attention to matters of this sort, but this is so bad that I hope you will, with your usual fairness, set it right.

What I meant was that from the tone of Mr. Crowther's comments he was not in favor of giving Worcester a fair show in the race for the sanction stakes. He did insinuate that the sanction should be given Boston. That's the way it seemed to most people. I had no desire to place Mr. Crowther in a "false position," and note that he has taken no further part in a matter which should have at first been decided without appeal to the official organ, Raymond or Burdett. In conversation with Mr. Crowther, he, to his credit be it said, disclaimed any particular sympathy with either club. The Worcester boys, having won, can now afford to extend the hand of good-fellowship to the Bostonians.

\*\*\*

##### *Whence the Information Came.*

In a recent issue of *Sporting Times*, Mr. Sullivan cross-counters the REFEREE's representative under very unfair rules. So does his man Friday—the admiral of L. A. W. officials and red tape, Walter J. Masterson. Editor Sullivan would have I. B. Potter & Co., and likewise his readers, believe that I made use of what was intended to be private conversation about the suit brought by Sherwood & Rogers against *Good Roads*, but the fact of his giving me the firm's address and an introduction to one of the printing partners, Mr. Sherwood, persuades me that there was nothing of a private nature in the matter. I have said, and do say, that my information was obtained in the *Sporting Times* office, but I would not have mentioned the fact had not *Sporting Times* rushed to the defense of *Good Roads* the week after giving me the information which its editor was either afraid to, or forgot to print. I have no suspicion as to the courage of Sullivan or the conductor of the cycling department to which so many papers contribute, but I do and will insist on truth telling and fair dealing.

\*\*\*

##### *Two Instead of Ten.*

In my note on the Boston-Worcester controversy last week, the typo made it appear that outside of the twenty-one delegates from Boston, the rest of the Massachusetts division was represented by only ten. It should have been two instead of ten, which shows how completely Boston manipulates the division political machine.

George T. Warwick, of Springfield, Mass., has brought out what he terms the Little Gem pedal. It is so arranged as to make a narrow tread, yet give a large surface for the foot. It is a combination of rubber and rat trap, but the rubber may be removed at pleasure. The maker claims that it is dust proof and very light and strong. It has that appearance, at any rate.

#### ZIM TO MEET OSMOND.

*But Only for a Social Chat—A Party Will Meet the English Champion.*

A few New York cycling newspaper men will greet the English champion on his arrival in New York. Roland Hennessey and W. J. Morgan have the matter in hand, and will invite a few others to co-operate with them, and have a quiet little talk with the Britisher at Rogers' Chop House on Park place. Both Zimmerman and Joseph McDermott will be invited to join the party. Osmond is expected in New York on Wednesday or Thursday on the steamer Britannic.

##### ZIM WILL MEET HIM.

NEW YORK, April 18.—[Special]—Zimmerman and McDermott sail on the Aurania, of the Cunard line, Saturday. On Thursday evening, however, they will join a party which meets Osmond at quarantine.

ASBURY PARK, April 18.—Zimmerman arrived home from Savannah this week in company with Harry C. Wheeler, the fast young rider of the Manhattan Athletic Club, who has been with the champion in the south.

On Saturday of this week Zimmerman and his brother-in-law, Joseph McDermott, of Freehold, will sail on the Aurania for Liverpool. They will remain in Europe until June 24, when they will return to the United States. The "Jersey Skeeter" will probably run over to France and Germany and try for the championships of these countries.

It was expected that Zimmerman would take part in the races at Asbury Park on July 4, but McDermott says that it is hardly probable. The champion will be in poor shape just after the ocean voyage, and in no condition to race. However, he will be seen here at a later date.

McDermott, in a modest way, predicts that "Zim" will be on top of the heap this year, although he admits that there are some good "uns on the path. The Jerseyman did a half in 1:07 at Savannah a few days ago, and this, he says, is remarkably good this early in the season. Speaking of Osmond, McDermott said:

"It won't be our fault if we don't meet him. We will give him every opportunity to do so."

##### *"A Monkey and Parrot Time."*

If the members of the Allegheny Cyclers, of Pittsburg, don't have a fuss ere long it will be queer. There are two elements in the club—one for and the other against "strong liquids" in the club house and on the road. In fact this was the issue at the recent election. So intense was the interest in the matter that fifty-two out of the eighty-two members attended the annual election, and though there were but eleven offices to fill, there were thirty-nine candidates. The "buttermilk contingent," as it was called, was defeated, and now the "gay boys" say they propose having a side-board in the club house. This, it is expected, will precipitate a nice little row in the club.

##### *English Cracks at It.*

A. W. Harris, probably to-day the best man in England, began his racing Saturday, April 1, when he beat out Schofield in a three-quarter mile event at the Salford Harriers' meet. The time was slow, 3:10. At the *Sport and Play* carnival on Easter Monday, Harris won his heat in the half-mile scratch, but was beaten in the final by Schofield. Harris also won his heat in a quarter-mile handicap, from scratch, but was unplaced in the final. Harris won a mile scratch race at Liverpool on Good Friday, Schofield having fallen early in the race.

EDGAR S. BARNES.

would be derived therefrom, but the wherewith to pay for improvement can not be collected under the present road laws, hence the work in this state resolves itself into pushing forward new and better road laws.

The farmers seem to understand the question better than in some of the states and do not oppose the legislation as much as usual.

The trouble at the last session of the legislature was the members could not get it into their heads that the people wanted to have the roads improved, and instead of helping the cause along, a good many of them obstructed the movement. We hope for a better lot of representatives next session.

EDGAR S. BARNES.

\*\*\*

#### ASSOCIATION IN ROCHESTER.

*Formed for the Purpose of Securing Better Roads and Protecting Wheelmen.*

Rochester bicyclists and business men have finally taken the proper initial steps toward the improvement of city and country roads. Last Thursday evening a mass meeting was held in the Chamber of Commerce. Great interest was taken in the purpose of the gathering, which resulted in the formation of the Rochester Cyclists' Association, a society organized to promote the interests of wheelmen hereabouts.

Samuel H. Lowe, formerly editor in chief of the *Herald*, acted as chairman. After a few suitable remarks Mr. Lowe was introduced as the first speaker, John A. C. Wright, secretary for the New York State League for the Promotion of Good Roads.

Mr. Wright said that he was a "reformed bicyclist," and had won many cups and prizes in Cambridge, but when he came to Rochester the bad roads and streets reformed him the other way.

"I am not here to-night to mend your ways," said he, "but to ask you to aid in mending the ways of others. I attended a national convention in Washington in January, twenty states being represented. We made quite an impression on the senators and congressmen, and succeeded in having a bill passed,

# You can't ride the best—

BOSTON CLUBS TO RACE.

REFEREE correspondent to-day: "The track will be completed for Decoration day, and there will be a race there if I have to ride one myself."

## THE SALTONSTALL TROPHY.

Conditions Under which It will be Contested for in August.

The committee in charge of the world's fair cycling tournament has formally accepted H. L. Saltonstall's magnificent donation of a \$1,000 silver cup. This trophy was placed at the disposal of the League of American Wheelmen, to be disposed of in such manner as that body deemed most desirable. Last week, by a vote of the committee the trophy was transferred to the Inter-

national Cyclists' Union of the world. This same rule as regards scoring of points applies to team contests.

5. Before delivery of the trophy a bond in the sum of one thousand dollars (\$1,000), satisfactory to the board of managers of the union, shall have been filed with the secretary of the International Cyclists' Union.

6. The association in possession of the trophy shall return same to the secretary of the International Cyclists' Union, or to any individual or individuals designated by the board of managers of the said union, thirty days (30) prior to the annual international championship meeting each year. The board of managers shall have the power to demand its return under forfeiture of bond at any time if good cause can be shown for such a demand.

7. No mark, inscription, display or engraving shall be attached to or put upon this prize without the consent or order of the board of managers of the union.

8. These conditions shall not be altered or amended in any manner without such changes or amendments shall first have been submitted to the board of managers of the International Cyclist Union and approved by them.

EXTERIOR VIEW OF MILWAUKEE WHEELMEN'S NEW CLUB HOUSE.

national Cyclists' Union of the world. The transfer was made subject to the following conditions:

1. The trophy shall be known as the Saltonstall International Trophy.
2. The Saltonstall trophy shall represent the general championship of the International Cyclist Union, and shall be competed for annually by all associations members of and in good standing with the union, in the manner prescribed below.
3. At the first meeting of the board of managers of each meet, held after the annual championships have been contested, they shall count the points secured by each competing association of the union, and shall announce the same to all members of the union, and award the trophy to the association having secured the greatest total of points in accordance with these conditions.
4. The manner of scoring points shall be as follows: Any duly accredited representative, or representatives of an association, a member of the union, competing in any international championship contest, held under the direct auspices of the International Cyclists' Union, shall score points for his or their association as follow: For first place five (5) points; for second place, three (3)

Any questions not covered by these rules shall be decided in the same manner.

## BUFFALO'S TRACK TROUBLES.

Difficulties in Securing a Suitable Site—Entries for Martin's Race.

BUFFALO, April 17. — Everybody thought spring was here for a certainty, and wheelmen had runs scheduled for Sunday, but between midnight and 8 o'clock Saturday morning over seven inches of snow fell, and yesterday cycle riding was almost impossible. The records of the local weather bureau fail to find a parallel for such a snow storm at this time of year.

The Ramblers are making extensive preparations for their big souvenir century run of June 25. The event promises to be of marked interest and has attracted wide attention. The captains of all the local clubs have been requested to furnish a half-dozen riders to assist in the pacemaking. The first ten miles the captains will be leaders, and during the next decade of distance the first lieutenants, etc. Efforts to keep the centurions bunched in the finish will be made.

The Press C. C. is having considerable difficulty in securing a track for the state

circuit meet, scheduled for June 3. Little progress has been made during the past week by the local track association, as the Y. M. C. A. cannot extend its lease of its outing grounds over a year at a time, and negotiations are blocked in that quarter by that association refusing to amalgamate with outsiders. Money is not as hard to raise to build a track with as it is to find a site to build a track on. It is thought by many that the board track suggested at Olympia Park is not feasible, as it could not be constructed the proper width, and would be a little quarter-mile affair at the best. Buffalo should have a date in the international circuit, and it is a crying disgrace to a city that boasts of eleven cycle manufacturers and 12,000 riders that it cannot have a decent track and take a place this year in the list of great cycling fixtures. Proper support from the trade is wanting, and while public spirit is exhibited in divers other ways in this particular feature all is disinterestedness.

Entries for the Martin road race are coming in fast, and among the outside riders who will compete is the Canadian contingent from Toronto, consisting of Hyslop, Carman, Smith, Milne, McClelland and a couple of others. Rochester will send a number, with Le Messurier as her fastest man, and as the rivalry among the local riders is very strong, a fine struggle will be the result. Every club has its best man in active preparation, and some dark horses are hinted at by the knowing ones. Last year the race fell to Nick Maeder, a young novice, and no one can tell the possibilities of this year's event.

There is a rumor afloat that a handicapper has been appointed for the western end of New York state by Chairman Raymond. There has long been a need for such an official, as Handicapper Prial's work for the whole state has been too severe.

## NO NEGROES IN THE PULLMAN.

The A. C. C. Bars the Colored Man—Officers Named.

Gradually the poor colored man is being shut out of everything that pertains to the sport of cycling; pretty soon we shall expect to hear of his being prevented from even riding a bicycle upon the public highways. Thursday night of last week the Associated Cycling Clubs of Chicago took up the colored question and all save two delegates voted to bar him from entering the Pullman road race. The committee on entries, through its chairman, asked for instructions in the matter, inasmuch as the question had been brought up by the newspapers. It took about two minutes to dispose of the matter, and the colored man will not be permitted to participate in the great Memorial day race.

The committee appointed to nominate officers made its report, which was adopted after two names had been added. The list of officers is as follows:

Referee—T. F. Sheridan.  
Judges—C. E. Randall, W. M. Brewster, William Herriek, H. P. Andrae, F. W. Gerould, J. M. Stimpson.

Assistant judges, to record numbers of finishers—N. H. Van Sicken, R. F. White, T. L. Sloan, A. W. Roth, K. F. Peterson, Mr. Wild.  
Timers—M. A. Hosford, R. D. Garden, E. H. Wilcox, F. W. Morgan.

Assistant timers, to record times as called—F. A. Ingalls, J. M. Erwin, John O. Blake, W. A. Davis.

Starter—L. W. Conkling.

The committee, in selecting the officials, took pains to name only those known to be workers; figure-heads would not do on such an occasion. Mr. Raymond was asked to act as referee, but as he does not expect to be in the west May 30 he declined the honor. Most of the officials are well known in

## THE WORCESTER-BOSTON TROUBLE.

There is nothing new in relation to the sanction for the Waltham race meet. An impression seems to have got abroad that the Associated Cycling Clubs is endeavoring to prevent Worcester from holding its meet on Decoration day. This is wrong; all the A. C. C. wants is a sanction for its race meet. If the sanction clause prevents the awarding of two sanctions in this state for Decoration day, it should also prevent the awarding of three sanctions for June 17, a holiday in this state. Despite the reason given for the non granting of two sanctions for Decoration day, three have been awarded for Bunker Hill day, to the Waltham, Lynn and Spencer clubs.

Great efforts are being made to induce the clubs to go to Worcester, but few if any of the local organizations will leave Boston on that day. The Massachusetts club is then to entertain the Rhode Island Wheelmen, the Pioneer club and New York Tourist Wheelmen, while the Press club will entertain the Taunton and Newburyport clubs. All the local clubs having rooms in Boston proper will throw their doors wide open and entertain wheelmen without regard to color, creed, sex or previous condition of servitude, and from present indications Boston will have the call Decoration day. Of course Worcester will not be left entirely in the cold, as there are enough wheelmen in this state to make both meets a decided success.

It has been stated that the Waltham track is only on paper. To a certain extent that statement is true, but that paper calls for the completion of the track within three weeks or the contractor loses a large amount of money. One of the owners of the same said to a

with Pneumatic Tires.

HURLBERT BROS. & CO., Manufacturers, 26 W. 23rd St., New York,

MENTION THE REFEREE.

cycling circles. Conkling has started almost every Pullman race, and without a hitch, too. In fact, the Pullman couldn't start without "Conk."

It has been decided to have the finishing point about 300 yards farther east than heretofore, or some 200 feet east of the Pullman railroad tracks on One Hundred and Eleventh street. This street will be enclosed with ropes from the stone wall gate to a point some distance beyond the tape and people will not be permitted beside the ropes. A large tent will be erected on the ball grounds—which are opposite the finishing point—and here the men will dress.

President Garden reported that arrangements for the transportation of the crowd from the city to Pullman had been arranged with the Illinois Central road. On the day of the race the world's fair traffic will cease for a time and the tracks and trains will be used for the race crowd. One train will be started two minutes before the limit man gets away, then a train will leave every two minutes thereafter until the entire crowd has been taken away. The railroad officials do not think a person can see the scratch men away and get to Pullman in time to see the first man in. Trains cannot be loaded as quickly as heretofore, for passengers must, on Decoration day, pass over the viaduct at Van Buren street, through turn-stiles, and down long stairways to the world's fair platforms. Under this plan, of course, bicycles cannot be taken on board the trains.

Those who intend witnessing the start and taking a train for Pullman, must buy tickets before passing through the gate, or they will be turned back. Commutation tickets will not be good on world's fair trains, which are to be used for the race patrons.

The Lincoln club will not run its tally-ho coach to the sand hill this year inasmuch as it will cost \$150 for the use of the coach, or about \$8 per head, to say nothing of extras.

QUAKER CITY RACE TALK.

*The Tioga Track—Taxis Will Train at Springfield.*

PHILADELPHIA, April 17.—Much regret is expressed that so many wheelmen have resigned from the Tioga Athletic Association. This association owns the only good track in the city, the others being what Mr. Prial justly calls "death traps." It is to be hoped that the advent of the racing season will cause an influx of new members from the ranks of the local bicycle clubs. The track is easy of access, and 'twere well if local wheelmen would think where we would be "at" without the track.

Unable, through press of business, to go south to train for the spring meets, Taxis will get in shape at Springfield, where he is in business with the Warwick Cycle Company.

The South End's road racing team is in active training for the coming race with the Wilmington Wheel Club's team.

Rumor has it that a half-dozen local cracks have applied for licences in the N. C. A.

The Southwestern Cycle Club will have a five-mile road race early in June.

A quarter-mile track has been built at Neshaminy Falls.

MISCELLANEOUS RACE TALK.

*Little Paragraphs About Prominent Riders—Future Meets.*

One thousand dollars worth of prizes have already been donated for the Waukesha road race.

Wilson, trainer for the London County

club, expresses the opinion that "Osmond has seen his best days, though, mind you, he was not properly trained when he went for the record last season. 'Choppy' Warburton's methods might have been all right had Osmond the same iron frame that 'Choppy' himself possesses. Osmond has a weak chest, and therefore requires careful handling." Warburton is an old long-distance runner, over six feet high and possessed wonderful staying powers years ago.

H. L. Saltonstall, chairman of the Irvington-Milburn road race, is doing splendid work. The entry this year will be larger than ever. Mr. Saltonstall's address is 96 Broadway, New York, where entry blanks can be procured.

Entry blanks for the Worcester meet, and nearly all other meets and road races in the east and south this season, can be obtained at the REFEREE's eastern office, 21 Park Row, New York. A request by mail, enclosing a stamp for return postage, will meet with prompt attention.

Preparing to Depart.

A. A. Zimmermann and Harry Wheeler arrived in New York last Sunday, on steamer Kansas City from Savannah, at 6:30 p. m. Both the boys were feeling in splendid fettle and are loud in their admiration for Savannah and the people there. A REFEREE representative boarded the steamer and had a chat with the champion, Captain Fisher and Purser Bridges, who have taken quite a liking to Wheeler and Zimmermann. In reply to a query the Freehold boy said that he was stronger and was confident that he would ride faster than ever this year. In reply to a question as to his defeat by Wheeler he stated he did not exactly like one of the corners on the Savannah track and rode with more than usual care, as he did not want to risk a fall just now. He will sail for England Saturday and will be accompanied by Joseph McDermott. The party will land at Southampton, probably. Wheeler will not go along. Nobody seems willing to foot the expense account. Wheeler looks strong, is evidently in fine form, and will probably continue training in the vicinity of New York. Zimmermann proceeded to Freehold, N. J., on an early train Monday.

The New Racing Rules.

The racing board has made some very desirable changes in the racing rules. The rules in a nut-shell follow:

Athletic clubs will always be granted sanction when but two cycling events are on the programme; if more than two, the rule regarding confictions shall apply.

The national championship events shall be quarter, half, one, two and five-mile safety, one-mile ordinary, and one-mile tandem.

The national championships are open to any amateur in the United States.

The classification table is done away with; a man is classed according to his record for a particular distance.

All entries must be paid in advance, or the handicapper shall throw out the entry.

The handicapper is to have track privileges.

Breeches must extend to the knee.

Numbers must be placed on the back or right shoulder.

To Race from Des Moines to Chicago.

In order that Des Moines, Ia., may be brought to the attention of the people visiting the world's fair, the people living in that city have been figuring on a race from the Iowa town to the world's fair. They figure that they can get seventy-five men to enter, at \$15 per head, and that if they give three prizes—\$500, \$300 and \$100—they will have enough left to pay the necessary expenses. The projectors of the race think that such a scheme would advertise the

city better than if \$20,000 were expended in any other direction.

Expect a Big Meet.

The members of the Kansas division are anticipating an unusually large and successful meet at Fort Scott July 4 and 5. The track on which the races will be run passed the winter splendidly, and is now being put in condition. It will be ready for training by April 25. The Solid City Wheelmen, who are promoting the meet, are getting out a large and handsome programme, which may be had, together with entry blanks, by addressing Henry E. Harris, secretary.

Speedy Riding at Memphis.

The Memphis *Avalanch* says that after the decision of the half-mile race on the 11th, "the boys tried for Birdie Munger's record for a flying quarter mile, and succeeded by nearly two seconds. Joe Craig, Jr., secured first honors, riding the distance in 32 sec. flat. C. H. Maydwell next in 33 sec., and E. D. Craig made it in 33 3/5 sec. Unless these times were taken by the town clock, Memphis must be coming to the front.

No Challenge Yet Received.

A Buffalo dispatch to the *Sporting Gazette* of Wednesday stated D. H. Lewis had, on behalf of Buffalo, challenged Chicago to a twenty-five-mile team race, to take place at Detroit June 10; each city to be represented by twenty-five men. Up to the time of going to press, however, Captain Root of the Chicago C. C. had received no such challenge. Mr. Lewis wrote, however, that he would issue a defi this week.

Race Notes.

The new San Francisco cement track is nearing completion.

Joe Hanley, of Kansas City, broke the Kansas ten-mile record Wednesday at Emporia, doing the distance in 33 min. 38 sec.

E. M. Newman, of the Lincoln C. C., Chicago, has been nominated for handicapper in the eighth district, in place of J. M. Erwin, now on the racing board.

Iowa's annual field day will be held at Des Moines in June, and on this occasion several bicycle races will be witnessed. The semi-annual field day will be held May 6.

The Savannah Wheelmen will hold their spring races May 9 and 11, during May week celebration. The 10th being "Tyber day," everybody will go to the sea—to see the sea and let others see them.

Charlie Murphy informs the REFEREE that the Maryland Bicycle Club has presented him with a handsome clock as the prize he won at its meet last fall. Murphy is highly pleased with the prize.

Several of the road scorchers negotiated the Irvington-Milburn course last Sunday and pronounced the going excellent. Chairman Saltonstall and his committee are doing well with the preliminaries.

Elliott Burris, of the New York Belting and Packing Company's tire department, is getting to be quite a scorchers. He was seen pumping away towards Coney Island last Sunday in company of W. F. and Charlie Murphy.

The Rockford (Ill.) C. C. will hold several club road races this summer. John T. Burke has offered as a prize a gold medal, appropriately inscribed, the value of which is \$37. Any member winning the medal three consecutive times becomes the owner of the same.

AUSTRALIAN COLOR SYSTEM.

*Riders Distinguishable by the Uniforms They Wear—How it is Worked.*

The Melbourne Bicycle Club, which is the leading organization of Australia, has a system by which the spectators at a race meeting are enabled to follow the fortunes of the riders and to tell at a glance how they stand in the procession. In England it is a common thing to find printed on the programme the colors of the riders' uniforms, but as anywhere from one to a dozen men are liable to dress alike, the system is incomplete. Australia does better. Every rider registers his colors, as is done by horsemen. Unlike horse-racing, however, there is no trouble in deciding which is red, pink, green, carmine, cardinal, maroon, or any other like color; for there is a regulation shade in each color. Red, for instance, is adopted to the exclusion of all others of its class. No two competitors have colors alike.

So far the only colors used are white, black, red, blue, green, yellow, gray and brown. These colors refer to jackets, caps and sashes only—for example, white body, brown sash, black cap. All riders wear white breeches and black socks. The colors count above the waist, and sashes are required to be four inches wide. The jackets are made of satin and the effect is pleasing. The objection which some riders made to riding in satin—that it hindered speed—was soon forgotten, and all now use them without a murmur. The jackets are made tight. The method of transposing colors is almost unlimited, at least running into thousands of distinct sets of colors.

BILLINGSLEY'S RELAYS.

*They Will be Started From Illinois' Capital on May 26.*

Vice-Consul Billingsley of the Illinois division is hard at work upon his several relay rides, which will be started from Springfield May 26. Messages will be carried from the governor of Illinois to the chief executives of Wisconsin, Indiana, Kentucky and Iowa.

The route to Madison, Wis., has been divided into districts, passing through Mason City, Peoria and Sterling to the Wisconsin line, where the message will be taken by riders selected by Captain Warner, of the Madison club.

From Springfield to Indianapolis the route will be through Decatur and Tuscola to some point in Vermillion County, Ind., where Carl Fischer, of the Zig-Zag club, will take the message and have it sent to Indianapolis via Rockville and Danville.

The message to Frankfort, Ky., will pass through Indiana on account of bad roads in southeastern Illinois. From Indianapolis it will be carried through Columbus, Seymour, Scottsburg and New Albany, and there taken charge of by Chief Consul Watts of Kentucky.

The Iowa route will be via Beards-town, Rushville and Macomb. At Burlington George W. Tones, secretary-treasurer of the Iowa division, will take the message and see that it reaches Des Moines.

A Good Move.

The Indiana Bicycle Company is about to open a distributing depot in Chicago. The location will probably be 287 Wabash avenue. This move is for the purpose of delivering promptly to customers in and around Chicago. No wheels will be retailed.

Van Wagoner has entered the Martin road race and W. S. Campbell will probably do so.

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tyre and you are ready to start.

Showing the Tyre open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

## CYCLING CASUALTIES.

FEW AND FAR BETWEEN AS COMPARED WITH OTHER SPORTS.

*Important Change in League Rules—The Policeman and the "Noomatic"*  
—Zimmerman and His Friends.

The recent fatal accident to a cyclist at Wheeling, W. Va., was a very sad affair, but it must be acknowledged that cyclists as a class are remarkably fortunate people. In no other branch of sport that has as many participants are there so few accidents as in cycling.

It is seldom, very seldom, that we hear of a cyclist being run down, or colliding, or any of the other hundreds of accidents that he could meet with every day. On our crowded city streets, with their horse cars, their maze of trucks and vehicles of all descriptions, it would seem that the cyclist would be the especial mark of unkind Fate. But no. The cyclist seems to lead a charmed life, for he twists and turns and flies around so that he saves himself anything from a scratch to a broken neck.

Not a hunting season passes that does not leave in its wake the spirits of two or three brave men who men their death while going 'cross country. The yachting months bring us storms and high waves that carry off lives like the rolling away of pebbles on a sandy beach. The football, polo fields and a dozen other places where games of skill and perseverance and strength are played, help the great list of casualties. But cycling has only a small share in the work of limb-crushing and life-destroying.

The death of poor John Keys, the Wheeling cyclist, is but a bit of cycling flotsam in the great sea of field and water accidents.

## LIBERALITY IN THE L. A. W.

Old age, prejudice, ignorance—each or all are responsible for excessive conservatism. Progressiveness, energy, youth—these are the things that make a liberal policy often a wise and generally a successful one. The League of American Wheelmen is getting more liberal every year.

The racing board of the L. A. W. has made some changes in the racing rules that cannot fail to meet the approval of cyclists. The one that I consider the most important is the change in the rule governing the national championship races. The amended rule reads as follows:

The national championship races are open to any amateur wheelman resident of the United States.

The change in this rule makes the L. A. W. an organization of importance to every cyclist in the United States, whether he is a member or not. It is thoroughly liberal in spirit and quite in keeping with American institutions.

By throwing open the national championship races to every cyclist in good amateur standing in this country, a larger number of entries will undoubtedly be received, the ultimate result being that the L. A. W. will gain as members many racing cyclists who now have no interest in its work.

The racing board is growing wise with age and liberal with experience.

## OUR BRIGHT GUARDIANS.

The old narrow-gauge tire promises soon to hold the same relative position to the pneumatic that the ordinary does to the safety. And yet at the present time there are many people right in this great, big city of New York who haven't

the slightest conception of what is meant by "pneumatic."

Such a man I met a few days ago. He was a policeman. I met him in Central Park under rather unpleasant circumstances. One day last week when the sun shone bright and the mud was thick, I very foolishly started for a little tour through the park. While going down one of the numerous little hills I lost control of my pedals, got a bit rattled, my wheel slipped from under me, and—well, I took an unmerciful tumble right into a mud-puddle. And what gave a still greater tumble to my pride was the fact that just at that moment a saucy-looking young woman went sailing calmly by just as if a fall was some thing with which she had not the slightest acquaintance.

At that moment up came a policeman. "Say, young feller," he blurted out, "if yer hadn't been coasting down that hill yer wouldn't hev gone under. It serves yer right, see!"

This surely was heaping indignity on misfortune. I was mad. And anger made me do a brave thing—I talked back at him.

"See here, officer, I wasn't coasting down hill and it didn't serve me right. Don't you know that it's the easiest thing in the world to slip on a pneumatic?"

"Noomatic, is it?" And he looked at me in disgust. "Yer think yer smart, don't yer? Why don't yer say plain mud?" this with much emphasis. "Noomatic, indeed!"

He thought "noomatic" referred to the condition of the road.

This is not so funny as it is characteristic of the New York policeman.

## THE GABBLE OF FRIENDS.

Some of Zimmerman's friends are making statements that they can't prove.

For the sake of the sport, it does seem a shame that Osmond is coming to America just as Zimmerman leaves for England, thus precluding the possibility of their meeting in the English championships. That is no reason, however, why Zimmerman's friends, much against his wishes, I believe, should claim that the English champion is coming to this country because he is afraid to meet Zimmerman. This is the sportsmanlike manner in which some of the friends of the Asbury Park cyclist are discussing a matter of which they appear to be grossly ignorant.

We all know that Osmond is coming to America to attend the world's fair in the interests of a great English cycle firm. This firm will be an important exhibitor in the cycle department of the fair. Months ago Osmond was assigned the position of manager for the firm's exhibit, and as the fair is to open on May 1, it is quite evident that it is high time that Osmond were at his post of duty. The company of which Osmond is an employe is probably very proud of its cyclist-manager and would like to see him win every prize that is offered, but, as with all other concerns, it is dollars and cents first and pride a close second.

Zimmerman is too much of a gentleman and sportsman to make disagreeable charges which he cannot prove. While he very properly and very naturally believes himself to be a greater cyclist than Osmond (and we're with you, "Zimmie"), he also knows that Osmond is a plucky cyclist and good sportsman, who probably as much as anyone deplores his inability, through the intervention of business, to meet the American on his native soil.

It looks as if Zimmerman might well say: "Defend me from my friends; I can defend myself from my enemies."

## NOT LOYALTY, BUT FALSE DIGNITY.

The Chicago Cycling Club is rowing in dirty water when it tries to pull Barrett and Munger out of the waves of expulsion into which they were thrown by the L. A. W.

I have talked with many cyclists on this question and the general opinion seems to be that Barrett and Munger received only their just deserts when they were expelled by the league. They committed a breach of etiquette and faith in signing the application of Leeming, and if they had not been expelled summarily it would have shown a weakness on the part of the L. A. W. that would have meant future trouble for that body.

A club cannot be blamed for taking up the cudgels in defense of members that are being unjustly treated, but it is poor policy to condone a fault that breeds mischief and for which the culprits seem to feel but little sorrow. Barrett and Munger are not children that can be whipped for a fault and put to bed with an admonition "not to do it again." Both men knew well what they were doing, and so did the L. A. W. when it decided upon its course in their case.

Messrs. Barrett and Munger, you have taken a leap into troublous waters, and as long as you don't sink you should be left to get to land as best you can. And as for you, Chicago Cycling Club, don't be sponsor for the acts of two foolish members just because you have exalted and distended ideas of club loyalty.

It's a pretty bad mess, but the L. A. W. seems to come forth with clean hands.

BURKE.

## TO BE READY MAY 15.

*The Chicago Track Will be Built in a Hurry According to the Contractors.*

The signatures of the eastern members of the international race committee are all that is now needed to complete the preliminary arrangements for the Chicago track. Bids were submitted Monday as follows: Dolese & Shepard, \$7,350; Kissack & Muir, \$8,150; Dennis McNamara, \$8,300. The Dolese & Sheppard bid was accepted.

The contractors expressed a belief that the track would be ready by May 1, were positive of finishing by the 10th and forfeit \$100 per day after the 15th. From that time onward the track will be incessantly "worked" until race day.

## BUNNELL, OFFICIAL REFEREE.

*Appointed to that Position by the Cash Prize League.*

The appointment of O. S. Bunnell, of Philadelphia, to the position of official referee of the National Cycling Association is announced. The appointment will occasion some surprise. Mr. Bunnell is one of the most prominent of Quaker City wheelmen, president of the Tioga Athletic Association and of the Park Avenue Wheelmen, and chairman of the state racing board. He will receive a salary of \$3,000 and expenses. Mr. Bunnell is regarded as one of the most honorable men connected with cycling.

## The Centurion's Good Luck.

The Century Wheelmen, of Philadelphia, are fortunate in having within their ranks men who look on the club run as a great factor in cycling club life. Charles N. Carr, in order to create a spirit of emulation and to insure large turnouts, has donated a handsome cup, valued at \$250, which is to become the property of the person who wins it three consecutive years. In the event of a tie, the one having the greatest mileage for the year wins. At the end of each year the leader has his name inscribed on the cup. The fact that sixty-three attended the first club run is an indication that the idea is a well-conceived one.

## "ZIMMIE" LEAVES SAVANNAH.

*He is Given a Dinner and Actually Makes a Speech.*

SAVANNAH, Ga., April 14.—Zimmerman and Wheeler, "the kid," left on the steamer Kansas City for New York this afternoon. A large delegation of the Savannah Wheelmen escorted them to ship and bade them a fond adieu. It was Dan Canary's intention to have accompanied them, but a business engagement in Brunswick prevented. As the ship steamed down the river the balconies of all the offices along the river front were thronged by wheelmen and friends to yell "good-bye" and "God-speed" to Arthur Augustus and "the kid," who were perched thirty or forty feet up in the main rigging of the good ship. "The kid" clung tenaciously and seemed to be well content with only a short distance intervening between himself and the deck, while Zim climbed to the highest position, as he undoubtedly will in the coming races. As the ship sailed on and they gradually faded from view mid waving of hats and handkerchiefs, the wheelmen turned their faces homeward with many regrets.

They have made friends everywhere, and Zimmy said in his laconic way: "Boys, I am really sorry to leave here, you have made my stay so pleasant; but I will be with you at your meet in October, and many of the boys will come with me."

## DINED WITH THE CHAMPION.

The wheelmen gave a dinner to Zimmerman and Wheeler at the Bannon House at Thunderbolt Wednesday night. Thirty members of the club went out on a special car over the electric line at 9 o'clock. It was the intention to ride out over the shell road, but the rain interfered.

The dinner was served at 10 o'clock, and the party returned to the city at midnight. The dinner was like all wheelmen's entertainments, informal. The toasts were impromptu. Mr. Denhardt, vice-president of the wheelmen, and Mr. Lindsay presided.

Speeches were made by Henry McAlpin, Mr. Lindsay, Zimmerman (think of it!), and others. Zimmie thanked the wheelmen for the courtesy shown him during his stay here. Wheeler voiced Zimmie's sentiments. Canary made a speech. Songs were sung, jokes were cracked, punch was drunk, and the after-dinner hour was spent as only wheelmen know how.

## WILL NOT SECEDE.

The *Wheel* in its last issue stated that the meet at Cumberland Island would be for the purpose of organizing a league of southern wheelmen and withdrawing from the L. A. W. on account of the negro being admitted. Such an idea is all bosh and silly talk. While the southern boys do not like the decision, they are amply protected by recommendation veto clause, and can refuse to admit negroes in their divisions. Rest assured we do not fear the negro entering the league in the south. CRACKER.

## A World's Fair Item.

James Dwyer, aged 75 years, proposes to go to the world's fair from Genesee, N. Y., on a bicycle.

A new bicycle club has been organized in New York, under the name of the Thirteen Cycle Club. It was started with thirteen members. The dues are \$1.13, initiation fee \$3.13. The meetings are called on the 13th of every month at 8:13 p. m. The club has quarters in One Hundred and Twenty-fifth street. A Thirteen club was once formed at Philadelphia by a number of trade and cycle press men.

THE  
ROVER  
IS

Without Doubt the Most Popular Machine in America.

AGENTS WANTED WHERE NOT REPRESENTED.

For List and Terms apply—

J. K. STARLEY & COMPANY, Ltd., MAKERS, - COVENTRY, ENGLAND.

MENTION THE REFEREE.

When on my Cleveland wheel I'm seated,  
And up the street I swiftly glide,  
They say discussion grows quite heated,  
To know what wheel that man doth ride.  
And when my wheel I let them try,  
They exclaim, with look intent:  
"This is the wheel we'll surely buy,  
If we don't lay up a cent."

MENTION THE REFEREE.

## RETAIL TRADE LOOMING UP.

*Chicago Shop-Keepers Continue to Have Good Trade.*

The occupancy of the store at the south-east corner of Wabash avenue and Van Buren street by the Monarch Cycle Company, places the east side of Wabash avenue almost even with the west side as regards the number of cycle concerns. It is understood the Monarch company pays \$6,000 per year for the store in question. Some shake their heads, as if in doubt as to the success of such an undertaking, but there is no likelihood that the Monarch managers are going into a deal in which they are not reasonably sure of piling up some profits. To be sure the season is pretty well opened up and the company will miss some sales, but there are yet many good bicycle-selling months to come, and the Monarch company will probably average up with most of the other concerns.

## SMALLEYS AND RALEIGHS.

The Marble Cycle Company, 271 Wabash avenue, has been enjoying a good trade in the wheels of its own production and those made famous by the "Jersey skeeter"—Raleighs. Manager George K. Barrett says there is a good demand for the "Buck," the Smalley racer with those peculiar handle bars. The Marble company is turning out four styles this season, and the Chicago store is disposing of a goodly number. A fair trade is also being done in second-hand and cheaper grade wheels.

## THE ARIEL COMPANY.

Manager Plumb's dummy rider, "John," is still an amateur—a maker's amateur, however, and keeps up his long-distance ride for a medal, which is occasionally pinned to his sweater. "John" makes a good attraction, and Mr. Plumb gives the dummy credit for causing many inquiries for Ariels. The manager says business is good, that Ariels are better, and that the Chicago store will show handsome profits at the end of the season.

## SIEG SELLING IMPERIALS.

Charlie Sieg is busy at all times—he always finds something to do. He reports trade in Imperials excellent, and thinks his order for a thousand wheels, made a short time since, will have to soon be increased. He also reports a good business in Falcons, the handsome and well-made wheel put out by the Yost Manufacturing Company of Toledo. A large number of "Perfection repair outfits for the salvation of all riders of pneumatics" is being disposed of daily, not only to individuals but to the trade.

## FLETCHER'S CYCLE NEWS STAND.

The store of W. A. Fletcher & Co., who handle every cycling periodical known, is becoming about as well known as the cycle stores themselves, and in the last year the business has been about doubled. Mr. Fletcher is also doing a good storage business. Many prominent Chicago business men are now riding down these days, and find Fletcher's a convenient place to leave their wheels to be cared for and cleaned and adjusted. The Columbian Bicycle Livery concern, of which Mr.

Fletcher is manager, is expected to be in full operation in a few days.

## AT G &amp; J'S RETAIL PLACE.

Manager J. O. Blake says he has been doing such a large business that it is almost impossible to keep the Madison street store looking as nicely as he would like, but of course this is not said in a complaining manner. Mr. Blake says there are a good many heavy men who desire solid comfort in preference to the prevailing style of low handle-bars, stiff saddles and diamond frames, and as a result a large number of spring-frame Rambler have been sold. The new ladies' wheel has been in great demand, and Mr. Blake was unable to show one to the REFEREE man, when he called, on this account.

## SELLING MANY EXCELSIORS

J. Hoyle—he is never known by any other name than Hoyle—5 and 7 Madison street, has a large force of repairers at work, and although busy he can take care of all the work that comes his way. He says the trade in Excelsiors, for which he has the agency for several states, is excellent and in the neighborhood of sixty machines have been sold at retail alone, while the agents' demand has been large. He shows a 27-pound road racer which has been ridden many hundred miles, but seems to be none the worse for wear.

## CREDENDAS AND VICTORS.

W. A. Davis, in charge of Spalding's store, 108 Madison street, says they're keeping him as busy as a bee selling Credendas and Victors. The advertisements offering to sell wheels on long-time payments have brought many customers. Ladies have been numerous among the purchasers of wheels.

## BICYCLE CLOTHING.

Nearly all the bicycle stores are handling bicycle clothing—Stokes, Taylor, Featherstone, the Marble company, Spalding and G. & J.—while several are making it a specialty. Clementi & Barr are doing a splendid retail and jobbing trade in all kinds of clothing for cyclists; Perryman, the haberdasher at 43 Van Buren street, has a splendid line of sweaters, stockings, etc., and Stokes and Spalding are carrying their usual complete line.

## PHILADELPHIA TRADE BRISK.

*Good Business Being Done By All Dealers—Personal and General Mention.*

Lou Geyler, Hart's right hand man, has opened a new field for bicycle salesmen. He sold a wheel last week to an inmate of Kirkbride's Insane Asylum. He is now on the trail of a couple of probable sales in the Eastern Penitentiary and another in the Blind Asylum.

Landschut, the uptown agent for the Columbia and Hartford wheels, is doing a lively business. Being a practical mechanic, Mr. Landschut makes a specialty of repair work, and for excellency in this department has acquired a well-deserved reputation.

Charles H. Brazer, of the Philadelphia Cycle Company, on his recent trip through the state met with flattering success, and says that the prospects for a lively season for the Keating and the Fowler are very bright.

Captain H. D. Simmons of the Park Avenue Wheelmen has left the Common

Sense Bicycle Manufacturing Company and is now with A. G. Spalding & Bros. in the capacity of salesman.

"Bart" Rick is about the only one in this city who handles geared ordinaries. He rides one himself, the Crypto, and says it is the coming wheel. In the Royal Triumph safety he finds a rapid seller.

In addition to a brisk trade in Clevelands and Warwicks, the Central Cycle Company's repair department is in full blast, necessitating the employment of a large auxiliary force.

The Dalsen company's installment system and the excellence of the wheels it handles are bringing this house to the front as one of the most progressive up-town.

Charles Hunter has opened his new store on Broad street and Susquehanna avenue. He will handle the Senator and Challenge wheels. His son Walter, a prominent local flyer, is in charge.

In W. J. Green, John T. Bailey & Co. have a most excellent manager, and it is largely owing to his efforts that the Raleigh is meeting with great success.

Hill & Gilbert, 520 Chestnut street, who handle the Premier, expect shortly to open a branch store in West Philadelphia.

Harvey T. Uhler, the local representative of the Bidwell company, is meeting with flattering success.

A. G. Spalding & Bros.' "39-cents-a-day" scheme is proving a veritable bonanza for them.

## CHICAGO TRADE IN BRIEF.

*Movements of Traveling Men.—General Local Trade Talk.*

Procter E. Seas, who is disposing of Falcons on the road, was a visitor to the Chicago trade Thursday. He found business good in all sections, he said. The Yost factory, Mr. Seas said, would turn out in the neighborhood of 6,000 wheels this year.

The Abbot Machine Company has put on the market a neat little skirt weight. It is of lead, about as large around as a half-dollar, and is covered with plush. A clasp is fastened to it. All a lady has to do is to snap it to the skirt just before she starts on a ride.

H. G. Rouse passed through Chicago Thursday last on his way home from his Pacific coast trip. He said he had gained fifteen pounds in weight and was feeling as fine as a peacock.

## VINCENT CYCLE COMPANY ASSIGNS.

*Preferred Creditors Will Take About All the Assets—No Others Lose Heavily.*

BUFFALO, April 18.—The rumors of financial difficulties, which have been embarrassing the Vincent Cycle Manufacturing Company of this city, culminated yesterday in the announcement that a general assignment had been made. The Vincent company has been manufacturing bicycles in the factory of the Niagara Manufacturing Company, and the failure involves that concern and the lumber firm of George W. Smith & Sons as well. Philo A. Balcom and George W. Smith are the assignors, and the papers as filed show the amount involved to be \$100,000. Francis J. Hamilton and James O. Templeton are the assignees, and the step was taken for the benefit of the firm's creditors. The preferred creditors are the employees, and after paying them provision is made for the payment of six notes held by the Columbia National Bank, to A. C. Vincent, \$800 to Parker & Hotchkiss, attorneys, for money loaned. It is impossible to ascertain at the present moment what the assets of the concern will approximate, but it is generally conceded that they will be insufficient to reimburse the

creditors. On Friday last A. C. Vincent disposed of his interest in the Vincent Cycle Manufacturing Company, and the notes held by the bank represented his interests. The failure will not involve any other concern interested in the trade, as far as known at the present time.

The heavy snow-storm of Saturday last made business dull with the retailers, but its rapid disappearance under the warm April sun has left the asphalted streets white and dry, and sales were heavy to-day again. George F. Lutz & Son are making a strong bid for patronage with the Rambler and Fowler, and both prove very taking wheels. Austin Crooks, who will this year ride for the Columbia B. C., will ride a Rambler No. 4.

## STUDEBAKERS TO MAKE WHEELS.

*Good Grounds for Believing the Great House Will Soon Be in Line.*

There are good grounds for believing that the Studebaker Brothers Manufacturing Company will, not later than next fall, begin the manufacture of a line of bicycles. It will be remembered that a few months ago the Studebaker company was mentioned in connection with the purchase of the plant of a prominent bicycle maker. This reported purchase was afterward denied, but there is little doubt that the great wagon-making concern was actually prospecting, as it were.

The Studebaker company is already handling wheels, and two are now in the show windows of the Chicago house on the Van Buren street side. It has closed with A. W. Moore, representing William Reed & Sons, and the Manchester Cycle Company, and will handle the product of these concerns at its depots in San Francisco, Portland, Ore., South Bend, Ind., and Chicago. There are four links in this little chain, and we have two of them. The fourth is missing, but here is the third, the statement of a well-known traveling man for an Ohio cycle concern:

"I'll just make a little prediction—a prediction only, mind. Inside of a year you'll see the Studebakers making wheels. They've been looking over the field, I know, and I'm pretty sure they're not fooling away good time for nothing. Only recently they were talking of buying a factory, or, at least, the machinery and tools. and later on they were figuring on taking the output of a large concern. The Studebakers are in for making money in constructing vehicles. They know they can make money out of bicycles, because they've got money to back them. If they do attempt bicycle making rest assured they will have the best and will make a big success of the venture.

"It will be an easy thing for them to dispose of their output. They have hundreds of carriage dealers for customers and it would be an easy thing for such a big concern to convince its present agents that in the bicycle business good profits could be realized."

## MAKES CYCLE PARTS.

*The Eadie Manufacturing Company and Something of Its Goods.*

One of the most successful concerns manufacturing cycle fittings is the Eadie Manufacturing Company, whose works are at Redditch, Eng. There is hardly a part used in cycle construction, unless it be the tires, which is not made by the Eadie company. Frames are made suitable for racers as light as 19 pounds, as well as those for light and full roadsters, front drivers and ladies' machines. The latest for a ladies' wheel which this concern shows is the one known as the double straight tube frame, which is

It is Not the Loudest Voice  
That Always Proclaims the Truth.

---

It is the wee small voice of conscience  
That ever roars louder than a flood,  
And *will* be recognized because it speaks the *truth*.

First we would ask you to believe that we are honest, and  
then give heed to our *small voice*.

The Tourist is as good as any other bicycle, because it is  
made upon exactly the same principle and by the same hands  
that make the finest fire-arms—that is, it is just as carefully  
guaged in all its parts, and just as highly finished as \$175  
gun. Modesty forbids our claiming the Tourist to be the  
best. We leave that for our friends to say, but we believe it  
to be just as good as any other.

now being extensively used by those who make ladies' wheels at all. The cut shown herewith is that of the Humber pattern frame, at present the most popular design on the market. The frame for the front driver is of a particularly handsome design, the saddle-post socket being exactly perpendicular, so

that (with a right-angle saddle post) the saddle may have a shifting leeway of about eight inches.

The front driver gear made by the Eadie company is that patented by R. W. Smith, the company claiming that it is the lightest running and most scientifically-constructed gear on the market. The gear wheels are made from the finest tool steel and the teeth are cut by "cutters" especially designed for the purpose. The Eadie company places its fork-bearings upon the outside of the gear and the intermediate wheels are also bolted to the fork-side above the bearing to receive the thrust of the

crank and to overcome any lateral strains upon the gear, the makers arguing that if the fork-bearings were placed on the inside of the gear it would not be supported against such lateral strains and consequently there would be a binding of the pinions at each thrust of the crank, setting up enormous friction.

The Eadie company also makes hubs, chain wheels, lugs, pedals and pedal parts, brackets, heads, balls, cranks, cones, handle-bars, chains, forks and, in fact, everything that is needed in the construction of a bicycle—excepting the tools.

#### GENERAL TRADE NOTES.

*Interesting Paragraphs About the Trade in all Sections.*

There is a good opening for a first-class repairer with a full outfit of tools, with the C. H. Schub Cycle House, Chicago.

Agent Neuman, of Hooverstown, N. Y., reports a steady trade in Columbias, Hartfords, Hickories and Western Wheel Works' goods.

Whitten & Godding, Providence, have dissolved partnership. Mr. Godding takes the retail business and will handle the oiler and Saladee saddles, while Mr. Whitten will take the wholesale end of the old concern and handle Victors.

The James Cycle Importing Company reports that it has not lost a single agent from the list of those who sold its '92

machines and that it has received orders from every town where its machines went last year. The James people say that each week they have expected to "catch up" on their orders before the week is out, but that they are still behind.

The bicycle business is booming in Elmira, N. Y. Previous to this year Charles T. Stevens was the only exclusive bicycle dealer in that place. Now Homer Wilken runs a repair shop and carries the Fowler and a line of sunrises. D. W. Seely also has a large line of wheels. G. B. Wixson & Co. are reported to be selling more Columbias and Hickories than all others combined.

#### The Whitworth Company's Exhibition.

According to the *Wheeler*, the display of Whitworths at Chicago will be set off by a handsome mahogany stand, with office in centre, plate glass mirrors and fluted mahogany posts carrying the two signs on which the words "Whitworth Cycles" may be read. Thirty machines of the very latest pattern will be ranged along the 120 feet of frontage at the disposal of the Whitworth company, and among them will be found two full roadsters, three light roadsters, ten road racers (some with and some without brakes), five racers of a very solid-looking description, yet quite light enough for the racing man of average weight; five ladies' safeties (all with gear cases) built on the rectilinear lines now so familiar, and five No. 8 special path racers, for light and small men and those who pedal with exceptional lightness. In all, ten machines will be shown with gear-cases fitted. Machines will be found to suit the requirements of all sizes and conditions of men, the Whitworth company following its custom of making frames to suit the varying heights of riders. The whole will be under the supervision of F. J. Osmond.

#### A Row Over Election.

ST. LOUIS, April 17.—The local elections are now over and the Wheelmen's Political Association has come out pretty well, all things considered. With two or three exceptions, the entire wheelmen's ticket was elected. During the heat of the campaign the wheelmen were caused some little trouble by too much newspaper talk from riders who were not fully posted on the doings of the association. As a result of this kind of business charges were preferred against H. G. Anderson, a member of the Pastime Athletic Club, of conduct unbecoming a wheelman, his offense being that he had an article put in the local papers accusing the committee of fixing the ticket to favor the republican candidates, and stating that a letter from the democratic candidate for mayor had been made away with. In reply to the charges, Anderson entered suit against six members of the committee for \$6,000 damages. The board of officers of the Missouri division had a meeting last Saturday night and the whole matter was settled by Anderson withdrawing his suit, and retracting all statements made against the members of the committee. The charges against him were then dropped.

The first DeSoto trip of the season was made yesterday by seventeen members of the Cycling Club. Weather and roads very fine.

The Excelsior Cycle Club, of New York, composed largely of women, gave its first reception and ball at the Lyric Hall, 723 Sixth avenue, last Thursday evening, the affair being most successful. Mrs. M. L. Peck and Miss Emma Owen are to be congratulated in pushing this new comer among metropolitan clubs to the fore so quickly.

#### WET WEATHER ON THE COAST.

*Yet Cycling Flourishes, Despite Poor Roads—That Coast Team.*

PORTLAND, Ore., April 12.—The advent of the present wet season antedates my arrival in Portland by about three months, and, save for a few brief smiles from Hafred's god, the rain has been unceasing. The gentleman by whom I was induced—I mean persuaded—to come out here, had told me only of the beautiful summers, and for almost three months I have been waiting for a chance to ride my wheel. Within the city limits there are only two rideable streets; all the others would shock a much less critical eye than Isaac B. Potter's. The surrounding country, except a ten-mile run to the government barracks at Vancouver, can not comfortably be explored on a bicycle. Yet, in spite of the deplorable condition of both city and country roads, the bicycle is pushing itself to the front and gaining recognition here as in all other parts of the world.

The much-talked-of Portland racing team was an advertising scheme which was born in the brain of Mr. Olddealer, has been cradled in its birthplace ever since, and here it will die a natural death. There are, of course, several old and experienced riders, who bought their first wheels last fall, who would like to get a chance to try for the coast record, but owing to the lack of facilities, grit, race promoters and track, I can not predict national reputation for Portland flyers this year. It is too bad that the racing team idea should, after all this boasting, come to naught. Mr. Olddealer secured a pigeon from Chicago and tried to pass him for an eagle, with wild, reckless newspaper yarns about how high he had flown on a certain trial heat. But, alas, for well laid plans! The pigeon longed to be in his class. He knew he could not navigate the heavens with the eagle, and he would not run along the ground with Portland prairie chickens, so we are obliged to resign him to some other Bird in the nest from which he came. 'Tis better so; in a climate like this the aboriginal deformity would grow on him and he would soon become like yours truly.

A WEBFOOT.

#### A Test Case.

E. A. Savage, president of the Milwaukee Wheelmen, has sued the Northwestern Insurance Company for damages for the purpose of testing the law regarding the leaving of bicycles in buildings, during the transaction of business with occupants, in which signs are displayed stating that "no bicycles will be allowed in this building." From the evidence given it appears that Savage placed his wheel in the hallway of the Insurance building, while calling on an occupant of the same, and on his return found the machine missing. He reported the affair to the police, who were put to a great deal of trouble in their attempt to locate it, and finally succeeded in tracing it to the janitor, who had removed it from the hall and forgot all about it. The decision of the court is awaited with considerable anxiety by the wheelmen.

#### Freeman Lillibridge Dead.

The members of the cycling fraternity, particularly the older ones, will mourn the death of Freeman Lillibridge, which occurred at the home of his brother in Rockford, Ill., early Monday evening. About a year ago Mr. Lillibridge sold out his business and went to El Paso to recover his failing health. But his condition only grew worse and a short time ago he returned to his old home, accompanied by his brother-in-law. Mr. Lilli-

bridge was brought prominently before the cycling public when he introduced his anti-header handle-bar and the well-known Lillibridge saddle, though he was always a prominent figure in the cycling world. He was a hard working man, a first-class mechanic and stood well with the trade and cycling public generally. He was nearly thirty-nine years old, and leaves a wife and one child.

#### Will Not Secede.

ATLANTA, Ga., April 18.—At a meeting of the Capital Cycle Club to-night, J. H. Johnson, Jr., editor of *Wheeling*, offered the following resolution:

Resolved, That it is the sense of this meeting of the C. C. C., that the best way to obtain the rights of southern wheelmen regarding the negro question in the L. A. W. is for this club to join the league.

The resolution was carried by a large majority. In view of Johnson's recent "Call to Southern Wheelmen" in the editorial columns of *Wheeling*, his resolution will be a surprise to wheel papers throughout the country, as his "call" has created much talk, adverse and otherwise. A storm of adverse criticism seems to have very materially changed his views about the L. A. W. and the negro, as his position formerly was to secede from the L. A. W.

WINTIRE.

#### Last Act in M. A. C. Affairs.

On the front of the Manhattan Athletic Club house a canvas sign twenty feet square has been placed, which, in very large black letters, makes the following announcement:

"Receiver's sale, by order of the Supreme Court, under the direction of Andrew Freedman, receiver. Peter F. Mayer will sell at auction Wednesday, April 26, at 12 o'clock noon, at the New York Real Estate Salesroom, 111 Broadway, the property known as the Manhattan Athletic Club."

The auctioneer has issued catalogues descriptive of the property, and everything is ready for the last act in the club's career.—N. Y. Sun.

Thus are the mighty brought low. Impure amateurism and extravagance wrecked the once mighty amateur athletic power in America, and it will be a long time before the like of it will be seen again. The cycling portion of the club, under the direction of Messrs. Moneypenny and Betting, is striving to organize a purely amateur cycling club out of the wreck. May they succeed.

#### Michigan Meets at Detroit.

At a meeting of the Michigan division last week there was a lively contest over the location of the next state meeting, the Detroit and Cadillac clubs, both of Detroit, competing with Port Huron for the honor. A vote was taken and Detroit was selected as the place. Then came the struggle between the two opposing clubs of that city. Mr. Hines, for the Detroit Wheelmen, offered 25 per cent of the receipts to the division and the Cadillac Wheelmen guaranteed the division \$300. Mr. Hines presented his case in an able manner and made good points in favor of his club. Mr. Coquard championed the cause of the Cadillac club. The contest was abruptly ended on a motion of Representative Metzger that the division conduct its own meet. This motion was carried. An executive committee will be appointed to make the necessary arrangements. The action is in the nature of an experiment, never before having been attempted by the division. The date of the meet is left with the committee.

The third annual election of the Y. M. C. A. Wheelmen, of Dayton, O., was held April 13 and resulted as follows: Frank C. Massey, president; H. S. Johnson, first vice-president; A. P. Gilmore, second vice-president; Walter Allen, captain; Charles C. Fletcher, secretary and treasurer.

## JOHNNY BULL'S TRADE.

OPENING OF THE SEASON FINDS FACTORIES FAIRLY BUSY.

*Catalogued at Net Prices Front Drivers in Variety—A High Priced Machine—General Trade Cleanings.*

LONDON, April 5.—There is a marked increase this season in the number of firms offering cycles at strictly net prices for cash. Last year Goy & Co. introduced the Witch safety at \$73, including Dunlop tires and Carter's gear case. Its success, doubtless, was instrumental in causing the example to be followed. A. W. Gamage offers his Ilium roadster safeties, with Dunlop tires and Carter case, at \$68.50 net, which represents about the bottom price for similar value. George Norris, of Holborn Viaduct, also sells at net terms. James Rickard, of Kennington, whose light "Westminsters" I have before now referred to in favorable terms, offers pneumatic safeties at \$61.50, whilst several provincial firms are advertising net prices. Up to the present only two of the big houses have followed the lead of their smaller but more business-like competitors.

J. K. Starley & Co. have created no little sensation both inside the trade and amongst the riding public with their new Popular Rover safety, listed at \$73 net with Dunlop tires. In common with several other pressmen I have had the pleasure of testing one of the machines and must say that it is a wonderful value. In every respect, save weight, the new Popular Rover is a high class mount. It weighs 38 pounds with saddle, rat-trap pedals, brake, guards and tool-bag. Its bearings are of splendid quality, making it a very fast machine, whilst its finish certainly could not be surpassed. Wherever it goes the New Popular Rover will win praise for its makers, who have been doing tremendous business with it. I regard it as a huge bribe to retain custom for rear drivers, as the firm still frowns on the F. D.

## THE PREMIER CYCLE COMPANY

has been selling some first-class safeties at a ruinous reduction for net cash. The machines were the light model A2 Premiers, with 1892 Dunlop tires, listed at \$121.75, and offered for \$78. Doubtless the object of the Premier people is to clear off all stock other than the helical tube machines, for which the demand is so great that it was necessary to run the works all through the Eastertide.

## ABOUT FRONT DRIVERS.

It is very interesting to note the rapid evolution of the front driver. Last year we had geared ordinaries weighing from 36 to 40 pounds. Late in the summer the front driving safety became perfected and scaled about 31 pounds with light roadster tires, whilst a 38-inch racer weighed 29 pounds. To-day there are many light roadster front drivers about weighing from 27 pounds, whilst the latest racer only scales 22 3/4 pounds. It is a 34 inch, geared to 69, with the new ball gear, built by the Crypto firm for Dan Lacaille for path use. There is every prospect of the front driver making a decent show as a path-racing instrument this summer. Lacy Hillier is very cordially disposed towards the new idea, and will foster its extension by promoting f. d. handicaps at Herne Hill.

## WOOSTER &amp; CO., OF PECKHAM,

have built a path racer weighing 27 pounds, fitted with the new Crypto ball gear, gearing the 34-inch driving wheel

to 68. The back wheel is 23 inches and the little mount is fitted with Smith's detachable wired tires. It has been tested on the road as well as the track by a heavy rider without flinching. I tried it myself but didn't like the new gear and the very short base. Another firm, which is turning out admirably built front drivers, is the Mag et Cycle Company, Green Lanes, N. Its light roadsters weigh 29 pounds, and are fitted with a new and original hollow fork crown, which, whilst being very strong, saves much weight and looks well. Of course the Crypto gear is used. I recently mounted one of these machines and found myself at once comfortable and at home upon it. The back wheel was 20 inches and the machine steered perfectly.

## THE AVERAGE CLUB MAN

when selecting a new mount is apt to feel shy of risking the train of trouble which light roadster tires sometimes bring upon him. He wants a light machine, and perhaps willingly dispenses with a brake, or even mud-guards, but he likes to feel he can ride over the roughest roads without much risk of seriously gashing or frequently puncturing. He also dislikes the discomfort of a small and none too easy saddle for the sake of saving a pound in weight, unless he be a racing man. Now there is no reason why these comforts should not be enjoyed in conjunction with moderate lightness. So thought I, when I decided to discard my geared ordinary and buy a light and lowly front driver. Since then I have received the new mount and given it a severe testing by riding it on an Easter tour up and down the mountains of the Derbyshire Peak district.

## BESIDES BEING MUCH FASTER

than my former machine, it is thoroughly safe and comfortable. As it is quite the latest product of the Crypto Cycle Company I will not hesitate to describe the mount. The front wheel is 38 inches, geared to 63, and the back 22 inches. The wheel-base measures 34 inches. The wheels have tangent spokes and 1 3/4-inch full roadster Boothroyd tires. The rake of the front forks is only 1 inch, but the rider sits 13 inches behind the driving axle, taking the measure to the middle of the saddle. The handles are 26 inches, brought back at right angles at the horn ends. The cranks are 6 1/2 inches in effective length and the distance of the saddle above the ground is 46 inches. Consequently a rider

## SITS ONLY TWO INCHES LOWER

than on a 46-inch geared ordinary, although his feet are four inches nearer the ground. This is explained by his position being more vertical on the racer pattern f. d. than on the geared ordinary. The weight of this machine, with its roadster tires, full size Brooks B 90 saddle, guards to both wheels, and rat-trap pedals, is exactly 34 pounds. Fitted with light tires and semi-racing saddle it would weigh 31 pounds, or for path work, only 28 pounds. These mounts admit of perfect adjustment to suit the arms or legs of any rider, and are pronounced to be more elegant in appearance than any f. d. model hitherto produced.

## RENOUF'S NEW MACHINE.

Some months ago P. L. Renouf described to me his patent front driving gear, which allows of the fork ends being rigidly tied together. Recently Mr. Renouf was down on the Ripley road with a 38-inch front driver, fitted with the gear, which bore the Beeston trade mark on its perfectly straight backbone. The machine had a 26-inch back wheel, and in consequence of its

long wheel base steered very steadily. I tried it and it certainly ran very easily. Lewis Stroud also rode it, and spoke highly of its qualities as a racing mount, it being possible to sprint suddenly upon it, as upon an ordinary.

It is reported that Mr. Travers is about to leave Mr. Marsden's Sunbeam factory at Wolverhampton. The Sunbeam design H has been selling very freely up in London. It is an up-to-date, good looking safety, with barrel hubs, Sunbeam inflated tires (Boothroyd pattern), and Carter's chain case. It weighs 37 pounds and sells for less than \$73 net cash.

Although the Elswicks, made by Newton & Co., Newcastle, are

## GREATLY ADMIRER BY LONDONERS

at Gamage's depot, their price is rather too high to induce a very brisk sale. The firm's mounts will be heard of on the path this year. Building racers, much below the usual weights, to riders' orders, is a specialty with Newton & Co. Immense labor and innumerable tests are bestowed on these triumphs of art, which run up to a costly figure, as much as \$195 being sometimes charged.

Both the Whitworth and the Raleigh firms are extremely busy, and were recently working with double shifts.

William Radford, who, it will be remembered, came from the Beeston factory of the Humber firm, is about to leave the New Howe company at Glasgow. His knowledge has been of immense service to the company, which will find it hard to fill his place. There has been a very

## BRISK DEMAND FOR NEW HOWES

this spring, but, except where deviations were required, prompt delivery has been the rule.

During my recent visit to the Midlands I saw some of the latest work of Nottingham firms. Humber, Cripps & Goddard have made a reputation for their light roadster and path safeties, called the Nelson, which has already extended south of London. The firm possesses all the secrets of building light mounts which are not only fast but rigid and durable to a degree difficult to credit. The Nottingham Machinists' Company turn out some marvels of lightness. J. H. Ball was met riding a safety under 21 pounds in weight, with circular ball pedals weighing 12 ounces per pair. Ball weighs 10 1/2 stones. The Nottingham riders affect local mounts almost to a man. Although their own immediate roads are good, during their frequent trips into adjoining Derbyshire they have ample opportunities of testing their light mounts severely over steep, rough surfaces, which ordeal they (the machines) stand with success.

STANLEY,

## Scarcity of Wheelwomen.

Cycling for women must be away behind in Australia, if the following from the Melbourne *Standard* proves anything:

"Last Saturday was the first occasion in Victoria that we have had the extreme pleasure of seeing ladies taking an active part at a cycling meet, and very nice they looked, too, as they pedalled along on a four-in-hand cycle. One of the gentleman riders was an editor of a commercial journal. I met some couple of lady cyclists after the meeting, who intimated that had they known that others were going to take part in the procession, they would have been pleased to have joined in. Now that a start has been made in the right direction, I hope Australian ladies will come forward and make cycling as popular for their sex as it is in England and America.

The Plzen C. C., of Chicago, was incorporated Wednesday.

The Select Few Cycling Club, is the title of a Newark, N. J., organization.

The Utah division now has but sixty members, but hopes to have a hundred within the next month.

A party of six Jeffersonville, Ind., cyclists will tour to the world's fair, starting some time in May.

Kilpatrick, the one-legged trick rider, rode down the west steps of the Capitol building at Washington Wednesday.

H. H. Everett, instructor at the National Gymnasium, Elgin, Ill., expects to arrange a number of bicycle races this season.

The Carolina C. C., of Wilmington, N. C., has decided, by the adoption of a resolution, to fine any of its members found riding on sidewalks.

The Wheelmen's Pavilion Company, Chicago, was incorporated Wednesday by S. H. Dempsey, James B. Herron and E. L. Brewry; capital stock, \$2,000.

The people of Richmond, Ind., are considerably stirred up because their mayor has taken to riding a bicycle—and they say he is becoming a scorcher, too.

At Mobile last week Thursday, Jack Prince defeated two horses in a twenty-mile race in 59 sec. The horses changed off every mile, but Prince beat the last animal out by a length.

The newly-elected officers of the Star C. C., of Hamilton, O., are as follows: President, Ben E. Geyer; vice-president, Louis Schmitt; captain, Charles A. Bercauw; secretary and treasurer, L. E. Deinzer.

The Miles B. C., of Eau Claire, Wis., has elected the following officers for 1893: President, G. W. Dunham; vice-president, W. W. Jackson; secretary, H. Schlegelmilch; treasurer, M. Cousins; captain, William Luebkehan.

Appleton and Berlin, Wis., are jealous of each other. The editor of a paper in the latter place has gone to the trouble of proving that Berlin, with 4,500 people, has fifty bicycle riders, while Appleton, with 15,000, has only eighty-two!

At the fourteenth annual meeting of the Brooklyn B. C. the following officers were elected: President, I. B. Potter; vice-president, W. L. Sinn; treasurer, H. E. Raymond; secretary, J. C. Van Doren; trustees, E. Skinner, J. H. Hobby and C. E. Loses.

Colie Bell, the old-time racing man, was united in marriage to Miss Minnie L. Grove, formerly of Elmwood, Ill., on March 29. Mr. Bell is with the F. S. Heath Cycle Company, of Minneapolis, and is well known in bicycle circles as a rattling good salesman and rider.

The Waseca (Minn.) Business Men's Bicycle association has been disbanded and a new league club of twenty-seven members has taken its place. The following officers were elected: President, T. P. Leonard; vice-president, F. V. Hubbard; secretary, W. G. Gallien; treasurer, C. Caldwell; captain, D. S. Cummings.

The Dayton (O.) B. C., has elected the following officers for the ensuing year: Captain, W. H. Bell; first lieutenant, Charles Hilkey; second lieutenant, Frank Rudy; directors, Clem Hall, A. H. Callahan, F. J. Bowen, E. H. Houck,

# WHITWORTH CYCLES

... U. S. A. 1893.

HIGHEST GRADE ONLY.

We are now prepared to place our celebrated wheels before American buyers. During the past season the enormous demand for the Whitworth, in Great Britain alone, absorbed practically the whole of our output. We have now quadrupled our manufacturing capacity and can guarantee prompt and regular deliveries of contract orders for the United States.

THE WHITWORTH is the leading English Racing Wheel, and is the mount of F. J. OSMOND, J. W. SCHOFIELD, J. H. ADAMS, M. B. FOWLER, and many other English riders.

The exhibit of the Whitworth at the World's Fair will be one of the finest displays of cycles ever made.

We propose to give control of large territory to responsible agents, and will carefully consider applications addressed to

The Oakland (Cal.) ordinances compel riders to carry lighted lamps after 6 o'clock at night. Recently a cyclist was arrested for violating the ordinance. The justice who tried the case said it was ridiculous to compel a man to carry a light in almost broad daylight, when it could do no possible good. He therefore discharged the wheelman. The prosecuting attorney said he thought the ordinance would have to be amended, for it now reads that all bicyclists must carry lanterns after 6 o'clock, which is nonsensical in the summer time.

### The Enterprise.

The Enterprise, made by Perry, Richards & Co., Wolverhampton, England, holds several records for road and path. It is a first-class wheel in every respect. The manufacturers in February last moved into larger premises in order to

be in a better position to handle their extensive trade. They are anxious to secure a good agency in this country, and they are satisfied that the Empire would meet with a hearty reception once it were introduced. In this issue is shown a cut of the Enterprise racer.

### Loses Its Chief Designer.

The New Howe Machine Company has recently lost its chief designer, William

Radford, who resigned his position. Mr. Radford was works manager and chief designer for the New Howe company, and for many years held a similar position with Humber & Co.

### OUR CHAMPION.

NOTE:—The following lines were written after seeing Will W. Windle ride his famous mile, 2:02 3-5, at Hampden Park, Springfield, Oct. 7, '92.  
W. LUCIUS HERVE.

"Bring forth the wheel," Will Windle cried,  
"Bring out the men—I'll try a MILE—  
And tell them, too, that they must ride,  
Our speed to-day will cause a smile."

And from those curtained rooms there came  
Will Windle's wheel, with rims of blue,  
And racing men of speedy fame—  
And Windle saw that they would do.

Anon, he mounts the pigskin seat,  
With smile of mingled joy and wrath,  
He vows "The records I will beat,  
And still be victor of the path."

"Make ready, there, ye men of speed."  
"Close up! Be quick!" was Asa's word,  
"Else every one of you will need,  
A rubbing that you can't afford."

Far up the stretch they take their start—  
Come riding grandly to the mark,  
And e'er the first man loses heart  
The "triplet" takes him round the park.

And bears him onward past the half.  
Another leads him at a pace  
That would check the coyote's laugh,  
And send a madness o'er his face.

Just see them! Watch them! Do they fly?  
The "pacer" brings him round the bend,  
And like a whirlwind sweeps him by  
The 'timers' station at the end.

And do you ask the time he made?  
Come, really now were you not dead?  
There's not a man nor boy nor maid  
Who has not that great record read.

The same saw they from watches three—  
"Two Minutes and Two Seconds 'Ray,'  
And let THREE-FIFTHS the fraction be."  
And thus Will Windle holds the day.

That there may be avoided the coming season troubles which were so frequently experienced by cyclists last season who rode on *butted end* air chambers.

### The Outer Cover

is made with four laced pockets, each ten inches in length, formed with flaps folding over the laces, to prevent rim-cement working through the lace holes, damaging the air chamber and protecting the laces from the rim-cement, contact with which always stiffens them and renders them unfit for use after repairing a puncture.

Our Road Whippet is as light as any tire of equal strength of the class which is cemented in the rim. We guarantee it will not burst on the road under the rider.

## RECENT ENGLISH INVENTIONS.

## New Ideas in Tires, Machines and Other Devices.

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from March 8, 1893, give notice in the prescribed form of such opposition.]

## A NEW DETACHABLE CRANK.

No. 4,209. D. Marshall's "Improved means for securing velocipede cranks on their spindles." March 3, 1892.—The illustration represents a part sectional view of the crank, the head or boss of which is similar to that of the ordinary or Starley detachable crank, but instead of the usual D-sectioned pin a round taper pin (C) is used. The pin has a head (a) at its larger end, or is otherwise formed so that it can be turned by a spanner or other device. The smaller end is screw-threaded at b, the screwed part being preferably parallel instead of tapered. The pin (C) passes transversely through the correspondingly tapered

hole in the crank (A) and bears against a hollow or slot formed in the axle. The smaller end of the hole in the crank is tapped to receive the screwed end (b) of the pin (C). When the pin is inserted in the hole and turned the screw-threaded end of the pin engages with the tapered end of the hole thereby drawing the taper part of the pin tightly in the hole and against the hollow or slot on the spindle, thus securing the crank to the spindle. When the pin becomes loose it can be adjusted by screwing the pin further in. This crank was exhibited by Thomas Smith & Sons of Saltley and by W. Bown at the national show.

## NEW TIRE FROM NEW YORK.

No. 7,859. E. Siltberg's "Improvements in connection with tires and wheels of velocipedes." April 26, 1892.—The improvements consist in the means for and method of attaching the outer cover of an inflated tire to the rim of the wheel and consists in constructing metal tubes the edges of which do not meet so that continuous slots are formed. Each tube (A) is bent lengthwise so as to form a circle approximately coinciding with the rim (E). The ends of the tubes (A) are not joined but left free. The outer cover (B) that surrounds the air tube (C) is provided with a bead (D) on each

edge the bead being formed by attaching a wire or cord to each edge of the cover. The outer covering (B) being so joined as to form a continuous band, a notch is cut through each edge at a given point, so that the bead may be threaded into the bent tube before described, the material forming the outer cover passing through the slot formed by the open edges of the tube. A tire being thus fitted to each edge of the tire fits within and practically fills the slot in the tube (A), the cover (B) may be placed in position so as to surround and enclose the air tube (C), thus firmly holding the outer cover and the air tube when the latter is expanded by inflation. The tubes form metallic edges for the outer cover, the beaded edges of which are firmly retained within the said tube because the slots are only sufficiently wide to allow the fabric to pass. The tubes (A) may be made in two or more sections lengthwise, care being taken to ensure that the cut in the beading does not come opposite the joint between any two sections. Several modifications of the principle are described.

## THE PREMIER GEAR CASE.

No. 6,472. W. Hillman's "Improvements in velocipedes." April 4, 1892.—The principal feature of novelty in this gear case is, that when fitted to a rear driven safety bicycle it forms an integral limb of the frame instead of being built

on to an already complete frame; this allows of a reduction in weight and obviates the necessity of having part of the frame passing through the case, as it generally does, that is, in at one side and out at the other. The illustration represents a plan view of the back stays of a safety. The case is constructed of two end castings (a, b) while the central part (c) is built of thin sheet metal. The front end casting (a) consists of one complete inner side (a1), a band (a2) connecting it with a narrow flange (a3) on the outside. The casting is formed with an internally screw

threaded boss (a4) by which it is screwed on to the end of the bracket (d). The outer side of the casting is closed by a plate (e) through the centre of which passes the crank axle (f); the plate (e) is fixed to the flange (a3) by screws. The back casting b is formed with a socket (b1) to receive the lower end of one tube of the back fork. The back casting is formed with a longitudinal slot to permit adjustment of the back wheel. An adjusting screw (l) with nut (m) and cross-bar is provided. The rear end of the case is formed with a removable end piece (n) to permit access to the adjustment. The portion (c) of the case is fixed at its ends to the castings (a, b) by screws or rivets and an internal stay (c\*) is fixed in the forward end of the part (c), thus completing the case and enabling it to serve the purpose of one of the back stays. A plate is used to cover in the hole formed in the case to permit of the entry of the hub (h) the said plate moving with the wheel when it is adjusted. The removable end piece (n) is fixed accurately in place by screws (n1) to the rear end of the part (c) of the case and by screws (n2) to the part (b). The case may be detached by taking off one crank and removing the end cover (n) and the driving wheel. Instead of forming the part (c) entirely of sheet metal, the upper and lower edges thereof may be formed of trough sectioned metal and the sides of leather or other suitable material. This case is being regularly fitted as a standard pattern to one of the Premier safeties for this season.

## Recent Patents Granted.

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

494,556, canopy attachment for velocipedes; Thomas W. Doyle, Holyoke, Mass.; filed March 6, 1892.  
494,575, pneumatic tire; John D. Keating, Springfield, Mass.; filed May 23, 1892.  
494,581, vehicle wheel; Joseph P. Mantou, Providence, R. I.; filed Aug. 22, 1892.  
494,611, pneumatic tire; Charles K. Welsh, Coventry, England, assignor to the Pneumatic Tire and Booth's Cycle Agency, Ltd., Dublin, Ireland; filed Dec. 7, 1892.  
491,741, gearing; Abraham M. Forrester, Washington, D. C.; filed March 6, 1893.  
494,803, bicycle; Frank D. Cable, Toledo, Ohio, assignor to the Yost Manufacturing Company, same place; filed Sept. 16, 1892.  
494,804, chain adjustment; Frank D. Cable, Toledo, Ohio, assignor to the Yost Manufacturing Company, same place; filed Jan. 5, 1893.  
494,830, bicycle; Leander Berry, Haverhill, Mass.; filed Aug. 22, 1892.  
494,870, velocipede; Gotthold Langer, St. Louis, Mo., assignor of one-half to Henry C. Withers, Carrollton, Ill.; filed Aug. 8, 1892.  
494,885, shaft-bearing cone; Albert Perkins, Chicopee, Mass., assignor to A. G. Spalding & Bros., New York, and the Lamb Knitting Machine Manufacturing Company, Chicopee Falls, Mass.; filed Sept. 5, 1892.  
494,947, wheel tire; Calvin Wynn, Toledo, O., assignor of one-third to William H. Standart, same place; filed Oct. 8, 1892.  
494,962, drive chain; Francis Ley, Derby, Eng.; filed Aug. 5, 1892. Patented in England Dec. 13, 1887.  
495,210, stand for bicycles; Isaac D. Smeed, Toledo, O.; filed Aug. 22, 1892.  
495,218, elastic tire; William J. Coe, Liverpool, England; filed Nov. 16, 1891. Patented in England Nov. 14, 1890.  
495,254, clock attachment for bicycles; Simon C. Levy, Philadelphia, Pa.; filed June 9, 1892.  
495,277, vehicle tire; George F. Stillman, Syracuse, N. Y.; filed Oct. 8, 1892.  
495,293, velocipede; Jean Bertoux, Fontainebleau, France; filed Jan. 11, 1893. Patented in England Nov. 18, 1892.  
495,391, bicycle saddle; Frank D. Cable, Toledo, O.; assignor, by direct and mesne assignments, to the Yost Manufacturing Company, same place; filed Aug. 9, 1892.  
495,412, bicycle saddle; Richard S. True, Syracuse, N. Y.; assignor to the R. S. True Company, same place; filed April 4, 1892.  
495,454, device for mending pneumatic tires; Henry H. Gummings Malden and Robert Coven, Cambridge, Mass.; filed June 13, 1892.

## TRADE MARKS.

CHAT BY PHŒBUS.

*An Easter Sunday Encounter — Riders Coming Out—Breakage Insurance.*

I witnessed a very gamey scene on Washington boulevard Easter Sunday. A couple of Halsted street toughs were playing ball in the street, and had become very much interested in their game. One of them, a very large young chap with a mug that would make his fortune on the Bowery, made a run after the ball just as a cyclist came slipping along up the street. The bicycle man made his calculations to pass the "gent" from Halsted street all right, but the ball struck the curb, and the man who wanted it stopped short and stooped over to pick it up, his back being turned to the swiftly-approaching cyclist. "Then came a burst of thunder sound," followed by "a dull, sickening thud;" the man from Halsted street described a probolo over the bicycle and rider and fell on his head with his heels on the back of his neck. The bicycle man made a wild swerve and came down like a second Icarus, 'mid a tangle of tubing and spoke wire, bent rims and bursted tires. The two men slowly arose, dusted themselves, cast rueful eyes at torn garments and ruined bicycle, and limped slowly toward one another, and then there was war. I rather admire fluent language, and had an idea that I had heard some very good examples of ability in the line of speaking one's mind, but the "gent" from the back district was a corker, and the bicycle man was no slouch. The Easter devotees were coming home from church, and were no doubt greatly edified by the familiarity with scriptural quotations evinced by the two belligerents. However, after much talk and many head and fist shakings, the couple parted without entering into direct hostilities. The bicycle man

picked up his smashed machine and disappeared down a side street; the gent smoothed out his battered tile as best he could and departed, muttering maledictions on the blooming heads of all bicycle riders, and peace and good will reigned once more. I am willing to bet a new hat, though, that the passers-by got a deal more fun out of the street racket than they did out of the Easter ceremonies.

\*\*

The few bright spring days that we have had are bringing out the riders and, incidentally, the buyers also, for which display of providential favor the powers be thanked. It will not be as hard for some of the "row" to pay their rent this month as it was last.

\*\*

Schemes for corralling the nimble penny are thick as grass in June-time. I had a new one sprung on me yesterday, namely, insurance for myself and my bicycle against *breakage* for the term of the fair—either of us to be repaired by the nsurance company in case of damage—all for the nominal sum of \$2, payable strictly in advance, and only one breakage to be paid for by the company on each of us. How is that?

PHŒBUS.

*Do Not Chew Toothpicks.*

A Liverpool cyclists' outfitter advertises "cyquills" as being invaluable to racing men. It is nothing more nor less than a quill about three inches long. There isn't a doubt that quill is much better than wood, or even pebbles. The latter one is apt to swallow, and wood, when chewed until in splinters, is apt to do a great deal of harm to the respiratory organs, inasmuch as the sharp little pieces are apt to lodge therein.

## INTERESTING FOREIGN FACTS.

Germany's Seven Best—Cyclists' Tax Reduced—The Wheel in Africa.

The table which follows shows the prize winnings of the seven best racing men in Germany during the season of 1892:

|                         | First. | Second. | Third. |
|-------------------------|--------|---------|--------|
| Willie Tischbein.....   | 25     | 16      | 5      |
| Otto Beyschlag.....     | 23     | 6       | 10     |
| Alexander Verheyen..... | 21     | 4       | 3      |
| Alvin Vater.....        | 21     | 2       | 1      |
| August Lehr.....        | 18     | 2       | —      |
| A. Opel.....            | 14     | 6       | 11     |
| M. Gehrig.....          | 8      | 12      | 5      |

Lehr is a member of the Frankfurter Bicycle Club to which most of the above mentioned belong, besides being members of the clubs in their own cities. It is considered a recommendation for a cyclist to be a club member in the principal city of sport in Germany. Lehr rode in twenty races last year, winning eighteen first and two second prizes. He is the most famous of German riders, and in '88, '89, '90 and '91 held the 10,000-metre championship of Europe. A great future is before Verheyen, who is only nineteen years of age, but who can look back on a great many victories. Zimmerman is of the opinion that Verheyen is the best German racer he has met up to date.

The French cyclists are congratulating themselves that the senate has reduced the tax of 10 francs (\$2) on each wheel, which the chamber had fixed, to 5 francs. Although the bill passed with a majority of seven votes only this is a proof of what union is able to reach, and one must acknowledge the perseverance which the cyclists showed in sending resolutions and protests to the senators.

The bicycle sport, even in Africa, seems to increase. Only two cities in the dark continent—Tunis and Cape Town—were known as places where the sport was cultivated, but the recent trips of cyclists from Tunis to the capital of the former domain of the Pharaohs have caused Egyptians to imitate the example. Clubs have been established in Cairo and Alexandria. The latter place has already had a race, which attracted great attention. It is hoped that the Egyptian government, which has already equipped messengers with wheels (as Japan has done), will take care to have good roads, and then there will be no impediment to the further spreading of the sport in that country.

Charles Terront has left Paris for Rouen, his future residence, where he will represent one of the large English bicycle firms.

Several large races are on the tapis in Italy—the 7th and 11th of May, in Turin; the 28th of May, in Genoa, and the 1st and 4th of June, in Alexandria.

Several long-distance races take place in Europe next month. On May 27 oc-

## SENSELESS LEGISLATION.

Beneath that marvelous, gold-capped dome which covers the capital at Hartford there are to be found a number of persons by whose act the wheelmen of Connecticut have lately been subjected to a law so outrageously unjust as to render the suggestion that the state house be at once transformed into a refuge for imbeciles entirely within the bounds of common sense. It seems incredible that a state whose people have given us such excellent advocates of the freedom of the people as Morgan G. Buckley could have so far forgotten itself as to seat a class of men so pure of thought as to deem unholy a game of "mug pound," or a bicycle race in which a gold medal is the only consideration involved. Yet, as we understand it, a bill recently passed makes it illegal to promote or engage in any kind of competition in which a prize of any description is offered.

The law was introduced for the purpose of suppressing gambling, but is found so far-reaching as to include many innocent amusements in connection with which that vice is unknown. It is to be presumed that, had greater publicity been given the bill at an earlier date influence could have been brought to bear which would have prevented the passage of so sweeping a law, and even now, though much time will be consumed in the attempt, there surely can be no doubt that a law, so manifestly unjust, will be repealed. Reports so far received, however, indicate the probability of the abandonment of all racing fixtures, during the early part of the season at least.

It is a ridiculous state of affairs and particularly to be regretted because of its occurrence in the state which gives the league its present president. The bill can only be compared with some of the hay-seed productions introduced from time to time for the purpose of driving wheelmen off the face of the universe.

It is understood that Connecticut will at once proceed to raise a crop of thistles in the state house grounds and to place in effect a law which will permit the trimming of the aural appendages of such creatures as may, with reason, be expected to be benefitted thereby.

## MILLER'S TRYING POSITION.

Mr. Miller, of the racing board, is in a trying position. He has refused to grant Boston sanction for a race meet on May 30 for the reason that he had already sanctioned a meeting at Worcester. Boston having appealed to the executive committee, that body has adopted a resolution which is in effect an instruc-

tion to Mr. Miller to sanction the Boston meet. Mr. Miller must either act upon the suggestion or—what? Possibly that alleged threat of decapitation would be carried out.

Unless Mr. Miller is inclined to be docile he may take it into his head to ask what right the executive committee has to interfere in the matter. It is the duty of the committee to "interpret" the rules of the league. Having done that and decided that Mr. Miller's decision was correct, its duty seems to have ended. But instead it authorizes him to break one of the rules of the racing board for the purpose of satisfying the clamor of a number of gentlemen in the Massachusetts division. We fail to see what authority the committee had for its action—desirable though it may have been. If, on some technicality the committee can show authority for its action—and some league officers have a habit of interpreting rules to suit themselves—it only goes to prove, once more, how excessive is the committee's authority. The league has a board for the special purpose of governing racing matters. No other committee should be allowed to interfere.

## A DELIBERATE FALSEHOOD.

Under no less positive caption are we able to place a statement made in the latest issue of the *Bulletin*, as follows:

"The whole aim and object of these men—Miles, Berger, Wardrop, et al., is to deprive the league of a national weekly organ."

This, so far as the REFEREE is concerned, as well as the claim that when the league *does* get a decent official organ the "three-dollar-a-year" fellows will have to get out of business (this cue, by the way, was furnished by Mr. Bassett in his "official editorial"), is a deliberate, and we think, in view of the showing heretofore made in these columns, a malicious misrepresentation. We submit to the executive committee and the league at large that it is an outrage that the organization should furnish unscrupulous persons with the means to continue this course of action. The committee virtually aids and abets these attacks so long as it permits them to appear.

Once more,—the REFEREE desires to see the league furnished with an organ which possesses something beyond the merit of an ordinary theatre programme and whose management shall be in the hands of men capable of conducting it with intelligence and veracity.

## THE L. A. W. CONSTITUTION.

The signs of the times seem to indicate that even in Connecticut members are awakening to the fact that the league's money is being spent and its energy wasted in the present method of conducting the roads bureau, and a special meeting of the assembly has even been suggested. These same people are just awakening to the fact that too much power is given the executive committee, a fact which has been pointed out more than once by the REFEREE and admitted by at least one member of the committee.

The calling of a special meeting means the expenditure of a lot of money and may not be desirable. Should one be held during the summer, however, the constitution should be overhauled by the rules and regulations committee before hand. It needs it badly. Proposers of amendments will please submit diagrams at the same time! It is a safe wager, however, that the autocratic president will not call a meeting unless forced to do so.

It is pleasing to note that Osmond has been received, so far, with the utmost

cordiality. One good turn deserves another and should the English rider get in form while here any victory which may fall to his share will be greeted with the same generous approbation as was extended to Zimmerman by the good old British public. Here's hoping that he may.

We respectfully suggest to "Ariel" in our humble "three-dollar-a-year" style the desirability of curtailing that "passing hour" to a half, or even a quarter. A "passing five minutes" would be ample.

## Some Training Advice.

A little advice from an old professional at this time on how to get into condition for track and road events, might be of use to those of the young division who would become racers. For track racing the best place to commence work is on the track, as long rides on the road are liable to get the rider into a steady slogging condition and which it will take a long time to overcome and regain that last quick sprint which is necessary to good work. When there is no track to train on, a good smooth piece of road is the next best thing, and a sharp spin of from five to ten miles a day, for two or three weeks, is better than a go-as-you-please slog of twenty to fifty miles, which some riders essay. After much preliminary work the track should be the place to train on.

Train in company, if possible, and vary the work of pacemaking. From ten to fifteen miles a day will be found plenty of work, and for people with little surplus flesh to get rid of five miles will be found enough. A steady ride over the course should be taken once a week, at least, to get accustomed to the work. Towards the end of the training a sharp sprint, varying according to the rider's constitution and condition, should be accomplished daily, always finishing strong.

For track work the same methods should be employed, and if training for a short race the same relative work should be followed. Leave tobacco in all forms severely alone and live moderately, eating judiciously and only strength-producing food. Sleep at least eight hours per day and do your work, if possible, after breakfast or dinner—say two hours after meals. If time permits a sharp walk of a mile or so before breakfast is a good thing. Learn to pedal fast, but also learn to stay, and avoid training nostrums. For rubbing purposes alcohol or whisky, with a little arnica mixed, is the best thing. Rub down well with both hands and a coarse towel. Use common care and sense in your training—that's all that is required to get fit.

## Roodhouse, Ill., Notes.

A large delegation will attend the Pike County tour of the Missouri division May 7.

Roodhouse will be represented on the racing circuit by E. E. Anderson and possibly others.

George E. Briggs sold his mount and said he was done wheeling, but the first robins find him again buying a wheel and out with the boys.

A party of Roodhouse cyclers took a 65-mile ride to Jacksonville and return via Winchester Sunday. One of the feather-weights broke both frame tubes squarely off and had to walk in a couple of miles.

Dealers report good trade and lots of new riders.

Last year's pneumatics are back numbers. Everybody wants the latest, consequently second-hand wheels are cheap.

The ladies are taking to wheeling in this place. We hope to see many more of them on wheels before the season is out.

## WILL MILLER GRANT IT?

*League's Executive Committee Authorizes Him to Sanction Boston Meeting.*

BOSTON, Mass., April 25. (Special)—The Boston people have won a glorious and bloodless victory, and that famous sanction for the Waltham races can be expected to arrive at any day or moment. Chief Consul George A. Perkins yesterday received a letter from the secretary of the executive committee which contained a resolution passed by the executive committee April 21, 1898, a copy of which is appended:

"RESOLVED. That the action of Mr. Miller, of the racing board, in interpreting rule "B" as mandatory on him to grant sanction to the first applicant, when in his judgment and opinion a conflict of dates and interests has been shown as between applicants for sanction for race meets on the same date was correct. In view of the fact, however, that a precedent had been established in over-riding the rules in a case where a division was one of the applicants, and not the first, that Mr. Miller will be authorized in rescinding his decision and granting sanction to the Massachusetts division for a race meet on May 30."

It was only three weeks in coming, but the decision eventually arrived. The sanction is, however, still missing. Meantime the A. C. C. is working like a beaver for the success of its meet.

## Waukesha-Milwaukee Road Race.

No action has, as yet, been taken by the Milwaukee Wheelmen relative to the admitting of colored wheelmen to compete in their annual road race. The question was recently settled as far as the Pullman is concerned, but whether colored men will be allowed to ride in the Waukesha race is a question of considerable annoyance to many who contemplate entering. It is time the matter was settled. If negroes are excluded why not keep out the Japs and Chinamen who are, it is said, desirous of competing. The latest donation to the prize list of the Waukesha road race is a donkey, the gift of Oscar E. Binner. As Binner intends the prize for the last unfortunate who crosses the tape, and as he has expressed a determination of riding in the race, it is safe to assert that the animal will continue to remain in the Binner family.

## Will the Track Be Ready.

The Boston people will not and cannot expect to have a first-class track at Waltham for the Decoration day races, as they have only just commenced to build. The contractor Mr. McClintock, awaited the REFEREE representative at Boston, last week, to get some points on track building. He stated that after consulting some fifty amateurs only one agreed with the REFEREE man's specifications, and that was Willie Windle. He will build on the lines suggested by Windle and the REFEREE man, but can scarcely expect to have a fast track for May 30. Boston is as usual very slow in racing matters, and it will take a year before the track will have settled properly and be fast.

## What Will Windle Ride?

It is rather queer reading to hear of W. W. Windle going to ride a Humber whilst a partner in the firm making his own wheel, the Windle! What's the matter with the Windle, Willie? Nevertheless, the REFEREE is told by a little bird that Windle is to ride a wheel this season made very near Springfield, Mass. Willie is coy, Willie is cute—and very diplomatic.

## THE ROADS TO SUCCESS.

GOOD QUALITY OF ONE NECESSARY  
TO ATTAINMENT OF THE OTHER.

*A Practical Illustration Given—Increasing Interest and a Desire for Road Improvement Exhibited in All Sections.*

So universal is the interest in good roads that the subject of highway improvement has become a favorite topic for discussion, not only before boards of trade and chambers of commerce, but at many of the social and trade club meetings in Massachusetts, and, in fact, throughout New England.

At the last banquet of the Boston Boot and Shoe Club, which was given at the Hotel Brunswick on April 20, the speakers devoted their remarks entirely to roads and road building, the interest of the great reform being ably supported by Colonel Albert A. Pope, who was followed by Mr. George A. Perkins, a member of the highway commission and chief consul of the Massachusetts division of the L. A. W.

The highway commission has, without doubt, done some excellent work during the past year, as will be shown by its report which is now in press. Starting out with no data whatever, it has collected a large number of photographs of the roads throughout the Commonwealth, and these having been systematically arranged in a series of albums, can be consulted at the state library. This would be a good plan for other states to follow. A cursory review of these pictures is enough to convince one of the lamentable condition of the country roads in the old bay state. If

such highways are permitted to exist here, what can we expect of the comparatively newly occupied territory of the west? Yet from the latter region comes the greater portion of our bread stuff not only for home consumption, but for exportation as well, and in no portion of the United States would passable highways be of greater value in securing the shipment of produce at reasonable expense.

The highway commission has also carried out a commendable policy in giving numerous hearings throughout the state in order, if possible, to get a general consensus of opinion at the best methods to be pursued in carrying out the road reforms. The people, particularly in the western counties, were found to be quite favorably inclined to the idea of having the state interfere and aid in the construction of roads.

In France according to the reports of most trustworthy statisticians, the population is nearly stationary while wealth is enormously on the increase, but in New England there is a great decrease of population in the agricultural districts attended by a decided shrinking in the values of real estate. To be sure, the cities and larger towns have gained enormously in both.

There are various causes operating to bring about the result. The great development of our industries with the consequent growth of large manufacturing centres, and the craze for adventure in the west draw many young people from their country homes. Would this be the case if the highways were put in such condition that the life of the farmer would be less isolated? Why is it that so many of the farms in Massachusetts and Maine are deserted or occupied only by the old people who cling to them from love of home or because they are too aged to start anew in life? As

the grand work of highway improvement advances it will be seen that these farms will increase in value and yield so good a living that the young people will not so easily be tempted from their ancestral abode. If a practical illustration be wanted, let us examine the district along the St. Lawrence river extending eastward from Quebec and contrast with it the condition of the region about the town of Freedom, Maine, which is perhaps a fair sample of the back country settlements. In the former place the population is comparatively dense and the soil productive while in the latter, according to the U. S. census, the population has decreased from 940 in 1850 to 510 in 1890. There has been a decline of \$14,000 in the value of the real estate in the past twenty years. Take a drive across country in any of the older states and see how invariably thrift and cultivation follow the line of good roads.

For some fifty years the people have been pushing ahead and perfecting the great systems of railroads with their subordinate branches, which latter have been looked to as feeders. The problem now is to supply these branches with the produce of the land. This cannot be accomplished till the road communication is perfected. In other words roads are the proper feeders to railroads, and the sooner and more forcibly this fact is impressed on the public the more rapid and effectual will be the work on our common roads.

KUKLOS.

### *Columbian Guards on Wheels.*

Colonel Rice, of the Columbian Guards, is thinking of mounting a squad of men on wheels for emergency cases at night. The colonel told a REFEREE man that it would be impossible to use wheels in the grounds during the day, but that at night it would be an easy thing to move

the squad from one part of the world's fair grounds to another if the men were on wheels. Messengers may also be mounted.

### *Played Poker for a Shirt.*

Dan. J. Canary, race meet promoter, trick rider and Victor traveler, floated into Savannah recently with a delapidated looking "white" shirt and collar. Paying Zimmerman a visit Dan bemoaned the fact that his clean clothing would not be ready for twenty-four hours and he did not want to increase his already extensive outfit. "Harry Wheeler has a shirt left," said Zim, "why not swipe that. Harry is down town." So Dan went through Harry's linen and helped himself to collar, and cuffs also. Then he went down town with the amateur champion and sat down to a pleasant little game of poker, and lost all his change. Pretty soon the party met just before dinner. Wheeler spotted his finery on Dan, and immediately demanded his goods, stating he must have a clean shirt. "I'll tell you what, we'll play a game of freeze out for \$1.50, and if I win I'll keep the shirt; if you win I'll pay you the amount and give you back the shirt." The game commenced and in ten minutes Wheeler made off down town on a hunt for a gentlemen's furnishing store.

### *Secure Sleeping Apartments at the World's Fair.*

Rooms can be secured at the National Columbian Wheelmen's Association club house and hotel. Prices \$1 per day and upwards. Address, L. D. Taylor, secretary, 959 West Madison street, Chicago.

Thomas G. Allen, Jr., and W. L. Sachtleben were the guests of the St. Louis C. C. Saturday night, when a "Kaffe Klatsch" was given in their honor.

## Uses of the Sabbath.

While visiting the Quaker city recently, the writer listened to a lecture by the secretary of the cash prize league on the Sunday racing question. He took me to task for calling a halt on Sunday racing, but did not advance an argument that could change my opinion. As I have said before, it is not a matter of religious scruples, I use the seventh day in various ways, often in work, but I do think that cycle racers should steer clear of the Sabbath race meet, for it will surely lower the sport in the eyes of myriads of good citizens. There is no right minded person of liberal ideas who can see any objection to a man or woman taking a ride on Sunday in city or country, where the trees and flowers bid them welcome; but save us from a racing Sabbath. A. G. Spalding is to be congratulated on keeping the Chicago professional ball game free from Sunday games. In the end it paid him.

Of course times have changed, and the old Sabbath of say a hundred years ago was quite a strait-laced affair compared with our present Sabbath. More liberality prevails, and the American apprentice would probably rebel were he lugged off to church with his boss twice a day for four years, as the writer was—yes, and it was part and parcel of his apprenticeship indentures. After close confinement of six days, behind a counter or desk, one longs for pure air and a change. In this the cyclist is greatly favored.

I was pleased to see these views endorsed by that "man of the people," the popular author and playwright, George R. Sims (Dagonet), in our bright namesake, the *London Referee*. Mr. Sims has a host of readers and is noted for his liberal and generally correct views of matters of vital interest to the people. He says:

It is a coincidence that, just as Sunday closing is being discussed by the bigots, the question of Sunday opening should bring together an important assembly, presided over by the chief magistrate of the city of London. "Is Sunday played out?" might very well have followed the recent discussion with regard to the staying powers of Christianity. The old Puritan Sunday is absolutely played out. It is no more in accordance with the needs and necessities of our modern civilization than the old Mosaic sanitary laws, the strict adherence to which nowadays would probably bring the adherent into conflict with the police.

That it is wise to have a day of rest in every seven need not be disputed, but there is nothing in Scripture to justify the Sabbatarian view of the weekly holiday. The English Sunday is the most pharisaical institution in the world. Every innocent kind of amusement, every sensible form of recreation, is considered unholy. We may not go to picture galleries or to sacred concerts or indulge in healthful games without being denounced as heathen. If we did cease work—if we absolutely rested on the day of rest—the humbug of our present restrictions would not be so apparent. But we don't rest. The church sets an example of increased activity; and domestic servants and many of our public servants have to work just as if it were a week-day. The Sunday that we are compelled to observe to-day was not a Sunday intended for cities and mighty hordes of men with only one day's release from monotonous toil.

God, we are told, rested on the seventh day, after creating the world in six. But it may be said without blasphemy that He has never rested since. Certainly no true Christian can believe that God rests on Sunday nowadays. The church itself devotes the whole of Sunday to special invitations to the Almighty to continue His work. The cry from every pulpit and from every congregation is for God to do His work then and there. What sort of a God would he be who absolutely

rested on Sunday—who declined to save souls or to listen to prayer or to continue the direction of the world because it wasn't Monday or Tuesday or Saturday, but Sunday? If God left off work on Sundays, it would be giving the devil a rare chance. And the moment we acknowledge that God does do his work on Sunday, we destroy the foundation on which the Sabbath of the bigot rests.

We don't want the Continental Sunday. The theatres and the music halls need not be opened, but surely the picture galleries and the museums might, and in any duly licensed building properly conducted, sacred concerts might be allowed in the interests of the hundreds and thousands of hard-working people to whom Sunday is at present

sitting on a tree or at a clergyman walking home from church.

If it is a question of the employment of labor, the Sabbatarian hasn't a leg to stand on. The hours of the attendants can be arranged in a museum quite as well as they can be in a church, and it is no harder for a man to sit on a stool for a few hours in a room in the British Museum than it is for a man to blow the organ three times a day in a place of worship.

In the above Mr. Sims does not encourage Sunday shows or race meets. Yes, give us museums, art galleries and quiet rides abroad, but frown down the Sunday race meet. Preserve the day of rest, called the Sabbath, from cycle racing, even if we can't prevent balloon ascensions.

\* \* \*

## The New York Cycle Show.

The question of a cycle exhibit in con-

## UTILIZING THE KANGAROO.

The French cycling paper, *Veloce Sport*, asks the question why we have not, in a time when boxing kangaroos are shown everywhere, had a cycling kangaroo. Inasmuch as the animal has a good constitution for such purposes, the paper gives several illustrations showing to what purposes the beast might be put: A letter carrier, military messenger, a trainer or pace-maker. Mrs. Kangaroo can keep a set of boxing gloves stowed away in the sac used for carrying the young, and could catch the cyclist who fails to pay his wheel tax, and if he refused, a few cuffs would bring him to time.

ent a day of desolation when it is not a day of drink and gluttony. Something sensible ought to be done at once.

There was once a well-known lady in Devonshire who absolutely refused to allow the church on her estate to be opened on Sunday evening, because she said it led to so much immorality among the young people attending evening service, and she was a devout churchwoman. Most religious people would object to her argument, but it was quite as sensible as that of the Sabbatarians, who object to the Sunday opening of museums and public galleries. It is a monstrous absurdity that our great educating, humanizing, national collections should be closed to the nation on the one day that the nation is free to visit them. No one who thinks such places wicked need enter them, and those who don't think them wicked can be doing no harm by patronizing them. There can be no more harm in looking at a stuffed bird than at a live one; at a painted man than at a real one. The glass case and the gilt frame cannot possibly make that which is harmless harmful. Up to the present even the Sabbatarians have refrained from hinting that is demoralizing or irreligious to look at a sparrow

few of the members of the club are reputable newspaper men, and their connection with it enables the organization to come at the business and general public of New York with a scheme apparently backed up by the entire newspaper guild.

The demands made in behalf of the approaching fair are not actually accompanied by threats of newspaper retribution, but in most cases the person approached is made generous by an undefined dread of what may happen to him if he isn't. With the demand is coupled the assurance that the Press Club is a philanthropic institution, which takes care of its members in sickness and buries them when dead.

This is a humiliating reflection on the members of the newspaper profession. The great majority of them, and the most reputable of them, do not belong to the Press Club at all. They are self-respecting, and make their own provision for sickness and death, or, at all events, do not appeal to the general public, directly or indirectly, to do for them.

There is a growing knowledge among the public that the Press Club idea, not only in New York but elsewhere, is strongly worked, and for their own advantage, by men who either are not newspaper men at all, or whose connection with the press is very slight. It will be a good thing when this knowledge becomes general.

This is right; newspaper men should not pose as beggars, or use their position to squeeze money out of the public, which is already supporting them generously.

\* \* \*

## He Put More Spice in It.

Roland Hennessy undoubtedly meant well when, last week, he advised Boardman to give his readers a little more interesting matter in the *Recorder* and less trade notices, which have practically filled his columns of late. Boardman took the hint readily enough, as the following proves:

Did it ever occur to any one who reads the cycle newspapers how full of news they are? Of course, it is not to be expected that a weekly paper can in its reports come any nearer than ten days of an occurrence unless its importance forces them to it. Yet the editors (?) and their bucolic writers, under this or that pseudonym, fill their copy with advice to others, how to do the business, or what to write or something equally as uninteresting. A writer whose name smacks of bottled goods dates his letters from this city, and with a desire to be in the swim uses two Celtic names for noms de plume, thinking perhaps the prestige of Tammany will give him prominence.

I, who have been eighteen months intimately connected with cycling in this city, never a day out of it, have yet to come in contact with this oracle of cycloedom. Where is he perched? His tit willow songs are melodious, but tiresome. First he says the *Recorder* 'is not read by wheelmen. Is it true, boys? You know, and so do I, that more riders read the cycle news of this column every day than read his scribbles in a month. If he wants different reading there are other journals in this city. He says he buys the *Recorder* every Sunday. Good. What's more, who has helped cycling most, he or the *Recorder*? What meat does this, our modern Caesar, feed upon that he has grown so great? Do you know? No? Then I'll tell you. Over in the Quaker City is an organ with a long-levered crank, whose writers are stationed in this city. He is one of them. With the others, his mission is to whip the outsiders into the ring of their scheme. Come in or you'll get "roasted" at every sweep of the pen. Their rule is not to build up, but to destroy. But how laughable are their feeble efforts. To further help their cause, sporting writers on the dailies are being promised lucrative positions if they will boom their scheme. But here is the best part of the way in which the work is done. All the while they are prodding one they tell him: "We are your friends." Then turn and give him a back-handed slap. Are these friends? Not on your life. Another feature of these worthies, "Cognac" and "Willie Buncombe," is their cry for assistance. Within the week both of them have asked my aid to secure something needed in their business schemes. The latter, nice fellow, has the bicycle trade privilege of the most worthy Press Club Fair. That manufacturers and dealers would find there a good opportunity to exhibit their wheels is true enough, but even at that they decline to negotiate with the "nice fellow."

So he comes to me, tells of his philanthropy and says: "Here's a chance to make a few dollars. You secure them, for I know I can't before I start." This is a nice fellow. The other Dromio wants to boost himself into place by getting into the professional ranks. So he will, I don't think. Now, let me say my little piece: The L. A. W. is the largest sporting organization in the world. It is a clean, healthy organization, working without gain for the cause of good roads. Upwards of fifty applications to membership have been sent in through the New York *Recorder* since last November; so much do I believe in it. Its officers and members are men of standing in their com-

Life is sorry to see the New York Press Club engage in a scheme that savors of blackmailing. A

MENTION THE REFEREE.

munites. Yet, their chief and his cohorts must attempt to tear it down. That they can't is a foregone conclusion. There is not one amongst them that would not give a good deal to be in good standing in the league. And so good gentlemen, Egan, Hennessy and Troy, I bid you good day, leaving as a parting shot such names as follows, to whom I respectfully refer as to the merits of the work done by the cycle department of the Recorder: Elliott Mason, J. D. Cheever, Wilson, Myer & Co., G. Minturn Worden, Elliott Burris, L. B. Whympier, Col. A. A. Pope, George H. Day, Charles W. Walker, Abbot Bassett, F. D. Ray, Alex Schwalbach, Boston Post, Sam Miles, "Senator" Morgan, O. S. Bunnell, M. L. Bridge-man, George Macdonald, J. Bretz, W. Measure, and all the 720,000 readers of the Recorder.

A little advice is good sometimes, and the man who heeds oftentimes profits. But Hennessy cares less for the cash prize than Boardman, the writer does, and is too clever a boy to be termed a "dromio," and will resent being called "Cognac," for Roland is strictly temperate, though his namesake does make very excellent brandy. Boardman is too busy with his many schemes to write much, but should not kick those who would be his friends. He hasn't over many.

\*\*\*

#### The Champion's Plans.

Arthur A. Zimmerman was a caller Friday, and was looking remarkably strong and well, and ready to meet Osmond—at the banquet—the same evening. "The boy" was in the best of spirits, spoke cordially of all racing men, and corroborated Joseph McDermott's statement that London would be the first point they would stop at, but only for a day or so, when they would proceed to Brussels. Mr. Parker, an art student, was with Zimmerman and will accompany him abroad. Zimmerman laughed when he read a Chicago paper whose Milwaukee correspondent intimated that Zimmerman and his friends were responsible for the delay said to have been shown by Mr. Raymond in issuing San-

ger a certificate of purity. Said Zimmerman:

"It is a pity that Sanger has such a lot of fool friends. They will eventually make him extremely unpopular if they keep up their present foolishness. Why should I or my friends fear Sanger's European trip? I trust Mr. Sanger's friends will be satisfied after we meet in England.

\*\*\*

#### The "Dead Easy's" Danger.

"Major" Billy Atwell, who was given his military title by the REFEREE, is getting anxious. He fears the new comer in Boston clubdom will rival his own creation, the "Dead Easy Club." Atwell called a council of war of his followers to treat with the "Mustys," a new concern of limited liability, but of a very suggestive title. The Post, of Boston, was the cause of the consternation in the Dead Easy ranks, through printing the following:

A new club, called the Musty, has been organized, composed of a number of new riders who learned at McCune's riding school. There are seventeen of them and they express a desire to rival the Dead Easy Club, whose idea seems to be to enjoy themselves. The new club will wear white sweaters, embroidered on which will be a pewter mug, over which the word "Musty" is worked.

Fancy white sweaters with an ale mug for a frontispiece! Is it any wonder the popular little major got excited? The emblem of the Dead Easys is a Mumm's-extra-dry bottle, worked in amber buta pewter mug, whew!

\*\*\*

#### Zimmerman's New Departure.

The following appeared in the English supplement to last Saturday's Spiel and Sport: "Zimmerman and the American trick rider, McAnney, have joined forces and are appearing together. Needless to say; they are making a success of it."—Bicycling News.

There is a decided need for some good

gardeners on some of the English papers. The "news" they print of Americans and America is not only second-handed, but oftentimes most unreliable. Fancy the champion of the world doubling up with a trick rider at this or any other time of the year!

#### The Indianapolis Meet.

Messrs. Hay and Keck, of Indianapolis, were in Chicago over Sunday taking in the world's fair grounds and the cycle stores. "We're going to have the finest meet on the international circuit, not barring Chicago," said Mr. Hay, "and we've got the greatest tournament manager, Fred Patee, at the head of the committee." Mr. Hay said the track was in better shape than ever, and that the grand stand had been entirely finished and the enclosure improved. The double track electric road now runs to the grounds, thus offering excellent transportation facilities.

#### The Boston-Chicago Relay.

All arrangements are now complete for the Boston-Chicago relay, which starts Monday. The promoters hope to get the message through inside of a hundred hours. The heavy rains of the past week have put the roads in horrible shape. Van Sicklen and Bliss will carry the message from Kensington to the fair grounds and deliver it to Governor Altgeld.

#### The Clarksville Race Off.

Chief Consul Holm, of Missouri, writes the REFEREE that the fifty-mile road race, which was to have taken place May 8 at Clarksville, Mo., has been abandoned because of a lack of encouragement. The Pike County tour, he adds, will be held on Sunday, May 7, and will be better attended than ever before.

#### A New Milwaukee Dealer.

The latest addition to the retail cycling trade of Milwaukee is the firm of T. L. Paine & Co. An excellent likeness of the senior member of the firm is presented herewith. Both T. L. and Harry J. Paine are well known and among the most popular wheelmen in the Cream

T. L. PAINE.

City. Their friends in the city are legion, and their success in the cycling trade is assured. The store is centrally located, at 87 Wisconsin street, in the heart of the business centre. The firm makes a special feature of the Arrow, made by the Century Cycle Manufacturing Company, of Indianapolis, and will carry a fine line of medium grades.

#### Secure Sleeping Apartments at the World's Fair.

Rooms can be secured at the National Columbian Wheelmen's Association club house and hotel. Prices \$1 per day and upwards. Address, L. D. Taylor, secretary, 950 West Madison street, Chicago.

# WELCOME! FAREWELL!

OSMOND ARRIVES JUST AS ZIMMERMAN LEAVES AMERICA.

*The Former Tendered a Welcome Reception and the Champion is Bidden God-speed By Hosts of Friends.*

NEW YORK, April 22.—Armed with a pass from Collector Hendricks, of the port of New York, and an assurance from Dr. Jenkins, of quarantine fame, that he would see that no cholera germs attacked him, a REFEREE representative was prepared to meet F. J. Osmond when he stepped ashore from the Britannic. Last Thursday night the REFEREE man set his alarm clock and retired at 8 o'clock in order to be up at 5 Friday morning to meet the English crack. He was to be at the barge office at 5:30 to board a revenue cutter with the boarding officer, James Little, to go to quarantine to see that the Britanic passengers did not escape paying Uncle Sam duty on anything they might have hidden up their sleeves. It was a stormy morning and a pall of fog completely enveloped New York bay, hiding our charming girl, Libby, on Bedloe's Island. "A nasty morning, sir," was the comment of an old tar as the REFEREE early bird hopped into the barge office.

"Have you heard from the Britannic?" was asked the young man at the telegraph instrument who is notified when steamers are sighted off quarantine.

"Not a word, and the chances are that last night's storm will keep her outside the hook, or perhaps drive her out of her course," he replied.

"But the storm was on her back, wasn't it?"

"Yes, it was, but captains fear thick weather. She may be in to-day, but I doubt it."

The REFEREE man sat for two whole hours, and then went to breakfast. On returning Mr. Little told him that the boat would be first sighted at Fire Island, and it would be three or four hours before she would drop anchor in quarantine. Then he hid himself to the postoffice and went to the man who receives the news from Fire Island when boats are sighted. After trotting up to the office of this gentleman with a handful of good cigars, he bribed him to send word to the REFEREE office when the Britannic was sighted.

## EVERYBODY ANXIOUS.

In the meantime Zimmerman, Wheeler, Troy, a committee of the Riverside Wheelmen and a few dozen other enthusiastic cycling citizens, had called for the news, and the song all the morning was—"has she been sighted yet?" A telegram was sent every hour to Roland Hennessy, who was cooking stuff for the banquet, for fear he would get panic stricken and let the soup spoil or meat burn, and to be sure he was at his post at 2:30 the REFEREE man boarded an elevated train and called on him. He was anxious, yet confident that Osmond would arrive. A mutual friend, who owned a tug, said if things came to the worst, he would "litch up his tug, go down the bay and get a chap who looked like Osmond, and bring him ashore; this banquet must come off."

"See here," said Roland, "that last telegram from you was a corker. You gave me an idea. We must switch around a bit, and instead of making it 'Welcome to Osmond' and 'farewell to Zimmerman' we will make it 'Farewell, Zimmerman' and 'welcome to Osmond,'" and Roland's

handsome face fairly beamed with the new idea.

"Why, yes," I returned, "we've got Zimmie, but have yet to catch Osmond."

## OSMOND IN SIGHT.

On my return to the REFEREE office there was a telegram from James Little saying, "come down to the barge office at once," also a note from my faithful postoffice friend, which read, "The Britannic sneaked by Fire Island without our man seeing her—she was off the hook at 2:35." Running to the telegraph office I wired Hennessy: "Hurrah! Keep the soup simmering; Osmond is in sight—thank heaven!" Then with Zimmerman I hustled to the barge office, only to find the cutter had left thirty minutes before.

Learning that the Britannic would dock at 6 o'clock, we posted a bulletin at the REFEREE office and raced down to the White Star pier. There was her majesty's namesake floating proudly towards the dock. John Prial with commendable patience, and more time at his disposal, had stood at his post at the

night, a goodly crowd was at the Cunard pier Saturday to see Zimmerman and Joseph McDermott off for England and wish them God speed. The REFEREE man was on board early and chatted with the champion's father and mother, Mrs. McDermott and some Freehold, Manasquan and Asbury Park friends. Others were there—F. J. Osmond, John Prial, L. C. Boardman, Sydney Bowman, George S. MacDonald, Mr. Woodhead, C. A. Dimon, W. B. Troy, Harry Wheeler, George C. Smith, Fred Atkins and several of the champion's lady admirers.

## PLAYED JOKES ON ZIM.

Knowing that without Mascot John Backus, Arthur would be at a disadvantage, the REFEREE representative had procured a cute looking Chinese doll, which was presented with strict injunctions that it be carried to all race tracks abroad, and on no account should Zimmie start in a race unless the baby was there. Osmond presented the champion with a suspicious looking package.

MISS UPTOSNOFF.—I have just purchased a new wheel, and isn't it a beauty? The manufacturers furnish a guarantee with each one of their make that the lady who rides it will become engaged before the season is ended.

MISS GOETLEFT.—For mercy's sake do tell me where they do business and I'll order half a dozen.

barge office; W. B. Troy had become hungry and gone to dinner, so Prial and an exceedingly fresh youth named Carlton had gone down to quarantine, and the trio was easily discernible as the big liner swung into the dock.

## F. J. O. IN AMERICA.

"How are you," shouted Fred J. Osmond to the REFEREE representative as he recognized him in the party of ten who assisted in shifting the gang plank. Osmond was about the first to land. He looked the same Osmond of five years ago, though probably a little larger in the shoulder, and he looked well, too. The party, including Zim, gave him three cheers and a tiger. After arranging for the transportation of his baggage to the St. Dennis, and the REFEREE man had presented welcome letters from the Chicago Cycling Club and Riverside Wheelmen, and introduced a committee from the latter, Osmond was left with Zimmerman and Wheeler, who escorted him to his hotel.

## ZIMMERMAN SAILS AWAY.

Notwithstanding the banquet Friday

cries of conspiracy arose from Zimmerman's friends. On opening the package a baby's feed-bottle was disclosed, and on a card was written, "To be taken morning and night, in order to become strong and win the N. C. U. championship," Zimmerman and McDermott laughed heartily and the former pocketed the Osmond gift.

There was no crying—even brave little Mrs. McDermott, the champion's sister, and the champion's mother wished Arthur good-bye without tears, but the parting was an affectionate one. "Good-bye, my boy; God bless you," was the parting words of the champion's father.

## AND HE SAILED AWAY.

"All ashore," shouted the second officer, a hearty hand shake with Joe McDermott and Zimmerman and we went ashore. When the big Canarder Aurania—which by the way brought the American team home in 1888—glided from the dock, a bright sun was shining. Sydney Bowman, who stood among the crowd at the end of the pier shouted in stentorian tones, "three cheers for

Arthur Zimmerman, America's champion bicyclist of the world." They were given with a will, and from the bow of the boat the modest Zimmie took off his hat and bowed.

In that crowd there was not one who would not have wagered his last cent that the championship of England will, inside of three months, be again brought to these shores.

Good luck to the champion!

\*\*\*

## BANQUETED THE CHAMPIONS.

*Osmond and Zimmerman Given a Supper by New Yorkers.*

NEW YORK, April 25.—"Farewell, Zimmerman! Welcome, Osmond!" is how the title page of the menu card read, with "God-speed" prefixed to the farewell, when twenty cyclists sat down to what proved a very enjoyable banquet tendered Arthur A. Zimmerman and Frederick J. Osmond, on the latter's arrival in New York last Friday. The affair originated with Roland Hennessy, who wrote the eastern representative of this paper recently, while he was in New England, asking if something could be done to give Osmond a welcome. The idea caught, but the uncertainty of Osmond's arrival was a puzzler, and it was only twenty-four hours before the boat touched dock that a definite scheme had been fixed upon. The invitations were sent out only the day before, and yet twenty of the twenty-eight invited made it convenient to be present, even with such brief notice. Roland Hennessy stopped putting the finishing touches to his song, "Sleep, baby, sleep," and threw his whole energy into getting things ready, and his many newspaper interests were forgotten. Osmond, Zimmerman and Wheeler walked into the parlor at Wallace's Fifth Avenue hotel, where the banquet was given, arm in arm. The gentlemen who attended showed themselves sportsmen worthy of the name, and the promoters of the "feed" are much indebted to F. P. Prial and A. Kennedy-Child for their cordial endorsement of their humble endeavors to welcome F. J. Osmond in a fitting manner. And A. A. Zimmerman and Joseph McDermott are to be thanked for rising above all petty racing jealousy, and, as men and Americans, they extended a hearty welcome to Osmond.

## LETTERS OF REGRET.

In response to a letter Mr. McDermott wrote from Freehold, N. J.: "If you will telegraph me when steamer is sighted I will be glad to be one of the party to welcome Osmond, and Arthur will do the same. You will appreciate how I will be rushed at about this time, as we go away Saturday, but I will make every effort to be on hand. If I should fail please express to Mr. Osmond my sincere regrets at not being able to be on hand to welcome him. I have always advocated just such a reception as you have planned. I know how it makes one feel to have some friends to greet you on your arrival in a strange country."

Toastmaster Child read Mr. McDermott's letter, which was greatly applauded. The day of the banquet McDermott telegraphed: "Can't make it; Arthur will see you this morning." Mr. Woodhead, of the Raleigh Cycle Company, who has just arrived in this country, wrote a letter of regret.

The dining hall was decorated with potted plants and flowers, and the table was arranged in the form of a cross, Osmond and Zimmerman at the centre, seated next to the chairman of the racing board, Mr. Raymond filling the post of referee, as it were.

## TOOK DESPERATE CHANCES.

The promoters of the entertainment

# The Preston Davies' Tyre & Valve Co.

## Some of the Advantages Claimed for the PRESTON DAVIES' TYRES:

Using a shallow rim, a greater depth of air space is obtained than by any other tyre on the market, consequently increase of speed and ease of running.

Owing to the construction of the webbing inside the outer case, the tyre is by far the most resilient and lightest of any yet introduced.

It is impossible for it to burst, even with excessive pressure.

In case of puncture from external sub-

The repairing outfit is so small that it can be easily carried in the waist-coat pocket.

The valve used is the smallest, lightest and simplest on the market, and can be removed from the tube by simply cutting the waxed thread which holds it in position.

Above all, NO SEWING, SOLUTIONING, or SPECIAL RIMS REQUIRED.

stances or for the purpose of examination, the air tube can be exposed without trouble in a few minutes. It can be removed from the rim, without unsolutioning, with valve attached, and inflated to test for puncture. The air tube can then be as easily replaced, or a new one substituted, on the rim, and the covering refixed.

The construction of the outer covering renders it impossible for any wet or grit to get inside the tyre and so damage or chafe the inner tube.

## To take out and replace the inner tube when you are unable to locate puncture.

Unhook one side of the outer jacket **C**, commencing at the ends of the wires **D**; turn back **C** and unflap the rubber **A** (which is not sewn or solutioned, but simply flapped over), when you have your inner tube exposed for repair, which can be taken out in a ring without unsolutioning, with valve attached, ready to test for puncture. Having found the puncture, and repaired it in the usual way by solutioning a piece of sheet rubber on to the inner tube, you replace **B**, placing the valve through the hole in the rim, flap the rubber **A** over the inner tube **B**; turn back your outer jacket **C**, and hook on, starting in centre of wires, and working each way to **DD**. Inflate your tire and you are ready to start.

Showing the Tire open ready for repair.—A.—Sheepskin or rubber; B.—Inner tube; C.—Jacket; D.—Ends of wire.

## TO REPAIR AN ORDINARY PUNCTURE.

When you have found the position of the puncture, unhook the outer jacket **C** about 6 inches each side, then place your hand in and draw out the inner tube **B**, which you repair in the usual way; replace **B**, tucking in the rubber **A**; hook on and replace your tyre. This repair taking but two or three minutes.

HEAD OFFICE AND WORKS: Town Mead Works, Fulham, S. W.

LONDON SHOW ROOMS: Coventry Machine Co., Ltd., 15 & 16 Holborn Viaduct, E. C.

COVENTRY DEPOT: 21 Warwick Lane, Coventry.

AGENTS FOR BIRMINGHAM: Thos. Smith & Sons, of Saltley, Ltd.

AGENTS FOR SCOTLAND: New "Howe" Machine Company, Ltd., Glasgow.

up to noon, Friday, were sorely puzzled to pick out a toastmaster. Roland Hennessy said Kennedy-Child would be the man to do it justice, but where was Kennedy? Out west, the REFEREE man said.

"Ah, there," said a well-known voice, and then Child's smiling baby face peeped in the door.

"For the love of Moses," was all Roland could say, as he hustled up town to change the words on the menu card from "You all know him" (the supposed toastmaster) to "A. Kennedy-Child."

We were still running desperate chances. No Osmond in sight, and 2:30 o'clock; but we had Jimmy, and I bribed Harry Wheeler to keep tab on him and see that he didn't scoot. Providence was kind to us. Zimmerman didn't scoot and Osmond arrived on time.

#### THE GUESTS.

Among those who filled the seats—the twenty provided—were Frederick J. Osmond, Howard E. Raymond, Arthur A. Zimmerman, A. Kennedy-Child, Harry Wheeler, Elliott Burris, M. L. Bridgeman, Charlie Price, W. B. Troy, E. A. Carlton, F. P. Prial, J. J. Prial, R. G. Betts, H. L. Saltonstall, Roland Hennessy, George Smith, A. E. Hildick, H. Roberts, Sydney Bowman and the REFEREE representative.

#### RAYMOND IN GOOD FORM.

Mr. Raymond was trying to make a record. He had made a speech before the Brooklyn and K. C. W. clubs at 8 o'clock and at 9:30 he was at Wallace's and soon talking again. He was in good voice and as witty as ever, and did full justice to "Welcome to Our Guest." He delivered a parting benediction to Zimmerman at the same time. F. P. Prial made possibly the best speech of his life on "The Cycling Press," and never was Prial in a happier mood. He said of the old-country papers he placed Henry Sturmy and the *Cyclist* at the top of the heap. He did not say that the *Wheel* was "on top" in America, but for the time being that credit was given him by the company.

#### OSMOND TALKS.

Osmond made a short speech in response to "The English Racing Man," wished Zimmerman success in his tour abroad, and hoped that he would meet America's best men while in this country. If he met Zimmerman he would, of course, try to beat him. "I'll not race, mind you," he said, "unless I'm fit to do myself credit."

#### ZIM DIDN'T SCOOT.

Strangely enough, although he had begged not to be asked to speak, Zimmerman arose, shook hands with Osmond, and made a neat little speech; time, 2:30-2-5. He was glad to see Mr. Osmond, and welcomed him to America. He hoped he would enjoy himself here, and when they met in battle array "may the best man win." Zimmerman made a decided hit.

John Prial and R. G. Betts did the subjects "The Cycling Fraternity" and "The Amateur" justice, considering they were called on without a moment's warning. Sydney Bowman made a classical speech on "The American Racing man." M. L. Bridgeman spoke eloquently on "The American Trade," and A. E. Hildick, of the Riverside Wheelmen, spoke on "The Woman Cyclist," and said some nice and some naughty things.

Roland Hennessy—bright boy that he is—spoke of "The Daily Paper in Cycling Journalism," and received applause for his effort. Elliott Burris, of the bone-shaking days of '69, told of "old times" in Pittman's place. H. L. Saltonstall defended and praised the L. A. W.

A. Kennedy-Child as toastmaster kept the crowd in magnificent humor, and

rarely have a lot of young men enjoyed themselves better or taken part in an affair so creditable and in keeping with America's hospitality than those truly good sportsmen who made the dining parlors of Wallace's ring with eloquence, laughter and song last Friday evening. R. J. McCreedy will be next to receive a reception by New Yorkers.

\*\*\*

#### OSMOND IN CHICAGO.

*The English Champion Ready for Business—May Race.*

F. J. Osmond, accompanied by F. P. Prial of the *Wheel*, reached Chicago Wednesday night, and is now at the Wellington. J. M. Erwin, of the racing board, and a REFEREE representative met him at Kensington. Osmond was greatly interested in the fair and got a glimpse of the buildings as the train passed Jackson Park.

The English crack proposes to begin training at once, on the Parkside track, if necessary, and if he can get into condition he will race. He wants one more year at racing, but, not having been defeated for three years, he proposes not to take the chance of defeat by racing when not in the best shape.

He stands 6 feet 2 inches and weighs over 180 pounds, has a pleasant, clean cut and determined face, and is a typical Englishman. Osmond thinks Schofield the best man on the English path to-day, but says it is not certain that he will be here to compete in the international races. Osmond, Harris nor Schofield have as yet received their licenses to ride from the N. C. U. and there is nothing certain that they will.

Osmond likes Jimmy, thinks Mills a better man on the road than Shorland, says Sanger must be a good one if all he has heard is true. Mr. Prial ventured the opinion that Johnson would prove the best man on the path this year.

Saturday night an informal reception to Mr. Osmond will be held at the home of the Chicago C. C., to which he has already applied for membership. If he races it will be under the colors of the Speedwell B. C.

#### In Re Garford's Patents.

The REFEREE is in receipt of a communication from President Garford, of the Garford Manufacturing Company, wherein that gentleman denies that Judge Dallas, in refusing to grant a preliminary injunction in the case of the Garford Manufacturing Company against the Bretz & Curtis Manufacturing Company, stated "that the Solid Comfort saddle did not infringe the Garford patents." Mr. Garford enclosed a copy of Judge Dallas' decision, which was as follows:

It is, I think, not desirable that I should, upon this motion, express any opinion upon the merits of the case as it has been presented.

It is enough to say that the affidavits, exhibits and arguments have not satisfied me, after full consideration that a preliminary injunction ought to be decreed. The case can be safely passed upon only when ripe for hearing upon the pleadings and proofs taken with opportunity to either side to cross-examine the witnesses of the other; and I perceive no reason which, in my opinion, should induce the court to grant an injunction at this stage.

The complainant's motion for preliminary injunction is denied.

L. C. Boardman of the New York *Recorder*, recently stated in the presence of four responsible witnesses that he had been asked to handle the New York and eastern end of the cash prize scheme and that he had turned the offer down. W. B. Troy says he has no knowledge of such an offer being made Boardman. Possibly Egan has. There is friction between Boardman and the cash prize people. Possibly the alleged offer accounts for it.

#### RECENT ENGLISH INVENTIONS.

*New Ideas in Tires, Machines and Other Devices.*

These abstracts are prepared, immediately after the complete specifications are published, by G. Douglas Leechman, consulting engineer, patent expert and cycle designer, 19 Hertford street, Coventry.

[All persons interested in opposing the grant of a patent on any one of the undermentioned applications may, at any time within two months from March 15, 1893, give notice in the prescribed form of such opposition.]

#### NEW RIM FOR PNEUMATIC TIRES.

No. 2,585. W. Lugton and E. C. Furby's "Improvements in the rims of wheels of velocipedes and other vehicles." Feb. 6, 1893.—This invention consists in forming rims in two parts so that they may be detached from one another for the purpose of opening pneumatic tires for repairing the same. The spokes are attached to the main portion (a) of the rim which is formed of a trough section; b is the detachable portion of the rim. One side of the part (a) of the rim is doubled over so as to form a spring catch (a1) for the purpose of receiving and securing the detachable part (b). The two edges of the outer cover (f) are cemented to the rim, one to the part (a) the other to the part (b) as shown. A number of small screw bolts or studs (d) are riveted or otherwise secured to the part (b) of the rim for the purpose of securing the parts (a and b) together. Slots or notches are cut in the curved portion (c) of the main part (a) of the rim opposite and corresponding to the studs (d) on the part (b) which permits of the two parts (a and b) being locked together or detached from one another without removing the studs; the two parts are tightly secured to one another by means of the nuts (d1) screwed on the ends of the studs (d). The curve (c) in the side of the part (a1) prevents the two parts (a and b) of the rim being separated until the nuts (d1) are unscrewed sufficiently to clear the projecting or curved portion (c) of the rim. To get at the air tube (e) the nuts (d1) are unscrewed sufficiently to clear the curved portion (c) when the part (b) may be withdrawn from the spring-catch portion (a1).

IMPROVED BEVEL DRIVING GEAR.

No. 18,549. T. Coppock's "Improved gear for front-driving bicycles and (so called) geared ordinaries." October 17, 1892.—In this gear a bevel wheel (b) is carried by the crank axle (a) and has teeth around the rim. The plate (c) forms one of the hub sides and has bevel teeth (d) on the face thereof. Above the wheel (b) a slanting bevel wheel (e) having teeth (e1) on the rim and another ring of teeth (e2) nearer the centre, is placed. When the wheel (e) is in position the teeth (e2) engage with the teeth of the wheel (b) fixed to the crank axle and the teeth (e1) engage with the teeth of the wheel (d) fixed to the hub plate (c). The slanting wheel (e) is mounted on a stationary spindle (f) with ball bearings (g). The end (f2) of the spindle (f) is fixed to one of the fork sides (a1) of the frame, and the crank axle (a) runs through it while one side of the hub rotates round it. The two sides (c, e1) of the hub are joined by strips of metal (h) and may be covered by a leather or metal band (i). Instead of mounting the bevel wheel (e) in a slanting position it may be mounted horizontally and be carried on a vertical stud instead of the inclined spindle (f). The action of the gear is as follows: The cranks (1) turn the axle (a) and with it the wheel (b). The teeth on the rim of the wheel (b) engage with and turn the wheel (e) by its teeth (e2). The wheel (e) by its teeth (e1) then turns the wheel (d) and with it the hub and complete wheel.

A NEW WHEEL LOCK.

No. 5,878. W. R. Smart's "Improvements in apparatus for locking the wheels of velocipedes and the like." March 25, 1892.—The object of this invention is to prevent the removal of the machine to which it is attached during the absence of the owner. The drawing illustrates it applied to the front wheel of a safety bicycle. On the back or front of say the arm (a) of the fork, and preferably at a point just within the rim of the wheel (b) a bar (c) is mounted with one end pivoted to the arm of the fork or provided with a slot (c1) fitting on a pin (d) secured to the arm (a) or to a plate of a bracket or box (H) mounted on the arm as shown, the bar (c) being retained by a plate or cover (f). The end (c2) of the bar (c) is provided with a recess and the bar is of sufficient

length to pass between the spokes of the wheel and reach the other arm (a1) of the fork, to which either arm is attached a lock formed in a bracket or box (G) and provided with an opening through which the end (c2) of the bar (c) is passed and in which it may be retained by the bolt (h), the end of which enters the recess in the end (c2) of the bar. When in this position the bar prevents the wheel from being rotated; it may be released by raising the bolt (h) against the action of a spring (h1) by a suitable key the end of which engages with the projection (h2) of the bolt; the end (c2) of the bar may be simultaneously ejected by a spring (i). When in its normal position the bar (c) lies parallel to the arm of the fork, as shown in dotted lines, and may be retained in this position by a projection (c3) engaging in a recess (i) in the cover (f). The brackets or boxes (H, G) may be secured to the arms of the fork by clips, or may be combined with ordinary rat-trap foot-rests. A chain or other equivalent may be substituted for the bar (c) and may be passed through openings in the fork or a bracket if preferred.

length to pass between the spokes of the wheel and reach the other arm (a1) of the fork, to which either arm is attached a lock formed in a bracket or box (G) and provided with an opening through which the end (c2) of the bar (c) is passed and in which it may be retained by the bolt (h), the end of which enters the recess in the end (c2) of the bar. When in this position the bar prevents the wheel from being rotated; it may be released by raising the bolt (h) against the action of a spring (h1) by a suitable key the end of which engages with the projection (h2) of the bolt; the end (c2) of the bar may be simultaneously ejected by a spring (i). When in its normal position the bar (c) lies parallel to the arm of the fork, as shown in dotted lines, and may be retained in this position by a projection (c3) engaging in a recess (i) in the cover (f). The brackets or boxes (H, G) may be secured to the arms of the fork by clips, or may be combined with ordinary rat-trap foot-rests. A chain or other equivalent may be substituted for the bar (c) and may be passed through openings in the fork or a bracket if preferred.

#### HOW ITALIANS WIN RACES.

*A Scheme on the Rubber-Necked-Horse Plan Discovered.*

The Italians are quite up to snuff as regards winning races, even if they have to have a Joe Mulhatten or a Munchausen to help them out now and then. A correspondent in one of the cycling papers from the sunny land has hit upon

a great scheme in order that exciting finishes may result. He would have a machine constructed like the one shown here. When within a few yards of the tape he presses a lever and the front part shoots ahead like an arrow, thereby carrying the rider with it to glory. It is probable that the inventive Italian had

been riding one of those rubber-necked horses. It will be remembered that a jockey once had a horse with a rubber neck. When there was a close finish between his animal and another, the rubber neck simply stretched out and pushed the head under the wire first. These patent extensions are good things, and it might be advisable for some of the Britishers to secure them in order to beat Zimmie and Wallie.

MENTION THE REFEREE.

## TRADE IN NEW ENGLAND

A REFEREE MAN FINDS MAKERS AND DEALERS EXCEEDINGLY BUSY.

*A Good Retail Business Reported By All Agents, While Makers Find It Hard to Keep Up With Orders.*

A visit to all the factories and a large portion of the agencies in New England found the bicycle and sundry trade in that section of the country in a most prosperous condition, and particularly so for a time so early in the season. There can be no doubt that the bicycle trade in New England will be greater this year than ever before, and it is growing every day. It seems as if people had gone bicycle mad—everybody is buying wheels. What a surprised set the good Puritans would be if they could only come on earth for a short time.

\* \* \*

*Springfield, Chicopee and Holyoke.*

It was fast day when the REFEREE man reached Holyoke, but the Keating people were not fasting, they were too busy. President Bosworth of this company reported progress and Mr. Keating was busy turning out the wheel bearing his name.

AT THE OVERMAN FACTORY.

At Chicopee Falls the Overman factory hands worked a half-day and the office force labored all day. George H. Powell, the advertising man, was wrestling with several problems not of an advertising nature, while Superintendent of Agencies C. C. Morgan was busy pacifying agents who wanted Victors—by telegraph if possible. The factory founded by A. H. Overman is a magnificent structure and well worth visiting. The great demand for the well-known Victor must be gratifying to the Overman Wheel Company.

MAKING CREDENDAS.

The Lamb Knitting Company is turning out Credendas for A. G. Spalding & Bros. in large numbers and this year's Credenda does the concern proud.

WHERE NEW MAILS ARE MADE.

At Chicopee the Ames Plough Company is busy with the making of William Read & Sons' well and favorably known New Mails, and the office people say the curly headed Billy Atwell make their lives unhappy by frequent visits demanding haste in shipping.

THE WARWICK COMPANY.

At Springfield President Rood, of the Warwick company, excused himself after a moment's chat, saying that it was his fishing day; he further said that the company's orator, Kennedy Child, was in the "wild and woolly" selling the remainder of the Warwick output. Eddie Nelson stated that he was going to race as a pure amateur this year. He is now, as in the past, in the employ of the Warwick company.

RETAILERS BUSY.

George M. Hendee, in a large store on Main street, nearly opposite the old post-office building, had a full house of old and new friends examining Rouse, Hazard & Co.'s line and Waverlys, and stated the latter machine was selling splendidly.

Haradon & Son were quite cheerful; at least the father was. Willie was on the road for the Monarch company.

Harry Tyler at the Union depot, looked fat and happy and reported good business. Tyler will not be able to do

much training this spring—he will be too busy with the P. D. Q.

Taylor Bros. have a store nearly opposite that of the Union Cycle Company, and handle two makes of wheels.

The Victor store was doing nicely, many people being in.

Frank Coe, with a big line of several makes, including Columbias and Hickorys, was also busy.

Charlie Whipple, the expert clockist, known to all Springfield and racing men, is this year pushing the Premier.

Gormully & Jeffery have a commodious store under the Cooley house for the sale of Rammers and their tire. They also have wheels on exhibition in a Main street drug store. There are now sixteen agents all told in Springfield.

\* \*

*Worcester and Vicinity.*

Of course the first thing one does on arriving at Worcester, if he knows Reed & Curtis, is to trot down to Gould street, where the splendid three-story factory of that firm stands, and inquire for that happy gentleman, Mr. Curtis. He will show you all over the factory where the Curtis pedal is turned out at the rate of 250 pairs per day, and where each day a quarter million screws are made. The place is a regular hive of industry, and Curtis flits from one machine to another to see if they are serving the firm that employs them rightly, and he watches the hundred employees closely. Knowing the mechanical business from the ground up, as he does, the man who is not doing his work right is given advice in a pleasant way and then the energetic manager moves on to another. Without the aid of a single traveler, orders for over 10,000 pedals are now on the books, and the firm has been shipping 1,500 pairs per week for the past four months. All the machinery for making screws and pedals is built in the next building by Mr. Reed, the partner, who is one of the largest builders of special machinery in the country.

GOOD DEMAND FOR LEATHER GOODS.

The J. J. Warren Company, maker of tool bags, saddles and all kinds of leather ware for the cycle trade, is up to its ears with work, and Secretary Davison is much pleased with the business the company does with the cycle trade, which is only a small part of the business.

WORCESTER AGENTS.

Lemont & Whitmore, the well known Worcester agents, who handle the Warwick, Victor and several other makes, have placed on the market a toe clip for racers and road riders. The clip is both neat and useful, and is constructed of finely tempered steel in the form of a wire loop which presses firmly on the toe and is safe from slipping, as the double rod grips the shoe. The Lemont lock is well known and the demand the past month has exceeded the supply. Mr. Lemont is one of the leading spirits in the Worcester club.

L. C. Havener, the Columbia agent, is an enterprising and original chap, and is constantly springing some new advertising novelty on his competitors. He is doing well and recently had a successful season's opening.

The other agent in Worcester is an burn-haired Alexander, who recently called out the fire department. A reflection of his head on the wall led him to believe that his place was afire. The fright was worse than the actual damage.

THE LOVELL DIAMOND HOUSE.

The John P. Lovell Arms Company recently opened a depot for the well-known Lovell in connection with Davis' sporting goods store.

J. C. Spier, the Majestic builder and

drop forge man, is busy at his factory, but he always finds a minute to talk to a REFEREE man. He is turning out Hulbert Bros. & Co.'s Majestic in good quality and quantity, and a pretty wheel it is, too.

Aldrich, the bicycle cape man, was found on the top of a six-story building, where, in the snow, he was fixing a telephone wire, as he is lineman for the telephone company. He says the merit of the bicycle rubber cape is not fully known, but he will make it so in the near future.

A PROLIFIC INVENTOR.

Dr. R. O. Wood, the Worcester champion cycling inventor, has brought out some fourteen articles in the way of saddles, frames, handles, etc., but up to date has not succeeded in getting anything in marketable shape, as he is busy doctoring the people of Worcester who have had to drink water or go dry. After May 1 something stronger will be retailed to Worcester folks, and the over-worked M. D. may have a chance at his cycle inventions.

\* \*

*In and About Fitchburg.*

Just an hour's run from Boston on the Fitchburg railroad brings you to Balltown. Here two large manufactories of those most necessary articles used in a cycle, the balls, are located. I first made a tour of the four large buildings of Iver, Johnson & Co., who make the Lovell bicycles. Under the guidance of that lively young business man and sportsman, Fred I. Johnson, after an introduction to the father, we visited the buildings where the Lovell is built, as well as all kinds of fire arms, and the bracelets with which the police decorate their charges. Carpenters' planes, revolvers, etc., are made by the thousands. But it was the Lovell bicycle I went to see, and I saw them in the rough and finished states, as well as those stowed away in cars for shipment. We just missed Colonel Ben Lovell, who arrived shortly after we left.

TRIP TO THE GRANT WORKS.

Hitching up his fine roadster Mr. Johnson drove the REFEREE correspondent over to the Grant Anti-Friction Ball Company's works, where Mr. Grant received the party most kindly. Whitaker, by this time, had joined the company. Mr. Grant conducted us through the entire plant, and as it was the first time that such a privilege had been extended to the writer the visit was full of interest. Mr. Grant, Jr., showed the party the testing and sorting machinery, while some young ladies enlightened us with the care required in detecting good from bad stock. Balls from the size of bird shot to those 1 1/2 inches in diameter for heavy machinery, were examined. A visit was also made to the Simonds Rolling Machine Company with the expectation of seeing George Weymouth, the manager of this well and favorably known ball concern, but unfortunately Mr. Weymouth was in Boston.

\* \*

*Busy at Westboro.*

Westboro ought to pay J. A. Hunt a salary for advertising the town, as Hunt has made Westboro famous. Mr. Tewkesbury, the bookkeeper and erstwhile traveler, was courteous; likewise W. B. Jordon, the inventive genius of the firm. The new Scorching racing saddle is taking well. Being rather late in producing it, the sale will be somewhat affected this year. J. A. Hunt was in Worcester, but he dismounted from a train just as the REFEREE man climbed aboard. I had time to shake hands and inquire after J. A. Hunt's good health. The assortment of Hunt saddles is large

and it is a hard man to please to whom Hunt cannot sell.

PASSED JACK'S GRAVE.

In a foot of snow on the ground, and more falling, the writer tramped to the old Westboro factory, and on the way passed the cemetery where all that is mortal of John Purvis Bruce lies in the private lot of banker William Read. Every anniversary of his death a young sister in far Scotland sends a floral wreath, which Mrs. Read places on the grave of one who was popular with all and whose writings were read by thousands. Entering the factory, Manager F. H. Porter told us of the excellent prospects of the old White Flyer, Broncho, and other White fancies. The factory is now making two machines, of different weights, for Houghton & Dutton, the large Boston house, and is figuring with a western house to build a front driver. The rear addition to the factory is now finished.

I called at the Savings bank and met Mr. Read, the late Purvis-Bruce's best friend. "Jack and I often talked about you, and I felt sure we would meet some day," he said.

\* \*

*Trade at Providence, R. I.*

Whitten and Godding have dissolved partnership. Mr. Whitten will handle Victors and attend to the wholesale trade in parts, while Mr. Godding, who is well and favorably known to the trade, will handle the Columbia and other makes and take the retail and sporting goods business, the Saladee saddle and magic oiler. The partners separate with the best of feeling and still occupy the same building, which is now divided by a partition.

Belcher & Loomis are busy and are rejoicing over securing the agency for Lovell wheels, which are selling even more rapidly than Unions. C. E. Monroe, the ex-Coventry Machinists' Company's employee, who is as popular in Providence as he was in San Francisco and elsewhere, reports the sundry business of Belcher & Loomis to be as large as ever.

RANKIN REPORTS GOOD DEMANDS.

Rankin, of sundry, toe clip and anti-squak fame, was out of town, but George Monroe was on hand selling wheels. Rankin is having a run on the Waverly, Lyndhurst and Rambler, and is doing a good business.

Campbell & Co. handle several makes of wheels and do a general repair business.

TILLINGHAST TIRES.

The Tillinghast Tire Company reports business as fair, but Treasurer Vose says, "We are selling all we make, but are not making as many as we did last year." Mr. Vose says his company is waiting to see how the tire business will go this season, as a bottom is sure to be reached and then they will profit by any mistake others may make. This company is making a good tire, Pardon Tillinghast's latest being a good thing in pneumatics. It is reported that the Tillinghast company is about to sue all makers of a certain kind of tire, and that it has been laying low for some time for this purpose. Mr. Vose would not affirm or deny the rumor. He spoke interestingly on the life of a pneumatic tire and asserted that no rider should expect a pair of tires to last more than one season—or two at the most. He says too much is expected from tires and if a little more consideration were given the subject of the delicate construction of a pneumatic the rider would not expect so much service from it.

\* \*

*Splendid Trade at Boston.*

William Read & Sons are busy, and

# On! Marmion, On!

Have you read of the new wedge-shaped railroad train built to overcome the resistance of the air? They say it makes a hundred miles an hour as a matter of course.

You know this principle is applied to ships and boats, to rifle bullets, etc. Nature approves of it. Birds fly with their bills stretched out to cut the air.

The “Imperial”  
REGISTERED TRADE MARK Bicycle is built in just this way. Careful study and experiment have brought the lines to perfection. There is a certain poise to the “Imperial”  
REGISTERED TRADE MARK not found in any other make, a certain life, a certain impetuous yet latent impulse which seems to throw the whole machine forward. “Imperial”  
REGISTERED TRADE MARK roadsters last year beat all the *racers* they were matched against. If you had seen an “Imperial”  
REGISTERED TRADE MARK you would know how to account for it.

Send for a catalogue.

**AMES & FROST COMPANY, Makers,**

**302 and 304 Wabash Avenue,**

**Chicago.**

"Major" William Atwell reports the demand for New Mails as being large. "Very little stock can be kept on hand," said Mr. Atwell, "and we are more than satisfied."

George A. Drysdale is doing well with the Brookes, made by the well-known Brookes & Co., Cape May Works, Birmingham. Mr. Drysdale's sales so far have amounted to 600 wheels, but the delay in receiving has inconvenienced him somewhat. However, he expects a large shipment this week, so that he will be able to supply his trade. George F. Taylor is riding a Brookes.

THE A. O. VERY CYCLE COMPANY.

This company has just issued one of the most elaborate and comprehensive catalogues imaginable, equal to anything issued by any firm in America. Mr. Very's strict business methods are shown on the first page in the instruction and advice and rules of the company's business. The company handles exclusively in the New England states the Warwick, Liberty, Eclipse, Central and Royal Limited bicycles. It is also general agent for a complete line of juvenile and medium-grade wheels, which it is jobbing in every section of the country. The Envoy, Fleetwing, Unique, Ben Hur and Reindeer are a collection of wheels calculated to delight the dealer's heart. It has also taken the agency for the Sager saddle in the east, including New York and Pennsylvania.

SIDWELL & SABIN.

These pioneers in the trade wear well. They handle Quinton Scorchers in New England and make a wheel, the Waltham, at their factory in the town of that name. They will turn out only a limited number of Walthams this year, but next season may do something more extensive.

The Flight Wheel Company is a new concern in Haverhill street which is making a few wheels. The wheel is called Flight. W. Bowler, late of Coventry, is with the firm, but is not satisfied with the limited output.

O. J. FAXON COMPANY.

This company has sprung into prominence quickly through the favorable reception accorded its really meritorious wheel, well named the Puritan. The factory at 3 Appleton street is superintended by the well known Henry Hedger. Some 500 wheels will be made this year, and the sales so far have been satisfactory to the concern.

LOVELL ARMS COMPANY.

The John P. Lovell Arms Company is distinctly in it this year, with the Lovell Diamond. Manager Harvey, of the cycle department enthralls when he speaks of the cordial endorsement the wheel is receiving all over, and frequent trips to the factory to hurry shipments are made.

COVENTRY MACHINISTS' COMPANY.

Manager Alex Hill is busy these days, says he is selling all the wheels he can get, and can't keep stock on hand. A clearance of all the old stock of solid and cushion tires has been made. George Seymour, who is in charge of the repair department, is having plenty to do with outside work and says the Seymour saddle sells well.

THE McCUNE CYCLE COMPANY.

Boston is rapidly developing in the way of having new things and the latest is worthy of notice. This is the reading room and gymnasium opened some little time ago at 47 Franklin street by the McCune Cycle Company and thrown open entirely free to the public. This reading room and gymnasium is situated on the upper floor, and having some twenty-five or thirty large windows, covering, in fact, the entire upper floor.

The ventilation is perfect and the light unobstructed. In the reading room will be found not only all the sporting periodicals of the world, but all the monthly magazines and weekly papers devoted to art, science, literature and amusement. The greater part of the floor is devoted to the gymnasium, in which may be found every kind of apparatus suited for physical training, though nothing of an acrobatic nature, as it is the purpose of this gymnasium not to make circus performers, but to develop the body. There is here also ample floor space for trying bicycles. In connection with the gymnasium there is a most commodious and spacious dressing room and a sufficiently large bath room with shower and needle baths apparatus, and these two rooms, as well as the gymnasium and the reading room, are entirely free morning, afternoon and evening to all respectable men and boys. The front corner of this large floor area is partitioned off with low partitions into the offices of the company and into a small salesroom, where everything pertaining to bicycles, all the parts of the machine, whistles, locks and lanterns, all the articles of wearing apparel used by cyclists may be obtained. The best thing, however, to be seen here is the McCune bicycle itself. It has rapidly forged its way to the very front of popular machines. The McCune Company claims that the frame of its machine is heavier than most light weight wheels, and yet the parts which are not subjected to violent strain are so light that the McCune is as light as any machine on the market. The balls used in the bearings are larger than those used in most wheels. The McCune company is well satisfied with the demand for its wheel and has had to refuse several wholesale orders.

W. W. STALL.

The genial Stall is very busy and a large number of employees are attending to customers. One of the sights in Stall's window is the disc wheel, imported from England.

SINGER & CO.

Manager Ross was almost too busy to talk and was pointing out the many good points of the Singer to prospective customers. "Our trade is good; I would be ungrateful to providence and my customers to speak otherwise."

V. DUGMORE & CO.

Vin. Dugmore is getting to be quite a manufacturer. He started ten years ago with a level head and only \$300 in cash. He is building a little gem of a wheel, called Perfecto, and perfect it is, too. He builds wheels to order, also, and carries a full line of parts. He is at 194 Columbus avenue.

THE UNION CYCLE COMPANY.

McDowell and Stainsforth were on hand at the Union store, but Walter Measure, the accomplished "boss," was at Highlandville, where the general office of the company is now located. Trade is good and the staff is busy.

POPE MANUFACTURING COMPANY.

I talked to E. W. Pope and Secretary Pattison, bowed to the colonel, had a word with Mr. Rice, the advertising man, and saluted the office people and salesroom generally. Albert L. Pope told me of a wonderfully fast yacht he owned, described its luxurious bath room and staterooms, and invited me to take a sail with him. A. D. Peck looked pleasant; so did Kirk Corey, who looks as if married life agreed with him.

OVERMAN WHEEL COMPANY.

W. C. Overman had a moment to spare and said, "We are all right this year, my boy. They [Victors of course] are going like hot cakes."

THE RECORDING INSTRUMENT COMPANY.

The Recording Instrument Company,

over whose destinies M. A. Doane presides, says the cyclometer is now ready to be delivered in quantities. There has been some delay and complaint on the non-delivery score but now they are all right.

HOLMES & CO.

The well-known cycling outfitters, Holmes & Co., are ready as ever to supply everybody with their popular cycling costumes. Mr. Homes seems to be as young and hard-working as ever.

THE QUADRANT COMPANY.

James Underwood was too busy to talk to a newspaper man, and this is something phenomenal. He was engaged selling a lady a Quadrant and this alone excused him.

HICKORY CYCLE COMPANY.

Out at Newton the Hickory Cycle Company was very busy. This company is selling more wheels in a day than it former sold in a month. This must be gratifying to the new organization, of which Arthur Pope, Charles Walker and Sterling Elliott are at the head.

A CENTURY RUN.

Poorman Branching Out.

According to a Cincinnati paper J. E. Poorman is soon to greatly enlarge his business in the Ohio city. He has recently leased a large store on Fifth street, near Main, paying \$4,000 per annum for the same. The paper also has this to say: "Another thing is called to view by the lease in question, and that is, that the bicycle business is one of the coming branches of trade, and when it is known that this business has doubled itself in Cincinnati several times within the past half-dozen years, and that even now, this city contains but 4,000 riders, it will be seen that the confidence which enables two houses handling this line of goods, almost exclusively, to pay \$10,000 for house rent on this Government Square alone, is not a misplaced one by any means. Mr. Poorman himself was a dealer in sewing machines up to a very few years since, and now he is able to fill the entire Dodd-Werner building with the bicycle business, besides keeping up his old stand at Eighth and Race streets, a branch establishment."

The Vincent Failure.

BUFFALO, April 25.—The officers of the Vincent Cycle Company, and the firms involved in the recent failure, are in pretty bad shape. The liabilities now foot up \$125,000. Some \$25,000 more than the original estimate. The largest paper is, of course, held against the lumber firm of George W. Smith & Son. A meeting of the creditors will be held to decide future action. In the meantime the assignees are continuing the cycle business, and W. B. Young is on the road with samples.

HE TALKED TOO MUCH.

*How a Loud-Voiced Traveler Lost the Sale of Fifty Wheels.*

A good story was told by W. M. Perrett recently, which proves that a salesman should not publicly make known his intentions and his prospective customers' whereabouts. It was in the dining-room of a St. Louis hotel, where sat a rather loud-talking young man, who represented a western house. Perrett, who was a stranger to him, sat at the next table. The young man was saying that he was the luckiest traveler afloat, and all he had to do was to reach a city, hear of a man who wanted wheels, and sell him immediately.

"Now, there is Messrs. Easy & Co., on — street," went on the young man. "They will see me at 10:30 this morning, and I'll sell them fifty wheels, sure. Nobody ever thought of those people, and they are easy to sell to."

Perrett had taken in every word, and, stealing from the dining-room, in twenty minutes had his samples before Easy & Co. quite an hour before the loud-voiced young man appeared. Perrett was told all about the other young man, who had left his sample machine for the firm to examine. He took out his wrench and took his opponent's and his own machines apart. He had about thoroughly convinced the firm that the other fellow's machine wasn't in it, when in walked the dining-room young man.

"Haven't I seen you somewhere?" the new-comer inquired of Perrett.

"I shouldn't be surprised," said William. "I am selling bicycles and stopping at the — house."

A look of pain passed over the questioner's face as he seemed to have remembered a fair young man who sat near his table at breakfast. He then tried a bluff by saying: "I have an appointment with these people and must catch a train; will you do me the favor of giving me your turn?"

"No," answered Perrett, "I have also to catch a train and an order, which I am about to book."

One of the firm then told Perrett's opponent that they would decide the question of buying later, and to call in a few days, so he left, looking daggers at handsome William. The next train took the Philadelphian out of St. Louis with an order for fifty wheels, which the young man with the loud voice would have had had he not talked so much about his business in a public place.

HENRY GOODMAN.

At the Michigan division board meeting Chief Consul Bressler was authorized to issue a handbook and maps of the state and counties. The state map is to go with the handbook, and county maps are to be distributed among local consuls, who are to see that copies are kept posted in cycling stores, L. A. W. hotels and bicycle club houses.

Western Wheel Works' Cycles.

## 1893 FIXTURES.

## MAY.

- 7—Pike county tour at Louisiana, Mo.
- 8—Fifty-mile road race at Clarkville, Mo.
- 9-10—Savannah Wheelmen's Track Association's races, Savannah, Ga.
- 9-11—Savannah (Ga.), Wheelmen's meet
- 30—Pullman Road Race, Chicago.
- 30—New Haven (Conn.) B. C.'s annual meet.
- 30—Massachusetts division meet, Worcester
- 30—Martin road race, Buffalo.
- 30—Irvington-Milburn road race.
- 30—Rome (N. Y.) Cyclers' meet.
- 30—"Southern Wheelman's" 10-mile road race, Louisville, Ky.
- 30—Winona (Minn.) C. C. race meet.
- 30—Cleveland (O.) Wheel Club's second annual road race.
- 30—Alameda B. C. meet, San Francisco.
- 30—Hanauer's annual road race, at Cincinnati.
- 30—Warner A. C. ten-mile road race, Wilmington, Del.

## JUNE.

- 3—Press C. C. meet, Buffalo.
- 3—Buffalo. (New York circuit.)
- 4—Inter state De Soto run.
- 16-17—Syracuse. (New York circuit.)
- 17—English championships on Herne Hill track.
- 17—Alpha Wheel Club's 10-mile road race, South Norwalk, Conn.
- 24—Prince Wells' second annual 10-mile road race, Louisville.
- 27-28—Kentucky division meet, Harrodsburg.

## JULY.

- 1-3-4—California division meet, San Francisco.
- 2-3-4—Missouri division meet, Sedalia.
- 2-4—Ohio division meet, Sandusky.
- 3-4—Columbia C. C. meet, Hartford, Conn.
- 3-4—Iowa division meet at Vinton.
- 4—Susquehanna Wheelmen's electric race meet at Harrisburg, Pa.
- 4—Colorado division meet.
- 4—Milwaukee-Waukesha road race.
- 4—Tonawanda Ramblers joint tournament, Tonawanda (N. Y.).
- 4—Watertown (N. Y.) Cyclers' meet.
- 4—Fourth annual Poorman road race, at Cincinnati.
- 4—Second annual road race, Erie (Pa.) Wanderers B. C.
- 4—California division meet.
- 4—Missouri division meet, Sedalia.
- 4-5—Seventh annual meet Kansas division at Fort Scott. Address Henry E. Harris.
- 4-5—Rockford, (Ill.) C. C. meet.
- 15—Atalanta Wheelmen's (of Newark, N. J.) 100-mile road race.
- 21-22—Ouca Cocoa cup race, Herne Hill, London.
- 25-26—Indiana division meet, Fort Wayne.

## AUGUST. (WESTERN CIRCUIT.)

- 5-12—Illinois Division, National L. A. W. and International meets, Chicago.
- 14-15—Milwaukee Wheelmen's meet.
- 16-17—Wisconsin division meet, Ripon.
- 19—Minneapolis C. C. meet.
- 19—Inter club road race, Buffalo.
- 22—Evansville C. C. meet.
- 24—Ziz-Zag C. C. meet, Indianapolis, Ind.
- 26—Cincinnati C. C. meet.
- 24-29—Columbus (O.) Century C. C. meet.
- 30-31—Cleveland W. C. meet.

## SEPTEMBER. (EASTERN CIRCUIT.)

- 2—Birmingham, Conn., Crescent Cycle Club.
- 4-5—Hartford, Conn., Hartford Wheel Club.
- 4-5—Syracuse (N. Y.), A. C. eighth annual meet.
- 7—Lynn, Mass., Lynn Cycling Association.
- 9—Boston, Associated Cycling Clubs.
- 9—Garden City Cyclers' meet, San Jose, Cal.
- 12-13—Springfield, Mass., Springfield B. C.
- 13-14—Springfield (Mass.) B. C.'s annual race meet, Hampden Park track.
- 16—New York, Metropolitan Association of Cycling Clubs.
- 18—New Jersey (place not named).
- 20-21—Baltimore, Maryland B. C.
- 23—Philadelphia, Associated Cycling Clubs.
- 26—Brooklyn, Kings County Wheelmen.
- 26-27-28—Inter-state Fair Association meet, Trenton, N. J.

## OCTOBER.

- 2—Capital City Wheelmen meet, Sacramento, Cal.
- 5—Annual St. Louis county fall tour.

PHILADELPHIA, April 24.—That the N. C. A. has made a ten-strike in having induced our fellow-townsmen, O. S. Bunnell, to accept the position of official referee is acknowledged by all interested in the sport, in this city at least, where the reputation and ability of "Bunny" are well known. The N. C. A. is to be congratulated, for it has secured a man whose honesty has never been questioned. The announcement caused some surprise but it is a well-known fact that Mr. Bunnell has always been an advocate of cash prizes; and his appointment by the N. C. A. is an earnest of its intention to give the public a square deal.

It is to be regretted that the Park Avenue Wheelmen will lose the services of Mr. Bunnell, for it has been mainly through his efforts that they occupy such an exalted position in the racing world. He has built the club up from a one-horse organization with a handful of members to a thriving, active club with a membership approximating two hundred, and a racing element second to none in the city. He has also been instrumental in developing more "young blood" than any other one man in the state.

## WILL MAKE THE CENTURY.

Well, there will be a century run, after all. The Associated Cycling Clubs of New Jersey having announced that it will take charge of the event, the club captains of this city are waking from their lethargy, and a meeting is to be called in the near future to formulate plans for the reception of the visitors. The date of the run will probably be June 10.

It was mainly owing to the efforts of Captain Calkins, of the Elizabeth Wheelmen, who has been appointed chairman of the Century Run Committee, that the run was decided on. He is an indefatigable worker, and will make the event a success if it is possible to do so.

There will be, as usual, prizes offered for the clubs bringing through the greatest number, and if reports be true, the Elizabeth Wheelmen are determined to bag the "rag." They claim that they could have captured it last year, but that when they saw the horde of gray-uniformed men tumbling out of the cars at Newark the evening preceding the race they took it for granted that they were all "century" men, and thought the "jig was up." Twenty or twenty-five men who had promised to go, if necessary, backed out at the last minute, thinking it was useless. The Centurions had but thirty-six starters, of whom thirty-five finished and Captain Calkins claims that he could have brought forty-five through, but was informed that the century boys had over sixty. He thinks the Elizabethans can do the trick this year; hence his anxiety for a race. It may be just possible that his calculations will be upset again; for Captain Allen, of the Century, is taking the matter up and says if he can only get his men to believe that they haven't a "gas-pipe cinch" on the banner, he can

rouse them from their "don't-care-a-damn-attiveness" and make it a real century run by landing the "rag" with a round 100.

Archie Gracey, Joe Donnelly, Howard Wunder, Bob McCurdy, Lou Geyler, Frank Dampman, Frank Marriott and several other good 25-mile men will enter the Irvington-Milburn race, and are training faithfully for that greatest of eastern road events.

M. D. Osgood, G. M. Coates and G. Wilborn, have qualified for the University of Pennsylvania Track Team.

The American Wheelmen will hold their annual five-mile road race from Bryn Mawr to Bala in the near future.

The newspaper artist has been getting in his deadly work on O. S. Bunnell, the newly-appointed official referee of the N. C. A. The Philadelphia Evening Call used the "phiz" of an electrocuted New York murderer, and put "Bunny's" name under it.

Howard Wunder, of the Columbia cyclers, from whom so much is expected the coming season, has started to train. He has ordered a Victor racer.

The seventh annual dinner of the Century Wheelmen, will be given on the evening of May 2nd.

George L. Bahl, of the Century Wheelmen, has been appointed state centurian for Pennsylvania of the Century Road Club.

The Century boys are banking on Billy West, a former member of the club, to win the Pullman road race. West won the Irvington-Milburn race three years ago.

The Wissahicken Wheelmen will form a racing team of four or five men to represent them on the track.

## SENATOR VANCE AS A TIMER.

*He Forgot to Stop His Watch, and Prince Made a World's Record.*

The recent race between Jack Prince and ponies at Mobile, on which several "prominents" forgot to stop their watches, reminds the writer of a similar case which occurred when he was traveling with the great horse annihilator some years ago. Jack was to perform against four horses at Charlotte, N. C., and also to make an attempt at the world's mile record, then 3:39, held by Prince himself. To lend importance to the occasion the writer, who had dined with Senator Vance, got Charles Jones, editor of the Charlotte Observer (who was also the Associated Press correspondent), to ask the senator to lend his august presence to the occasion.

Prince ably defeated about as dejected a looking quartette of equines as I ever saw, amid great excitement, and then the trial of the mile came. We got Senator Vance to hold one watch and a local bicyclist the other. Prince started, paced by four of the "fastest" of the local riders. He flew by them one by one, and entered the last quarter in good time. Everybody, including Senator Vance and the other clockist yelled like Indians. On Prince came, with head down, and flashed by the finish in what I thought would be about 2:45.

"What time, Senator," Mr. Jones asked.

"Oh! damn it, I forgot to stop my watch, in the excitement," he replied.

"What time have you," I asked the other clockist.

"2:35," he replied without flinching.

"Do you mean to say that he broke the world's record," I stammered, disbelieving him.

"Yes," he replied, and Senator Vance and all those present chimed in with "Yes, it was 2:35 or better." And so it was dispatched all over the country, creating much excitement.

There has never been any doubt in my

mind that the young man, in the excitement, stopped his watch before Prince finished, but in the presence of the senator and the mighty enthusiasm it would have been grossly impertinent for me to doubt the time.

Prince had asked me to throw a little water on him, after he had finished provided he did his usual "fainting act." I threw a whole bucket full of cold water on him, Prince swearing under his breath at me for being too liberal.

We have often laughed over the Charlotte 2:35 and the incidents attending it. W. J. M.

## HARD ON HARTFORD.

*No More Races at Charter Oak Park—The Pool-selling Law Forbids.*

It would seem that the Hartford racing clubs are doomed, as far as the historic Charter Oak Park track is concerned, and we will see no more tournaments on the old track unless the late racing blue laws are repealed.

HARTFORD, April 18.—The directors of Charter Oak Park Driving Association met last night to take action in view of the law relating to pool selling, purse racing, and other outdoor sports. It was unanimously voted to rescind a former vote, giving a spring meeting with purses of \$6,000.

A committee was appointed to ascertain what arrangements can be made with some other association in the grand circuit to trot upon its track the Hartford Colt Stake of \$10,000 and the historic Charter Oak stake of \$10,000, which are advertised to be trotted at the August meeting.

The directors were also obliged to refuse the applications of the Columbia Cycle Club and the Hartford Wheel Club for the use of the park for bicycle tournaments, as the new law makes the lessees of any grounds to be used for racing purposes for prizes liable to arrest and imprisonment.

At first the Hartford business men were inclined to be stiff as regards cycle tournaments on their track, but of late years they entered into the spirit of the bicycle tournaments and last year some of the most prominent of Hartford's horse people occupied official positions at the Hartford Wheel Club tournament. Now comes an opportunity for Colonel Pope's talked-of bicycle track and Hartford can be depended upon to meet the emergency in a prompt manner. Build your new track, Hartford cyclists!

But what will the cyclists race for? Here's a chance to demonstrate the usefulness of class A.—all riders to compete for laurel wreaths and diplomas.

\* \* \*

## BUFFALO RACE GOSSIP.

*Change in Dates—A Western New York Handicapper—Buffalo-Chicago Race.*

BUFFALO, April 24.—The date of the state circuit meet, scheduled for June 3, has been changed to June 10, and the Press Cycling Club has at last decided to hold it at the driving park. The half-mile track will be put in condition, a grand stand and fence erected, and a big rental beside will be paid to the association, all at the club's expense. The club is working hard to make the meet a success. Chairman Raymond has awarded the one-mile state champion ship to this meet.

The next racing fixture here, following the circuit meet, will be the holiday tournament of the Tonawanda B. C. and Buffalo Ramblers at Tonawanda, July 4. Last year's tournament at that place, which is twenty minutes' ride by rail from Buffalo, was highly successful, and as a splendid prize list will be offered, a big entry list is assured.

Entries for the Martin road race continue to pour in, add it looks as though last year's event, which was a big affair, will be greatly eclipsed. The Corfu course, with the start and finish at the Parade house, has been selected and will be carefully surveyed.

The appointment of A. G. Batchelder, sporting editor of the Buffalo Courier,

# Bailey Manufacturing Co. . . .

This is a cut from a photograph of our 1893 wheel. For style it is unexcelled. In finish it is second to none. For ease of running it is the ideal. For strength and rigidity we will cheerfully pit it against anything made.

We are advertising just what we have on hand—not what we expect to have at some hoped-for day in the future.

Weight, 31½ lbs. - Price, \$150.

as official handicapper for the western end of New York state, is received with universal satisfaction. The appointee's well-known reputation for fairness and independence will make him a most popular handicapper, and give us better racing in this vicinity.

Now that the challenge of the wheelmen of Buffalo to Chicago for a 25-mile team race has been accepted\* by the windy city, the flyers are redoubling their energies, and by the time they meet Chicago men on the Pontiac course at Detroit, this city will have a strong team to present. The men making the best showing in the Martin road race will probably be selected.

\* No challenge has been accepted by Chicago, for the challenge was not received until Wednesday of this week. The Chicago club captains will meet this week and then, no doubt, Buffalo's deft will be taken up.—Ed.

Milwaukee in the N. C. A.

MILWAUKEE, April 24.—Milwaukee is now in the cash prize league. According to the present schedule there will be two meets of the league in this city, and prizes amounting to \$1,000 will be given at each event. Race promoters in Milwaukee will no doubt smile when they contemplate the possibility of the gate receipts aggregating anywhere near that amount. The Milwaukee Wheelmen succeeded in giving a race meet, the treasury side of which was satisfactory; but they very foolishly tempted the gods

FAIR OPENS MONDAY.

BICYCLE EXHIBITS BEING RAPIDLY PUT INTO SHAPE.

Those of the Pope and Overman Companies Are Simply Grand—Stearns and Liberty Give up Their Spaces—Foreign Exhibits.

Notwithstanding the fact that the world's fair opens three days hence, the bicycle exhibits, both American and English, are in a very incomplete state. In fact, there is not one complete exhibit in the Transportation building. During the past week a few of the representatives of the exhibitors have put in an appearance and are getting things in shape. It is quite certain that it will be useless for visitors to come to Chicago much before the first of June. The exhibits throughout the entire fair are yet very incomplete; some of the buildings are not more than half finished, and those who expect to have but a couple or three weeks' time in which to see the whole fair had best wait until everything is in ship-shape order.

WILL BE MAGNIFICENT.

For several days a large force of men has been at work on the magnificent exhibits of the Overman and Pope companies, and also that which will cover

pleting arrangements for the show of Ridges, Sylphs and Overlands

ON HAND FOR WORK.

F. W. and H. A. Ensworth are in town fixing up the Lozier exhibit, while A. L. Atkins, who has recently joined the Gormully & Jeffery Manufacturing Company, is arranging the Rambler exhibit, of which he will have charge. Fenton S. Fox is putting into shape the Sercombe-Bolte exhibit, which will consist of a complete line of Telegram wheels and a Sanger racer weighing only nineteen pounds. Harry Pope and Sterling Elliott are at the grounds fixing up the Hartford and Hickory spaces.

WILL NOT EXHIBIT.

E. C. Stearns & Co., at the last moment, decided not to exhibit, inasmuch as they could hardly prepare a creditable exhibit in the time. They have given up their space. The Liberty people have also decided not to show their wheels at the fair.

IN THE BRITISH SECTION.

In the British section, which occupies the northwest portion of the gallery of the Transportation building, and is directly opposite the American bicycle exhibit, there seems to have been little work done. The Premier Cycle Company is farther advanced in the arrangement of its exhibit than any other concern. It has dark oak fittings, with gold lettering, and occupies a long space on the extreme west side of the building.

being a member of the Royal British Commission, states that the British manufacturers seem to have taken little interest in the world's fair. He says they give as an excuse the McKinley tariff bill. None of the other exhibitors in the British section had done anything at all with their spaces, nor had any of their goods arrived.

TWO GERMAN MAKERS.

In the German section, on the main floor of the Transportation building, are two large exhibits of wheels by Adam Opel and Heinrich Kleyer. There are from twenty to twenty-five machines in each.

Race Chat.

July 4 is the date set for the race meet of the Union County (N. J.) Roadsters.

The Quincy (Ill.) B. C. has a road race on the programme for Decoration day.

The base ball and bicycle people are negotiating for a new track at Canton, Ohio.

The Milwaukee Wheelmen have secured National Park for their races June 8.

Several bicycle races will be held at the driving park, Greeley, Colo., on Arbor day.

The Lakeside C. C., of Cleveland, has named the following racing committee for the tournament to be held June 14. D. L. Robinson, A. N. French, E. C.

PLAN OF ALLOTMENTS IN THE BRITISH SECTION, GALLERY OF TRANSPORTATION BUILDING.

again and the second tournament swallowed up all they made in their previous venture.

Wells Stays in America.

"What's that about President Hunter, of the Canadian Wheelmen's Association ordering the Wanderer, Marshall Wells, home?" queried the REFEREE of Zimmerman last Friday.

"Marshall won't go home, all the same," said Zimmerman. "He has just started a fine cycle store in Trenton, which makes our third store—Freehold, Asbury Park and Trenton. If they want him in Canada they ought to pay him a good salary," and here Zimmie grinned.

Notes.

The Iowa division meet will be held at Vinton July 3 and 4.

Elyria, Ohio, expects to hold at least two meets this season.

The Harlem Wheelmen hold their annual spring races May 13.

Kelly and Draper, the tandem team, are training at Louisville.

Billy Perrett will be clerk of the course at the big Chicago meet.

Crawfordsville, Ind., is to have a 100-mile road race on Decoration day.

Nursery handicaps are given in Australia, probably for the baby riders.

Baltimore racing men will be kept busy. The Baltimore club's road race takes place on Decoration day, and on June 15 the A. C. C. races will be held.

the Imperial wheels. In the English section the Whitworth, Premier and Sparkbrook exhibits are in a fair way to be completed in time for the opening on Monday. The smaller exhibitors have as yet done nothing. The Overman and Pope exhibits will probably be as fine as anything in the whole fair. It has been said, by those who are competent judges, that nothing in the Manufacturers' building will equal them.

MAHOGANY, BRASS AND OAK.

The Overman exhibit is surrounded by immense pillars of solid mahogany, trimmed with gold, and above is a massive roof of the same material. The Spalding exhibit is furnished in exactly the same manner and of the same material, being practically a portion of the Overman exhibit. The Pope Manufacturing Company's stand will be surrounded by heavy brass rails, and the brass roof is supported by immense solid brass pillars. The Imperial exhibit will be under a roof of splendidly finished oak.

OTHERS GETTING READY.

Some of the other exhibitors have, at this writing, merely commenced to get things in shape, not even the rails being in position. On Wednesday a large number of cases of the Pope company arrived, but will not be unpacked until the end of the week. W. A. Shockley is busily engaged in arranging the exhibit of Rouse, Hazard & Co. and the Rouse-Duryea Cycle Company. Mr. Rouse was in town during the week com-

pleting arrangements for the show of Ridges, Sylphs and Overlands

SPARKBROOK COMPANY ABOUT READY.

The Sparkbrook Manufacturing Company has four cases on hand, which will undoubtedly be in position on Monday. The furniture has been set up for some considerable time and all that remains to be done is to unpack the machines. The furniture is black with handsome gold letters. The stand occupies the position next to that of the Premier, on the west side of the building.

WHERE OSMOND WILL BE.

The Whitworth company's furniture, made by Harris & Sheldon, of Birmingham, will make the exhibit of that concern something grand. It is mahogany, finished in gold, and is so arranged as to have little dressing rooms and an office. Six cases, containing twenty-four machines, will undoubtedly be unpacked by Mr. Osmond who will have charge of the exhibit, before the week is out.

OTHERS INCOMPLETE.

Warman & Hazlewood have fourteen cases of wheels in the building, but at this time nothing has been done toward completing the exhibit. The Quadrant Company's exhibit is yet incomplete. The fixings of the space are finished, but as late as Thursday no wheels had arrived.

TAKE LITTLE INTEREST.

Thomas Baker, who has charge of the bicycle portion of the British exhibit,

Johnson, A. Brown, George Edmundson, G. A. Boyer, Charles Hoyt, L. C. Johnson and M. Menth.

A two-mile bicycle race is on the Decoration day programme of the New Jersey A. O.

The Earlham track, Richmond, Ind., is now finished, and the local flyers are training on it.

The Susquehanna Wheelmen, of Harrisburg, Pa., have arranged to give an electric meet on July 4.

A road race for Decoration day is being talked of by the members of the Springfield (O.) Bicycle Club.

The date of the 100-mile road race of the Atalanta Wheelmen of Newark, N. J., has been changed from July 1 to July 15.

The date of the Illinois C. C.'s first annual road race has not been definitely fixed, but it will probably be ten days prior to the International races.

Tom Busst (the genuine) stands a good chance of being elected handicapper to the Melbourne Bicycle Club now that his racing days are practically over. Busst has been one of the best riders Australia ever turned out, and is now recovering from a long spell of sickness.

P. H. Sercombe leaves Milwaukee for Springfield, Mass., on Monday to join Sanger. Sanger sails for Europe May 3. Sercombe will be prevented from going by business, the company with which he is connected not being willing that he should go at this season of the year.

# WHITWORTHS

• • • • • At Chicago.

All Whitworths bear this mark.

Extract from the "Birmingham Daily Post," April 4, 1893.

The Whitworth Works Cycle Company, Birmingham, have secured a space 770 square feet, with a frontage of 110 feet. It is situate in the entresol floor of the Transportation Building, and it will be, with one exception, the largest exhibit of cycles in the fair. The stand is fitted up with mahogany and plate-glass mirrors, the style of the whole being solid and plain. The exhibit will consist of thirty bicycles, grouped into two general classes—roadsters and racers. Among the former are specimens of the Whitworth No. 1 Full Roadster, weight 39 lbs.; the Whitworth No. 2 Light Roadster, weight 35 lbs.; the Whitworth Special Light Roadster, weight 30 lbs.; and the Whitworth Lady's Bicycle, weight 35 lbs. Among the racers are the Whitworth No. 3 Road Racer, weight 28 lbs.; the Whitworth No. 4 Track Racer, 25 lbs.; and the Whitworth No. 8 Special Track Racer, in weight from 18 lbs. to 21 lbs. No machines will be staged except practically-built ones intended for actual use, the whole of the exhibits being ordinary specimens of the regular productions of the firm. Specially interesting will be a few historic machines, among which will be the No. 8 Whitworth, ridden last year by Mr. J. W. Schofield, of the Speedwell B. C., when he lowered the world's record for the quarter-mile, covering the distance in 31 seconds, and for the half-mile which he rode in 1 min. 2 sec. Photographs and sketches of important races won on Whitworths will be shown on the stand, together with those of celebrated English and foreign bicyclists who use the Whitworth. The exhibits left Birmingham via London last week.

## SECOND-HAND WHEELS.

*Should They be Taken in Trade?—The Case From Both Sides.*

It is not often that the opinion of bicycle dealers is so unanimous on any one thing as it is to the effect that the taking in trade by them of second-hand wheels is an unmitigated evil, and the main object of all trade organizations formed by the dealers is to regulate the prices to be allowed on such wheels, or to do away altogether with the practice of taking them in trade. It is considered that these wheels lock up capital, eat up the profits of the business, and, unless the dealer is exceedingly careful, load him up with stock which may become utterly unsaleable and remain on hand for years, to be closed out finally for almost nothing. The approach of spring invariably witnesses attempts made to remove or diminish this obstacle; dealers bind themselves publicly, and resolve secretly, to refuse to take wheels in trade, to allow less money for them, or to be more careful as to whom such trades are made with and the kind of wheels taken; and upon the arrival of the selling season they break nearly every vow they have made and makes trades with more or less freedom, as they may be a bad or good business manager.

This state of affairs would naturally lead one to inquire whether there was not

## A SCREW LOOSE SOMEWHERE—

whether the second-hand wheel business really is the terrible evil it is said to be. A careful review of the subject in all its phases, both from a theoretical standpoint and from actual observation in my own business, leads me to think that the evil is very much exaggerated. The life of the bicycle dealer would indeed be one long dream of bliss could he sell all the new wheels he disposes of during the year and yet take no second-hand wrecks to contain in their mis-shapen frames the greater part of the hard-earned profits of the dealer. Such happiness, however, is not in store for us, and we may as well dismiss such pleasant dreams. Did we cut off the men who bring in wheels to trade we would cut off nearly half our business, and that we could not afford to do, in spite of the constant accessions to our ranks of those who buy wheels and have none to offer in trade.

Perhaps the most pressing evil in connection with the second-hand wheel trade is the high price asked, and in many cases given, for them. All dealers strive to take in wheels at a price that will enable them to

## SELL THEM AT A SLIGHT PROFIT

over the original figure allowed, but the proportion of wheels upon which they succeed in doing this is comparatively small. Many are quite satisfied to realize the amount allowed, and not a few willing to sacrifice \$10 or \$20 of the profit on the new wheel. This is not as it should be; the dealer should not be expected to have the trouble of making two sales to get one profit, even if that profit is a good one; to say nothing of the stock for an uncertain period, to get nothing out of it in the end but the money put in. It is here that the necessity for reform exists, but it

can not be brought about by any combination or resolve made before the seasons opens; every dealer must work out the solution for himself.

## THE PRICE OBTAINED

for second-hand wheels depends almost entirely on the standing of the dealer and his method of conducting his business. There are some who, by reason of their well-established business, their character for fair dealing and consequent ability to secure the confidence of the buying public, and their caution in making trades, are almost invariably able to either make a profit or come out clear, and when that point is once reached the road is an easy one. Every year they will do better with second-hand wheels, and find a more ready sale for them, while the dealer who pursues the opposite plan and recklessly takes everything that comes in his way, will get deeper and deeper into the Slough of Despond, and find it impossible to extricate himself.

There are always men, and boys, too, who want to buy cheap wheels;

in the wheel, and it is no uncommon sight to see a buyer give \$10 or \$15 more for a wheel with such a dealer as I have described than he would have had to pay for a precisely similar wheel—make, condition and all—if he had bought it from some one else who did not have the reputation of the first. When such facts as these can be cited it is hardly necessary to inquire whether the practice of guaranteeing wheels pays.

One of the strangest features of the system of wheel trading is the avenue which it opens for what

## IS PRACTICALLY PRICE CUTTING

on all wheels. Many a dealer who would not look at \$145 in cold cash offered to him for a \$150 wheel, would be perfectly willing to allow \$5 or \$10 more in trade for a second-hand wheel than he could sell it for, if there was any special reason for doing so. Or, he would increase the allowance if two wheels were being bargained for, and go still higher if the customer wanted three wheels. In doing this he would not consider that he was doing anything out of the way, and would assert most positively that he was not cutting prices. It is very hard to see, however, what it is if it is not cutting.

Another point is that it places the new rider, the man who enters the fold as a stranger, and pays \$150 for his wheel, at

THE STEARNS RACER.

## THEY HAVEN'T ENOUGH MONEY

to buy good ones, or want to learn on old ones and then get new ones; or they are not sure they will like cycling and don't want to put too much money into it until they know definitely. It is with these that there is a market for second-hand wheels; educate them in the belief that it is better to buy a second-hand wheel of some good make than a "medium-grade" wheel of a poor make; treat them right, sell them a wheel that is fully worth the money they pay for it, stand by and see that they don't get the worst of a bargain, and you will secure a friend who will come to you for his next wheel. Many a time a man will buy a second-hand wheel who would not buy any if there were nothing but new ones on the market.

A practice which is coming into vogue with those dealers

## WHO GET THE BEST PRICES

for second-hand wheels, is that of guaranteeing a wheel, just as a new wheel is guaranteed, usually for six months, although sometimes it is for one year. As a rule an advance in price of \$5 or \$10 is made when such a guarantee is given, and the practice is usually confined to good makes, although there are some who will guarantee any wheel. In many cases it is found that the simple offer to guarantee for a slight advance is sufficient to give the prospective purchaser confidence both in the dealer and

a disadvantage compared with the old stager, who has an old wreck worth but a few dollars, or a last year's mount was the thing when purchased, as the case may be. It may be, however, that those who are in should have a position on the ground floor, and thus be enabled to look down upon those who have not reached their elevation. Who knows?

S. W. MERRIHEW.

## THE RAMBLER IN CHINA.

*A Club Named After It—Notes on Trade in Philadelphia.*

As an evidence of the popularity of the Rambler, Charles S. Smith & Co., of 1001 Arch street, are exhibiting a letter from a certain Mr. Wong Risum, of No. 26 Hollywood Road, Hong Kong, China, asking for a catalogue and terms. They also state that a club has been formed in Merchantville, N. J., called the Ramblers (a very uncommon name, by the way), and among the by-laws is one making it a capital offense for a member to ride any wheel but the Rambler. Business is looking up, sure.

The Hart Cycle Company's latest, "The Long and the Short of It," is a very happy illustration of judicious advertising.

Since John T. Bailey & Co. have removed their bicycle department to the first floor, they have been experiencing a boom in that line which even the re-

cent wet weather could not squelch. Jack Greer, their manager, is happy over the change, and says that now that he can properly exhibit the beauties of the Raleigh and Relay they are "selling like hot cakes."

The Luburg Manufacturing Company is putting pneumatic tires on baby carriages and invalid chairs, and the idea has taken so well that in order to supply the demand it has been necessary to run day and night.

The Pennsylvania Bicycle Company reports a lively demand for Quinton Scorchers and Warwicks. At present it has more repair work than it can properly attend to.

Hill & Gilbert have on exhibition an 18 1/2-pound Premier racer, for which they have already received numerous orders. It is the lightest stock racing wheel made, and will surely be heard from in the early race meets.

W. W. Taxis is as successful in his new role of salesman as he is on the track. The Warwick people are to be congratulated on having secured Willie.

The Central Cycle Company is booking many orders for the Cleveland racer. The weight of this wheel, 20 pounds, is what is attracting the attention of the "tin can" brigade.

Charlie Hunter's new store on Susquehanna avenue is proving a bonanza. He is disposing of many Senator and Challenge cycles, and he is also fortunate in having secured first-class repairers. He is gaining a reputation in this line second to none in the upper portion of the city.

Wall & Boyer are placing Singers at a rate which is surprising some of the more pretentious cycling firms. Their repair business is so large that it keeps them constantly on the move to keep ahead.

The Globe Steam Heater Company, 44 North Seventh street, local agent for the Sylph, is making a big bid for local trade. The lightness and strength of the wheel, and the fact that it is fitted with Morgan & Wright tires, will insure for this wheel the consideration which its merit demands.

The Fowler, which is handled in this city by the Philadelphia Cycle Company, is taking hold in great shape.

## TRADE IN OREGON.

*Three Portland Dealers, who Represent the Principal Makers.—The Outlook is Rosey.*

PORTLAND, Oregon, April 20.—Lively times are anticipated in the bicycle business in Portland, and in fact throughout the entire Pacific northwest, during the coming season, which will be the first real "bicycle year" the coast has had. All of the leading wheels are well represented. One of the finest bicycle stores on the coast is that of the North Pacific Cycle Company, where Imperials, Falcons and Wynnewoods are found. This company is under the management of John L. Walpole, and is doing a lively business. The Webb Safe & Lock Co. is not asleep, and here we find Columbias, Union P. D. Q., Magestics, and a host of others. Victors, Ramblers and Cleverlands are in the hands of Fred T. Merrill, of skicycle fame.

The late rains have kept things somewhat quiet up to date, but all the dealers are in good shape to do business and only waiting for the birds to begin to sing. The bicycle fever is spreading rapidly throughout this part of the country, and the people, like the dealers, are only sitting around waiting for the weather man to do his part. Times are somewhat hard, but the public is determined, and we find people willing to go with one meal a day in order to lay up

# One Thing is Sure

## The '93 Bidwell Pneumatic Tire

Stands up well and takes the hardest kind of punishment.

---

No Mechanical Weakness.

No Structural Weakness.

It is going Thro' the Season.

Make a note of this and send for Catalogue. Another thing is sure—*TOURIST BICYCLES* are up to date in all improvements. In superior finish, careful construction and smooth running qualities. Like Colt's Revolvers—Tourists are made for business. They are, in fact, made by the same hands and upon exactly the same fine system of gauges.

308-310 W. 59th St., New York.

Factory, Colt's West Armory, - Hartford, Conn.

coin enough to buy a bicycle. The country here, like everywhere else, is flooded with cheap wheels, put on the market by cheap people. However, they will soon have had their day, and this will in the end revert to the advantage of the legitimate dealers, who are anxious to handle only the best wheels. We also find a large number of the hardware dealers handling bicycles, but they do not cut much figure, and the trade centers principally around those who handle wheels exclusively and do the hustling. Competition is hot, and will be hotter, but this only sets the public to thinking, and stimulates the trade, a fact which is an advantage rather than otherwise.

There are two cycling clubs in Portland, the Imperial and the Portland, both of which are in a flourishing condition. Some of the local men are in training and no doubt there will be lively times this summer on the track.

#### IMPORTANT CHANGES.

##### *Well Known Men Leaving Three English Houses—The Licensing Committee.*

LONDON, April 15.—This has been a week of surprises. In my last letter I chronicled the fact that W. Radford, the chief designer and head of the works at the New Howe factory at Glasgow, had resigned his position. On Wednesday I received the news that R. L. Philpot, the energetic general manager of the same company, had also resigned. It seems that the directors decided upon a change in policy which did not please Radford, who sent in his resignation. Philpot was also dissatisfied, but remained in the hope that he would be able to change the decision of the directorate, but finding his attempts unsuccessful, he also sent in his papers. During the last day or two all sorts of rumors have been current as to what these two men will do next. Half a dozen different firms have been mentioned as having already engaged them, while it has also been whispered that they in company with several other men who have during the past twelve months occupied prominent positions in the New Howe service, would start in business together for themselves. Yesterday I had a communication from Philpot denying the truth of all these rumors and saying that he had not yet definitely decided on anything. Radford, who has not been in the best of health, has determined for the present to take a holiday and is proceeding to Switzerland for that purpose.

Another unexpected change has taken place in the works of the Rudge Cycle Company where Walter Phillips, who has been at the head of affairs for many years past, now reigns no longer. At the beginning of this year several new directors, all Birmingham men, were appointed and with a view of making the concern a paying one, they have been effecting many changes. These culminated on Wednesday when Phillips and they parted company. Phillips, who before he entered the Rudge firm, was a professional racing man of considerable note in the days of Keen, Derkinderen and Cooper, had for a long while been regarded as one of the most able works managers in the trade. He began in a small way with George Woodcock, the Coventry solicitor, who taking over the old Tangent works of Haynes & Jeffries—names now almost forgotten in the cycle trade—gradually developed the business until it became the Rudge Cycle Co. Ltd. As the business increased Phillips became Woodcock's right-hand man and up to the time of the latter's death was generally supposed to be enjoying a situation which would last for life.

Yet another change has taken place at Wolverhampton, where W. Travers, who

has for three years past been manager at the Sunbeam Cycle Works has left the employ of John Marston. A few years such ago events as these would have caused a great stir but there are now so many men of proved ability in the trade that it is quite easy to fill vacancies in even the most important positions. In the case of the New Howe, Arthur Gastale, who has had charge of the firm's Manchester and north of England business, has been appointed general manager, while P. C. Wilson has been promoted to the position vacated by Radford. Gastale, before joining the New Howe, had had a long experience as a factor and agent on his own account. Wilson, who has lately managed the firm's London depot, has had a thorough and varied experience. Educated as an engineer, he migrated into the cycle trade to take charge of the Whippet factory of Messrs. Linley & Biggs, and from that position went into the employ of Humber & Co. Ltd. at Beeston. He is a close and personal friend of M. A. Holbein.

There has been quite a boom in the company which has been formed to work the French patents of Seddon's pneumatic tire. That most busy of busy men, William Bowden, is the managing director of the new concern, and the capital is placed at £50,000. Of this sum it was decided to issue one-half at the commencement in 25,000 £1 shares. I have absolute proof of the fact that before the prospectus was issued by the company the whole of these shares were applied for ten times over. The directors decided, as in the recent issue for the English company, to give the cycle trade the first chance of taking the shares and as the shares are already at a high premium, those who have received an allotment are already happy in the possession of a very handsome profit on their outlay.

The Dunlop Pneumatic Co. has declared an interim dividend for the half year of five shillings per share, equal to twenty-five per cent. on the six months. They open a branch in Australia very shortly.

At the adjourned council meeting of the National Cyclists' Union on Thursday evening the special licensing committee was duly appointed and a first class committee it is, containing such men as Robert Todd, Robert Hall, R. C. Nesbitt, F. W. Brook, J. Young, etc. It, in fact, consists of the picked men of the Union and every man whose application comes before it may rely on strict justice being done.

##### *The Stearns Racer.*

E. C. Stearns & Co., of Syracuse, N. Y., though young in the bicycle manufacturing business, have been exceedingly successful in every way. Those who have seen the various models of the Stearns have not failed to pronounce them excellent and up-to-date wheels in all particulars. A cut of the Stearns racer is shown in this issue. It certainly has the looks of a substantial and speedy machine, though it tips the scales at only twenty pounds. Both wheels are 28 inches, with tangent spokes; gear, 68; wheel base, 44 1-2 inches. The continuous cranks are used, but if desired the regulation cranks, with separate pedal pin, will be fitted, and on special orders the elliptical sprocket will be furnished.

##### *Whitworths in America.*

Arrangements have been made by the Whitworth Works Cycle Company for wheels to be distributed from New York. Mr. Howard, the manager of the branch, which is to be conducted temporarily at the offices of Messrs. Bywater, Taqueray & Payre, an English house with offices at 114 Fifth avenue, New York,

came over with Osmond and is at present in the east. The arrangements made for shipment and general distribution of wheels will relieve American agents of the usual anxieties of importers.

##### *Wilcox Makes a Change.*

For a few weeks past E. H. Wilcox, who has been identified with the Stover company ever since its organization, has been contemplating a change and this culminated, on Monday, in the signing of a contract under which he became general manager of the Ariel Cycle Company's factory at Goshen, Ind. Of all the salesmen that infest the country none is

E. H. WILCOX.

better known than Wilcox. He is a veteran of veterans, having entered the business with Gormully & Jeffery in the very early days of that concern. His record is one of which any man may be proud, both as a salesman and as secretary of the company which he has so ably represented for the past three or four years.

Mr. Wilcox will assume his new position on May 1 and there can be no doubt that his addition to the general staff of the Ariel company will prove highly beneficial to that organization.

##### *A Waterproof Cape.*

A. T. Aldrich, of 342 Pleasant street, Worcester, Mass., is selling a useful article for cyclists in the shape of the Ald-

rich bicycle cape for stormy weather. It is a complete protection from a storm, and falls gracefully over the rider, covering the entire form. In England this article is in great demand, is used by all tourists, and oftentimes saves much discomfort.

##### *Recent Patents Granted.*

The following is a list of recent bicycle patents granted, reported especially for the REFEREE by W. E. Aughinbaugh, patent attorney, Washington, D. C.:

495,511, attachment for Velocipedes; George E. Pfeiffer, Lyndhurst, N. J.; filed June 23, 1892.  
495,541, tire-tightener; Azro B. Bowen, Bethel, Vt.; filed Sept. 21, 1892.  
495,581, drive-chain gear; Herbert Guthrie, Levenshulme, England; filed Aug. 21, 1891; patented in England Mar. 9, 1891.  
495,661, bicycle-lamp; William Brown and Joseph H. Hughes, Birmingham, England; filed Mar. 3, 1892. Patented in England June 3, 1891.  
495,734, cycle; Charles E. Hadley, Chicopee, Mass., assignor to the Overan Wheel Company, Hartford, Conn., and Chicopee Falls, Mass.; filed Nov. 21, 1892.  
495,777, pneumatic tire; Pierre Bouery, Clermont-Ferrand, France; filed Nov. 26, 1892; patented in France, Belgium, England, and Germany.

495,914, adjustable support for bicycles; Charles W. Smart, Carbondale, Ill.; filed Apr. 12, 1892.  
495,942, velocipede; Amesach Levin, Brooklyn, N. Y., assignor of one-half to Joseph Konig, same place; filed Oct. 12, 1892.

##### *DESIGNS.*

22,357, bicycle oiler; Henry O. Hall, Washington, D. C.; filed Mar. 17, 1893; term of patent 7 years.

##### *TRADE MARKS.*

22,858, safety bicycles; Harry D. Hedger, Boston, Mass.; filed Mar. 24, 1893; essential feature the word "Puritan."

##### *Miscellaneous Chat.*

For two weeks trade has been very dull in Illinois owing to the mud and rain.

H. O. Fox has been appointed the REFEREE's correspondent at Birmingham, Ala.

W. A. Shockley will represent Rouse, Hazard and Company at the Columbian Exposition.

Arthur Black, manager of the Jacksonville, Ill., tournaments has gone into the cycle business at Jacksonville.

Report says that all rumors to the contrary notwithstanding, Lumsden will race this year on a specially built Waverly, now being made up at the factory.

The first annual meet of the Colorado division will be held at Greeley July 3 and 4 in connection with the opening of the grounds of the Greeley Driving Park Association.

Stolen—From A. H. Perrigo & Co., Omaha, model 30 Columbia, No. 2,884, 1893 style, elliptical sprocket wheel, had never been used. \$75 reward for arrest of thief and return of wheel.

Stillman G. Whittaker, who for a long time has represented the Revere Rubber Company, has just entered the employ of the Anglo-American Iron and Metal Company, which he will represent on the road.

The one-legged Syracusean transcontinental rider, Frank S. Beedleson, who will ride from San Francisco to New York, has ordered corrugated G. & J. pneumatic tires fitted to his Stearns bicycle.

W. F. Moss, of Atlanta, Ga., proposes to start from that place for Chicago about May 1. He will cover the distance by wheel in about three weeks and his little four-year-old daughter will occupy a child's seat in front of her father.

The Illinois division is offering cash prizes for new league members as follows: For four applications, one Illinois road book; for ten applications, \$5 cash, for twenty applications, \$10 cash, and larger numbers at the same rate.

The Waterville (Me.) Wheel Club is about to occupy quarters in the new Cote building. It will have the entire front of the building facing on Main street. For winter quarters it will have some of the rear rooms fitted up with gymnastic apparatus.

The Rochester Cycle Manufacturing Company has just completed a special wheel, weight 45 pounds, for B. L. Hopkins, Penn Yan, N. Y., a rider who tips the scales at 340 pounds. This machine is guaranteed to carry the rider for one year, over all kinds of roads.

A one-legged man rode down the steps of the capitol at Washington on a bicycle. We would be willing to bet that our esteemed fellow townsman, Frank Lawler, would ride up those steps on a bicycle if the Chicago postmastership was on the portico.—Chicago Post.

A. L. Atkins, for two seasons in charge of Rouse, Hazard & Co.'s Illinois trade, resigned his position last week with that house to accept a far higher position in the trade with a leading Chicago house. Atkins has had fourteen years' experience in the cycle trade in every branch, is one of the best posted, yet withal one of the quietest men in the business, and will be a valuable man to the Chicago trade.

### SPORT AND TRADE IN THE SOUTH.

*Riders Becoming Numerous and Enthusiastic—Trade Good.*

ROME, Ga., April 20.—Yesterday morning, while waiting for a train at Caleira, Ala., I was sitting on the hotel veranda basking in the sunshine, reading a letter from the north, telling me of a snow-storm raging there. I was attired in the light-weight suit I have been wearing for some time, together with a straw hat, and the question that I have often asked myself, viz., Why don't more of the northern people take their vacation in the winter instead of the summer, and come south? came to me again. I have often wondered why they ran away from the glorious climates of the northern states in summer.

Nearly every city in the north has boating facilities of some description and lots of good roads for wheeling, where people could go out after business hours and enjoy themselves. It is the extreme cold weather that we ought to avoid, and where could we spend a few weeks more profitably than in Tennessee, Georgia, Alabama or Florida?

There are many things, the towns, scenery and people, that are so entirely different to those of the northern states, that cannot help but be of interest as well as instructive. To the cyclist these states offer many inducements in the way of good roads, splendid scenery, and hospitality of the big-hearted southerner. Then again there will be the opportunity of attending race meets in mid-winter, as nearly all the towns of any size are following in Savannah's footsteps and building good tracks, and will hold tournaments on dates not conflicting, at which a great many northern riders will compete.

Atlanta, the first city of Georgia, and probably the most important in all the

south, is making great progress as a cycling city. I saw in your columns a week or so ago an article on Atlanta, so I will not take up your space by going into details, but will merely say that I enjoyed a number of rides with the members of the Capital Cycling Club to Lythia Springs, twenty miles; McIntosh Barracks, five miles, and to Fairbairn, nineteen miles, and found the roads good, and if any one desires to "scorch" there are some members of the club that can accommodate them very nicely.

Macon is another Georgia city that is making rapid progress, from a cycling point of view, and has already one club, the Central City, with prospects of another being organized shortly. The captain, J. N. Hinholser, is an enthusiastic rider, and intends to advance the interests of his club in every possible manner. He will encourage the "youngsters" to get into trim by holding club races from time to time. There are three firms in Macon that handle bicycles: S. S. Parmelee, Imperials and Keatings; the Dunlap Hardware Company and C. Huhn. They all report trade as very brisk.

The other day in Columbus, Ga., I ran across J. H. Polhill, one of the oldest riders in the south. He entertained me in a right royal way during my stay, not only by extending the right hand of good fellowship, but by relating many little incidents of the early days of cycling in the south. His stories about the trips of Morgan, Prince and Crocker in the early eighties, and their many trials and tribulations, were indeed funny, although I am under the impression that the trio did not consider them so. Mr. Polhill still has in his possession his old ordinary, a 53-inch 24-pound Spalding racer, on which he has won 113 first prizes, and on which he defeated the "Senator" in many a hard-fought race. He was a competitor in the first race

held in Georgia, on July 4, 1884. The race was a ten-mile, open to "amateurs," and the first prize "\$50 in gold." Polhill competed with his arm in a sling, the result of a fall a few days previous to the race, by which his arm was broken. He was always considered a plucky rider, and I think this fact alone firmly established his reputation as such as he finished third in an awfully close finish.

Columbus might justly be termed the "city of roses," from the large quantity of these beautiful flowers that are to be seen all over the city. The streets are very wide and pretty, the residences on the majority of them being extremely fine.

Through the kindness of Mr. Polhill, I was permitted to take my wheel and camera through the North Highlands, a large, magnificent private park. There are many points of interest in this park, the principal one being Lovers' Leap, so called on account of the following little incident. Some years ago two tribes of Indians lived where the city of Columbus now stands, who were at war with one another. The daughter of the chief of one tribe and the son of the chief of the other loved each other, and had determined that rather than be separated they would die together. A scout of the girl's father had come across the two lovers while they were seated on a rock that extended out over a deep ravine, through which flowed a good-sized river, and out of the water extended great, sharp rocks. The scout reported what he had seen to his chief, who laid plans to capture his daughter's lover and burn him at the stake that night when the youngsters met. The moon was shining brightly and the unsuspecting couple were enjoying themselves as only lovers can, when there was an unearthly yell, and a score of Indians rushed upon them. They jumped to their feet, and,

clasped in each other's arms, leaped into air and were killed on the rocks below.

There are one hundred riders in Columbus, and they are about to organize a club.

Trade is good and the following firms are getting prepared for a big season's business: Parr Brothers, Rambler; J. H. Polhill, Imperial, Columbia and Relay; Philip Eifler, Humber and New Mail.

Over in the northeastern part of the state of Georgia is to be found the enterprising city of Augusta, one of the largest cities in the state. During the past six months the main street, very appropriately named Broad, has been laid with asphalt its entire length, and Augusta riders now proudly claim the honor of having the finest street in the south, and justly so. Every afternoon cyclists of each sex can be seen gliding over the smooth, even surface, and I tell you it makes a pretty sight.

An association has been organized to build a club house, with gymnasium, reading, bath, reception and billiard rooms. The association will soon number five hundred members, and during the week just passed races were held under its auspice at the spring carnival. A track will be built and every effort made to put Augusta first in the cycling world of the glorious south. SPECK.

### *Sport in New Orleans.*

NEW ORLEANS, April 18.—John S. Prince, the professional rider, has been in the city trying to arrange a race with some wheelman of this city, but he could not do so. He has been compelled to defeat two horses in a twenty-mile race. One of the local owners of trotters has consented to match his horses against him. Prince will have to ride the entire distance while the horses will change at every mile.

On Sunday, the 16th, three of our rid-

ers rode to Baton Rouge, a distance of about one hundred miles, leaving here at 6 in the morning, and after a hard ride arrived there at 7 that evening, staying in Baton Rouge all night and returning next day.

The Pelican Cycling Club had a run Sunday to Shadwells, a little station on the Louisville & Nashville Railroad. The run was attended by thirty riders—a large number to take a hard ride like that.

At the last meeting of the Pelican Cycling Club fifteen new members were elected.

RAMBLER.

#### A Veteran's Long Tour.

A. D. Ruff (Pap) and E. E. Mitchell, of Richmond, Ky., will start from their home on a tour to the Pacific coast. They will steer direct for Chicago, where they will spend about two weeks at the fair. From Chicago they will take the best wheeling route for Yellowstone Park. Here they will again rest for a few weeks and then visit Washington, Oregon and California, riding all the distance if possible. Their mounts will be Victor pneumatics. Mr. Ruff is almost three score and ten, yet can keep up with most any of 'em on the road. Mr. Mitchell is about thirty and a noted scorchers. They have well considered the magnitude of their undertaking, and are prepared to meet the hardships and to make the best of them.

Ground will soon be broken for the Denver Ramblers' new club house. The site finally selected is at Thirteenth and Lincoln avenues. The structure will be of brick, with brick and stone front, and will cost \$50,000. Balcomb & Rice have made the plans and the building will be erected by the Home Investment Association, which is composed of the directors of the Ramblers. The club expects to occupy its new quarters some time during the summer.

#### SOUTHERN SPEED AND PLUCK.

Birmingham, Ala., has two Clubs, a Track and Several Speedy Riders.

BIRMINGHAM, Ala., April 23.—After a long standstill cycling has again come to the front, and is now the chief sport of the day. Up to last November there were not more than fifty riders in the city, but since then there has been, figuring at a low estimate, no less than \$20,000 worth of wheels sold.

The interest is so great that a \$1,200 quarter-mile track, banked, is well under way, which will be used exclusively for cycling. This track will be finished June 1 and immediately after, dates not having been announced, the state L. A. W. championships will be run.

Birmingham is justly proud of two cycling clubs, the Birmingham C. C. and Birmingham Athletic Club which has a cycling club connected with it. Each of these clubs has a membership numbering a hundred or more, sevenths being L. A. W. men of good standing. Both are well up the ladder of success.

A very important fact, which must not be overlooked, is our good supply of fast men. We have at least ten men who can do a mile in 2:40, five who are good for 2:35, and a quartette who think nothing of 2:30. So, as a whole, our men are not far behind in speed.

It will pay all the cycling enthusiasts to keep their eyes on Birmingham the coming year.

H. C. Fox.

#### From the Mountain Tops.

MONTROSE, Pa., April 23.—Once in a while we have a little cycling news up here. Montrose is about 2,000 feet above sea level. The mountain roads are very hilly, but hard pan and red shell. We have twenty riders but no club. The

wheels used here are Featherstone, Victor, Cleveland and Columbia. They are sold by the following agents: Victor, A. H. Knoll; Cleveland, O. A. Gilberts; Featherstone, George C. Burns; Columbia, F. D. Melhuish. At present the Cleveland seems to be taking the lead, with Victor a close second. Last year the Victor took the lead, selling at least five to one of any other make.

The country around us is beautiful and a very nice trip can be taken in any direction. One of the most popular is to Binghamton, N. Y., about twenty-five miles. This trip takes about two and a half or three hours, going, and from four to five hours home again.

Montrose is the highest ground anywhere around and is quite a summer resort. All trips going from town are A 1, but coming home it is different—namely, walk every once in a while. But it has to be a good, stiff hill to make Montrose wheelmen get off, as they are good hill climbers. The roads at present are muddy and there is snow in the woods one and a half feet deep, so of course there is little riding. Cycling is on the boom, more so than it has in a number of years.

GEORGE C. BURNS.

#### "Gid" Haynes in Chicago.

Gideon Haynes, one of Boston's best known early rider, is now in Chicago. Haynes has been connected with the cycle trade for many years, but for a brief season will work in another line. About six months ago a REFEREE man met Gid. in Boston, as he was about to leave for Chicago, carrying with him a check for \$30,000 to bind a deal with the world's fair people which called for \$100,000 for the exclusive privilege of selling popcorn in the world's fair buildings. Haynes got the contract, and believes he will make a fortune out of

the scheme. It is not generally known that Gid. Haynes was the inventor of the hammerless gun. He turned the patent over to William Read & Sons, who in turn sent it to England to see what the gunsmiths there thought about it. A check for a thousand dollars was the reward, and now nearly every breach-loading gun is a hammerless. Haynes would now be as rich as Colonel Pope if he had held on to his patents.

#### Recent Club Elections.

Dallas (Tex.) Wheel Club—J. B. McCraw, president; W. G. Achenbach, secretary; W. L. Springfield, captain.

Elgin (Ill.) Y. M. C. A. C. C.—Bert Mathewson, president; Charles Stevens, vice-president; Carl Swanson, captain.

Kirkland (N. Y.) Wheelmen—President, Dr. S. E. MacDougall; vice-president, John Hayes; treasurer, Guy Reese; secretary, H. P. Osborne; captain, F. E. Payne.

Bergen County (N. J.) Wheelmen—President, Morton L. Brewster; vice-president, Fred S. Bennett; secretary, Thomas D. McLeese; treasurer, P. A. Meaeroll; captain, W. E. Marrnio.

Comet Cycling Club, Milwaukee—R. S. Baird, president; W. C. Neilson, secretary and treasurer; D. W. Howie, Jr., captain.

South Brooklyn Wheelmen—E. J. Muller, president; B. A. Burtis, vice-president; H. W. Marion, secretary; A. W. Hudson, treasurer; F. B. Baker, captain.

#### Secure Sleeping Apartments at the World's Fair.

Rooms can be secured at the National Columbian Wheelmen's Association club house and hotel. Prices \$1 per day and upwards. Address, L. D. Taylor, secretary, 959 West Madison street, Chicago.

# CYCLING JOURNALISM.

## NOTES ON THE PROGRESS OF THIS AND OTHER INSTITUTIONS.

*How a Young Firm Grew—How Osmond's Racing Career Ended—Who Laughs Last?—Cycle Journalism Changes.*

The sky is changed,—and such a change! O night And storm and darkness! ye are wondrous strong, Yet lovely in your strength, as is the light Of a dark eye in woman! Far along, From peak to peak, the rattling crags among, Leaps the live thunder.

So said Byron a half century ago. The lord poet spoke not of cycling, and yet his words are of peculiar significance just now. A change has come over the sky of cycle journalism.

As a class or trade is the mother of class or trade papers, so are the policies and methods of those papers governed by the wishes of their mother. When trade journalism was young and in its teens it crawled, as do the little prattlers by our firesides. When it grew to a respectable age and began to feel its strength and influence it threw off the strait of its younger years and its mother was treated simply as a venerable old person who must needs be requited for its tender care when young, and whose commands are to be respected, but not necessarily obeyed.

And so it is with cycle papers. The cycle paper was started because the trade needed a mouth-organ. At first it was wholly dependent upon the cycle-makers, and, to the credit of the latter, be it said that it was tenderly reared and well clothed and fed. But the field widened. A certain part of the public needed a cycle paper and naturally turned its attention to the trade sheet. Then came the important change, gradually but surely. While always ready and willing to comply with the requests and to the demands of its mother (the trade), the cycle paper gradually gained emancipation and formed opinions of its own and took unto itself several other things that were considered luxuries when it was young and helpless.

But this emancipation is not the only great change that has come over the sky of cycling journalism. One of the great rules of journalism is that mankind is always more interesting to itself than the study of mere things. Cycle papers have for years recognized the truth and importance of this rule, but not until the past few years have American wheel papers practised it. But when they did begin they lost no time in giving their slow-going English cousins points as to what personality in journalism really means.

At the present time there is hardly an editor of a cycle paper that is not engaged in a controversy with the editor of some other paper. Cycle writers are gradually mixing themselves up in a cloud of discord, from which some of them will emerge in anything but a dignified manner.

And thus the merry war goes on. As long as the quibbles and controversies and quarrels are of interest to more than those engaged in them, the public will look on and applaud and be pleased with itself. To be sure, in some cases, these quibblings are of so petty a nature that they seem like child's play, but when they are of that kind the public shows that it is tired and the contestants will stop of their own free will. For remember that there is but little satisfaction in whipping an enemy if your friends, and enemies too, don't see you administer the thrashing.

And thus with Sheridan we say: "The quarrel is a very pretty one as it stands; we should only spoil it by trying to explain it."

### SIMPLE STORY OF A FIRM.

A change in the firm of Whitten-Godding Cycle Company, of Providence, R. I., recalls to my mind the early struggle of this concern, which is to-day one of the best known in the trade.

Messrs. Whitten and Godding were graduates of Brown University, of Providence. Like many young men they had struggled through their college terms only after great effort, and graduated with the world to meet, and more college learning in their heads than dollars and cents in their pockets. They went manfully to work. They got credit from several bicycle houses and started a little establishment in a loft at No. 1 Westminster street. It was here that I made their acquaintance and purchased from them a Columbia of the vintage of '86. They found it hard work. The cycle was not then so much of a necessity as it is at the present time. Both members of the firm did everything from the uncatering of their machines to teaching their customers how to ride, and one of my earliest cycling recollections is a scene on the beautiful Brown University campus, with an old "try-it-on-the-dog" bone-shaker, Mr. Godding and myself as the principal characters.

Pluck, perseverance and straightforwardness soon began to tell. The Whitten-Godding Cycle Company became a recognized factor of the New England cycle trade. Its credit was good, for it paid its debts with unusual promptness. Larger and handsomer quarters were engaged, new lines were added to the stock, and soon the names of Whitten and Godding were a synonym for youthful energy and spotless integrity.

The firm has split, upon what rock I know not. But I cannot help paying this tribute to two young men who have won all they possess and who are good samples of the brainy young American.

### AN ESTIMATE OF OSMOND.

Walter Masterson, of the New York *Sun* and *Sporting Times*, is generally very conservative in his views, and withal an impartial critic. But in the last issue of the *Sporting Times* he makes a statement regarding Osmond that is unfair, and ungenerous at the same time. He writes:

Under ordinary circumstances no rider who has attained the fame and prominence in English racing circles that Osmond has would forfeit his chances of regaining his lost laurels in the championship races, unless something were wrong, and we surmise that this something is that his days as a racer are over.

Mr. Masterson should know that the "something" to which he refers is nothing less than a good business reason. Mr. Osmond is the world's fair representative of a great cycle firm and is thinking more of cycle exhibits than he is of championship medals; that is, if he is as good a business man as he is a racer.

If Mr. Masterson refers to a waning of racing power, when he says that Mr. Osmond's "days as a racer are over," he is placing himself in a very vulnerable position. Osmond's work on the track last year was not all that could have been wished by his friends, but it certainly was not such as to have given anyone the idea that his "days as a racer are over." He is still young, has a splendid constitution, and, above all things, does not over-estimate his powers.

No, indeed, Mr. Masterson, Mr. Osmond's "days as a racer" are not over, as some of our American track riders may discover before he goes back to England.

### WHO LAUGHS LAST?

The *Bearings* and other papers have

**Sunol**  
Rignity

in a wheel is perhaps the most important point next to absolute strength of material. Some makers have sought to accomplish this by ideal devices, special crank brackets, etc. In the "Sunol," extreme rigidity is the result of a series of experiments, conducted with a view to establishing the shape of frame best suited to counteract a heavy strain, and an adaptation of that result to practical ends. Great simplicity, and high grade workmanship and material, help to make it permanent. Send for a catalogue.

had many a laugh at the expense of the *Bi. World*, though many of these broad smiles were not as much due to a superabundance of humor as to a desire to have the public believe that the *Bi. World* is only a funny old woman.

"Who but must laugh, if such a man there be,  
Who would not weep, if Atticus were he?"

Even if that Berger photograph did cost Ariel the price of a whole dozen, I think that in this case Berger is the Atticus and Ariel the laughter. The *Bi. World* now has the opportunity of making its weekly replies to Berger still more pointed by accompanying sketches of the little Chicago editor in the various attitudes in which a clever artist is able to place him. It seems to me, however, that the "A glimpse into the graveyards of the future" is a bit premature, for if Berger is dead and buried surely no self-respecting paper would be so lacking in principle as to blacken the whiteness of his wings. The *Bi. World* would have gotten more for its five dollars if it had made the graveyard scene the last of a series of pictures and not buried Berger before it had killed him.

So, after all, I am not yet quite certain who is the Atticus in this case. If it is Ariel I think that under the circumstances he is a better natured Atticus than Pope would have made him.

BURKE.

### Tom Roe's Preparation.

John Grey, who is assisting Roe in his preparation for the coming "York to Frisco" ride, writes the REFEREE as follows:

"We have been in Needham now for three weeks, during which time Tom has trained hard and steadily and shows much earnestness in his work. We get up at 6 in the morning (the other morning we got up at 4, but this was a mistake, as our watches had gone on a strike during the night and we did not discover the fact until we were dressed) take a walk and have breakfast at 7:30. Then Tom has a rub. At 9 we go for a twenty-mile ride; we go ten miles from home, then Tom gives me a hand-cap of several minutes and we have a race. In this way he gets his speed. When he gets in he has another rub and dinner. At three he starts out for another twenty-mile run by himself, has a rub, then a short nap, followed by a good supper. The training quarters are excellent. The cooking is all special, consisting of regular training food. Tom says, 'Talk about your Chicago wind, it is not in it with the New England wind' and the hills are found in plenty, but

# G. & J. Pneumatic Road and Racing Tires.

all this does not seem to have any effect on him and he does not complain of being tired at night. He enjoys a walk after supper, writes a few letters and asks about fifty times if he can have a cigarette. At 9 o'clock he goes to bed. Notwithstanding that he has still three weeks to train he is already in the pink of condition, and would be fully able to start on his trip any day; I also feel confident that he can do it in the time he has counted—sixty-five days, and furthermore the surprise would not be near as great to me as it would be to a good many if he should do it in sixty days."

PUTTING ON A BRAKE.

From South Eastern Iowa.

SIGOURNEY, Iowa, April 24, 1893.—L. E. Hickok is in this section booming Columbias. Our boys showed him what the Chicago boys once showed Golder, nice roads. We have a few samples, which, if it were possible to place the genuine article upon the ground at the big fair, would plead the cause of good roads with an eloquence which even the most stubborn old fossil could not resist.

There is some talk going the rounds of organizing a touring party to ride to Chicago in August, starting from Davenport, which will be the place of meeting for the greater part of the tourists, about the first of August. The ride should be made in four days from that point, and not tire the slowest of riders. A party of twenty-five or thirty could have a very pleasant time in this way and be useful to each other after reaching Chicago.

RUSTIC.

Robert Bruce left New York Monday for a trip on wheel to Chicago,

## PROGRESS IN KANSAS CITY.

It Now has a Dozen Dealers—Its Clubs and Racing Men.

KANSAS CITY, Mo., April 24.—Cling is on a "boom" in Kansas City. Though the chill of winter is still lingering the cycling season seems to be in full blast, for at no time have so many wheels been seen on the streets. The extensive boulevard and other public improvements now in progress will give the sport a tremendous impetus.

The Kansas City Cyclists, organized less than two years ago, have attained a membership of ninety. The club occupies a ten room house, centrally located. Club runs are made every Sunday, and are well attended. The recently organized Jackson County Wheelmen had their first regular run to Raytown. Sixteen men were in line, including Hal Greenwood, of DeSoto road fame.

The fine showing made by Kansas City men last season at the Missouri and Kansas state meets has induced the Kansas City Cyclists to foster and promote road and track racing, and to this end, a racing committee, consisting of Messrs. Ladish, Haynes and Cannon, has been appointed to take general charge of this branch of the sport.

Arrangements are being made for a road race to take place on May 12 and a race meeting on Decoration day.

Kansas City has not, prior to this time, been considered a cycling town. Three years ago there was but one cycling agency here; now there are a dozen exclusive cycle stores and several of the large implement and hardware houses are jobbing bicycles on a large scale. Kingman & Co. are jobbers of the King of Scorchers, Road King and Queen and Featherstone's medium grades. Hal W. Greenwood, representing this company on the road, is in the city and reports trade in the west very good.

W. D. Wornack has the Imperial agency and is delivering these popular wheels as fast as he can get them. The model G, twenty-eight pounds, and model F, thirty-four pounds, are the favorite patterns. He carries also the Telegram, New Mail, Dauntless and Falcon. The ladies' Telegram in its lightness, rigidity and beauty of outline and finish, has already created a very favorable impression and will become a popular mount as the reason advances.

Coming a Hundred Strong.

WICHITA, Kas., April 24.—It might be

of interest to know that Kansas is working up a delegation of 100 or more cyclists to go to the world's fair on bicycles. Our idea is to meet at Fort Scott on July 4 and 5, when we have our annual meet, and start from there to the fair. Mr. Boulton, editor of the Kiowa Signal, at Greensburg, and myself have started the ball rolling and a good many have sent in their application to join the company. All applications will be received by me and placed on the list. Kansas never does anything by halves (not even in the legislation halls), so you may look for a big delegation on wheels in July from Kansas. We have the finest roads on earth, I think, for natural roads, and cycling is one of the grandest pastimes in this part of the state.

THOMAS SHAW.

## Maywood Club Notes.

The Maywood Cycling Club held its annual election of officers April 15, resulting as follows: President, A. W. Hatch; vice-president, Dr. W. L. Ruggles; secretary and treasurer, A. R. Parrish; captain, A. A. Coupland.

Several members of the club will soon begin training for the Pullman, and the club's entry list will probably be much larger than last year, as it is numerically stronger. After May 1 the club rooms will be located in the Skemp Block where are the Maywood club's fine billiard and pool tables, card rooms, smoking room, dining hall, etc.

## FRESH FOREIGN FACTS.

Kaufman and Marschner Matched—The Swiss Form a Union.

It is estimated that about 70,000 bicycles will be sold in France this year. The home output will be 35,000 wheels, so that English makers will likely have a good trade with the Frenchmen.

The German competitor of Kaufman, G. Marschner, of Dresden, is challenged by the "Radfahrer Club Wanderer Fuertli," in the name of Kaufman, to show his tricks before a college of arbiters at Nuremberg. Each of the two riders has the right to choose six arbiters, while the Radfahrer Humor selects the chairman. Each man deposits \$250. The winner gets the \$500 and the loser has to give up all claims to the title of trick rider champion of the world from that date.

The three cycling unions in Switzerland, l'Union Velocipedique Suisse S. V. B., l'Union Velocipedique Suisse Romande, and l'Union Velocipedique Cantonale Genevoise, together with about seventy clubs, with 2,100 members, formed at a delegation day in Bern a National Swiss Federation, to promote in general the interests of cycling. The Velociman's Suisse will be the official paper of the new federation.

The French cyclists are proud of having their secretary of war, Loizillon, amongst their number. Although he is a cavalry general he is very fond of bicycle riding and has prevailed on his wife to ride.
